Cover Design: Edmonds Design

Revision History
October 2010—R1 Junos 10.4

The information in this document is current as of the date listed in the revision history.

YEAR 2000 NOTICE

Juniper Networks hardware and software products are Year 2000 compliant. The Junos OS has no known time-related limitations through the year 2038. However, the NTP application is known to have some difficulty in the year 2036.

END USER LICENSE AGREEMENT

READ THIS END USER LICENSE AGREEMENT ("AGREEMENT") BEFORE DOWNLOADING, INSTALLING, OR USING THE SOFTWARE. BY DOWNLOADING, INSTALLING, OR USING THE SOFTWARE OR OTHERWISE EXPRESSING YOUR AGREEMENT TO THE TERMS CONTAINED HEREIN, YOU (AS CUSTOMER OR IF YOU ARE NOT THE CUSTOMER, AS A REPRESENTATIVE/AGENT AUTHORIZED TO BIND THE CUSTOMER) CONSENT TO BE BOUND BY THIS AGREEMENT. IF YOU DO NOT OR CANNOT AGREE TO THE TERMS CONTAINED HEREIN, THEN (A) DO NOT DOWNLOAD, INSTALL, OR USE THE SOFTWARE, AND (B) YOU MAY CONTACT JUNIPER NETWORKS REGARDING LICENSE TERMS.

1. **The Parties.** The parties to this Agreement are (i) Juniper Networks, Inc. (if the Customer's principal office is located in the Americas) or Juniper Networks (Cayman) Limited (if the Customer's principal office is located outside the Americas) (such applicable entity being referred to herein as "Juniper"), and (ii) the person or organization that originally purchased from Juniper or an authorized Juniper reseller the applicable license(s) for use of the Software ("Customer") (collectively, the "Parties").

2. **The Software.** In this Agreement, "Software" means the program modules and features of the Juniper or Juniper-supplied software, for which Customer has paid the applicable license or support fees to Juniper or an authorized Juniper reseller, or which was embedded by Juniper in equipment which Customer purchased from Juniper or an authorized Juniper reseller. "Software" also includes updates, upgrades and new releases of such software. "Embedded Software" means Software which Juniper has embedded in or loaded onto the Juniper equipment and any updates, upgrades, additions or replacements which are subsequently embedded in or loaded onto the equipment.

3. **License Grant.** Subject to payment of the applicable fees and the limitations and restrictions set forth herein, Juniper grants to Customer a non-exclusive and non-transferable license, without right to sublicense, to use the Software, in executable form only, subject to the following use restrictions:

a. Customer shall use Embedded Software solely as embedded in, and for execution on, Juniper equipment originally purchased by Customer from Juniper or an authorized Juniper reseller.

b. Customer shall use the Software on a single hardware chassis having a single processing unit, or as many chassis or processing units for which Customer has paid the applicable license fees; provided, however, with respect to the Steel-Belted Radius or Odyssey Access Client software only, Customer shall use such Software on a single computer containing a single physical random access memory space and containing any number of processors. Use of the Steel-Belted Radius or IMS AAA software on multiple computers or virtual machines (e.g., Solaris zones) requires multiple licenses, regardless of whether such computers or virtualizations are physically contained on a single chassis.

c. Product purchase documents, paper or electronic user documentation, and/or the particular licenses purchased by Customer may specify limits to Customer's use of the Software. Such limits may restrict use to a maximum number of seats, registered endpoints, concurrent users, sessions, calls, connections, subscribers, clusters, nodes, realms, devices, links, ports or transactions, or require the purchase of separate licenses to use particular features, functionalities, services, applications, operations, or capabilities, or provide throughput, performance, configuration, bandwidth, interface, processing, temporal, or geographical limits. In addition, such limits may restrict the use of the Software to managing certain kinds of networks or require the Software to be used only in conjunction with other specific Software. Customer's use of the Software shall be subject to all such limitations and purchase of all applicable licenses.

d. For any trial copy of the Software, Customer's right to use the Software expires 30 days after download, installation or use of the Software. Customer may operate the Software after the 30-day trial period only if Customer pays for a license to do so. Customer may not extend or create an additional trial period by re-installing the Software after the 30-day trial period.

e. The Global Enterprise Edition of the Steel-Belted Radius software may be used by Customer only to manage access to Customer's enterprise network. Specifically, service provider customers are expressly prohibited from using the Global Enterprise Edition of the Steel-Belted Radius software to support any commercial network access services.

