

## Configuring Event Traps

---

Use the following configuration statements to configure event traps:

```
snmp notify event category category-name ...  
snmp notify event category category-name event event-name ...
```

To configure event traps:

1. From configuration mode, access the configuration statement that configures the type of event trap.

```
[edit]  
user@host# edit snmp notify
```

2. Specify the type of trap and the trap name.

```
[edit snmp notify]  
user@host# set event category category-name event event-name
```

You can select from the list of trap types and their associated traps or create new traps.
