<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Ethernet Alarm Indication Signal (ETH-AIS) Function Overview on page 748</a></li> <li>• <a href="#">Configuring ETH-AIS on a CFM MEP on page 752</a></li> </ul>

## priority (OAM Connectivity-Fault Management)

<b>Syntax</b>	<code>priority number;</code>
<b>Hierarchy Level</b>	[edit protocols <b>oam ethernet connectivity-fault-management maintenance-domain</b> <i>md-name</i> <b>maintenance-association</b> <i>ma-name</i> <b>mep</b> <i>mep-id</i> ] For EX Series Switches: [edit protocols oam ethernet connectivity-fault-management maintenance-domain <i>domain-name</i> maintenance-association <i>ma-name</i> mep <i>mep-id</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.4.
<b>Description</b>	IEEE 802.1p priority bits used by the continuity check messages.
<b>Options</b>	<b>number</b> —Configure the IEEE 802.1p priority bits to be used in the VLAN header of the CFM packets. <b>Range:</b> 0 through 7
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring a MEP to Generate and Respond to CFM Protocol Messages on page 585</a></li> </ul>

## protocol (Server MEP)

---

<b>Syntax</b>	<code>protocol (l2circuit   l2vpn   ethernet) {     interface <i>interface-name</i>; }</code>
<b>Hierarchy Level</b>	[edit protocols oam ethernet connectivity-fault-management]
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2.
<b>Description</b>	Configure the protocol as Layer 2 circuit, Layer 2 VPN, or Ethernet and associate the interface to the protocol that needs to be monitored for ETH-AIS.
<b>Options</b>	<p><b>l2circuit</b>—Configure the protocol for the server MEP as Layer 2 circuit.</p> <p><b>l2vpn</b>—Configure the protocol for the server MEP as Layer 2 VPN.</p> <p><b>ethernet</b>—Configure the protocol for the server MEP as Ethernet.</p> <p><b>interface <i>interface-name</i></b>—The interface that is to be associated with the protocol that needs monitoring for ETH-AIS.</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Ethernet Alarm Indication Signal (ETH-AIS) Function Overview on page 748</a></li><li>• <a href="#">Configuring ETH-AIS on a CFM MEP on page 752</a></li></ul>

## protect-maintenance-association (OAM)

---

<b>Syntax</b>	<code>protect-maintenance-association <i>protect-ma-name</i>;</code>
<b>Hierarchy Level</b>	[edit protocols oam ethernet connectivity-fault-management maintenance-domain <i>domain-name</i> maintenance-association <i>ma-name</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 11.4
<b>Description</b>	Configure the name of the protect transport path for the maintenance-association.
<b>Options</b>	<p><b><i>protect-ma-name</i></b>—The name of the protect transport path.</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring a MEP to Generate and Respond to CFM Protocol Messages on page 585</a></li></ul>

## receive-ais

---

<b>Syntax</b>	receive-ais;
<b>Hierarchy Level</b>	[edit protocols oam ethernet connectivity-fault-management action-profile <i>action-profile-name</i> event ais-trigger-condition]
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2.
<b>Description</b>	Send a message to the peer MEPs when an AIS message is received by a peer MEP at its own maintenance level.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Ethernet Alarm Indication Signal (ETH-AIS) Function Overview on page 748</a></li> <li>• <a href="#">Configuring ETH-AIS on a CFM MEP on page 752</a></li> </ul>

## remote-maintenance-association (OAM)

---

<b>Syntax</b>	remote-maintenance-association <i>remote-ma-name</i> ;
<b>Hierarchy Level</b>	[edit protocols <a href="#">oam</a> <a href="#">ethernet connectivity-fault-management maintenance-domain</a> <i>domain-name</i> <a href="#">maintenance-association</a> <i>ma-name</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 11.4.
<b>Description</b>	Configure the name of the remote maintenance association.
<b>Options</b>	<i>remote-ma-name</i> —Name of the remote maintenance association.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring a MEP to Generate and Respond to CFM Protocol Messages on page 585</a></li> </ul>

## remote-mep

---

<b>Syntax</b>	<pre>remote-mep mep-id {   action-profile profile-name;   sla-iterator-profile profile-name {     data-tlv-size size;     iteration-count count-value;     priority priority-value;   }   detect-loc; }</pre>
<b>Hierarchy Level</b>	[edit protocols <a href="#">oam ethernet connectivity-fault-management maintenance-domain md-name maintenance-association ma-name mep mep-id</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.4.
<b>Description</b>	Configure the numeric identifier of the remote maintenance association end point (MEP) within the maintenance association.
<b>Options</b>	<p><b>mep-id</b>—Numeric identifier of the MEP.</p> <p><b>Range:</b> 1 through 8191</p> <p>The remaining statements are explained separately.</p>
<b>Required Privilege Level</b>	<p>Configure—To enter configuration mode.</p> <p>Control—To modify any configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring a MEP to Generate and Respond to CFM Protocol Messages on page 585</a></li><li>• <a href="#">detect-loc on page 927</a></li></ul>

## short-name-format

<b>Syntax</b>	short-name-format (character-string   vlan   2octet   rfc-2685-vpn-id);
<b>Hierarchy Level</b>	[edit protocols oam ethernet connectivity-fault-management maintenance-domain domain-name <b>maintenance-association</b> ma-name]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.4. Statement introduced in Junos OS Release 12.1X48 for PTX Series Packet Transport Routers.
<b>Description</b>	Specify the name format of the maintenance association name.
<b>Options</b>	<p><b>character-string</b>—The name is an ASCII character string.</p> <p><b>vlan</b>—The primary VLAN identifier.</p> <p><b>2octet</b>—A number in the range 0 through 65,535.</p> <p><b>rfc-2685-vpn-id</b>—A VPN identifier that complies with RFC 2685.</p> <p><b>Default:</b> character-string</p>

**NOTE:** The PTX Series Packet Transport Routers support the vlan and 2octet options only.

<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Creating a Maintenance Association on page 582</a></li> <li>• <a href="#">Configuring Ethernet 802.1ag OAM on PTX Series Packet Transport Routers</a></li> </ul>

## sla-iterator-profile

---

<b>Syntax</b>	<code>sla-iterator-profile <i>profile-name</i> {     <b>data-tlv-size</b> <i>size</i>;     <b>iteration-count</b> <i>count-value</i>;     <b>priority</b> <i>priority-value</i>; }</code>
<b>Hierarchy Level</b>	[edit protocols <b>oam ethernet connectivity-fault-management maintenance-domain</b> <i>md-name</i> <b>maintenance-association</b> <i>ma-name</i> <b>mep</b> <i>mep-id</i> <b>remote-mep</b> <i>remote-mep-id</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 11.1.
<b>Description</b>	Configure a remote MEP with an iterator profile and specify the options.
<b>Options</b>	<b>profile-name</b> —Name of the iterator profile configured for a remote MEP. For more information about configuring a remote MEP with an iterator profile, see <a href="#">“Configuring a Remote MEP with an Iterator Profile” on page 716</a> .  The remaining statements are explained separately.
<b>Required Privilege Level</b>	Configure—To enter configuration mode. Control—To modify any configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring an Iterator Profile on page 706</a></li><li>• <a href="#">Configuring a Remote MEP with an Iterator Profile on page 716</a></li><li>• <a href="#">Verifying the Configuration of an Iterator Profile on page 708</a></li><li>• <a href="#">Managing Iterator Statistics on page 711</a></li><li>• <a href="#">sla-iterator-profiles on page 959</a></li></ul>

## sla-iterator-profiles

<b>Syntax</b>	<pre>sla-iterator-profiles {   profile-name {     avg-fd-twoway-threshold;     avg-ifdv-twoway-threshold;     avg-flr-forward-threshold;     avg-flr-backward-threshold;     calculation-weight {       delay delay-weight;       delay-variation delay-variation-weight;     }     cycle-time milliseconds;     iteration-period iteration-period-value;     measurement-type (loss   statistical-frame-loss   two-way-delay);   } }</pre>
<b>Hierarchy Level</b>	[edit protocols <a href="#">oam ethernet connectivity-fault-management performance-monitoring</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 11.1.
<b>Description</b>	Configure an iterator application and specify the iterator profile options.
<b>Options</b>	<p><b>profile-name</b>—Name of the iterator profile. For more information about configuring the iterator profile, see <a href="#">“Configuring an Iterator Profile” on page 706</a>.</p> <p>The remaining statements are explained separately.</p>
<b>Required Privilege Level</b>	<p>Configure—To enter configuration mode.</p> <p>Control—To modify any configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring an Iterator Profile on page 706</a></li> <li>• <a href="#">Configuring a Remote MEP with an Iterator Profile on page 716</a></li> <li>• <a href="#">Verifying the Configuration of an Iterator Profile on page 708</a></li> <li>• <a href="#">Managing Iterator Statistics on page 711</a></li> </ul>

## 802.3ad

Syntax	<pre>802.3ad {     ae <i>interface-number</i> (primary   backup);     lacp {         port-priority;     } }</pre>
Hierarchy Level	[edit interfaces <i>interface-name</i> <a href="#">fastether-options</a> ], [edit interfaces <i>interface-name</i> <a href="#">gigether-options</a> ]
Release Information	Statement introduced before Junos OS Release 7.4. <b>primary</b> and <b>backup</b> options added in Junos OS Release 8.3.
Description	Specify aggregated Ethernet logical interface number.
Options	<b>ae <i>interface-number</i></b> —Aggregated Ethernet logical interface number. <b>Range:</b> 0 through 15  <b>primary</b> —For link protection configurations, specify the primary link for egress traffic. <b>backup</b> —For link protection configurations, specify the backup link for egress traffic.
Required Privilege Level	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
Related Documentation	<ul style="list-style-type: none"><li>• <a href="#">Configuring an Aggregated Ethernet Interface on page 141</a></li><li>• <a href="#">Configuring Aggregated Ethernet Link Protection on page 172</a></li></ul>

## accept-source-mac

<b>Syntax</b>	<pre> accept-source-mac {   mac-address mac-address {     policer {       input cos-policer-name;       output cos-policer-name;     }   } } </pre>
<b>Hierarchy Level</b>	<p>[edit interfaces <i>interface-name</i> <b>unit</b> <i>logical-unit-number</i>],  [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> <b>unit</b> <i>logical-unit-number</i>]</p>
<b>Release Information</b>	<p>Statement introduced before Junos OS Release 7.4.  Statement introduced in Junos OS Release 12.1X48 for PTX Packet Transport Routers.  Statement introduced in Junos OS Release 13.2 for the QFX Series.</p>
<b>Description</b>	<p>For Gigabit Ethernet intelligent queuing (IQ) interfaces only, accept traffic from and to the specified remote media access control (MAC) address.</p> <p>The <b>accept-source-mac</b> statement is equivalent to the <b>source-address-filter</b> statement, which is valid for aggregated Ethernet, Fast Ethernet, and Gigabit Ethernet interfaces only. To allow the interface to receive packets from specific MAC addresses, include the <b>accept-source-mac</b> statement.</p> <p>On untagged Gigabit Ethernet interfaces, you should not configure the <b>source-address-filter</b> statement and the <b>accept-source-mac</b> statement simultaneously. On tagged Gigabit Ethernet interfaces, you should not configure the <b>source-address-filter</b> statement and the <b>accept-source-mac</b> statement with an identical MAC address specified in both filters.</p> <p>The statements are explained separately.</p>
	<p> <b>NOTE:</b> The <b>policer</b> statement is not supported on PTX Series Packet Transport Routers.</p>
	<p> <b>NOTE:</b> On QFX platforms, if you configure source MAC addresses for an interface using the <i>static-mac</i> or <i>persistent-learning</i> statements and later configure a different MAC address for the same interface using the <b>accept-source-mac</b> statement, the MAC addresses that you previously configured for the interface remain in the ethernet-switching table and can still be used to send packets to the interface.</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.  interface-control—To add this statement to the configuration.</p>

## access-concentrator

<b>Syntax</b>	<code>access-concentrator <i>name</i>;</code>
<b>Hierarchy Level</b>	<p>[edit dynamic-profiles <i>profile-name</i> interfaces demux0 unit <i>logical-unit-number</i> family pppoe],</p> <p>[edit dynamic-profiles <i>profile-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> family pppoe],</p> <p>[edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <b>family</b> pppoe],</p> <p>[edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <b>pppoe-options</b>],</p> <p>[edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <b>pppoe-underlying-options</b>],</p> <p>[edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <b>family</b> pppoe],</p> <p>[edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <b>pppoe-options</b>],</p> <p>[edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <b>pppoe-underlying-options</b>]</p>
<b>Release Information</b>	<p>Statement introduced before Junos OS Release 7.4.</p> <p>Support at the [edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <b>pppoe-underlying-options</b>] and [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <b>pppoe-underlying-options</b>] hierarchy levels introduced in Junos OS Release 10.1.</p> <p>Support at the [edit ... <b>family pppoe</b>] hierarchies introduced in Junos OS Release 11.2.</p>
<b>Description</b>	Configure an alternative access concentrator name in the AC-NAME tag in a PPPoE control packet for use with a dynamic PPPoE subscriber interface. If you do not configure the access concentrator name, the AC-NAME tag contains the system name.

**NOTE:** The [edit ... **family pppoe**] hierarchies are supported only on MX Series routers with MPCs.

<b>Options</b>	<i>name</i> —Name of the access concentrator.
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Identifying the Access Concentrator on page 351</a></li> <li>• <a href="#">Configuring the PPPoE Family for an Underlying Interface</a></li> <li>• <a href="#">Configuring Dynamic PPPoE Subscriber Interfaces</a></li> <li>• <a href="#">PPPoE Overview on page 348</a></li> </ul>

## account-layer2-overhead (PIC Level)

---

<b>Syntax</b>	account-layer2-overhead;
<b>Hierarchy Level</b>	[edit chassis fpc <i>slot-number</i> pic <i>pic-number</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 13.2.
<b>Description</b>	Enable the automatic adjustment of Layer 2 overhead in bytes, which is the octet adjustment per packet, based on the encapsulation on the logical interface for the total octet count for ingress and egress traffic on all the interfaces in the PIC.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Accounting of the Layer 2 Overhead Attribute in Interface Statistics on page 511</a></li> <li>• <a href="#">Configuring Layer 2 Overhead Accounting in Interface Statistics on page 514</a></li> <li>• <a href="#">Verifying the Accounting of Layer 2 Overhead in Interface Statistics on page 515</a></li> </ul>

## action (OAM)

---

<b>Syntax</b>	<pre> action {   link-down;   send-critical-event;   syslog; } </pre>
<b>Hierarchy Level</b>	[edit protocols <a href="#">oam ethernet link-fault-management action-profile</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.5.
<b>Description</b>	Define the action or actions to be taken when the OAM fault event occurs.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Specifying the Actions to Be Taken for Link-Fault Management Events on page 659</a></li> </ul>

## action-profile (Defining for LFM)

---

<b>Syntax</b>	<pre>action-profile <i>profile-name</i> {     action {         link-down;         send-critical-event;         syslog;     }     event {         link-adjacency-loss;         link-event-rate {             frame-error <i>count</i>;             frame-period <i>count</i>;             frame-period-summary <i>count</i>;             symbol-period <i>count</i>;         }         protocol-down;     } }</pre>
<b>Hierarchy Level</b>	[edit protocols <a href="#">oam ethernet link-fault-management</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.5.
<b>Description</b>	Configure a name, one or more actions, and the events that trigger the action for an action profile.
<b>Options</b>	<p><i>profile-name</i>—Name of the action profile.</p> <p>The remaining statements are explained separately.</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring an OAM Action Profile on page 657</a></li></ul>

## adaptive

<b>Syntax</b>	<pre>adaptive {   pps;   scan-interval <i>multiple</i>;   tolerance <i>tolerance-percentage</i>; }</pre>
<b>Hierarchy Level</b>	[edit interfaces aex aggregated-ether-options load-balance]
<b>Release Information</b>	<p>Statement introduced in Junos OS Release 13.2R3 for MX Series Routers.</p> <p>Statement introduced in Junos OS Release 14.1 for PTX Series Packet Transport Routers.</p> <p>Statement introduced in Junos OS Release 15.1X53-D10 for the QFX Series.</p>
<b>Description</b>	Correct a genuine traffic imbalance by using a feedback mechanism to distribute the traffic across the links of an aggregated Ethernet bundle.
<b>Options</b>	<p><b>pps</b>—(PTX Series only) The type of traffic rate among the members of the AE bundle is measured packets per second. The default rate type is bytes per second.</p> <p><b>scan-interval <i>multiple</i></b>—(PTX Series only) Scan interval, as a multiple of a 30-second interval.</p> <p><b>Range:</b> 1 through 5</p> <p><b>Default:</b> 1</p> <p><b>tolerance <i>tolerance-percentage</i></b>—(MX Series and PTX Series) Limit to the variance in the packet traffic flow to the aggregated Ethernet links in a percentage.</p> <p><b>Range:</b> 1 through 100 percent</p> <p><b>Default:</b> 20 percent</p>
<b>Required Privilege Level</b>	<p>interface - To view this statement in the configuration.</p> <p>interface-control - To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Understanding Aggregated Ethernet Load Balancing on page 182</a></li> <li>• <a href="#">Example: Configuring Aggregated Ethernet Load Balancing on page 187</a></li> </ul>

## address

```

        }
        virtual-address [ addresses ];
    }
}

```

**Hierarchy Level** [edit interfaces *interface-name* unit *logical-unit-number* family *family*],

[edit logical-systems *logical-system-name* interfaces *interface-name* unit *logical-unit-number* family *family*]

**Release Information** Statement introduced before Junos OS Release 7.4.  
Statement introduced in Junos OS Release 11.1 for the QFX Series.

**Description** Configure the interface address.

**Options** *address*—Address of the interface.

- In Junos OS Release 13.3 and later, when you configure an IPv6 host address and an IPv6 subnet address on an interface, the commit operation fails.
- In releases earlier than Junos OS Release 13.3, when you use the same configuration on an interface, the commit operation succeeds, but only one of the IPv6 addresses that was entered is assigned to the interface. The other address is not applied.

**NOTE:** If you configure the same address on multiple interfaces in the same routing instance, Junos OS uses only the first configuration, and the remaining address configurations are ignored and can leave interfaces without an address. Interfaces that do not have an assigned address cannot be used as a donor interface for an unnumbered Ethernet interface.

For example, in the following configuration the address configuration of interface xe-0/0/1.0 is ignored:

```
interfaces {
  xe-0/0/0 {
    unit 0 {
      family inet {
        address 192.168.1.1/8;
      }
    }
  }
  xe-0/0/1 {
    unit 0 {
      family inet {
        address 192.168.1.1/8;
      }
    }
  }
}
```

For more information on configuring the same address on multiple interfaces, see *Configuring the Interface Address*.

The remaining statements are explained separately.

**NOTE:** The edit logical-systems hierarchy is not available on QFabric systems.

**Required Privilege Level** interface—To view this statement in the configuration.  
interface-control—To add this statement to the configuration.

- [Configuring ETH-AIS on a CFM MEP on page 752](#)

## advertisement-interval

<b>Syntax</b>	<code>advertisement-interval seconds;</code>
<b>Hierarchy Level</b>	[edit protocols <a href="#">lldp</a> ], [edit routing-instances <i>routing-instance-name</i> protocols <a href="#">lldp</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.6 for MX Series and T Series routers. Statement introduced in Junos OS Release 9.0 for EX Series switches. Statement introduced in Junos OS Release 14.1X53-D20 for OCX Series switches. Statement introduced in Junos OS Release 11.1 for the QFX Series. Statement introduced in Junos OS Release 14.1X53-D20 for OCX Series switches.
<b>Description</b>	<p>Configure an interval for LLDP advertisement.</p> <p>For switches configured for Link Layer Discovery Protocol, configure the frequency at which LLDP advertisements are sent.</p> <p>The <b>advertisement-interval</b> value must be greater than or equal to four times the <b>transmit-delay</b> value, or an error will be returned when you attempt to commit the configuration.</p>
	<div>  <p><b>NOTE:</b> The default value of <b>transmit-delay</b> is 2 seconds. If you configure the <b>advertisement-interval</b> as less than 8 seconds and you do not configure a value for <b>transmit-delay</b>, the default value of <b>transmit-delay</b> is automatically changed to 1 second in order to satisfy the requirement that the <b>advertisement-interval</b> value must be greater than or equal to four times the <b>transmit-delay</b> value.</p> </div>
<b>Default</b>	Disabled.
<b>Options</b>	<p><b>seconds</b>—Interval between LLDP advertisement.</p> <p><b>Default:</b> 30</p> <p><b>Range:</b> 5 through 32768</p>
<b>Required Privilege Level</b>	<p>routing—To view this statement in the configuration.</p> <p>routing-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring LLDP on page 336</a></li> <li>• <code>show lldp</code></li> <li>• <a href="#">Configuring LLDP (CLI Procedure)</a></li> <li>• <a href="#">Understanding LLDP and LLDP-MED on EX Series Switches</a></li> <li>• <code>transmit-delay</code></li> <li>• <a href="#">Understanding LLDP</a></li> </ul>

## age

---

<b>Syntax</b>	age (30m   10m   1m   30s   10s);
<b>Hierarchy Level</b>	[edit protocols <a href="#">oam ethernet connectivity-fault-management linktrace</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.5.
<b>Description</b>	Time to wait (in minutes or seconds) for a response. If no response is received, the request and response entry is deleted from the linktrace database.
<b>Default</b>	10 minutes
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring Linktrace Protocol in CFM on page 594</a></li></ul>

## agent-specifier

<b>Syntax</b>	<pre> agent-specifier {     aci <i>circuit-id-string</i> ari <i>remote-id-string</i> {         drop;         delay <i>seconds</i>;         terminate;         dynamic-profile <i>profile-name</i>;         routing-instance <i>routing-instance-name</i>;         static-interface <i>interface-name</i>;     } } </pre>
<b>Hierarchy Level</b>	[edit protocols pppoe service-name-tables <i>table-name</i> <b>service</b> <i>service-name</i> ]
<b>Release Information</b>	<p>Statement introduced in Junos OS Release 10.0.</p> <p><b>drop</b>, <b>delay</b>, <b>terminate</b>, <b>dynamic-profile</b>, <b>routing-instance</b>, and <b>static-interface</b> options introduced in Junos OS Release 10.2.</p>
<b>Description</b>	<p>Specify the action taken by the interface for the specified agent circuit identifier/agent remote identifier (ACI/ARI) pair when the interface receives a PPPoE Active Discovery Initiation (PADI) control packet that includes the vendor-specific tag with ACI/ARI pair information. You can configure an ACI/ARI pair for a named service, <b>empty</b> service, or <b>any</b> service in a PPPoE service name table. A maximum of 8000 ACI/ARI pairs are supported per PPPoE service name table. You can distribute the ACI/ARI pairs in any combination among the named, <b>empty</b>, and <b>any</b> service entries in the service name table.</p> <p>You can use an asterisk (*) as a wildcard character to match ACI/ARI pairs, the ACI alone, or the ARI alone. The asterisk can be placed only at the beginning, the end, or both the beginning and end of the identifier string. You can also specify an asterisk alone for either the ACI or the ARI. You cannot specify only an asterisk for both the ACI and the ARI. When you specify a single asterisk as the identifier, that identifier is ignored in the PADI packet.</p> <p>For example, suppose you care about matching only the ACI and do not care what value the ARI has in the PADI packet, or even whether the packet contains an ARI value. In this case you can set the <b>remote-id-string</b> to a single asterisk. Then the interface ignores the ARI received in the packet and the interface takes action based only on matching the specified ACI.</p>
<b>Default</b>	The default action is terminate.
<b>Options</b>	<p><b>aci <i>circuit-id-string</i></b>—Identifier for the agent circuit ID that corresponds to the DSLAM interface that initiated the service request. This is a string of up to 63 characters.</p> <p><b>ari <i>remote-id-string</i></b>—Identifier for the subscriber associated with the DSLAM interface that initiated the service request. This is a string of up to 63 characters.</p> <p>The remaining statements are explained separately.</p>

<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Configuring PPPoE Service Name Tables</i></li><li>• <i>Assigning an ACI/ARI Pair to a Service Name and Configuring the Action Taken When the Client Request Includes ACI/ARI Information</i></li></ul>

---

## aggregate (Gigabit Ethernet CoS Policer)

---

<b>Syntax</b>	<pre>aggregate {     bandwidth-limit <i>bps</i>;     burst-size-limit <i>bytes</i>; }</pre>
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> gigether-options <a href="#">ethernet-switch-profile ethernet-policer-profile policer cos-policer-name</a> ]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4.
<b>Description</b>	Define a policer to apply to nonpremium traffic.  The statements are explained separately.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.

## apply-action-profile

---

<b>Syntax</b>	<code>apply-action-profile <i>profile-name</i>;</code>
<b>Hierarchy Level</b>	[edit protocols <a href="#">oam ethernet link-fault-management interface</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.5.
<b>Description</b>	Apply the specified action profile to the interface for link-fault management.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Applying an Action Profile on page 663</a></li></ul>

## arp (Interfaces)

**Syntax** `arp ip-address (mac | multicast-mac) mac-address publish;`

**Hierarchy Level** [edit interfaces *interface-name* unit *logical-unit-number* family inet address *address*],  
[edit logical-systems *logical-system-name* interfaces *interface-name* unit *logical-unit-number* family inet address *address*]

**NOTE:** The edit logical-systems hierarchy is not available on QFabric systems.

**Release Information** Statement introduced before Junos OS Release 7.4.  
Statement introduced in Junos OS Release 9.0 for EX Series switches.  
Statement introduced in Junos OS Release 11.1 for the QFX Series.

**Description** For Ethernet, Fast Ethernet, and Gigabit Ethernet interfaces only, configure Address Resolution Protocol (ARP) table entries, mapping IP addresses to MAC addresses.

**NOTE:** By default, an ARP policer is installed that is shared among all the Ethernet interfaces on which you have configured the family inet statement. By including the arp statement at the [edit interfaces *interface-name* unit *logical-unit-number* family inet policer] hierarchy level, you can apply a specific ARP-packet policer to an interface. This feature is not available on EX Series switches.

When you need to conserve IP addresses, you can configure an Ethernet interface to be unnumbered by including the unnumbered-address statement at the [edit interfaces *interface-name* unit *logical-unit-number* family inet] hierarchy level.

**Options** *ip-address*—IP address to map to the MAC address. The IP address specified must be part of the subnet defined in the enclosing **address** statement.

**mac** *mac-address*—MAC address to map to the IP address. Specify the MAC address as six hexadecimal bytes in one of the following formats: *nnnn.nnnn.nnnn* or *nn:nn:nn:nn:nn:nn*. For example, **0000.5e00.5355** or **00:00:5e:00:53:55**.

**multicast-mac** *mac-address*—Multicast MAC address to map to the IP address. Specify the multicast MAC address as six hexadecimal bytes in one of the following formats: *nnnn.nnnn.nnnn* or *nn:nn:nn:nn:nn:nn*. For example, **0000.5e00.5355** or **00:00:5e:00:53:55**.

**publish**—(Optional) Have the router or switch reply to ARP requests for the specified IP address. If you omit this option, the router or switch uses the entry to reach the destination but does not reply to ARP requests.

**NOTE:** For unicast MAC addresses only, if you include the `publish` option, the router or switch replies to proxy ARP requests.

---

<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring Static ARP Table Entries For Mapping IP Addresses to MAC Addresses on page 368</a></li></ul>

---

## asynchronous-notification

---

<b>Syntax</b>	(asynchronous-notification   no-asynchronous-notification);
<b>Hierarchy Level</b>	[edit interfaces <i>ge-fpc/pic/port</i> gigether-options ]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.3. Statement introduced in Junos OS Release 12.2 for ACX Series Universal Access Routers.
<b>Description</b>	<p>(MX Series routers, T Series routers) For all Gigabit Ethernet interfaces (1-Gigabit, 10-Gigabit, and 100-Gigabit), configure support for notification of link down alarm generation and transfer.</p> <p>(M120 and M320 routers) For all 10-Gigabit Ethernet PIC interfaces, configure support for notification of link down alarm generation and transfer.</p> <ul style="list-style-type: none"><li>• <b>asynchronous-notification</b>—Support notification of link down alarm generation and transfer.</li><li>• <b>no-asynchronous-notification</b>—Prohibit notification of link down alarm generation and transfer.</li></ul>
<b>Default</b>	Support for notification of link down alarm generation and transfer is not enabled.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Gigabit Ethernet Notification of Link Down Alarm Overview on page 413</a></li><li>• <a href="#">Configuring Gigabit Ethernet Notification of Link Down Alarm on page 414</a></li></ul>

## authentication-access-control (MX Series in Enhanced LAN Mode)

```

Syntax authentication-access-control {

            guest-vlan (vlan-id | vlan-name);
            mac-radius {
                flap-on-disconnect;
                restrict;
            }
            maximum-requests number;
            no-reauthentication;
            server-fail (deny | permit | use-cache | vlan-id | vlan-name);
            server-reject-vlan (vlan-id | vlan-name) {
                eapol-block;
                block-interval block-interval;
            }
            supplicant-timeout seconds;
            transmit-period seconds;
        }
    }
    (captive-portal | no-captive-portal);
}

```

**Hierarchy Level** [edit protocols]

**Release Information** Statement introduced in Junos OS Release 14.2 for MX240, MX480, and MX960 routers in enhanced LAN mode.

**Description** Configure an authenticator for 802.1X and captive-portal authentication.

The statements are explained separately.

**NOTE:** You cannot configure 802.1X user authentication on interfaces that have been enabled for Q-in-Q tunneling.

---

**Default** No static MAC address or VLAN is configured.

**Required Privilege** routing—To view this statement in the configuration.

**Level** routing-control—To add this statement to the configuration.

---

## authentication-profile-name

---

**Syntax** authentication-profile-name *access-profile-name*;

**Hierarchy Level** [edit protocols dot1x [authenticator](#)]

**Release Information** Statement introduced in Junos OS Release 9.3.

**Description** Specify the RADIUS authentication profile to use for user authentication when establishing an IEEE 802.1x Port-Based Network Access Control (**dot1x**) connection.

**Required Privilege** interface—To view this statement in the configuration.

**Level** interface control—To add this statement to the configuration.

## authenticator

<b>Syntax</b>	<pre> authenticator {   authentication-profile-name <i>access-profile-name</i>;   interface <i>interface-id</i> {     maximum-requests <i>integer</i>;     quiet-period <i>seconds</i>;     reauthentication (disable   interval <i>seconds</i>);     retries <i>integer</i>;     server-timeout <i>seconds</i>;     supplicant (<i>single</i>);     supplicant-timeout <i>seconds</i>;     transmit-period <i>seconds</i>;   } } </pre>
<b>Hierarchy Level</b>	[edit protocols dot1x]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.3.
<b>Description</b>	Specify an authentication profile for user or client authentication and configure the Ethernet interface for 802.1x protocol operation.
<b>Options</b>	<p><b>authentication-profile-name <i>access-profile-name</i></b>—Specifies the RADIUS authentication profile for user or client authentication.</p> <p>The remaining statements are explained separately.</p>
<b>Required Privilege Level</b>	<p>protocols—To view this statement in the configuration.</p> <p>protocols-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">IEEE 802.1x Port-Based Network Access Control Overview on page 33</a></li> <li>• <a href="#">authentication-profile-name on page 990</a></li> <li>• <a href="#">dot1x on page 1022</a></li> </ul>

## auto-negotiation

<b>Syntax</b>	(auto-negotiation   no-auto-negotiation) <remote-fault (local-interface-online   local-interface-offline) >;
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> ether-options], [edit interfaces <i>interface-name</i> <i>gigether-options</i> ], [edit interfaces <i>ge-pim</i> /0/0 <i>switch-options</i> <i>switch-port</i> <i>port-number</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 7.6. Statement introduced in Junos OS Release 9.0 for EX Series switches. Statement introduced in Junos OS Release 12.2 for ACX Series Universal Access Routers.
<b>Description</b>	For Gigabit Ethernet interfaces on M Series, MX Series, T Series, TX Matrix routers, and ACX Series routers explicitly enable autonegotiation and remote fault. For EX Series switches, explicitly enable autonegotiation only.

- **auto-negotiation**—Enables autonegotiation. This is the default.
- **no-auto-negotiation**—Disable autonegotiation. When autonegotiation is disabled, you must explicitly configure the link mode and speed.

When you configure Tri-Rate Ethernet copper interfaces to operate at 1 Gbps, autonegotiation must be enabled.

**NOTE:** On EX Series switches, an interface configuration that disables autonegotiation and manually sets the link speed to 1 Gbps is accepted when you commit the configuration; however, if the interface you are configuring is a Tri-Rate Ethernet copper interface, the configuration is ignored as invalid and autonegotiation is enabled by default.

To correct the invalid configuration and disable autonegotiation:

1. Delete the **no-auto-negotiation** statement and commit the configuration.
2. Set the link speed to 10 or 100 Mbps, set **no-auto-negotiation**, and commit the configuration.

On EX Series switches, if the link speed and duplex mode are also configured, the interfaces use the values configured as the desired values in the negotiation. If autonegotiation is disabled, the link speed and link mode must be configured.

**NOTE:** On T4000 routers, the **auto-negotiation** command is ignored for interfaces other than Gigabit Ethernet.

<b>Default</b>	Autonegotiation is automatically enabled. No explicit action is taken after the autonegotiation is complete or if the negotiation fails.
<b>Options</b>	<b>remote-fault (local-interface-online   local-interface-offline)</b> —(Optional) For M Series, MX Series, T Series, TX Matrix routers, and ACX Series routers only, manually configure remote fault on an interface. <b>Default:</b> local-interface-online
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Gigabit Ethernet Autonegotiation Overview on page 529</a></li> <li>• <a href="#">Configuring Gigabit Ethernet Interfaces (CLI Procedure)</a></li> <li>• <a href="#">Configuring Gigabit Ethernet Interfaces (CLI Procedure)</a></li> </ul>

## auto-reconnect

<b>Syntax</b>	auto-reconnect <i>seconds</i> ;
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <b>pppoe-options</b> ], [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> <b>unit</b> <i>logical-unit-number</i> <b>pppoe-options</b> ]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4.
<b>Description</b>	PPP over Ethernet interfaces, configure the amount of time to wait before reconnecting after a session has terminated.
<b>Options</b>	<b>seconds</b> —Time to wait before reconnecting after a session has terminated. <b>Range:</b> 0 through 4,294,967,295 seconds <b>Default:</b> 0 (immediately)
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring the PPPoE Automatic Reconnect Wait Timer on page 351</a></li> <li>• <a href="#">Junos OS Interfaces and Routing Configuration Guide</a></li> </ul>

## bandwidth-limit (Policer for Gigabit Ethernet Interfaces)

---

<b>Syntax</b>	<code>bandwidth-limit <i>bps</i>;</code>
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> <i>gigether-options</i> <a href="#">ethernet-switch-profile ethernet-policer-profile</a> <i>policer cos-policer-name aggregate</i> ], [edit interfaces <i>interface-name</i> <i>gigether-options</i> <a href="#">ethernet-switch-profile ethernet-policer-profile</a> <i>policer cos-policer-name premium</i> ]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4.
<b>Description</b>	Define a policer to apply to nonpremium traffic.
<b>Options</b>	<b><i>bps</i></b> —Bandwidth limit, in bits per second. Specify either as a complete decimal number or as a decimal number followed by the abbreviation <b>k</b> (1000), <b>m</b> (1,000,000), or <b>g</b> (1,000,000,000).  <b>Range:</b> 32 Kbps through 32 gigabits per second (Gbps). For IQ2 and IQ2-E interfaces 65,536 bps through 1 Gbps. For 10-Gigabit IQ2 and IQ2-E interfaces 65,536 bps through 10 Gbps.
<b>Required Privilege Level</b>	<b>interface</b> —To view this statement in the configuration. <b>interface-control</b> —To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring Gigabit Ethernet Policers on page 517</a></li><li>• <a href="#">burst-size-limit (Policer for Gigabit Ethernet Interfaces) on page 1000</a></li></ul>

## bridge-domain

---

<b>Syntax</b>	bridge-domain <i>name</i> ; vlan-id [ <i>vlan-identifiers</i> ]; }
<b>Hierarchy Level</b>	[edit protocols oam ethernet connectivity-fault-management maintenance-domain <i>maintenance-domain-name</i> ], [edit protocols oam ethernet connectivity-fault-management maintenance-domain <i>maintenance-domain-name</i> virtual-switch <i>virtual-switch-name</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.4.
<b>Description</b>	(MX Series routers only) Specify the OAM Ethernet CFM maintenance domain bridge domain.
<b>Options</b>	<i>name</i> —Specify the name of the bridge domain.  <i>vlan-identifiers</i> —Specify one or more VLAN identifiers.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring Maintenance Intermediate Points (MIPs) on page 580</a></li> <li>• <a href="#">maintenance-domain on page 942</a></li> </ul>

## bridge-domains

<b>Syntax</b>	<pre> bridge-domains {     bridge-domain-name {         bridge-options {             ...bridge-options-configuration...         }         domain-type bridge;         interface <i>interface-name</i>;         no-irb-layer-2-copy;         routing-interface <i>routing-interface-name</i>;         vlan-id (all   none   <i>number</i>);         vlan-id-list [ <i>vlan-id-numbers</i> ];         vlan-tags outer <i>number</i> inner <i>number</i>;         bridge-options {             interface <i>interface-name</i> {                 mac-pinning                 static-mac <i>mac-address</i>;             }             interface-mac-limit <i>limit</i>;             mac-statistics;             mac-table-size <i>limit</i>;             no-mac-learning;         }     } } </pre>
<b>Hierarchy Level</b>	[edit], [edit logical-systems <i>logical-system-name</i> routing-instances <i>routing-instance-name</i> ], [edit routing-instances <i>routing-instance-name</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.4. Support for logical systems added in Junos OS Release 9.6. Support for the <b>no-irb-layer-2-copy</b> statement added in Junos OS Release 10.2.
<b>Description</b>	(MX Series routers only) Configure a domain that includes a set of logical ports that share the same flooding or broadcast characteristics in order to perform Layer 2 bridging.
<b>Options</b>	<i>bridge-domain-name</i> —Name of the bridge domain.
<div style="display: flex; align-items: center;">  <div> <p><b>NOTE:</b> You cannot use the slash (/) character as part of the bridge domain name. If you do, the configuration will not commit.</p> </div> </div>	
<p>The remaining statements are explained separately.</p>

## bfd-liveness-detection (LAG)

```
Syntax  bfd-liveness-detection {
        authentication {
            algorithm algorithm-name;
            key-chain key-chain-name;
            loose-check;
        }
        detection-time {
            threshold milliseconds;
        }
        holddown-interval milliseconds;
        local-address bfd-local-address;
        minimum-interval milliseconds;
        minimum-receive-interval milliseconds;
        multiplier number;
        neighbor bfd-neighbor-address;
        no-adaptation;
        transmit-interval {
            minimum-interval milliseconds;
            threshold milliseconds;
        }
        version (1 | automatic);
    }
```

**Hierarchy Level** [edit interfaces *aex* aggregated-ether-options]

**Release Information** Statement introduced in Junos OS Release 13.3.

**Description** Configure Bidirectional Forwarding Detection (BFD) timers and authentication for aggregated Ethernet interfaces.

**Options** **holddown-interval *milliseconds***— Specify a time limit, in milliseconds, indicating the time that a BFD session remains up before a state change notification is sent. If the BFD session goes down and then comes back up during the hold-down interval, the timer is restarted.

**Range:** 0 through 255,000

**Default:** 0

**local-address *bfd-local-address***— Specify the loopback address or the AE interface address of the source of the BFD session.

**NOTE:** Beginning with Release 16.1R2, Junos OS checks and validates the configured micro BFD **local-address** against the interface or loopback IP address before the configuration commit. Junos OS performs this check on both IPv4 and IPv6 micro BFD address configurations, and if they do not match, the commit fails.

**minimum-interval *milliseconds***— Specify a minimum time interval after which the local routing device transmits a BFD packet and then expects to receive a reply from the BFD neighbor. Optionally, instead of using this statement, you can configure the minimum transmit and receive intervals separately using the **transmit-interval** **minimum-interval** statement.

**Range:** 1 through 255,000

**minimum-receive-interval *milliseconds***— Specify the minimum time interval after which the routing device expects to receive a reply from the BFD neighbor.

**Range:** 1 through 255,000

**multiplier *number***— Specify the number of BFD packets that were not received by the BFD neighbor before the originating interface is declared down.

**Range:** 1 through 255

**neighbor *bfd-neighbor-address***— Specify the loopback address or the AE interface address of a remote destination to send BFD packets.

**no-adaptation**— Disable the BFD adaptation. Include this statement if you do not want the BFD sessions to adapt to changing network conditions. We recommend that you do not disable BFD adaptation unless it is preferable not to have BFD adaptation enabled in your network.

**version**— Configure the BFD version to detect (BFD version 1) or autodetect (the BFD version).

**Default:** automatic

The remaining statements are explained separately.

<b>Required Privilege</b>	interface—To view this statement in the configuration.
<b>Level</b>	interface-control—To add this statement to the configuration.

## burst-size-limit (Policer for Gigabit Ethernet Interfaces)

---

<b>Syntax</b>	<code>burst-size-limit bytes;</code>
<b>Hierarchy Level</b>	<code>[edit interfaces <i>interface-name</i> gigether-options <a href="#">ethernet-switch-profile ethernet-policer-profile</a> policer <i>cos-policer-name</i> <a href="#">aggregate</a>],</code> <code>[edit interfaces <i>interface-name</i> gigether-options <a href="#">ethernet-switch-profile ethernet-policer-profile</a> policer <i>cos-policer-name</i> <a href="#">premium</a>]</code>
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4.
<b>Description</b>	Define a policer to apply to nonpremium traffic.
<b>Options</b>	<b>bytes</b> —Burst length. <b>Range:</b> 1500 through 100,000,000 bytes
<b>Required Privilege Level</b>	<code>interface</code> —To view this statement in the configuration. <code>interface-control</code> —To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring Gigabit Ethernet Policers on page 517</a></li><li>• <a href="#">bandwidth-limit (Policer for Gigabit Ethernet Interfaces) on page 994</a></li></ul>

## cak (MX Series)

<b>Syntax</b>	<i>ckn hexadecimal-number;</i>
<b>Hierarchy Level</b>	[edit security macsec connectivity-association <i>connectivity-association-name</i> pre-shared-key]
<b>Release Information</b>	Statement introduced in Junos OS Release 15.1 for MX240, MX480, and MX960 routers.
<b>Description</b>	<p>Specifies the connectivity association key (CAK) for a pre-shared key.</p> <p>A pre-shared key includes a connectivity association key name (CKN) and a CAK. A pre-shared key is exchanged between two devices at each end of a point-to-point link to enable MACsec using dynamic security keys. The MACsec Key Agreement (MKA) protocol is enabled once the pre-shared keys are successfully exchanged. The pre-shared key—the CKN and CAK—must match on both ends of a link</p>
<b>Default</b>	No CAK exists, by default.
<b>Options</b>	<p><i>hexadecimal-number</i>—The key name, in hexadecimal format.</p> <p>The key name is 32 hexadecimal characters in length. If you enter a key name that is less than 32 characters long, the remaining characters are set to 0.</p>
<b>Required Privilege Level</b>	<p>admin—To view this statement in the configuration.</p> <p>admin-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring Media Access Control Security (MACsec) on MX Series Routers on page 100</a></li> </ul>

## **captive-portal (MX Series in Enhanced LAN Mode)**

---

<b>Syntax</b>	(captive-portal   no-captive-portal);
<b>Hierarchy Level</b>	[edit protocols authentication-access-control]
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2 for MX240, MX480, and MX960 routers in enhanced LAN mode.
<b>Description</b>	Specify whether captive portal authentication needs to be enabled or disabled. You can set up captive portal authentication (hereafter referred to as captive portal) on a switch to redirect Web browser requests to a login page that requires the user to input a username and password. Upon successful authentication, the user is allowed to continue with the original page request and subsequent access to the network.
<b>Default</b>	Not enabled
<b>Options</b>	<b>captive-portal</b> —Enable captive portal authentication. <b>no-captive-portal</b> —Disable captive portal authentication.
<b>Required Privilege Level</b>	<b>security</b> —To view this statement in the configuration. <b>security-control</b> —To add this statement to the configuration.

## captive-portal-custom-options (MX Series in Enhanced LAN Mode)

<b>Syntax</b>	<pre> captive-portal-custom-options {   banner-message <i>string</i>;   footer-bgcolor <i>color</i>;   footer-message <i>string</i>;   footer-text-color <i>color</i>;   form-header-bgcolor <i>color</i>;   form-header-message <i>string</i>;   form-header-text-color <i>color</i>;   form-reset-label <i>label name</i>;   form-submit-label <i>label name</i>;   header-bgcolor <i>color</i>;   header-logo <i>filename</i>;   header-message <i>string</i>;   header-text-color <i>color</i>;   post-authentication-url <i>url-string</i>; } </pre>
<b>Hierarchy Level</b>	[edit protocols]
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2 for MX240, MX480, and MX960 routers in enhanced LAN mode.
<b>Description</b>	Specify the design elements of a captive portal login page.
<b>Options</b>	<p><b>banner-message</b>—The first screen displayed before the captive portal login page is displayed—for example, a disclaimer message.  <b>Range:</b> 1–2047 characters</p> <p><b>footer-bgcolor</b> —The hexadecimal color code for the color of the footer bar across the bottom of the captive portal login page—for example, #2E8B57 (sea green).  <b>Values:</b> # symbol followed by six characters.</p> <p><b>footer-message</b>—Text message displayed in the footer bar across the bottom of the captive portal login page.  <b>Range:</b> 1–2047 characters  <b>Default:</b> Copyright ©2010, Juniper Networks Inc.</p> <p><b>footer-text-color</b> — Color of the text in the footer.  <b>Default:</b> The default color is white.</p> <p><b>form-header-bgcolor</b> —The hexadecimal color code for the background color of the header bar across the top of the form area of the captive portal login page.  <b>Values:</b> # symbol followed by six characters.</p> <p><b>form-header-message</b>—Text message displayed in the header bar across the top of the form area of the captive portal login page.  <b>Range:</b> 1–255 characters  <b>Default:</b> Captive Portal User Authentication</p>

**form-header-text-color**—Color of the text in the form header.

**Default:** The default color is black.

**form-reset-label**—Label displayed in the button that the user can select to clear the username and password fields on the form.

**Range:** 1–255 characters

**Default:** Reset

**form-submit-label**—Label displayed in the button that the user selects to submit their login information—for example, **Log In**.

**Range:** 1–255 characters

**Default:** Log In

**header-bgcolor**—The hexadecimal color code for the color of the header bar across the top of the captive portal login page.

**Values:** # symbol followed by six characters.

**header-logo**—Filename of the file containing the image of the logo displayed at the top of the captive portal login page. The image file can be in GIF, JPEG, or PNG format.

**Default:** The Juniper Networks logo

**header-message**—Text displayed in the header bar across the bottom of the captive portal login page.

**Range:** 1–2047 characters

**Default:** User Authentication

**header-text-color**—Color of the text in the header.

**Default:** The default color is white.

**post-authentication-url**—URL to which the users are directed upon successful authentication—for example **www.mycafe.com**.

**Range:** 1–255 characters

**Default:** The page originally requested by the user.

<b>Required Privilege Level</b>	routing—To view this statement in the configuration. routing-control—To add this statement to the configuration.
---------------------------------	---

## centralized

<b>Syntax</b>	centralized;
<b>Hierarchy Level</b>	[edit protocols lacp ppm]
<b>Release Information</b>	<p>Statement introduced in Junos OS Release 9.4 for MX Series routers.</p> <p>Statement introduced in Junos OS Release 10.2 for EX Series switches.</p> <p>Statement introduced in Junos OS Release 11.3 for the QFX Series.</p> <p>Statement introduced in Junos OS Release 14.1X53-D20 for the OCX Series.</p>
<b>Description</b>	<p>Disable distributed periodic packet management (PPM) processing for Link Aggregation Control Protocol (LACP) packets and run all PPM processing for LACP packets on the Routing Engine.</p> <p>This statement disables distributed PPM processing for only LACP packets. You can disable distributed PPM processing for all packets that use PPM and run all PPM processing on the Routing Engine by configuring the <b>no-delegate-processing</b> statement in the [edit routing-options ppm] hierarchy.</p>
<div>  <p><b>BEST PRACTICE:</b> We generally recommend that you disable distributed PPM only if Juniper Networks Customer Service advises you to do so. You should disable distributed PPM only if you have a compelling reason to disable it.</p> </div>	
<b>Default</b>	Distributed PPM processing is enabled for all packets that use PPM.
<b>Required Privilege Level</b>	<p>routing—To view this statement in the configuration.</p> <p>routing-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Configuring Distributed Periodic Packet Management on an EX Series Switch (CLI Procedure)</i></li> <li>• <i>Configuring Aggregated Ethernet LACP (CLI Procedure)</i></li> <li>• <a href="#">Configuring Distributed Periodic Packet Management on page 219</a></li> <li>• <i>Configuring Link Aggregation</i></li> </ul>

## ckn (MX Series)

---

<b>Syntax</b>	<i>ckn hexadecimal-number;</i>
<b>Hierarchy Level</b>	[edit security macsec connectivity-association <i>connectivity-association-name</i> pre-shared-key]
<b>Release Information</b>	Statement introduced in Junos OS Release 15.1 for MX240, MX480, and MX960 routers.
<b>Description</b>	<p>Specifies the connectivity association key name (CKN) for a pre-shared key.</p> <p>A pre-shared key includes a CKN and a connectivity association key (CAK). A pre-shared key is exchanged between two devices at each end of a point-to-point link to enable MACsec using dynamic security keys. The MACsec Key Agreement (MKA) protocol is enabled once the pre-shared keys are successfully exchanged. The pre-shared key—the CKN and CAK—must match on both ends of a link</p>
<b>Default</b>	No CKN exists, by default.
<b>Options</b>	<p><i>hexadecimal-number</i>—The key name, in hexadecimal format.</p> <p>The key name is 32 hexadecimal characters in length. If you enter a key name that is less than 32 characters long, the remaining characters are set to 0.</p>
<b>Required Privilege Level</b>	<p>admin—To view this statement in the configuration.</p> <p>admin-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring Media Access Control Security (MACsec) on MX Series Routers on page 100</a></li></ul>

## classifier

<b>Syntax</b>	<pre>classifier {   per-unit-scheduler {     forwarding-class <i>class-name</i> {       loss-priority (high   low);     }   } }</pre>
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> gigether-options <a href="#">ethernet-switch-profile</a> <a href="#">ethernet-policer-profile</a> <a href="#">output-priority-map</a> ]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4.
<b>Description</b>	<p>For Gigabit Ethernet IQ and 10-Gigabit Ethernet interfaces only, define the classifier for the output priority map to be applied to outgoing frames on this interface.</p> <p>The statements are explained separately.</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Specifying an Output Priority Map on page 517</a></li> <li>• <a href="#">input-priority-map on page 1087</a></li> </ul>

## clear

<b>Syntax</b>	request protection-group ethernet-aps clear md <md> ma <ma>
<b>Hierarchy Level</b>	[edit protocols protection-group ethernet-aps]
<b>Description</b>	Clears the lockout, force switch, manual switch, exercise, and wait-to-restore (WTR) states.
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Ethernet Automatic Protection Switching Overview on page 225</a></li> </ul>

## client

<b>Syntax</b>	client;
<b>Hierarchy Level</b>	[edit interfaces pp0 unit <i>logical-unit-number</i> <a href="#">pppoe-options</a> ], [edit logical-systems <i>logical-system-name</i> interfaces pp0 unit <i>logical-unit-number</i> <a href="#">pppoe-options</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.5.
<b>Description</b>	Configure the router to operate in the PPPoE client mode.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li><a href="#">Configuring the PPPoE Client Mode on page 351</a></li> </ul>

## community-vlans (MX Series)

<b>Syntax</b>	community-vlans [ <i>number number-number</i> ];
<b>Hierarchy Level</b>	[edit <a href="#">bridge-domains</a> <i>bridge-domain-name</i> ], [edit logical-systems <i>logical-system-name</i> routing-instances <i>routing-instance-name</i> <a href="#">bridge-domains</a> <i>bridge-domain-name</i> bridge-options], [edit logical-systems <i>logical-system-name</i> routing-instances <i>routing-instance-name</i> <a href="#">bridge-domains</a> <i>bridge-domain-name</i> ], [edit routing-instances <i>routing-instance-name</i> <a href="#">bridge-domains</a> <i>bridge-domain-name</i> ],
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2 for MX240, MX480, and MX960 routers.
<b>Description</b>	Configure the specified community VLAN to be a secondary VLAN of the specified primary VLAN. A <i>community</i> VLAN is used to transport frames among members of a community, which is a subset of users within the VLAN, and to forward frames upstream to the primary VLAN.

**NOTE:** When you specify this configuration statement, the VLAN ID of a logical interface that you associate with a bridge domain that matches with the VLAN ID or list of IDs that you specify using the `community-vlans` state is treated as a community port.

