

Configuring License Server Properties (SRC CLI)

You can use the license server engine configuration to configure the general properties for the license server.

Use the following configuration statements to configure the license server general properties:

```
shared license-server engine {  
    service-session-unit-size service-session-unit-size;  
    sae-service-unit-size sae-service-unit-size;  
    lease-renew-interval lease-renew-interval;  
    allocate-license-threshold allocate-license-threshold;  
    release-license-threshold release-license-threshold;  
}
```

NOTE: In most cases, you do not need to change the configuration for the license server. If you change the configuration, do so with care. The software needs to be able to communicate with the license server to operate correctly.

To configure the license server general properties:

1. From configuration mode, access the configuration statement that configures license server general properties.

```
[edit]  
user@host# edit shared license-server engine
```

2. Specify the size of each license unit for the service session property; this is the size of the license unit allocated to the SAE.

```
[edit shared license-server engine]  
user@host# set service-session-unit-size service-session-unit-size
```

3. (Optional) Specify the size of each license unit for the SAE service property; this is the size of the license unit allocated to the SAE.

```
[edit shared license-server engine]  
user@host# set sae-service-unit-size sae-service-unit-size
```

4. Specify the lease period for the licenses that the SAE client receives.

```
[edit shared license-server engine]  
user@host# set lease-renew-interval lease-renew-interval
```

5. Specify the license threshold, as a percentage of the chunk size, at which the SAE client obtains more licenses.

```
[edit shared license-server engine]  
user@host# set allocate-license-threshold allocate-license-threshold
```

6. Specify the license threshold, as a percentage of the chunk size, at which the SAE client releases one license unit.

```
[edit shared license-server engine]  
user@host# set release-license-threshold release-license-threshold
```
