

Configuring Event Tracking for JUNOS LSPs (SRC CLI)

Configure event tracking for JUNOS LSPs to provide information to an application, such as the sample IPTV application, that needs information about LSP status.

To configure LSP tracking:

1. From configuration mode, access the configuration statement that specifies the configuration for tracking LSPs.

```
[edit]  
user@host# edit shared sae configuration driver junos lsp-tracking
```

2. (Optional) Specify a regular expression to identify a set of LSP names. If you do not define an expression, the SAE tracks all LSPs.

```
[edit shared sae configuration driver junos lsp-tracking]  
user@host# set match SRC123
```

3. (Optional) Specify the name of the file to store syslog event messages (that provide information about LSP state changes in a JUNOS routing platform).

For example, to store messages in the junos-1 file:

```
[edit shared sae configuration driver junos lsp-tracking]  
user@host# file junos-1
```