<b>Options</b>	<i>number</i> —Individual VLAN IDs separated by a space.
<b>Required Privilege Level</b>	system—To view this statement in the configuration. system-control—To add this statement to the configuration.
<b>Related Documentation</b>	

## compatibility-version

<b>Syntax</b>	compatibility-version;
<b>Hierarchy Level</b>	[edit protocols <a href="#">protection-group ethernet-ring ring-name</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2.
<b>Description</b>	Specify the compatible version mode to be used. When compatibility-version is set to value 1, the node operates in ITU-T Recommendation G.8032/Y.1344 version 1 compatible mode. In this mode all the supported external commands are blocked, ring-id is forced to be 1 and mode of operation is set to revertive mode.
<b>Options</b>	<ul style="list-style-type: none"> <li>• 1—Use ITU-T Recommendation G.8032/Y.1344 compatible mode version 1.</li> <li>• 2—Use ITU-T Recommendation G.8032/Y.1344 compatible mode version 2.</li> </ul>
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Ethernet Ring Protection Switching Overview on page 233</a></li> <li>• <a href="#">Configuring Ethernet Ring Protection Switching (CLI Procedure)</a></li> </ul>

## connectivity-association (MACsec Interfaces for MX Series)

<b>Syntax</b>	connectivity-association <i>connectivity-association-name</i> ;
<b>Hierarchy Level</b>	[edit security macsec interfaces <i>interface-name</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 15.1 for MX240, MX480, and MX960 routers.
<b>Description</b>	Applies a connectivity association to an interface, which enables Media Access Control Security (MACsec) on that interface.
<b>Default</b>	No connectivity associations are associated with any interfaces.
<b>Options</b>	<i>connectivity-association-name</i> —Name of the MACsec connectivity association. <b>Range:</b> 1 through 32 alphanumeric characters. Allowed characters are [a-z, A-Z, 0-9]
<b>Required Privilege Level</b>	admin—To view this statement in the configuration. admin-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring Media Access Control Security (MACsec) on MX Series Routers on page 100</a></li> </ul>

## connectivity-association (MX Series)

**Syntax** `connectivity-association connectivity-association-name {  
 exclude-protocol protocol-name;  
 include-sci;  
 mka {

## data-channel

<b>Syntax</b>	data-channel { vlan <i>number</i> ; }
<b>Hierarchy Level</b>	[edit protocols <a href="#">protection-group ethernet-ring ring-name</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 10.2. Statement introduced in Junos OS Release 12.1 for EX Series switches. Statement introduced in Junos OS Release 14.153-D10 for QFX Series switches.
<b>Description</b>	For Ethernet ring protection, configure a data channel to define a set of VLAN IDs that belong to a ring instance.  VLANs specified in the data channel use the same topology used by the ERPS PDU in the control channel. Therefore, if a ring interface is blocked in the control channel, all traffic in the data channel is also blocked on that interface.
<b>Options</b>	<b>vlan <i>number</i></b> —Specify (by VLAN ID) one or more VLANs that belong to a ring instance.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Ethernet Ring Protection Using Ring Instances for Load Balancing on page 795</a></li> <li>• <a href="#">Example: Configuring Load Balancing Within Ethernet Ring Protection for MX Series Routers on page 802</a></li> <li>• <a href="#">Example: Configuring Ethernet Ring Protection Switching on QFX Series and EX Series Switches Supporting ELS</a></li> <li>• <a href="#">Configuring Ethernet Ring Protection Switching (CLI Procedure)</a></li> </ul>

## delay (PPPoE Service Name Tables)

---

<b>Syntax</b>	<code>delay seconds;</code>

<b>Release Information</b>	Statement introduced in Junos OS Release 10.0. Support at [edit protocols pppoe service-name-tables <i>table-name</i> service <i>service-name</i> <b>agent-specifier</b> <i>aci circuit-id-string ari remote-id-string</i> ] hierarchy level introduced in Junos OS Release 10.2.
<b>Description</b>	<p>Configure the PPPoE underlying interface on the router to wait a specified number of seconds after receiving a PPPoE Active Discovery Initiation (PADI) control packet from a PPPoE client before sending a PPPoE Active Discovery Offer (PADO) packet to indicate that it can service the client request</p> <p>The router (PPPoE server) does not check whether another server has already sent a PADO packet during the delay period in response to the PPPoE client's PADI packet. It is up to the PPPoE client to determine whether another PPPoE server has responded to its PADI request, or if it must respond to the delayed PADO packet to establish a PPPoE session.</p>
<b>Options</b>	<b>seconds</b> —Number of seconds that the PPPoE underlying interface waits after receiving a PADI packet from a PPPoE client before sending a PADO packet in response. <b>Range:</b> 1 through 120 seconds
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Configuring PPPoE Service Name Tables</i></li></ul>

## destination (IPCP)

---

<b>Syntax</b>	<code>destination address destination-profile <i>profile-name</i>;</code>
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> family inet unnumbered-address <i>interface-name</i> ], [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> family inet unnumbered-address <i>interface-name</i> ]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4.
<b>Description</b>	For unnumbered interfaces with PPP encapsulation, specify the IP address of the remote interface.
<b>Options</b>	<p><b>address</b>—IP address of the remote interface.</p> <p>The remaining statement is explained separately.</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Configuring IPCP Options for Interfaces with PPP Encapsulation</i></li> <li>• <a href="#">address on page 976</a></li> <li>• <a href="#">negotiate-address on page 1149</a></li> <li>• <i>Junos OS Administration Library</i></li> </ul>

## device-count

---

<b>Syntax</b>	<code>device-count <i>number</i>;</code>
<b>Hierarchy Level</b>	[edit chassis <a href="#">aggregated-devices ethernet</a> ] [edit chassis <a href="#">aggregated-devices sonet</a> ]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4. Statement functionality updated in Junos OS Release 14.2, as described below.
<b>Description</b>	<p>Configure the number of aggregated logical devices available to the router.</p> <p>Starting in Junos release 14.2, for MX series routers, aggregate Ethernet interfaces created under a logical system can be individually named. Prior to 14.2, ae interfaces were named automatically (AE1, AE2) etc. upon setting the device count. This change allows administrators to use custom naming schemes. System resources are only allocated for named ae interfaces, regardless of how many were declared in the device count. (In Junos 14.2 and earlier, ae naming occurred automatically up to the number specified for device count, and system resources were allocated whether a given ae interface was used or not.)</p>
<b>Options</b>	<i>number</i> —Set the number of aggregated logical devices that will be available for configuration.
<hr/> <div> <b>NOTE:</b> Starting with Junos OS Release 13.2, a maximum of 64 aggregated interfaces are supported for link aggregation of SONET/SDH interfaces. In releases before Junos OS Release 13.2, a maximum of 16 aggregated interfaces are supported for link aggregation of SONET/SDH interfaces.</div> <hr/>	
<b>Range:</b> 1 - 496. The upper limit for this value is system specific.	
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring Junos OS for Supporting Aggregated Devices on page 155</a></li><li>• <a href="#">Configuring Aggregated SONET/SDH Interfaces</a></li></ul>

## direction (MX Series)

<b>Syntax</b>	direction (inbound   outbound);
<b>Hierarchy Level</b>	[edit security macsec connectivity-association <i>connectivity-association-name</i> secure-channel <i>secure-channel-name</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 15.1 for MX240, MX480, and MX960 routers.
<b>Description</b>	<p>Configure whether the secure channel applies MACsec security to traffic entering or leaving an interface.</p> <p>If you need to apply MACsec on traffic entering and leaving an interface, you need to create one secure channel to apply MACsec on incoming traffic and another secure channel to apply MACsec on outgoing traffic within the same connectivity association. When you associate the connectivity association with an interface, MACsec is applied on traffic entering and leaving that interface.</p> <p>You only use this configuration option when you are configuring MACsec using static secure association keys (SAK) security mode. When you are configuring MACsec using static connectivity association keys (CAK) security mode, two secure channels that are not user-configurable—one inbound secure channel and one outbound secure channel—are automatically created within the connectivity association.</p>
<b>Default</b>	<p>This statement does not have a default value.</p> <p>If you have configured a secure channel to enable MACsec using static SAK security mode, you must specify whether the secure channel applies MACsec to traffic entering or leaving an interface. A candidate configuration that contains a secure channel that has not configured a direction cannot be committed.</p>
<b>Options</b>	<p><b>inbound</b>—Enable MACsec security on traffic entering the interface that has applied the secure channel.</p> <p><b>outbound</b>—Enable MACsec security on traffic leaving the interface that has applied the secure channel.</p> <p>The remaining statements are explained separately.</p>
<b>Required Privilege Level</b>	<p>admin—To view this statement in the configuration.</p> <p>admin-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring Media Access Control Security (MACsec) on MX Series Routers on page 100</a></li> </ul>

## disable

---

<b>Syntax</b>	disable;
<b>Hierarchy Level</b>	[edit protocols <a href="#">lldp</a> ], [edit protocols <a href="#">lldp interface</a> (all   <i>interface-name</i> )], [edit routing-instances <i>routing-instance-name</i> protocols <a href="#">lldp</a> ], [edit routing-instances <i>routing-instance-name</i> protocols <a href="#">lldp interface</a> (all   <i>interface-name</i> )]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.6.
<b>Description</b>	<p>Disable LLDP globally or on an interface.</p> <p>For information about interface names, see <i>Interface Naming Overview</i>. For information about interface names for TX Matrix routers, see <i>TX Matrix Router Chassis and Interface Names</i>. For information about FPC numbering on TX Matrix routers, see <i>Routing Matrix with a TX Matrix Router FPC Numbering</i>.</p> <p>For information about extended port names in the Junos Fusion technology, see <i>Understanding Junos Fusion Ports</i>.</p>
<b>Required Privilege Level</b>	routing—To view this statement in the configuration. routing-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring LLDP on page 336</a></li></ul>

## disable (Link Protection)

---

<b>Syntax</b>	disable;
<b>Hierarchy Level</b>	[edit interfaces aeX aggregated-ether-options lacp link-protection]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.3. Statement introduced in Junos OS Release 11.4 for EX Series switches. Statement introduced in Junos OS Release 15.1F4 for PTX Series routers.
<b>Description</b>	Disable LACP link protection on the interface.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring LACP for Aggregated Ethernet Interfaces on page 164</a></li><li>• <a href="#">Configuring LACP Link Protection of Aggregated Ethernet Interfaces (CLI Procedure)</a></li></ul>

## disable (802.1X for MX Series in Enhanced LAN Mode)

<b>Syntax</b>	disable;
<b>Hierarchy Level</b>	[edit protocols authentication-access-control interface (all   [ <i>interface-names</i> ]) dot1x]
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2 for MX240, MX480, and MX960 routers in enhanced LAN mode.
<b>Description</b>	Disable 802.1X authentication on a specified interface or all interfaces.
<b>Default</b>	802.1X authentication is disabled on all interfaces.
<b>Required Privilege Level</b>	routing—To view this statement in the configuration. routing-control—To add this statement to the configuration.

## dot1p-priority

<b>Syntax</b>	dot1p-priority <i>number</i> ;
<b>Hierarchy Level</b>	[edit protocols <a href="#">protection-group ethernet-ring ring-name</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2.
<b>Description</b>	Specify the IEEE 802.1p priority to be used in the transmitted RAPS protocol data units.
<b>Options</b>	<i>number</i> —802.1p priority number. <b>Range:</b> 0 through 7 <b>Default:</b> 0
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Ethernet Ring Protection Switching Overview on page 233</a></li> <li>• <a href="#">Configuring Ethernet Ring Protection Switching (CLI Procedure)</a></li> </ul>

## dot1x

---

**Syntax**

```
dot1x {  
    authenticator {  
        authentication-profile-name access-profile-name;  
        interface interface-id {  
            maximum-requests integer;  
            quiet-period seconds;  
            reauthentication (disable | interval seconds);  
            retries integer;  
            server-timeout seconds;  
            supplicant (single);  
            supplicant-timeout seconds;  
            transmit-period seconds;  
        }  
    }  
}
```

**Hierarchy Level** [edit protocols]

**Release Information** Statement introduced in Junos OS Release 9.3.

**Description** For the MX Series only, specifies settings for using 802.1x Port-Based Network Access Control.

The remaining statements are explained separately.

**Required Privilege Level** interface—To view this statement in the configuration.  
interface-control—To add this statement to the configuration.

## dot1x (MX Series in Enhanced LAN Mode)

<b>Syntax</b>	<pre>dot1x {   disable;   guest-vlan (vlan-id   vlan-name);   mac-radius {     flap-on-disconnect;     restrict;   }   maximum-requests <i>number</i>;   no-reauthentication;   server-fail (deny   permit   use-cache   vlan-id   vlan-name);   server-reject-vlan (vlan-id   vlan-name) {     eapol-block;     block-interval <i>block-interval</i>;   }   supplicant-timeout <i>seconds</i>;   transmit-period <i>seconds</i>; }</pre>
<b>Hierarchy Level</b>	[edit protocols authentication-access-control interface (all   [ <i>interface-names</i> ])]
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2 for MX240, MX480, and MX960 routers in enhanced LAN mode.
<b>Description</b>	<p>Configure 802.1X authentication for Port-Based Network Access Control. 802.1X authentication is supported on interfaces that are members of private VLANs (PVLANS).</p> <p>The remaining statements are explained separately.</p>
<b>Default</b>	802.1X is disabled.
<b>Required Privilege Level</b>	<p>routing—To view this statement in the configuration.</p> <p>routing-control—To add this statement to the configuration.</p>

## domain-id

<b>Syntax</b>	<code>domain-id <i>domain-id</i>;</code>
<b>Hierarchy Level</b>	[edit logical-systems <i>logical-system-name</i> routing-instances <i>routing-instance-name</i> protocols (ospf   ospf3)], [edit routing-instances <i>routing-instance-name</i> protocols (ospf   ospf3)]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4. Statement introduced in Junos OS Release 9.0 for EX Series switches.
<b>Description</b>	Specify a domain ID for a route. The domain ID identifies the OSPF domain from which the route originated.
<b>Options</b>	<b><i>domain-id</i></b> —You can specify either an IP address or an IP address and a local identifier using the following format: <i>ip-address:local-identifier</i> . If you do not specify a local identifier with the IP address, the identifier is assumed to have a value of 0. <b>Default:</b> If the router ID is not configured in the routing instance, the router ID is derived from an interface address belonging to the routing instance.
<b>Required Privilege Level</b>	routing—To view this statement in the configuration. routing-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>Configuring Routing Between PE and CE Routers in Layer 3 VPNs</li> </ul>

## drop (PPPoE Service Name Tables)

<b>Syntax</b>	<code>drop;</code>
<b>Hierarchy Level</b>	[edit protocols pppoe service-name-tables <i>table-name</i> <b>service</b> <i>service-name</i> ], [edit protocols pppoe service-name-tables <i>table-name</i> service <i>service-name</i> <b>agent-specifier</b> <i>aci circuit-id-string</i> ari <i>remote-id-string</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 10.0. Support at [edit protocols pppoe service-name-tables <i>table-name</i> service <i>service-name</i> <b>agent-specifier</b> <i>aci circuit-id-string</i> ari <i>remote-id-string</i> ] hierarchy level introduced in Junos OS Release 10.2.
<b>Description</b>	Direct the router to drop (ignore) a PPPoE Active Discovery Initiation (PADI) control packet received from a PPPoE client that contains the specified service name tag or agent circuit identifier/agent remote identifier (ACI/ARI) information. This action effectively denies the client's request to provide the specified service, or to accept requests from the subscriber or subscribers represented by the ACI/ARI information.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>Configuring PPPoE Service Name Tables</li> </ul>

## dynamic-profile (PPPoE Service Name Tables)

<b>Syntax</b>	<code>dynamic-profile <i>profile-name</i>;</code>
<b>Hierarchy Level</b>	<code>[edit protocols pppoe service-name-tables <i>table-name</i> <i>service</i> <i>service-name</i>],</code> <code>[edit protocols pppoe service-name-tables <i>table-name</i> service <i>service-name</i> <i>agent-specifier</i></code> <code>aci <i>circuit-id-string</i> ari <i>remote-id-string</i>]</code>
<b>Release Information</b>	Statement introduced in Junos OS Release 10.2.
<b>Description</b>	<p>Specify a dynamic profile to instantiate a dynamic PPPoE interface. You can associate a dynamic profile with a named service entry, <b>empty</b> service entry, or <b>any</b> service entry configured in a PPPoE service name table, or with an agent circuit identifier/agent remote identifier (ACI/ARI) pair defined for these services.</p> <p>The dynamic profile associated with a service entry in a PPPoE service name table overrides the dynamic profile associated with the PPPoE underlying interface on which the dynamic PPPoE interface is created.</p> <p>If you include the <b>dynamic-profile</b> statement at the <code>[edit protocols pppoe service-name-tables <i>table-name</i> service <i>service-name</i> <i>agent-specifier</i> aci <i>circuit-id-string</i> ari <i>remote-id-string</i>]</code> hierarchy level, you cannot also include the <b>static-interface</b> statement at this level. The <b>dynamic-profile</b> and <b>static-interface</b> statements are mutually exclusive for ACI/ARI pair configurations.</p>
<b>Options</b>	<b><i>profile-name</i></b> —Name of the dynamic profile that the router uses to instantiate a dynamic PPPoE interface.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li><i>Configuring PPPoE Service Name Tables</i></li> <li><i>Assigning a Dynamic Profile and Routing Instance to a Service Name or ACI/ARI Pair for Dynamic PPPoE Interface Creation</i></li> </ul>

## east-interface

<b>Syntax</b>	<pre> east-interface {   node-id mac-address;   control-channel channel-name {     vlan number;     interface name interface-name   }   interface-none   ring-protection-link-end; } </pre>
<b>Hierarchy Level</b>	[edit protocols <b>protection-group ethernet-ring ring-name</b> ]
<b>Release Information</b>	<p>Statement introduced in Junos OS Release 9.4.</p> <p>Statement introduced in Junos OS Release 12.1 for EX Series switches.</p> <p>Statement introduced in Junos OS Release 14.153-D10 for QFX Series switches.</p>
<b>Description</b>	<p>Define one of the two interface ports for Ethernet ring protection, the other being defined by the <b>west-interface</b> statement at the same hierarchy level. The interface must use the control channel's logical interface name. The control channel is a dedicated VLAN channel for the ring port.</p> <p>EX Series switches do not use the node-id statement--the node ID is automatically configured on the switches using the MAC address.</p>
	<p> <b>NOTE:</b> Always configure this port first, before configuring the <b>west-interface</b> statement.</p>
	<p> <b>NOTE:</b> The Node ID is not configurable on EX Series switches. The node ID is automatically configured using the MAC address.</p>
	The statements are explained separately.
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Ethernet Ring Protection Switching Overview on page 233</a></li> <li>• <a href="#">Ethernet Ring Protection Using Ring Instances for Load Balancing on page 795</a></li> <li>• <a href="#">west-interface on page 1305</a></li> <li>• <a href="#">ethernet-ring on page 1046</a></li> <li>• <a href="#">Example: Configuring Ethernet Ring Protection Switching on EX Series Switches</a></li> </ul>

- *Example: Configuring Ethernet Ring Protection Switching on QFX Series and EX Series Switches Supporting ELS*
- *Configuring Ethernet Ring Protection Switching (CLI Procedure)*

## egress-policer-overhead

<b>Syntax</b>	<code>egress-policer-overhead bytes;</code>
<b>Hierarchy Level</b>	<code>[edit chassis fpc slot-number pic pic-number]</code>
<b>Release Information</b>	Statement introduced before Junos OS Release 11.1.
<b>Description</b>	<p>Add the specified number of bytes to the actual length of an Ethernet frame when determining the actions of Layer 2 policers, MAC policers, or queue rate limits applied to output traffic on the line card. You can configure egress policer overhead to account for egress <i>shaping</i> overhead bytes added to output traffic on the line card.</p> <p>On M Series and T Series routers, this statement is supported on Gigabit Ethernet Intelligent Queuing 2 (IQ2) PICs and Enhanced IQ2 (IQ2E) PICs. On MX Series routers, this statement is supported for interfaces configured on Dense Port Concentrators (DPCs).</p>
	<div>  <p><b>NOTE:</b> This statement is not supported on Modular Interface Cards (MICs) or Modular Port Concentrators (MPCs) in MX Series routers.</p> </div>
<b>Options</b>	<p><b>bytes</b>—Number of bytes added to a packet exiting an interface.</p> <p><b>Range:</b> 0–255 bytes</p> <p><b>Default:</b> 0</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>egress-shaping-overhead</i></li> <li>• <i>Policer Overhead to Account for Rate Shaping Overview</i></li> <li>• <i>Example: Configuring Policer Overhead to Account for Rate Shaping</i></li> <li>• <i>Configuring a Policer Overhead</i></li> <li>• <i>CoS on Enhanced IQ2 PICs Overview</i></li> </ul>

## encapsulation (Logical Interface)

<b>Syntax</b>	encapsulation (atm-ccc-cell-relay   atm-ccc-vc-mux   atm-cisco-nlpid   atm-mlppp-llc   atm-nlpid   atm-ppp-llc   atm-ppp-vc-mux   atm-snap   atm-tcc-snap   atm-tcc-vc-mux   atm-vc-mux   ether-over-atm-llc   ether-vpls-over-atm-llc   ether-vpls-over-fr   ether-vpls-over-ppp   ethernet   ethernet-ccc   ethernet-vpls   ethernet-vpls-fr   frame-relay-ccc   frame-relay-ether-type   frame-relay-ether-type-tcc   frame-relay-ppp   frame-relay-tcc   gre-fragmentation   multilink-frame-relay-end-to-end   multilink-ppp   ppp-over-ether   ppp-over-ether-over-atm-llc   vlan-bridge   vlan-ccc   vlan-vci-ccc   vlan-tcc   vlan-vpls   vxlan);
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> <b>unit</b> <i>logical-unit-number</i> ], [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> <b>unit</b> <i>logical-unit-number</i> ], [edit interfaces rlsq <i>number</i> <b>unit</b> <i>logical-unit-number</i> ] [edit protocols evpn]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4. Statement introduced in Junos OS Release 12.1X48 for PTX Series Packet Transport Routers ( <b>ethernet</b> , <b>vlan-ccc</b> , and <b>vlan-tcc</b> options only). Statement introduced in Junos OS Release 12.2 for the ACX Series Universal Access Routers. Only the <b>atm-ccc-cell-relay</b> and <b>atm-ccc-vc-mux</b> options are supported on ACX Series routers.
<b>Description</b>	Configure a logical link-layer encapsulation type. Not all encapsulation types are supported on the switches. See the switch CLI.
<b>Options</b>	<p><b>atm-ccc-cell-relay</b>—Use ATM cell-relay encapsulation.</p> <p><b>atm-ccc-vc-mux</b>—Use ATM virtual circuit (VC) multiplex encapsulation on CCC circuits. When you use this encapsulation type, you can configure the <b>ccc</b> family only.</p> <p><b>atm-cisco-nlpid</b>—Use Cisco ATM network layer protocol identifier (NLPID) encapsulation. When you use this encapsulation type, you can configure the <b>inet</b> family only.</p> <p><b>atm-mlppp-llc</b>—For ATM2 IQ interfaces only, use Multilink Point-to-Point (MLPPP) over AAL5 LLC. For this encapsulation type, your router must be equipped with a Link Services or Voice Services PIC. MLPPP over ATM encapsulation is not supported on ATM2 IQ OC48 interfaces.</p> <p><b>atm-nlpid</b>—Use ATM NLPID encapsulation. When you use this encapsulation type, you can configure the <b>inet</b> family only.</p> <p><b>atm-ppp-llc</b>—(ATM2 IQ interfaces and MX Series routers with MPC/MIC interfaces using the ATM MIC with SFP only) Use PPP over AAL5 LLC encapsulation.</p> <p><b>atm-ppp-vc-mux</b>—(ATM2 IQ interfaces and MX Series routers with MPC/MIC interfaces using the ATM MIC with SFP only) Use PPP over ATM AAL5 multiplex encapsulation.</p> <p><b>atm-snap</b>—(All interfaces including MX Series routers with MPC/MIC interfaces using the ATM MIC with SFP) Use ATM subnetwork attachment point (SNAP) encapsulation.</p>

**atm-tcc-snap**—Use ATM SNAP encapsulation on translational cross-connect (TCC) circuits.

**atm-tcc-vc-mux**—Use ATM VC multiplex encapsulation on TCC circuits. When you use this encapsulation type, you can configure the **tcc** family only.

**atm-vc-mux**—(All interfaces including MX Series routers with MPC/MIC interfaces using the ATM MIC with SFP) Use ATM VC multiplex encapsulation. When you use this encapsulation type, you can configure the **inet** family only.

**ether-over-atm-llc**—(All IP interfaces including MX Series routers with MPC/MIC interfaces using the ATM MIC with SFP) For interfaces that carry IP traffic, use Ethernet over ATM LLC encapsulation. When you use this encapsulation type, you cannot configure multipoint interfaces.

**ether-vpls-over-atm-llc**—For ATM2 IQ interfaces only, use the Ethernet virtual private LAN service (VPLS) over ATM LLC encapsulation to bridge Ethernet interfaces and ATM interfaces over a VPLS routing instance (as described in RFC 2684, *Multiprotocol Encapsulation over ATM Adaptation Layer 5*). Packets from the ATM interfaces are converted to standard ENET2/802.3 encapsulated Ethernet frames with the frame check sequence (FCS) field removed.

**ether-vpls-over-fr**—For E1, T1, E3, T3, and SONET interfaces only, use the Ethernet virtual private LAN service (VPLS) over Frame Relay encapsulation to support Bridged Ethernet over Frame Relay encapsulated TDM interfaces for VPLS applications, per RFC 2427, *Multiprotocol Interconnect over Frame Relay*.

**NOTE:** The SONET/SDH OC3/STM1 (Multi-Rate) MIC with SFP, the Channelized SONET/SDH OC3/STM1 (Multi-Rate) MIC with SFP, and the DS3/E3 MIC do not support Ethernet over Frame Relay encapsulation.

**ether-vpls-over-ppp**—For E1, T1, E3, T3, and SONET interfaces only, use the Ethernet virtual private LAN service (VPLS) over Point-to-Point Protocol (PPP) encapsulation to support Bridged Ethernet over PPP-encapsulated TDM interfaces for VPLS applications.

**ethernet**—Use Ethernet II encapsulation (as described in RFC 894, *A Standard for the Transmission of IP Datagrams over Ethernet Networks*).

**ethernet-ccc**—Use Ethernet CCC encapsulation on Ethernet interfaces.

**ethernet-vpls**—Use Ethernet VPLS encapsulation on Ethernet interfaces that have VPLS enabled and that must accept packets carrying standard Tag Protocol ID (TPID) values.

**NOTE:** The built-in Gigabit Ethernet PIC on an M7i router does not support extended VLAN VPLS encapsulation.

**ethernet-vpls-fr**—Use in a VPLS setup when a CE device is connected to a PE router over a time-division multiplexing (TDM) link. This encapsulation type enables the PE router to terminate the outer layer 2 Frame Relay connection, use the 802.1p bits inside the inner Ethernet header to classify the packets, look at the MAC address from the Ethernet header, and use the MAC address to forward the packet into a given VPLS instance.

**frame-relay-ccc**—Use Frame Relay encapsulation on CCC circuits. When you use this encapsulation type, you can configure the **ccc** family only.

**frame-relay-ether-type**—Use Frame Relay ether type encapsulation for compatibility with Cisco Frame Relay. The physical interface must be configured with flexible-frame-relay encapsulation.

**frame-relay-ether-type-tcc**—Use Frame Relay ether type TCC for Cisco-compatible Frame Relay on TCC circuits to connect different media. The physical interface must be configured with flexible-frame-relay encapsulation.

**frame-relay-ppp**—Use PPP over Frame Relay circuits. When you use this encapsulation type, you can configure the **ppp** family only.

**frame-relay-tcc**—Use Frame Relay encapsulation on TCC circuits for connecting different media. When you use this encapsulation type, you can configure the **tcc** family only.

**gre-fragmentation**—For adaptive services interfaces only, use GRE fragmentation encapsulation to enable fragmentation of IPv4 packets in GRE tunnels. This encapsulation clears the do not fragment (DF) bit in the packet header. If the packet's size exceeds the tunnel's maximum transmission unit (MTU) value, the packet is fragmented before encapsulation.

**multilink-frame-relay-end-to-end**—Use MLFR FRF.15 encapsulation. This encapsulation is used only on multilink, link services, and voice services interfaces and their constituent T1 or E1 interfaces, and is supported on LSQ and redundant LSQ interfaces.

**multilink-ppp**—Use MLPPP encapsulation. This encapsulation is used only on multilink, link services, and voice services interfaces and their constituent T1 or E1 interfaces.

**ppp-over-ether**—Use PPP over Ethernet encapsulation to configure an underlying Ethernet interface for a dynamic PPPoE logical interface on M120 and M320 routers with Intelligent Queuing 2 (IQ2) PICs, and on MX Series routers with MPCs.

**ppp-over-ether-over-atm-llc**—(MX Series routers with MPCs using the ATM MIC with SFP only) For underlying ATM interfaces, use PPP over Ethernet over ATM LLC encapsulation. When you use this encapsulation type, you cannot configure the interface address. Instead, configure the interface address on the PPP interface.

**vlan-bridge**—Use Ethernet VLAN bridge encapsulation on Ethernet interfaces that have IEEE 802.1Q tagging, flexible-ethernet-services, and bridging enabled and that must accept packets carrying TPID 0x8100 or a user-defined TPID.

**vlan-ccc**—Use Ethernet virtual LAN (VLAN) encapsulation on CCC circuits. When you use this encapsulation type, you can configure the **ccc** family only.

**vlan-vci-ccc**—Use ATM-to-Ethernet interworking encapsulation on CCC circuits. When you use this encapsulation type, you can configure the **ccc** family only.

**vlan-tcc**—Use Ethernet VLAN encapsulation on TCC circuits. When you use this encapsulation type, you can configure the **tcc** family only.

**vlan-vpls**—Use Ethernet VLAN encapsulation on VPLS circuits.

**vxlan**—Use VXLAN data plane encapsulation for EVPN.

**Required Privilege Level** interface—To view this statement in the configuration.  
interface-control—To add this statement to the configuration.

## encapsulation (Physical Interface)

<b>Syntax</b>	encapsulation (atm-ccc-cell-relay   atm-pvc   cisco-hdlc   cisco-hdlc-ccc   cisco-hdlc-tcc   ethernet-bridge   ethernet-ccc   ethernet-over-atm   ethernet-tcc   ethernet-vpls   ethernet-vpls-fr   ether-vpls-over-atm-llc   ethernet-vpls-ppp   extended-frame-relay-ccc   extended-frame-relay-ether-type-tcc   extended-frame-relay-tcc   extended-vlan-bridge   extended-vlan-ccc   extended-vlan-tcc   extended-vlan-vpls   flexible-ethernet-services   flexible-frame-relay   frame-relay   frame-relay-ccc   frame-relay-ether-type   frame-relay-ether-type-tcc   frame-relay-port-ccc   frame-relay-tcc   generic-services   multilink-frame-relay-uni-nni   ppp   ppp-ccc   ppp-tcc   vlan-ccc   vlan-vci-ccc   vlan-vpls);
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> ], [edit interfaces rlsq <i>number:number</i> ]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4. Statement introduced in Junos OS Release 11.1 for EX Series switches. Statement introduced in Junos OS Release 12.1X48 for PTX Series Packet Transport Routers ( <b>flexible-ethernet-services</b> , <b>ethernet-ccc</b> , and <b>ethernet-tcc</b> options only).
<b>Description</b>	Specify the physical link-layer encapsulation type. Not all encapsulation types are supported on the switches. See the switch CLI.
<b>Default</b>	<b>ppp</b> —Use serial PPP encapsulation.
<b>Options</b>	<div>  <b>NOTE:</b> Frame Relay, ATM, PPP, SONET, and SATSOP options are not supported on the EX Series switches. </div> <p><b>atm-ccc-cell-relay</b>—Use ATM cell-relay encapsulation.</p> <p><b>atm-pvc</b>—Defined in RFC 2684, <i>Multiprotocol Encapsulation over ATM Adaptation Layer 5</i>. When you configure physical ATM interfaces with ATM PVC encapsulation, an RFC 2684-compliant ATM Adaptation Layer 5 (AAL5) tunnel is set up to route the ATM cells over a Multiprotocol Label Switching (MPLS) path that is typically established between two MPLS-capable routers using the Label Distribution Protocol (LDP).</p> <p><b>cisco-hdlc</b>—Use Cisco-compatible High-Level Data Link Control (HDLC) framing. E1, E3, SONET/SDH, T1, and T3 interfaces can use Cisco HDLC encapsulation. Two related versions are supported:</p> <ul style="list-style-type: none"> <li>• CCC version (<b>cisco-hdlc-ccc</b>)—The logical interface does not require an encapsulation statement. When you use this encapsulation type, you can configure the <b>ccc</b> family only.</li> <li>• TCC version (<b>cisco-hdlc-tcc</b>)—Similar to CCC and has the same configuration restrictions, but used for circuits with different media on either side of the connection.</li> </ul> <p><b>cisco-hdlc-ccc</b>—Use Cisco-compatible HDLC framing on CCC circuits.</p>

**cisco-hdlc-tcc**—Use Cisco-compatible HDLC framing on TCC circuits for connecting different media.

**ethernet-bridge**—Use Ethernet bridge encapsulation on Ethernet interfaces that have bridging enabled and that must accept all packets.

**ethernet-ccc**—Use Ethernet CCC encapsulation on Ethernet interfaces that must accept packets carrying standard Tag Protocol ID (TPID) values. For 8-port, 12-port, and 48-port Fast Ethernet PICs, CCC is not supported.

**ethernet-over-atm**—For interfaces that carry IPv4 traffic, use Ethernet over ATM encapsulation. When you use this encapsulation type, you cannot configure multipoint interfaces. As defined in RFC 2684, *Multiprotocol Encapsulation over ATM Adaptation Layer 5*, this encapsulation type allows ATM interfaces to connect to devices that support only bridge protocol data units (BPDUs). Junos OS does not completely support bridging, but accepts BPDU packets as a default gateway. If you use the router as an edge device, then the router acts as a default gateway. It accepts Ethernet LLC/SNAP frames with IP or ARP in the payload, and drops the rest. For packets destined to the Ethernet LAN, a route lookup is done using the destination IP address. If the route lookup yields a full address match, the packet is encapsulated with an LLC/SNAP and MAC header, and the packet is forwarded to the ATM interface.

**ethernet-tcc**—For interfaces that carry IPv4 traffic, use Ethernet TCC encapsulation on interfaces that must accept packets carrying standard TPID values. For 8-port, 12-port, and 48-port Fast Ethernet PICs, TCC is not supported.

**ethernet-vpls**—Use Ethernet VPLS encapsulation on Ethernet interfaces that have VPLS enabled and that must accept packets carrying standard TPID values. On M Series routers, except the M320 router, the 4-port Fast Ethernet TX PIC and the 1-port, 2-port, and 4-port, 4-slot Gigabit Ethernet PICs can use the Ethernet VPLS encapsulation type.

**ethernet-vpls-fr**—Use in a VPLS setup when a CE device is connected to a PE device over a time division multiplexing (TDM) link. This encapsulation type enables the PE device to terminate the outer Layer 2 Frame Relay connection, use the 802.1p bits inside the inner Ethernet header to classify the packets, look at the MAC address from the Ethernet header, and use the MAC address to forward the packet into a given VPLS instance.

**ethernet-vpls-ppp**—Use in a VPLS setup when a CE device is connected to a PE device over a time division multiplexing (TDM) link. This encapsulation type enables the PE device to terminate the outer Layer 2 PPP connection, use the 802.1p bits inside the inner Ethernet header to classify the packets, look at the MAC address from the Ethernet header, and use it to forward the packet into a given VPLS instance.

**ether-vpls-over-atm-llc**—For ATM intelligent queuing (IQ) interfaces only, use the Ethernet virtual private LAN service (VPLS) over ATM LLC encapsulation to bridge Ethernet interfaces and ATM interfaces over a VPLS routing instance (as described in RFC 2684, *Multiprotocol Encapsulation over ATM Adaptation Layer 5*). Packets from the ATM interfaces are converted to standard ENET2/802.3 encapsulated Ethernet frames with the frame check sequence (FCS) field removed.

**extended-frame-relay-ccc**—Use Frame Relay encapsulation on CCC circuits. This encapsulation type allows you to dedicate DLCIs 1 through 1022 to CCC. When you use this encapsulation type, you can configure the **ccc** family only.

**extended-frame-relay-ether-type-tcc**—Use extended Frame Relay ether type TCC for Cisco-compatible Frame Relay for DLCIs 1 through 1022. This encapsulation type is used for circuits with different media on either side of the connection.

**extended-frame-relay-tcc**—Use Frame Relay encapsulation on TCC circuits to connect different media. This encapsulation type allows you to dedicate DLCIs 1 through 1022 to TCC.

**extended-vlan-bridge**—Use extended VLAN bridge encapsulation on Ethernet interfaces that have IEEE 802.1Q VLAN tagging and bridging enabled and that must accept packets carrying TPID 0x8100 or a user-defined TPID.

**extended-vlan-ccc**—Use extended VLAN encapsulation on CCC circuits with Gigabit Ethernet and 4-port Fast Ethernet interfaces that must accept packets carrying 802.1Q values. Extended VLAN CCC encapsulation supports TPIDs 0x8100, 0x9100, and 0x9901. When you use this encapsulation type, you can configure the **ccc** family only. For 8-port, 12-port, and 48-port Fast Ethernet PICs, extended VLAN CCC is not supported. For 4-port Gigabit Ethernet PICs, extended VLAN CCC is not supported.

**extended-vlan-tcc**—For interfaces that carry IPv4 traffic, use extended VLAN encapsulation on TCC circuits with Gigabit Ethernet interfaces on which you want to use 802.1Q tagging. For 4-port Gigabit Ethernet PICs, extended VLAN TCC is not supported.

**extended-vlan-vpls**—Use extended VLAN VPLS encapsulation on Ethernet interfaces that have VLAN 802.1Q tagging and VPLS enabled and that must accept packets carrying TPIDs 0x8100, 0x9100, and 0x9901. On M Series routers, except the M320 router, the 4-port Fast Ethernet TX PIC and the 1-port, 2-port, and 4-port, 4-slot Gigabit Ethernet PICs can use the Ethernet VPLS encapsulation type.

**NOTE:** The built-in Gigabit Ethernet PIC on an M7i router does not support extended VLAN VPLS encapsulation.

---

**flexible-ethernet-services**—For Gigabit Ethernet IQ interfaces and Gigabit Ethernet PICs with small form-factor pluggable transceivers (SFPs) (except the 10-port Gigabit Ethernet PIC and the built-in Gigabit Ethernet port on the M7i router), use flexible Ethernet services encapsulation when you want to configure multiple per-unit Ethernet encapsulations. Aggregated Ethernet bundles can use this encapsulation type. This encapsulation type allows you to configure any combination of route, TCC, CCC, Layer 2 virtual private networks (VPNs), and VPLS encapsulations on a single physical port. If you configure flexible Ethernet services encapsulation on the physical interface, VLAN IDs from 1 through 511 are no longer reserved for normal VLANs.

**flexible-frame-relay**—For IQ interfaces only, use flexible Frame Relay encapsulation when you want to configure multiple per-unit Frame Relay encapsulations. This encapsulation type allows you to configure any combination of TCC, CCC, and standard Frame Relay encapsulations on a single physical port. Also, each logical interface can have any DLCI value from 1 through 1022.

**frame-relay**—Use Frame Relay encapsulation is defined in RFC 1490, *Multiprotocol Interconnect over Frame Relay*. E1, E3, link services, SONET/SDH, T1, T3, and voice services interfaces can use Frame Relay encapsulation.

**frame-relay-ccc**—Use Frame Relay encapsulation on CCC circuits. This encapsulation is same as standard Frame Relay for DLCIs 0 through 511. DLCIs 512 through 1022 are dedicated to CCC. The logical interface must also have **frame-relay-ccc** encapsulation. When you use this encapsulation type, you can configure the **ccc** family only.

**frame-relay-ether-type**—Use Frame Relay ether type encapsulation for compatibility with the Cisco Frame Relay. IETF frame relay encapsulation identifies the payload format using NLPID and SNAP formats. Cisco-compatible Frame Relay encapsulation uses the Ethernet type to identify the type of payload.

**NOTE:** When the encapsulation type is set to Cisco-compatible Frame Relay encapsulation, ensure that the LMI type is set to ANSI or Q933-A.

**frame-relay-ether-type-tcc**—Use Frame Relay ether type TCC for Cisco-compatible Frame Relay on TCC circuits to connect different media. This encapsulation is Cisco-compatible Frame Relay for DLCIs 0 through 511. DLCIs 512 through 1022 are dedicated to TCC.

**frame-relay-port-ccc**—Use Frame Relay port CCC encapsulation to transparently carry all the DLCIs between two customer edge (CE) routers without explicitly configuring each DLCI on the two provider edge (PE) routers with Frame Relay transport. The connection between the two CE routers can be either user-to-network interface (UNI) or network-to-network interface (NNI); this is completely transparent to the PE routers. When you use this encapsulation type, you can configure the **ccc** family only.

**frame-relay-tcc**—This encapsulation is similar to Frame Relay CCC and has the same configuration restrictions, but used for circuits with different media on either side of the connection.

**generic-services**—Use generic services encapsulation for services with a hierarchical scheduler.

**multilink-frame-relay-uni-nni**—Use MLFR UNI NNI encapsulation. This encapsulation is used on link services, voice services interfaces functioning as FRF.16 bundles, and their constituent T1 or E1 interfaces, and is supported on LSQ and redundant LSQ interfaces.

**ppp**—Use serial PPP encapsulation. This encapsulation is defined in RFC 1661, *The Point-to-Point Protocol (PPP) for the Transmission of Multiprotocol Datagrams over Point-to-Point Links*. PPP is the default encapsulation type for physical interfaces. E1, E3, SONET/SDH, T1, and T3 interfaces can use PPP encapsulation.

**ppp-ccc**—Use serial PPP encapsulation on CCC circuits. When you use this encapsulation type, you can configure the **ccc** family only.

**ppp-tcc**—Use serial PPP encapsulation on TCC circuits for connecting different media. When you use this encapsulation type, you can configure the **tcc** family only.

**vlan-ccc**—Use Ethernet VLAN encapsulation on CCC circuits. VLAN CCC encapsulation supports TPID 0x8100 only. When you use this encapsulation type, you can configure the **ccc** family only.

**vlan-vci-ccc**—Use ATM-to-Ethernet interworking encapsulation on CCC circuits. When you use this encapsulation type, you can configure the **ccc** family only. All logical interfaces configured on the Ethernet interface must also have the encapsulation type set to **vlan-vci-ccc**.

**vlan-vpls**—Use VLAN VPLS encapsulation on Ethernet interfaces with VLAN tagging and VPLS enabled. Interfaces with VLAN VPLS encapsulation accept packets carrying standard TPID values only. On M Series routers, except the M320 router, the 4-port Fast Ethernet TX PIC and the 1-port, 2-port, and 4-port, 4-slot Gigabit Ethernet PICs can use the Ethernet VPLS encapsulation type.

NOTE:

- Label-switched interfaces (LSIs) do not support VLAN VPLS encapsulation. Therefore, you can only use VLAN VPLS encapsulation on a PE-router-to-CE-router interface and not a core-facing interface.
  - Starting with Junos OS release 13.3, a commit error occurs when you configure **vlan-vpls** encapsulation on a physical interface and configure **family inet** on one of the logical units. Previously, it was possible to commit this invalid configuration.
- 

<b>Required Privilege</b>	interface—To view this statement in the configuration.

## encryption (MACsec for MX Series)

---

<b>Syntax</b>	encryption;
<b>Hierarchy Level</b>	[edit security macsec connectivity-association <i>connectivity-association-name</i> secure-channel <i>secure-channel-name</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 15.1 for MX240, MX480, and MX960 routers.
<b>Description</b>	<p>Enable MACsec encryption within a secure channel.</p> <p>You can enable MACsec without enabling encryption. If a connectivity association with a secure channel that has not enabled MACsec encryption is associated with an interface, traffic is forwarded across the Ethernet link in clear text. You are, therefore, able to view this unencrypted traffic when you are monitoring the link. The MACsec header is still applied to the frame, however, and all MACsec data integrity checks are run on both ends of the link to ensure the traffic has not been tampered with and does not represent a security threat.</p> <p>Traffic traversing a MAC-enabled point-to-point Ethernet link traverses the link at the same speed regardless of whether encryption is enabled or disabled. You cannot increase the speed of traffic traversing a MACsec-enabled Ethernet link by disabling encryption.</p> <p>This command is used to enable encryption when MACsec is configured using secure association key (SAK) security mode only. When MACsec is configuring using static connectivity association key (CAK) security mode, the encryption setting is configured outside of the secure channel using the <b>no-encryption</b> configuration statement.</p>
<b>Default</b>	MACsec encryption is disabled when MACsec is configured using static SAK security mode, by default.
<b>Required Privilege Level</b>	admin—To view this statement in the configuration. admin-control—To add this statement to the configuration.

## enhanced-convergence

<b>Syntax</b>	enhanced-convergence;
<b>Hierarchy Level</b>	[edit interfaces aeX aggregated-ether-options <b>mc-ae</b> ] [edit interfaces irb unit <i>unit-number</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 15.1R1.
<b>Description</b>	<div>  <p><b>NOTE:</b> On EX9200 and QFX10000 switches, enhanced convergence is applicable for unicast traffic only—for example, when a MAC address is learned over an MC-AE interface, or an ARP entry is resolved over an MC-AE interface.</p> </div> <p>Improves Layer 2 and Layer 3 convergence time when a multichassis aggregated Ethernet (MC-AE) link goes down or comes up in a bridge domain or VLAN. Convergence time is improved because the traffic on the MC-AE interface is switched to the interchassis link (ICL) without waiting for a MAC address update.</p> <p>If you have configured an IRB interface over an MC-AE interface that has enhanced convergences enabled, then you must configure enhanced convergence on the IRB interface as well. Enhanced convergence must be enabled for both Layer 2 and Layer 3 interfaces.</p>
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.

**Hierarchy Level** [edit interfaces *interface-name* gigether-options [ethernet-switch-profile](#)],  
[edit interfaces *interface-name* aggregated-ether-options [ethernet-switch-profile](#)]

**Release Information** Statement introduced before Junos OS Release 7.4.

**Description**

**NOTE:** On QFX Series standalone switches, this statement hierarchy is only supported on the Enhanced Layer 2 Switching CLI.

For Gigabit Ethernet IQ, 10-Gigabit Ethernet, Gigabit Ethernet PICs with SFPs (except the 10-port Gigabit Ethernet PIC and the built-in Gigabit Ethernet port on the M7i router), and 100-Gigabit Ethernet Type 5 PIC with CFP, configure a class of service (CoS)-based policer. Policing applies to the inner VLAN identifiers, not to the outer tag. For Gigabit Ethernet interfaces with SFPs (except the 10-port Gigabit Ethernet PIC and the built-in Gigabit Ethernet port on the M7i router), the **premium** policer is not supported.

The statements are explained separately.

**Required Privilege Level** interface—To view this statement in the configuration.  
interface-control—To add this statement to the configuration.

## ethernet-ring

---

<b>Syntax</b>	<pre>ethernet-ring <i>ring-name</i> {     control-vlan (<i>vlan-id</i>   <i>vlan-name</i>);     data-channel {         vlan <i>number</i>     }     east-interface {         control-channel <i>channel-name</i> {             vlan <i>number</i>;             interface name <i>interface-name</i>         }     }     guard-interval <i>number</i>;     node-id <i>mac-address</i>;     restore-interval <i>number</i>;     ring-protection-link-owner;     west-interface {         control-channel <i>channel-name</i> {             vlan <i>number</i>;         }     } }</pre>
<b>Hierarchy Level</b>	[edit protocols <a href="#">protection-group</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.4. Statement introduced in Junos OS Release 12.1 for EX Series switches. Statement introduced in Junos OS Release 14.153-D10 for QFX Series switches.
<b>Description</b>	For Ethernet PICs on MX Series routers or for EX Series switches, , specify the Ethernet ring in an Ethernet ring protection switching configuration.
<b>Options</b>	<i>ring-name</i> —Name of the Ethernet protection ring.  The remaining statements are explained separately.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Ethernet Ring Protection Switching Overview on page 233</a></li><li>• <i>Example: Configuring Ethernet Ring Protection Switching on EX Series Switches</i></li><li>• <i>Example: Configuring Ethernet Ring Protection Switching on QFX Series and EX Series Switches Supporting ELS</i></li><li>• <i>Configuring Ethernet Ring Protection Switching (CLI Procedure)</i></li></ul>

## ethernet-switch-profile

**Syntax**

```
ethernet-switch-profile {
  ethernet-policer-profile {
    input-priority-map {
      ieee802.1p premium [values];
    }
    output-priority-map {
      classifier {
        premium {
          forwarding-class class-name {
            loss-priority (high | low);
          }
        }
      }
    }
  }
  policer cos-policer-name {
    aggregate {
      bandwidth-limit bps;
      burst-size-limit bytes;
    }
    premium {
      bandwidth-limit bps;
      burst-size-limit bytes;
    }
  }
  storm-control storm-control-profile;
  tag-protocol-id tpid;
}
mac-learn-enable;
```

**Hierarchy Level** [edit interfaces *interface-name* [gigether-options](#)],  
[edit interfaces *interface-name* [aggregated-ether-options](#)],  
[edit interfaces *interface-name* aggregated-ether-options],  
[edit interfaces *interface-name* ether-options]

**Release Information** Statement introduced before Junos OS Release 7.4.  
Statement introduced in Junos OS Release 12.2 for ACX Series Universal Access Routers.  
Statement introduced in Junos OS Release 13.2 for the QFX Series.  
Statement introduced in Junos OS Release 13.2X50-D15 for the EX Series switches.

**Description**

**NOTE:** On QFX Series standalone switches, the `ethernet-policer-profile` CLI hierarchy and the `mac-learn-enable` statement are supported only on the Enhanced Layer 2 Switching CLI.

For Gigabit Ethernet IQ, 10-Gigabit Ethernet IQ2 and IQ2-E, and Gigabit Ethernet PICs with SFPs (except the 10-port Gigabit Ethernet PIC, aggregated Ethernet with Gigabit Ethernet IQ interfaces, the built-in Gigabit Ethernet port on the M7i router); 100-Gigabit Ethernet Type 5 PIC with CFP; and Gigabit Ethernet, 10-Gigabit Ethernet, 40-Gigabit

Ethernet, and aggregated Ethernet interfaces on EX Series switches, configure VLAN tag and MAC address accounting and filtering properties.

The remaining statements are explained separately.

.....

**NOTE:** When you gather interfaces into a bridge domain, the `no-mac-learn-enable` statement at the [edit interfaces *interface-name* *gigether-options* ethernet-switch-profile] hierarchy level is not supported. You must use the `no-mac-learning` statement at the [edit bridge-domains *bridge-domain-name* bridge-options interface *interface-name*] hierarchy level to disable MAC learning on an interface in a bridge domain. For information on disabling MAC learning for a bridge domain, see the *MX Series Layer 2 Configuration Guide*.

.....

