

Adding Subscribers (SRC CLI)

The tasks to configure subscribers are:

- Adding Retailers (SRC CLI)
- Configuring Administrative Information for Retailers (SRC CLI)
- Adding Subscriber Folders (SRC CLI)

The subscriber hierarchy requires that the objects immediately subordinate to retailers be subscriber folders. You can, however, use subscriber folders subordinate to other subscriber objects to organize groups of subscribers.

- Adding Residential Subscribers (SRC CLI)
- Adding Enterprises (SRC CLI)
- Configuring Administrative Information for Enterprise Subscribers (SRC CLI)
- Adding Sites (SRC CLI)
- Adding Devices as Subscribers (SRC CLI)

After you add subscribers, you can add managers and configure subscriptions.
