

Configuring Basic RADIUS Authentication Plug-Ins

You can use basic RADIUS authentication plug-ins to send authentication information to an external RADIUS accounting server or a group of redundant servers. To communicate with nonredundant servers, you need to create additional instances of the plug-in.

To set up basic RADIUS authentication plug-ins:

1. Click **Configure**, expand **Shared > SAE**, and then expand the SAE group for which you want to configure RADIUS plug-ins.
2. In the side pane, expand **Configuration > Plug Ins**.
3. Expand the plug-in that you created for basic RADIUS authentication, and then click **RADIUS Authentication**.

The RADIUS Authentication pane appears.

4. Click **Create**, enter information as described in the Help text in the main pane, and then click **Apply**.