<b>Default</b>	If the <b>ethernet-switch-profile</b> statement is not configured, Gigabit Ethernet IQ and Gigabit Ethernet PICs with SFPs (except the 10-port Gigabit Ethernet PIC and the built-in Gigabit Ethernet port on the M7i router) behave like Gigabit Ethernet interfaces.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring Gigabit Ethernet Policers on page 517</a></li><li>• <a href="#">Configuring MAC Address Filtering on page 517</a></li><li>• <a href="#">Stacking and Rewriting Gigabit Ethernet VLAN Tags Overview on page 537</a></li><li>• <a href="#">Configuring Q-in-Q Tunneling (CLI Procedure)</a></li></ul>

## evcs

<b>Syntax</b>	<pre>evcs evc-id {     evc-protocol cfm;     remote-uni-count count;     multipoint-to-multipoint; }</pre>
<b>Hierarchy Level</b>	[edit protocols <a href="#">oam ethernet</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.5.
<b>Description</b>	On MX Series routers with <b>ge</b> , <b>xe</b> , or <b>ae</b> interfaces, configure an OAM Ethernet virtual connection.
<b>Options</b>	<p><b>remote-uni-count <i>count</i></b>—(Optional) Specify the number of remote UNIs in the EVC configuration, the default is 1.</p> <p><b>multipoint-to-multipoint</b>—(Optional) Specify multiple points in the EVC configuration, the default is point-to-point if <b>remote-uni-count</b> is 1.</p> <p>Remaining options are explained separately.</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring Ethernet Local Management Interface on page 595</a></li> <li>• <a href="#">lmi (Ethernet OAM) on page 1115</a></li> </ul>

## evc-protocol cfm

---

Syntax	evc-protocol cfm { maintenance-association <i>association-name</i>   vpls routing-instance <i>routing-id</i> ; maintenance-domain <i>domain-id</i> ; mep-id <i>mep-id</i> ; }
Hierarchy Level	[edit protocols <a href="#">oam ethernet evcs</a> ]
Release Information	Statement introduced in Junos OS Release 9.5. <b>mep-id mep-id</b> statement introduced in Junos OS Release 15.1.
Description	Specify connectivity fault management (CFM) or virtual private LAN service (VPLS) as the Ethernet virtual connection (EVC) protocol.
Options	<b>management-domain domain-id</b> —(Optional) For CFM, specify the CFM management domain.  <b>management-association association-id</b> —(Optional) For CFM, specify the CFM management association.  <b>routing-instance instance-id</b> —(Optional) For VPLS, specify the VPLS routing instance.  <b>mep-id mep-id</b> —(Required for CFM) Identifier for the maintenance association endpoint
<hr/> <div> <b>NOTE:</b> This option is available on MX Series routers only.</div> <hr/>	
<b>Range:</b> 1 through 8191	
Required Privilege Level	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
Related Documentation	<ul style="list-style-type: none"><li>• <a href="#">Configuring Ethernet Local Management Interface on page 595</a></li><li>• <a href="#">lmi (Ethernet OAM) on page 1115</a></li></ul>

## event (LFM)

<b>Syntax</b>	<pre> event {   link-adjacency-loss;   link-event-rate {     frame-error count;     frame-period count;     frame-period-summary count;     symbol-period count;   }   protocol-down; } </pre>
<b>Hierarchy Level</b>	[edit protocols <a href="#">oam ethernet link-fault-management action-profile</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.5.
<b>Description</b>	<p>Configure threshold values for link events in an action profile.</p> <p>The remaining statements are explained separately.</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Monitoring Protocol Status on page 661</a></li> </ul>

## event-thresholds

<b>Syntax</b>	<pre> event-thresholds {   frame-error count;   frame-period count;   frame-period-summary count;   symbol-period count; } </pre>
<b>Hierarchy Level</b>	[edit protocols <a href="#">oam link-fault-management interface interface-name</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.4.
<b>Description</b>	<p>Configure threshold limit values for link events in periodic OAM PDUs.</p> <p>The remaining statements are explained separately.</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring Threshold Values for Local Fault Events on an Interface on page 654</a></li> </ul>

## exclude-protocol (MX Series)

---

<b>Syntax</b>	<code>exclude-protocol <i>protocol-name</i>;</code>
<b>Hierarchy Level</b>	<code>[edit security macsec connectivity-association <i>connectivity-association-name</i>]</code>
<b>Release Information</b>	Statement introduced in Junos OS Release 15.1 for MX240, MX480, and MX960 routers.
<b>Description</b>	<p>Specifies protocols whose packets are not secured using Media Access Control Security (MACsec) when MACsec is enabled on a link using static connectivity association key (CAK) security mode.</p> <p>When this option is enabled in a connectivity association that is attached to an interface, MACsec is not enabled for all packets of the specified protocols that are sent and received on the link.</p>
<b>Default</b>	<p>Disabled.</p> <p>All packets are secured on a link when MACsec is enabled, with the exception of all types of Spanning Tree Protocol (STP) packets.</p>
<b>Options</b>	<p><b><i>protocol-name</i></b>—Specifies the name of the protocol that should not be MACsec-secured. Options include:</p> <ul style="list-style-type: none"><li>• <b>cdp</b>—Cisco Discovery Protocol.</li><li>• <b>lACP</b>—Link Aggregation Control Protocol.</li><li>• <b>lldp</b>—Link Level Discovery Protocol.</li></ul>
<b>Required Privilege Level</b>	<p>admin—To view this statement in the configuration.</p> <p>admin-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring Media Access Control Security (MACsec) on MX Series Routers on page 100</a></li></ul>

## exercise

---

<b>Syntax</b>	<code>request protection-group ethernet-aps exercise md &lt;md&gt; ma &lt;ma&gt;</code>
<b>Hierarchy Level</b>	<code>[edit protocols protection-group ethernet-aps]</code>
<b>Description</b>	This configuration statement is used to test if APS is operating correctly, it does not interrupt regular APS operations.
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Ethernet Automatic Protection Switching Overview on page 225</a></li></ul>

---

## failover-delay

---

<b>Syntax</b>	<code>failover-delay <i>milliseconds</i>;</code>
<b>Hierarchy Level</b>	[edit protocols vrrp]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.4.
<b>Description</b>	Configure the failover delay for VRRP and VRRP for IPv6 operations.
<b>Options</b>	<i>milliseconds</i> —Specify the failover delay time, in milliseconds. <b>Range:</b> 50 through 2000
<b>Required Privilege Level</b>	routing—To view this statement in the configuration. routing-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring VRRP and VRRP for IPv6 on page 344</a></li></ul>

## family

```

Syntax  family family {

Hierarchy Level	[edit interfaces <i>interface-name</i> <b>unit</b> <i>logical-unit-number</i> ], [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> <b>unit</b> <i>logical-unit-number</i> ]
Release Information	Statement introduced before Junos OS Release 7.4. Option <b>max-sessions-vs-a-ignore</b> introduced in Junos OS Release 11.4.
Description	Configure protocol family information for the logical interface.

**NOTE:** Not all subordinate statements are available to every protocol family.

---

Options *family*—Protocol family:

- **any**—Protocol-independent family used for Layer 2 packet filtering

**NOTE:** This option is not supported on T4000 Type 5 FPCs.

- **bridge**—(M Series and T Series routers only) Configure only when the physical interface is configured with **ethernet-bridge** type encapsulation or when the logical interface is configured with **vlan-bridge** type encapsulation. You can optionally configure this protocol family for the logical interface on which you configure VPLS.
- **ethernet-switching**—(M Series and T Series routers only) Configure only when the physical interface is configured with **ethernet-bridge** type encapsulation or when the logical interface is configured with **vlan-bridge** type encapsulation
- **ccc**—Circuit cross-connect protocol suite. You can configure this protocol family for the logical interface of CCC physical interfaces. When you use this encapsulation type, you can configure the **ccc** family only.
- **inet**—Internet Protocol version 4 suite. You must configure this protocol family for the logical interface to support IP protocol traffic, including Open Shortest Path First (OSPF), Border Gateway Protocol (BGP), Internet Control Message Protocol (ICMP), and Internet Protocol Control Protocol (IPCP).
- **inet6**—Internet Protocol version 6 suite. You must configure this protocol family for the logical interface to support IPv6 protocol traffic, including Routing Information Protocol for IPv6 (RIPng), Intermediate System-to-Intermediate System (IS-IS), BGP, and Virtual Router Redundancy Protocol for IPv6 (VRRP).
- **iso**—International Organization for Standardization Open Systems Interconnection (ISO OSI) protocol suite. You must configure this protocol family for the logical interface to support IS-IS traffic.
- **mlfr-end-to-end**—Multilink Frame Relay FRF.15. You must configure this protocol or multilink Point-to-Point Protocol (MLPPP) for the logical interface to support multilink bundling.
- **mlfr-uni-nni**—Multilink Frame Relay FRF.16. You must configure this protocol or **mlfr-end-to-end** for the logical interface to support link services and voice services bundling.
- **multilink-ppp**—Multilink Point-to-Point Protocol. You must configure this protocol (or **mlfr-end-to-end**) for the logical interface to support multilink bundling.
- **mpls**—Multiprotocol Label Switching (MPLS). You must configure this protocol family for the logical interface to participate in an MPLS path.
- **pppoe**—Point-to-Point Protocol over Ethernet
- **tcc**—Translational cross-connect protocol suite. You can configure this protocol family for the logical interface of TCC physical interfaces.

- **tnp**—Trivial Network Protocol. This protocol is used to communicate between the Routing Engine and the router's packet forwarding components. The Junos OS automatically configures this protocol family on the router's internal interfaces only, as discussed in *Understanding Internal Ethernet Interfaces*.
- **vpls**—(M Series and T Series routers only) Virtual private LAN service. You can optionally configure this protocol family for the logical interface on which you configure VPLS. VPLS provides an Ethernet-based point-to-multipoint Layer 2 VPN to connect customer edge (CE) routers across an MPLS backbone. When you configure a VPLS encapsulation type, the **family vpls** statement is assumed by default.

MX Series routers support dynamic profiles for VPLS pseudowires, VLAN identifier translation, and automatic bridge domain configuration.

For more information about VPLS, see the *Junos OS VPNs Library for Routing Devices*.

The remaining statements are explained separately.

<b>Required Privilege Level</b>	interface—To view this statement in the configuration.
	interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Configuring the Protocol Family</i></li></ul>

## fast-aps-switch

<b>Syntax</b>	<code>fast-aps-switch;</code>
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> sonet-options aps]
<b>Release Information</b>	Statement introduced in Junos OS Release 12.1.
<b>Description</b>	(M320 routers with Channelized OC3/STM1 Circuit Emulation PIC with SFP only and EX Series switches) Reduce the Automatic Protection Switching (APS) switchover time in Layer 2 circuits.

### NOTE:

- Configuring this statement reduces the APS switchover time only when the Layer 2 circuit encapsulation type for the interface receiving traffic from a Layer 2 circuit neighbor is SAToP.
- When the `fast-aps-switch` statement is configured in revertive APS mode, you must configure an appropriate value for revert time to achieve reduction in APS switchover time.
- To prevent the logical interfaces in the data path from being shut down, configure appropriate hold-time values on all the interfaces in the data path that support TDM.
- The `fast-aps-switch` statement cannot be configured when the APS annex-b option is configured.
- The interfaces that have the `fast-aps-switch` statement configured cannot be used in virtual private LAN service (VPLS) environments.

<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Reducing APS Switchover Time in Layer 2 Circuits</i></li> </ul>

## fastether-options

---

**Syntax**    fastether-options {  
              802.3ad {  
                  aex (primary | backup);

              source-address-filter {  
                  *mac-address*;  
              }  
              (source-filtering | no-source-filtering);  
          }

**Hierarchy Level**    [edit interfaces *interface-name*]

**Release Information**    Statement introduced before Junos OS Release 7.4.

**Description**    Configure Fast Ethernet-specific interface properties.  
  
                  The statements are explained separately.

**Required Privilege Level**    interface—To view this statement in the configuration.  
                                  interface-control—To add this statement to the configuration.

**Related Documentation**    • [Ethernet Interfaces Overview on page 3](#)

## flexible-vlan-tagging

<b>Syntax</b>	flexible-vlan-tagging;
<b>Hierarchy Level</b>	[edit interfaces <i>aex</i> ], [edit interfaces <i>ge-fpc/pic/port</i> ], [edit interfaces <i>et-fpc/pic/port</i> ], [edit interfaces <i>ps0</i> ], [edit interfaces <i>xe-fpc/pic/port</i> ]
<b>Release Information</b>	<p>Statement introduced in Junos OS Release 8.1.</p> <p>Support for aggregated Ethernet added in Junos OS Release 9.0.</p> <p>Statement introduced in Junos OS Release 12.1x48 for PTX Series Packet Transport Routers.</p> <p>Statement introduced in Junos OS Release 13.2X50-D15 for EX Series switches.</p> <p>Statement introduced in Junos OS Release 13.2X51-D20 for the QFX Series.</p>
<b>Description</b>	<p>Support simultaneous transmission of 802.1Q VLAN single-tag and dual-tag frames on logical interfaces on the same Ethernet port, and on pseudowire logical interfaces.</p> <p>This statement is supported on M Series and T Series routers, for Fast Ethernet and Gigabit Ethernet interfaces only on Gigabit Ethernet IQ2 and IQ2-E, IQ, and IQE PICs, and for aggregated Ethernet interfaces with member links in IQ2, IQ2-E, and IQ PICs or in MX Series DPCs, or on Ethernet interfaces for PTX Series Packet Transport Routers or 100-Gigabit Ethernet Type 5 PIC with CFP. This statement is supported on Gigabit Ethernet, 10-Gigabit Ethernet, 40-Gigabit Ethernet, and aggregated Ethernet interfaces on EX Series switches.</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring Mixed Tagging on page 258</a></li> <li>• <a href="#">Configuring Flexible VLAN Tagging on PTX Series Packet Transport Routers on page 261</a></li> </ul>

## flow-control

<b>Syntax</b>	(flow-control   no-flow-control);
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> <a href="#">aggregated-ether-options</a> ], [edit interfaces <i>interface-name</i> ether-options], [edit interfaces <i>interface-name</i> <a href="#">fastether-options</a> ], [edit interfaces <i>interface-name</i> <a href="#">gigether-options</a> ], [edit interfaces <i>interface-name</i> multiservice-options], [edit interfaces interface-range <i>name</i> <a href="#">aggregated-ether-options</a> ], [edit interfaces interface-range <i>name</i> ether-options]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4. Statement introduced in Junos OS Release 9.0 in EX Series switches. Statement introduced in Junos OS Release 12.2 for ACX Series Universal Access Routers.
<b>Description</b>	For aggregated Ethernet, Fast Ethernet, and Gigabit Ethernet interfaces only, explicitly enable flow control, which regulates the flow of packets from the router or switch to the remote side of the connection. Enabling flow control is useful when the remote device is a Gigabit Ethernet switch. Flow control is not supported on the 4-port Fast Ethernet PIC.
<div style="display: flex; align-items: center;">  <div> <p><b>NOTE:</b> On the Type 5 FPC, to prioritize control packets in case of ingress oversubscription, you must ensure that the neighboring peers support MAC flow control. If the peers do not support MAC flow control, then you must disable flow control.</p> </div> </div>	
<b>Default</b>	Flow control is enabled.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring Flow Control on page 11</a></li> <li>• <i>Configuring Gigabit Ethernet Interfaces (CLI Procedure)</i></li> <li>• <i>Configuring Gigabit Ethernet Interfaces (CLI Procedure)</i></li> </ul>

## fnp

<b>Syntax</b>	<pre>fnp {   interval &lt;100ms   1s   10s   1m   10m&gt;;   loss-threshold <i>number</i>   interface <i>interface name</i> {     domain-id <i>domain-id</i>   } }</pre>
<b>Hierarchy Level</b>	[edit protocols <a href="#">oam ethernet</a> ]
<b>Release Information</b>	Command introduced in Junos OS Release 11.4.
<b>Description</b>	On routers with <b>ge</b> , <b>xe</b> , or <b>ae</b> interfaces, configure an OAM Ethernet failure notification protocol.
<b>Options</b>	<p><b>interval <i>number</i></b>—Specifies the time between the transmission of FNP messages.</p> <p><b>loss-threshold <i>number</i></b>—FNP messages that can be lost before the FNP message is considered aged out and flushed.</p> <p><b>interface <i>interface-name</i></b>—Name of the Ethernet interface.</p> <p><b>domain-id <i>number</i></b>—Domain ID of the access network.</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Ethernet Failure Notification Protocol Overview on page 688</a></li> <li>• <a href="#">Configuring the Failure Notification Protocol on page 747</a></li> </ul>

## force switch

<b>Syntax</b>	request protection-group ethernet-aps force-switch md <md> ma <ma>
<b>Hierarchy Level</b>	[edit protocols protection-group ethernet-aps]
<b>Description</b>	Forces traffic to switch from the active path to the alternate path. If the working path is the active path, traffic will be switched to the protection path. If the protection path is the active path, traffic will be switched to the protection path.
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>

## force-up

---

<b>Syntax</b>	force-up;
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> aggregated-ethernet-options lacp] [edit interfaces <i>interface-name</i> ether-options 802.3ad lacp]
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2 for MX Series routers. Statement introduced in Junos OS Release 16.1 for EX9200 switches.
<b>Description</b>	Configure the peer interface (in MC-LAG) to remain up even with limited LACP capability.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Forcing MC-LAG Links or Interfaces with Limited LACP Capability to Be Up</i></li></ul>

## forwarding-class (Gigabit Ethernet IQ Classifier)

---

<b>Syntax</b>	forwarding-class <i>class-name</i> { loss-priority (high   low); }
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> gigether-options <a href="#">ethernet-switch-profile</a> <a href="#">ethernet-policer-profile</a> output-priority-map classifier premium]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4.
<b>Description</b>	For Gigabit Ethernet IQ interfaces only, define forwarding class name and option values.
<b>Options</b>	<i>class-name</i> —Name of forwarding class.  The statements are explained separately.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Specifying an Output Priority Map on page 517</a></li><li>• <a href="#">input-priority-map on page 1087</a></li><li>• forwarding-class statement in the <i>Class of Service Feature Guide for Routing Devices</i></li></ul>

## forwarding-mode (100-Gigabit Ethernet)

<b>Syntax</b>	<pre>forwarding-mode {   (sa-multicast   ...the following vlan-steering statement...);   vlan-steering {     vlan-rule (high-low   odd-even);   } }</pre>
<b>Hierarchy Level</b>	[edit chassis fpc slot pic slot]
<b>Release Information</b>	<p>Statement introduced in Junos OS Release 10.4.</p> <p>Statement introduced in Junos OS Release 12.1 for MX Series routers.</p>
<b>Description</b>	<p>Configure the interoperation mode for 100-Gigabit Ethernet PIC or the 100-Gigabit Ethernet MIC.</p> <p>The remaining statements are explained separately.</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring VLAN Steering Mode for 100-Gigabit Ethernet Type 4 PIC with CFP on page 430</a></li> <li>• <a href="#">Configuring 100-Gigabit Ethernet MICs to Interoperate with Type 4 100-Gigabit Ethernet PICs (PD-1CE-CFP-FPC4) Using SA Multicast Mode</a></li> <li>• <a href="#">Interoperability Between the 100-Gigabit Ethernet PICs PD-1CE-CFP-FPC4 and PF-1CGE-CFP on page 436</a></li> <li>• <a href="#">Configuring the Interoperability Between the 100-Gigabit Ethernet PICs PF-1CGE-CFP and PD-1CE-CFP-FPC4 on page 439</a></li> <li>• <a href="#">sa-multicast (100-Gigabit Ethernet) on page 1221</a></li> <li>• <a href="#">vlan-rule (100-Gigabit Ethernet Type 4 PIC with CFP) on page 1297</a></li> <li>• <a href="#">vlan-steering (100-Gigabit Ethernet Type 4 PIC with CFP) on page 1298</a></li> </ul>

## forwarding-mode (PTX Series Packet Transport Routers)

---

<b>Syntax</b>	<code>forwarding-mode {     sa-multicast }</code>
<b>Hierarchy Level</b>	<code>[edit chassis fpc slot pic slot port port-number]</code>
<b>Release Information</b>	Statement introduced in Junos OS Release 12.1X48R4.
<b>Description</b>	<p>Configure interoperability between 100-Gigabit Ethernet PICs PD-1CE-CFP-FPC4 and P1-PTX-2-100GE-CFP.</p> <p>The remaining statement is explained separately.</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>

## frame-error

<b>Syntax</b>	<code>frame-error count;</code>
<b>Hierarchy Level</b>	[edit protocols <a href="#">oam ethernet link-fault-management action-profile event link-event-rate</a> ], [edit protocols <a href="#">oam link-fault-management interface interface-name event-thresholds</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.4.
<b>Description</b>	<p>Threshold for sending frame error events or taking the action specified in the action profile.</p> <p>A frame error is any frame error on the underlying physical layer. The threshold is reached when the number of frame errors reaches the configured value within the window.</p> <p>The window or period during which frame errors are counted is 5 seconds or multiples of it (with a maximum value of 1 minute). This window denotes the duration as intervals of 100 milliseconds, encoded as a 16-bit unsigned integer. This window is not configurable in Junos OS. According to the IEEE 802.3ah standard, the default value of the frame-errors window is 1 second. This window has a lower bound of 1 second and an upper bound of 1 minute.</p>
<b>Options</b>	<p><b>count</b>—Threshold count for frame error events.</p> <p><b>Range:</b> 0 through 100</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring Threshold Values for Local Fault Events on an Interface on page 654</a></li> <li>• <a href="#">Configuring Threshold Values for Fault Events in an Action Profile on page 662</a></li> </ul>

## frame-period

---

<b>Syntax</b>	<code>frame-period count;</code>
<b>Hierarchy Level</b>	[edit protocols <a href="#">oam ethernet link-fault-management action-profile event link-event-rate</a> ], [edit protocols <a href="#">oam link-fault-management interface interface-name event-thresholds</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.4.
<b>Description</b>	<p>Threshold for sending frame period error events or taking the action specified in the action profile.</p> <p>A frame error is any frame error on the underlying physical layer. The frame period threshold is reached when the number of frame errors reaches the configured value within the period window. The default period window is the number of minimum-size frames that can be transmitted on the underlying physical layer in 1 second. The window is not configurable.</p>
<b>Options</b>	<p><b>count</b>—Threshold count for frame period error events.</p> <p><b>Range:</b> 0 through 100</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring Threshold Values for Local Fault Events on an Interface on page 654</a></li><li>• <a href="#">Configuring Threshold Values for Fault Events in an Action Profile on page 662</a></li></ul>

## frame-period-summary

---

<b>Syntax</b>	<code>frame-period-summary count;</code>
<b>Hierarchy Level</b>	[edit protocols <a href="#">oam ethernet link-fault-management action-profile event link-event-rate</a> ], [edit protocols <a href="#">oam link-fault-management interface interface-name event-thresholds</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.4.
<b>Description</b>	<p>Threshold for sending frame period summary error events or taking the action specified in the action profile.</p> <p>An errored frame second is any 1-second period that has at least one errored frame. This event is generated if the number of errored frame seconds is equal to or greater than the specified threshold for that period window. The default window is 60 seconds. The window is not configurable.</p>
<b>Options</b>	<p><b>count</b>—Threshold count for frame period summary error events.</p> <p><b>Range:</b> 0 through 100</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring Threshold Values for Local Fault Events on an Interface on page 654</a></li> <li>• <a href="#">Configuring Threshold Values for Fault Events in an Action Profile on page 662</a></li> </ul>

## framing (10-Gigabit Ethernet Interfaces)

<b>Syntax</b>	framing (lan-phy   wan-phy);
<b>Hierarchy Level</b>	[edit interfaces xe- <i>fpc/pic/port</i> ] [edit interfaces et- <i>fpc/pic/port</i> ] (PTX Series Packet Transport Routers and MX Series Routers)
<b>Release Information</b>	Statement introduced in Junos OS Release 8.0. Statement introduced in Junos OS Release 12.3R2 for PTX Series Packet Transport Routers.
<b>Description</b>	For routers supporting the 10-Gigabit Ethernet interface, configure the framing format. WAN PHY mode is supported on MX240, MX480, MX960, T640, T1600, T4000, and PTX Series Packet Transport Routers routers only.

### NOTE:

- The T4000 Core Router supports only LAN PHY mode in Junos OS Release 12.1R1. Starting with Junos OS Release 12.1R2, WAN PHY mode is supported on the T4000 routers with the 12-port 10-Gigabit Ethernet LAN/WAN PIC with SFP+ (PF-12XGE-SFPP). Starting with Junos OS Release 12.2, WAN PHY mode is supported on the T4000 routers with the 24-port 10-Gigabit Ethernet LAN/WAN PIC with SFP+ (PF-24XGE-SFPP).
- On PTX Series routers, WAN PHY mode is supported only on the 24-port 10-Gigabit Ethernet LAN/WAN PIC with SFP+ .
- When the PHY mode changes, interface traffic is disrupted because of port reinitialization.

<b>Default</b>	Operates in LAN PHY mode.
<b>Options</b>	<b>lan-phy</b> —10GBASE-R interface framing format that bypasses the WIS sublayer to directly stream block-encoded Ethernet frames on a 10-Gigabit Ethernet serial interface.  <b>wan-phy</b> —10GBASE-W interface framing format that allows 10-Gigabit Ethernet wide area links to use fiber-optic cables and SONET devices.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">10-Gigabit Ethernet Framing Overview on page 409</a></li> <li>• <a href="#">Configuring SONET Options for 10-Gigabit Ethernet Interfaces</a></li> </ul>

## gigether-options

<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> ]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4.
<b>Description</b>	Configure Gigabit Ethernet specific interface properties.  The statements are explained separately.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Ethernet Interfaces Overview on page 3</a></li><li>• <i>gether-options (ACX Series)</i></li></ul>

---

## gratuitous-arp-reply

<b>Syntax</b>	(gratuitous-arp-reply   no-gratuitous-arp-reply);
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> ] [edit interfaces <i>interface-range</i> <i>interface-range-name</i> ]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4. Statement introduced in Junos OS Release 9.0 in EX Series switches. Statement introduced in Junos OS Release 12.2 for ACX Series Universal Access Routers.
<b>Description</b>	For Ethernet interfaces, enable updating of the Address Resolution Protocol (ARP) cache for gratuitous ARPs.
<b>Default</b>	Updating of the ARP cache is disabled on all Ethernet interfaces.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring Gratuitous ARP on page 19</a></li><li>• <a href="#">no-gratuitous-arp-request on page 1152</a></li></ul>

## guest-vlan (MX Series in Enhanced LAN Mode)

---

<b>Syntax</b>	<code>guest-vlan (vlan-id   vlan-name);</code>
<b>Hierarchy Level</b>	<code>[edit protocols authentication-access-control interface (all   [interface-names]) dot1x]</code>
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2 for MX240, MX480, and MX960 routers in enhanced LAN mode.
<b>Description</b>	Specify the VLAN to which an interface is moved when no 802.1X supplicants are connected on the interface. The VLAN specified must already exist on the switch.
<b>Default</b>	None
<b>Options</b>	<b><i>vlan-id</i></b> —VLAN tag identifier of the guest VLAN. <b><i>vlan-name</i></b> —Name of the guest VLAN.
<b>Required Privilege Level</b>	<b>routing</b> —To view this statement in the configuration. <b>routing-control</b> —To add this statement to the configuration.

## guard-interval

---

<b>Syntax</b>	<code>guard-interval <i>number</i>;</code>
<b>Hierarchy Level</b>	[edit protocols <a href="#">protection-group ethernet-ring <i>ring-name</i></a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.4. Statement introduced in Junos OS Release 12.1 for EX Series switches. Statement introduced in Junos OS Release 14.153-D10 for QFX Series switches.
<b>Description</b>	When a link goes down, the ring protection link (RPL) activates. When the downed link comes back up, the RPL link receives notification, restores the link, and waits for the restore interval before issuing another block on the same link. This configuration is a global configuration and applies to all Ethernet rings if the Ethernet ring does not have a more specific configuration for this value. If no parameter is configured at the protection group level, the global configuration of this parameter uses the default value.
<b>Options</b>	<b><i>number</i></b> —Guard timer interval, in milliseconds. <b>Range:</b> 10 through 2000 ms <b>Default:</b> 500 ms
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Ethernet Ring Protection Switching Overview on page 233</a></li><li>• <i>Example: Configuring Ethernet Ring Protection Switching on EX Series Switches</i></li><li>• <i>Example: Configuring Ethernet Ring Protection Switching on QFX Series and EX Series Switches Supporting ELS</i></li><li>• <i>Configuring Ethernet Ring Protection Switching (CLI Procedure)</i></li></ul>

## hold-interval (Protection Group)

<b>Syntax</b>	hold-interval <i>number</i> ;
<b>Hierarchy Level</b>	[edit protocols <a href="#">protection-group ethernet-ring name</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.4.
<b>Description</b>	Specify the hold-off timer interval <i>for all rings</i> in 100 millisecond (ms) increments.
<b>Options</b>	<i>number</i> —Hold-timer interval, in milliseconds. <b>Range:</b> 0 through 10,000 ms <b>Default:</b> 100 ms
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Ethernet Ring Protection Switching Overview on page 233</a></li> <li>• <a href="#">Example: Configuring Ethernet Ring Protection Switching on QFX Series and EX Series Switches Supporting ELS</a></li> </ul>

## hold-multiplier

<b>Syntax</b>	hold-multiplier <i>number</i> ;
<b>Hierarchy Level</b>	[edit protocols <a href="#">lldp</a> ], [edit routing-instances <i>routing-instance-name</i> protocols <a href="#">lldp</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.6.
<b>Description</b>	Configure a value for the LLDP hold multiplier.  Hold timer interval in seconds to cache learned LLDP information before discarding.
<b>Options</b>	<i>number</i> —Advertisement interval multiplier for LLDP cache discard. <b>Default:</b> 4 (giving 120 second LLDP cache lifetime with other defaults) <b>Range:</b> 2 through 10
<b>Required Privilege Level</b>	routing—To view this statement in the configuration. routing-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring LLDP on page 336</a></li> </ul>

## hold-time up

---

<b>Syntax</b>	<code>hold-time up <i>timer-value</i>;</code>
<b>Hierarchy Level</b>	[edit interfaces aex <a href="#">aggregated-ether-options lacp</a> ],
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2R3.
<b>Description</b>	<p>Specifies the time period for which the Link Aggregation Control Protocol (LACP) maintains the state of a child (member) link as expired or default.</p> <p>When a child link goes from the current state to the expired state, the LACP monitors the reception of protocol data units (PDUs) on the child link for the configured hold-up time interval and does not allow the child link to transition back to the current state. This configuration thus prevents excessive flapping of a child link on an aggregated Ethernet interface.</p> <p>The configured hold-up timer value is applicable to all the child links within a link aggregated (LAG) interface. By default, this feature is disabled.</p>
<b>Options</b>	<p><b><i>timer-value</i></b>—Hold-up interval in seconds.</p> <p><b>Range:</b> 1 to 6000 seconds</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring LACP for Aggregated Ethernet Interfaces on page 164</a></li><li>• <i>Configuring Aggregated Ethernet LACP (CLI Procedure)</i></li></ul>

## iccp

<b>Syntax</b>	<pre> iccp {     traceoptions; {         file &lt;filename&gt; &lt;files number&gt; &lt;match regular-expression&gt; &lt;microsecond-stamp&gt;         &lt;size size&gt; &lt;world-readable   no-world-readable&gt;;         flag flag;         no-remote-trace;     }     local-ip-address ip address;     session-establishment-hold-time value;     authentication-key string;     peer ip-address {         local-ip-address ip address;         session-establishment-hold-time value;         authentication-key string;         redundancy-group-id-list redundancy-group-id-list;         liveness-detection;     } } </pre>
<b>Hierarchy Level</b>	<pre> [edit protocols iccp] [edit logical-systems logical-system-name protocols iccp] </pre>
<b>Release Information</b>	<p>Statement introduced in Junos OS Release 10.0.</p> <p>Support for logical systems introduced in Junos OS Release 14.1.</p>
<b>Description</b>	<p>Configure Interchassis Control Protocol (ICCP) between the multichassis link aggregation group (MC-LAG) peers. ICCP replicates forwarding information, validates configurations, and propagates the operational state of the MC-LAG members.</p>
<b>Default</b>	<p>If you do not include this statement, no ICCP protocol tracing operations are performed.</p>
<b>Options</b>	<p><b>traceoptions</b>—Set Interchassis Control Protocol (ICCP) tracing options.</p> <p><b>local-ip-address</b>—Specify the source address where the ICCP packet is routed.</p> <p><b>session-establishment-hold-time</b>—Specify if the chassis takes over as the master at the ICCP session.</p> <p><b>authentication-key</b>—Specify TCP Message Digest 5 (MD5) option for an ICCP TCP session.</p> <p><b>peer ip-address</b>—Specify the IP address of the peer that hosts an MC-LAG. You must configure ICCP for both peers that host the MC-LAG.</p> <p><b>redundancy-group-id-list</b>—Specify the redundancy groups between two ICCP peers.</p> <p><b>liveness-detection</b>—Specify Bidirectional Forwarding Detection (BFD) protocol options.</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>

## ignore-l3-incompletes

---

<b>Syntax</b>	ignore-l3-incompletes;
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> <a href="#">fastether-options</a> ], [edit interfaces <i>interface-name</i> <a href="#">gigether-options</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.0. Statement introduced in Junos OS Release 12.2 for ACX Series Universal Access Routers.
<b>Description</b>	Ignore the counting of Layer 3 incomplete errors on Fast Ethernet, Gigabit Ethernet, and 10-Gigabit Ethernet interfaces.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Ignoring Layer 3 Incomplete Errors on page 19</a></li></ul>

## include-sci (MACsec for MX Series)

<b>Syntax</b>	include-sci;
<b>Hierarchy Level</b>	[edit security macsec connectivity-association <i>connectivity-association-name</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 15.1 for MX240, MX480, and MX960 routers.
<b>Description</b>	<p>Specifies that the SCI tag should be appended to each packet on a link that has enabled MACsec.</p> <p>SCI tags are automatically appended to packets leaving a MACsec-enabled interface on an MX240, MX480, or MX960 router. This option is, therefore, redundant to be configured.</p> <p>This option is used only when connecting a router to a host device that requires SCI tagging. SCI tags are eight octets long, so appending an SCI tag to all traffic on the link adds a significant amount of unneeded overhead.</p>
<b>Default</b>	SCI tagging is enabled on MX Series routers that have enabled MACsec using static connectivity association key (CAK) security mode, by default.
<b>Required Privilege Level</b>	<p>admin—To view this statement in the configuration.</p> <p>admin-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring Media Access Control Security (MACsec) on MX Series Routers on page 100</a></li> </ul>

## ingress-policer-overhead

<b>Syntax</b>	<code>ingress-policer-overhead bytes;</code>
<b>Hierarchy Level</b>	<code>[edit chassis fpc slot-number pic pic-number]</code>
<b>Release Information</b>	Statement introduced before Junos OS Release 11.1. Statement introduced in Junos OS Release 15.1X49-D30 for vSRX.
<b>Description</b>	<p>Add the configured number of bytes to the length of a packet entering the interface.</p> <p>Configure a policer overhead to control the rate of traffic received on an interface. Use this feature to help prevent denial-of-service (DoS) attacks or to enforce traffic rates to conform to the service-level agreement (SLA). When you configure a policer overhead, the configured policer overhead value (bytes) is added to the length of the final Ethernet frame. This calculated length of frame is used to determine the policer or the rate-limiting action.</p> <p>Traffic policing combines the configured policy bandwidth limits and the burst size to determine how to meter the incoming traffic. If you configure a policer overhead on an interface, Junos OS adds those bytes to the length of incoming Ethernet frames. This added overhead fills each frame closer to the burst size, allowing you to control the rate of traffic received on an interface.</p> <p>You can configure the policer overhead to rate-limit queues and Layer 2 and Layer 3 policers, for standalone (SA) and high-availability (HA) deployments. The policer overhead and the shaping overhead can be configured simultaneously on an interface.</p>

**NOTE:** vSRX supports policer overhead on Layer 3 policers only.

The policer overhead applies to all interfaces on the PIC. In the following example, Junos OS adds 10 bytes of overhead to all incoming Ethernet frames on ports ge-0/0/0 through ge-0/0/4.

```
set chassis fpc 0 pic 0 ingress-policer-overhead 10
```

**NOTE:** vSRX only supports fpc 0 pic 0. When you commit the `ingress-policer-overhead` statement, the vSRX takes the PIC offline and then back online.

You need to craft the policer overhead size to match your network traffic. A value that is too low will have minimal impact on traffic bursts. A value that is too high will rate-limit too much of your incoming traffic.

In this example, the policer overhead of 255 bytes is configured for ge-0/0/0 through ge-0/0/4. The firewall policer is configured to discard traffic when the burst size is over

1500 bytes. This policer is applied to ge-0/0/0 and ge 0/0/1. Junos OS adds 255 bytes to every Ethernet frame that comes into the configured ports. If, during a burst of traffic, the combined length of incoming frames and the overhead bytes exceeds 1500 bytes, the policer starts to discard further incoming traffic.

```
set chassis fpc 0 pic 0 ingress-policer-overhead 255
set interfaces ge-0/0/0 unit 0 family inet policer input overhead_policer
set interfaces ge-0/0/0 unit 0 family inet address 10.9.1.2/24
set interfaces ge-0/0/1 unit 0 family inet policer input overhead_policer
set interfaces ge-0/0/1 unit 0 family inet address 10.9.2.2/24
set firewall policer overhead_policer if-exceeding bandwidth-limit 32k
set firewall policer overhead_policer if-exceeding burst-size-limit 1500
set firewall policer overhead_policer then discard
```

**Options** *bytes*—Number of bytes added to a frame entering an interface.

**Range:** 0–255 bytes

**Default:** 0

```
[edit chassis fpc 0 pic 0]
user@host# set ingress-policer-overhead 10;
```

**Required Privilege Level** interface—To view this statement in the configuration.  
interface-control—To add this statement to the configuration.

## interface

<b>Syntax</b>	interface (all   <i>interface-name</i> ) { <b>disable</b> ; }
<b>Hierarchy Level</b>	[edit protocols <b>lldp</b> ], [edit routing-instances <i>routing-instance-name</i> protocols <b>lldp</b> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.6.
<b>Description</b>	Specify an LLDP interface.
<b>Options</b>	<i>interface-name</i> —A valid physical interface name.

**NOTE:** On MX Series and T Series routers, you run LLDP on a physical interface, such as ge-1/0/0, and not at the logical interface (unit) level.

Starting with Junos OS Release 14.2, you can also specify LLDP neighbor details for management interfaces, such as fxp or me, on MX Series routers.

For information about interface names, see *Interface Naming Overview*. For information about interface names for TX Matrix routers, see *TX Matrix Router Chassis and Interface Names*. For information about FPC numbering on TX Matrix routers, see *Routing Matrix with a TX Matrix Router FPC Numbering*.

For information about extended port names in the Junos Fusion technology, see *Understanding Junos Fusion Ports*.

**all**—Run LLDP on all interfaces.

**disable**—Disable LLDP on the specified interface

<b>Required Privilege Level</b>	routing—To view this statement in the configuration. routing-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring LLDP on page 336</a></li> </ul>

## interface (IEEE 802.1x)

---

<b>Syntax</b>	<pre>interface <i>interface-id</i> {     maximum-requests <i>integer</i>;     quiet-period <i>seconds</i>;     reauthentication (disable   interval <i>seconds</i>);     retries <i>integer</i>;     server-timeout <i>seconds</i>;     supplicant (<i>single</i>);     supplicant-timeout <i>seconds</i>;     transmit-period <i>seconds</i>; }</pre>
<b>Hierarchy Level</b>	[edit protocols <a href="#">dot1x authenticator</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.3.
<b>Description</b>	Use this statement to configure the 802.1x Port-Based Network Access Control protocol-specific Ethernet interface options.
<b>Default</b>	The default values are provided for the options below on the respective statement pages.
<b>Options</b>	<p><b>maximum-requests</b>—Specify the maximum number of retransmission times for an EAPOL Request packet to the client before it times out the authentication session.</p> <p><b>quiet-period</b>—Specify the number of seconds the port remains in the wait state following a failed authentication exchange with the client, before reattempting the authentication.</p> <p><b>reauthentication</b>—Includes two options:</p> <ul style="list-style-type: none"><li>• <b>disable</b>—Periodic reauthentication of the client is disabled.</li><li>• <b>interval</b>—Specify the periodic reauthentication time interval.</li></ul> <p><b>retries</b>—Specify the number of tries after which the port remains in the wait state for <b>quiet-period</b> seconds before reattempting the authentication.</p> <p><b>server-timeout</b>—Specify the number of seconds the port waits for a reply when relaying a response from the client to the authentication server before timing out and invoking the server-fail action.</p> <p><b>supplicant (<i>single</i>)</b>—Specify supplicant single mode. See the usage guidelines to configure other modes.</p> <p><b>supplicant-timeout</b>—Specify the number of seconds the port waits for a response when relaying a request from the authentication server to the client before resending the request.</p> <p><b>transmit-period</b>—Specify the number of seconds the port waits before retransmitting the initial EAPOL PDUs to the client.</p>

**Required Privilege Level** interface—To view this statement in the configuration.  
 interface-control—To add this statement to the configuration.

## interface (OAM Link-Fault Management)

**Syntax**

```
interface interface-name {
  apply-action-profile profile-name;
  link-discovery (active | passive);
  pdu-interval interval;
  pdu-threshold threshold-value;
  remote-loopback;
  event-thresholds {
    frame-error count;
    frame-period count;
    frame-period-summary count;
    symbol-period count;
  }
  negotiation-options {
    allow-remote-loopback;
    no-allow-link-events;
  }
}
```

**Hierarchy Level** [edit protocols [oam ethernet link-fault-management](#)]

**Release Information** Statement introduced in Junos OS Release 8.2.

**Description** For Ethernet interfaces on M320, MX Series, and T Series routers, configure IEEE 802.3ah Operation, Administration, and Management (OAM) support.

**Options** `interface interface-name`—Interface to be enabled for IEEE 802.3ah link fault management OAM support.

The remaining statements are described separately.

**Required Privilege Level** interface—To view this statement in the configuration.  
 interface-control—To add this statement to the configuration.

**Related Documentation**

- [Enabling IEEE 802.3ah OAM Support on page 651](#)

## interface (Static MAC Bypass)

---

<b>Syntax</b>	<code>interface [<i>interface-names</i>];</code>
<b>Hierarchy Level</b>	[edit protocols authentication-access-control]
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2 for MX240, MX480, and MX960 routers in enhanced LAN mode.
<b>Description</b>	Configure interfaces on which the specified MAC addresses are allowed to bypass RADIUS authentication and allowed to connect to the LAN without authentication.
<b>Options</b>	<i>interface-names</i> —List of interfaces.
<b>Required Privilege Level</b>	routing—To view this statement in the configuration. routing-control—To add this statement to the configuration.
<b>Related Documentation</b>	

## interfaces (MACsec for MX Series)

<b>Syntax</b>	<pre>interfaces <i>interface-name</i> {     connectivity-association <i>connectivity-association-name</i>; }</pre>
<b>Hierarchy Level</b>	[edit security macsec]
<b>Release Information</b>	Statement introduced in Junos OS Release 15.1 for MX240, MX480, and MX960 routers.
<b>Description</b>	<p>Applies the specified connectivity association to the specified interface to enable MACsec.</p> <p>One connectivity association can be applied to multiple interfaces.</p> <p>You must always use this statement to apply a connectivity association to an interface to enable MACsec. You must complete this configuration step regardless of whether MACsec is enabled using static connectivity association key (CAK) security mode or static secure association key (SAK) security mode.</p> <p>If you are enabling MACsec using static SAK security mode and need to configure MACsec on inbound and outbound traffic on the same interface, you must configure a connectivity association with one secure channel for inbound traffic and a second secure channel for outbound traffic. The connectivity association is then applied to the interface using this statement to enable MACsec for traffic entering and leaving the interface.</p>
	<p> <b>NOTE:</b> Starting in Junos OS Release 16.1R2, when Media Access Control Security (MACsec) is enabled on an interface, the interface flow control capability is enabled by default, regardless of the configuration that you set using the (flow-control   no-flow-control) statement at the [edit interfaces <i>interface-name</i> together-options] hierarchy level. When MACsec is disabled, interface flow control is restored to the configuration that you set using the flow-control statement at the [edit interfaces] hierarchy level. When MACsec is enabled, additional header bytes are added to the packet by the MACsec PHY. With line rate traffic, when MACsec is enabled and flow control is disabled, the pause frames sent by the MACsec PHY are terminated by the MIC's MAC (enhanced 20-port Gigabit Ethernet MICs on MX Series routers) and not transferred to the Packet Forwarding Engine, causing framing errors. Therefore, when MACsec is enabled on an interface, flow control is also automatically enabled on such an interface.</p>
<b>Default</b>	Interfaces are not associated with any connectivity associations, by default.
<b>Required Privilege Level</b>	<p>admin—To view this statement in the configuration.</p> <p>admin-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring Media Access Control Security (MACsec) on MX Series Routers on page 100</a></li> </ul>

## interface-none

---

<b>Syntax</b>	interface-none;
<b>Hierarchy Level</b>	[edit protocols <a href="#">protection-group ethernet-ring ring-name east-interface</a> ] [edit protocols <a href="#">protection-group ethernet-ring ring-name west-interface</a> ]
<b>Description</b>	Designates port as not used for Ethernet ring protection.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Ethernet Ring Protection Switching Overview on page 233</a></li><li>• <a href="#">Ethernet Ring Protection Using Ring Instances for Load Balancing on page 795</a></li><li>• <i>Example: Configuring Ethernet Ring Protection Switching on EX Series Switches</i></li><li>• <i>Configuring Ethernet Ring Protection Switching (CLI Procedure)</i></li></ul>

## isolated-vlan (MX Series)

<b>Syntax</b>	<code>isolated-vlan <i>vlan-id</i>;</code>
<b>Hierarchy Level</b>	<p>[edit <b>bridge-domains</b> <i>bridge-domain-name</i> ],</p> <p>[edit logical-systems <i>logical-system-name</i> routing-instances <i>routing-instance-name</i> <b>bridge-domains</b> <i>bridge-domain-name</i> bridge-options],</p> <p>[edit logical-systems <i>logical-system-name</i> routing-instances <i>routing-instance-name</i> <b>bridge-domains</b> <i>bridge-domain-name</i> ,</p> <p>[edit routing-instances <i>routing-instance-name</i> <b>bridge-domains</b> <i>bridge-domain-name</i> ],</p>
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2 for MX240, MX480, and MX960 routers.
<b>Description</b>	Configure the specified isolated VLAN to be a secondary VLAN of the specified primary VLAN. An isolated VLAN receives packets only from the primary VLAN and forwards frames upstream to the primary VLAN.
<div>  <p><b>NOTE:</b> When you specify this configuration statement, the VLAN ID of a logical interface that you associate with a bridge domain that matches with the VLAN ID that you specify using the <code>isolated-vlan</code> state is treated as an isolated port.</p> </div>	
<b>Options</b>	<i>vlan-id</i> —Individual VLAN IDs separated by a space.
<b>Required Privilege Level</b>	<p>system—To view this statement in the configuration.</p> <p>system—control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	

## key (MACsec for MX Series)

---

<b>Syntax</b>	<code>key key-string;</code>
<b>Hierarchy Level</b>	[edit security macsec connectivity-association <i>connectivity-association-name</i> secure-channel <i>secure-channel-name</i> security-association <i>security-association-number</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 15.1 for MX240, MX480, and MX960 routers.
<b>Description</b>	<p>Specifies the static security key to exchange to enable MACsec using static secure association key (SAK) security mode.</p> <p>The key string is a 32-digit hexadecimal number. The key string and the security association must match on both sides of an Ethernet connection to secure traffic using MACsec when enabling MACsec using SAK security mode.</p> <p>You must configure at least two security associations with unique security association numbers and key strings to enable MACsec using static SAK security mode. MACsec initially establishes a secure connection when a security association number and key match on both ends of an Ethernet link. After a certain number of Ethernet frames are securely transmitted across the Ethernet link, MACsec automatically rotates to a new security association with a new security association number and key to maintain the secured Ethernet link. This rotation continues each time a certain number of Ethernet frames are securely transmitted across the secured Ethernet link, so you must always configure MACsec to have at least two security associations.</p>
<b>Default</b>	This statement does not have a default value.
<b>Options</b>	<b><i>key-string</i></b> —Specifies the key to exchange with the other end of the link on the secure channel. The <i>key-string</i> is a 32-digit hexadecimal string that is created by the user.
<b>Required Privilege Level</b>	admin—To view this statement in the configuration. admin-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring Media Access Control Security (MACsec) on MX Series Routers on page 100</a></li></ul>

## key-server-priority (MACsec for MX Series)

<b>Syntax</b>	<code>key-server-priority <i>priority-number</i>;</code>
<b>Hierarchy Level</b>	[edit security macsec connectivity-association <i>connectivity-association-name</i> mka]
<b>Release Information</b>	Statement introduced in Junos OS Release 15.1 for MX240, MX480, and MX960 routers.
<b>Description</b>	<p>Specifies the key server priority used by the MACsec Key Agreement (MKA) protocol to select the key server when MACsec is enabled using static connectivity association key (CAK) security mode.</p> <p>The switch with the lower <i>priority-number</i> is selected as the key server.</p> <p>If the <i>priority-number</i> is identical on both sides of a point-to-point link, the MKA protocol selects the device with the lower MAC address as the key server.</p>
<b>Default</b>	The default key server priority number is 16.
<b>Options</b>	<p><i>priority-number</i>—Specifies the MKA server election priority number.</p> <p>The <i>priority-number</i> can be any number between 0 and 255. The lower the number, the higher the priority.</p>
<b>Required Privilege Level</b>	<p>admin—To view this statement in the configuration.</p> <p>admin-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring Media Access Control Security (MACsec) on MX Series Routers on page 100</a></li> </ul>

## lacp (802.3ad)

---

<b>Syntax</b>	<code>lacp {     port-priority <i>port-priority</i> }</code>
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> fastether-options <a href="#">802.3ad</a> ], [edit interfaces <i>interface-name</i> gigether-options <a href="#">802.3ad</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.3.
<b>Description</b>	Configure the Link Aggregation Control Protocol (LACP) port priority for Ethernet interfaces.
<b>Options</b>	<i>port-priority</i> —Priority for being elected as the active port to collect and distribute traffic. A smaller value indicates a higher priority for selection. <b>Range:</b> 0 through 65,535 <b>Default:</b> 127
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring LACP for Aggregated Ethernet Interfaces on page 164</a></li><li>• <a href="#">port-priority on page 1187</a></li></ul>

## lacp (Aggregated Ethernet)

<b>Syntax</b>	<pre>lacp {   (active   passive);   admin-key <i>key</i>;   accept-data;   fast-failover;   link-protection {     disable;     (revertive   non-revertive);   }   periodic <i>interval</i>;   system-id <i>mac-address</i>;   system-priority <i>priority</i>; }</pre>
<b>Hierarchy Level</b>	<p>[edit interfaces aeX <b>aggregated-ether-options</b>]</p> <p>[edit logical-systems <i>logical-system-name</i> interfaces aeX aggregated-ether-options]</p>
<b>Release Information</b>	<p>Statement introduced before Junos OS Release 7.4.</p> <p>Statement introduced in Junos OS Release 9.0 for EX Series switches.</p> <p>Statement introduced in Junos OS Release 15.1F4 for PTX Series routers.</p> <p><b>fast-failover</b> option introduced in Junos OS Release 12.2.</p> <p>Support for logical systems introduced in Junos OS Release 14.1.</p>
<b>Description</b>	<p>Configure the Link Aggregation Control Protocol (LACP) for aggregated Ethernet interfaces only.</p> <p>When you configure the <b>accept-data</b> statement at the [edit interfaces aeX <b>aggregated-ether-options lacp</b>] hierarchy level, the router processes packets received on a member link irrespective of the LACP state if the aggregated Ethernet bundle is up.</p> <div style="border: 1px solid #ccc; padding: 10px; margin-top: 10px;"> <p> <b>NOTE:</b> When you configure the <b>accept-data</b> statement at the [edit interfaces aeX aggregated-ether-options lacp] hierarchy level, this behavior occurs:</p> <ul style="list-style-type: none"> <li>• By default, the <b>accept-data</b> statement is not configured when LACP is enabled.</li> <li>• You can configure the <b>accept-data</b> statement to improve convergence and reduce the number of dropped packets when member links in the bundle are enabled or disabled.</li> <li>• When LACP is down and a member link receives packets, the router or switch does not process packets as defined in the IEEE 802.1ax standard. According to this standard, the packets should be dropped, but they are processed instead because the <b>accept-data</b> statement is configured.</li> </ul> </div>
<b>Default</b>	<p>If you do not specify LACP as either <b>active</b> or <b>passive</b>, LACP remains passive.</p>

**Options**    **active**—Initiate transmission of LACP packets.

**admin-key *number***—Specify an administrative key for the router or switch.

**NOTE:** You must also configure multichassis link aggregation (MC-LAG) when you configure the **admin-key**.

---

**fast-failover**—Specify to override the IEEE 802.3ad standard and allow the standby link to receive traffic. Overriding the default behavior facilitates subsecond failover.

**passive**—Respond to LACP packets.

The remaining statements are explained separately.

**Required Privilege Level**    interface—To view this statement in the configuration.  
   interface-control—To add this statement to the configuration.

**Related Documentation**    • [Configuring LACP for Aggregated Ethernet Interfaces on page 164](#)

## layer2-policer

<b>Syntax</b>	<pre> layer2-policer {     input-policer <i>policer-name</i>;     input-three-color <i>policer-name</i>;     output-policer <i>policer-name</i>;     output-three-color <i>policer-name</i>; } </pre>
<b>Hierarchy Level</b>	<p>[edit interfaces <i>interface-name</i> <b>unit</b> <i>logical-unit-number</i>],</p> <p>[edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> <b>unit</b> <i>logical-unit-number</i>],</p>
<b>Release Information</b>	<p>Statement introduced in Junos OS Release 8.2.</p> <p>Statement introduced in Junos OS Release 12.3R2 for EX Series switches.</p>
<b>Description</b>	<p>For 1-Gigabit Ethernet and 10-Gigabit Ethernet IQ2 and IQ2-E interfaces on M Series, MX Series, and T Series routers, and for aggregated Ethernet, Gigabit Ethernet, and 10-Gigabit Ethernet interfaces on EX Series switches, apply Layer 2 logical interface policers. The following policers are supported:</p> <ul style="list-style-type: none"> <li>• Two-color</li> <li>• Single-rate tricolor marking (srTCM)</li> <li>• Two-rate tricolor marking (trTCM)</li> </ul> <p>Two-color and tricolor policers are configured at the <b>[edit firewall]</b> hierarchy level.</p>
<b>Options</b>	<p><b>input-policer <i>policer-name</i></b>—Two-color input policer to associate with the interface. This statement is mutually exclusive with the <b>input-three-color</b> statement.</p> <p><b>input-three-color <i>policer-name</i></b>—Tricolor input policer to associate with the interface. This statement is mutually exclusive with the <b>input-policer</b> statement.</p> <p><b>output-policer <i>policer-name</i></b>—Two-color output policer to associate with the interface. This statement is mutually exclusive with the <b>output-three-color</b> statement.</p> <p><b>output-three-color <i>policer-name</i></b>—Tricolor output policer to associate with the interface. This statement is mutually exclusive with the <b>output-policer</b> statement.</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Applying Layer 2 Policers to Gigabit Ethernet Interfaces</a></li> <li>• <a href="#">Configuring Gigabit Ethernet Two-Color and Tricolor Policers on page 524</a></li> </ul>

## link-adjacency-loss

---

<b>Syntax</b>	link-adjacency-loss;
<b>Hierarchy Level</b>	[edit protocols <a href="#">oam</a> <a href="#">ethernet</a> <a href="#">link-fault-management</a> <a href="#">action-profile</a> <a href="#">event</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.5.
<b>Description</b>	Loss of adjacency with IEEE 802.3ah link-fault management peer event. When included, the loss-of-adjacency event triggers the action specified under the <b>action</b> statement.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Monitoring the Loss of Link Adjacency on page 660</a></li></ul>

## link-discovery

---

<b>Syntax</b>	link-discovery (active   passive);
<b>Hierarchy Level</b>	[edit protocols <a href="#">oam</a> <a href="#">ethernet</a> <a href="#">link-fault-management</a> <a href="#">interface</a> <i>interface-name</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.2.
<b>Description</b>	For Ethernet interfaces on EX Series switches, and M320, M120, MX Series, and T Series routers, specify the discovery mode used for IEEE 802.3ah Operation, Administration, and Management (OAM) support. The discovery process is triggered automatically when OAM 802.3ah functionality is enabled on a port. Link monitoring is done when the interface sends periodic OAM PDUs.
<b>Options</b>	( <b>active   passive</b> )—Passive or active mode. In active mode, the interface discovers and monitors the peer on the link if the peer also supports IEEE 802.3ah OAM functionality. In passive mode, the peer initiates the discovery process. Once the discovery process is initiated, both sides participate in discovery.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring Link Discovery on page 652</a></li></ul>

## link-down

---

<b>Syntax</b>	link-down;
<b>Hierarchy Level</b>	[edit protocols <a href="#">oam ethernet link-fault-management</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.5.
<b>Description</b>	Mark the interface down for transit traffic.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Specifying the Actions to Be Taken for Link-Fault Management Events on page 659</a></li> </ul>

## link-event-rate

---

<b>Syntax</b>	<pre>link-event-rate {   frame-error count;   frame-period count;   frame-period-summary count;   symbol-period count; }</pre>
<b>Hierarchy Level</b>	[edit protocols <a href="#">oam ethernet link-fault-management action-profile event</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.5.
<b>Description</b>	Configure the number of link-fault management events per second.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring Threshold Values for Fault Events in an Action Profile on page 662</a></li> </ul>

## link-fault-management

