

## Enabling State Synchronization (C-Web Interface)

---

State synchronization is achieved when the SAE is configured to communicate with the policy server over the COPS connection.

To enable state synchronization with policy servers:

1. Click **Configure**, expand **Shared > SAE > Configuration > Driver**, and then click **Pcmm**.

The Pcmm pane appears.

2. Click the **Create** button.
3. Clear the **Disable Full Sync** checkbox to enable full synchronization.
4. If the policy server or devices do not support policies defined in PCMM-I03, make sure the **Disable PCMM I03** checkbox is selected and that the correct value is displayed in the **Session Recovery Retry Interval** box. Refer to the Help text in the main pane as needed.
5. Click **Apply**.
