CHAPTER 13

Operational Response Tag Elements Common to EX Series, J Series, QFX Series, and SRX Series

This chapter lists the Extensible Markup Language (XML) tag elements in the Junos XML application programming interface (API) that contain operational information. The Junos XML protocol and NETCONF servers return them in response to requests from client applications.

The tags listed in this chapter are common to devices belonging to the following platforms:

- EX Series
- J Series
- QFX Series
- SRX Series

The tags are divided into the following sections and listed in alphabetical order within each section.

- Summary of Autoinstallation Response Tags on page 6159
- Summary of DHCP Response Tags on page 6161
- Summary of IGMP Snooping Response Tags on page 6176
- Summary of LLDP Response Tags on page 6220

Summary of Autoinstallation Response Tags

<autoinstallation-status-information>

Usage

```
<autoinstallation-status-information>
  <master-state>
    master-state
  </master-state>
  <last-configuration-filename>
    last-configuration-filename
  </last-configuration-filename>
  <last-configuration-server>
```

```
        last-configuration-server
      </last-configuration-server>

    <autoinstallation-status-interface-information>....</autoinstallation-status-interface-information>

  </autoinstallation-status-information>
```

Description Autoinstallation status

<autoinstallation-status-interface-address-information>

Usage

```
<autoinstallation-status-information>
  <autoinstallation-status-interface-information>
    <autoinstallation-status-interface-address-information>
      <protocol-name>
        protocol-name
      </protocol-name>
      <protocol-address>
        protocol-address
      </protocol-address>
    </autoinstallation-status-interface-address-information>
  </autoinstallation-status-interface-information>
</autoinstallation-status-information>
```

Description Autoinstallation status for address acquisition protocols on a particular interface

<autoinstallation-status-interface-information>

Usage

```
<autoinstallation-status-information>
  <autoinstallation-status-interface-information>
    <interface-name>
      interface-name
    </interface-name>
    <interface-state>
      interface-state
    </interface-state>
    <interface-acquired-address>
      interface-acquired-address
    </interface-acquired-address>
    <interface-acquired-hostname>
      interface-acquired-hostname
    </interface-acquired-hostname>
    <interface-acquired-hostname-source>
      interface-acquired-hostname-source
    </interface-acquired-hostname-source>
    <interface-acquired-configuration-filename>
      interface-acquired-configuration-filename
    </interface-acquired-configuration-filename>
    <interface-acquired-configuration-server>
      interface-acquired-configuration-server
    </interface-acquired-configuration-server>
```

```

<autoinstallation-status-interface-address-information>...</autoinstallation-status-interface-address-information>

</autoinstallation-status-interface-information>
</autoinstallation-status-information>

```

Description Autoinstallation status for a particular interface

Summary of DHCP Response Tags

<client-identifier>

Usage

```

<dhcp-binding-information>
<dhcp-binding>
  <client-identifier>
    <hex-data>
      hex-data
    </hex-data>
    <hex-data-line>
      hex-data-line
    </hex-data-line>
    <printable-data-line>
      printable-data-line
    </printable-data-line>
  </client-identifier>
</dhcp-binding>
</dhcp-binding-information>

```

Description Identifier that the DHCP client provided for itself when it requested an address assignment

<dhcp-binding>

Usage

```

<dhcp-binding-information>
<dhcp-binding>
  <allocated-address>
    allocated-address
  </allocated-address>
  <mac-address>
    mac-address
  </mac-address>
  <dhcp-lease-binding-type>
    dhcp-lease-binding-type
  </dhcp-lease-binding-type>
  <lease-end-time>
    lease-end-time
  </lease-end-time>
  <lease-state>
    lease-state
  </lease-state>
  <dhcp-option-table>....</dhcp-option-table>

```

```
<address-pool-name>
  address-pool-name
</address-pool-name>
<interface-name>
  interface-name
</interface-name>
<bootp-relay-address>
  bootp-relay-address
</bootp-relay-address>
<dhcp-lease-information>....</dhcp-lease-information>
<client-identifier>....</client-identifier>
</dhcp-binding>
</dhcp-binding-information>
```