```
Syntax  link-fault-management {
        action-profile profile-name {
            action {
                link-down;
                send-critical-event;
                syslog;
            }
            event {
                link-adjacency-loss;
                link-event-rate {
                    frame-error count;
                    frame-period count;
                    frame-period-summary count;
                    symbol-period count;
                }
                protocol-down;
            }
        }
    }
    interface interface-name {
        apply-action-profile profile-name;
        link-discovery (active | passive);
        loopback-tracking;
        pdu-interval interval;
        pdu-threshold threshold-value;
        remote-loopback;
        event-thresholds {
            frame-error count;
            frame-period count;
            frame-period-summary count;
            symbol-period count;
        }
        negotiation-options {
            allow-remote-loopback;
            no-allow-link-events;
        }
    }
}
```

**Hierarchy Level** [edit protocols [oam](#) [ethernet](#)]

**Release Information** Statement introduced in Junos OS Release 8.2.

**Description** For Ethernet interfaces on M320, M120, MX Series, and T Series routers and EX Series switches, specify fault signaling and detection for IEEE 802.3ah Operation, Administration, and Management (OAM) support.

The remaining statements are explained separately.

**Required Privilege Level** interface—To view this statement in the configuration.  
 interface-control—To add this statement to the configuration.

**Related Documentation** • [Enabling IEEE 802.3ah OAM Support on page 651](#)

## link-mode

<b>Syntax</b>	link-mode <i>mode</i> (automatic   full-duplex   half-duplex);
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> ], [edit interfaces <i>interface-name</i> ether-options], [edit interfaces ge-pim/0/0 <i>switch-options</i> <i>switch-port</i> <i>port-number</i> ]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4. Statement introduced in Junos OS Release 9.0 for EX Series switches. Statement introduced in Junos OS Release 12.2 for ACX Series Universal Access Routers.
<b>Description</b>	Set the device's link connection characteristic.
<b>Options</b>	<p><i>mode</i>—Link characteristics:</p> <ul style="list-style-type: none"> <li>• <b>automatic</b>—Link mode is negotiated. This is the default for EX Series switches.</li> <li>• <b>full-duplex</b>—Connection is full duplex.</li> <li>• <b>half-duplex</b>—Connection is half duplex.</li> </ul> <p><b>Default:</b> Fast Ethernet interfaces, can operate in either full-duplex or half-duplex mode. The router's management Ethernet interface, <b>fxp0</b> or <b>em0</b>, and the built-in Fast Ethernet interfaces on the FIC (M7i router) autonegotiate whether to operate in full-duplex or half-duplex mode. Unless otherwise noted here, all other interfaces operate only in full-duplex mode.</p>
<div>  <b>NOTE:</b> <ul style="list-style-type: none"> <li>• On EX4300 switches, the interfaces operate in full-duplex mode only.</li> <li>• On EX Series switches, if no-auto-negotiation is specified in [edit interfaces <i>interface-name</i> ether-options], you can select only full-duplex or half-duplex. If auto-negotiation is specified, you can select any mode.</li> </ul> </div>	
<div>  <b>NOTE:</b> Member links of an aggregated Ethernet bundle must not be explicitly configured with a link mode. You must remove any such link-mode configuration before committing the aggregated Ethernet configuration.         </div>	
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring the Link Characteristics on Ethernet Interfaces on page 12</a></li> <li>• <a href="#">Understanding Management Ethernet Interfaces</a></li> <li>• <a href="#">Configuring Gigabit Ethernet Interfaces (CLI Procedure)</a></li> </ul>

## link-protection

<b>Syntax</b>	<pre>link-protection {   disable;   (revertive  non-revertive); }</pre>
<b>Hierarchy Level</b>	<pre>[edit interfaces aex aggregated-ether-options] [edit interfaces aex aggregated-ether-options lacp]</pre>
<b>Release Information</b>	<p>Statement introduced in Junos OS Release 8.3.</p> <p>Statement introduced in Junos OS Release 9.0 for EX Series switches.</p> <p>Statement introduced in Junos OS Release 15.1F4 for PTX Series routers.</p> <p>Support for <b>disable</b>, <b>revertive</b>, and <b>non-revertive</b> statements added in Junos OS Release 9.3.</p>
<b>Description</b>	<p>On the router, for aggregated Ethernet interfaces only, configure link protection. In addition to enabling link protection, a primary and a secondary (backup) link must be configured to specify what links egress traffic should traverse. To configure primary and secondary links on the router, include the <b>primary</b> and <b>backup</b> statements at the <b>[edit interfaces ge-fpc/pic/port gige-ether-options 802.3ad aex]</b> hierarchy level or the <b>[edit interfaces fe-fpc/pic/port fastether-options 802.3ad aex]</b> hierarchy level.</p> <p>On the switch, you can configure either Junos OS link protection for aggregated Ethernet interfaces or the LACP standards link protection for aggregated Ethernet interfaces.</p> <p>For Junos OS link protection, specify <b>link-protection</b> at the following hierarchy levels:</p> <ul style="list-style-type: none"> <li>• <b>[edit interfaces ge-fpc/pic/port ether-options 802.3ad aex]</b></li> <li>• <b>[edit interfaces xe-fpc/pic/port ether-options 802.3ad aex]</b> hierarchy level or at the <b>[edit interfaces xe-fpc/pic/port ether-options 802.3ad aex]</b> hierarchy level.</li> </ul> <p>To disable link protection, use the <b>delete interface ae aggregate-ether-options link-protection</b> statement at the <b>[edit interfaces aex aggregated-ether-options]</b> hierarchy level or the <b>[edit interfaces aex aggregated-ether-options lacp]</b> hierarchy level.</p>
<b>Options</b>	The statements are explained separately.
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring Aggregated Ethernet Link Protection on page 172</a></li> <li>• <i>Configuring LACP Link Protection of Aggregated Ethernet Interfaces (CLI Procedure)</i></li> </ul>

## link-speed (Aggregated Ethernet)

---

<b>Syntax</b>	<code>link-speed <i>speed</i>;</code>
<b>Hierarchy Level</b>	[edit interfaces aex <a href="#">aggregated-ether-options</a> ], [edit interfaces interface-range <i>name</i> aggregated-ether-options], [edit interfaces interface-range <i>name</i> aggregated-sonet-options]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4. Statement introduced in Junos OS Release 9.0 for EX Series switches. <b>mixed</b> option added in Junos OS Release 15.1F3 and 16.1R2 for PTX5000 routers and 15.1F6 and 16.1R2 for PTX3000 routers.
<b>Description</b>	For aggregated Ethernet interfaces only, set the required link speed.
<b>Options</b>	<p><b><i>speed</i></b>—For aggregated Ethernet links, you can specify <b><i>speed</i></b> in bits per second either as a complete decimal number or as a decimal number followed by the abbreviation <b>k</b> (1000), <b>m</b> (1,000,000), or <b>g</b> (1,000,000,000).</p> <p>Aggregated Ethernet links on the M120 router can have one of the following speeds:</p> <ul style="list-style-type: none"><li>• <b>100m</b>—Links are 100 Mbps.</li><li>• <b>10g</b>—Links are 10 Gbps.</li><li>• <b>1g</b>—Links are 1 Gbps.</li><li>• <b>oc192</b>—Links are OC192 or STM64c.</li></ul> <p>Aggregated Ethernet links on EX Series switches can be configured to operate at one of the following speeds:</p> <ul style="list-style-type: none"><li>• <b>10m</b>—Links are 10 Mbps.</li><li>• <b>100m</b>—Links are 100 Mbps.</li><li>• <b>1g</b>—Links are 1 Gbps.</li><li>• <b>10g</b>—Links are 10 Gbps.</li></ul> <p>Aggregated Ethernet links on T Series routers can be configured to operate at one of the following speeds:</p> <ul style="list-style-type: none"><li>• <b>100g</b>—Links are 100 Gbps.</li><li>• <b>100m</b>—Links are 100 Mbps.</li><li>• <b>10g</b>—Links are 10 Gbps.</li><li>• <b>1g</b>—Links are 1 Gbps.</li><li>• <b>40g</b>—Links are 40 Gbps.</li><li>• <b>50g</b>—Links are 50 Gbps.</li><li>• <b>80g</b>—Links are 80 Gbps.</li></ul>

- **8g**—Links are 8 Gbps.
- **mixed**—Links are of various speeds.
- **oc192**—Links are OC192.

**mixed**—Enables bundling of different Ethernet rate links in the same Aggregated Ethernet interface on PTX Series routers.

**Required Privilege Level**    interface—To view this statement in the configuration.  
                                     interface-control—To add this statement to the configuration.

## link-speed (Aggregated SONET/SDH)

---

<b>Syntax</b>	link-speed ( <i>speed</i>   mixed);
<b>Hierarchy Level</b>	[edit interfaces asx aggregated-sonet-options]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4. mixed option added in Release 8.0.
<b>Description</b>	For aggregated SONET/SDH interfaces only, set the required link speed.
<b>Options</b>	<p><b>speed</b>—Aggregated SONET/SDH links can have one of the following speed values.</p> <ul style="list-style-type: none"><li>• <b>oc3</b>—Links are OC3c or STM1c.</li><li>• <b>oc12</b>—Links are OC12c or STM4c.</li><li>• <b>oc48</b>—Links are OC48c or STM16c.</li><li>• <b>oc192</b>—Links are OC192c or STM64c.</li><li>• <b>oc768</b>—Links are OC768c or STM256c.</li></ul> <p><b>mixed</b>—For aggregated SONET/SDH links on T Series routers, you can mix interface speeds in SONET/SDH aggregation bundles. Interface speeds from OC3 through OC768 are supported.</p>
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring Aggregated Ethernet Link Speed on page 159</a></li><li>• <a href="#">Configuring Aggregated SONET/SDH Interfaces</a></li></ul>

## lldp

<b>Syntax</b>	<pre> lldp {   advertisement-interval <i>seconds</i>;   disable;   hold-multiplier <i>number</i>;   interface (all   <i>interface-name</i>) {     disable;   }   lldp-configuration-notification-interval <i>seconds</i>;   management-address <i>ip-management-address</i>;   mau-type   port-description-type {     interface-alias;     interface-description;   }   port-id-subtype {     interface-name;     locally-assigned;   }   ptopo-configuration-maximum-hold-time <i>seconds</i>;   ptopo-configuration-trap-interval <i>seconds</i>;   traceoptions {     file <i>filename</i> &lt;files <i>number</i>&gt; &lt;size <i>maximum-file-size</i>&gt; &lt;world-readable       no-world-readable&gt;;     flag <i>flag</i> &lt;disable&gt;;   }   transmit-delay <i>seconds</i>; } </pre>
<b>Hierarchy Level</b>	[edit protocols], [edit routing-instances <i>routing-instance-name</i> protocols]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.6.
<b>Description</b>	Specify LLDP configuration parameters.
<b>Options</b>	The statements are explained separately.
<b>Required Privilege Level</b>	routing—To view this statement in the configuration. routing-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring LLDP on page 336</a></li> </ul>

## lldp-configuration-notification-interval

---

<b>Syntax</b>	lldp-configuration-notification-interval <i>seconds</i> ;
<b>Hierarchy Level</b>	[edit protocols <a href="#">lldp</a> ], [edit routing-instances <i>routing-instance-name</i> protocols <a href="#">lldp</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.6.
<b>Description</b>	Configure a time for the period of SNMP trap notifications to the Master Agent to wait regarding changes in database information.
<b>Options</b>	<b><i>seconds</i></b> —Time for the period of SNMP trap notifications about the LLDP database. This feature is disabled by default. <b>Range:</b> 0 through 3600
<b>Required Privilege Level</b>	routing—To view this statement in the configuration. routing-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring LLDP on page 336</a></li></ul>

## lmi (Ethernet OAM)

**Syntax**

