

Configuring QoS Conditions (SRC CLI)

You can create QoS conditions within JUNOS scheduler policy rules. Use the following configuration statements to configure a QoS condition:

```
policies group name list name rule name qos-condition name {  
    forwarding-class forwarding-class ;  
    description description ;  
}
```

To create a QoS condition:

1. From configuration mode, enter the QoS condition configuration. For example:

```
user@host# edit policies group junos list qos rule pr qos-condition qc
```

2. (Optional) Configure the forwarding class to match.

```
[edit policies group junos list qos rule pr qos-condition qc]  
user@host# set forwarding-class forwarding-class
```

3. (Optional) Enter a description of the QoS condition.

```
[edit policies group junos list qos rule pr qos-condition qc]  
user@host# set description description
```

4. (Optional) Verify the QoS condition configuration.

```
[edit policies group junos list qos rule pr qos-condition qc]  
user@host# show  
forwarding-class assured-forwarding;  
description "QoS condition for QoS scheduling";
```