Description Information about the address assigned to a Dynamic Host Configuration Protocol client

<dhcp-binding-information>

Usage

```
<dhcp-binding-information>
<dhcp-binding>....</dhcp-binding>
</dhcp-binding-information>
```

Description Information about the address assigned to each of one or more Dynamic Host Configuration Protocol clients

<dhcp-client>

Usage

```
<dhcp-client-information>
<dhcp-client>
  <logical-interface>
    logical-interface
  </logical-interface>
  <mac-address>
    mac-address
  </mac-address>
  <client-status>
    client-status
  </client-status>
  <vendor-identifier>
    vendor-identifier
  </vendor-identifier>
  <server-address>
    server-address
  </server-address>
  <address-obtained>
    address-obtained
  </address-obtained>
  <update-server>
    update-server
  </update-server>
  <lease-obtained>
```

```

        lease-obtained
      </lease-obtained>
      <lease-expires>
        lease-expires
      </lease-expires>
      <dhcp-option-table>....</dhcp-option-table>
    </dhcp-client>
  </dhcp-client-information>

```

Description Information about a DHCP client

<dhcp-client-information>

Usage

```

<dhcp-client-information>
  <dhcp-client>....</dhcp-client>
</dhcp-client-information>

```

Description Information about one or more Dynamic Host Configuration Protocol clients

<dhcp-client-statistics-information>

Usage

```

<dhcp-client-statistics-information>
  <dropped-client-packet-total>
    dropped-client-packet-total
  </dropped-client-packet-total>
  <dropped-client-packet-invalid-server-address>
    dropped-client-packet-invalid-server-address
  </dropped-client-packet-invalid-server-address>
  <dropped-client-packet-too-short>
    dropped-client-packet-too-short
  </dropped-client-packet-too-short>
  <dropped-client-packet-read-error>
    dropped-client-packet-read-error
  </dropped-client-packet-read-error>
  <dropped-client-packet-send-error>
    dropped-client-packet-send-error
  </dropped-client-packet-send-error>
  <message-client-table>....</message-client-table>
</dhcp-client-statistics-information>

```

Description Statistics from the Dynamic Host Configuration Protocol client

<dhcp-conflict>

Usage

```

<dhcp-conflict>
  <detection-time>
    detection-time
  </detection-time>

```

```
<detection-method>
  detection-method
</detection-method>
<conflict-address>
  conflict-address
</conflict-address>
</dhcp-conflict>
```

Description Information about a Dynamic Host Configuration Protocol conflict. A conflict arises when an address assigned to DHCP client is already assigned to another entity (computer or interface, for example).

<dhcp-conflict>

Usage

```
<dhcp-conflict-information>
  <dhcp-conflict>
    <detection-time>
      detection-time
    </detection-time>
    <detection-method>
      detection-method
    </detection-method>
    <conflict-address>
      conflict-address
    </conflict-address>
  </dhcp-conflict>
</dhcp-conflict-information>
```

Description Information about a Dynamic Host Configuration Protocol conflict. A conflict arises when an address assigned to DHCP client is already assigned to another entity (computer or interface, for example).

<dhcp-conflict-information>

Usage

```
<dhcp-conflict-information>
  <dhcp-conflict>....</dhcp-conflict>
</dhcp-conflict-information>
```

Description Information about one or more Dynamic Host Configuration Protocol conflicts.