```
lmi {
  status-counter count;
  polling-verification-timer value;
  interface name {
    uni-id uni-name;
    status-counter number;
    polling-verification-timer value;
    evc-map-type (all-to-one-bundling | bundling | service-multiplexing);
    evc evc-name {
      default-evc;
      vlan-list vlan-id-list;
    }
  }
}
```

**Hierarchy Level** [edit protocols [oam](#) [ethernet](#)]

**Release Information** Statement introduced in Junos OS Release 9.5.

**Description** On routers with **ge**, **xe**, or **ae** interfaces, configure an OAM Ethernet Local Management Interface (E-LMI).

**NOTE:** On MX Series routers, E-LMI is supported on Gigabit Ethernet (**ge**), 10-Gigabit Ethernet (**xe**), and Aggregated Ethernet (**ae**) interfaces configured on MX Series routers with DPC only.

**Options**

- status-counter *count***—Status counter (N393), defaults to 4.
- interface *name***—Polling verification timer (T392), defaults to 15 seconds.
- uni-id *uni-name***—(Optional) Defaults to the physical interface name.
- status-counter *number***—(Optional) Defaults to a global value.
- polling-verification-timer *value***—(Optional) Defaults to a global value.
- evc-map-type (all-to-one-bundling | bundling | service-multiplexing)**—Specify the Ethernet virtual connection (EVC) map type.
- evc *evc-name***—Specify the name of the EVC.
- default-evc**—Set the specified EVC as the default EVC.
- vlan-list *vlan-id-list***—Specify a group of VLANs to assign to the EVC.

**Required Privilege Level**

- interface**—To view this statement in the configuration.
- interface-control**—To add this statement to the configuration.

  - [evcs on page 1049](#)

---

## load-balance

---

<b>Syntax</b>	<pre>load-balance {     adaptive{         pps;         scan-interval <i>multiple</i>;         tolerance <i>percentage</i>;     }     no-adaptive;     per-packet; }</pre>
<b>Hierarchy Level</b>	[edit interfaces aex aggregated-ether-options]
<b>Release Information</b>	Statement introduced in Junos OS Release 13.3. Statement introduced in Junos OS Release 14.1 for PTX Series Packet Transport Routers.
<b>Description</b>	Load-balances the received traffic across all the available paths of aggregated Ethernet bundles for better link utilization.
<b>Options</b>	<p><b>adaptive</b>— (MX Series and PTX Series) Corrects a genuine traffic imbalance by using a feedback mechanism to distribute the traffic across the links of an Aggregated Ethernet bundle.</p> <p><b>no-adaptive</b>— (MX Series and PTX Series) Disables the adaptive load-balancing solution configured to distribute traffic by using a feedback mechanism.</p> <p><b>per-packet</b>— (MX Series only) Randomly sprays packets to the aggregate next hops in a round-robin manner to avoid traffic imbalance.</p>
<b>Required Privilege Level</b>	interface - To view statement in the configuration. interface-control - To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Understanding Aggregated Ethernet Load Balancing on page 182</a></li><li>• <a href="#">Example: Configuring Aggregated Ethernet Load Balancing on page 187</a></li></ul>

## load-balance-stateful (Aggregated Ethernet Interfaces)

<b>Syntax</b>	<pre>load-balance-stateful {     per-flow;     rebalance <i>interval</i>;     load-type (low   medium   large); }</pre>
<b>Hierarchy Level</b>	[edit interfaces aeX <i>unit logical-unit-number</i> forwarding-options]
<b>Release Information</b>	Statement introduced in Junos OS Release 13.2R1.
<b>Description</b>	<p>Define the capability to perform uniform load balancing and also perform rebalancing is introduced on MX Series routers with MPCs, except MPC3Es and MPC4Es. Rebalancing is not supported when load-balancing is skewed or distorted owing to a change in the number of flows. The mechanism to record and retain states for the flows and distribute the traffic load accordingly is added. As a result, for m number of flows, they are distributed among n member links of a LAG bundle or among the unilist of next-hops in an ECMP link. This method of splitting the load among member links is called stateful load balancing and it uses 5-tuple information (source and destination addresses, protocol, source and destination ports). Such a method can be mapped directly to the flows, or to a precompute hash based on certain fields in the flow. As a result, the deviation observed on each child link is reduced.</p>
<b>Options</b>	<p><b>stateful</b>—Define the stateful load-distribution mechanism for traffic flows on aggregated Ethernet interfaces.</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring Stateful Load Balancing on Aggregated Ethernet Interfaces on page 204</a></li> </ul>

## load-type (Aggregated Ethernet Interfaces)

---

<b>Syntax</b>	load-type (low   medium   large);
<b>Hierarchy Level</b>	[edit interfaces aeX unit logical-unit-number forwarding-options load-balance-stateful]
<b>Release Information</b>	Statement introduced in Junos OS Release 13.2R1.
<b>Description</b>	Define the load-balancing type to inform the Packet Forwarding Engine regarding the appropriate memory pattern to be used for traffic flows. The approximate number of flows for effective load-balancing for each keyword is a derivative.
<b>Options</b>	<p><b>low</b>—Define a low load-balancing method if the number of flows that flow on the specified aggregated Ethernet interface is less or minimal (between 1 and 100 flows).</p> <p><b>medium</b>—Define a medium or moderate load-balancing method if the number of flows that flow on the specified aggregated Ethernet interface is relatively higher (between 100 and 1000 flows).</p> <p><b>large</b>—Define a high load-balancing method if the number of flows that flow on the specified aggregated Ethernet interface is excessive or reaches the maximum supported flows (between 1000 and 10,000 flows).</p>
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring Stateful Load Balancing on Aggregated Ethernet Interfaces on page 204</a></li></ul>

## lockout

---

<b>Syntax</b>	request protection-group ethernet-aps lockout md <md> ma <ma>
<b>Hierarchy Level</b>	[edit protocols protection-group ethernet-aps]
<b>Description</b>	Configure a lockout of the protection path, forcing the use of the working path and locking out the protect path regardless of anything else.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Ethernet Automatic Protection Switching Overview on page 225</a></li></ul>

## logical-interface-policer

<b>Syntax</b>	logical-interface-policer;
<b>Hierarchy Level</b>	[edit dynamic-profiles <i>profile-name</i> firewall policer <i>policer-name</i> ], [edit dynamic-profiles <i>profile-name</i> firewall three-color-policer <i>name</i> ], [edit firewall atm-policer <i>atm-policer-name</i> ], [edit firewall policer <i>policer-name</i> ], [edit firewall policer <i>policer-template-name</i> ], [edit firewall three-color-policer <i>policer-name</i> ], [edit logical-systems <i>logical-system-name</i> firewall policer <i>policer-name</i> ], [edit logical-systems <i>logical-system-name</i> firewall three-color-policer <i>name</i> ]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4. Support at the [edit firewall three-color-policer <i>policer-name</i> ] hierarchy level introduced in Junos OS Release 8.2. Logical systems support introduced in Junos OS Release 9.3. Support at the [edit dynamic-profiles ... policer <i>policer-name</i> ] and [edit dynamic-profiles ... three-color-policer <i>name</i> ] hierarchy levels introduced in Junos OS Release 11.4. Statement introduced in Junos OS Release 12.3R2 for EX Series switches.
<b>Description</b>	Configure a logical interface policer.

**NOTE:** Starting in Junos OS Release 12.2R2, on T Series Core Routers only, you can configure an MPLS LSP policer for a specific LSP to be shared across different protocol family types. You must include the logical-interface-policer statement to do so.

<b>Required Privilege Level</b>	firewall—To view this statement in the configuration. firewall-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Two-Color and Three-Color Logical Interface Policers</i></li> <li>• <i>Traffic Policer Types</i></li> <li>• <i>Configuring and Applying Tricolor Marking Policers</i></li> <li>• <i>action</i></li> <li>• <a href="#">Configuring Gigabit Ethernet Two-Color and Tricolor Policers on page 524</a></li> <li>• <i>action</i></li> </ul>

## loopback (Aggregated Ethernet, Fast Ethernet, and Gigabit Ethernet)

<b>Syntax</b>	(loopback   no-loopback);
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> <a href="#">aggregated-ether-options</a> ], [edit interfaces <i>interface-name</i> ether-options], [edit interfaces <i>interface-name</i> <a href="#">fastether-options</a> ], [edit interfaces <i>interface-name</i> <a href="#">gigether-options</a> ], [edit interfaces interface-range <i>name</i> ether-options]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4. Statement introduced in Junos OS Release 9.0 for EX Series switches. Statement introduced in Junos OS Release 12.2 for ACX Series Universal Access Routers.
<b>Description</b>	For aggregated Ethernet, Fast Ethernet, Gigabit Ethernet, and 10-Gigabit Ethernet interfaces, enable or disable loopback mode.

### NOTE:

- By default, local aggregated Ethernet, Fast Ethernet, Tri-Rate Ethernet copper, Gigabit Ethernet, and 10-Gigabit Ethernet interfaces connect to a remote system.
- IPv6 Neighbor Discovery Protocol (NDP) addresses are not supported on Gigabit Ethernet interfaces when loopback mode is enabled on the interface. That is, if the loopback statement is configured at the [edit interfaces *ge-fpc/pic/port* [gigether-options](#)] hierarchy level, an NDP address cannot be configured at the [edit interfaces *ge-fpc/pic/port* unit *logical-unit-number* family inet6 address] hierarchy level.

<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring Ethernet Loopback Capability on page 18</a></li> </ul>

## loopback (Local and Remote)

<b>Syntax</b>	<code>loopback (local   remote);</code>
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> <a href="#">gigether-options</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 15.1F3 and 16.1R2 for PTX5000 routers. Statement introduced in Junos OS Release 15.1F6 and 16.1R2 for PTX3000 routers.
<b>Description</b>	Enables local loopback and enables remote loopback. This allows you to test the transceiver cable connection from the far end to the retimer interface without changing the cable.
<b>Options</b>	<b>local</b> —Enables local loopback <b>remote</b> —Enables remote loopback
<b>Required Privilege Level</b>	<b>interface</b> —To view this statement in the configuration. <b>interface-control</b> —To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Configuring Ethernet Loopback Capability</i></li> </ul>

## loopback-tracking

<b>Syntax</b>	<code>loopback-tracking;</code>
<b>Hierarchy Level</b>	[edit protocols oam ethernet <a href="#">link-fault-management</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2.
<b>Description</b>	Enables loopback tracking on Ethernet interfaces. When loopback tracking is enabled and the Ethernet Operation, Administration, and Management (OAM) link-fault management process (lfmd) detects its own generated packets on an interface, it marks the interface as down. When the loopback issue resolves, the interface is brought back up.
<b>Required Privilege Level</b>	<b>interface</b> —To view this statement in the configuration. <b>interface-control</b> —To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">IEEE 802.3ah OAM Link-Fault Management Overview on page 648</a></li> <li>• <a href="#">Enabling IEEE 802.3ah OAM Support on page 651</a></li> </ul>

## loss-priority

---

<b>Syntax</b>	<code>loss-priority (high   low);</code>
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> gigether-options <a href="#">ethernet-switch-profile</a> <a href="#">ethernet-policer-profile</a> <a href="#">output-priority-map</a> <a href="#">classifier</a> <a href="#">premium</a> <a href="#">forwarding-class</a> <i>class-name</i> ]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4.
<b>Description</b>	Specify the packet loss priority value.
<b>Options</b>	<b>high</b> —Packet has high loss priority. <b>low</b> —Packet has low loss priority.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Specifying an Output Priority Map on page 517</a></li></ul>

## mac

---

<b>Syntax</b>	<code>mac mac-address;</code>
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> ]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4.
<b>Description</b>	Set the MAC address of the interface.  Use this statement at the [edit interfaces ... <b>ps0</b> ] hierarchy level to configure the MAC address for a pseudowire logical device that is used for subscriber interfaces over point-to-point MPLS pseudowires.
<b>Options</b>	<b>mac-address</b> —MAC address. Specify the MAC address as six hexadecimal bytes in one of the following formats: <i>nnnn.nnnn.nnnn</i> or <i>nn:nn:nn:nn:nn:nn</i> . For example, 0000.5e00.5355 or 00:00:5e:00:53:55.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring the MAC Address on the Management Ethernet Interface on page 27</a></li><li>• <a href="#">Configuring a Pseudowire Subscriber Logical Interface Device</a></li></ul>

## mac (IRB)

<b>Syntax</b>	<code>mac mac-address;</code>
<b>Hierarchy Level</b>	<code>[edit interfaces <i>irb</i> unit <i>logical-unit-number</i> ]</code>
<b>Release Information</b>	Statement introduced in Junos OS Release 13.2.
<b>Description</b>	Specify the MAC address of the IRB interface in devices that have Modular Port Concentrator (MPC) cards.
<b>Options</b>	<b>mac-address</b> — Specify the MAC address as six hexadecimal bytes in one of the following hexadecimal formats: <i>nnnn:nnnn:nnnn</i> or <i>nn:nn:nn:nn:nn:nn</i> .
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Example: Configuring the MAC Address of an IRB Interface on page 326</a></li> </ul>

## mac-address (Accept Source Mac)

<b>Syntax</b>	<code>mac-address mac-address <a href="#">policer</a>;</code>
<b>Hierarchy Level</b>	<code>[edit interfaces <i>interface-name</i> <a href="#">unit</a> <i>logical-unit-number</i> <a href="#">accept-source-mac</a>],</code> <code>[edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> <a href="#">unit</a> <i>logical-unit-number</i> <a href="#">accept-source-mac</a> ]</code>
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4. Statement introduced in Junos OS Release 12.2 for ACX Series Universal Access Routers.
<b>Description</b>	For Gigabit Ethernet IQ and Gigabit Ethernet PICs with SFPs (except the 10-port Gigabit Ethernet PIC and the built-in Gigabit Ethernet port on the M7i router), for Gigabit Ethernet DPCs on MX Series routers, and 100-Gigabit Ethernet Type 5 PIC with CFP, specify a remote MAC address on which to count incoming and outgoing packets.
<b>Options</b>	<b>mac-address</b> —MAC address. Specify the MAC address as six hexadecimal bytes in one of the following formats: <i>nnnn.nnnn.nnnn</i> or <i>nn:nn:nn:nn:nn:nn</i> . For example, 0011.2233.4455 or 00:11:22:33:44:55.  <b>policer</b> —MAC policer. For more information, see <a href="#">policer (MAC)</a> .
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring MAC Address Filtering on page 517</a></li> </ul>

## mac-address (MACsec)

---

<b>Syntax</b>	<code>mac-address mac-address;</code>
<b>Hierarchy Level</b>	[edit security macsec connectivity-association <i>connectivity-association-name</i> secure-channel <i>secure-channel-name</i> id]
<b>Release Information</b>	Statement introduced in Junos OS Release 15.1 for MX240, MX480, and MX960 routers.
<b>Description</b>	<p>Specify a MAC address to enable MACsec using static secure association key (SAK) security mode. The <b>mac-address</b> variables must match on the sending and receiving ends of a link to enable MACsec using static SAK security mode.</p> <p>If you are configuring a MAC address on a secure channel in the outbound direction, you should specify the MAC address of the interface as the <b>mac-address</b>.</p> <p>If you are configuring a MAC address on a secure channel in the inbound direction, you should specify the MAC address of the interface at the other end of the link as the <b>mac-address</b>.</p> <p>You only use this configuration option when you are configuring MACsec using static SAK security mode. This option does not need to be specified when you are enabling MACsec using static connectivity association key (CAK) security mode.</p>
<b>Default</b>	No MAC address is specified in the secure channel, by default.
<b>Options</b>	<b>mac-address</b> —The MAC address, in six groups of two hexadecimal digits.
<b>Required Privilege Level</b>	admin—To view this statement in the configuration. admin-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring Media Access Control Security (MACsec) on MX Series Routers on page 100</a></li></ul>

## mac-learn-enable

<b>Syntax</b>	<code>mac-learn-enable;</code>
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> gigether-options <a href="#">ethernet-switch-profile</a> ] [edit interfaces aex aggregated-ether-options ethernet-switch-profile]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4. Support for statement under the [edit interfaces aex aggregated-ether-options <a href="#">ethernet-switch-profile</a> ] hierarchy introduced in Junos OS Release 15.1.
<b>Description</b>	<p>For Gigabit Ethernet IQ and Gigabit Ethernet PICs with SFPs (except the 10-port Gigabit Ethernet PIC and the built-in Gigabit Ethernet port on the M7i router), for Gigabit Ethernet DPCs on MX Series routers, for 100-Gigabit Ethernet Type 5 PIC with CFP, and for MPC3E, MPC4E, MPC5E, MPC5EQ, and MPC6E MPCs, configure dynamic learning of the source and destination MAC addresses. By default, the interface is not allowed to dynamically learn source and destination MAC addresses.</p> <p>To disable dynamic learning of the source and destination MAC addresses after it has been configured, you must delete <b>mac-learn-enable</b> from the configuration.</p> <p>MPCs support MAC address accounting for an individual interface or an aggregated Ethernet interface member link only after the interface has received traffic from the MAC source. If traffic is only exiting an interface, the MAC address is not learned and MAC address accounting does not occur.</p>
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring MAC Address Filtering on page 517</a></li> <li>• <a href="#">Configuring MAC Address Accounting on page 509</a></li> </ul>

## mac-radius (MX Series in Enhanced LAN Mode)

---

<b>Syntax</b>	<code>mac-radius &lt;flap-on-disconnect&gt; &lt;restrict&gt;;</code>
<b>Hierarchy Level</b>	<code>[edit protocols authentication-access-control interface (all   [<i>interface-names</i>]) dot1x]</code>
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2 for MX240, MX480, and MX960 routers in enhanced LAN mode.
<b>Description</b>	<p>Configure MAC RADIUS authentication for specific interfaces. MAC RADIUS authentication allows LAN access to permitted MAC addresses. When a new MAC address appears on an interface, the switch consults the RADIUS server to check whether the MAC address is a permitted address. If the MAC address is configured on the RADIUS server, the device is allowed access to the LAN.</p> <p>If MAC RADIUS is configured, the switch first tries to get a response from the host for 802.1X authentication. If the host is unresponsive, the switch attempts to authenticate using MAC RADIUS.</p> <p>To restrict authentication to MAC RADIUS only, use the <b>restrict</b> option. In restrictive mode, all 802.1X packets are eliminated and the attached device on the interface is considered a nonresponsive host.</p>
<b>Options</b>	<p><b>flap-on-disconnect</b>—(Optional) When the RADIUS server sends a disconnect message to a supplicant, the switch resets the interface on which the supplicant is authenticated. If the interface is configured for multiple supplicant mode, the switch resets all the supplicants on the specified interface. This option takes effect only when the <b>restrict</b> option is also set.</p> <p><b>restrict</b>—(Optional) Restricts authentication to MAC RADIUS only. When <b>mac-radius restrict</b> is configured the switch drops all 802.1X packets. This option is useful when no other 802.1X authentication methods, such as guest VLAN, are needed on the interface, and eliminates the delay that occurs while the switch determines that a connected device is a non-802.1X-enabled host.</p>
<b>Required Privilege Level</b>	<p>routing—To view this statement in the configuration.</p> <p>routing-control—To add this statement to the configuration.</p>

## mac-validate

<b>Syntax</b>	mac-validate (loose   strict);
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> <b>unit</b> <i>logical-unit-number</i> <b>family</b> <i>family</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.3. Statement introduced in Junos OS Release 12.3R2 for EX Series switches.
<b>Description</b>	Enable IP and MAC address validation for static Ethernet and IP demux interfaces.
<b>Options</b>	<p><b>loose</b>—Forwards incoming packets when both the IP source address and the MAC source address match one of the trusted address tuples. Drops packets when the IP source address matches one of the trusted tuples, but the MAC address does not match the MAC address of the tuple. Continues to forward incoming packets when the source address of the incoming packet does not match any of the trusted IP addresses.</p> <p><b>strict</b>—Forwards incoming packets when both the IP source address and the MAC source address match one of the trusted address tuples. Drops packets when the MAC address does not match the tuple's MAC source address, or when IP source address of the incoming packet does not match any of the trusted IP addresses.</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">MAC Address Validation on Static Ethernet Interfaces Overview on page 251</a></li> <li>• <i>Configuring an IP Demultiplexing Interface</i></li> <li>• <i>Configuring a VLAN Demultiplexing Interface</i></li> </ul>

## macsec (MX Series)

<b>Syntax</b>	<pre> macsec {     connectivity-association <i>connectivity-association-name</i> {         exclude-protocol <i>protocol-name</i>;         include-sci;         mka {             must-secure;             key-server-priority <i>priority-number</i>;             transmit-interval <i>interval</i>;         }         no-encryption;         offset (0 30 50);         pre-shared-key {             cak <i>hexadecimal-number</i>;             ckn <i>hexadecimal-number</i>;         }         replay-protect {             replay-window-size <i>number-of-packets</i>;         }         secure-channel <i>secure-channel-name</i> {             direction (inbound   outbound);             encryption ;             id {                 mac-address <i>mac-address</i>;                 port-id <i>port-id-number</i>;             }             offset (0 30 50);             security-association <i>security-association-number</i> {                 key <i>key-string</i>;             }         }         security-mode <i>security-mode</i>;     }     interfaces <i>interface-name</i> {         connectivity-association <i>connectivity-association-name</i>;     } } </pre>
<b>Hierarchy Level</b>	[edit security]
<b>Release Information</b>	Statement introduced in Junos OS Release 15.1 for MX240, MX480, and MX960 routers.
<b>Description</b>	Configure Media Access Control Security (MACsec) on MX Series routers.
<b>Options</b>	The remaining statements are explained separately.
<b>Required Privilege Level</b>	admin—To view this statement in the configuration. admin-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li><a href="#">Configuring Media Access Control Security (MACsec) on MX Series Routers on page 100</a></li> </ul>

## major-ring-name

---

<b>Syntax</b>	major-ring-name <i>name</i> ;
<b>Hierarchy Level</b>	[edit protocols <a href="#">protection-group ethernet-ring ring-name</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2.
<b>Description</b>	Specify the name of major ring to which the sub-ring node is interconnected.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Ethernet Ring Protection Switching Overview on page 233</a></li> <li>• <i>Configuring Ethernet Ring Protection Switching (CLI Procedure)</i></li> </ul>

## manual switch

---

<b>Syntax</b>	request protection-group ethernet-aps manual-switch md <md> ma <ma>
<b>Hierarchy Level</b>	[edit protocols protection-group ethernet-aps]
<b>Description</b>	Forces traffic to switch from the active path to the alternate path, even in the absence of a failure on the working path. If the working path is the active path, traffic will be switched to the protection path. If the protection path is the active path, traffic will be switched to the protection path.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Ethernet Automatic Protection Switching Overview on page 225</a></li> </ul>

## master-only

---

<b>Syntax</b>	master-only;
<b>Hierarchy Level</b>	[edit groups rex interfaces (fxp0   em0) unit <i>logical-unit-number</i> family <i>family</i> address], [edit groups rex logical-systems <i>logical-system-name</i> interfaces fxp0 unit <i>logical-unit-number</i> family <i>family</i> address], [edit interfaces (fxp0   em0) unit <i>logical-unit-number</i> family <i>family</i> address], [edit logical-systems <i>logical-system-name</i> interfaces fxp0 unit <i>logical-unit-number</i> family <i>family</i> address]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4. Statement introduced in Junos OS Release 11.1 for the QFX Series.
<b>Description</b>	Configure the IP address to be used when the Routing Engine is the current master.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring a Consistent Management IP Address on page 26</a></li><li>• <i>CLI User Guide</i></li></ul>

## max-sessions (PPPoE Service Name Tables)

<b>Syntax</b>	<code>max-sessions <i>number</i>;</code>
<b>Hierarchy Level</b>	[edit protocols pppoe service-name-tables <i>table-name</i> <b>service</b> <i>service-name</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 10.2.
<b>Description</b>	<p>Configure the maximum number of active PPPoE sessions using either static or dynamic PPPoE interfaces that the router can establish with the specified named service, <b>empty</b> service, or <b>any</b> service entry in a PPPoE service name table. The router maintains a count of active PPPoE sessions for each service entry to determine when the maximum sessions limit has been reached.</p> <p>The router uses the <b>max-sessions</b> value for a PPPoE service name table entry in conjunction with the <b>max-sessions</b> value configured for the PPPoE underlying interface, and with the maximum number of PPPoE sessions supported on your router. If your configuration exceeds any of these maximum session limits, the router is unable to establish the PPPoE session.</p>
<b>Options</b>	<p><b>number</b>—Maximum number of active PPPoE sessions that the router can establish with the specified PPPoE service name table entry, in the range 1 to the platform-specific maximum PPPoE sessions supported for your router. The default value is equal to the maximum number of PPPoE sessions supported on your routing platform.</p> <p>For information about scaling values for PPPoE interfaces, access the <i>Subscriber Management Scaling Values (XLS)</i> spreadsheet from the Downloads box on the <i>Junos OS Subscriber Management</i> pathway page for the current release.</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Limiting the Number of Active PPPoE Sessions Established with a Specified Service Name</i></li> <li>• <i>Configuring PPPoE Service Name Tables</i></li> <li>• <i>PPPoE Maximum Session Limit Overview</i></li> <li>• <i>Configuring an Interface Set of Subscribers in a Dynamic Profile</i></li> <li>• <i>Subscriber Interfaces and PPPoE Overview</i></li> </ul>

## max-sessions-vsa-ignore (Static and Dynamic Subscribers)

<b>Syntax</b>	max-sessions-vsa-ignore;
<b>Hierarchy Level</b>	<p>[edit dynamic-profiles <i>profile-name</i> interfaces demux0 unit <i>logical-unit-number</i> family pppoe],</p> <p>[edit dynamic-profiles <i>profile-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> family pppoe],</p> <p>[edit dynamic-profiles <i>profile-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> pppoe-underlying-options],</p> <p>[edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> family pppoe],</p> <p>[edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> pppoe-underlying-options],</p> <p>[edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> family pppoe],</p> <p>[edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> pppoe-underlying-options]</p>
<b>Release Information</b>	Statement introduced in Junos OS Release 11.4.
<b>Description</b>	<p>Configure the router to ignore (clear) the value returned by RADIUS in the Max-Clients-Per-Interface Juniper Networks vendor-specific attribute (VSA) [26-143], and restore the PPPoE maximum session value on the underlying interface to the value configured in the CLI with the <b>max-sessions</b> statement. The PPPoE maximum session value specifies the maximum number of concurrent static or dynamic PPPoE logical interfaces (sessions) that the router can activate on the PPPoE underlying interface, or the maximum number of active static or dynamic PPPoE sessions that the router can establish with a particular service entry in a PPPoE service name table.</p>
<b>Default</b>	If you do not include the <b>max-sessions-vsa-ignore</b> statement, the maximum session value returned by RADIUS in the Max-Clients-Per-Interface VSA takes precedence over the PPPoE maximum session value configured with the <b>max-sessions</b> statement.
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>Limiting the Maximum Number of PPPoE Sessions on the Underlying Interface</li> <li>PPPoE Maximum Session Limit Overview</li> <li>Guidelines for Using PPPoE Maximum Session Limit from RADIUS</li> <li>Juniper Networks VSAs Supported by the AAA Service Framework</li> <li>Configuring an Interface Set of Subscribers in a Dynamic Profile</li> <li>Subscriber Interfaces and PPPoE Overview</li> </ul>

## maximum-links

<b>Syntax</b>	<code>maximum-links <i>maximum-links-limit</i>;</code>
<b>Hierarchy Level</b>	[edit chassis <a href="#">aggregated-devices</a> ]
<b>Release Information</b>	<p>Statement introduced in Junos OS Release 11.1 for T Series routers.</p> <p>Statement introduced in Junos OS Release 12.1X48 for PTX Series Packet Transport Routers.</p> <p>Statement introduced in Junos OS Release 12.3 for MX Series routers.</p>
<b>Description</b>	<p>Configure the maximum links limit for aggregated devices. Note that for MX Series routers, to set a range of 32 or 64 the router must be running in Enhanced IP mode, which is only supported for Trio-based MPCs and multiservice DPCs (MS-DPCs). For more information on Enhanced IP mode, <i>Network Services Mode Overview</i>.</p> <p>For MX series routers and PTX series switches, the option for 64 links is only supported for Junos OS release 12.3 and later.</p>
	<div>  <p><b>NOTE:</b> This statement is not supported on the MX80, MX104, and PTX1000 routers.</p> </div>
<b>Options</b>	<p><i>maximum-links-limit</i>—Maximum links limit for aggregated devices.</p> <p><b>Range:</b> 16, 32, 64</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Network Services Mode Overview</i></li> <li>• <a href="#">Configuring Junos OS for Supporting Aggregated Devices on page 155</a></li> <li>• <a href="#">Configuring an Aggregated Ethernet Interface on page 141</a></li> <li>• <i>network-services</i></li> </ul>

## maximum-requests

---

<b>Syntax</b>	maximum-requests <i>times</i> ;
<b>Hierarchy Level</b>	[edit protocols dot1x authenticator interface <i>interface-id</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.3.
<b>Description</b>	Specify the maximum number of retransmission times of an EAPOL Request packet to the client before it times out the authentication session.
<b>Options</b>	<i>times</i> —Specify the maximum number of retransmission times. <b>Range:</b> 1 through 10 times <b>Default:</b> 2 times
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">IEEE 802.1x Port-Based Network Access Control Overview on page 33</a></li><li>• <a href="#">authenticator on page 991</a></li><li>• <a href="#">dot1x on page 1022</a></li><li>• <a href="#">interface (IEEE 802.1x) on page 1092</a></li></ul>

## maximum-requests (MX Series in Enhanced LAN Mode)

---

<b>Syntax</b>	maximum-requests <i>number</i> ;
<b>Hierarchy Level</b>	[edit protocols authentication-access-control interface (all   [ <i>interface-names</i> ]) dot1x]
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2 for MX240, MX480, and MX960 routers in enhanced LAN mode.
<b>Description</b>	For 802.1X authentication, configure the maximum number of times an EAPOL request packet is retransmitted to the supplicant before the authentication session times out.
<b>Default</b>	Two retransmission attempts
<b>Options</b>	<i>number</i> —Number of retransmission attempts. <b>Range:</b> 1 through 10 <b>Default:</b> 2
<b>Required Privilege Level</b>	routing—To view this statement in the configuration. routing-control—To add this statement to the configuration.

## mc-ae

<b>Syntax</b>	<pre>mc-ae {   chassis-id <i>chassis-id</i>;   events {     iccp-peer-down;     force-icl-down;     prefer-status-control-active;   }   init-delay-time <i>seconds</i>;   mc-ae-id <i>mc-ae-id</i>;   mode (active-active   active-standby);   redundancy-group <i>group-id</i>;   revert-time <i>revert-time</i>;   status-control (active   standby);   switchover-mode (non-revertive   revertive); }</pre>
<b>Hierarchy Level</b>	<p>[edit interfaces aeX aggregated-ether-options],  [edit logical-systems <i>logical-system-name</i> interfaces aeX aggregated-ether-options]</p>
<b>Release Information</b>	<p>Statement introduced in Junos OS Release 9.6 for MX Series routers.</p> <p><b>events</b> statement introduced in Junos OS Release 11.4R4 for MX Series routers.</p> <p>Statement introduced in Junos OS Release 12.2 for the QFX Series. Only the <b>chassis-id</b>, <b>mc-ae-id</b>, <b>mode active-active</b>, and <b>status-control (active   standby)</b> options are supported on QFX Series devices.</p> <p>Statement introduced in Junos OS Release 12.3R2 for EX Series switches.</p> <p><b>prefer-status-control-active</b> statement introduced in Junos OS Release 13.2R1 for EX Series switches.</p> <p><b>init-delay-time seconds</b> statement introduced in Junos OS Release 13.2R3 for EX Series switches.</p> <p><b>switchover-mode</b> and <b>revert-time</b> statements introduced in Junos OS Release 13.3.</p> <p>Support for logical systems introduced in Junos OS Release 14.1.</p>
<b>Description</b>	<p>Enable multichassis link aggregation groups (MC-LAG), which enables one device to form a logical LAG interface with two or more other devices.</p>
<b>Options</b>	<p><b>chassis-id</b>—Specify the chassis ID for Link Aggregation Control Protocol (LACP) to calculate the port number of MC-LAG physical member links.</p> <p><b>Values:</b> 0 or 1</p> <p><b>events</b>—Specify an action if a specific MC-LAG event occurs.</p> <p><b>iccp-peer-down</b>—Specify an action if the ICCP peer of this node goes down.</p> <p><b>force-icl-down</b>—If the node's ICCP peer goes down, bring down the interchassis-link logical interface.</p> <p><b>prefer-status-control-active</b>—Specify that the node configured as <b>status-control active</b> become the active node if the peer of this node goes down.</p>

**NOTE:** The `prefer-status-control-active` statement can be configured with the `status-control standby` configuration to prevent the LACP MC-LAG system ID from reverting to the default LACP system ID on ICCP failure. Use this configuration only if you can ensure that ICCP will not go down unless the router or switch is down. You must also configure the `hold-time down` value (at the `[edit interfaces interface-name]` hierarchy level) for the interchassis link with the `status-control standby` configuration to be higher than the ICCP BFD timeout. This configuration prevents data traffic loss by ensuring that when the router or switch with the `status-control active` configuration goes down, the router or switch with the `status-control standby` configuration does not go into standby mode.

To make the `prefer-status-control-active` configuration work with the `status-control standby` configuration when an interchassis-link logical interface is configured on aggregate Ethernet interface, you must either configure the `lACP periodic interval` statement at the `[edit interface interface-name aggregated-ether-options]` hierarchy level as slow or configure the `detection-time threshold` statement at the `[edit protocols iccp peer liveness-detection]` hierarchy level as less than 3 seconds.

**init-delay-time *seconds***—To minimize traffic loss, specify the number of seconds in which to delay bringing the multichassis aggregated Ethernet interface back to the up state when you reboot an MC-LAG peer.

**mc-ae-id *mc-ae-id***—Specify the identification number of the MC-LAG device. The two MC-LAG network devices that manage a given MC-LAG must have the same identification number.

**Range:** 1 through 65,535

**mode (*active-active* | *active-standby*)**—Specify whether the MC-LAG is in active-active or active-standby mode.

**NOTE:** You can configure IPv4 (`inet`) and IPv6 (`inet6`) addresses on `mc-ae` interfaces when the `active-standby` mode is configured.

**redundancy-group *group-id***—Specify the redundancy group identification number. The Inter-Chassis Control Protocol (ICCP) uses the redundancy group ID to associate multiple chassis that perform similar redundancy functions.

**Range:** 1 through 4,294,967,294

**revert-time**—Wait interval (in minutes) before the switchover to the preferred node is performed when the `switchover-mode` is configured as `revertive`.

**Range:** 1 through 10

**status-control (active | standby)**—Specify whether the chassis becomes active or remains in standby mode when an interchassis link failure occurs.

**switchover-mode (non-revertive | revertive)**—Specify whether Junos OS should trigger a link switchover to the preferred node when the active node is available.

**NOTE:** For revertive mode to automatically switch over to the preferred node, the **status-control** statement should be configured as **active**.

**init-delay-time seconds**—To minimize traffic loss, specify the number of seconds by which to delay bringing the multichassis aggregated Ethernet (mc-ae) interface back to the up state when you reboot an MC-LAG peer.

**Required Privilege Level** interface—To view this statement in the configuration.  
interface-control—To add this statement to the configuration.

## minimum-bandwidth (aggregated Ethernet)

---

<b>Syntax</b>	minimum-bandwidth bw-unit <i>unit</i> bw-value <i>value</i> ;
<b>Hierarchy Level</b>	[edit interfaces aex aggregated-ether-options]
<b>Release Information</b>	Statement introduced before Junos OS Release 14.1R1 and 14.2 for MX Series.
<b>Description</b>	Configure the minimum bandwidth unit for an aggregated Ethernet bundle as bps, Gbps, Kbps, or Mbps and the bandwidth value from 1 through 128,000.
<b>Options</b>	<p><b><i>unit</i></b>—Minimum bandwidth unit for the aggregated Ethernet bundle as bps, Gbps, Kbps, or Mbps.</p> <p><b><i>value</i></b>—Minimum bandwidth value from 1 through 128,000.</p>
<b>Required Privilege Level</b>	routing—To view this statement in the configuration. routing-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Aggregated Ethernet Interfaces Overview on page 136</a></li><li>• <a href="#">Understanding Mixed Rates and Mixed Modes on Aggregated Ethernet Bundles on page 144</a></li><li>• <a href="#">Configuring Mixed Rates and Mixed Modes on Aggregated Ethernet Bundles on page 150</a></li></ul>

## minimum-links

<b>Syntax</b>	<code>minimum-links <i>number</i>;</code>
<b>Hierarchy Level</b>	<p>[edit interfaces aex <a href="#">aggregated-ether-options</a>],  [edit interfaces aex aggregated-sonet-options],  [edit interfaces <i>interface-name</i> mlfr-uni-nni-bundle-options],  [edit interfaces <i>interface-name</i> <a href="#">unit logical-unit-number</a>],  [edit interfaces interface-range <i>range</i> <a href="#">aggregated-ether-options</a>],  [edit interfaces interface-range <i>range</i> aggregated-sonet-options],  [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> <a href="#">unit logical-unit-number</a>]</p>
<b>Release Information</b>	<p>Statement introduced before Junos OS Release 7.4.</p> <p>Statement introduced in Junos OS Release 9.0 for EX Series switches.</p>
<b>Description</b>	For aggregated Ethernet, SONET/SDH, multilink, link services, and voice services interfaces only, set the minimum number of links that must be up for the bundle to be labeled up.
<b>Options</b>	<p><i>number</i>—Number of links.</p> <p><b>Range:</b> On M120, M320, MX Series, T Series, and TX Matrix routers with Ethernet interfaces, the valid range for minimum-links number is 1 through 64. When the maximum value (16) is specified, all configured links of a bundle must be up for the bundle to be labeled up. On all other routers and on EX Series switches, other than EX8200 switches, the range of valid values for minimum-links number is 1 through 8. When the maximum value (8) is specified, all configured links of a bundle must be up for the bundle to be labeled up. On EX8200 switches, the range of valid values for minimum-links number is 1 through 12. When the maximum value (12) is specified, all configured links of a bundle must be up for the bundle to be labeled up.</p> <p><b>Default:</b> 1</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>

## mixed-rate-mode

---

<b>Syntax</b>	<code>mixed-rate-mode;</code>
<b>Hierarchy Level</b>	<code>[edit chassis fpc slot-number pic pic-number mixed-rate-mode]</code> , <code>[edit chassis lcc number fpc slot-number pic pic-number mixed-rate-mode]</code> (Routing Matrix)
<b>Release Information</b>	Statement introduced in Junos OS Release 13.3.
<b>Description</b>	Configure the mixed-rate mode for the 24-port 10 Gigabit Ethernet PIC (PF-24XGE-SFPP) only.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Modes of Operation of 10-Gigabit Ethernet PICs on page 387</a></li><li>• <a href="#">Configuring Mixed-Rate Mode Operation on page 392</a></li></ul>

## mka (MX Series)

---

<b>Syntax</b>	<code>mka {   must-secure;   key-server-priority <i>priority-number</i>;   transmit-interval <i>interval</i>; }</code>
<b>Hierarchy Level</b>	<code>[edit security macsec connectivity-association <i>connectivity-association-name</i>]</code>
<b>Release Information</b>	Statement introduced in Junos OS Release 15.1 for MX240, MX480, and MX960 routers.
<b>Description</b>	Specify parameters for the MACsec Key Agreement (MKA) protocol.
<b>Options</b>	The remaining statements are explained separately.
<b>Required Privilege Level</b>	admin—To view this statement in the configuration. admin-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring Media Access Control Security (MACsec) on MX Series Routers on page 100</a></li></ul>

## must-secure (MX Series)

<b>Syntax</b>	<code>must-secure;</code>
<b>Hierarchy Level</b>	<code>[edit security macsec connectivity-association <i>connectivity-association-name</i> mka]</code>
<b>Release Information</b>	Statement introduced in Junos OS Release 15.1 for MX240, MX480, and MX960 routers.
<b>Description</b>	<p>Specifies that all traffic travelling on the MACsec-secured link must be MACsec-secured to be forwarded onward.</p> <p>When the <b>must-secure</b> option is enabled, all traffic that is not MACsec-secured that is received on the interface is dropped.</p> <p>When the <b>must-secure</b> option is disabled, all traffic from devices that support MACsec is MACsec-secured while traffic received from devices that do not support MACsec is forwarded through the network.</p> <p>The <b>must-secure</b> option is particularly useful in scenarios where multiple devices, such as a phone and a PC, are accessing the network through the same Ethernet interface. If one of the devices supports MACsec while the other device does not support MACsec, the device that doesn't support MACsec can continue to send and receive traffic over the network—provided the <b>must-secure</b> option is disabled—while traffic to and from the device that supports MACsec is MACsec-secured. In this scenario, traffic to the device that is not MACsec-secured must be VLAN-tagged.</p>
<b>Default</b>	The <b>must-secure</b> option is disabled.
<b>Required Privilege Level</b>	<p>admin—To view this statement in the configuration.</p> <p>admin-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring Media Access Control Security (MACsec) on MX Series Routers on page 100</a></li> </ul>

## mtu

<b>Syntax</b>	<code>mtu bytes;</code>
<b>Hierarchy Level</b>	<p>[edit interfaces <i>interface-name</i>],</p> <p>[edit interfaces <i>interface-name</i> <b>unit</b> <i>logical-unit-number</i> <b>family</b> <i>family</i>],</p> <p>[edit interfaces <i>interface-range name</i>],</p> <p>[edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> <b>unit</b> <i>logical-unit-number</i> <b>family</b> <i>family</i>],</p> <p>[edit logical-systems <i>logical-system-name</i> protocols l2circuit local-switching interface <i>interface-name</i> backup-neighbor <i>address</i>],</p> <p>[edit logical-systems <i>logical-system-name</i> protocols l2circuit neighbor <i>address</i> interface <i>interface-name</i>],</p> <p>[edit logical-systems <i>logical-system-name</i> protocols l2circuit neighbor <i>address</i> interface <i>interface-name</i> backup-neighbor <i>address</i>],</p> <p>[edit logical-systems <i>logical-system-name</i> routing-instances <i>routing-instance-name</i> protocols l2vpn interface <i>interface-name</i>],</p> <p>[edit logical-systems <i>logical-system-name</i> routing-instances <i>routing-instance-name</i> protocols vpls],</p> <p>[edit protocols l2circuit local-switching interface <i>interface-name</i> backup-neighbor <i>address</i>],</p> <p>[edit protocols l2circuit neighbor <i>address</i> interface <i>interface-name</i>],</p> <p>[edit protocols l2circuit neighbor <i>address</i> interface <i>interface-name</i> backup-neighbor <i>address</i>],</p> <p>[edit routing-instances <i>routing-instance-name</i> protocols l2vpn interface <i>interface-name</i>],</p> <p>[edit routing-instances <i>routing-instance-name</i> protocols vpls]</p>
<b>Release Information</b>	<p>Statement introduced before Junos OS Release 7.4.</p> <p>Statement introduced in Junos OS Release 9.0 for EX Series switches.</p> <p>Support for Layer 2 VPNs and VPLS introduced in Junos OS Release 10.4.</p> <p>Statement introduced in Junos OS Release 12.1X48 for PTX Series Packet Transport Routers.</p> <p>Statement introduced in Junos OS Release 12.2 for ACX Series Universal Access Routers.</p> <p>Support at the [set interfaces <i>interface-name</i> <b>unit</b> <i>logical-unit-number</i> <b>family</b> <i>ccc</i>] hierarchy level introduced in Junos OS Release 12.3R3 for MX Series routers.</p>
<b>Description</b>	<p>Specify the maximum transmission unit (MTU) size for the media or protocol. The default MTU size depends on the device type. Changing the media MTU or protocol MTU causes an interface to be deleted and added again.</p> <p>To route jumbo data packets on an integrated routing and bridging (IRB) interface or routed VLAN interface (RVI) on EX Series switches, you must configure the jumbo MTU size on the member physical interfaces of the VLAN that you have associated with the IRB interface or RVI, as well as on the IRB interface or RVI itself (the interface named <i>irb</i> or <i>vlan</i>, respectively).</p>

**CAUTION:** For EX Series switches, setting or deleting the jumbo MTU size on an IRB interface or RVI while the switch is transmitting packets might cause packets to be dropped.

---

**NOTE:**

The MTU for an IRB interface is calculated by removing the Ethernet header overhead [6(DMAC)+6(SMAC)+2(EtherType)]. Because, the MTU is the lower value of the MTU configured on the IRB interface and the MTU configured on the IRB's associated bridge domain IFDs or IFLs, the IRB MTU is calculated as follows:

- In case of Layer 2 IFL configured with the `flexible-vlan-tagging` statement, the IRB MTU is calculated by including 8 bytes overhead (SVLAN+CVLAN).
  - In case of Layer 2 IFL configured with the `vlan-tagging` statement, the IRB MTU is calculated by including a single VLAN 4 bytes overhead.
-

---

**NOTE:**

- If a packet whose size is larger than the configured MTU size is received on the receiving interface, the packet is eventually dropped. The value considered for MRU (maximum receive unit) size is also the same as the MTU size configured on that interface.
- Not all devices allow you to set an MTU value, and some devices have restrictions on the range of allowable MTU values. You cannot configure an MTU for management Ethernet interfaces (fxp0, em0, or me0) or for loopback, multilink, and multicast tunnel devices.
- On ACX Series routers, you can configure the protocol MTU by including the `mtu` statement at the [edit interfaces *interface-name* unit *logical-unit-number* family inet] or [edit interfaces *interface-name* unit *logical-unit-number* family inet6] hierarchy level.
  - If you configure the protocol MTU at any of these hierarchy levels, the configured value is applied to all families that are configured on the logical interface.
  - If you are configuring the protocol MTU for both inet and inet6 families on the same logical interface, you must configure the same value for both the families. It is not recommended to configure different MTU size values for inet and inet6 families that are configured on the same logical interface.
- Starting in Release 14.2, MTU for IRB interfaces is calculated by removing the Ethernet header overhead (6(DMAC)+6(SMAC)+2(EtherType)), and the MTU is a minimum of the two values:
  - Configured MTU
  - Associated bridge domain's physical or logical interface MTU
    - For Layer 2 logical interfaces configured with flexible-vlan-tagging, IRB MTU is calculated by including 8 bytes overhead (SVLAN+CVLAN).
    - For Layer 2 logical interfaces configured with vlan-tagging, IRB MTU is calculated by including single VLAN 4 bytes overhead.

---

**NOTE:** Changing the Layer 2 logical interface option from vlan-tagging to flexible-vlan-tagging or vice versa adjusts the logical interface MTU by 4 bytes with the existing MTU size. As a result, the Layer 2 logical interface is deleted and re-added, and the IRB MTU is re-computed appropriately.

---

For more information about configuring MTU for specific interfaces and router or switch combinations, see *Configuring the Media MTU*.

**Options** *bytes*—MTU size.

**Range:** 256 through 9192 bytes, 256 through 9216 (EX Series switch interfaces), 256 through 9500 bytes (Junos OS 12.1X48R2 for PTX Series routers), 256 through 9500 bytes (Junos OS 16.1R1 for MX Series routers)

**NOTE:** Starting in Junos OS Release 16.1R1, the MTU size for a media or protocol is increased from 9192 to 9500 for Ethernet interfaces on the following MX Series MPCs:

- MPC1
- MPC2
- MPC2E
- MPC3E
- MPC4E
- MPC5E
- MPC6E

**Default:** 1500 bytes (INET, INET6, and ISO families), 1448 bytes (MPLS), 1514 bytes (EX Series switch interfaces)

**Required Privilege Level** interface—To view this statement in the configuration.  
interface-control—To add this statement to the configuration.

## multi-chassis-protection

<b>Syntax</b>	<pre>multi-chassis-protection {   peer a.b.c.d {     interface interface-name;   } }</pre>
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 11.1.
<b>Description</b>	<p>For MX Series routers with multichassis aggregated Ethernet (MC-AE) interfaces, you can use this statement under the physical interface level to reduce the configuration at the logical interface level if the following assumption exists:</p> <p>If there are <math>n + 1</math> logical interfaces under <b>ae0</b>, from <b>ae0.0</b> through <b>ae0.n</b>, there will be <math>n + 1</math> logical interfaces under <b>ge-0/0/0</b> as well, from <b>ge-0/0/0.0</b> through <b>ge-0/0/0.n</b>, and each <b>ge-0/0/0</b> logical interface will be a protection link for the <b>ae0</b> logical interface.</p> <hr/> <div>  <p><b>NOTE:</b> A bridge domain cannot have MC-AE logical interfaces which belong to different redundancy groups.</p> </div> <hr/> <p>If the Inter-Chassis Control Protocol (ICCP) connection is UP and the interchassis data link (ICL) comes UP, the router configured as standby will bring up the MC-AE interfaces shared with the peer.</p> <p>The remaining statements are explained separately.</p>
<b>Options</b>	<b>interface <i>interface-name</i></b> —Specify the interface: <b>interface <i>interface-name-fpc/pic/port</i></b>
<b>Required Privilege Level</b>	<b>interface</b> —To view this statement in the configuration. <b>interface-control</b> —To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring Multichassis Link Aggregation on MX Series Routers</a></li> <li>• <a href="#">Configuring Active-Active Bridging and VRRP over IRB in Multichassis Link Aggregation</a></li> <li>• <a href="#">Configuring Aggregated Ethernet Link Protection on page 172</a></li> <li>• <a href="#">Example: Configuring Aggregated Ethernet Link Protection on page 174</a></li> <li>• <a href="#">peer on page 1177</a></li> </ul>

## native-vlan-id

---

<b>Syntax</b>	<code>native-vlan-id <i>number</i>;</code>
<b>Hierarchy Level</b>	[edit interfaces <i>ge-fpc/pic/port</i> ], [edit interfaces <i>interface-name</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.3. Statement introduced in Junos OS Release 12.2 for ACX Series Universal Access Routers. Statement introduced in Junos OS Release 12.3R2 for EX Series switches. Statement introduced in Junos OS Release 13.2X51-D20 for the QFX Series.
<b>Description</b>	<p>Configure mixed tagging support for untagged packets on a port for the following:</p> <ul style="list-style-type: none"><li>• M Series routers with Gigabit Ethernet IQ PICs with SFP and Gigabit Ethernet IQ2 PICs with SFP configured for 802.1Q flexible VLAN tagging</li><li>• MX Series routers with Gigabit Ethernet DPCs and MICs, Tri-Rate Ethernet DPCs and MICs, and 10-Gigabit Ethernet DPCs and MICs and MPCs configured for 802.1Q flexible VLAN tagging</li><li>• T4000 routers with 100-Gigabit Ethernet Type 5 PIC with CFP</li><li>• EX Series switches with Gigabit Ethernet, 10-Gigabit Ethernet, 40-Gigabit Ethernet, and aggregated Ethernet interfaces</li></ul> <p>When the <b>native-vlan-id</b> statement is included with the <b>flexible-vlan-tagging</b> statement, untagged packets are accepted on the same mixed VLAN-tagged port.</p> <div> <b>NOTE:</b> The logical interface on which untagged packets are received must be configured with the same VLAN ID as the native VLAN ID configured on the physical interface, otherwise the untagged packets are dropped.</div> <p>To configure the logical interface, include the <b>vlan-id</b> statement (matching the <b>native-vlan-id</b> statement on the physical interface) at the [edit interfaces <i>interface-name</i> <i>unit logical-unit-number</i>] hierarchy level.</p> <p>When the <b>native-vlan-id</b> statement is included with the <i>interface-mode</i> statement, untagged packets are accepted and forwarded within the bridge domain or VLAN that is configured with the matching VLAN ID.</p> <p>Starting in Junos OS Release 17.1R1, you can send untagged traffic without a native VLAN ID to the remote end of the network. To do this, remove the native VLAN ID from the untagged traffic configuration by setting the <b>no-native-vlan-insert</b> statement. If you do not configure this statement, the native VLAN ID is added to the untagged traffic.</p>
<b>Default</b>	By default, the untagged packets are dropped. That is, if you do not configure the <b>native-vlan-id</b> option, the untagged packets are dropped.

<b>Options</b>	<i>number</i> —VLAN ID number. <b>Range:</b> (ACX Series routers and EX Series switches) 0 through 4094.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring Mixed Tagging Support for Untagged Packets on page 258</a></li> <li>• <a href="#">Configuring Access Mode on a Logical Interface on page 272</a></li> <li>• <a href="#">Configuring the Native VLAN Identifier (CLI Procedure)</a></li> <li>• <a href="#">Understanding Bridging and VLANs on EX Series Switches</a></li> <li>• <a href="#">flexible-vlan-tagging on page 1061</a></li> <li>• <a href="#">Understanding Q-in-Q Tunneling on EX Series Switches</a></li> <li>• <a href="#">no-native-vlan-insert on page 1154</a></li> <li>• <a href="#">Sending Untagged Traffic Without VLAN ID to Remote End on page 260</a></li> </ul>

## negotiate-address

<b>Syntax</b>	negotiate-address;
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> <i>unit</i> <i>logical-unit-number</i> <i>family</i> inet], [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> <i>unit</i> <i>logical-unit-number</i> <i>family</i> inet]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4.
<b>Description</b>	For interfaces with PPP encapsulation, enable the interface to be assigned an IP address by the remote end.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring IPCP Options for Interfaces with PPP Encapsulation</a></li> <li>• <a href="#">address on page 976</a></li> <li>• <a href="#">unnumbered-address (PPP) on page 1287</a></li> <li>• <a href="#">Junos OS Administration Library</a></li> </ul>

## negotiation-options

---

<b>Syntax</b>	negotiation-options { <a href="#">allow-remote-loopback</a> ; <a href="#">no-allow-link-events</a> ; }
<b>Hierarchy Level</b>	[edit protocols <a href="#">oam link-fault-management interface</a> <i>interface-name</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.4.
<b>Description</b>	Enable and disable IEEE 802.3ah Operation, Administration, and Management (OAM) features for Ethernet interfaces.  The statements are explained separately.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">IEEE 802.3ah OAM Link-Fault Management Overview on page 648</a></li></ul>

## no-adaptive

---

<b>Syntax</b>	no-adaptive;
<b>Hierarchy Level</b>	[edit interfaces aex aggregated-ether-options load-balance]
<b>Release Information</b>	Statement introduced in Junos OS Release 13.2R3.
<b>Description</b>	Configure no-adaptive on the aggregated Ethernet bundle to remove the adaptive that is configured to address the traffic imbalance.
<b>Required Privilege Level</b>	interface - To view statement in the configuration. interface-control - To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Understanding Aggregated Ethernet Load Balancing on page 182</a></li></ul>

## no-allow-link-events

<b>Syntax</b>	no-allow-link-events;
<b>Hierarchy Level</b>	[edit protocols <b>oam</b> <b>ethernet</b> <b>link-fault-management</b> <b>interface</b> <i>interface-name</i> <b>negotiation-options</b> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.4.
<b>Description</b>	Disable the sending of link event TLVs.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Disabling the Sending of Link Event TLVs on page 656</a></li> </ul>

## no-encryption (MACsec for MX Series)

<b>Syntax</b>	no-encryption;
<b>Hierarchy Level</b>	[edit security macsec connectivity-association <i>connectivity-association-name</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 15.1 for MX240, MX480, and MX960 routers.
<b>Description</b>	<p>Disables MACsec encryption for a connectivity association that is configured to enable MACsec using static connectivity association key (CAK) or dynamic security mode.</p> <p>You can enable MACsec without enabling encryption. If a connectivity association that has not enabled MACsec encryption is associated with an interface, traffic is forwarded across the Ethernet link in clear text. You are, therefore, able to view this unencrypted traffic when you are monitoring the link. The MACsec header is still applied to the packet, however, and all MACsec data integrity checks are run on both ends of the link to ensure the traffic does not represent a security threat.</p> <p>This command is used to disable encryption when MACsec is configured using static CAK or dynamic security mode only. When MACsec is configuring using static secure association key (SAK) security mode, the encryption setting is managed in the secure channel using the <b>encryption</b> configuration statement.</p>
<b>Default</b>	MACsec encryption is enabled if MACsec is enabled using static CAK or dynamic security mode.
<b>Required Privilege Level</b>	admin—To view this statement in the configuration. admin-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring Media Access Control Security (MACsec) on MX Series Routers on page 100</a></li> </ul>

## no-auto-mdix

---

<b>Syntax</b>	no-auto-mdix;
<b>Hierarchy Level</b>	[edit interface <i>ge-fpc/port/pic</i> gigether-options]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.5. Statement introduced in Junos OS Release 12.2 for ACX Series Universal Access Routers.
<b>Description</b>	Disable the Auto MDI/MDIX feature.  MX Series routers with Gigabit Ethernet interfaces automatically detect MDI and MDIX port connections. Use this statement to override the default setting. Remove this statement to return to the default setting.
<b>Default</b>	Auto MDI/MDIX is enabled by default.
<b>Options</b>	There are no options for this statement.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Ethernet Interfaces Overview on page 3</a></li><li>• <a href="#">gigether-options on page 1071</a>.</li></ul>

## no-gratuitous-arp-request

---

<b>Syntax</b>	no-gratuitous-arp-request;
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.6 for EX Series switches. Statement introduced in Junos OS Release 12.2 for ACX Series Universal Access Routers.
<b>Description</b>	For Ethernet interfaces and pseudowire logical interfaces, do not respond to gratuitous ARP requests.
<b>Default</b>	Gratuitous ARP responses are enabled on all Ethernet interfaces.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring Gratuitous ARP on page 19</a></li><li>• <a href="#">gratuitous-arp-reply on page 1072</a></li></ul>

## no-keepalives

<b>Syntax</b>	no-keepalives;
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> ], [edit interfaces <i>interface-name</i> <b>unit</b> <i>logical-unit-number</i> ], [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> <b>unit</b> <i>logical-unit-number</i> ]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4.
<b>Description</b>	<p>Disable the sending of keepalives on a physical interface configured with PPP, Frame Relay, or Cisco HDLC encapsulation. The default keepalive interval is 10 seconds.</p> <p>For ATM2 IQ interfaces only, you can disable keepalives on a logical interface unit if the logical interface is configured with one of the following PPP over ATM encapsulation types:</p> <ul style="list-style-type: none"> <li>• <b>atm-ppp-llc</b>—PPP over AAL5 LLC encapsulation.</li> <li>• <b>atm-ppp-vc-mux</b>—PPP over AAL5 multiplex encapsulation.</li> </ul>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Configuring Keepalives</i></li> <li>• <a href="#">Disabling the Sending of PPPoE Keepalive Messages on page 357</a></li> <li>• <i>Configuring Frame Relay Keepalives</i></li> </ul>

## no-mac-table-binding (802.1X for MX Series in Enhanced LAN Mode)

<b>Syntax</b>	no-mac-table-binding;
<b>Hierarchy Level</b>	[edit protocols authentication-access-control]
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2 for MX240, MX480, and MX960 routers in enhanced LAN mode.
<b>Description</b>	For 802.1X authentication, disable the removal of the session from the authentication session table when the MAC address ages out of the Ethernet switching table.
<b>Default</b>	Not enabled
<b>Required Privilege Level</b>	<p>routing—To view this statement in the configuration.</p> <p>routing-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	

## no-native-vlan-insert

<b>Syntax</b>	no-native-vlan-insert;
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 17.1R1.
<b>Description</b>	<p>Send traffic without the native VLAN ID (<b>native-vlan-id</b>) to the remote end of the network if untagged traffic is received.</p> <p>If this statement is not configured, then <b>native-vlan-id</b> is added to untagged traffic. But if this statement is configured, then <b>native-vlan-id</b> is not added to untagged traffic.</p>
	<div>  <p><b>NOTE:</b></p> <ul style="list-style-type: none"> <li>This feature works only on MX Series routers with MPCs/MICs. Configuring this statement on MX Series routers with DPCs results in no behavioral change. However, if you configure the statement on aggregated Ethernet (ae) interfaces with logical interfaces across MPCs/MICs and DPCs, then the MPCs/MICs and DPCs behave differently.</li> <li>In the egress direction, this feature is disrupted by VLAN normalization. Because of normalization, the egress interface cannot distinguish between untagged traffic and tagged traffic. And untagged traffic is sent out with <b>native-vlan-id</b>. Consider this while configuring both VLAN normalization and new <b>native-vlan-id</b> statement.</li> </ul> <p>There will be a problem with ingress FW filter if filter term includes <b>native-vlan-id</b>. With no-native-vlan-insert statement configured, <b>native-vlan-id</b> will not be inserted to untagged traffic. So, FW filter term will not match with untagged traffic. But if incoming traffic have VLAN ID which is equal to <b>native-vlan-id</b>, then FW filter term will match and FW will work.</p> <ul style="list-style-type: none"> <li>When this feature is used with AE, all sub-interfaces of AE should be in same type of FPC.</li> </ul> </div>
<b>Default</b>	By default, <b>native-vlan-id</b> is inserted to untagged traffic. That is, if this statement is not configured, then <b>native-vlan-id</b> is inserted to untagged traffic.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li><a href="#">Configuring Mixed Tagging Support for Untagged Packets on page 258</a></li> <li><a href="#">Configuring Access Mode on a Logical Interface on page 272</a></li> <li><a href="#">Configuring the Native VLAN Identifier (CLI Procedure)</a></li> </ul>

## no-pre-classifier

<b>Syntax</b>	no-pre-classifier;
<b>Hierarchy Level</b>	[edit chassis fpc <i>n</i> pic <i>n</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 10.4.
<b>Description</b>	Specify disabling the control queue for all ports on the 10-Gigabit Ethernet LAN/WAN PIC. Deleting this configuration re-enables the control queue feature on all ports of the 10-Gigabit Ethernet LAN/WAN PIC.
	<div>  <p><b>NOTE:</b> For the 10-Gigabit Ethernet LAN/WAN PIC with SFP+ (model number PD-5-10XGE-SFPP), the control queue has a rate limiter to limit the control traffic to 2 Mbps (fixed, not user-configurable) per port. If the transit control traffic crosses this limit, then it can cause drops on locally terminating control traffic, causing flap of protocols such as BGP and OSPF. To avoid the control traffic being dropped, configure the no-pre-classifier statement to disable the control queue.</p> </div>
<b>Default</b>	The no-pre-classifier statement is not configured and the control queue is operational.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">10-port 10-Gigabit Ethernet LAN/WAN PIC Overview on page 379</a></li> <li>• <a href="#">Configuring Control Queue Disable on a 10-port 10-Gigabit Ethernet LAN/WAN PIC on page 388</a></li> </ul>

## no-reauthentication (MX Series in Enhanced LAN Mode)

---

<b>Syntax</b>	no-reauthentication;
<b>Hierarchy Level</b>	[edit protocols authentication-access-control interface (all   [ <i>interface-names</i> ]) dot1x]
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2 for MX240, MX480, and MX960 routers in enhanced LAN mode.
<b>Description</b>	For 802.1X authentication, disables reauthentication.
<b>Default</b>	Not disabled
<b>Required Privilege Level</b>	routing—To view this statement in the configuration. routing-control—To add this statement to the configuration.

## no-send-pads-ac-info

---

<b>Syntax</b>	no-send-pads-ac-info;
<b>Hierarchy Level</b>	[edit protocols pppoe]
<b>Release Information</b>	Statement introduced in Junos OS Release 12.2.
<b>Description</b>	Prevent the router from sending the AC-Name and AC-Cookie tags in the PPPoE Active Discovery Session (PADS) packet. When you configure this statement, it affects PADS packets sent on all PPPoE interfaces configured on the router after the command is issued; it has no effect on previously created PPPoE interfaces. By default, the AC-Name and AC-Cookie tags are transmitted in the PADS packet, along with the Service-Name, Host-Uniq, Relay-Session-Id, and PPP-Max-Payload tags.

**NOTE:** In Junos OS Release 12.1 and earlier, only the Service-Name, Host-Uniq, Relay-Session-Id, and PPP-Max-Payload tags are contained in the PADS packet by default. The AC-Name and AC-Cookie tags are not transmitted in the PADS packet by default.

<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>Disabling the Sending of PPPoE Access Concentrator Tags in PADS Packets</li></ul>

## no-send-pads-error

---

<b>Syntax</b>	no-send-pads-error;
<b>Hierarchy Level</b>	[edit protocols pppoe]
<b>Release Information</b>	Statement introduced in Junos OS Release 12.3.
<b>Description</b>	Discard PADR messages to prevent transmission of PADS control packets with AC-System-Error tags.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Discarding PADR Messages to Accommodate Abnormal CPE Behavior</i></li> </ul>

## non-revertive (Interfaces)

---

<b>Syntax</b>	non-revertive;
<b>Hierarchy Level</b>	[edit interfaces aeX aggregated-ether-options lacp link-protection]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.3. Statement introduced in Junos OS Release 11.4 for EX Series switches. Statement introduced in Junos OS Release 15.1F4 for PTX Series routers.
<b>Description</b>	Disable the ability to switch to a better priority link (if one is available) once a link is established as active and collection distribution is enabled.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">link-protection on page 1109</a></li> <li>• <a href="#">Configuring Aggregated Ethernet Link Protection on page 172</a></li> <li>• <i>Configuring LACP Link Protection of Aggregated Ethernet Interfaces (CLI Procedure)</i></li> </ul>

## non-revertive

---

<b>Syntax</b>	non-revertive;
<b>Hierarchy Level</b>	[edit protocols <a href="#">protection-group ethernet-ring ring-name</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2.
<b>Description</b>	Enable nonrevertive operation where traffic is allowed to use the RPL if it has not failed, even after a switch condition has cleared. The default mode of operation is revertive.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Ethernet Ring Protection Switching Overview on page 233</a></li><li>• <i>Configuring Ethernet Ring Protection Switching (CLI Procedure)</i></li></ul>

## non-vc-mode

---

<b>Syntax</b>	non-vc-mode;
<b>Hierarchy Level</b>	[edit protocols <a href="#">protection-group ethernet-ring ring-name</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2.
<b>Description</b>	Configure a node on the sub-ring to operate in non-virtual channel mode. If this option is enabled then all the nodes in the sub-ring are configured with this option. Also, the <b>non-vc-mode</b> option should be used with care and only for open rings. Using this option for closed rings creates loops for RAPS control messages.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Ethernet Ring Protection Switching Overview on page 233</a></li><li>• <i>Configuring Ethernet Ring Protection Switching (CLI Procedure)</i></li></ul>

---

## node-id

---

<b>Syntax</b>	<code>node-id mac-address;</code>
<b>Hierarchy Level</b>	[edit protocols <a href="#">protection-group ethernet-ring ring-name</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.4.
<b>Description</b>	<p>For EX Series switches and QFX Series switches, node-id is not configurable.</p> <p>For MX Series routers, optionally specify the MAC address of a node in the protection group. If this statement is not included, the router assigns the node's MAC address.</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Ethernet Ring Protection Switching Overview on page 233</a></li><li>• <i>Example: Configuring Ethernet Ring Protection Switching on EX Series Switches</i></li><li>• <i>Example: Configuring Ethernet Ring Protection Switching on QFX Series and EX Series Switches Supporting ELS</i></li></ul>

## offset (MX Series)

<b>Syntax</b>	offset (0  30   50);
<b>Hierarchy Level</b>	[edit security macsec connectivity-association <i>connectivity-association-name</i> ] [edit security macsec connectivity-association <i>connectivity-association-name</i> secure-channel <i>secure-channel-name</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 15.1 for MX240, MX480, and MX960 routers.
<b>Description</b>	<p>Specifies the number of octets in an Ethernet frame that are sent in unencrypted plain-text when encryption is enabled for MACsec.</p> <p>Setting the offset to 30 allows a feature to see the IPv4 header and the TCP/UDP header while encrypting the remaining traffic. Setting the offset to 50 allows a feature to see the IPv6 header and the TCP/UDP header while encrypting the remaining traffic.</p> <p>You would typically forward traffic with the first 30 or 50 octets unencrypted if a feature needed to see the data in the octets to perform a function, but you otherwise prefer to encrypt the remaining data in the frames traversing the link. Load balancing features, in particular, typically need to see the IP and TCP/UDP headers in the first 30 or 50 octets to properly load balance traffic.</p> <p>You configure the <b>offset</b> in the [edit security macsec connectivity-association <i>connectivity-association-name</i>] hierarchy when you are enabling MACsec using static connectivity association key (CAK) or dynamic security mode.</p> <p>You configure the <b>offset</b> in the [edit security macsec connectivity-association <i>connectivity-association-name</i> secure-channel <i>secure-channel-name</i>] hierarchy when you are enabling MACsec using static secure association key (SAK) security mode.</p>
<b>Default</b>	0
<b>Options</b>	<p><b>0</b>—Specifies that no octets are unencrypted. When you set the offset to 0, all traffic on the interface where the connectivity association or secure channel is applied is encrypted.</p> <p><b>30</b>—Specifies that the first 30 octets of each Ethernet frame are unencrypted.</p>

**NOTE:** In IPv4 traffic, setting the offset to 30 allows a feature to see the IPv4 header and the TCP/UDP header while encrypting the rest of the traffic. An offset of 30, therefore, is typically used when a feature needs this information to perform a task on IPv4 traffic.

**50**—Specified that the first 50 octets of each Ethernet frame are unencrypted.

**NOTE:** In IPv6 traffic, setting the offset to 50 allows a feature to see the IPv6 header and the TCP/UDP header while encrypting the rest of the traffic. An offset of 50, therefore, is typically used when a feature needs this information to perform a task on IPv6 traffic.

**Required Privilege** admin—To view this statement in the configuration.  
**Level** admin-control—To add this statement to the configuration.

## output-policer

---

<b>Syntax</b>	<code>output-policer <i>policer-name</i>;</code>
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">layer2-policer</a> ], [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">layer2-policer</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.2. Statement introduced in Junos OS Release 12.3R2 for EX Series switches.
<b>Description</b>	Apply a single-rate two-color policer to the Layer 2 output traffic at the logical interface. The <b>output-policer</b> and <b>output-three-color</b> statements are mutually exclusive.
<b>Options</b>	<b><i>policer-name</i></b> —Name of the single-rate two-color policer that you define at the [edit <b>firewall</b> ] hierarchy level.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Two-Color and Three-Color Policers at Layer 2</i></li><li>• <i>Applying Layer 2 Policers to Gigabit Ethernet Interfaces</i></li><li>• <a href="#">Configuring a Gigabit Ethernet Policer on page 517</a></li><li>• <a href="#">input-policer on page 1086</a></li><li>• <a href="#">input-three-color on page 1088</a></li><li>• <a href="#">layer2-policer on page 1103</a></li><li>• <a href="#">logical-interface-policer on page 1119</a></li><li>• <a href="#">output-three-color on page 1170</a></li></ul>

## output-priority-map

<b>Syntax</b>	<pre> output-priority-map {   classifier {     premium {       forwarding-class <i>class-name</i> {         loss-priority (high   low);       }     }   } } </pre>
<b>Hierarchy Level</b>	<p>[edit interfaces <i>interface-name</i> together-options <a href="#">ethernet-switch-profile</a> <a href="#">ethernet-policer-profile</a>]</p> <p>[edit interfaces <i>interface-name</i> ether-options <a href="#">ethernet-switch-profile</a> <a href="#">ethernet-policer-profile</a>]</p>
<b>Release Information</b>	<p>Statement introduced before Junos OS Release 7.4.</p> <p>Statement introduced in Junos OS Release 13.2 for the QFX Series.</p>
<b>Description</b>	<p>For Gigabit Ethernet IQ and 10-Gigabit Ethernet interfaces only, define the output policer priority map to be applied to outgoing frames on this interface.</p> <p>The statements are explained separately.</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Specifying an Output Priority Map on page 517</a></li> <li>• <a href="#">input-priority-map on page 1087</a></li> </ul>

## output-three-color

---

<b>Syntax</b>	<code>output-three-color <i>policer-name</i>;</code>
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">layer2-policer</a> ] [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">layer2-policer</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.2. Statement introduced in Junos OS Release 12.3R2 for EX Series switches.
<b>Description</b>	Apply a single-rate or two-rate three-color policer to the Layer 2 output traffic at the logical interface. The <b>output-three-color</b> and <b>output-policer</b> statements are mutually exclusive.
<b>Options</b>	<b><i>policer-name</i></b> —Name of the single-rate or two-rate three-color policer.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Two-Color and Three-Color Policers at Layer 2</i></li><li>• <i>Applying Layer 2 Policers to Gigabit Ethernet Interfaces</i></li><li>• <a href="#">Configuring a Gigabit Ethernet Policer on page 517</a></li><li>• <a href="#">input-three-color on page 1088</a></li><li>• <a href="#">input-policer on page 1086</a></li><li>• <a href="#">layer2-policer on page 1103</a></li><li>• <a href="#">logical-interface-policer on page 1119</a></li><li>• <a href="#">output-policer on page 1168</a></li></ul>

## output-vlan-map (Aggregated Ethernet)

<b>Syntax</b>	<pre>output-vlan-map {   (pop   push   swap);   tag-protocol-id <i>tpid</i>;   vlan-id <i>number</i>; }</pre>
<b>Hierarchy Level</b>	<pre>[edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i>], [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i>]</pre>
<b>Release Information</b>	Statement introduced in Junos OS Release 8.2.
<b>Description</b>	<p>For aggregated Ethernet interfaces using Gigabit Ethernet IQ, 10-Gigabit Ethernet IQ2 and IQ2-E interfaces, and 100-Gigabit Ethernet Type 5 PIC with CFP only, define the rewrite profile to be applied to outgoing frames on this logical interface.</p> <p>The statements are explained separately.</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Stacking and Rewriting Gigabit Ethernet VLAN Tags on page 538</a></li> <li>• <a href="#">input-vlan-map (Aggregated Ethernet) on page 1089</a></li> </ul>

## output-vlan-map (Gigabit Ethernet IQ and 10-Gigabit Ethernet with SFPP)

---

<b>Syntax</b>	<pre>output-vlan-map {     (pop   pop-pop   pop-swap   push   push-push   swap   swap-push   swap-swap);     inner-tag-protocol-id <i>tpid</i>;     inner-vlan-id <i>number</i>;     tag-protocol-id <i>tpid</i>;     vlan-id <i>number</i>; }</pre>
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> <a href="#">unit</a> <i>logical-unit-number</i> ], [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> <a href="#">unit</a> <i>logical-unit-number</i> ]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4. <b>pop-pop</b> , <b>pop-swap</b> , <b>push-push</b> , <b>swap-push</b> , and <b>swap-swap</b> statements added in Junos OS Release 8.1.
<b>Description</b>	For Gigabit Ethernet IQ and 10-Port 10-Gigabit Ethernet SFPP interfaces only, define the rewrite operation to be applied to outgoing frames on this logical interface.  The statements are explained separately.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Stacking and Rewriting Gigabit Ethernet VLAN Tags on page 538</a></li><li>• <a href="#">input-vlan-map on page 1090</a></li></ul>

## pado-advertise

---

<b>Syntax</b>	pado-advertise;
<b>Hierarchy Level</b>	[edit protocols pppoe]
<b>Release Information</b>	Statement introduced in Junos OS Release 10.2.
<b>Description</b>	Enable named services configured in PPPoE service name tables to be advertised in PPPoE Active Discovery Offer (PADO) control packets. By default, advertisement of named services in PADO packets is disabled.

**NOTE:** If you enable advertisement of named services in PADO packets, make sure the number and length of all advertised service entries does not exceed the maximum transmission unit (MTU) size of the PPPoE underlying interface.

<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Configuring PPPoE Service Name Tables</i></li> <li>• <i>Enabling Advertisement of Named Services in PADO Control Packets</i></li> </ul>

## passive-monitor-mode

---

<b>Syntax</b>	<code>passive-monitor-mode;</code>
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> ], [edit interfaces <i>interface-name</i> <b>unit</b> <i>logical-unit-number</i> ], [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> <b>unit</b> <i>logical-unit-number</i> ]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4.
<b>Description</b>	<p>Monitor packet flows from another router. If you include this statement in the configuration, the interface does not send keepalives or alarms, and does not participate actively on the network.</p> <p>This statement is supported on ATM, Ethernet, and SONET/SDH interfaces. For more information, see <i>ATM Interfaces Feature Guide for Routing Devices</i>.</p> <p>For ATM and Ethernet interfaces, you can include this statement on the physical interface only.</p> <p>For SONET/SDH interfaces, you can include this statement on the logical interface only.</p>
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Enabling Passive Monitoring on ATM Interfaces</i></li><li>• <a href="#">Passive Monitoring on Ethernet Interfaces Overview on page 29</a></li><li>• <i>Enabling Packet Flow Monitoring on SONET/SDH Interfaces</i></li><li>• <i>multiservice-options</i></li><li>• <i>Junos OS Services Interfaces Library for Routing Devices</i></li></ul>

## pdu-interval

<b>Syntax</b>	<code>pdu-interval <i>interval</i>;</code>
<b>Hierarchy Level</b>	[edit protocols <a href="#">oam</a> <a href="#">ethernet link-fault-management interface</a> <i>interface-name</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.2.
<b>Description</b>	For Ethernet interfaces on EX Series switches and M320, M120, MX Series, and T Series routers, specify the periodic OAM PDU sending interval for fault detection. Used for IEEE 802.3ah Operation, Administration, and Management (OAM) support.
<b>Options</b>	<p><i>interval</i>—Periodic OAM PDU sending interval.</p> <p><b>Range:</b> 100 through 1000 milliseconds</p> <p><b>Default:</b> 1000 milliseconds</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring the OAM PDU Interval on page 653</a></li> </ul>

## pdu-threshold

<b>Syntax</b>	<code>pdu-threshold <i>threshold-value</i>;</code>
<b>Hierarchy Level</b>	[edit protocols <a href="#">oam</a> <a href="#">ethernet link-fault-management interface</a> <i>interface-name</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.2.
<b>Description</b>	For Ethernet interfaces on EX Series switches and M320, M120, MX Series, and T Series routers, specify the number of OAM PDUs to miss before an error is logged. Used for IEEE 802.3ah Operation, Administration, and Management (OAM) support.
<b>Options</b>	<p><i>threshold-value</i>—The number of PDUs missed before declaring the peer lost.</p> <p><b>Range:</b> 3 through 10 PDUs</p> <p><b>Default:</b> 3 PDUs</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring the OAM PDU Threshold on page 654</a></li> </ul>

## per-flow (Aggregated Ethernet Interfaces)

---

<b>Syntax</b>	<code>per-flow;</code>
<b>Hierarchy Level</b>	[edit interfaces aeX unit logical-unit-number forwarding-options load-balance-stateful]
<b>Release Information</b>	Statement introduced in Junos OS Release 13.2R1.
<b>Description</b>	Enable the mechanism to perform an even, effective distribution of traffic flows across member links of an aggregated Ethernet interface ( <b>ae</b> ) bundle on MX Series routers with MPCs, except MPC3Es and MPC4Es. When multiple flows are transmitted out of an <b>ae</b> interface, the flows must be distributed across the different member links evenly to enable an effective and optimal load-balancing behavior. To obtain a streamlined and robust method of load-balancing, the member link of the aggregated Ethernet interface bundle that is selected each time for load balancing plays a significant part.
<b>Options</b>	<b>per-flow</b> —Enable the stateful load-distribution mechanism per traffic flow on an aggregated Ethernet interface.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring Stateful Load Balancing on Aggregated Ethernet Interfaces on page 204</a></li></ul>

## peer

---

<b>Syntax</b>	<code>peer <i>a.b.c.d</i> {     interface <i>interface-name</i>; }</code>
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> <b>multi-chassis-protection</b> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 11.1.
<b>Description</b>	For MX Series routers with multichassis aggregated Ethernet (MC-AE) interfaces, use the <b>multi-chassis-protection</b> statement under the physical interface level to reduce the configuration at the logical interface level. If the interchassis control protocol connection (ICCP) is UP and the interchassis data link (ICL) comes UP, the router configured as standby will bring up the MC-AE interfaces shared with the peer active-active node specified by the <b>peer</b> statement. You must also specify the peer's physical interface.
<b>Options</b>	<p><b><i>a.b.c.d</i></b>—Specify the IP address of the peer.</p> <p><b>interface <i>interface-name</i></b>—Specify the peer's physical interface: interface <i>interface-name-fpc/pic/port</i></p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring Multichassis Link Aggregation on MX Series Routers</a></li> <li>• <a href="#">Configuring Active-Active Bridging and VRRP over IRB in Multichassis Link Aggregation</a></li> <li>• <a href="#">Configuring Aggregated Ethernet Link Protection on page 172</a></li> <li>• <a href="#">Example: Configuring Aggregated Ethernet Link Protection on page 174</a></li> <li>• <a href="#">multi-chassis-protection on page 1147</a></li> </ul>

## periodic

---

<b>Syntax</b>	<code>periodic interval;</code>
<b>Hierarchy Level</b>	[edit interfaces aex <a href="#">aggregated-ether-options lacp</a> ], [edit interfaces interface-range <i>name</i> <a href="#">aggregated-ether-options lacp</a> ]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4. Statement introduced in Junos OS Release 9.0 for EX Series switches. Statement introduced in Junos OS Release 15.1F4 for PTX Series routers.
<b>Description</b>	For aggregated Ethernet interfaces only, configure the interval for periodic transmission of LACP packets.
<b>Options</b>	<i>interval</i> —Interval for periodic transmission of LACP packets. <ul style="list-style-type: none"><li>• <b>fast</b>—Transmit packets every second.</li><li>• <b>slow</b>—Transmit packets every 30 seconds.</li></ul> <b>Default:</b> <b>fast</b>
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring LACP for Aggregated Ethernet Interfaces on page 164</a></li><li>• <i>Configuring Aggregated Ethernet LACP (CLI Procedure)</i></li><li>• <i>Example: Configuring Aggregated Ethernet High-Speed Uplinks Between an EX4200 Virtual Chassis Access Switch and an EX4200 Virtual Chassis Distribution Switch</i></li></ul>

---

## policer (CFM Firewall)

---

<b>Syntax</b>	<pre>policer <i>cfm-policer</i> {     if-exceeding {         bandwidth-limit 8k;         burst-size-limit 2k;     }     then discard; }</pre>
<b>Hierarchy Level</b>	[edit firewall]
<b>Release Information</b>	Statement introduced in Junos OS Release 10.0.
<b>Description</b>	Attach an explicit policer to CFM sessions.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring Rate Limiting of Ethernet OAM Messages on page 621</a></li><li>• <a href="#">policer (CFM Global) on page 950</a></li><li>• <a href="#">policer (CFM Session) on page 951</a></li></ul>

## policer (CoS)

---

<b>Syntax</b>	<pre>policer <i>cos-policer-name</i> {     aggregate {         bandwidth-limit <i>bps</i>;         burst-size-limit <i>bytes</i>;     }     premium {         bandwidth-limit <i>bps</i>;         burst-size-limit <i>bytes</i>;     } }</pre>
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> gigether-options <a href="#">ethernet-switch-profile</a> <a href="#">ethernet-policer-profile</a> ]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4.
<b>Description</b>	For Gigabit Ethernet IQ, Gigabit Ethernet PICs with SFPs (except the 10-port Gigabit Ethernet PIC and the built-in Gigabit Ethernet port on the M7i router), and 100-Gigabit Ethernet Type 5 PIC with CFP, define a CoS policer template to specify the premium bandwidth and burst-size limits, and the aggregate bandwidth and burst-size limits. The premium policer is not supported on MX Series routers or for Gigabit Ethernet interfaces with SFPs (except the 10-port Gigabit Ethernet PIC and the built-in Gigabit Ethernet port on the M7i router).
<b>Options</b>	<p><b><i>cos-policer-name</i></b>—Name of one policer to specify the premium bandwidth and burst-size limits, and the aggregate bandwidth and burst-size limits.</p> <p>The remaining statements are explained separately.</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring Gigabit Ethernet Policers on page 517</a></li></ul>

## policer (MAC)

<b>Syntax</b>	<pre> policer {     input <i>cos-policer-name</i>;     output <i>cos-policer-name</i>; } </pre>
<b>Hierarchy Level</b>	<p>[edit interfaces <i>interface-name</i> <b>unit</b> <i>logical-unit-number</i> <b>accept-source-mac</b> <i>mac-address</i> <i>mac-address</i>],</p> <p>[edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> <b>unit</b> <i>logical-unit-number</i> <b>accept-source-mac</b> <i>mac-address</i> <i>mac-address</i>]</p>
<b>Release Information</b>	<p>Statement introduced before Junos OS Release 7.4.</p> <p>Statement introduced in Junos OS Release 12.3R2 for EX Series switches.</p>
<b>Description</b>	<p>For Gigabit Ethernet IQ and Gigabit Ethernet PICs with SFPs (except the 10-port Gigabit Ethernet PIC and the built-in Gigabit Ethernet port on the M7i router), and 100-Gigabit Ethernet Type 5 PIC with CFP, configure MAC policing.</p>
<div>  <p><b>NOTE:</b></p> <p>On MX Series routers with Gigabit Ethernet or Fast Ethernet PICs, the following considerations apply:</p> <ul style="list-style-type: none"> <li>Interface counters do not count the 7-byte preamble and 1-byte frame delimiter in Ethernet frames.</li> <li>In MAC statistics, the frame size includes MAC header and CRC before any VLAN rewrite/imposition rules are applied.</li> <li>In traffic statistics, the frame size encompasses the L2 header without CRC after any VLAN rewrite/imposition rule.</li> </ul> </div>	
<b>Options</b>	<p><b>input <i>cos-policer-name</i></b>—Name of one policer to specify the premium bandwidth and aggregate bandwidth.</p> <p><b>output <i>cos-policer-name</i></b>—Name of one policer to specify the premium bandwidth and aggregate bandwidth.</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li><a href="#">Configuring MAC Address Filtering on page 517</a></li> </ul>

## pop

<b>Syntax</b>	pop;
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">input-vlan-map</a> ], [edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">output-vlan-map</a> ], [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">input-vlan-map</a> ], [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">output-vlan-map</a> ]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4. Statement introduced in Junos OS Release 12.3R2 for EX Series switches. Statement introduced in Junos OS Release 13.2X51-D20 for the QFX Series.
<b>Description</b>	<div>  <p><b>NOTE:</b> On EX4300 switches, <b>pop</b> is not supported at the [edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">input-vlan-map</a>] hierarchy level.</p> </div> <p>For Gigabit Ethernet IQ, 10-Gigabit Ethernet IQ2, and IQ2-E interfaces; 10-Gigabit Ethernet LAN/WAN PIC; aggregated Ethernet interfaces using Gigabit Ethernet IQ interfaces; 100-Gigabit Ethernet Type 5 PIC with CFP; and Gigabit Ethernet, 10-Gigabit Ethernet, 40-Gigabit Ethernet, and aggregated Ethernet interfaces, specify the VLAN rewrite operation to remove a VLAN tag from the top of the VLAN tag stack. The outer VLAN tag of the frame is removed.</p>
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Removing a VLAN Tag on page 548</a></li> <li>• <a href="#">Configuring Q-in-Q Tunneling (CLI Procedure)</a></li> </ul>

## pop-pop

---

<b>Syntax</b>	pop-pop;
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">input-vlan-map</a> ], [edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">output-vlan-map</a> ], [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">input-vlan-map</a> ], [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">output-vlan-map</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.1. Statement introduced in Junos OS Release 12.3R2 for EX Series switches.
<b>Description</b>	For Gigabit Ethernet IQ, IQ2 and IQ2-E interfaces, 10-Gigabit Ethernet LAN/WAN PIC, for aggregated Ethernet interfaces using Gigabit Ethernet IQ2 and IQ2-E or 10-Gigabit Ethernet PICs on MX Series routers, and 100-Gigabit Ethernet Type 5 PIC with CFP, and for 10-Gigabit Ethernet SFP interfaces on EX Series switches, specify the VLAN rewrite operation to remove both the outer and inner VLAN tags of the frame.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Removing the Outer and Inner VLAN Tags on page 549</a></li> </ul>

## pop-swap

---

<b>Syntax</b>	pop-swap;
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">input-vlan-map</a> ], [edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">output-vlan-map</a> ], [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">input-vlan-map</a> ], [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">output-vlan-map</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.1. Statement introduced in Junos OS Release 12.3R2 for EX Series switches.
<b>Description</b>	<p>Specify the VLAN rewrite operation to remove the outer VLAN tag of the frame, and replace the inner VLAN tag of the frame with a user-specified VLAN tag value. The inner tag becomes the outer tag in the final frame.</p> <p>You can use this statement on Gigabit Ethernet IQ, IQ2, IQ2-E interfaces, 10-Gigabit Ethernet LAN/WAN PIC, on aggregated Ethernet interfaces using Gigabit Ethernet IQ2 and IQ2-E or 10-Gigabit Ethernet PICs on MX Series routers, and 100-Gigabit Ethernet Type 5 PIC with CFP.</p>
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Removing the Outer VLAN Tag and Rewriting the Inner VLAN Tag on page 550</a></li></ul>

## port-description-type

<b>Syntax</b>	port-description-type { interface-alias; interface-description; }
<b>Hierarchy Level</b>	[edit protocols lldp] [edit routing- instances <i>routing-instance-name</i> protocols lldp]
<b>Release Information</b>	Statement introduced in Junos OS Release 13.3R5, 14.2R2, 14.1R4, and 12.3R9.
<b>Description</b>	For Link Layer Discovery Protocol, configure the value to be used for port description TLV.
<b>Options</b>	<p><b>interface-alias</b>—Use the <i>ifAlias</i> MIB object value to generate the port description TLV.</p> <p><b>interface-description</b>—Use the <i>ifDescr</i> MIB object value to generate the port description TLV.</p> <p><b>Default:</b> By default, <b>interface-alias</b> is used for generation of port description TLV. The <b>interface-alias</b> value is same as description of an interface configured by statement <b>set interface <i>name</i> description <i>description</i></b>.</p>

**NOTE:** The LLDP MIB *lldpLocPortDesc* value gets changed depending on the setting of **port-description-type** statement. That is:

- If you configure the **port-description-type interface-alias** statement, the MIB variable *lldpLocPortDesc* displays the value same as that of MIB variable *ifAlias*, which is same as the description of the interface. By default, the MIB variable *lldpLocPortDesc* displays the value same as that of MIB variable *ifAlias*.
- If you configure the **port-description-type interface-description** statement, the MIB variable *lldpLocPortDesc* displays the value of MIB variable *ifDescr*, which is same as that of interface name.

<b>Required Privilege Level</b>	routing—To view this statement in the configuration. routing-control—To add this statement to the configuration.
---------------------------------	---

<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">lldp on page 1113</a></li> <li>• <a href="#">show lldp on page 1765</a></li> <li>• <a href="#">show lldp neighbors on page 1771</a></li> </ul>
------------------------------	---

## port-id (MACsec for MX Series)

---

<b>Syntax</b>	<code>port-id port-id-number;</code>
<b>Hierarchy Level</b>	<code>[edit security macsec connectivity-association connectivity-association-name secure-channel secure-channel-name id]</code>
<b>Release Information</b>	Statement introduced in Junos OS Release 15.1 for MX240, MX480, and MX960 routers.
<b>Description</b>	<p>Specify a port ID in a secure channel when enabling MACsec using static secure association key (SAK) security mode. The port IDs must match on a sending and receiving secure channel on each side of a link to enable MACsec.</p> <p>Once the port numbers match, MACsec is enabled for all traffic on the connection.</p> <p>You only use this configuration option when you are configuring MACsec using static SAK security mode. This option does not need to be specified when you are enabling MACsec using static connectivity association key (CAK) security mode.</p>
<b>Default</b>	No port ID is specified.
<b>Options</b>	<code>port-id-number</code> —The port ID number.
<b>Required Privilege Level</b>	admin—To view this statement in the configuration. admin-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring Media Access Control Security (MACsec) on MX Series Routers on page 100</a></li></ul>

## port-priority

---

<b>Syntax</b>	<code>port-priority <i>priority</i>;</code>
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> <i>gigether-options</i> <b>802.3ad</b> lacp]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.3. Statement introduced in Junos OS Release 11.4 for EX Series switches. Statement introduced in Junos OS Release 15.1F4 for PTX Series routers.
<b>Description</b>	Define LACP port priority at the interface level.
<b>Options</b>	<p><b><i>priority</i></b>—Priority for being elected to be the active port and both collect and distribute traffic. A smaller value indicates a higher priority for being elected.</p> <p><b>Range:</b> 0 through 65535</p> <p><b>Default:</b></p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Configuring LACP Link Protection of Aggregated Ethernet Interfaces (CLI Procedure)</i></li> <li>• <i>Configuring Aggregated Ethernet LACP</i></li> </ul>

## port-id-subtype

---

<b>Syntax</b>	port-id-subtype { interface-name; locally-assigned; }
<b>Hierarchy Level</b>	[edit protocols lldp] [edit routing- instances <i>routing-instance-name</i> protocols lldp]
<b>Release Information</b>	Statement introduced in Junos OS Release 12.3R1
<b>Description</b>	For Link Layer Discovery Protocol, configure the port ID type, length, and value (TLV).
<b>Options</b>	<b>interface-name</b> —Use the interface name to generate the port ID TLV. <b>Default:</b> Use the SNMP index of the interface to generate the port ID TLV. This is the default option used to generate port ID TLV.

**NOTE:** The `show lldp neighbors` command displays the content of the port ID TLV received from the peer in the **port Info** field. Changing the configuration of **port-id-subtype** affects the display of the `show lldp neighbors` command on the peer device running Junos OS.

When the value of **port-id-subtype** is set to **locally-assigned**, which is the default value, the `show lldp neighbors` command on the peer device running Junos OS displays the SNMP index as the port information for the local device.

When the value of **port-id-subtype** is set to **interface-name**, the `show lldp neighbors` command on the peer device running Junos OS displays the interface name as the port information for the local device.

The value of the MIB variable instance `lldpLocPortId` depends on the entity that is used to generate the port ID TLV. If the port ID TLV generation is configured to use the **interface-name** in the command `set port-id-subtype interface-name`, then the value of the MIB variable `lldpLocPortId` instance is the interface name and not the SNMP index.

---

<b>Required Privilege Level</b>	routing—To view this statement in the configuration. routing-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">lldp on page 1113</a></li><li>• <a href="#">Configuring LLDP on page 336</a></li><li>• <a href="#">show lldp neighbors on page 1771</a></li></ul>

## pp0 (Dynamic PPPoE)

Hierarchy Level [edit dynamic-profiles *profile-name* interfaces]

<b>Release Information</b>	Statement introduced in Junos OS Release 10.1.
<b>Description</b>	<p>Configure the dynamic PPPoE logical interface in a dynamic profile. When the router creates a dynamic PPPoE logical interface on an underlying Ethernet interface configured with PPPoE (<b>ppp-over-ether</b>) encapsulation, it uses the information in the dynamic profile to determine the properties of the dynamic PPPoE logical interface.</p> <p>The remaining statements are explained separately.</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Configuring a PPPoE Dynamic Profile</i></li><li>• <i>Configuring Dynamic Authentication for PPP Subscribers</i></li><li>• For information about creating static PPPoE interfaces, see <a href="#">Configuring PPPoE on page 351</a></li></ul>

---

## ppm (Ethernet Switching)

---

<b>Syntax</b>	<pre>ppm {     centralized; }</pre>
<b>Hierarchy Level</b>	[edit protocols lacp]
<b>Release Information</b>	<p>Statement introduced in Junos OS Release 9.4 for MX Series routers.</p> <p>Statement introduced in Junos OS Release 10.2 for EX Series switches.</p> <p>Statement introduced in Junos OS Release 11.3 for the QFX Series.</p> <p>Statement introduced in Junos OS Release 12.1 for T Series devices.</p> <p>Statement introduced in Junos OS Release 14.1X53-D20 for the OCX Series.</p>
<b>Description</b>	<p>Configure PPM processing options for Link Aggregation Control Protocol (LACP) packets.</p> <p>This command configures the PPM processing options for LACP packets only. You can disable distributed PPM processing for all packets that use PPM and run all PPM processing on the Routing Engine by configuring the <b>no-delegate-processing</b> configuration statement in the <b>[edit routing-options ppm]</b> statement hierarchy.</p>
<b>Default</b>	Distributed PPM processing is enabled for all packets that use PPM.
<b>Required Privilege Level</b>	<p>routing—To view this statement in the configuration.</p> <p>routing-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Configuring Distributed Periodic Packet Management on an EX Series Switch (CLI Procedure)</i></li><li>• <a href="#">Configuring Distributed Periodic Packet Management on page 219</a></li></ul>

## pppoe-options

<b>Syntax</b>	<pre>pppoe-options {   access-concentrator name;   auto-reconnect seconds;   (client   server);   service-name name;   underlying-interface interface-name; }</pre>
<b>Hierarchy Level</b>	[edit interfaces pp0 unit <i>logical-unit-number</i> ], [edit logical-systems <i>logical-system-name</i> interfaces pp0 unit <i>logical-unit-number</i> ]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4. <b>client</b> Statement introduced in Junos OS Release 8.5. <b>server</b> Statement introduced in Junos OS Release 8.5.
<b>Description</b>	Configure PPP over Ethernet-specific interface properties.  The remaining statements are explained separately.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring a PPPoE Interface on page 351</a></li> </ul>

## pppoe-underlying-options (Static and Dynamic Subscribers)

---

<b>Syntax</b>	<pre>pppoe-underlying-options {   access-concentrator <i>name</i>;   bsimmons <i>profile-name</i>;   direct-connect   duplicate-protection;   max-sessions <i>number</i>;   max-sessions-vsa-ignore;   service-name-table <i>table-name</i>;   short-cycle-protection &lt;lockout-time-min <i>minimum-seconds</i>&gt; &lt;lockout-time-max     <i>maximum-seconds</i>&gt; &lt;filter [<i>aci</i>]&gt;; }</pre>
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> <a href="#">unit</a> <i>logical-unit-number</i> ], [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> <a href="#">unit</a> <i>logical-unit-number</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 10.0.
<b>Description</b>	<p>Configure PPPoE-specific interface properties for the underlying interface on which the router creates a static or dynamic PPPoE logical interface. The underlying interface must be configured with PPPoE (<b>ppp-over-ether</b>) encapsulation.</p> <p>The remaining statements are explained separately.</p>
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring PPPoE on page 351</a> (for static interfaces)</li><li>• <i>Configuring an Underlying Interface for Dynamic PPPoE Subscriber Interfaces</i></li><li>• <i>Assigning a Service Name Table to a PPPoE Underlying Interface</i></li></ul>

## preferred-source-address

<b>Syntax</b>	<code>preferred-source-address address;</code>
<b>Hierarchy Level</b>	[edit dynamic-profiles interfaces <i>interface-name</i> unit <i>logical-unit-number</i> family <i>family</i> <b>unnumbered-address</b> <i>interface-name</i> ], [edit dynamic-profiles <i>profile-name</i> interfaces demux0 unit <i>logical-unit-number</i> family <i>family</i> ],
<b>Release Information</b>	Statement introduced in Junos OS Release 9.2. Support for the <b>\$junos-preferred-source-address</b> and <b>\$junos-preferred-source-ipv6-address</b> predefined variables introduced in Junos OS Release 9.6.
<b>Description</b>	<p>For unnumbered Ethernet interfaces configured with a loopback interface as the donor interface, specify one of the loopback interface's secondary addresses as the preferred source address for the unnumbered Ethernet interface. Configuring the preferred source address enables you to use an IP address other than the primary IP address on some of the unnumbered Ethernet interfaces in your network. To configure the preferred source address dynamically, instead of using this statement, you must include the <b>\$junos-preferred-source-address</b> predefined variable for IPv4 (family inet) addresses or the <b>\$junos-preferred-source-ipv6-address</b> predefined variable for IPv6 (family inet6) addresses.</p> <p>Configuration of a preferred source address for unnumbered Ethernet interfaces is supported for IPv4 and IPv6 address families.</p>
<div>  <p><b>NOTE:</b> When you specify a static logical interface for the unnumbered interface in a dynamic profile that includes the <b>\$junos-routing-instance</b> predefined variable, you must not configure a preferred source address, whether with the <b>\$junos-preferred-source-address</b> predefined variable, the <b>\$junos-preferred-source-ipv6-address</b> predefined variable, or the <b>preferred-source-address</b> statement. Configuring the preferred source address in this circumstance causes a commit failure.</p> </div>	
<b>Options</b>	<b>address</b> —Secondary IP address of the donor loopback interface. Alternatively, use the <b>\$junos-preferred-source-address</b> or the <b>\$junos-preferred-source-ipv6-address</b> predefined variable to dynamically apply a preferred source address to the unnumbered Ethernet interface.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Configuring an Unnumbered Interface</i></li> <li>• <i>Junos OS Network Interfaces Library for Routing Devices</i></li> <li>• <i>Junos OS Administration Library</i></li> </ul>

## pre-shared-key (MX Series)

---

<b>Syntax</b>	<pre>pre-shared-key {     cak hexadecimal-number;     ckn hexadecimal-number; }</pre>
<b>Hierarchy Level</b>	[edit security macsec connectivity-association <i>connectivity-association-name</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 15.1 for MX240, MX480, and MX960 routers.
<b>Description</b>	<p>Specifies the pre-shared key used to enable MACsec using static connectivity association key (CAK) security mode.</p> <p>A pre-shared key includes a connectivity association key name (CKN) and a connectivity association key (CAK). A pre-shared key is exchanged between two devices at each end of a point-to-point link to enable MACsec using static CAK security mode. The MACsec Key Agreement (MKA) protocol is enabled after the pre-shared keys are successfully verified and exchanged. The pre-shared key—the CKN and CAK—must match on both ends of a link.</p>
<b>Default</b>	No pre-shared keys exist, by default.
<b>Options</b>	The remaining statements are explained separately.
<b>Required Privilege Level</b>	admin—To view this statement in the configuration. admin-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring Media Access Control Security (MACsec) on MX Series Routers on page 100</a></li></ul>

## premium (Output Priority Map)

<b>Syntax</b>	<pre>premium {   forwarding-class <i>class-name</i> {     loss-priority (high   low);   } }</pre>
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> gigether-options <a href="#">ethernet-switch-profile</a> <a href="#">ethernet-policer-profile</a> <a href="#">output-priority-map</a> <i>classifier</i> ]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4.
<b>Description</b>	<p>For Gigabit Ethernet IQ interfaces only, define the classifier for egress premium traffic.</p> <p>The statements are explained separately.</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Specifying an Output Priority Map on page 517</a></li> <li>• <a href="#">input-priority-map on page 1087</a></li> </ul>

## premium (Policer)

<b>Syntax</b>	<pre>premium {   bandwidth-limit <i>bps</i>;   burst-size-limit <i>bytes</i>; }</pre>
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> gigether-options <a href="#">ethernet-switch-profile</a> <a href="#">ethernet-policer-profile</a> <a href="#">policer</a> <i>cos-policer-name</i> ]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4.
<b>Description</b>	<p>Define a policer to apply to nonpremium traffic.</p> <p>The statements are explained separately.</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring Gigabit Ethernet Policers on page 517</a></li> <li>• <a href="#">aggregate (Gigabit Ethernet CoS Policer) on page 982</a></li> <li>• <a href="#">ieee802.1p on page 1078</a></li> </ul>

## propagate-tc

---

<b>Syntax</b>	propagate-tc;
<b>Hierarchy Level</b>	[edit protocols <a href="#">protection-group ethernet-ring ring-name</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2.
<b>Description</b>	Enable topology change propagation from a sub-ring to an interconnected major-ring. By default, topology change propagation is disabled.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Ethernet Ring Protection Switching Overview on page 233</a></li><li>• <i>Configuring Ethernet Ring Protection Switching (CLI Procedure)</i></li></ul>

## protection-group