The foregoing license is not transferable or assignable by Customer. No license is granted herein to any user who did not originally purchase the applicable license(s) for the Software from Juniper or an authorized Juniper reseller.

4. **Use Prohibitions.** Notwithstanding the foregoing, the license provided herein does not permit the Customer to, and Customer agrees not to and shall not: (a) modify, unbundle, reverse engineer, or create derivative works based on the Software; (b) make unauthorized copies of the Software (except as necessary for backup purposes); (c) rent, sell, transfer, or grant any rights in and to any copy of the Software, in any form, to any third party; (d) remove any proprietary notices, labels, or marks on or in any copy of the Software or any product in which the Software is embedded; (e) distribute any copy of the Software to any third party, including as may be embedded in Juniper equipment sold in the secondhand market; (f) use any 'locked' or key-restricted feature, function, service, application, operation, or capability without first purchasing the applicable license(s) and obtaining a valid key from Juniper, even if such feature, function, service, application, operation, or capability is enabled without a key; (g) distribute any key for the Software provided by Juniper to any third party; (h) use the

Software in any manner that extends or is broader than the uses purchased by Customer from Juniper or an authorized Juniper reseller; (i) use Embedded Software on non-Juniper equipment; (j) use Embedded Software (or make it available for use) on Juniper equipment that the Customer did not originally purchase from Juniper or an authorized Juniper reseller; (k) disclose the results of testing or benchmarking of the Software to any third party without the prior written consent of Juniper; or (l) use the Software in any manner other than as expressly provided herein.

5. **Audit.** Customer shall maintain accurate records as necessary to verify compliance with this Agreement. Upon request by Juniper, Customer shall furnish such records to Juniper and certify its compliance with this Agreement.

6. **Confidentiality.** The Parties agree that aspects of the Software and associated documentation are the confidential property of Juniper. As such, Customer shall exercise all reasonable commercial efforts to maintain the Software and associated documentation in confidence, which at a minimum includes restricting access to the Software to Customer employees and contractors having a need to use the Software for Customer's internal business purposes.

7. **Ownership.** Juniper and Juniper's licensors, respectively, retain ownership of all right, title, and interest (including copyright) in and to the Software, associated documentation, and all copies of the Software. Nothing in this Agreement constitutes a transfer or conveyance of any right, title, or interest in the Software or associated documentation, or a sale of the Software, associated documentation, or copies of the Software.

8. **Warranty, Limitation of Liability, Disclaimer of Warranty.** The warranty applicable to the Software shall be as set forth in the warranty statement that accompanies the Software (the "Warranty Statement"). Nothing in this Agreement shall give rise to any obligation to support the Software. Support services may be purchased separately. Any such support shall be governed by a separate, written support services agreement. TO THE MAXIMUM EXTENT PERMITTED BY LAW, JUNIPER SHALL NOT BE LIABLE FOR ANY LOST PROFITS, LOSS OF DATA, OR COSTS OR PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES, OR FOR ANY SPECIAL, INDIRECT, OR CONSEQUENTIAL DAMAGES ARISING OUT OF THIS AGREEMENT, THE SOFTWARE, OR ANY JUNIPER OR JUNIPER-SUPPLIED SOFTWARE. IN NO EVENT SHALL JUNIPER BE LIABLE FOR DAMAGES ARISING FROM UNAUTHORIZED OR IMPROPER USE OF ANY JUNIPER OR JUNIPER-SUPPLIED SOFTWARE. EXCEPT AS EXPRESSLY PROVIDED IN THE WARRANTY STATEMENT TO THE EXTENT PERMITTED BY LAW, JUNIPER DISCLAIMS ANY AND ALL WARRANTIES IN AND TO THE SOFTWARE (WHETHER EXPRESS, IMPLIED, STATUTORY, OR OTHERWISE), INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, OR NONINFRINGEMENT. IN NO EVENT DOES JUNIPER WARRANT THAT THE SOFTWARE, OR ANY EQUIPMENT OR NETWORK RUNNING THE SOFTWARE, WILL OPERATE WITHOUT ERROR OR INTERRUPTION, OR WILL BE FREE OF VULNERABILITY TO INTRUSION OR ATTACK. In no event shall Juniper's or its suppliers' or licensors' liability to Customer, whether in contract, tort (including negligence), breach of warranty, or otherwise, exceed the price paid by Customer for the Software that gave rise to the claim, or if the Software is embedded in another Juniper product, the price paid by Customer for such other product. Customer acknowledges and agrees that Juniper has set its prices and entered into this Agreement in reliance upon the disclaimers of warranty and the limitations of liability set forth herein, that the same reflect an allocation of risk between the Parties (including the risk that a contract remedy may fail of its essential purpose and cause consequential loss), and that the same form an essential basis of the bargain between the Parties.

