

Viewing Backbone Congestion Point Information by Service

Purpose View backbone congestion point information by service.

Action To display information about backbone congestion points by service:

```
user@host> show acp backbone congestion-point congestion-point-expression
```

To display information about specific backbone services used to generate congestion points:

```
user@host> show acp backbone congestion-point congestion-point-expression  
service-name service-name
```

Enter a partial service name to list all matching backbone services.

To display information about the backbone services from a specific virtual router:

```
user@host> show acp backbone congestion-point congestion-point-expression  
virtual-router-name virtual-router-name
```

Enter a virtual router name to list backbone services from a particular virtual router.

To display congestion point DNS:

```
user@host> show acp backbone congestion-point congestion-point-expression brief
```

By default, information about the congestion point attributes and congestion point bandwidth is displayed.
