

Configuring Local Properties for Web Application Server (SRC CLI)

To configure basic local properties:

1. From configuration mode, access the configuration statement that configures the local properties.

```
user@host# edit slot 0 application-server
```

2. Configure the garbage collection functionality of the Java Virtual Machine.

```
[edit slot 0 application-server]
```

```
user@host# set java-garbage-collection-options java-garbage-collection-options
```

3. (Optional) If you encounter problems caused by lack of memory, change the maximum memory size available to the JRE.

```
[edit slot 0 application-server]
```

```
user@host# set java-heap-size java-heap-size
```

4. (Optional) Verify your configuration.

```
[edit slot 0 application-server]
```

```
user@host# show
```
