

## Setting Up Script Services

---

To set up script services:

1. Write a script that implements the ScriptService interface, a service provider interface (SPI) for the SAE.

See Customizing Service Implementations.

See the script service documentation in the SAE core API documentation on the Juniper Networks Web site at

<http://www.juniper.net/techpubs/software/management/src/api-index.html>

2. Add a script service that references the script.

See Overview of SRC Script Services.