<dhcp-global-information>

Usage

```
<dhcp-global-information>
  <dhcp-lease-time-information>....</dhcp-lease-time-information>
  <dhcp-option-table>....</dhcp-option-table>
  <bootp-lease-length>
    bootp-lease-length
  </bootp-lease-length>
```

```

    <bootp-lease-cutoff>
      bootp-lease-cutoff
    </bootp-lease-cutoff>
  </dhcp-global-information>

```

Description Information about Dynamic Host Configuration Protocol settings that are configured for the global scope

<dhcp-helper-statistics>

Usage

```

<dhcp-helper-statistics>
  <helper-statistics-service-information>....</helper-statistics-service-information>

</dhcp-helper-statistics>

```

Description Port forwarding helper statistics

<dhcp-lease-information>

Usage

```

<dhcp-lease-information>
  <dhcp-lease-type>
    dhcp-lease-type
  </dhcp-lease-type>
  <lease-start-time>
    lease-start-time
  </lease-start-time>
  <lease-end-time>
    lease-end-time
  </lease-end-time>
  <lease-state>
    lease-state
  </lease-state>
</dhcp-lease-information>

```

Description Information about an address assignment

<dhcp-lease-information>

Usage

```

<dhcp-binding-information>
  <dhcp-binding>
    <dhcp-lease-information>
      <dhcp-lease-type>
        dhcp-lease-type
      </dhcp-lease-type>
      <lease-start-time>
        lease-start-time
      </lease-start-time>
      <lease-end-time>

```

```
        lease-end-time
      </lease-end-time>
    <lease-state>
      lease-state
    </lease-state>
  </dhcp-lease-information>
</dhcp-binding>
</dhcp-binding-information>
```

Description Information about an address assignment

<dhcp-lease-time-information>

Usage

```
<dhcp-lease-time-information>
  <default-lease-time>
    default-lease-time
  </default-lease-time>
  <minimum-lease-time>
    minimum-lease-time
  </minimum-lease-time>
  <maximum-lease-time>
    maximum-lease-time
  </maximum-lease-time>
</dhcp-lease-time-information>
```

Description Information about configured default, maximum, and minimum duration for address assignments

<dhcp-lease-time-information>

Usage

```
<dhcp-pool-information>
  <dhcp-pool>
    <dhcp-lease-time-information>
      <default-lease-time>
        default-lease-time
      </default-lease-time>

        minimum-lease-time
      </minimum-lease-time>
      <maximum-lease-time>
        maximum-lease-time
      </maximum-lease-time>
    </dhcp-lease-time-information>
  </dhcp-pool>
</dhcp-pool-information>
```

Description Information about configured default, maximum, and minimum duration for address assignments

