

Configuring Static Host Mapping (SRC CLI)

Use the following statements to configure static host mapping:

```
system static-host-mapping host-name {  
    inet [inet...];  
    alias [alias...];  
}
```

To configure static host mapping:

1. From configuration mode, access the configuration statement that configures static host mapping and specify the fully-qualified name of the system.

```
[edit]  
user@host# edit system static-host-mapping host-name
```

2. Specify the IPv4 or IPv6 addresses to which you want to map the hostname.

```
[edit system static-host-mapping host-name]  
user@host# set inet inet
```

3. (Optional) Specify the aliases for this host.

```
[edit system static-host-mapping host-name]  
user@host# set alias alias
```