9. **Termination.** Any breach of this Agreement or failure by Customer to pay any applicable fees due shall result in automatic termination of the license granted herein. Upon such termination, Customer shall destroy or return to Juniper all copies of the Software and related documentation in Customer's possession or control.

10. **Taxes.** All license fees payable under this agreement are exclusive of tax. Customer shall be responsible for paying Taxes arising from the purchase of the license, or importation or use of the Software. If applicable, valid exemption documentation for each taxing jurisdiction shall be provided to Juniper prior to invoicing, and Customer shall promptly notify Juniper if their exemption is revoked or modified. All payments made by Customer shall be net of any applicable withholding tax. Customer will provide reasonable assistance to Juniper in connection with such withholding taxes by promptly: providing Juniper with valid tax receipts and other required documentation showing Customer's payment of any withholding taxes; completing appropriate applications that would reduce the amount of withholding tax to be paid; and notifying and assisting Juniper in any audit or tax proceeding related to transactions hereunder. Customer shall comply with all applicable tax laws and regulations, and Customer will promptly pay or reimburse Juniper for all costs and damages related to any liability incurred by Juniper as a result of Customer's non-compliance or delay with its responsibilities herein. Customer's obligations under this Section shall survive termination or expiration of this Agreement.

11. **Export.** Customer agrees to comply with all applicable export laws and restrictions and regulations of any United States and any applicable foreign agency or authority, and not to export or re-export the Software or any direct product thereof in violation of any such restrictions, laws or regulations, or without all necessary approvals. Customer shall be liable for any such violations. The version of the Software supplied to Customer may contain encryption or other capabilities restricting Customer's ability to export the Software without an export license.

12. **Commercial Computer Software.** The Software is "commercial computer software" and is provided with restricted rights. Use, duplication, or disclosure by the United States government is subject to restrictions set forth in this Agreement and as provided in DFARS 227.7201 through 227.7202-4, FAR 12.212, FAR 27.405(b)(2), FAR 52.227-19, or FAR 52.227-14(ALT III) as applicable.

13. **Interface Information.** To the extent required by applicable law, and at Customer's written request, Juniper shall provide Customer with the interface information needed to achieve interoperability between the Software and another independently created program, on payment of applicable fee, if any. Customer shall observe strict obligations of confidentiality with respect to such information and shall use such information in compliance with any applicable terms and conditions upon which Juniper makes such information available.

14. **Third Party Software.** Any licensor of Juniper whose software is embedded in the Software and any supplier of Juniper whose products or technology are embedded in (or services are accessed by) the Software shall be a third party beneficiary with respect to this Agreement, and such licensor or vendor shall have the right to enforce this Agreement in its own name as if it were Juniper. In addition, certain third party software may be provided with the Software and is subject to the accompanying license(s), if any, of its respective owner(s). To the extent portions of the Software are distributed under and subject to open source licenses obligating Juniper to make the source code for such portions publicly available (such as the GNU General Public License ("GPL") or the GNU Library General Public License ("LGPL")), Juniper will make such source code portions (including Juniper modifications, as appropriate) available upon request for a period of up to three years from the date of distribution. Such request can be made in writing to Juniper Networks, Inc., 1194 N. Mathilda Ave., Sunnyvale, CA 94089, ATTN: General Counsel. You may obtain a copy of the GPL at http://www.gnu.org/licenses/gpl.html, and a copy of the LGPL at http://www.gnu.org/licenses/lgpl.html .

