

Loading a Configuration from a Directory

If your VTA configuration is stored in a directory, you need to connect to the directory before you load configurations into VTA Configuration Manager.

To connect to a directory and load a configuration from the directory:

1. In the VTA Configuration Manager navigation pane, select **Dir Connection**.

The Connecting to the Directory page appears.

VTA Configuration Manager

Directory Connection

▶ Home	Connecting to the Directory
▶ Dir Connection	
▶ Configuration	

Directory Information
Please enter your directory information.

Directory Host
Bind DN
Static Configuration DN
Configuration Namespace
Password

Juniper your Net

2. Edit or accept the default values for the fields, and click **Connect**.

See Connecting to the Directory Fields.

3. In the VTA Configuration Manager navigation pane, select **Load**.

The software loads the configuration that you specified in the Configuration Namespace field, and the Edit Configuration page appears with your configuration. From this page, you can view or change your VTA configuration.
