

Configuring Service Class Name Actions for Dynamic Service Activator

You can use a service class name action to specify the traffic profile in CommitResource messages. Table 1 on page 1 lists the field that you can use for PCMM policies that will be used with PCMM Web service interface. It also provides the parameter names that you must use if you configure parameter substitutions for a service class name action.

Table 1: Parameter Names for Service Class Actions

Field	Parameter Name
Service Class	TrafficClass
