

## Configuring SRC ACP to Manage the Backbone Network (C-Web Interface)

---

To configure SRC ACP to manage the backbone network:

1. Configure network interfaces in the directory.

See [Configuring Network Interfaces in the Directory](#) .

2. (Optional) Configure an action congestion point.

See [Configuring Action Congestion Points](#).

3. Configure guaranteed bandwidths for services.

4. Assign network interfaces to services.

See [Configuring Congestion Points for Services](#)

5. Create congestion points in the directory.

See [Configuring Congestion Points in the Directory](#)

6. Assign interfaces to congestion points.

See [Assigning Interfaces to Congestion Points](#)