15. **Miscellaneous.** This Agreement shall be governed by the laws of the State of California without reference to its conflicts of laws principles. The provisions of the U.N. Convention for the International Sale of Goods shall not apply to this Agreement. For any disputes arising under this Agreement, the Parties hereby consent to the personal and exclusive jurisdiction of, and venue in, the state and federal courts within Santa Clara County, California. This Agreement constitutes the entire and sole agreement between Juniper and the Customer with respect to the Software, and supersedes all prior and contemporaneous agreements relating to the Software, whether oral or written (including any inconsistent terms contained in a purchase order), except that the terms of a separate written agreement executed by an authorized Juniper representative and Customer shall govern to the extent such terms are inconsistent or conflict with terms contained herein. No modification to this Agreement nor any waiver of any rights hereunder shall be effective unless expressly assented to in writing by the party to be charged. If any portion of this Agreement is held invalid, the Parties agree that such invalidity shall not affect the validity of the remainder of this Agreement. This Agreement and associated documentation has been written in the English language, and the Parties agree that the English version will govern. (For Canada: Les parties aux présentés confirment leur volonté que cette convention de même que tous les documents y compris tout avis qui s'y rattaché, soient redigés en langue anglaise. (Translation: The parties confirm that this Agreement and all related documentation is and will be in the English language)).

Table of Contents

Introduction

This document describes how to retrieve and interpret Layer 3 VPN routing and forwarding information using SNMP.

SNMP Overview

SNMP allows users to monitor network devices from a central location. Many network management systems (NMS) are based on SNMP, and support for this protocol is a key feature of most network devices.

Juniper Networks provides many different platforms that support SNMP on Junos OS. Junos OS includes an onboard SNMP agent that provides remote management applications with access to detailed information about the devices on the network.

A typical SNMP implementation contains three components:

- Managed devices – such as routers and switches.
- SNMP agent – process that resides on a managed device and communicates with the NMS.
- NMS – a combination of hardware and software used to monitor and administer the network; network device that runs SNMP manager software. Also referred to as an SNMP manager.

The SNMP agent exchanges network management information with the SNMP manager (NMS). The agent responds to requests for information and actions from the manager. The SNMP manager collects information about network connectivity, activity, and events by polling managed devices.

SNMP implementation in Junos OS uses a master SNMP agent (known as SNMP process or snmpd) that resides on the managed device. Various subagents reside on different modules of Junos OS as well (such as the Routing Engine), and these are managed by the snmpd.

Retrieving VRF VPN Information Using SNMP

This example describes how to retrieve and interpret Layer 3 VPN routing and forwarding information using SNMP and includes the following sections:

Requirements

The routers used in this example are Juniper Networks M Series Multiservice Edge Routers, T Series Core Routers, or MX Series 3D Universal Edge Routers. The network management system (NMS) is a workstation running UNIX with the standard SNMP application available in UNIX.

SNMP applications are preinstalled on Linux and Solaris versions of UNIX. SNMP applications are available in open source code and can be installed on any operating system, including Windows systems. Network management applications, such as IBM Tivoli, provide their own SNMP tools.

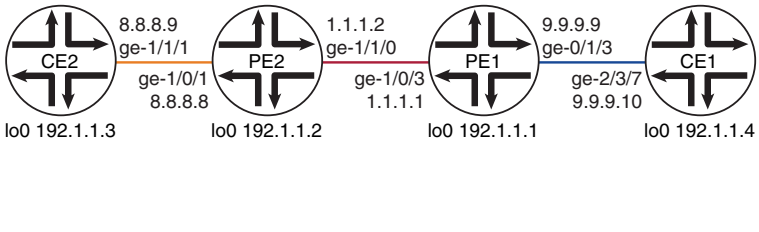
Overview

This example shows how to retrieve virtual private network (VPN) routing and forwarding (VRF) information using SNMP to display management information base (MIB) objects.

In Figure 1 on page 5:

- Provider edge (PE) routers PE1 and PE2 are configured with a VRF routing instance named **jnprl3vpn**.
- Customer edge (CE) routers CE1 and CE2 communicate across the VPN service using subnetwork 192.1.1.0.

Figure 1: VRF VPN Example Topology



Configuration

The network is preconfigured with a VRF VPN named **jnprl3vpn** and uses the interfaces and IP addresses shown in Figure 1 on page 5. This example describes how to retrieve the VPN configuration and status information using SNMP.

Verifying VRF VPN Information Using SNMP

To confirm the configuration of the VRF VPN, perform these tasks:

- Display the MPLS VPN MIB on page 6
- Display the VPN Interface Index Information on page 7
- Display the VRF Route Table Information on page 9
- Display the Interface Name for an Interface Index on page 15
- Display the Interface Index for Interfaces Configured for a VRF Routing Instance on page 15

Display the MPLS VPN MIB

Purpose Retrieve and display a table of information describing the VRF routing instance and the associated attributes on a PE router.

