

Configuring the Web Application Server (SRC CLI)

Tasks to configure the Web application server are:

1. Configure the operating properties.

See [Configuring Local Properties for Web Application Server \(SRC CLI\)](#).

2. Configure remote access to the application server.

See [Configuring Remote Access to the Application Server \(SRC CLI\)](#).

3. Configure the virtual host for the Web application, including whether to allow or deny access by specific remote clients.

See [Configuring Virtual Hosts for the Web Applications \(SRC CLI\)](#).

4. Configure the user accounts for the Web application.

See [Configuring User Accounts for Web Applications \(SRC CLI\)](#).
