

Configuring Stateful Firewall Actions (C-Web Interface)

You can configure stateful firewall actions for JUNOS ASP policy rules. Stateful firewall actions specify the action to take on packets that match the classify-traffic condition.

1. In the side pane, select a JUNOS ASP policy rule.
2. From the Create new list, select **Stateful Firewalls**. Type a name for the action, and click **OK**.
3. Enter information as described in the Help text in the main pane, and click **Apply**.
4. Expand the policy list and expand **Packet Action**.

A list of actions that can be taken on a packet appears in the side pane. You can configure one type of action.

5. Select the action that you want to configure for the stateful firewall, and click **Create**.
6. Enter information as described in the Help text in the main pane, and click **Apply**.
