

Configuring RADIUS and TACACS+ Authentication on a C Series Controller (C-Web Interface)

The SRC software always performs password authentication on a C Series Controller. You can configure RADIUS and/ or TACACS + authentication to complement password authentication. In this case, the software performs RADIUS and/or TACACS + authentication before password authentication.

To configure RADIUS and TACACS + authentication for users who access a C Series Controller:

1. Configure the connection to the RADIUS or TACACS + server.

See Configuring RADIUS Authentication (C-Web Interface).

See Configuring TACACS + Authentication (C-Web Interface).

2. Configure the authentication order.
3. Configure template accounts.

See Using Remote Template Accounts and Configuring a Local User Template.

4. (Optional) Configure individual user profiles.

See Overview of SRC User Accounts.
