

Configuring Forwarding Class Actions (SRC CLI)

You can configure forwarding class actions for JUNOS filter policy rules. The forwarding class action causes the router to assign a forwarding class to packets that match the associated classify-traffic condition.

The type of action that you can create depends on the type of policy rule. See Policy Information Model.

Use the following configuration statements to configure a forwarding class action:

```
policies group name list name rule name forwarding-class name {  
    forwarding-class forwarding-class ;  
    description description ;  
}
```

To configure a forwarding class action:

1. From configuration mode, enter the forwarding class action configuration. For example, in this procedure, *fca* is the name of the forwarding class action.

```
user@host# edit policies group bod list input rule pr forwarding-class fca
```

2. (Optional) Configure the name of the forwarding class assigned to packets.

```
[edit policies group bod list input rule pr forwarding-class fca]  
user@host# set forwarding-class forwarding-class
```

3. (Optional) Enter a description for the forwarding class action.

```
[edit policies group bod list input rule pr forwarding-class fca]  
user@host# set description description
```

4. (Optional) Verify the forwarding class action configuration.

```
[edit policies group bod list input rule pr forwarding-class fca]  
user@host# show  
forwarding-class fc_expedited;  
description "Expedited forwarding class";
```
