

## Committing a VTA Configuration to a Directory

Before you commit your VTA configuration to a directory, you need to connect to the directory and specify the name and location of your configuration in the Configuration Namespace field of the Connecting to the Directory page. See [Loading a Configuration from a Directory](#).

To commit your VTA configuration to a directory, in the navigation pane, select Commit. The software copies your configuration to the directory and the Commit page.

### VTA Configuration Manager

*Commit Configuration Changes*

▶	Home
▶	Dir Connection
▼	Configuration
▶	Create
▶	Edit
▶	Load
▶	Commit
▶	Import
▶	Export

#### Commit

Your configuration has been saved to the LDAP directory.
