

## Promoting a Secondary Database to a Primary Role in a Configuration with One Primary Database with the C-Web Interface

---

Although all communities should have two databases with a primary role, if a community includes one database assigned a primary role and another database assigned a secondary role, promote the database assigned a secondary role to a primary role.

To promote a Juniper Networks database from a secondary role to a primary role:

1. On the database that has a secondary role, set the role to primary.
  - a. Click **Configure**, expand System **LDAP > Server**, and then click **Community**.  
The Community pane appears.
  - b. In the Primary Neighbors box, verify whether the other database is listed as a primary neighbor. If it is not, add it.
  - c. In the Role box, select **Primary**, and click **Apply**.
  - d. In the side pane, click **Commit**.
2. On the existing database that has a primary role, remove the neighbor as secondary and add it as primary.
  - a. Click **Configure**, expand System **LDAP > Server**, and then click **Community**.  
The Community pane appears.
  - b. In the Secondary Neighbors box, remove the database listed.
  - c. In the Primary Neighbors box, add the other database in the community, and click **Apply**.
  - d. In the side pane, click **Commit**.
3. (Optional if you have two databases with a primary role in a community) Switch the role of the database that originally had a secondary role back to secondary.
  - a. Click **Configure**, expand System **LDAP > Server**, and then click **Community**.  
The Community pane appears.
  - b. In the Primary Neighbors box, remove the database that is to become the secondary database.
  - c. In the Secondary Neighbors box, add the database, and click **Apply**.
  - d. In the side pane, click **Commit**.