```
Syntax  protection-group {
        ethernet-ring ring-name {
            data-channel {
                vlan number
            }

```

Hierarchy Level	[edit protocols]
Release Information	Statement introduced in Junos OS Release 9.4. Statement introduced in Junos OS Release 12.1 for EX Series switches.
Description	Configure Ethernet ring protection switching.  The statements are explained separately. All statements apply to MX Series routers. EX Series switches do not assign <b>node-id</b> and use <b>control-vlan</b> instead of <b>control-channel</b> .
Required Privilege Level	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
Related Documentation	<ul style="list-style-type: none"> <li>• <a href="#">Ethernet Ring Protection Switching Overview on page 233</a></li> <li>• <a href="#">Ethernet Ring Protection Using Ring Instances for Load Balancing on page 795</a></li> <li>• <a href="#">Example: Configuring Load Balancing Within Ethernet Ring Protection for MX Series Routers on page 802</a></li> <li>• <a href="#">Example: Configuring Ethernet Ring Protection Switching on EX Series Switches</a></li> <li>• <a href="#">Example: Configuring Ethernet Ring Protection Switching on QFX Series and EX Series Switches Supporting ELS</a></li> <li>• <a href="#">Configuring Ethernet Ring Protection Switching (CLI Procedure)</a></li> </ul>

## protocols

<b>Syntax</b>	<code>protocols [inet iso mpls];</code>
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> <b>unit</b> logical-unit-number <b>family</b> tcc]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.3.
<b>Description</b>	For Layer 2.5 VPNs on T Series, MX Series, M120, and M320 routers support, configure IS-IS (ISO traffic) or MPLS traffic to traverse a TCC interface. By default, IPv4 (inet) traffic runs on T Series, MX, Series, M120, and M320 routers and over TCC interfaces. You must configure the same traffic type on both ends of the Layer 2.5 VPN.

**NOTE:** Some platform and FPC combinations can not pass TCC encapsulated ISO traffic. See *Platforms/FPCs That Cannot Forward TCC Encapsulated ISO Traffic* for details.

<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Configuring IS-IS or MPLS Traffic for TCC Interfaces</i></li> <li>• <i>Platforms/FPCs That Cannot Forward TCC Encapsulated ISO Traffic</i></li> </ul>

## protocol-down

<b>Syntax</b>	<code>protocol-down;</code>
<b>Hierarchy Level</b>	[edit protocols <b>oam</b> <b>ethernet</b> <b>link-fault-management</b> <b>action-profile</b> <b>event</b> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.5.
<b>Description</b>	Upper layer indication of protocol down event. When the <b>protocol-down</b> statement is included, the protocol down event triggers the action specified under the <b>action</b> statement.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Configuring an OAM Action Profile on page 657</i></li> </ul>

## ptopo-configuration-maximum-hold-time

---

<b>Syntax</b>	ptopo-configuration-maximum-hold-time <i>seconds</i> ;
<b>Hierarchy Level</b>	[edit protocols <a href="#">lldp</a> ], [edit routing-instances <i>routing-instance-name</i> protocols <a href="#">lldp</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.6.
<b>Description</b>	Configure a time to maintain dynamic topology entries.
<b>Options</b>	<b><i>seconds</i></b> —Time to maintain interval dynamic topology entries. <b>Default:</b> 300 <b>Range:</b> 1 through 2147483647
<b>Required Privilege Level</b>	routing—To view this statement in the configuration. routing-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring LLDP on page 336</a></li></ul>

## ptopo-configuration-trap-interval

---

<b>Syntax</b>	ptopo-configuration-trap-interval <i>seconds</i> ;
<b>Hierarchy Level</b>	[edit protocols <a href="#">lldp</a> ], [edit routing-instances <i>routing-instance-name</i> protocols <a href="#">lldp</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.6.
<b>Description</b>	Configure a time for the period of SNMP trap notifications to the Master Agent to wait regarding changes in topology global statistics.
<b>Options</b>	<b><i>seconds</i></b> —Time for the period of SNMP trap notifications about global statistics. This feature is disabled by default. <b>Range:</b> 0 through 3600
<b>Required Privilege Level</b>	routing—To view this statement in the configuration. routing-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring LLDP on page 336</a></li></ul>

## push

<b>Syntax</b>	<code>push;</code>
<b>Hierarchy Level</b>	<code>[edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">input-vlan-map</a>],</code> <code>[edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">output-vlan-map</a>],</code> <code>[edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i></code> <code><a href="#">input-vlan-map</a>],</code> <code>[edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i></code> <code><a href="#">output-vlan-map</a>]</code>
<b>Release Information</b>	<p>Statement introduced before Junos OS Release 7.4.</p> <p>Statement introduced in Junos OS Release 12.3R2 for EX Series switches.</p> <p>Statement introduced in Junos OS Release 13.2X51-D20 for the QFX Series.</p>
<b>Description</b>	<p> <b>NOTE:</b> On EX4300 switches, <code>push</code> is not supported at the <code>[edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">output-vlan-map</a>]</code> hierarchy level.</p> <p>Specify the VLAN rewrite operation to add a new VLAN tag to the top of the VLAN stack. An outer VLAN tag is pushed in front of the existing VLAN tag.</p> <p>You can use this statement on Gigabit Ethernet IQ and 10-Gigabit Ethernet IQ2 and IQ2-E interfaces; 10-Gigabit Ethernet LAN/WAN PIC; aggregated Ethernet interfaces using Gigabit Ethernet IQ interfaces; 100-Gigabit Ethernet Type 5 PIC with CFP; and Gigabit Ethernet, 10-Gigabit Ethernet, 40-Gigabit Ethernet, and aggregated Ethernet interfaces.</p> <p>If you include the <b>push</b> statement in the configuration, you must also include the <a href="#">pop</a> statement at the <code>[edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">output-vlan-map</a>]</code> hierarchy level.</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Stacking a VLAN Tag on page 547</a></li> <li>• <a href="#">Configuring Q-in-Q Tunneling (CLI Procedure)</a></li> </ul>

## push-push

---

<b>Syntax</b>	push-push;
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">input-vlan-map</a> ], [edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">output-vlan-map</a> ], [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">input-vlan-map</a> ], [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">output-vlan-map</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.1. Statement introduced in Junos OS Release 12.3R2 for EX Series switches.
<b>Description</b>	<p>Specify the VLAN rewrite operation to push two VLAN tags in front of the frame.</p> <p>You can use this statement on Gigabit Ethernet IQ, IQ2 and IQ2-E interfaces, 10-Gigabit Ethernet LAN/WAN PIC, on aggregated Ethernet interfaces using Gigabit Ethernet IQ2 and IQ2-E or 10-Gigabit Ethernet PICs on MX Series routers, and 100-Gigabit Ethernet Type 5 PIC with CFP.</p>
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Stacking Two VLAN Tags on page 548</a></li></ul>

## premium (Output Priority Map)

---

<b>Syntax</b>	premium { <a href="#">forwarding-class</a> <i>class-name</i> { <a href="#">loss-priority</a> (high   low); } }
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> <i>gigether-options</i> <a href="#">ethernet-switch-profile</a> <a href="#">ethernet-policer-profile</a> <a href="#">output-priority-map</a> <i>classifier</i> ]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4.
<b>Description</b>	<p>For Gigabit Ethernet IQ interfaces only, define the classifier for egress premium traffic.</p> <p>The statements are explained separately.</p>
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Specifying an Output Priority Map on page 517</a></li><li>• <a href="#">input-priority-map on page 1087</a></li></ul>

---

## premium (Policer)

---

<b>Syntax</b>	<pre>premium {     bandwidth-limit <i>bps</i>;     burst-size-limit <i>bytes</i>; }</pre>
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> gigether-options <a href="#">ethernet-switch-profile</a> <a href="#">ethernet-policer-profile</a> <a href="#">policer</a> <i>cos-policer-name</i> ]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4.
<b>Description</b>	<p>Define a policer to apply to nonpremium traffic.</p> <p>The statements are explained separately.</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring Gigabit Ethernet Policers on page 517</a></li><li>• <a href="#">aggregate (Gigabit Ethernet CoS Policer) on page 982</a></li><li>• <a href="#">ieee802.1p on page 1078</a></li></ul>

## proxy

---

<b>Syntax</b>	<code>proxy inet-address <i>address</i>;</code>
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> <b>unit</b> <i>logical-unit-number</i> <b>family</b> <i>tcc</i> ], [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> <b>unit</b> <i>logical-unit-number</i> <b>family</b> <i>tcc</i> ]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4.
<b>Description</b>	For Layer 2.5 VPNs using an Ethernet interface as the TCC router, configure the IP address for which the TCC router is proxying. Ethernet TCC is supported on interfaces that carry IPv4 traffic only. Ethernet TCC encapsulation is supported on 1-port Gigabit Ethernet, 2-port Gigabit Ethernet, 4-port Gigabit Ethernet, and 4-port Fast Ethernet PICs only. Ethernet TCC is not supported on the T640 router.
<b>Options</b>	<b>inet-address</b> —Configure the IP address of the neighbor to the TCC router.
<b>Required Privilege Level</b>	<b>interface</b> —To view this statement in the configuration. <b>interface-control</b> —To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring Translation Cross-Connect Interface Switching on page 374</a></li><li>• <a href="#">Example: Configuring an Ethernet TCC or Extended VLAN TCC on page 374</a></li><li>• <a href="#">remote on page 1211</a></li><li>• <i>Junos OS VPNs Library for Routing Devices</i></li></ul>

## proxy-arp

<b>Syntax</b>	<code>proxy-arp (restricted   unrestricted);</code>
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> ], [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> ]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4. Statement introduced in Junos OS Release 9.6 for EX Series switches. <b>restricted</b> added in Junos OS Release 10.0 for EX Series switches. Statement introduced in Junos OS Release 12.2 for the QFX Series.
<b>Description</b>	For Ethernet interfaces only, configure the router or switch to respond to any ARP request, as long as the router or switch has an active route to the ARP request's target address.
<div>  <b>NOTE:</b> You must configure the IP address and the inet family for the interface when you enable proxy ARP. </div>	
<b>Default</b>	Proxy ARP is not enabled. The router or switch responds to an ARP request only if the destination IP address is its own.
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>none</b>—The router or switch responds to any ARP request for a local or remote address if the router or switch has a route to the target IP address.</li> <li>• <b>restricted</b>—(Optional) The router or switch responds to ARP requests in which the physical networks of the source and target are different and does not respond if the source and target IP addresses are in the same subnet. The router or switch must also have a route to the target IP address.</li> <li>• <b>unrestricted</b>—(Optional) The router or switch responds to any ARP request for a local or remote address if the router or switch has a route to the target IP address.</li> </ul>
	<b>Default:</b> <code>unrestricted</code>
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring Restricted and Unrestricted Proxy ARP on page 365</a></li> <li>• <a href="#">Configuring Proxy ARP (CLI Procedure)</a></li> <li>• <a href="#">Example: Configuring Proxy ARP on an EX Series Switch</a></li> <li>• <a href="#">Configuring Gratuitous ARP on page 19</a></li> </ul>

## push

<b>Syntax</b>	<code>push;</code>
<b>Hierarchy Level</b>	<code>[edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">input-vlan-map</a>],</code> <code>[edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">output-vlan-map</a>],</code> <code>[edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i></code> <code>  <a href="#">input-vlan-map</a>],</code> <code>[edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i></code> <code>  output-vlan-map]</code>
<b>Release Information</b>	<p>Statement introduced before Junos OS Release 7.4.</p> <p>Statement introduced in Junos OS Release 12.3R2 for EX Series switches.</p> <p>Statement introduced in Junos OS Release 13.2X51-D20 for the QFX Series.</p>
<b>Description</b>	<p> <b>NOTE:</b> On EX4300 switches, <code>push</code> is not supported at the <code>[edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> output-vlan-map]</code> hierarchy level.</p> <p>Specify the VLAN rewrite operation to add a new VLAN tag to the top of the VLAN stack. An outer VLAN tag is pushed in front of the existing VLAN tag.</p> <p>You can use this statement on Gigabit Ethernet IQ and 10-Gigabit Ethernet IQ2 and IQ2-E interfaces; 10-Gigabit Ethernet LAN/WAN PIC; aggregated Ethernet interfaces using Gigabit Ethernet IQ interfaces; 100-Gigabit Ethernet Type 5 PIC with CFP; and Gigabit Ethernet, 10-Gigabit Ethernet, 40-Gigabit Ethernet, and aggregated Ethernet interfaces.</p> <p>If you include the <code>push</code> statement in the configuration, you must also include the <a href="#">pop</a> statement at the <code>[edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> output-vlan-map]</code> hierarchy level.</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Stacking a VLAN Tag on page 547</a></li> <li>• <a href="#">Configuring Q-in-Q Tunneling (CLI Procedure)</a></li> </ul>

## push-push

<b>Syntax</b>	push-push;
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">input-vlan-map</a> ], [edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">output-vlan-map</a> ], [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">input-vlan-map</a> ], [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">output-vlan-map</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.1. Statement introduced in Junos OS Release 12.3R2 for EX Series switches.
<b>Description</b>	Specify the VLAN rewrite operation to push two VLAN tags in front of the frame.  You can use this statement on Gigabit Ethernet IQ, IQ2 and IQ2-E interfaces, 10-Gigabit Ethernet LAN/WAN PIC, on aggregated Ethernet interfaces using Gigabit Ethernet IQ2 and IQ2-E or 10-Gigabit Ethernet PICs on MX Series routers, and 100-Gigabit Ethernet Type 5 PIC with CFP.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Stacking Two VLAN Tags on page 548</a></li> </ul>

## quiet-period

---

<b>Syntax</b>	<code>quiet-period seconds;</code>
<b>Hierarchy Level</b>	<code>[edit protocols dot1x authenticator interface <i>interface-id</i>]</code>
<b>Release Information</b>	Statement introduced in Junos OS Release 9.3.
<b>Description</b>	Specify the number of seconds the port remains in the wait state following a failed authentication exchange with the client, before reattempting authentication.
<b>Options</b>	<b>seconds</b> —Specify the number of seconds the port remains in the wait state following a failed authentication exchange with the client, before reattempting authentication. <b>Range:</b> 0 through 65,535 seconds <b>Default:</b> 60 seconds
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">IEEE 802.1x Port-Based Network Access Control Overview on page 33</a></li><li>• <a href="#">authenticator on page 991</a></li><li>• <a href="#">dot1x on page 1022</a></li><li>• <a href="#">interface (IEEE 802.1x) on page 1092</a></li></ul>

## quiet-period (MX Series in Enhanced LAN Mode)

---

<b>Syntax</b>	<code>quiet-period seconds;</code>
<b>Hierarchy Level</b>	<code>[edit protocols authentication-access-control interface (all   [<i>interface-names</i>])]</code>
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2 for MX240, MX480, and MX960 routers in enhanced LAN mode.
<b>Description</b>	For 802.1X and captive portal authentication, configure the number of seconds the interface remains in the wait state following a failed authentication attempt by a supplicant before reattempting authentication.
<b>Default</b>	60 seconds
<b>Options</b>	<b>seconds</b> —Number of seconds the interface remains in the wait state. <b>Range:</b> 0 through 65,535 seconds <b>Default:</b> 60 seconds
<b>Required Privilege Level</b>	routing—To view this statement in the configuration. routing-control—To add this statement to the configuration.

## reauthentication

<b>Syntax</b>	reauthentication (disable   interval <i>seconds</i> );
<b>Hierarchy Level</b>	[edit protocols dot1x authenticator interface <i>interface-id</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.3.
<b>Description</b>	Set or disable the periodic reauthentication of the client.
<b>Options</b>	<ul style="list-style-type: none"> <li>• <b>disable</b>—Disable the periodic reauthentication of the client.</li> <li>• <b>interval <i>seconds</i></b>—Specify the periodic reauthentication time interval.</li> </ul> <p><b>Range:</b> 1 through 65,535 seconds  <b>Default:</b> 3600 seconds</p>
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">IEEE 802.1x Port-Based Network Access Control Overview on page 33</a></li> <li>• <a href="#">dot1x on page 1022</a></li> <li>• <a href="#">interface (IEEE 802.1x) on page 1092</a></li> <li>• <a href="#">quiet-period on page 1208</a></li> </ul>

## reauthentication (MX Series in Enhanced LAN Mode)

<b>Syntax</b>	reauthentication <i>interval</i> ;
<b>Hierarchy Level</b>	[edit protocols authentication-access-control interface (all   [ <i>interface-names</i> ]) dot1x]
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2 for MX240, MX480, and MX960 routers in enhanced LAN mode.
<b>Description</b>	For 802.1X authentication, specify the number of seconds before an authentication session times out.
<b>Options</b>	<p><b>interval</b>—Sets the periodic reauthentication time interval in seconds.</p> <p><b>Range:</b> 1 through 4,294,967,296 seconds  <b>Default:</b> 3600 seconds</p>
<b>Required Privilege Level</b>	routing—To view this statement in the configuration. routing-control—To add this statement to the configuration.

## rebalance (Aggregated Ethernet Interfaces)

---

<b>Syntax</b>	<code>rebalance <i>interval</i></code>
<b>Hierarchy Level</b>	[edit interfaces <i>aeX unit logical-unit-number</i> forwarding-options load-balance-stateful per-flow]
<b>Release Information</b>	Statement introduced in Junos OS Release 13.2R1.
<b>Description</b>	Configure periodic rebalancing of traffic flows of an aggregated Ethernet bundle by clearing the load balance state at a specified interval.
<b>Options</b>	<b><i>interval</i></b> —Number of minutes after which the load-balancing state must be cleared for the specified interface. <b>Range:</b> 1 through 1000 flows per minute
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring Stateful Load Balancing on Aggregated Ethernet Interfaces on page 204</a></li></ul>

## receive-options-packets

---

<b>Syntax</b>	<code>receive-options-packets;</code>
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name unit logical-unit-number family</i> inet], [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name unit logical-unit-number family</i> inet]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4.
<b>Description</b>	For a Monitoring Services PIC and an ATM or SONET/SDH PIC installed in an M160, M40e, or T Series router, guarantee conformity with cflowd records structure. This statement is required when you enable passive monitoring.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Enabling Passive Monitoring on ATM Interfaces</i></li><li>• <i>Enabling Packet Flow Monitoring on SONET/SDH Interfaces</i></li></ul>

## receive-ttl-exceeded

<b>Syntax</b>	receive-ttl-exceeded;
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> <b>unit</b> <i>logical-unit-number</i> <b>family</b> inet], [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> <b>unit</b> <i>logical-unit-number</i> <b>family</b> inet]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4.
<b>Description</b>	For Monitoring Services PIC and an ATM or SONET/SDH PIC installed in an M160, M40e, or T Series router, guarantee conformity with cflowd records structure. This statement is required when you enable passive monitoring.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Enabling Passive Monitoring on ATM Interfaces</i></li> <li>• <i>Enabling Packet Flow Monitoring on SONET/SDH Interfaces</i></li> </ul>

## remote

<b>Syntax</b>	remote { (inet-address <i>address</i>   mac-address <i>address</i> ); }
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> <b>unit</b> <i>logical-unit-number</i> <b>family</b> tcc], [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> <b>unit</b> <i>logical-unit-number</i> <b>family</b> tcc]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4.
<b>Description</b>	For Layer 2.5 VPNs using an Ethernet interface as the TCC router, configure the location of the remote router. Ethernet TCC is supported on interfaces that carry IPv4 traffic only. Ethernet TCC encapsulation is supported on 1-port Gigabit Ethernet, 2-port Gigabit Ethernet, 4-port Gigabit Ethernet, and 4-port Fast Ethernet PICs only.
<b>Options</b>	<b>mac-address</b> —Configure the MAC address of the remote site.  <b>inet-address</b> —Configure the IP address of the remote site.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring Translation Cross-Connect Interface Switching on page 374</a></li> <li>• <a href="#">Example: Configuring an Ethernet TCC or Extended VLAN TCC on page 374</a></li> <li>• <a href="#">proxy on page 1204</a></li> <li>• <i>Junos OS VPNs Library for Routing Devices</i></li> </ul>

## remote-loopback

---

<b>Syntax</b>	remote-loopback;
<b>Hierarchy Level</b>	[edit protocols <a href="#">oam link-fault-management interface</a> <i>interface-name</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.2.
<b>Description</b>	For Ethernet interfaces on EX Series switches and M320, M120, MX Series, and T Series routers, set the remote DTE into loopback mode. Remove the statement from the configuration to take the remote DTE out of loopback mode. Used for IEEE 802.3ah Operation, Administration, and Management (OAM) support.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Setting a Remote Interface into Loopback Mode on page 664</a></li></ul>

## replay-window-size (MX Series)

<b>Syntax</b>	<code>replay-window-size <i>number-of-packets</i>;</code>
<b>Hierarchy Level</b>	[edit security macsec connectivity-association <i>connectivity-association-name</i> replay-protect]
<b>Release Information</b>	Statement introduced in Junos OS Release 15.1 for MX240, MX480, and MX960 routers.
<b>Description</b>	<p>Specifies the size of the replay protection window.</p> <p>This statement has to be configured to enable replay protection.</p> <p>When MACsec is enabled on an Ethernet link, an ID number is assigned to each packet entering the link. The ID number of the packet is checked by the receiving interface after the packet has traversed the MACsec-enabled link.</p> <p>When replay protection is enabled, the sequence of the ID number of received packets are checked. If the packet arrives out of sequence and the difference between the packet numbers exceeds the replay protection window size, the packet is dropped by the receiving interface. For instance, if the replay protection window size is set to five and a packet assigned the ID of 1006 arrives on the receiving link immediately after the packet assigned the ID of 1000, the packet that is assigned the ID of 1006 is dropped because it falls outside the parameters of the replay protection window.</p> <p>Replay protection is especially useful for fighting man-in-the-middle attacks. A packet that is replayed by a man-in-the-middle attacker on the Ethernet link will arrive on the receiving link out of sequence, so replay protection helps ensure the replayed packet is dropped instead of forwarded through the network.</p> <p>Replay protection should not be enabled in cases where packets are expected to arrive out of order.</p>
<b>Default</b>	Replay protection is disabled.
<b>Options</b>	<p><i>number-of-packets</i>—Specifies the size of the replay protection window, in packets.</p> <p>When this variable is set to 0, all packets that arrive out-of-order are dropped.</p>
<b>Required Privilege Level</b>	<p>admin—To view this statement in the configuration.</p> <p>admin-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring Media Access Control Security (MACsec) on MX Series Routers on page 100</a></li> </ul>

## replay-protect (MX Series)

---

<b>Syntax</b>	replay-protect { replay-window-size <i>number-of-packets</i> ; }
<b>Hierarchy Level</b>	[edit security macsec connectivity-association <del>connectivity-association-name</del> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 15.1 for MX240, MX480, and MX960 routers.
<b>Description</b>	<p>Enable replay protection for MACsec.</p> <p>A replay window size specified using the <b>replay-window-size <i>number-of-packets</i></b> statement must be specified to enable replay protection.</p>
<b>Options</b>	The remaining statements are explained separately.
<b>Required Privilege Level</b>	admin—To view this statement in the configuration. admin-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring Media Access Control Security (MACsec) on MX Series Routers on page 100</a></li></ul>

## restore-interval

<b>Syntax</b>	<code>restore-interval <i>number</i>;</code>
<b>Hierarchy Level</b>	[edit protocols <a href="#">protection-group ethernet-ring <i>ring-name</i></a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.4. Statement introduced in Junos OS Release 12.1 for EX Series switches. Statement introduced in Junos OS Release 14.153-D10 for QFX Series switches.
<b>Description</b>	Configures the number of minutes that the node does not process any Ethernet ring protection (ERP) protocol data units (PDUs).. This configuration is a global configuration and applies to all Ethernet rings if the Ethernet ring does not have a more specific configuration for this value. If no parameter is configured at the protection group level, the global configuration of this parameter uses the default value.
<b>Options</b>	<i>number</i> —Specify the restore interval. <b>Range:</b> 5 through 12 minutes
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Ethernet Ring Protection Switching Overview on page 233</a></li> <li>• <a href="#">Example: Configuring Ethernet Ring Protection Switching on EX Series Switches</a></li> <li>• <a href="#">Example: Configuring Ethernet Ring Protection Switching on QFX Series and EX Series Switches Supporting ELS</a></li> <li>• <a href="#">Configuring Ethernet Ring Protection Switching (CLI Procedure)</a></li> </ul>

## retries

---

<b>Syntax</b>	<code>retries <i>integer</i>;</code>
<b>Hierarchy Level</b>	[edit protocols dot1x authenticator interface <i>interface-id</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.3.
<b>Description</b>	Set a limit on the number of failed authentication attempts between a port and a client. When the limit is exceeded, the port waits to reattempt authentication for the number of seconds set by the <b>quiet-period</b> statement configured at the same hierarchy level.
<b>Options</b>	<b><i>integer</i></b> —Specify the number of retries. <b>Range:</b> 1 through 10 <b>Default:</b> 3 retries
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">IEEE 802.1x Port-Based Network Access Control Overview on page 33</a></li><li>• <a href="#">dot1x on page 1022</a></li><li>• <a href="#">interface (IEEE 802.1x) on page 1092</a></li><li>• <a href="#">quiet-period on page 1208</a></li></ul>

## retries (MX Series in Enhanced LAN Mode)

---

<b>Syntax</b>	<code>retries <i>number</i>;</code>
<b>Hierarchy Level</b>	[edit protocols authentication-access-control interface (all   [ <i>interface-names</i> ])]
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2 for MX240, MX480, and MX960 routers in enhanced LAN mode.
<b>Description</b>	For 802.1X and captive portal authentication, configure the number of times the switch attempts to authenticate the port after an initial failure. The port remains in a wait state during the quiet period after the authentication attempt.
<b>Options</b>	<b><i>number</i></b> —Number of retries. <b>Default:</b> 3 retries <b>Range:</b> 1 through 10
<b>Required Privilege Level</b>	routing—To view this statement in the configuration. routing-control—To add this statement to the configuration.

## revertive

<b>Syntax</b>	revertive;
<b>Hierarchy Level</b>	[edit interfaces aeX aggregated-ether-options lacp link-protection]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.3. Statement introduced in Junos OS Release 12.3 for EX Series switches. Statement introduced in Junos OS Release 15.1F4 for PTX Series routers.
<b>Description</b>	Enable the ability to switch to a better priority link (if one is available).
<div>  <p><b>NOTE:</b> By default, LACP link protection is revertive. However, you can use this statement to define a specific aggregated Ethernet interface as revertive to override a global non-revertive statement specified at the [edit chassis] hierarchy level.</p> </div>	
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li><i>non-revertive (Chassis)</i></li> <li><i>Configuring LACP Link Protection of Aggregated Ethernet Interfaces (CLI Procedure)</i></li> </ul>

## ring-id

<b>Syntax</b>	ring-id <i>number</i> ;
<b>Hierarchy Level</b>	[edit protocols <b>protection-group ethernet-ring</b> <i>ring-name</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2.
<b>Description</b>	Specify the ring ID.
<b>Options</b>	<i>number</i> —Ring ID number. <b>Range:</b> 1 through 239 <b>Default:</b> 1
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li><a href="#">Ethernet Ring Protection Switching Overview on page 233</a></li> <li><i>Configuring Ethernet Ring Protection Switching (CLI Procedure)</i></li> </ul>

## ring-protection-link-end

---

<b>Syntax</b>	ring-protection-link-end;
<b>Hierarchy Level</b>	[edit protocols <a href="#">protection-group ethernet-ring</a> <i>ring-name</i> ( <a href="#">east-interface</a>   <a href="#">west-interface</a> )]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.4. Statement introduced in Junos OS Release 12.1 for EX Series switches.
<b>Description</b>	Specify that the port is one side of a ring protection link (RPL) by setting the RPL end flag.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Ethernet Ring Protection Switching Overview on page 233</a></li><li>• <i>Example: Configuring Ethernet Ring Protection Switching on EX Series Switches</i></li><li>• <i>Example: Configuring Ethernet Ring Protection Switching on QFX Series and EX Series Switches Supporting ELS</i></li><li>• <i>Configuring Ethernet Ring Protection Switching (CLI Procedure)</i></li></ul>

## ring-protection-link-owner

---

<b>Syntax</b>	ring-protection-link-owner;
<b>Hierarchy Level</b>	[edit protocols <a href="#">protection-group ethernet-ring</a> <i>ring-name</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.4. Statement introduced in Junos OS Release 12.1 for EX Series switches. Statement introduced in Junos OS Release 14.153-D10 for QFX Series switches.
<b>Description</b>	Specify the ring protection link (RPL) owner flag in the Ethernet protection ring. Include this statement only once for each ring (only one node can function as the RPL owner).
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Ethernet Ring Protection Switching Overview on page 233</a></li><li>• <i>Example: Configuring Ethernet Ring Protection Switching on EX Series Switches</i></li><li>• <i>Example: Configuring Ethernet Ring Protection Switching on QFX Series and EX Series Switches Supporting ELS</i></li></ul>

## routing-instance

---

<b>Syntax</b>	routing-instance { destination <i>routing-instance-name</i> ; }
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> tunnel], [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> <b>unit</b> <i>logical-unit-number</i> tunnel]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4.
<b>Description</b>	To configure <b>interfaces</b> and <b>logical-systems</b> , specify the destination routing instance that points to the routing table containing the tunnel destination address.
<b>Default</b>	The default Internet routing table is <b>inet.0</b> .
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Junos OS Services Interfaces Library for Routing Devices</i></li> </ul>

## routing-instance (PPPoE Service Name Tables)

---

<b>Syntax</b>	<code>routing-instance <i>routing-instance-name</i>;</code>
<b>Hierarchy Level</b>	<code>[edit protocols pppoe service-name-tables <i>table-name</i> <i>service</i> <i>service-name</i>],</code> <code>[edit protocols pppoe service-name-tables <i>table-name</i> service <i>service-name</i> <i>agent-specifier</i></code> <code>aci <i>circuit-id-string</i> ari <i>remote-id-string</i>]</code>
<b>Release Information</b>	Statement introduced in Junos OS Release 10.2.
<b>Description</b>	<p>Use in conjunction with the <b>dynamic-profile</b> statement at the same hierarchy levels to specify the routing instance in which to instantiate a dynamic PPPoE interface. You can associate a routing instance with a named service entry, <b>empty</b> service entry, or <b>any</b> service entry configured in a PPPoE service name table, or with an agent circuit identifier/agent remote identifier (ACI/ARI) pair defined for these services.</p> <p>The routing instance associated with a service entry in a PPPoE service name table overrides the routing instance associated with the PPPoE underlying interface on which the dynamic PPPoE interface is created.</p> <p>If you include the <b>routing-instance</b> statement at the <code>[edit protocols pppoe service-name-tables <i>table-name</i> service <i>service-name</i> agent-specifier aci <i>circuit-id-string</i> ari <i>remote-id-string</i>]</code> hierarchy level, you cannot also include the <b>static-interface</b> statement at this level. The <b>routing-instance</b> and <b>static-interface</b> statements are mutually exclusive for ACI/ARI pair configurations.</p>
<b>Options</b>	<b><i>routing-instance-name</i></b> —Name of the routing instance in which the router instantiates the dynamic PPPoE interface.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Configuring PPPoE Service Name Tables</i></li><li>• <i>Assigning a Dynamic Profile and Routing Instance to a Service Name or ACI/ARI Pair for Dynamic PPPoE Interface Creation</i></li></ul>

## sa-multicast (100-Gigabit Ethernet)

<b>Syntax</b>	sa-multicast;
<b>Hierarchy Level</b>	[edit chassis fpc slot pic slot forwarding-mode]
<b>Release Information</b>	Statement introduced in Junos OS Release 10.4.
<b>Description</b>	Configure the 100-Gigabit Ethernet PIC or MIC to interoperate with other Juniper Networks 100-Gigabit Ethernet PICs.

**NOTE:** The default packet steering mode for PD-ICE-CFP-FPC4 is SA multicast bit mode. No SA multicast configuration is required to enable this mode.

sa-multicast supports interoperability between the following PICs and MICs:

- 100-Gigabit Ethernet Type 5 PIC with CFP (PF-1CGE-CFP) and the 100-Gigabit Ethernet Type 4 PIC with CFP (PD-ICE-CFP-FPC4) .
- 100-Gigabit Ethernet MICs and the 100-Gigabit Ethernet Type 4 PIC with CFP (PD-ICE-CFP-FPC4).

<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
---------------------------------	---

<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Interoperability Between the 100-Gigabit Ethernet PICs PD-ICE-CFP-FPC4 and PF-1CGE-CFP on page 436</a></li> <li>• <a href="#">Configuring the Interoperability Between the 100-Gigabit Ethernet PICs PF-1CGE-CFP and PD-ICE-CFP-FPC4 on page 439</a></li> <li>• <a href="#">Configuring 100-Gigabit Ethernet MICs to Interoperate with Type 4 100-Gigabit Ethernet PICs (PD-ICE-CFP-FPC4) Using SA Multicast Mode</a></li> <li>• <a href="#">Interoperability Between MPC4E (MPC4E-3D-2CGE-8XGE) and 100-Gigabit Ethernet PICs on Type 4 FPC</a></li> <li>• <a href="#">Configuring MPC4E (MPC4E-3D-2CGE-8XGE) to Interoperate with 100-Gigabit Ethernet PICs on Type 4 FPC Using SA Multicast Mode</a></li> <li>• <a href="#">Interoperability Between the 100-Gigabit Ethernet PICs PD-ICE-CFP-FPC4 and P1-PTX-2-100GE-CFP on page 437</a></li> <li>• <a href="#">Configuring the Interoperability Between the 100-Gigabit Ethernet PICs P1-PTX-2-100GE-CFP and PD-ICE-CFP-FPC4 on page 441</a></li> <li>• <a href="#">forwarding-mode (100-Gigabit Ethernet) on page 1065</a></li> <li>• <a href="#">sa-multicast (PTX Series Packet Transport Routers) on page 1222</a></li> <li>• <a href="#">vlan-steering (100-Gigabit Ethernet Type 4 PIC with CFP) on page 1298</a></li> </ul>
------------------------------	--

- [Configuring VLAN Steering Mode for 100-Gigabit Ethernet Type 4 PIC with CFP on page 430](#)

---

## sa-multicast (PTX Series Packet Transport Routers)

---

<b>Syntax</b>	sa-multicast;
<b>Hierarchy Level</b>	[edit chassis fpc <i>slot</i> pic <i>slot</i> port <i>port-number</i> <a href="#">forwarding-mode</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 12.1X48R4.
<b>Description</b>	Configure source address (SA) multicast bit mode on the 100-Gigabit Ethernet PIC P1-PTX-2-100GE-CFP to enable interoperability with 100-Gigabit Ethernet PIC PD-1CE-CFP-FPC4.

**NOTE:** When SA multicast bit steering mode is configured on a PTX Series Packet Transport Router 100-Gigabit Ethernet port, VLANs are not supported for that port.

---

<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.

## secure-authentication (MX Series in Enhanced LAN Mode)

---

<b>Syntax</b>	secure-authentication (http   https);
<b>Hierarchy Level</b>	[edit protocols captive-portal-custom-options]
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2 for MX240, MX480, and MX960 routers in enhanced LAN mode.
<b>Description</b>	Enable HTTP or HTTPS access on the captive portal interface.
<b>Default</b>	http
<b>Options</b>	<b>http</b> —Enables HTTP access on the captive portal interface. <b>https</b> —Enables HTTPS access on the captive portal interface. HTTPS is recommended.
<b>Required Privilege Level</b>	routing—To view this statement in the configuration. routing-control—To add this statement to the configuration.

## secure-channel

---

<b>Syntax</b>	<pre>secure-channel <i>secure-channel-name</i> {     direction (inbound   outbound);     encryption (MACsec);     id {         mac-address <i>mac-address</i>;         port-id <i>port-id-number</i>;     }     offset (0 30 50);     security-association <i>security-association-number</i> {         key <i>key-string</i>;     } }</pre>
<b>Hierarchy Level</b>	[edit security macsec connectivity-association <i>connectivity-association-name</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 15.1 for MX240, MX480, and MX960 routers.
<b>Description</b>	<p>Create and configure a secure channel to enable and configure MACsec when MACsec is enabled using static secure association key (SAK) security mode.</p> <p>You do not need to use this option to enable MACsec using static connectivity association key (CAK) security mode. All configuration for MACsec using static CAK security mode is done inside of the connectivity association but outside of the secure channel. When MACsec is enabled using static CAK security mode, an inbound and an outbound secure channel—neither of which is user-configurable—is automatically created within the connectivity association.</p>
<b>Options</b>	The remaining statements are explained separately.
<b>Required Privilege Level</b>	admin—To view this statement in the configuration. admin-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring Media Access Control Security (MACsec) on MX Series Routers on page 100</a></li></ul>

## security-association

<b>Syntax</b>	<code>security-association <i>security-association-number</i> { key <i>key-string</i>; }</code>
<b>Hierarchy Level</b>	[edit security macsec connectivity-association <i>connectivity-association-name</i> secure-channel <i>secure-channel-name</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 15.1 for MX240, MX480, and MX960 routers.
<b>Description</b>	<p>Specifies the number of one of the security associations in the secure channel when MACsec is enabled using static secure association key (SAK) security mode. Because SAKs are created by the key server when MACsec is enabled using static connectivity association key (CAK) security mode, the <b>security-association</b> statement is not used when enabling MACsec using static CAK security mode.</p> <p>You must configure at least two security associations to enable MACsec using static SAK security mode. MACsec initially establishes a secure connection when a security association number and key match on both ends of an Ethernet link. After a certain number of Ethernet frames are securely transmitted across the Ethernet link, MACsec automatically rotates to a new security association with a new security association number and key to maintain the secured Ethernet link. This rotation continues each time a certain number of Ethernet frames are securely transmitted across the secured Ethernet link, so you must always configure MACsec to have at least two security associations.</p>
<b>Default</b>	No security keys are configured, by default.
<b>Options</b>	<p><b><i>security-association-number</i></b>—Specifies the security association number and creates the SAK.</p> <p>The security association number is a whole number between 0 and 3. You can configure two security associations in a secure channel when enabling MACsec using static security keys.</p>
<b>Required Privilege Level</b>	<p>admin—To view this statement in the configuration.</p> <p>admin-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li><a href="#">Configuring Media Access Control Security (MACsec) on MX Series Routers on page 100</a></li> </ul>

## send-critical-event

---

<b>Syntax</b>	send-critical-event;
<b>Hierarchy Level</b>	[edit protocols <a href="#">oam</a> <a href="#">ethernet</a> <a href="#">link-fault-management</a> <a href="#">action-profile</a> <a href="#">action</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.5.
<b>Description</b>	Send OAM PDUs with the critical event bit set.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Specifying the Actions to Be Taken for Link-Fault Management Events on page 659</a></li></ul>

## server

---

<b>Syntax</b>	server;
<b>Hierarchy Level</b>	[edit interfaces pp0 unit <i>logical-unit-number</i> <a href="#">pppoe-options</a> ], [edit logical-systems <i>logical-system-name</i> interfaces pp0 unit <i>logical-unit-number</i> <a href="#">pppoe-options</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.5.
<b>Description</b>	Configure the router to operate in the PPPoE server mode. Supported on M120 and M320 Multiservice Edge Routers and MX Series Universal Edge Routers operating as access concentrators.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring the PPPoE Server Mode on page 351</a></li></ul>

## server-fail

<b>Syntax</b>	<code>server-fail (deny   permit   use-cache   <i>vlan-id</i>   <i>vlan-name</i>);</code>
<b>Hierarchy Level</b>	<code>[edit protocols authentication-access-control interface (all   [<i>interface-names</i>]) dot1x]</code>
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2 for MX240, MX480, and MX960 routers in enhanced LAN mode.
<b>Description</b>	<p>For EX Series switches configured for 802.1X authentication, specify the server fail fallback action the switch takes when all RADIUS authentication servers are unreachable.</p> <p>When you specify the action <i>vlan-name</i> or <i>vlan-id</i>, the VLAN must already be configured on the switch.</p>
<b>Default</b>	Authentication is denied.
<b>Options</b>	<p><b>deny</b>—Force fail the supplicant authentication. No traffic will flow through the interface.</p> <p><b>permit</b>—Force succeed the supplicant authentication. Traffic will flow through the interface as if it were successfully authenticated by the RADIUS server.</p> <p><b>use-cache</b>—Force succeed the supplicant authentication only if it was previously authenticated successfully. This action ensures that already authenticated supplicants are not affected.</p> <p><b>vlan-id</b>—Move supplicant on the interface to the VLAN specified by this numeric identifier. This action is allowed only if it is the first supplicant connecting to the interface. If an authenticated supplicant is already connected, then the supplicant is not moved to the VLAN and is not authenticated.</p> <p><b>vlan-name</b>—Move supplicant on the interface to the VLAN specified by this name. This action is allowed only if it is the first supplicant connecting to an interface. If an authenticated supplicant is already connected, then the supplicant is not moved to the VLAN and is not authenticated.</p>
<b>Required Privilege Level</b>	<p>routing—To view this statement in the configuration.</p> <p>routing-control—To add this statement to the configuration.</p>

## server-reject-vlan (MX Series in Enhanced LAN Mode)

---

<b>Syntax</b>	<pre>server-reject-vlan (<i>vlan-id</i>   <i>vlan-name</i>) {     eapol-block;     block-interval <i>block-interval</i>; }</pre>
<b>Hierarchy Level</b>	[edit protocols authentication-access-control interface (all   [ <i>interface-names</i> ]) dot1x]
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2 for MX240, MX480, and MX960 routers in enhanced LAN mode.
<b>Description</b>	<p>For EX Series switches configured for 802.1X authentication, specify that when the switch receives an Extensible Authentication Protocol Over LAN (EAPoL) Access-Reject message during the authentication process between the switch and the RADIUS authentication server, supplicants attempting access to the LAN are granted access and moved to a specific VLAN. Any VLAN name or VLAN ID sent by a RADIUS server as part of the EAPoL Access-Reject message is ignored.</p> <p>When you specify the VLAN ID or VLAN name, the VLAN must already be configured on the switch.</p> <p>The remaining statements are explained separately.</p>
<b>Default</b>	None
<b>Options</b>	<p><i>vlan-id</i>—Numeric identifier of the VLAN to which the supplicant is moved.</p> <p><i>vlan-name</i>—Name of the VLAN to which the supplicant is moved.</p>
<b>Required Privilege Level</b>	<p>routing—To view this statement in the configuration.</p> <p>routing-control—To add this statement to the configuration.</p>

## server-timeout

---

<b>Syntax</b>	<code>server-timeout <i>seconds</i>;</code>
<b>Hierarchy Level</b>	<code>[edit protocols dot1x authenticator interface <i>interface-id</i>]</code>
<b>Release Information</b>	Statement introduced in Junos OS Release 9.3.
<b>Description</b>	Sets the number of seconds the port waits for a reply when relaying a response from the client to the authentication server before timing out and invoking the server-fail action.
<b>Options</b>	<p><b><i>seconds</i></b>—The number of seconds the port waits for a response when relaying a request from the authentication server to the client before resending the request.</p> <p><b>Range:</b> 1 through 60 seconds</p> <p><b>Default:</b> 30 seconds</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">IEEE 802.1x Port-Based Network Access Control Overview on page 33</a></li> <li>• <a href="#">authenticator on page 991</a></li> <li>• <a href="#">dot1x on page 1022</a></li> <li>• <a href="#">interface (IEEE 802.1x) on page 1092</a></li> </ul>

## server-timeout (MX Series in Enhanced LAN Mode)

---

<b>Syntax</b>	<code>server-timeout <i>seconds</i>;</code>
<b>Hierarchy Level</b>	<code>[edit protocols authentication-access-control interface (all   [<i>interface-names</i>])]</code>
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2 for MX240, MX480, and MX960 routers in enhanced LAN mode.
<b>Description</b>	For 802.1X and captive portal authentication, configure the amount of time a port will wait for a reply when relaying a response from the supplicant to the authentication server before timing out and invoking the server-fail action.
<b>Default</b>	30 seconds
<b>Options</b>	<p><b><i>seconds</i></b> —Number of seconds.</p> <p><b>Range:</b> 1 through 60 seconds</p> <p><b>Default:</b> 30 seconds</p>
<b>Required Privilege Level</b>	<p>routing—To view this statement in the configuration.</p> <p>routing-control—To add this statement to the configuration.</p>

## service (PPPoE)

<b>Syntax</b>	<pre> service service-name {     drop;     delay seconds;     terminate;     dynamic-profile profile-name;     routing-instance routing-instance-name;     max-sessions number;     agent-specifier {         aci circuit-id-string ari remote-id-string {             drop;             delay seconds;             terminate;             dynamic-profile profile-name;             routing-instance routing-instance-name;             static-interface interface-name;         }     } } </pre>
<b>Hierarchy Level</b>	[edit protocols pppoe <b>service-name-tables</b> table-name]
<b>Release Information</b>	<p>Statement introduced in Junos OS Release 10.0.</p> <p><b>any</b>, <b>dynamic-profile</b>, <b>routing-instance</b>, <b>max-sessions</b>, and <b>static-interface</b> options introduced in Junos OS Release 10.2.</p>
<b>Description</b>	<p>Specify the action taken by the interface on receipt of a PPPoE Active Discovery Initiation (PADI) control packet for the specified named service, <b>empty</b> service, or <b>any</b> service in a PPPoE service name table. You can also specify the dynamic profile and routing instance that the router uses to instantiate a dynamic PPPoE interface, and the maximum number of active PPPoE sessions that the router can establish with the specified service.</p>
<b>Default</b>	The default action is terminate.
<b>Options</b>	<p><b>service-name</b>—Service entry in the PPPoE service name table:</p> <ul style="list-style-type: none"> <li>• <b>service-name</b>—Named service entry of up to 32 characters; for example, <b>premiumService</b>. You can configure a maximum of 512 named service entries across all PPPoE service name tables on the router.</li> <li>• <b>empty</b>—Service entry of zero length that represents an unspecified service. Each PPPoE service name table includes one <b>empty</b> service entry by default.</li> <li>• <b>any</b>—Default service for non-empty service entries that do not match the named or <b>empty</b> service entries configured in the PPPoE service name table. Each PPPoE service name table includes one <b>any</b> service entry by default.</li> </ul> <p>The remaining statements are explained separately.</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>

## service-name

<b>Syntax</b>	<code>service-name name;</code>
<b>Hierarchy Level</b>	[edit interfaces pp0 unit <i>logical-unit-number</i> <a href="#">pppoe-options</a> ], [edit logical-systems <i>logical-system-name</i> interfaces pp0 <a href="#">unit</a> <i>logical-unit-number</i> <a href="#">pppoe-options</a> ]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4.
<b>Description</b>	PPP over Ethernet interfaces, configure the service to be requested from the PPP over Ethernet server; that is, the access concentrator. For example, you can use this statement to indicate an Internet service provider (ISP) name or a class of service.
<b>Options</b>	<b>name</b> —Service to be requested from the PPP over Ethernet server.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring the PPPoE Service Name on page 351</a></li> <li>• <i>Junos OS Interfaces and Routing Configuration Guide</i></li> </ul>

## service-name-table

<b>Syntax</b>	<code>service-name-table <i>table-name</i>;</code>
<b>Hierarchy Level</b>	<p>[edit dynamic-profiles <i>profile-name</i> interfaces demux0 unit <i>logical-unit-number</i> family pppoe],</p> <p>[edit dynamic-profiles <i>profile-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> family pppoe],</p> <p>[edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> family pppoe],</p> <p>[edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">pppoe-underlying-options</a>],</p> <p>[edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> family pppoe],</p> <p>[edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">pppoe-underlying-options</a>]</p>
<b>Release Information</b>	<p>Statement introduced in Junos OS Release 10.0.</p> <p>Support at the [edit ... family pppoe] hierarchies introduced in Junos OS Release 11.2.</p>
<b>Description</b>	Specify the PPPoE service name table assigned to a PPPoE underlying interface. This underlying interface is configured with either the <b>encapsulation ppp-over-ether</b> statement or the <b>family pppoe</b> statement; the two statements are mutually exclusive.
<div>  <p><b>NOTE:</b> The [edit ... family pppoe] hierarchies are supported only on MX Series routers with MPCs.</p> </div>	
<b>Options</b>	<b><i>table-name</i></b> —Name of the PPPoE service name table, a string of up to 32 alphanumeric characters.
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>Configuring PPPoE Service Name Tables</li> <li>Assigning a Service Name Table to a PPPoE Underlying Interface</li> <li>Configuring the PPPoE Family for an Underlying Interface</li> </ul>

## service-name-tables

<b>Syntax</b>	<pre> service-name-tables <i>table-name</i> {   service <i>service-name</i> {     drop;     delay <i>seconds</i>;     terminate;     dynamic-profile <i>profile-name</i>;     routing-instance <i>routing-instance-name</i>;     max-sessions <i>number</i>;     agent-specifier {       aci <i>circuit-id-string</i> ari <i>remote-id-string</i> {         drop;         delay <i>seconds</i>;         terminate;         dynamic-profile <i>profile-name</i>;         routing-instance <i>routing-instance-name</i>;         static-interface <i>interface-name</i>;       }     }   } } </pre>
<b>Hierarchy Level</b>	[edit protocols pppoe]
<b>Release Information</b>	<p>Statement introduced in Junos OS Release 10.0.</p> <p><b>dynamic-profile</b>, <b>routing-instance</b>, <b>max-sessions</b>, and <b>static-interface</b> options introduced in Junos OS Release 10.2.</p>
<b>Description</b>	<p>Create and configure a PPPoE service name table. Specify the action taken for each service and remote access concentrator on receipt of a PPPoE Active Discovery Initiation (PADI) packet. You can also specify the dynamic profile and routing instance that the router uses to instantiate a dynamic PPPoE interface, and the maximum number of active PPPoE sessions that the router can establish with the specified service. A maximum of 32 PPPoE service name tables is supported per router.</p>
<b>Options</b>	<p><b>table-name</b>—Name of the PPPoE service name table, a string of up to 32 alphanumeric characters.</p> <p>The remaining statements are explained separately.</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>Configuring PPPoE Service Name Tables</li> <li>Creating a Service Name Table</li> </ul>

## session-expiry (MX Series in Enhanced LAN Mode)

---

<b>Syntax</b>	session-expiry <i>seconds</i> ;
<b>Hierarchy Level</b>	[edit protocols authentication-access-control interface (all   [ <i>interface-names</i> ])]
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2 for MX240, MX480, and MX960 routers in enhanced LAN mode.
<b>Description</b>	Configure the maximum duration in seconds of a session.
<b>Options</b>	<i>seconds</i> —Duration of session. <b>Range:</b> 1 through 65535 <b>Default:</b> 3600
<b>Required Privilege Level</b>	routing—To view this statement in the configuration. routing—control—To add this statement to the configuration.

## source-address-filter

<b>Syntax</b>	<pre>source-address-filter {     mac-address; }</pre>
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> <a href="#">aggregated-ether-options</a> ], [edit interfaces <i>interface-name</i> <a href="#">fastether-options</a> ], [edit interfaces <i>interface-name</i> <a href="#">gigether-options</a> ]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4. Statement introduced in Junos OS Release 12.1X48 for PTX Packet Transport Routers.
<b>Description</b>	For aggregated Ethernet, Fast Ethernet, Gigabit Ethernet, Gigabit Ethernet IQ interfaces, and Gigabit Ethernet PICs with SFPs (except the 10-port Gigabit Ethernet PIC and the built-in Gigabit Ethernet port on the M7i router), specify the MAC addresses from which the interface can receive packets. For this statement to have any effect, you must include the <b>source-filtering</b> statement in the configuration to enable source address filtering.
<b>Options</b>	<p><b>mac-address</b>—MAC address filter. You can specify the MAC address as <i>nn:nn:nn:nn:nn:nn</i> or <i>nnnn.nnnn.nnnn</i>, where <i>n</i> is a decimal digit. To specify more than one address, include multiple <b>mac-address</b> options in the <b>source-address-filter</b> statement.</p> <p>If you enable the VRRP on a Fast Ethernet or Gigabit Ethernet interface, as described in <a href="#">“VRRP and VRRP for IPv6 Overview” on page 343</a>, and if you enable MAC source address filtering on the interface, you must include the virtual MAC address in the list of source MAC addresses that you specify in the <b>source-address-filter</b> statement. MAC addresses ranging from <b>00:00:5e:00:01:00</b> through <b>00:00:5e:00:01:ff</b> are reserved for VRRP, as defined in RFC 3768, <i>Virtual Router Redundancy Protocol</i>. When you configure the VRRP group, the group number must be the decimal equivalent of the last hexadecimal byte of the virtual MAC address.</p> <p>On untagged Gigabit Ethernet interfaces, you should not configure the <b>source-address-filter</b> statement and the <b>accept-source-mac</b> statement simultaneously. On tagged Gigabit Ethernet interfaces, you should not configure the <b>source-address-filter</b> statement and the <b>accept-source-mac</b> statement with an identical MAC address specified in both filters.</p>
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring MAC Address Filtering for Ethernet Interfaces on page 13</a></li> <li>• <a href="#">Configuring MAC Address Filtering on PTX Series Packet Transport Routers on page 15</a></li> <li>• <a href="#">source-filtering on page 1236</a></li> </ul>

## source-filtering

---

<b>Syntax</b>	(source-filtering   no-source-filtering);
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> <a href="#">aggregated-ether-options</a> ], [edit interfaces <i>interface-name</i> <a href="#">fastether-options</a> ], [edit interfaces <i>interface-name</i> <a href="#">gigether-options</a> ]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4. Statement introduced in Junos OS Release 12.1X48 for PTX Packet Transport Routers.
<b>Description</b>	<p>For aggregated Ethernet, Fast Ethernet, Gigabit Ethernet, and Gigabit Ethernet IQ interfaces only, enable the filtering of MAC source addresses, which blocks all incoming packets to that interface. To allow the interface to receive packets from specific MAC addresses, include the <b>source-address-filter</b> statement.</p> <p>If the remote Ethernet card is changed, the interface is no longer able to receive packets from the new card because it has a different MAC address.</p>
<b>Default</b>	Source address filtering is disabled.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring MAC Address Filtering for Ethernet Interfaces on page 13</a></li><li>• <a href="#">Configuring MAC Address Filtering on PTX Series Packet Transport Routers on page 15</a></li><li>• <a href="#">accept-source-mac on page 971</a></li><li>• <a href="#">source-address-filter on page 1235</a></li></ul>

## speed (Ethernet)

<b>Syntax</b>	<code>speed (10m   100m   1g   auto   auto-10m-100m);</code>
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> ], [edit interfaces <i>ge-pim/0/0</i> <b>switch-options</b> <i>switch-port</i> <i>port-number</i> ]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4. Statement introduced in Junos OS Release 12.2 for ACX Series Universal Access Routers. Statement introduced in Junos OS Release 13.2X50-D10 for EX Series switches.
<b>Description</b>	Configure the interface speed. This statement applies to the management Ethernet interface ( <b>fxp0</b> or <b>em0</b> ), Fast Ethernet 12-port and 48-port PICs, the built-in Fast Ethernet port on the FIC (M7i router), Combo Line Rate DPCs and Tri-Rate Ethernet Copper interfaces on MX Series routers, and Gigabit Ethernet interfaces on EX Series switches.

When you configure the Tri-Rate Ethernet copper interface to operate at 1 Gbps, autonegotiation must be enabled. When you configure 100BASE-FX SFP, you must set the port speed at 100 Mbps.

**NOTE:** On MX Series routers with Tri-rate Enhanced DPC (DPCE-R-40GE-TX), when you configure the interface speed using the **auto-10m-100m** option, the speed is negotiated to the highest value possible (100 Mbps), if the same value is configured on both sides of the link. However, when you view the interface speed of the DPC, using the **show interfaces** command, the value of the speed is not accurately displayed. For instance, if you configure the speed of the Tri-rate enhanced DPC, as 100Mbps on both sides of the link, the interface speed of the DPC is negotiated to 100 Mbps. However, the interface speed of the DPC displays 1 bps. This is an issue with the **show interfaces** command only. The actual interface speed is 100 Mbps.

**Options** You can specify the speed as either **10m** (10 Mbps), **100m** (100 Mbps), and on MX Series routers, **1g** (1 Gbps). You can also specify the **auto** option on MX Series routers.

For Gigabit Ethernet interfaces on EX Series switches, you can specify one of the following options:

- **10m**—10 Mbps
- **100m**—100 Mbps
- **1g**—1 Gbps
- **auto**—Automatically negotiate the speed (10 Mbps, 100 Mbps, or 1 Gbps) based on the speed of the other end of the link.
- **auto-10m-100m**—Automatically negotiate the speed (10 Mbps or 100 Mbps) based on the speed of the other end of the link.

<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring the Interface Speed</a></li><li>• <a href="#">Configuring the Interface Speed on Ethernet Interfaces on page 8</a></li><li>• <a href="#">Configuring Gigabit Ethernet Autonegotiation on page 529</a></li><li>• <a href="#">Configuring Gigabit Ethernet Interfaces (CLI Procedure)</a></li></ul>

---

## speed (MX Series DPC)

---

<b>Syntax</b>	speed (auto   1Gbps   100Mbps   10Mbps);
<b>Hierarchy Level</b>	[edit interfaces ge- <i>fpc/pic/port</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.5.
<b>Description</b>	On MX Series routers with Combo Line Rate DPCs and Tri-Rate Copper SFPs you can set auto negotiation of speed. To specify the auto negotiation speed, use the <b>speed (auto   1Gbps   100Mbps   10Mbps)</b> statement under the [edit interface ge- <i>fpc/pic/port</i> ] hierarchy level. The <b>auto</b> option will attempt to automatically match the rate of the connected interface. To set port speed negotiation to a specific rate, set the port speed to <b>1Gbps</b> , <b>100Mbps</b> , or <b>10Mbps</b> .
<div> <b>NOTE:</b> If the negotiated speed and the interface speed do not match, the link will not be brought up. Half duplex mode is not supported.</div>	
<b>Options</b>	You can specify the speed as either <b>auto</b> (autonegotiate), <b>10Mbps</b> (10 Mbps), <b>100Mbps</b> (100 Mbps), or <b>1Gbps</b> (1 Gbps).
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring Gigabit Ethernet Autonegotiation on page 529</a></li><li>• <a href="#">no-auto-mdix on page 1152</a></li></ul>

## stacked-vlan-tagging

---

<b>Syntax</b>	stacked-vlan-tagging;
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> ]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4. Statement introduced in Junos OS Release 12.2 for ACX Series Universal Access Routers.
<b>Description</b>	<p>For Gigabit Ethernet IQ interfaces, Gigabit Ethernet, 10-Gigabit Ethernet LAN/WAN PIC, and 100-Gigabit Ethernet Type 5 PIC with CFP, enable stacked VLAN tagging for all logical interfaces on the physical interface.</p> <p>For pseudowire subscriber interfaces, enable stacked VLAN tagging for logical interfaces on the pseudowire service.</p>
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Stacking and Rewriting Gigabit Ethernet VLAN Tags Overview on page 537</a></li><li>• <a href="#">vlan-tags (Stacked VLAN Tags) on page 1303</a></li></ul>

## static (Protocols 802.1X)

---

<b>Syntax</b>	<pre>static <i>mac-address</i> {     interface <i>interface-names</i>;     vlan-assignment (<i>vlan-id</i>   <i>vlan-name</i> ); }</pre>
<b>Hierarchy Level</b>	[edit protocols authentication-access-control]
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2 for MX240, MX480, and MX960 routers in enhanced LAN mode.
<b>Description</b>	<p>Configure MAC addresses to exclude from 802.1X authentication. The static MAC list provides an authentication bypass mechanism for supplicants connecting to a port, permitting devices such as printers that are not 802.1X-enabled to be connected to the network on 802.1X-enabled ports.</p> <p>Using this 802.1X authentication-bypass mechanism, the supplicant connected to the MAC address is assumed to be successfully authenticated and the port is opened for it. No further authentication is done for the supplicant.</p> <p>You can optionally configure the VLAN that the supplicant is moved to or the interfaces on which the MAC address can gain access from.</p>
<b>Options</b>	<p><b><i>mac-address</i></b> —The MAC address of the device for which 802.1X authentication should be bypassed and the device permitted access to the port.</p> <p>The remaining statements are explained separately.</p>
<b>Required Privilege Level</b>	<p>routing—To view this statement in the configuration.</p> <p>routing-control—To add this statement to the configuration.</p>

## static-interface

<b>Syntax</b>	<code>static-interface <i>interface-name</i>;</code>
<b>Hierarchy Level</b>	[edit protocols pppoe service-name-tables <i>table-name</i> service <i>service-name</i> <b>agent-specifier</b> <i>aci circuit-id-string</i> <i>ari remote-id-string</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 10.2.
<b>Description</b>	<p>Reserve the specified static PPPoE interface for use only by the PPPoE client with matching agent circuit identifier (ACI) and agent remote identifier (ARI) information. You can specify only one static interface per ACI/ARI pair configured for a named service entry, <b>empty</b> service entry, or <b>any</b> service entry in the PPPoE service name table.</p> <p>The static interface associated with an ACI/ARI pair takes precedence over the general pool of static interfaces associated with the PPPoE underlying interface.</p> <p>If you include the <b>static-interface</b> statement in the configuration, you cannot also include either the <b>dynamic-profile</b> statement or the <b>routing-instance</b> statement. The <b>dynamic-profile</b>, <b>routing-instance</b>, and <b>static-interface</b> statements are mutually exclusive for ACI/ARI pair configurations.</p>
<b>Options</b>	<b><i>interface-name</i></b> —Name of the static PPPoE interface reserved for use by the PPPoE client with matching ACI/ARI information. Specify the interface in the format <b>pp0.<i>logical</i></b> , where <b><i>logical</i></b> is a logical unit number from 0 through 16385 for static interfaces.
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li><i>Configuring PPPoE Service Name Tables</i></li> <li><i>Reserving a Static PPPoE Interface for Exclusive Use by a PPPoE Client</i></li> </ul>

## supplicant

---

<b>Syntax</b>	supplicant <i>single</i> ;
<b>Hierarchy Level</b>	[edit protocols dot1x authenticator interface <i>interface-id</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.3.
<b>Description</b>	<p>Specify the supplicant mode. Only single mode is supported.</p> <p>This option will authenticate only the first client that connects to a port. All other clients that connect later (802.1x compliant or non-compliant) will be allowed free access on that port without any further authentication. If the first authenticated client logs out, all other users are locked out until a client authenticates again.</p>
<b>Options</b>	<b>single</b> —Sets single mode.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">IEEE 802.1x Port-Based Network Access Control Overview on page 33</a></li><li>• <a href="#">authenticator on page 991</a></li><li>• <a href="#">dot1x on page 1022</a></li><li>• <a href="#">interface (IEEE 802.1x) on page 1092</a></li></ul>

## supplicant (MX Series in Enhanced LAN Mode)

<b>Syntax</b>	supplicant (multiple   single   single-secure);
<b>Hierarchy Level</b>	[edit protocols authentication-access-control interface (all   [ <i>interface-names</i> ])]
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2 for MX240, MX480, and MX960 routers in enhanced LAN mode.
<b>Description</b>	Configure the MAC-based method used to authenticate clients for 802.1X or captive portal authentication.
<b>Default</b>	single
