

Authenticating Registered Username/Password Pairs (C-Web Interface)

You can specify whether the application programming interface (API) method `registerLoginCredentials` authenticates the registered username/password or creates the registration without authentication. Enable this setting if your authentication server does not allow authentication while a session for the authenticated username is active.

To specify whether or not registered username/password pairs are authenticated:

1. Click **Configure**, expand **Shared > SAE**, and then click **Login Registration**.

The Login Registration pane appears.

2. Enable or disable whether registered username/password pairs are authenticated, as described in the Help text.
3. Click **Apply**.