Action To display the VRF routing instance information, use the **snmpwalk** command on a network management station. Specify the SNMP read community string, the router IP address, and the MIB object identifier (OID) to identify which portion of the object identifier space is searched using SNMP GET NEXT requests. In the following example, the SNMP read community string is **petblr**, the IP address is **116.197.178.2**, and the MIB OID is **mplsVpnMIB**. For more information about the **snmpwalk** command, see the manual (man) pages on your workstation.

NOTE: The IP address specified in the snmpwalk command can be the fxp0 Ethernet console port, the lo0.0 loopback interface, or any transit interface that is configured to respond to SNMP requests. By default, all interfaces are configured to respond to SNMP requests.

```
user@host_shell>snmpwalk -v1 -c petblr 116.197.178.2 mplsVpnMIB

MPLS-VPN-MIB::mplsVpnConfiguredVrfs.0 = Gauge32: 1
MPLS-VPN-MIB::mplsVpnActiveVrfs.0 = Gauge32: 1
MPLS-VPN-MIB::mplsVpnConnectedInterfaces.0 = Gauge32: 2
MPLS-VPN-MIB::mplsVpnNotificationEnable.0 = INTEGER: false(2)
MPLS-VPN-MIB::mplsVpnVrfConfMaxPossibleRoutes.0 = Gauge32: 0
MPLS-VPN-MIB::mplsVpnVrfConfRouteMaxThreshTime.0 = Gauge32: 0 seconds
MPLS-VPN-MIB::mplsVpnVrfVpnId."jnprl3vpn" = ""
MPLS-VPN-MIB::mplsVpnVrfDescription."jnprl3vpn" = STRING: jnprl3vpn
MPLS-VPN-MIB::mplsVpnVrfRouteDistinguisher."jnprl3vpn" = STRING: "1234:1"
MPLS-VPN-MIB::mplsVpnVrfCreationTime."jnprl3vpn" = Timeticks: (114092600) 13 days, 4:55:26.00
MPLS-VPN-MIB::mplsVpnVrfOperStatus."jnprl3vpn" = INTEGER: up(1)
MPLS-VPN-MIB::mplsVpnVrfActiveInterfaces."jnprl3vpn" = Gauge32: 2
MPLS-VPN-MIB::mplsVpnVrfAssociatedInterfaces."jnprl3vpn" = Gauge32: 2
```

```
MPLS-VPN-MIB::mplsVpnVrfConfMidRouteThreshold."jnprl3vpn" = Gauge32: 0
MPLS-VPN-MIB::mplsVpnVrfConfHighRouteThreshold."jnprl3vpn" = Gauge32: 0
MPLS-VPN-MIB::mplsVpnVrfConfMaxRoutes."jnprl3vpn" = Gauge32: 0
MPLS-VPN-MIB::mplsVpnVrfConfLastChanged."jnprl3vpn" = Timeticks: (114095300) 13 days, 4:55:53.00
MPLS-VPN-MIB::mplsVpnVrfConfRowStatus."jnprl3vpn" = INTEGER: active(1)
MPLS-VPN-MIB::mplsVpnVrfConfStorageType."jnprl3vpn" = INTEGER: readOnly(5)
MPLS-VPN-MIB::mplsVpnVrfRouteTarget."jnprl3vpn".0.both = STRING: "1234:1"
MPLS-VPN-MIB::mplsVpnVrfRouteTargetDescr."jnprl3vpn".0.both = STRING:
MPLS-VPN-MIB::mplsVpnVrfRouteTargetRowStatus."jnprl3vpn".0.both = INTEGER: active(1)
MPLS-VPN-MIB::mplsVpnVrfPerfRoutesAdded."jnprl3vpn" = Counter32: 19
MPLS-VPN-MIB::mplsVpnVrfPerfRoutesDeleted."jnprl3vpn" = Counter32: 0
MPLS-VPN-MIB::mplsVpnVrfPerfCurrNumRoutes."jnprl3vpn" = Gauge32: 19
```

Meaning In the sample output:

- The **mplsVpnVrfDescription** MIB object shows **jnprl3vpn** as the description of the VRF routing instance configured on the router. If the description is not configured, the MIB object displays the VRF name by default.
- The **mplsVpnVrfRouteDistinguisher** MIB object shows **1234:1** as the route distinguisher for this VPN.
- The **mplsVpnVrfOperStatus** MIB object shows **(up)1** as the operational status of the VRF routing instance.
- The **mplsVpnVrfRouteTarget** MIB object shows **1234:1** as the route target for this VPN.