<dhcp-lease-time-information>

Usage

```

<dhcp-global-information>
  <dhcp-lease-time-information>
    <default-lease-time>
      default-lease-time
    </default-lease-time>
    <minimum-lease-time>
      minimum-lease-time

Description

CHAPTER 14

Operational Response Tag Elements Specific to M, MX, and T Series

This chapter lists the Extensible Markup Language (XML) tag elements in the Junos XML application programming interface (API) that contain operational information. The Junos XML protocol and NETCONF servers return them in response to requests from client applications.

The tags listed in this chapter are specific to devices belonging to the following platforms:

- M Series
- MX Series
- T Series

The tags are divided into the following sections and listed in alphabetical order within each section.

- Summary of DS-Lite Response Tags on page 6273
- Summary of DHCP Response Tags on page 6275
- Summary of Multicast and IGMP Snooping Response Tags on page 6286

CHAPTER 15

Operational Response Tag Elements Specific to EX Series and QFX Series

This chapter lists the Extensible Markup Language (XML) tag elements in the Junos XML application programming interface (API) that contain operational information. The Junos XML protocol and NETCONF servers return them in response to requests from client applications.

The tags listed in this chapter are specific to devices belonging to the following platforms:

- EX Series
- QFX Series

The tags are divided into the following sections and listed in alphabetical order within each section.

- Summary of Connectivity Fault Management Response Tags on page 6385
- Summary of Chassis Response Tags on page 6497
- Summary of 802.1X Process Response Tags on page 6674
- Summary of ESW Response Tags on page 6695
- Summary of Layer 2 Control Protocol Response Tags on page 6809
- Summary of sFLOW Response Tags on page 6867
- Summary of VCCP Response Tags on page 6869
- Summary of Uplink Failure Detection Information Response Tags on page 6942

Description

Operational Response Tag Elements Specific to J Series and SRX Series

This chapter lists the Extensible Markup Language (XML) tag elements in the Junos XML application programming interface (API) that contain operational information. The Junos XML protocol and NETCONF servers return them in response to requests from client applications.

The tags listed in this chapter are specific to devices belonging to the following platforms:

- J Series
- SRX Series

The tags are divided into the following sections and listed in alphabetical order within each section.

- Summary of Allowed System Services and Protocols Response Tags on page 6946
- Summary of ALG Response Tags on page 6951
- Summary of AVT Response Tags on page 6972
- Summary of DHCP Response Tags on page 6972
- Summary of 802.1X Process Response Tags on page 7011
- Summary of DS-Lite Response Tags on page 7032
- Summary of Dynamic VPN Response Tags on page 7034
- Summary of End-to-End Debug Response Tags on page 7037
- Summary of ESW Response Tags on page 7040
- Summary of sFlow Response Tags on page 7154
- Summary of Firewall Authentication Response Tags on page 7167
- Summary of GPRS Tunneling Protocol Response Tags on page 7173
- Summary of IDS Response Tags on page 7178
- Summary of IPSec Response Tags on page 7181
- Summary of ISDN Response Tags on page 7331
- Summary of Stateful Redundancy Response Tags on page 7342
- Summary of DNS Proxy Response Response Tags on page 7367

DTD for Accounting Response Tags

This chapter contains the Extensible Markup Language (XML) document type definition (DTD) called `junos-accounting.dtd`, which lists the Junos XML tags that contain information about Junos OS accounting. To review reference pages for the tags, see “Summary of Operational Response Tag Elements” on page 835.

CHAPTER 18

DTD for Adaptive Services Response Tags

This chapter contains the Extensible Markup Language (XML) document type definition (DTD) called `junos-adaptive-services.dtd`, which lists the Junos XML tags that contain information about Junos OS adaptive services. To review reference pages for the tags, see “Summary of Operational Response Tag Elements” on page 835.

CHAPTER 27

DTD for Chassis Response Tags

This chapter contains the Extensible Markup Language (XML) document type definition (DTD) called `junos-chassis.dtd`, which lists the Junos XML tags that contain information about chassis. To review reference pages for the tags, see “Summary of Operational Response Tag Elements” on page 835.

DTD for Interface Metadata Response Tags

This chapter contains the Extensible Markup Language (XML) document type definition (DTD) called `junos-interface-metadata.dtd`, which lists the Junos XML tags that contain information about Interface Metadata. To review reference pages for the tags, see “Summary of Operational Response Tag Elements” on page 835.

CHAPTER 45

DTD for IPSec Response Tags

This chapter contains the Extensible Markup Language (XML) document type definition (DTD) called `junos-ipsec.dtd`, which lists the Junos XML tags that contain information about IPSec. To review reference pages for the tags, see “Summary of Operational Response Tag Elements” on page 835.

DTD for IPv6 Neighbor Discovery Response Tags

This chapter contains the Extensible Markup Language (XML) document type definition (DTD) called `junos-ipv6-nd.dtd`, which lists the Junos XML tags that contain information about IPv6 Neighbor Discovery. To review reference pages for the tags, see “Summary of Operational Response Tag Elements” on page 835.

DTD for JNX Example Response Tags

This chapter contains the Extensible Markup Language (XML) document type definition (DTD) called `junos-jnx-example.dtd`, which lists the Junos XML tags that contain information about JNX example. To review reference pages for the tags, see “Summary of Operational Response Tag Elements” on page 835.

CHAPTER 50

DTD for L2CP Response Tags

This chapter contains the Extensible Markup Language (XML) document type definition (DTD) called `junos-l2cp.dtd`, which lists the Junos XML tags that contain information about L2CP. To review reference pages for the tags, see “Summary of Operational Response Tag Elements” on page 835.
