

Sending Notifications for System Log Messages to Users (SRC CLI)

Use the following statements to configure the system log server to send notifications to users:

```
system syslog user user-name (any | authorization | daemon | ftp | kernel | user |  
local7) {  
    (any | emergency | alert | critical | error | warning | notice | info | none);  
}
```

To configure the system log server to send notifications to users:

1. From configuration mode, access the configuration statement that configures the system log server.

```
[edit]  
user@host# edit system syslog
```

2. Specify the user to receive notifications and the types of notifications to be sent.

```
[edit system syslog]  
user@host# set user user-name message-group severity
```

For example, to configure the system log server to send notifications to admin for conditions that require immediate attention:

```
[edit system syslog]  
user@host# set user admin any critical
```