Another way to display the VRF routing instance information, is to use the **show snmp mib** command and specify the MPLS VPN MIB table (**mplsVpnMIB**):

For more information about the MIB objects shown in this sample output, see *draft-ietf-ppvpn-mpls-vpn-mib-05.txt*.

Display the VPN Interface Index Information

Purpose Retrieve and display a table of VRF routing instance interface information on a PE router.

Action To display the VRF routing instance interface information, use the **show snmp mib** command. Specify the **walk** option, specify the **jnxVpnMIB** VPN interface MIB table, and to display the information in a more user-friendly format, specify the **ascii** option:

```
user@PE1> show snmp mib walk jnxVpnMIB ascii

jnxVpnConfiguredVpns.0 = 1
jnxVpnActiveVpns.0 = 1
jnxVpnNextIfIndex.0 = 0
jnxVpnNextPwIndex.0 = 0
jnxVpnNextRTIndex.0 = 0
jnxVpnRowStatus.2."jnprl3vpn" = 1
jnxVpnStorageType.2."jnprl3vpn" = 5
jnxVpnDescription.2."jnprl3vpn" = jnprl3vpn
jnxVpnIdentifierType.2."jnprl3vpn" = 5
jnxVpnIdentifier.2."jnprl3vpn" =  5-1234:1
jnxVpnConfiguredSites.2."jnprl3vpn" = 0
jnxVpnActiveSites.2."jnprl3vpn" = 0
jnxVpnLocalAddresses.2."jnprl3vpn" = 0
jnxVpnTotalAddresses.2."jnprl3vpn" = 0
jnxVpnAge.2."jnprl3vpn" = 31000
```

```
jnxVpnIfRowStatus.2."jnprl3vpn".518 = 1
jnxVpnIfRowStatus.2."jnprl3vpn".536 = 1
jnxVpnIfStorageType.2."jnprl3vpn".518 = 5
jnxVpnIfStorageType.2."jnprl3vpn".536 = 5
jnxVpnIfAssociatedPw.2."jnprl3vpn".518 = 0
jnxVpnIfAssociatedPw.2."jnprl3vpn".536 = 0
jnxVpnIfProtocol.2."jnprl3vpn".518 = 0
jnxVpnIfProtocol.2."jnprl3vpn".536 = 0
jnxVpnIfInBandwidth.2."jnprl3vpn".518 = 0
jnxVpnIfInBandwidth.2."jnprl3vpn".536 = 0
jnxVpnIfOutBandwidth.2."jnprl3vpn".518 = 0
jnxVpnIfOutBandwidth.2."jnprl3vpn".536 = 0
jnxVpnIfStatus.2."jnprl3vpn".518 = 5
jnxVpnIfStatus.2."jnprl3vpn".536 = 5
jnxVpnRTRowStatus.2."jnprl3vpn".1 = 1
jnxVpnRTStorageType.2."jnprl3vpn".1 = 5
jnxVpnRTType.2."jnprl3vpn".1 = 6
jnxVpnRT.2."jnprl3vpn".1 = 1234:1
jnxVpnRTFunction.2."jnprl3vpn".1 = 3
```

Meaning In the sample output:

- The **jnxVpnDescription** MIB object shows the description of the VRF routing instance. In this example the description is the name of the VRF routing instance.
- The **jnxVpnIfRowStatus** MIB object shows the operational status of the VRF routing instance interfaces. The last index in the table identifies the interface index (ifIndex) of the interface. In this example the highlighted interface indexes are **518** and **536**.