<b>Options</b>	<p><b>single</b>—Authenticates only the first client that connects to an authenticator port. All other clients connecting to the authenticator port after the first are permitted free access to the port without further authentication. If the first authenticated client logs out, all other supplicants are locked out until a client authenticates again.</p> <p><b>single-secure</b>—Authenticates only one client to connect to an authenticator port. The host must be directly connected to the switch.</p> <p><b>multiple</b>—Authenticates multiple clients individually on one authenticator port. You can configure the number of clients per port. If you also configure a maximum number of devices that can be connected to a port through port security settings, the lower of the configured values is used to determine the maximum number of clients allowed per port.</p>
<b>Required Privilege Level</b>	<p>routing—To view this statement in the configuration.</p> <p>routing-control—To add this statement to the configuration.</p>

## supplicant-timeout

---

<b>Syntax</b>	supplicant-timeout <i>seconds</i> ;
<b>Hierarchy Level</b>	[edit protocols dot1x authenticator interface <i>interface-id</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.3.
<b>Description</b>	Specify the number of seconds the port waits for a response when relaying a request from the authentication server to the client before resending the request.
<b>Options</b>	<b><i>seconds</i></b> —Specify the number of seconds the port waits for the supplicant timeout. <b>Range:</b> 1 through 60 seconds <b>Default:</b> 30 seconds
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">IEEE 802.1x Port-Based Network Access Control Overview on page 33</a></li><li>• <a href="#">authenticator on page 991</a></li><li>• <a href="#">dot1x on page 1022</a></li><li>• <a href="#">interface (IEEE 802.1x) on page 1092</a></li></ul>

## supplicant-timeout (MX Series in Enhanced LAN Mode)

---

<b>Syntax</b>	supplicant-timeout <i>seconds</i> ;
<b>Hierarchy Level</b>	[edit protocols authentication-access-control interface (all   [ <i>interface-names</i> ]) dot1x]
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2 for MX240, MX480, and MX960 routers in enhanced LAN mode.
<b>Description</b>	For 802.1X authentication, configure how long the port waits for a response when relaying a request from the authentication server to the supplicant before resending the request.
<b>Default</b>	30 seconds
<b>Options</b>	<b><i>seconds</i></b> —Number of seconds. <b>Range:</b> 1 through 60 seconds <b>Default:</b> 30 seconds
<b>Required Privilege Level</b>	routing—To view this statement in the configuration. routing-control—To add this statement to the configuration.

## swap

<b>Syntax</b>	swap;
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">input-vlan-map</a> ], [edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">output-vlan-map</a> ], [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">input-vlan-map</a> ], [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">output-vlan-map</a> ]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4. Statement introduced in Junos OS Release 12.3R2 for EX Series switches. Statement introduced in Junos OS Release 13.2X51-D20 for the QFX Series.
<b>Description</b>	Specify the VLAN rewrite operation to replace a VLAN tag. The outer VLAN tag of the frame is overwritten with the user-specified VLAN tag information.  On MX Series routers, you can enter this statement on Gigabit Ethernet IQ and 10-Gigabit Ethernet IQ2 and IQ2-E interfaces, 10-Gigabit Ethernet LAN/WAN PIC, aggregated Ethernet using Gigabit Ethernet IQ interfaces, and 100-Gigabit Ethernet Type 5 PIC with CFP. On EX Series switches, you can enter this statement on Gigabit Ethernet, 10-Gigabit Ethernet, 40-Gigabit Ethernet, and aggregated Ethernet interfaces.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Rewriting the VLAN Tag on Tagged Frames on page 550</a></li> <li>• <a href="#">Configuring Q-in-Q Tunneling (CLI Procedure)</a></li> </ul>

## swap-by-poppush

<b>Syntax</b>	swap-by-poppush;
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 11.2
<b>Description</b>	For Gigabit Ethernet IQ and 10-Gigabit Ethernet IQ2 and IQ2-E interfaces, 10-Gigabit Ethernet LAN/WAN PIC, and aggregated Ethernet using Gigabit Ethernet IQ interfaces, specify the VLAN rewrite operation to replace a VLAN tag. Pop original tag, then push an entirely new tag. The swap operation is performed as pop followed by push.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.

## swap-push

---

<b>Syntax</b>	swap-push;
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">input-vlan-map</a> ], [edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">output-vlan-map</a> ], [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">input-vlan-map</a> ], [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">output-vlan-map</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.1. Statement introduced in Junos OS Release 12.3R2 for EX Series switches.
<b>Description</b>	<p>Specify the VLAN rewrite operation to replace the outer VLAN tag of the frame with a user-specified VLAN tag value. A user-specified outer VLAN tag is pushed in front. The outer tag becomes an inner tag in the final frame.</p> <p>You can use this statement on Gigabit Ethernet IQ, IQ2 and IQ2-E interfaces, 10-Gigabit Ethernet LAN/WAN PIC, and for aggregated Ethernet interfaces using Gigabit Ethernet IQ2 and IQ2-E or 10-Gigabit Ethernet PICs on MX Series routers, and 100-Gigabit Ethernet Type 5 PIC with CFP.</p>
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Rewriting a VLAN Tag and Adding a New Tag on page 555</a></li></ul>

## swap-swap

<b>Syntax</b>	swap-swap;
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">input-vlan-map</a> ], [edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">output-vlan-map</a> ], [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">input-vlan-map</a> ], [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">output-vlan-map</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.1. Statement introduced in Junos OS Release 12.3R2 for EX Series switches.
<b>Description</b>	Specify the VLAN rewrite operation to replace both the inner and the outer VLAN tags of the frame with a user-specified VLAN tag value.  You can use this statement on Gigabit Ethernet IQ, IQ2 and IQ2-E interfaces, 10-Gigabit Ethernet LAN/WAN PIC, for aggregated Ethernet interfaces using Gigabit Ethernet IQ2 and IQ2-E or 10-Gigabit Ethernet PICs on MX Series routers, and for 100-Gigabit Ethernet Type 5 PIC with CFP.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Rewriting the Inner and Outer VLAN Tags on page 556</a></li> </ul>

## switch-options

<b>Syntax</b>	switch-options { switch-port <i>port-number</i> { ( <a href="#">auto-negotiation</a>   no-auto-negotiation); <a href="#">speed</a> (10m   100m   1g); <a href="#">link-mode</a> (full-duplex   half-duplex); } }
<b>Hierarchy Level</b>	[edit interfaces <i>ge-pim</i> /0/0]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.4.
<b>Description</b>	Configuration of the physical port characteristics is done under the single physical interface.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.

## switch-port

---

<b>Syntax</b>	<pre>switch-port <i>port-number</i> {     (auto-negotiation   no-auto-negotiation);     speed (10m   100m   1g);     link-mode (full-duplex   half-duplex); }</pre>
<b>Hierarchy Level</b>	[edit interfaces <i>ge-pim/0/0</i> <b>switch-options</b> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.4.
<b>Description</b>	Configuration of the physical port characteristics, done under the single physical interface.
<b>Default</b>	Autonegotiation is enabled by default. If the link speed and duplex are also configured, the interfaces use the values configured as the desired values in the negotiation.
<b>Options</b>	<p><b><i>port-number</i></b>—Ports are numbered 0 through 5 on the 6-port Gigabit Ethernet uPIM, 0 through 7 on the 8-port Gigabit Ethernet uPIM, and 0 through 15 on the 16-port Gigabit Ethernet uPIM.</p> <p>The remaining statements are explained separately.</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>

## symbol-period

<b>Syntax</b>	<code>symbol-period count;</code>
<b>Hierarchy Level</b>	[edit protocols <a href="#">oam ethernet link-fault-management action-profile event</a> , <a href="#">link-event-rate</a> ], [edit protocols <a href="#">oam link-fault-management interface</a> <i>interface-name</i> <a href="#">event-thresholds</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.4.
<b>Description</b>	<p>Configure the threshold for sending symbol period events or taking the action specified in the action profile.</p> <p>A symbol error is any symbol code error on the underlying physical layer. The symbol period threshold is reached when the number of symbol errors reaches the configured value within the period window. The default period window is the number of symbols that can be transmitted on the underlying physical layer in 1 second. The window is not configurable.</p>
<b>Options</b>	<p><b>count</b>—Threshold count for symbol period events.</p> <p><b>Range:</b> 0 through 100</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring Threshold Values for Local Fault Events on an Interface on page 654</a></li> <li>• <a href="#">Configuring Threshold Values for Fault Events in an Action Profile on page 662</a></li> </ul>

## syslog (OAM Action)

<b>Syntax</b>	<code>syslog;</code>
<b>Hierarchy Level</b>	[edit protocols <a href="#">oam ethernet link-fault-management action-profile action</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.5.
<b>Description</b>	Generate a syslog message for the Ethernet Operation, Administration, and Management (OAM) event.
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Specifying the Actions to Be Taken for Link-Fault Management Events on page 659</a></li> </ul>

## system-id

---

<b>Syntax</b>	<code>system-id <i>system-id</i>;</code>
<b>Hierarchy Level</b>	[edit interfaces aeX aggregated-ether-options lacp]
<b>Release Information</b>	Statement introduced in Junos OS Release 12.2R1 Statement introduced in Junos OS Release 15.1F4 for PTX Series routers.
<b>Description</b>	<p>Define the LACP system identifier at the aggregated Ethernet interface level.</p> <p>The user-defined system identifier in LACP enables two ports from two separate routers (M Series or MX Series routers) to act as though they were part of the same aggregate group.</p> <p>The system identifier is a 48-bit (6-byte) globally unique field. It is used in combination with a 16-bit system-priority value, which results in a unique LACP system identifier.</p>
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring LACP for Aggregated Ethernet Interfaces on page 164</a></li></ul>

## system-priority

<b>Syntax</b>	<code>system-priority <i>priority</i>;</code>
<b>Hierarchy Level</b>	[edit interfaces aeX aggregated-ether-options lacp]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.3. Statement introduced in Junos OS Release 11.4 for EX Series switches. Statement introduced in Junos OS Release 15.1F4 for PTX Series routers.
<b>Description</b>	<p>Define LACP system priority at the aggregated Ethernet interface level. This system priority value takes precedence over a system priority value configured at the global <b>[edit chassis]</b> hierarchy level.</p> <p>The device with the lower system priority value determines which links between LACP partner devices are active and which are in standby for each LACP group. The device on the controlling end of the link uses port priorities to determine which ports are bundled into the aggregated bundle and which ports are put in standby mode. Port priorities on the other device (the noncontrolling end of the link) are ignored. In priority comparisons, numerically lower values have higher priority. Therefore, the system with the numerically lower value (higher priority value) for LACP system priority becomes the controlling system. If both devices have the same LACP system priority (for example, they are both configured with the default setting of 127), the device MAC address determines which switch is in control.</p>
<b>Options</b>	<p><b>priority</b>—Priority for the aggregated Ethernet system. A smaller value indicates a higher priority.</p> <p><b>Range:</b> 0 through 65535</p> <p><b>Default:</b> 127</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>

## tag-protocol-id (TPIDs Expected to Be Sent or Received)

---

<b>Syntax</b>	<code>tag-protocol-id [<i>tpids</i>];</code>
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> <code>gigether-options ethernet-switch-profile</code> ], [edit interfaces <i>interface-name</i> <code>aggregated-ether-options ethernet-switch-profile</code> ], [edit interfaces <i>interface-name</i> <code>aggregated-ether-options ethernet-switch-profile</code> ], [edit interfaces <i>interface-name</i> <code>ether-options ethernet-switch-profile</code> ]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4. Statement introduced in Junos OS Release 12.2 for ACX Series Universal Access Routers. Statement introduced in Junos OS Release 13.2X50-D15 for EX Series switches. Statement introduced in Junos OS Release 14.1X53-D15 for the QFX Series.
<b>Description</b>	<p>For Gigabit Ethernet IQ and 10-Gigabit Ethernet IQ2 and IQ2-E interfaces, aggregated Ethernet with Gigabit Ethernet IQ interfaces, and Gigabit Ethernet PICs with SFPs (except the 10-port Gigabit Ethernet PIC, and the built-in Gigabit Ethernet port on the M7i router), define the TPIDs expected to be sent or received on a particular VLAN. For each Gigabit Ethernet port, you can configure up to eight TPIDs using the <b>tag-protocol-id</b> statement; but only the first four TPIDs are supported on IQ2 and IQ2-E interfaces.</p> <p>For 10-Gigabit Ethernet LAN/WAN PIC interfaces on T Series routers only the default TPID value (<b>0x8100</b>) is supported.</p> <p>For Gigabit Ethernet, 10-Gigabit Ethernet, 40-Gigabit Ethernet, and aggregated Ethernet interfaces on EX Series switches, define the TPIDs expected to be sent or received on a particular VLAN. The default TPID value is <b>0x8100</b>. Other supported values are <b>0x88a8</b>, <b>0x9100</b>, and <b>0x9200</b>.</p>
<b>Options</b>	<i>tpids</i> —TPIDs to be accepted on the VLAN. Specify TPIDs in hexadecimal.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring Frames with Particular TPIDs to Be Processed as Tagged Frames on page 541</a></li><li>• <a href="#">Configuring Q-in-Q Tunneling (CLI Procedure)</a></li></ul>

## tag-protocol-id (TPID to Rewrite)

<b>Syntax</b>	<code>tag-protocol-id <i>tpid</i>;</code>
<b>Hierarchy Level</b>	<p>[edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">input-vlan-map</a>],</p> <p>[edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">output-vlan-map</a>],</p> <p>[edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">input-vlan-map</a>],</p> <p>[edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">output-vlan-map</a>]</p>
<b>Release Information</b>	<p>Statement introduced before Junos OS Release 7.4.</p> <p>Statement introduced in Junos OS Release 12.3R2 for EX Series switches.</p>
<b>Description</b>	<p>For Gigabit Ethernet IQ and 10-Gigabit Ethernet IQ2 and IQ2-E interfaces only, configure the outer TPID value. All TPIDs you include in input and output VLAN maps must be among those you specify at the [edit interfaces <i>interface-name</i> <a href="#">gigether-options ethernet-switch-profile tag-protocol-id [ <i>tpids</i> ]</a>] hierarchy level.</p> <p>For 10-Gigabit Ethernet LAN/WAN PIC interfaces on T Series routers the default TPID value (<b>0x8100</b>) is supported.</p>
<b>Default</b>	If the <code>tag-protocol-id</code> statement is not configured, the TPID value is 0x8100.
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring Inner and Outer TPIDs and VLAN IDs on page 544</a></li> </ul>

## targeted-options (Grouping Subscribers by Bandwidth Usage)

---

Syntax	<pre>targeted-options {   backup <i>backup</i>;   group <i>group</i>;   primary <i>primary</i>; }</pre>
Hierarchy Level	[edit dynamic-profiles <i>name</i> interfaces <i>name</i> unit ], [edit dynamic-profiles <i>name</i> logical-systems <i>name</i> interfaces <i>name</i> unit ], [edit interfaces <i>name</i> unit ]
Release Information	Statement introduced in Junos OS Release 16.1.
Description	
Options	<p><b>backup</b>—Configure a backup member link per subscriber when you configure manual targeting. Configuring a backup link is optional.</p> <p><b>group</b>—Group together subscribers with similar bandwidth usage and <i>optionally</i> assign a group name. Subscribers that are configured for targeted distribution without a group name are added to the <b>default</b> group and distributed evenly across member links. Grouping of subscribers is supported only for static subscribers.</p> <p><b>Default:</b> default</p> <p><b>primary</b>—Configure a primary member link per subscriber when you configure manual targeting. You must always configure a primary link when you configure manual targeting.</p>
Required Privilege Level	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
Related Documentation	<ul style="list-style-type: none"><li>• <a href="#">targeted-options (Manual Targeting) on page 1255</a></li></ul>

## targeted-options (Manual Targeting)

<b>Syntax</b>	<pre>targeted-options {   (logical-interface-chassis-redundancy   logical-interface-fpc-redundancy);   rebalance-periodic {     interval <i>interval</i>;     start-time <i>start-time</i>;   }   type (auto   manual); }</pre>
<b>Hierarchy Level</b>	<p>[edit dynamic-profiles <i>name</i> interfaces <i>name</i> <a href="#">aggregated-ether-options</a>],  [edit dynamic-profiles <i>name</i> logical-systems <i>name</i> interfaces <i>name</i> <a href="#">aggregated-ether-options</a>],  [edit interfaces <i>name</i> <a href="#">aggregated-ether-options</a>]  [edit interfaces <i>name</i> unit ]</p>
<b>Release Information</b>	Statement introduced in Junos OS Release 16.1.
<b>Description</b>	Configure manual targeting or auto-targeting.
<b>Options</b>	<p><b>type</b>—Configure manual targeting type as <b>manual</b> or <b>auto</b>.</p> <p><b>Values:</b></p> <ul style="list-style-type: none"> <li><b>auto</b>—Configure targeted-distribution without specific primary and backup links.</li> <li><b>manual</b>—Configure targeted distribution with specific member links as primary and backup for a subscriber. When you configure manual targeting, you must always configure a primary link. Configuring a backup link is optional. You specify the primary and backup links for a subscriber in the individual interface configuration. You configure primary and backup links by using the <a href="#">targeted-options</a> statement at the [edit interfaces <i>name</i> unit] hierarchy level.</li> </ul> <p>Manual targeting enhances the distribution of targeted VLANs or subscribers across member links of an aggregated Ethernet bundle by making it bandwidth-aware.</p> <p><b>Default:</b> auto</p> <p>The remaining statements are described separately.</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li><a href="#">Ethernet Interfaces Overview on page 3</a></li> <li><a href="#">targeted-options (Grouping Subscribers by Bandwidth Usage) on page 1254</a></li> <li><i>Targeted Traffic Distribution on Aggregated Ethernet Interfaces in a Virtual Chassis</i></li> </ul>

## terminate (PPPoE Service Name Tables)

---

<b>Syntax</b>	terminate;
<b>Hierarchy Level</b>	[edit protocols pppoe service-name-tables <i>table-name</i> <b>service</b> <i>service-name</i> ], [edit protocols pppoe service-name-tables <i>table-name</i> service <i>service-name</i> <b>agent-specifier</b> <i>aci circuit-id-string ari remote-id-string</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 10.0. Support at [edit protocols pppoe service-name-tables <i>table-name</i> service <i>service-name</i> <b>agent-specifier</b> <i>aci circuit-id-string ari remote-id-string</i> ] hierarchy level introduced in Junos OS Release 10.2.
<b>Description</b>	Direct the router to immediately respond to a PPPoE Active Discovery Initiation (PADI) control packet received from a PPPoE client by sending the client a PPPoE Active Discovery Offer (PADO) packet. The PADO packet contains the name of the access concentrator (router) that can service the client request. The <b>terminate</b> action is the default action for a named service entry, <b>empty</b> service entry, <b>any</b> service entry, or agent circuit identifier/agent remote identifier (ACI/ARI) pair in a PPPoE service name table.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.

## traceoptions

<b>Syntax</b>	<pre> traceoptions {     file <i>filename</i> &lt;files <i>number</i>&gt; &lt;size <i>maximum-file-size</i>&gt; &lt;world-readable       no-world-readable&gt;;     flag <i>flag</i> &lt;disable&gt;; } </pre>
<b>Hierarchy Level</b>	[edit protocols <a href="#">lldp</a> ], [edit routing-instances <i>routing-instance-name</i> protocols <a href="#">lldp</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.6.
<b>Description</b>	Set LLDP protocol-level tracing options.
<b>Default</b>	The default LLDP protocol-level trace options are inherited from the global <b>traceoptions</b> statement.
<b>Options</b>	<p><b>disable</b>—(Optional) Disable the tracing operation. One use of this option is to disable a single operation when you have defined a broad group of tracing operations, such as <b>all</b>.</p> <p><b>file <i>filename</i></b>—Name of the file to receive the output of the tracing operation. Enclose the name in quotation marks. We recommend that you place spanning-tree protocol tracing output in the file <code>/var/log/stp-log</code>.</p> <p><b>files <i>number</i></b>—(Optional) Maximum number of trace files. When a trace file named <b>trace-file</b> reaches its maximum size, it is renamed <b>trace-file.0</b>, then <b>trace-file.1</b>, and so on, until the maximum number of trace files is reached. Then, the oldest trace file is overwritten.</p> <p>If you specify a maximum number of files, you must also specify a maximum file size with the <b>size</b> option.</p> <p><b>Range:</b> 2 through 1000 files</p> <p><b>Default:</b> 1 trace file only</p> <p><b>flag</b>—Tracing operation to perform. To specify more than one tracing operation, include multiple <b>flag</b> statements. The following are the LLDP-specific tracing options:</p> <ul style="list-style-type: none"> <li>• <b>all</b>—Trace all operations.</li> <li>• <b>config</b>—Log configuration events.</li> <li>• <b>interface</b>—Trace interface update events.</li> <li>• <b>protocol</b>—Trace protocol information.</li> <li>• <b>rtsock</b>—Trace socket events.</li> <li>• <b>vlan</b>—Trace vlan update events.</li> </ul>

The following are the global tracing options:

- **all**—All tracing operations.
- **config-internal**—Trace configuration internals.
- **general**—Trace general events.
- **normal**—All normal events. This is the default. If you do not specify this option, only unusual or abnormal operations are traced.
- **parse**—Trace configuration parsing.
- **policy**—Trace policy operations and actions.
- **regex-parse**—Trace regular-expression parsing.
- **route**—Trace routing table changes.
- **state**—Trace state transitions.
- **task**—Trace protocol task processing.
- **timer**—Trace protocol task timer processing.

**no-world-readable**—(Optional) Prevent any user from reading the log file. This is the default. If you do not include this option, tracing output is appended to an existing trace file.

**size maximum-file-size**—(Optional) Maximum size of each trace file, in kilobytes (KB) or megabytes (MB). When a trace file named **trace-file** reaches this size, it is renamed **trace-file.0**. When the **trace-file** again reaches its maximum size, **trace-file.0** is renamed **trace-file.1** and **trace-file** is renamed **trace-file.0**. This renaming scheme continues until the maximum number of trace files is reached. Then the oldest trace file is overwritten.

If you specify a maximum file size, you must also specify a maximum number of trace files with the **files** option.

**Syntax:** **xk** to specify KB, **xm** to specify MB, or **xg** to specify GB

**Range:** 10 KB through the maximum file size supported on your system

**Default:** 1 MB

**world-readable**—(Optional) Allow any user to read the log file.

<b>Required Privilege Level</b>	routing—To view this statement in the configuration.
	routing-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Tracing LLDP Operations on page 341</a></li></ul>

## traceoptions (Ethernet Ring Protection)

<b>Syntax</b>	<pre>traceoptions {     file <i>filename</i> &lt;no-stamp&gt; &lt;world-readable   no-world-readable&gt; &lt;replace&gt; &lt;size <i>size</i>&gt;;     flag <i>flag</i>; }</pre>
<b>Hierarchy Level</b>	[edit protocols <a href="#">protection-group</a> ]
<b>Release Information</b>	<p>Statement introduced in Junos OS Release 12.1 for EX Series switches.</p> <p>Statement introduced in Junos OS Release 14.153-D10 for QFX Series switches.</p>
<b>Description</b>	Configure trace options for the protection group.
<b>Default</b>	Trace options are not set by default. On some EX Series switches, logging of basic ERPS state transitions is set by default. You can configure trace options on those switches to obtain more details than are provided by the default log. See <a href="#">“Understanding Ethernet Ring Protection Switching Functionality” on page 234</a> for additional information about default logging of the basic state transitions.
<b>Options</b>	<p><b>file <i>filename</i></b>—Name of the file to receive the output of the tracing operation. All files are placed in the directory <b>/var/log</b>. You can include the following file options:</p> <ul style="list-style-type: none"> <li>• <b>no-stamp</b>—(Optional) Do not timestamp trace file.</li> <li>• <b>no-world-readable</b>—(Optional) Do not allow any user to read the log file.</li> <li>• <b>replace</b>—(Optional) Replace the trace file rather than appending to it.</li> <li>• <b>size</b>—(Optional) Maximum trace file size (10240..4294967295).</li> <li>• <b>world-readable</b>—(Optional) Allow any user to read the log file.</li> </ul> <p><b>flag <i>flag</i></b>—Tracing operation to perform. To specify more than one tracing operation, include multiple <b>flag</b> statements. The following flags are available for both EX Switches and MX Series routers:</p> <ul style="list-style-type: none"> <li>• <b>all</b>—Trace all</li> <li>• <b>config</b>—Trace configuration messages</li> <li>• <b>debug</b>—Trace debug messages</li> <li>• <b>events</b>—Trace events to the protocol state machine</li> <li>• <b>normal</b>—Trace normal messages</li> <li>• <b>pdu</b>—Trace RAPS PDU reception and transmission</li> <li>• <b>periodic-packet-management</b>—Trace periodic packet management state and events</li> <li>• <b>state-machine</b>—Trace RAPS state machine</li> <li>• <b>timers</b>—Trace protocol timers</li> </ul>

<b>Required Privilege Level</b>	system—To view this statement in the configuration. system-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Configuring Ethernet Ring Protection Switching (CLI Procedure)</i></li><li>• <i>Example: Configuring Ethernet Ring Protection Switching on EX Series Switches</i></li><li>• <i>Example: Configuring Ethernet Ring Protection Switching on QFX Series and EX Series Switches Supporting ELS</i></li></ul>

## traceoptions (Interface Process)

<b>Syntax</b>	<pre> traceoptions {     file &lt;filename&gt; &lt;files number&gt; &lt;match regular-expression&gt; &lt;size size&gt; &lt;world-readable       no-world-readable&gt;;     flag flag &lt;disable&gt;;     no-remote-trace; } </pre>
<b>Hierarchy Level</b>	[edit interfaces]
<b>Release Information</b>	<p>Statement introduced before Junos OS Release 7.4.</p> <p>Statement introduced in Junos OS Release 9.0 for EX Series switches.</p>
<b>Description</b>	Define tracing operations for the interface process (dcd).
<b>Default</b>	If you do not include this statement, no interface-specific tracing operations are performed.
<b>Options</b>	<p><b>disable</b>—(Optional) Disable the tracing operation. You can use this option to disable a single operation when you have defined a broad group of tracing operations, such as <b>all</b>.</p> <p><b>filename</b>—Name of the file to receive the output of the tracing operation. Enclose the name within quotation marks. All files are placed in the directory <b>/var/log</b>. By default, interface process tracing output is placed in the file <b>dcd</b>.</p> <p><b>files number</b>—(Optional) Maximum number of trace files. When a trace file named <b>trace-file</b> reaches its maximum size, it is renamed <b>trace-file.0</b>, then <b>trace-file.1</b>, and so on, until the maximum number of trace files is reached. Then the oldest trace file is overwritten.</p> <p>If you specify a maximum number of files, you also must specify a maximum file size with the <b>size</b> option.</p> <p><b>Range:</b> 2 through 1000</p> <p><b>Default:</b> 3 files</p> <p><b>flag</b>—Tracing operation to perform. To specify more than one tracing operation, include multiple <b>flag</b> statements. You can include the following flags:</p> <ul style="list-style-type: none"> <li>• <b>all</b></li> <li>• <b>change-events</b>—Log changes that produce configuration events</li> <li>• <b>config-states</b>—Log the configuration state machine changes</li> <li>• <b>kernel</b>—Log configuration IPC messages to kernel</li> <li>• <b>kernel-detail</b>—Log details of configuration messages to kernel</li> </ul> <p><b>no-world-readable</b>—(Optional) Disallow any user to read the log file.</p>

**size size**—(Optional) Maximum size of each trace file, in kilobytes (KB), megabytes (MB), or gigabytes (GB). When a trace file named **trace-file** reaches this size, it is renamed **trace-file.0**. When the **trace-file** again reaches its maximum size, **trace-file.0** is renamed **trace-file.1** and **trace-file** is renamed **trace-file.0**. This renaming scheme continues until the maximum number of trace files is reached. Then, the oldest trace file is overwritten.

If you specify a maximum file size, you also must specify a maximum number of trace files with the **files** option.

**Syntax:** **xk** to specify kilobytes, **xm** to specify megabytes, or **xg** to specify gigabytes

**Range:** 10 KB through the maximum file size supported on your router

**Default:** 1 MB

**world-readable**—(Optional) Allow any user to read the log file.

**match regex**—(Optional) Refine the output to include only those lines that match the given regular expression.

<b>Required Privilege Level</b>	interface—To view this statement in the configuration.
	interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Tracing Operations of the Interface Process</i></li></ul>

## traceoptions (LACP)

<b>Syntax</b>	<pre> traceoptions {     file &lt;filename&gt; &lt;files number&gt; &lt;size size&gt; &lt;world-readable   no-world-readable&gt;;     flag flag;     no-remote-trace; } </pre>
<b>Hierarchy Level</b>	[edit protocols lacp]
<b>Release Information</b>	<p>Statement introduced in Junos OS Release 7.6.</p> <p>Statement introduced in Junos OS Release 15.1F4 for PTX Series routers.</p>
<b>Description</b>	Define tracing operations for the LACP protocol.
<b>Default</b>	If you do not include this statement, no LACP protocol tracing operations are performed.
<b>Options</b>	<p><b>filename</b>—Name of the file to receive the output of the tracing operation. Enclose the name within quotation marks. All files are placed in the directory <code>/var/log</code>. By default, interface process tracing output is placed in the file <code>lacpd</code>.</p> <p><b>files number</b>—(Optional) Maximum number of trace files. When a trace file named <i>trace-file</i> reaches its maximum size, it is renamed <i>trace-file.0</i>, then <i>trace-file.1</i>, and so on, until the maximum number of trace files is reached. Then the oldest trace file is overwritten.</p> <p>If you specify a maximum number of files, you also must specify a maximum file size with the <b>size</b> option.</p> <p><b>Range:</b> 2 through 1000</p> <p><b>Default:</b> 3 files</p> <p><b>flag</b>—Tracing operation to perform. To specify more than one tracing operation, include multiple <b>flag</b> statements. You can include the following flags:</p> <ul style="list-style-type: none"> <li>• <b>all</b>—All LACP tracing operations</li> <li>• <b>configuration</b>—Configuration code</li> <li>• <b>packet</b>—Packets sent and received</li> <li>• <b>process</b>—LACP process events</li> <li>• <b>protocol</b>—LACP protocol state machine</li> <li>• <b>routing-socket</b>—Routing socket events</li> <li>• <b>startup</b>—Process startup events</li> </ul> <p><b>no-world-readable</b>—(Optional) Prevent any user from reading the log file.</p> <p><b>size size</b>—(Optional) Maximum size of each trace file, in kilobytes (KB), megabytes (MB), or gigabytes (GB). When a trace file named <i>trace-file</i> reaches this size, it is renamed <i>trace-file.0</i>. When the <i>trace-file</i> again reaches its maximum size, <i>trace-file.0</i> is renamed</p>

***trace-file.1*** and ***trace-file*** is renamed ***trace-file.0***. This renaming scheme continues until the maximum number of trace files is reached. Then the oldest trace file is overwritten.

If you specify a maximum file size, you also must specify a maximum number of trace files with the **files** option:

**Syntax:** **xk** to specify kilobytes, **xm** to specify megabytes, or **xg** to specify gigabytes

**Range:** 10 KB through the maximum file size supported on your router

**Default:** 1 MB

**world-readable**—(Optional) Allow any user to read the log file.

<b>Required Privilege Level</b>	interface—To view this statement in the configuration.
	interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Tracing LACP Operations on page 164</a></li></ul>

## traceoptions (MACsec)

<b>Syntax</b>	<pre>traceoptions {     file <i>filename</i> &lt;files <i>number</i>&gt; &lt;size <i>size</i>&gt; &lt;world-readable   no-world-readable&gt;;     flag <i>flag</i>; }</pre>
<b>Hierarchy Level</b>	[edit security macsec]
<b>Release Information</b>	<p>Statement introduced in Junos OS Release 15.1 for MIC-3D-20GE-SFP-E on MX Series routers.</p> <p>Statement introduced in Junos OS Release 16.1 for MPC7E-10G on MX Series routers.</p>
<b>Description</b>	<p>Define tracing operations at the MACsec level. Tracing operations provide support for debugging protocol-level issues. MACsec is an industry-standard security technology that provides secure communication for almost all types of traffic on Ethernet links. To specify more than one tracing operation, include multiple <b>flag</b> statements.</p> <p>The interfaces <b>traceoptions</b> statement does not support a separate trace file. The logging is done by the kernel, so the tracing information is placed in the <b>syslog</b> file in the directory <b>/var/log/dcd</b>.</p>
<b>Default</b>	If you do not include this statement, no tracing operations are performed.
<b>Options</b>	<p><b>file <i>filename</i></b>—Name of the file to receive the output of the tracing operation. Enclose the name within quotation marks. By default, interface process tracing output is placed in the directory. If you do not specify the name of the trace file, all files are placed in the directory <b>/var/log/dcd</b>.</p> <p><b>files <i>number</i></b>—(Optional) Maximum number of trace files. When a trace file named <b>trace-file</b> reaches the maximum value, it is renamed <b>trace-file.0</b>, then <b>trace-file.1</b>, and so on, until the maximum number of trace files is reached. Then the oldest trace file is overwritten. Values range from 2 through 1000.</p> <p><b>flag <i>flag</i></b>—Tracing operation to perform. To specify more than one tracing operation, include multiple <b>flag</b> statements. The following are the tracing operation options:</p> <p><b>all</b>—Trace all operations.</p> <p><b>config</b>—Trace configuration messages.</p> <p><b>debug</b>—Trace debug messages.</p> <p><b>normal</b>—Trace normal messages.</p> <p><b>no-world-readable</b>—(Optional) Prevent any user from reading the log file.</p> <p><b>size <i>size</i></b>—(Optional) Maximum size of each trace file, in kilobytes (KB), megabytes (MB), or gigabytes (GB). When a trace file named <b>trace-file</b> reaches this size, it is renamed <b>trace-file.0</b>. When <b>trace-file</b> again reaches its maximum size, <b>trace-file.0</b> is renamed <b>trace-file.1</b> and <b>trace-file</b> is renamed <b>trace-file.0</b>. This renaming scheme continues</p>

until the maximum number of trace files is reached. Then, the oldest trace file is overwritten.

**world-readable**—(Optional) Allow any user to read the log file.

<b>Required Privilege</b>	admin—To view this statement in the configuration.
<b>Level</b>	admin-control—To add this statement to the configuration.

<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Understanding Media Access Control Security (MACsec) on MX Series Routers on page 97</a></li><li>• <a href="#">Configuring Media Access Control Security (MACsec) on MX Series Routers on page 100</a></li></ul>

## traceoptions (MACsec interfaces)

<b>Syntax</b>	<pre>traceoptions {     file <i>filename</i> &lt;files <i>number</i>&gt; &lt;size <i>size</i>&gt; &lt;world-readable   no-world-readable&gt;;     flag <i>flag</i>; }</pre>
<b>Hierarchy Level</b>	[edit security macsec interfaces <i>interface-name</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 16.1 for MPC7E-10G on MX Series routers.
<b>Description</b>	<p>Define tracing operations for individual MACsec interfaces. Tracing operations provide support for debugging protocol-level issues. MACsec is an industry-standard security technology that provides secure communication for almost all types of traffic on Ethernet links. To specify more than one tracing operation, include multiple <b>flag</b> statements.</p> <p>The interfaces <b>traceoptions</b> statement does not support a separate trace file. The logging is done by the kernel, so the tracing information is placed in the system <b>syslog</b> file in the directory <b>/var/log/dcd</b>.</p>
<b>Default</b>	If you do not include this statement, no tracing operations are performed.
<b>Options</b>	<p><b>file <i>filename</i></b>—Name of the file to receive the output of the tracing operation. Enclose the name within quotation marks. By default, interface process tracing output is placed in the directory. If you do not specify the name of the tracefile, all files are placed in the directory <b>/var/log/dcd</b>.</p> <p><b>files <i>number</i></b>—(Optional) Maximum number of trace files. When a trace file named <b>trace-file</b> reaches the maximum value, it is renamed <b>trace-file.0</b>, then <b>trace-file.1</b>, and so on, until the maximum number of trace files is reached. Then the oldest trace file is overwritten. Values range from 2 through 1000.</p> <p><b>flag <i>flag</i></b>—Tracing operation to perform. To specify more than one tracing operation, include multiple <b>flag</b> statements. The following are the tracing operation options:</p> <p><b>all</b>—Trace all operations.</p> <p><b>keys</b>—Trace key creation or generation information.</p> <p><b>mka-packets</b>—Trace MACsec Key Agreement (MKA) protocol input and output packet information.</p> <p><b>normal</b>—Trace all normal events and messages.</p> <p><b>state</b>—Trace MKA protocol state information.</p> <p><b>to-secy</b>—Trace MKA to security entity state change information.</p> <p><b>no-world-readable</b>—(Optional) Prevent any user from reading the log file.</p> <p><b>size <i>size</i></b>—(Optional) Maximum size of each trace file, in kilobytes (KB), megabytes (MB), or gigabytes (GB). When a trace file named <b>trace-file</b> reaches this size, it is renamed</p>

**trace-file.0.** When **trace-file** again reaches its maximum size, **trace-file.0** is renamed **trace-file.1** and **trace-file** is renamed **trace-file.0**. This renaming scheme continues until the maximum number of trace files is reached. Then, the oldest trace file is overwritten.

**world-readable**—(Optional) Allow any user to read the log file.

<b>Required Privilege</b>	admin—To view this statement in the configuration.
<b>Level</b>	admin-control—To add this statement to the configuration.

<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Understanding Media Access Control Security (MACsec) on MX Series Routers on page 97</a></li><li>• <a href="#">Configuring Media Access Control Security (MACsec) on MX Series Routers on page 100</a></li></ul>
------------------------------	--

## traceoptions (PPPoE)

<b>Syntax</b>	<pre> traceoptions {     file &lt;filename&gt; &lt;files number&gt; &lt;match regular-expression&gt; &lt;size maximum-file-size&gt;       &lt;world-readable   no-world-readable&gt;;     filter {       aci regular-expression;       ari regular-expression;       service-name regular-expresion;       underlying-interface interface-name;     }     flag flag;     level (all   error   info   notice   verbose   warning);     no-remote-trace; } </pre>
<b>Hierarchy Level</b>	[edit protocols pppoe]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.6. Option <b>filter</b> introduced in Junos OS Release 12.3
<b>Description</b>	Define tracing operations for PPPoE processes.
<b>Options</b>	<p><b>file filename</b>—Name of the file to receive the output of the tracing operation. Enclose the name within quotation marks. All files are placed in the directory <b>/var/log</b>.</p> <p><b>files number</b>—(Optional) Maximum number of trace files to create before overwriting the oldest one. If you specify a maximum number of files, you also must specify a maximum file size with the <b>size</b> option.</p> <p><b>Range:</b> 2 through 1000</p> <p><b>Default:</b> 3 files</p> <p><b>disable</b>—Disable this trace flag.</p> <p><b>filter</b>—Additional filter to refine the output to display particular subscribers. Filtering based on the following subscriber identifiers simplifies troubleshooting in a scaled environment.</p>
	<p> <b>BEST PRACTICE:</b> Due to the complexity of agent circuit identifiers and agent remote identifiers, we recommend that you do not try an exact match when filtering on these options. For service names, searching on the exact name is appropriate, but you can also use a regular expression with that option.</p>
	<ul style="list-style-type: none"> <li>• <b>aci regular-expression</b>—Regular expression to match the agent circuit identifier provided by PPPoE client.</li> <li>• <b>ari regular-expression</b>—Regular expression to match the agent remote identifier provided by PPPoE client.</li> </ul>

- **service *regular-expression***—Regular expression to match the name of PPPoE service.
- **underlying-interface *interface-name***—Name of a PPPoE underlying interface. You cannot use a regular expression for this filter option.

**flag *flag***—Tracing operation to perform. To specify more than one tracing operation, include multiple **flag** statements. You can include the following flags:

- **all**—Trace all operations.
- **config**—Trace configuration events.
- **events**—Trace events.
- **gres**—Trace GRES events.
- **init**—Trace initialization events.
- **interface-db**—Trace interface database operations.
- **memory**—Trace memory processing events.
- **protocol**—Trace protocol events.
- **rtsock**—Trace routing socket events.
- **session-db**—Trace connection events and flow.
- **signal**—Trace signal operations.
- **state**—Trace state handling events.
- **timer**—Trace timer processing.
- **ui**—Trace user interface processing.

**level**—Level of tracing to perform. You can specify any of the following levels:

- **all**—Match all levels.
- **error**—Match error conditions.
- **info**—Match informational messages.
- **notice**—Match notice messages about conditions requiring special handling.
- **verbose**—Match verbose messages.
- **warning**—Match warning messages.

**Default:** error

**match *regular-expression***—(Optional) Refine the output to include lines that contain the regular expression.

**no-remote-trace**—Disable remote tracing.

**no-world-readable**—(Optional) Disable unrestricted file access.

**size** *maximum-file-size*—(Optional) Maximum size of each trace file. By default, the number entered is treated as bytes. Alternatively, you can include a suffix to the number to indicate kilobytes (KB), megabytes (MB), or gigabytes (GB). If you specify a maximum file size, you also must specify a maximum number of trace files with the **files** option.

**Syntax:** *sizek* to specify KB, *sizem* to specify MB, or *sizeg* to specify GB

**Range:** 10240 through 1073741824

**Default:** 128 KB

**world-readable**—(Optional) Enable unrestricted file access.

<b>Required Privilege</b>	trace—To view this statement in the configuration.
<b>Level</b>	trace-control—To add this statement to the configuration.

<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring PPPoE Service Name Tables</a></li><li>• <a href="#">Tracing PPPoE Operations on page 358</a></li></ul>
------------------------------	--

## traceoptions (802.1X and Captive Portal for MX Series in Enhanced LAN Mode)

<b>Syntax</b>	<pre> traceoptions {     file <i>filename</i> &lt;files <i>number</i>&gt; &lt;size <i>size</i>&gt; &lt;world-readable   no-world-readable&gt; &lt;match         <i>regex</i>&gt;;     flag <i>flag</i>; } </pre>
<b>Hierarchy Level</b>	[edit protocols authentication-access-control]
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2 for MX240, MX480, and MX960 routers in enhanced LAN mode.
<b>Description</b>	Define tracing operations for the 802.1X protocol, LLDP, and captive portal authentication.
<b>Default</b>	Tracing operations are disabled.
<b>Options</b>	<p><b>file <i>filename</i></b>—Name of the file to receive the output of the tracing operation. Enclose the name within quotation marks. All files are placed in the directory <b>/var/log</b>.</p> <p><b>files <i>number</i></b>—(Optional) Maximum number of trace files. When a trace file named <b>trace-file</b> reaches its maximum size, it is renamed <b>trace-file.0</b>, then <b>trace-file.1</b>, and so on, until the maximum number of trace files is reached. Then the oldest trace file is overwritten. If you specify a maximum number of files, you also must specify a maximum file size by using the <b>size</b> option.</p> <p><b>Range:</b> 2 through 1000</p> <p><b>Default:</b> 3 files</p> <p><b>flag <i>flag</i></b>—Tracing operation to perform. To specify more than one tracing operation, include multiple flag statements. You can include the following flags:</p> <ul style="list-style-type: none"> <li>• <b>all</b>—All tracing operations.</li> <li>• <b>config-internal</b>—Trace internal configuration operations.</li> <li>• <b>dot1x-event</b>—Trace 802.1x events.</li> <li>• <b>dot1x-debug</b>—Trace 802.1x events.</li> <li>• <b>dot1x-ipc</b>—Trace IPC interactions.</li> <li>• <b>eapol</b>—Trace EAPOL packets transmitted and received.</li> <li>• <b>general</b>—Trace general operations.</li> <li>• <b>normal</b>—Trace normal operations.</li> <li>• <b>parse</b>—Trace reading of the configuration.</li> <li>• <b>regex-parse</b>—Trace regular-expression parsing operations.</li> <li>• <b>state</b>—Trace protocol state changes.</li> <li>• <b>task</b>—Trace protocol task operations.</li> </ul>

- **timer**—Trace protocol timer operations.
- **vlan**—Trace VLAN transactions.

**match *regex***—(Optional) Refine the output to include lines that contain the regular expression.

**no-world-readable**—(Optional) Restrict file access to the user who created the file.

**size *size***—(Optional) Maximum size of each trace file, in kilobytes (KB), megabytes (MB), or gigabytes (GB). When a trace file named **trace-file** reaches its maximum size, it is renamed **trace-file.0**, then **trace-file.1**, and so on, until the maximum number of trace files is reached. Then the oldest trace file is overwritten. If you specify a maximum number of files with the **files** option, you also must specify a maximum file size.

**Syntax:** **xk** to specify KB, **xm** to specify MB, or **xg** to specify GB

**Range:** 10 KB through 1 GB

**Default:** 128 KB

**world-readable**—(Optional) Enable unrestricted file access.

<b>Required Privilege Level</b>	routing—To view this statement in the configuration. routing-control—To add this statement to the configuration.
---------------------------------	---

## transmit-delay

<b>Syntax</b>	<code>transmit-delay <i>seconds</i>;</code>
<b>Hierarchy Level</b>	[edit protocols <a href="#">lldp</a> ], [edit routing-instances <i>routing-instance-name</i> protocols <a href="#">lldp</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.6.
<b>Description</b>	(MX Series and T Series routers only) Configure a delay between two successive LLDP advertisements.
<b>Options</b>	<b><i>seconds</i></b> —Delay between two successive LLDP advertisements. <b>Default:</b> 2 <b>Range:</b> 1 through 8192
<b>Required Privilege Level</b>	routing—To view this statement in the configuration. routing-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring LLDP on page 336</a></li> </ul>

## transmit-interval (MACsec for MX Series)

---

<b>Syntax</b>	<code>transmit-interval <i>interval</i>;</code>
<b>Hierarchy Level</b>	<code>[edit security macsec connectivity-association <i>connectivity-association-name</i> mka]</code>
<b>Release Information</b>	Statement introduced in Junos OS Release 15.1 for MX240, MX480, and MX960 routers.
<b>Description</b>	<p>Specifies the transmit interval for MACsec Key Agreement (MKA) protocol data units (PDUs).</p> <p>The MKA transmit interval setting sets the frequency for how often the MKA PDU is sent to the directly connected device to maintain MACsec on a point-to-point Ethernet link. A lower <i>interval</i> increases bandwidth overhead on the link; a higher <i>interval</i> optimizes the MKA protocol data unit exchange process.</p> <p>The transmit interval settings must be identical on both ends of the link when MACsec using static connectivity association key (CAK) security mode is enabled.</p> <p>We recommend increasing the interval to 6000 ms in high-traffic load environments.</p>
<b>Default</b>	The default transmit interval is 2000 milliseconds.
<b>Options</b>	<i>interval</i> —Specifies the transmit interval, in milliseconds.
<b>Required Privilege Level</b>	admin—To view this statement in the configuration. admin-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring Media Access Control Security (MACsec) on MX Series Routers on page 100</a></li></ul>

## transmit-period

<b>Syntax</b>	<code>transmit-period <i>seconds</i>;</code>
<b>Hierarchy Level</b>	<code>[edit protocols dot1x authenticator interface <i>interface-id</i>]</code>
<b>Release Information</b>	Statement introduced in Junos OS Release 9.3.
<b>Description</b>	Set the number of seconds the port waits before retransmitting the initial EAPOL PDUs to the client.
<b>Options</b>	<p><b><i>seconds</i></b>—The number of seconds the port waits before retransmitting the initial EAPOL PDUs to the client.</p> <p><b>Range:</b> 1 through 65,535 seconds</p> <p><b>Default:</b> 30 seconds</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">IEEE 802.1x Port-Based Network Access Control Overview on page 33</a></li> <li>• <a href="#">authenticator on page 991</a></li> <li>• <a href="#">dot1x on page 1022</a></li> <li>• <a href="#">interface (IEEE 802.1x) on page 1092</a></li> </ul>

## transmit-period (MX Series in Enhanced LAN Mode)

<b>Syntax</b>	<code>transmit-period <i>seconds</i>;</code>
<b>Hierarchy Level</b>	<code>[edit protocols authentication-access-control interface (all   [<i>interface-names</i>]) dot1x]</code>
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2 for MX240, MX480, and MX960 routers in enhanced LAN mode.
<b>Description</b>	For 802.1X authentication, how long the port waits before retransmitting the initial EAPOL PDUs to the supplicant.
<b>Default</b>	30 seconds
<b>Options</b>	<p><b><i>seconds</i></b>—Number of seconds the port waits before retransmitting the initial EAPOL PDUs to the supplicant.</p> <p><b>Range:</b> 1 through 65,535 seconds</p> <p><b>Default:</b> 30 seconds</p>
<b>Required Privilege Level</b>	<p>routing—To view this statement in the configuration.</p> <p>routing-control—To add this statement to the configuration.</p>

## uac-policy (MX Series in Enhanced LAN Mode)

---

<b>Syntax</b>	uac-policy;
<b>Hierarchy Level</b>	[edit protocols authentication-access-control]
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2 for MX240, MX480, and MX960 routers in enhanced LAN mode.
<b>Description</b>	Configure Junos Pulse Access Control Service as the access policy to authenticate and authorize users connected to the switch for admission to the network and for access to protected network resources.
<b>Default</b>	The Access Control Service access policy is disabled.
<b>Required Privilege Level</b>	routing—To view this statement in the configuration. routing-control—To add this statement to the configuration.
<b>Related Documentation</b>	

## underlying-interface

<b>Syntax</b>	<code>underlying-interface <i>interface-name</i>;</code>
<b>Hierarchy Level</b>	<p>[edit interfaces pp0 unit <i>logical-unit-number</i> <b>pppoe-options</b>],</p> <p>[edit interfaces demux0 unit <i>logical-unit-number</i> demux-options],</p> <p>[edit logical-systems <i>logical-system-name</i> interfaces demux0 unit <i>logical-unit-number</i> demux-options],</p> <p>[edit logical-systems <i>logical-system-name</i> interfaces pp0 unit <i>logical-unit-number</i> <b>pppoe-options</b>],</p> <p>[edit logical-systems <i>logical-system-name</i> routing-instances <i>routing-instance-name</i> interfaces demux0 unit <i>logical-unit-number</i> demux-options],</p> <p>[edit logical-systems <i>logical-system-name</i> routing-instances <i>routing-instance-name</i> interfaces pp0 unit <i>logical-unit-number</i> <b>pppoe-options</b>]</p>
<b>Release Information</b>	<p>Statement introduced before Junos OS Release 7.4.</p> <p>Support for aggregated Ethernet added in Junos OS Release 9.4.</p>
<b>Description</b>	<p>Configure the interface on which PPP over Ethernet is running.</p> <p>For demux interfaces, configure the underlying interface on which the demultiplexing (demux) interface is running.</p>
<b>Options</b>	<p><b><i>interface-name</i></b>—Name of the interface on which PPP over Ethernet or demux is running. For example, <b>at-0/0/1.0</b> (ATM VC), <b>fe-1/0/1.0</b> (Fast Ethernet interface), <b>ge-2/0/0.0</b> (Gigabit Ethernet interface), <b>ae1.0</b> (for IP demux on an aggregated Ethernet interface), or <b>ae1</b> (for VLAN demux on an aggregated Ethernet interface).</p>
<div style="display: flex; align-items: center;">  <div> <p><b>NOTE:</b> Demux interfaces are currently supported on Gigabit Ethernet, Fast Ethernet, 10-Gigabit Ethernet interfaces, or aggregated Ethernet devices.</p> </div> </div>	
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Configuring an IP Demultiplexing Interface</i></li> <li>• <i>Configuring a VLAN Demultiplexing Interface</i></li> <li>• <a href="#">Configuring the PPPoE Underlying Interface on page 351</a></li> <li>• <i>Junos OS Interfaces and Routing Configuration Guide</i></li> </ul>

**Hierarchy Level** [edit interfaces *interface-name*],  
[edit logical-systems *logical-system-name* interfaces *interface-name*],  
[edit interfaces interface-set *interface-set-name* interface *interface-name*]

<b>Release Information</b>	Statement introduced before Junos OS Release 7.4.
<b>Description</b>	Configure a logical interface on the physical device. You must configure a logical interface to be able to use the physical device.
<b>Options</b>	<p><b><i>logical-unit-number</i></b>—Number of the logical unit.</p> <p><b>Range:</b> 0 through 1,073,741,823 for demux and PPPoE static interfaces. 0 through 16,385 for all other static interface types.</p> <p>The remaining statements are explained separately.</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Configuring Logical Interface Properties</i></li><li>• <i>Example: Configuring E-LINE and E-LAN Services for a PBB Network on MX Series Routers</i></li><li>• <i>Junos OS Services Interfaces Library for Routing Devices</i></li></ul>

## unnumbered-address (Dynamic Profiles)

<b>Syntax</b>	<code>unnumbered-address interface-name &lt;preferred-source-address address&gt;;</code>
<b>Hierarchy Level</b>	[edit dynamic-profiles <i>profile-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> family <i>family</i> ], [edit dynamic-profiles <i>profile-name</i> interfaces demux0 unit <i>logical-unit-number</i> family <i>family</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.2. Support for the <code>\$junos-preferred-source-address</code> and <code>\$junos-preferred-source-ipv6-address</code> predefined variables introduced in Junos OS Release 9.6. Support for the <code>\$junos-loopback-interface</code> predefined variable introduced in Junos OS Release 9.6.
<b>Description</b>	For Ethernet interfaces, enable the local address to be derived from the specified interface. Configuring unnumbered Ethernet interfaces enables IP processing on the interface without assigning an explicit IP address to the interface. To configure unnumbered address dynamically, include the <code>\$junos-loopback-interface-address</code> predefined variable.  You can configure unnumbered address support on Ethernet interfaces for IPv4 and IPv6 address families.
<b>Options</b>	<b>interface-name</b> —Name of the interface from which the local address is derived. The specified interface must have a logical unit number, a configured IP address, and must not be an unnumbered interface. This value can be a specific interface name or the <code>\$junos-loopback-interface</code> predefined variable.

When defining the **unnumbered-address** statement using a static interface, keep the following in mind:

- If you choose to include the **routing-instance** statement at the [edit dynamic-profiles] hierarchy level, that statement must be configured with a dynamic value by using the `$junos-routing-instance` predefined variable. In addition, whatever static unnumbered interface you specify must belong to that routing instance; otherwise, the profile instantiation fails.
- If you choose to not include the **routing-instance** statement at the [edit dynamic-profiles] hierarchy level, the unnumbered-address statement uses the default routing instance. The use of the default routing instance requires that the unnumbered interface be configured statically and that it reside in the default routing instance.

**NOTE:** When you specify a static logical interface for the unnumbered interface in a dynamic profile that includes the `$junos-routing-instance` predefined variable, you must not configure a preferred source address, whether with the `$junos-preferred-source-address` predefined variable, the `$junos-preferred-source-ipv6-address` predefined variable, or the **preferred-source-address** statement. Configuring the preferred source address in this circumstance causes a commit failure.

When defining the **unnumbered-address** statement using the **\$junos-loopback-interface** predefined variable, keep the following in mind:

- To use the **\$junos-loopback-interface** predefined variable, the dynamic profile must also contain the **routing-instance** statement configured with the **\$junos-routing-instance** predefined variable at the [edit dynamic-profiles] hierarchy level.
- The applied loopback interface is based on the dynamically obtained routing instance of the subscriber.

**address**—(Optional) Secondary IP address of the donor interface. Configuring the preferred source address enables you to use an IP address other than the primary IP address on some of the unnumbered Ethernet interfaces in your network. This value can be a static IP address, the **\$junos-preferred-source-address** predefined variable for the inet family, or the **\$junos-preferred-source-ipv6-address** predefined variable for the inet6 family.

When defining the **preferred-source-address** value using a static IP address, keep the following in mind:

- The unnumbered interface must be statically configured.
- The IP address specified as the **preferred-source-address** must be configured in the specified unnumbered interface.

When defining the **preferred-source-address** value using the **\$junos-preferred-source-address** or the **\$junos-preferred-source-ipv6-address** predefined variables, keep the following in mind:

- You must configure the **unnumbered-address** statement using the **\$junos-loopback-interface** predefined variable.
- You must configure the **routing-instance** statement using the **\$junos-routing-instance** predefined variable at the [edit dynamic-profiles] hierarchy level.
- The preferred source address chosen is based on the dynamically applied loopback address which is in turn derived from the dynamically obtained routing instance of the subscriber. The configured loopback address with the closest network match to the user IP address is selected as the preferred source address.

<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.

## unnumbered-address (PPP)

<b>Syntax</b>	<code>unnumbered-address interface-name destination address destination-profile profile-name;</code>
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> family inet], [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> family inet]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4.
<b>Description</b>	For interfaces with PPP encapsulation, enable the local address to be derived from the specified interface.
<b>Options</b>	<p><i>interface-name</i>—Interface from which the local address is derived. The interface name must include a logical unit number and must have a configured address.</p> <p>The remaining statements are explained separately.</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Configuring IPCP Options for Interfaces with PPP Encapsulation</i></li> <li>• <a href="#">address on page 976</a></li> <li>• <a href="#">negotiate-address on page 1149</a></li> <li>• <i>Junos OS Administration Library</i></li> </ul>

## version-3

---

<b>Syntax</b>	version-3;
<b>Hierarchy Level</b>	[edit protocols vrrp]
<b>Release Information</b>	Statement introduced in Junos OS Release 12.2.
<b>Description</b>	Enable Virtual Router Redundancy Protocol version 3 (VRRPv3).

**NOTE:**

- Even though the **version-3** statement can be configured only at the [edit protocols vrrp] hierarchy level, VRRPv3 is enabled on all the configured logical systems as well.
  - When enabling VRRPv3, you must ensure that VRRPv3 is enabled on all the VRRP routers in the network. This is because VRRPv3 does not interoperate with the previous versions of VRRP.
- 

<b>Required Privilege Level</b>	routing—To view this statement in the configuration. routing-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Junos OS Support for VRRPv3</i></li></ul>

## virtual-control-channel

---

<b>Syntax</b>	virtual-control-channel <i>channel-name</i> { west-interface <i>name</i> ; east-interface <i>name</i> ; }
<b>Hierarchy Level</b>	[edit protocols <a href="#">protection-group ethernet-ring name</a> ( <a href="#">east-interface</a>   <a href="#">west-interface</a> )]
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2.
<b>Description</b>	Specify virtual control channels which are logical interfaces on the east and west interfaces of the major ring.
<b>Options</b>	<b>west-interface <i>name</i></b> —Logical interface on the major ring's west port.  <b>east-interface <i>name</i></b> —Logical interface on the major ring's east port.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Ethernet Ring Protection Switching Overview on page 233</a></li> <li>• <a href="#">Configuring Ethernet Ring Protection Switching (CLI Procedure)</a></li> </ul>

## virtual-switch

---

<b>Syntax</b>	virtual-switch <i>name</i> bridge-domain <i>name</i> vlan-id [ <i>vlan-ids</i> ];
<b>Hierarchy Level</b>	[edit protocols oam ethernet connectivity-fault-management <a href="#">maintenance-domain domain-name</a> default-x]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.6.
<b>Description</b>	Specify the routing-instance type as a virtual switch, under which bridge-domain MIPs must be enabled.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring MIP for Bridge Domains of a Virtual Switch on page 580</a></li> </ul>

## vlan-assignment

---

<b>Syntax</b>	<code>vlan-assignment (vlan-id   vlan-name);</code>
<b>Hierarchy Level</b>	[edit protocols authentication-access-control]
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2 for MX240, MX480, and MX960 routers in enhanced LAN mode.
<b>Description</b>	Configure the VLAN that is associated with the list of MAC addresses that are excluded from RADIUS authentication.
<b>Options</b>	<b>vlan-id   vlan-name</b> —The name of the VLAN or the VLAN tag identifier to associate with the device. The VLAN already exists on the switch.
<b>Required Privilege Level</b>	<b>routing</b> —To view this statement in the configuration. <b>routing-control</b> —To add this statement to the configuration.

## vlan-id (VLAN ID to Be Bound to a Logical Interface)

---

<b>Syntax</b>	<code>vlan-id number;</code>
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> ], [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> ]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4.
<b>Description</b>	For Fast Ethernet, Gigabit Ethernet, and Aggregated Ethernet interfaces only, bind a 802.1Q VLAN tag ID to a logical interface.
<b>Options</b>	<b>number</b> —A valid VLAN identifier. <b>Range:</b> For aggregated Ethernet, 4-port, 8-port, and 12-port Fast Ethernet PICs, and for management and internal Ethernet interfaces, 1 through 1023.  For 48-port Fast Ethernet and Gigabit Ethernet PICs, 1 through 4094.  VLAN ID 0 is reserved for tagging the priority of frames.
<b>Required Privilege Level</b>	<b>interface</b> —To view this statement in the configuration. <b>interface-control</b> —To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring Mixed Tagging on page 258</a></li></ul>

## vlan-id (VLAN ID to Rewrite)

<b>Syntax</b>	<code>vlan-id <i>number</i>;</code>
<b>Hierarchy Level</b>	<p>[edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">input-vlan-map</a>],  [edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">output-vlan-map</a>],  [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">input-vlan-map</a>],  [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">output-vlan-map</a>]</p>
<b>Release Information</b>	<p>Statement introduced before Junos OS Release 7.4.</p> <p>Statement introduced in Junos OS Release 12.3R2 for EX Series switches.</p>
<b>Description</b>	<p>For Gigabit Ethernet IQ and 10-Gigabit Ethernet IQ2, 10-Gigabit Ethernet LAN/WAN PIC, and IQ2-E interfaces and aggregated Ethernet using Gigabit Ethernet IQ interfaces, specify the line VLAN identifiers to be rewritten at the input or output interface.</p> <p>You cannot include the <b>vlan-id</b> statement with the <b>swap</b> statement, <b>swap-push</b> statement, <b>push-push</b> statement, or <b>push-swap</b> statement at the [edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> <a href="#">output-vlan-map</a>] hierarchy level. If you include any of those statements in the output VLAN map, the VLAN ID in the outgoing frame is rewritten to the <b>vlan-id</b> statement that you include at the [edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i>] hierarchy level.</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Rewriting the VLAN Tag on Tagged Frames on page 550</a></li> <li>• <a href="#">Binding VLAN IDs to Logical Interfaces on page 262</a></li> </ul>

## vlan-id-list (Ethernet VLAN Circuit)

<b>Syntax</b>	<code>vlan-id-list [vlan-id vlan-id–vlan-id];</code>
<b>Hierarchy Level</b>	<code>[edit interfaces interface-name unit logical-unit-number],</code> <code>[edit logical-systems logical-system-name interfaces interface-name unit logical-unit-number]</code>
<b>Release Information</b>	Statement introduced in Junos OS Release 9.5.
<b>Description</b>	Binds a single-tag logical interface to a list of VLAN IDs. Configures a logical interface to receive and forward any tag frame whose VLAN ID tag matches the list of VLAN IDs you specify.

### NOTE:

When you create a circuit cross-connect (CCC) using VLAN-bundled single-tag logical interfaces on Layer 2 VPN routing instances, the circuit automatically uses ethernet encapsulation. For Layer 2 VPN, you need to include the `encapsulation-type` statement and specify the value `ethernet` at either of the following hierarchy levels:

- `[edit routing-instances routing-instance-name protocols l2vpn]`
- `[edit logical-systems logical-system-name routing-instances routing-instance-name protocols l2vpn]`

For more information about the `encapsulation-type` configuration statement and the Layer 2 encapsulation types `ethernet` and `ethernet-vlan`, see the *Junos OS VPNs Library for Routing Devices*.

<b>Options</b>	<code>[vlan-id vlan-id–vlan-id]</code> —A list of valid VLAN ID numbers. Specify the VLAN IDs individually by using a space to separate each ID, as an inclusive list by separating the starting VLAN ID and ending VLAN ID with a hyphen, or as a combination of both. <b>Range:</b> 1 through 4094. VLAN ID 0 is reserved for tagging the priority of frames.
----------------	--

**NOTE:** Configuring `vlan-id-list` with the entire `vlan-id` range is an unnecessary waste of system resources and is not best practice. It should be used only when a subset of VLAN IDs (not the entire range) needs to be associated with a logical interface. If you specify the entire range (1-4094), it has the same result as not specifying a range; however, it consumes PFE resources such as VLAN lookup tables entries, and so on.

The following examples illustrate this further:

