

Before You Configure Login Classes (SRC CLI)

Before you configure a login class:

- Review the predefined login classes to determine whether you can use one of these classes rather than creating a new one.

See [Predefined Login Classes for the SRC Software](#) .

- Make sure you are familiar with how to use regular expressions to specify which commands and configuration statements to allow or deny.

Consider that you can issue one **allow** statement and one **deny** statement for operation mode commands, and one **allow** statement and one **deny** statement for configuration mode commands. Use regular expressions in a statement to specify more than one command in a statement.

See [Access to Individual Commands and Configuration Statements \(SRC CLI\)](#).