The following MIB object definitions are from the enterprise-specific MIB files supplied by Juniper Networks. The MIB object description can be useful in understanding the meaning and purpose of a MIB object. The following sample definitions are provided for your reference.

```
jnxVpnIfEntry OBJECT-TYPE
    SYNTAX     JnxVpnIfEntry
    MAX-ACCESS not-accessible
    STATUS     current
    DESCRIPTION
        "Entry containing information about a particular VPN
         interface."
    INDEX { jnxVpnIfVpnType, jnxVpnIfVpnName, jnxVpnIfIndex }
    ::= { jnxVpnIfTable 1 }

jnxVpnIfIndex OBJECT-TYPE
    SYNTAX     Unsigned32
    MAX-ACCESS accessible-for-notify
    STATUS     current
    DESCRIPTION
        "The index of this interface in the VPN.  Each interface
         in the VPN is given a unique index.  The RowStatus says
         whether a given interface (i.e., a row in this table)
         is valid or not. Note: this index MUST NOT be zero."
    ::= { jnxVpnIfEntry 3 }
```

Supported MIBs are described in the *Junos® Software SNMP MIBs and Traps Reference*. Juniper Networks enterprise-specific MIBs can be downloaded from http://www.juniper.net/techpubs/en_US/junos10.2/information-products/topic-collections/reference-mibs-and-traps/topic-21572.html. For more information about the **show snmp mib** command, see the *Junos® Software System Basics and Services Command Reference*.

Display the VRF Route Table Information

Purpose Retrieve and display a table of information describing the VRF routing table on a PE router.

Action To display the VRF routing table information, use the **snmpwalk** command on a network management station. Specify the name of the VRF routing instance and the SNMP read community string in the format **vrfname@communitystring**. Also specify the router IP address and the MIB OID. In the following example the routing instance is **jnprl3vpn**, the SNMP read community string is **petblr**, the IP address is **116.197.178.2** and the OID is **1.3.6.1.2.1.4**.

```
user@host_shell>snmpwalk -v1 -c jnprl3vpn@petblr 116.197.178.2 1.3.6.1.2.1.4

```

Meaning In the sample output:

- The **IP-MIB::ipNetToMediaPhysAddress.518.8.8.8.9** MIB object shows the Ethernet MAC address of the interface that has IP address **8.8.8.9** and is directly connected to the interface with interface index **518**.
- The **IP-MIB::ipNetToMediaNetAddress.518.8.8.8.9** MIB object shows the IP address of the interface directly connected to the interface with interface index **518**.
- The **IP-FORWARD-MIB::ipCidrRouteDest.192.1.1.3.255.255.255.255.0.8.8.8.9** MIB object shows there is a route to reach IP address **192.1.1.3**, which is the address configured on the loopback interface (lo0) of Router CE1.
- The **IP-FORWARD-MIB::ipCidrRouteNextHop.192.1.1.3.255.255.255.255.0.8.8.8.9** MIB object shows the next hop for reaching IP address **192.1.1.3** through the interface with interface index **518**.
- The **IP-FORWARD-MIB::ipCidrRouteIfIndex.1.1.1.0.255.255.255.0.0.8.8.8.9** MIB object shows the interface index for the interface used to reach IP subnetwork 1.1.1.0.
- The **IP-FORWARD-MIB::ipCidrRouteIfIndex.8.8.8.0.255.255.255.0.0.0.0.0.0** MIB object shows the interface index for the interface used to reach IP subnetwork 8.8.8.0.
- The **IP-FORWARD-MIB::ipCidrRouteIfIndex.192.1.1.3.255.255.255.255.0.8.8.8.9** MIB object shows the interface index for the interface used to reach IP address 192.1.1.3.

Display the Interface Name for an Interface Index

Purpose Retrieve and display the interface name for a given interface index.

Action To display the interface name for a given interface index, use the **show snmp mib** command and specify the interface index number:

Sample Output

```
user@PE2> show snmp mib get ifName.518
ifName.518    = ge-1/0/1.0
```

Meaning In the sample output interface index **518** is identified as the **ge-1/0/1.0** interface.

Display the Interface Index for Interfaces Configured for a VRF Routing Instance

Purpose Retrieve and display the interface index for a given VRF routing instance.

Action To display the interface index for a given VRF routing instance, use the **snmpwalk** command on a network management station. Specify the name of the VRF routing instance and the SNMP read community string in the format **vrfname@communitystring**. Also specify the IP address of the router and the MIB object identifier (OID). In the following example, the routing instance name is **jnprl3vpn**, the SNMP read community string is **petblr**, the IP address is **116.197.178.2**, and the MIB OID is **1.3.6.1.2.1.2**.

```
user@host_shell>snmpwalk -v1 -c jnprl3vpn@petblr 116.197.178.2 1.3.6.1.2.1.2
