

Specifying the ORB Configuration for the SRC License Server (SRC CLI)

You can use the object request broker (ORB) configuration to define the location of the property file for the license server. Typically, you do not need to change this property.

Use the following configuration statements to specify the ORB configuration property file for the license server:

```
shared license-server corba {  
    orb-configuration-property-file orb-configuration-property-file;  
}
```

NOTE: In most cases, you do not need to change the configuration for the license server. If you change the configuration, do so with care. The software needs to be able to communicate with the license server to operate correctly.

To specify the ORB configuration:

1. From configuration mode, access the configuration statement that configures CORBA.

```
[edit]  
user@host# edit shared license-server corba
```

2. Specify the ORB configuration property file.

```
[edit shared license-server corba]  
user@host# set orb-configuration-property-file orb-configuration-property-file
```
