

SRC CLI Commands to View NIC Resolution Data

You can view the data that NIC uses during a resolution. You can view all resolution data, or data for a specified NIC component. Table 1 lists the commands you use to view NIC resolution information.

Table 1: Commands to Display NIC Data

Command	Output Displayed
show nic data	All NIC data. The output for this command includes the output for the other show nic data commands.
show nic data maximum-results	All or a specified quantity of NIC resolution data.
show nic data agent	NIC resolution data for a specified agent.
show nic data resolver	NIC resolution data for a specified resolver.
show nic data slot	All NIC data for a specified slot. The output for this command includes the output for the show nic data agent and show nic data resolver commands.
