

## Configuring Congestion Points in the Directory

---

To configure individual backbone congestion points:

1. Click **Configure > Shared > Congestion Points**.

The Congestion Points pane appears.

2. In the Create new list, select **Profile**. Type a name for the new profile in the dialog box, and click **OK**.

The Congestion Point Profile screen appears.

3. Enter information as described in the Help text in the main pane, and click **Apply**.