```
[edit interfaces interface-name]
vlan-tagging;
unit number {
```

```
        vlan-id-range 1-4094;  
    }  
  
    [edit interfaces interface-name]  
    unit 0;
```

---

**Required Privilege Level** interface—To view this statement in the configuration.  
interface-control—To add this statement to the configuration.

## vlan-id-list (Interface in Bridge Domain)

---

<b>Syntax</b>	<code>vlan-id-list [ <i>number number-number</i> ];</code>
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> family bridge], [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> family bridge]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.2. Statement introduced in Junos OS Release 15.1.
<b>Description</b>	Configure a logical interface to forward packets and learn MAC addresses within each bridge domain configured with a VLAN ID that matches a VLAN ID specified in the list. VLAN IDs can be entered individually using a space to separate each ID, entered as an inclusive list separating the starting VLAN ID and ending VLAN ID with a hyphen, or a combination of both.
<b>Options</b>	<i>number number</i> —Individual VLAN IDs separated by a space.  <i>number-number</i> —Starting VLAN ID and ending VLAN ID in an inclusive range. <b>Range:</b> 1 through 4095
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring a Logical Interface for Trunk Mode on page 272</a></li><li>• <a href="#">Configuring the VLAN ID List for a Trunk Interface on page 273</a></li><li>• <a href="#">Tunnel Services Overview</a></li><li>• <a href="#">Tunnel Interface Configuration on MX Series Routers Overview</a></li></ul>

## vlan-id-range

<b>Syntax</b>	<code>vlan-id-range <i>vlan-id-vlan-id</i></code>
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> ], [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 8.4. Statement introduced in Junos OS Release 12.3R2 for EX Series switches.
<b>Description</b>	Bind a range of VLAN IDs to a logical interface.
<b>Options</b>	<b>number</b> —The first number is the lowest VLAN ID in the range the second number is the highest VLAN ID in the range. <b>Range:</b> 1 through 4094

**NOTE:** Configuring `vlan-id-range` with the entire `vlan-id` range is an unnecessary waste of system resources and is not best practice. It should be used only when a subset of VLAN IDs (not the entire range) needs to be associated with a logical interface. If you specify the entire range (1-4094), it has the same result as not specifying a range; however, it consumes PFE resources such as VLAN lookup tables entries, and so on.

The following examples illustrate this further:

```
[edit interfaces interface-name]
vlan-tagging;
unit number {
    vlan-id-range 1-4094;
}

[edit interfaces interface-name]
unit 0;
```

VLAN ID 0 is reserved for tagging the priority of frames.

<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Binding a Range of VLAN IDs to a Logical Interface on page 262</a></li> </ul>

## vlan-rewrite

---

<b>Syntax</b>	vlan-rewrite translate (200 500   201 501)
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> unit <i>number</i> family bridge interface-mode trunk] [edit interfaces <i>interface-name</i> unit <i>number</i> family ethernet-switching interface-mode trunk]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.4. Statement introduced in Junos OS Release 12.3R2 for EX Series switches.
<b>Description</b>	Translates an incoming VLAN to a bridge-domain VLAN, corresponding counter translation at egress. Supports translation of VLAN 200 to VLAN 500 and VLAN 201 to VLAN 501. Other valid VLANs pass through without translation.
<b>Options</b>	<b>translate 200 500</b> —Translates incoming packets with VLAN 200 to 500. <b>translate 201 501</b> —Translates incoming packets with VLAN 201 to 501. <b>translate 202 502</b> —Translates incoming packets with VLAN 202 to 502.
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Rewriting a VLAN Tag and Adding a New Tag on page 555</a></li></ul>

## vlan-rule (100-Gigabit Ethernet Type 4 PIC with CFP)

<b>Syntax</b>	vlan-rule (high-low   odd-even);
<b>Hierarchy Level</b>	[edit chassis fpc slot pic slot forwarding-mode <a href="#">vlan-steering</a> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 10.4.
<b>Description</b>	<p>Configure the interoperation mode of the 100-Gigabit Ethernet Type 4 PIC with CFP (PD-ICE-CFP-FPC4) when interoperating with 100 gigabit Ethernet interfaces from other vendors.</p> <p>If no VLAN rule is configured, all tagged packets are distributed to PFE0.</p>
<b>Options</b>	<p><b>high-low</b>—VLAN IDs 1 through 2047 are distributed to PFE0 and VLAN IDs 2048 through 4096 are distributed to PFE1.</p> <p><b>odd-even</b>—Odd number VLAN IDs are distributed to PFE1 and even number VLAN IDs are distributed to PFE0.</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring VLAN Steering Mode for 100-Gigabit Ethernet Type 4 PIC with CFP on page 430</a></li> <li>• <a href="#">forwarding-mode (100-Gigabit Ethernet) on page 1065</a></li> <li>• <a href="#">vlan-steering (100-Gigabit Ethernet Type 4 PIC with CFP) on page 1298</a></li> </ul>

## vlan-steering (100-Gigabit Ethernet Type 4 PIC with CFP)

---

<b>Syntax</b>	<code>vlan-steering {     vlan-rule (high-low   odd-even); }</code>
<b>Hierarchy Level</b>	[edit chassis fpc slot pic slot forwarding-mode]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.4.
<b>Description</b>	<p>Configure the 100-Gigabit Ethernet Type 4 PIC with CFP (PD-ICE-CFP-FPC4) to interoperate with 100 gigabit Ethernet interfaces from other vendors.</p> <p>The other statement is explained separately.</p>
<b>Required Privilege Level</b>	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring VLAN Steering Mode for 100-Gigabit Ethernet Type 4 PIC with CFP on page 430</a></li><li>• <a href="#">forwarding-mode (100-Gigabit Ethernet) on page 1065</a></li><li>• <a href="#">sa-multicast (100-Gigabit Ethernet) on page 1221</a></li><li>• <a href="#">vlan-rule (100-Gigabit Ethernet Type 4 PIC with CFP) on page 1297</a></li></ul>

## vlan-tagging

<b>Syntax</b>	vlan-tagging;
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> ], [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> ]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4. Statement introduced in Junos OS Release 9.0 for EX Series switches. Statement introduced in Junos OS Release 12.2 for ACX Series Universal Access Routers. Statement introduced in Junos OS Release 13.2 for PTX Series Routers. Statement introduced in Junos OS Release 14.1X53-D10 for the QFX Series.
<b>Description</b>	For Fast Ethernet and Gigabit Ethernet interfaces, aggregated Ethernet interfaces configured for VPLS, and pseudowire subscriber interfaces, enable the reception and transmission of 802.1Q VLAN-tagged frames on the interface.

**NOTE:** On EX Series switches except for EX4300 and EX9200 switches, the **vlan-tagging** and **family ethernet-switching** statements cannot be configured on the same interface. Interfaces on EX2200, EX3200, EX3300, EX4200, and EX4500 switches are set to **family ethernet-switching** by the default factory configuration. EX6200 and EX8200 switch interfaces do not have a default family setting.

<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
---------------------------------	---

<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">802.1Q VLANs Overview on page 256</a></li> <li>• <i>vlan-id</i></li> <li>• <i>Configuring a Layer 3 Subinterface (CLI Procedure)</i></li> <li>• <a href="#">Configuring Tagged Aggregated Ethernet Interfaces on page 162</a></li> <li>• <i>Example: Configuring Layer 3 Subinterfaces for a Distribution Switch and an Access Switch</i></li> </ul>
------------------------------	---

## vlan-tags

<b>Syntax</b>	<code>vlan-tags outer [tpid].vlan-id [inner [tpid].vlan-id];</code>
<b>Hierarchy Level</b>	<code>[edit dynamic-profiles <i>profile-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i>]</code>
<b>Release Information</b>	Statement introduced in Junos OS Release 9.5. VLAN demux interface support introduced in Junos OS Release 10.2.
<b>Description</b>	For Gigabit Ethernet IQ and IQE interfaces only, binds TPIDs and 802.1Q VLAN tag IDs to a logical interface. You must include the <b>stacked-vlan-tagging</b> statement at the <code>[edit interfaces <i>interface-name</i>]</code> hierarchy level.

**NOTE:** The inner-range *vid1–vid2* option is supported on IQE PICs only.

<b>Options</b>	<code>inner [tpid].vlan-id</code> —A TPID (optional) and a valid VLAN identifier in the format <i>tpid.vlan-id</i> . When used in the <b>dynamic-profiles</b> hierarchy, specify the <code>\$junos-vlan-id</code> predefined variable to dynamically obtain the VLAN ID.
----------------	---

**NOTE:** On the network-to-network (NNI) or egress interfaces of provider edge (PE) routers, you cannot configure the inner-range *tpid. vid1–vid2* option with the `vlan-tags` statement for ISP-facing interfaces.

**Range:** For VLAN ID, 1 through 4094. VLAN ID 0 is reserved for tagging the priority of frames.

`outer [tpid].vlan-id`—A TPID (optional) and a valid VLAN identifier in the format *tpid.vlan-id*.  
When used in the **dynamic-profiles** hierarchy, specify the `$junos-stacked-vlan-id` predefined variable.

**Range:** For VLAN ID, 1 through 511 for normal interfaces, and 512 through 4094 for VLAN CCC interfaces. VLAN ID 0 is reserved for tagging the priority of frames.

<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
---------------------------------	---

<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Configuring Dual VLAN Tags on page 543</a></li> <li>• <a href="#">stacked-vlan-tagging on page 1239</a></li> </ul>
------------------------------	---

## vlan-tags (Dual-Tagged Logical Interface)

<b>Syntax</b>	<code>vlan-tags inner-list [vlan-id vlan-id-vlan-id ] outer &lt;tpid.&gt;vlan-id;</code>
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> ], [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> unit <i>logical-unit-number</i> ]
<b>Release Information</b>	Statement introduced in Junos OS Release 9.5.
<b>Description</b>	(MX Series routers only) Binds a dual-tag logical interface to a list of VLAN IDs. Configures the logical interface to receive and forward any dual-tag frame whose inner VLAN ID tag matches the list of VLAN IDs you specify.

### NOTE:

To create a circuit cross-connect (CCC) using VLAN-bundled dual-tag logical interfaces on Layer 2 VPN routing instances, you must include the `encapsulation-type` statement and specify the value `ethernet-vlan` at the one of the following hierarchy levels:

- [edit routing-instances *routing-instance-name* protocols l2vpn]
- [edit logical-systems *logical-system-name* routing-instances *routing-instance-name* protocols l2vpn]

For more information about the `encapsulation-type` configuration statement and the Layer 2 encapsulation types `ethernet` and `ethernet-vlan`, see the *Junos OS VPNs Library for Routing Devices*.

**Options** `inner-list [vlan-id vlan-id vlan-id-vlan-id]`—A list of valid VLAN ID numbers. Specify the VLAN IDs individually by using a space to separate each ID, as an inclusive list by separating the starting VLAN ID and ending VLAN ID with a hyphen, or as a combination of both.

**Range:** 1 through 4094. VLAN ID 0 is reserved for tagging the priority of frames.

`outer <tpid.>vlan-id`—An optional Tag Protocol ID (TPID) and a valid VLAN ID.

**Range:** For TPID, specify a hexadecimal value in the format `0xnnnn`.

**Range:** For VLAN ID, 1 through 4094. VLAN ID 0 is reserved for tagging the priority of frames.

**NOTE:** Configuring `inner-list` with the entire `vlan-id` range is an unnecessary waste of system resources and is not best practice. It should be used only when a subset of VLAN IDs of inner tag (not the entire range) needs to be associated with a logical interface. If you specify the entire range (1 through 4094), it has the same result as not specifying a range; however, it consumes PFE resources such as VLAN lookup tables entries, and so on.

The following examples illustrate this further:

```
[edit interfaces interface-name]  
vlan-tagging;  
unit number {  
    vlan-tags outer vid inner-list 1-4094;  
}  
  
[edit interfaces interface-name]  
vlan-tagging;  
unit number {  
    vlan-id vid;  
}
```

---

<b>Required Privilege</b>	interface—To view this statement in the configuration.
<b>Level</b>	interface-control—To add this statement to the configuration.

|------------------------------|---|

## vlan-tags (Stacked VLAN Tags)

<b>Syntax</b>	<code>vlan-tags inner <i>tpid.vlan-id</i> inner-list <i>value</i> inner-range <i>vid1—vid2</i> outer <i>tpid.vlan-id</i>;</code>
<b>Hierarchy Level</b>	[edit interfaces <i>interface-name</i> unit <i>logical-unit-number</i> ], [edit logical-systems <i>logical-system-name</i> interfaces <i>interface-name</i> <b>unit</b> <i>logical-unit-number</i> ]
<b>Release Information</b>	Statement introduced before Junos OS Release 7.4. Statement introduced in Junos OS Release 12.1X48 for PTX Series Packet Transport Routers.
<b>Description</b>	For Gigabit Ethernet IQ and IQE interfaces only, bind TPIDs and 802.1Q VLAN tag IDs to a logical interface.
<b>Options</b>	<b>inner <i>tpid.vlan-id</i></b> —A TPID and a valid VLAN identifier. <b>Range:</b> (most routers) For VLAN ID, 1 through 4094. VLAN ID 0 is reserved for tagging the priority of frames. For PTX Series, VLAN ID 0 is not supported. <b>inner-list <i>value</i></b> — List or a set of VLAN identifiers.

**NOTE:** This is supported on MX Series routers with Trio-based FPCs.

**inner-range *tpid. vid1—vid2***—Specify a TPID and a range of VLAN IDs where *vid1* is the start of the range and *vid2* is the end of the range.

**NOTE:** On the network-to-network (NNI) or egress interfaces of provider edge (PE) routers, you cannot configure the inner-range *tpid. vid1—vid2* option with the `vlan-tags` statement for ISP-facing interfaces.

**Range:** For VLAN ID, 1 through 4094. VLAN ID 0 is reserved for tagging the priority of frames.

**outer *tpid.vlan-id***—A TPID and a valid VLAN identifier.

**Range:** (most routers) For VLAN ID, 1 through 511 for normal interfaces, and 512 through 4094 for VLAN CCC interfaces. VLAN ID 0 is reserved for tagging the priority of frames. For PTX Series, VLAN ID 0 is not supported.

**NOTE:** Configuring inner-range with the entire `vlan-id` range consumes system resources and is not a best practice. The inner-range must be used only when a subset of VLAN IDs of inner tag (not the entire range) needs to be associated with a logical interface. If you specify the entire range (1 through 4094), it has the same result as not specifying a range; however, it consumes Packet Forwarding Engine resources such as VLAN lookup table entries, and so on.

The following examples illustrate this further:

```
[edit interfaces interface-name]  
stacked-vlan-tagging;  
unit number {  
    vlan-tags outer vid inner-range 1-4094;  
}  
  
[edit interfaces interface-name]  
vlan-tagging;  
unit number {  
    vlan-id vid;  
}
```

---

<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring Dual VLAN Tags on page 543</a></li><li>• <a href="#">Configuring Flexible VLAN Tagging on PTX Series Packet Transport Routers on page 261</a></li><li>• <a href="#">stacked-vlan-tagging on page 1239</a></li></ul>

---

## wait-to-block-interval

---

<b>Syntax</b>	<code>wait-to-block-interval <i>number</i>;</code>
<b>Hierarchy Level</b>	<code>[edit protocols <a href="#">protection-group ethernet-ring</a> <i>ring-name</i>]</code>
<b>Release Information</b>	Statement introduced in Junos OS Release 14.2.
<b>Description</b>	Enable the Wait to Block (WTB) timer interval when clearing force switch and manual switch commands.
<b>Options</b>	<i>number</i> —Wait-to-block interval, in seconds. <b>Range:</b> 5 through 10 s <b>Default:</b> 5 s
<b>Required Privilege Level</b>	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Ethernet Ring Protection Switching Overview on page 233</a></li><li>• <a href="#">Configuring Ethernet Ring Protection Switching (CLI Procedure)</a></li></ul>

## west-interface

**Syntax**

```
west-interface {
  node-id mac-address;
  control-channel channel-name {
    vlan number;
    interface name interface-name
  }
  interface-none
  ring-protection-link-end;
  virtual-control-channel {
    west-interface name;
    east-interface name;
  }
}
```

**Hierarchy Level** [edit protocols [protection-group ethernet-ring ring-name](#)]

**Release Information** Statement introduced in Junos OS Release 9.5.  
Statement introduced in Junos OS Release 12.1 for EX Series switches.  
Statement introduced in Junos OS Release 14.153-D10 for QFX Series switches.

**Description** Define one of the two interface ports for Ethernet ring protection, the other being defined by the **east-interface** statement at the same hierarchy level. The interface must use the control channel's logical interface name. The control channel is a dedicated VLAN channel for the ring port.

**NOTE:** Always configure this port second, after configuring the **east-interface** statement.

The statements are explained separately.

**Required Privilege Level** interface—To view this statement in the configuration.  
interface-control—To add this statement to the configuration.

## clear interfaces interface-set statistics

---

<b>Syntax</b>	clear interfaces interface-set statistics <i>interface-set-name</i>
<b>Release Information</b>	Command introduced in Junos OS Release 8.5.
<b>Description</b>	Set interface set statistics to zero.
<b>Options</b>	<i>interface-set-name</i> —Set statistics on a specified interface set to zero. Wildcard values can be used in the interface set name. This command will not clear the statistics of the member logical interfaces.
<b>Required Privilege Level</b>	clear
<b>List of Sample Output</b>	<a href="#">clear interfaces interface-set statistics on page 1310</a>
<b>Output Fields</b>	When you enter this command, you are provided feedback on the status of your request.

### Sample Output

#### clear interfaces interface-set statistics

```
user@host> clear interfaces interface-set statistics
```

## clear interfaces interval

<b>Syntax</b>	clear interfaces interval <i>interface-name</i>
<b>Release Information</b>	Command introduced before Junos OS Release 7.4.
<b>Description</b>	Clear the channel service unit (CSU) alarm and defect counters so that only the current time interval is displayed. This operation affects the <b>show interface interval</b> command, but not an SNMP query.
<b>Options</b>	<i>interface-name</i> —Name of a particular interface.
<b>Required Privilege Level</b>	clear
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">show interfaces interval on page 1730</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">clear interfaces interval on page 1311</a>
<b>Output Fields</b>	See <a href="#">show interfaces interval</a> for an explanation of output fields.

## Sample Output

### clear interfaces interval

The following example displays the output for a T3 interface before and after the **clear interfaces** command is entered:

```

user@host> show interfaces interval t3-0/3/0:4
Physical interface: t3-0/3/0:4, SNMP ifIndex: 23
  17:43-current:
    LCV: 0, PCV: 0, CCV: 0, LES: 0, PES: 0, PSES: 0, CES: 0, CSES: 0,
    SEFS: 0, UAS: 0
  17:28-17:43:
    LCV: 0, PCV: 0, CCV: 0, LES: 0, PES: 0, PSES: 0, CES: 0, CSES: 0,
    SEFS: 0, UAS: 0
  17:13-17:28:
    LCV: 0, PCV: 0, CCV: 0, LES: 0, PES: 0, PSES: 0, CES: 0, CSES: 0,
    SEFS: 0, UAS: 0
  16:58-17:13:
    LCV: 0, PCV: 0, CCV: 0, LES: 0, PES: 0, PSES: 0, CES: 0, CSES: 0,
    SEFS: 0, UAS: 0
  16:43-16:58:
    LCV: 0, PCV: 0, CCV: 0, LES: 0, PES: 0, PSES: 0, CES: 0, CSES: 0,
    SEFS: 0, UAS: 0
  16:28-16:43:
    LCV: 0, PCV: 0, CCV: 0, LES: 0, PES: 0, PSES: 0, CES: 0, CSES: 0,
    CES: 195, CSES: 195, SEFS: 195, UAS: 206
  14:58-15:13:
    LCV: 35, PCV: 163394, CCV: 54485, LES: 0, PES: 35, PSES: 35, CES:
    35, CSES: 35, SEFS: 35, UAS: 32
  Interval Total:
    LCV: 230, PCV: 1145859, CCV: 455470, LES: 0, PES: 230, PSES: 230,
    CES: 230, CSES: 230, SEFS: 230, UAS: 238

```

```
user@host> clear interfaces interval t3-0/3/0:4
```

```
user@host> show interfaces interval t3-0/3/0:4
Physical interface: t3-0/3/0:4, SNMP ifIndex: 23
  17:43-current:
    LCV: 0, PCV: 0, CCV: 0, LES: 0, PES: 0, PSES: 0, CES: 0, CSES: 0,
    SEFS: 0, UAS: 0
  Interval Total:
    LCV: 0, PCV: 0, CCV: 0, LES: 0, PES: 0, PSES: 0, CES: 0, CSES: 0, SEFS: 0,
    UAS: 0
```

## clear interfaces aeX forwarding-options load-balance state

---

<b>Syntax</b>	clear interfaces aeX unit <i>logical-unit-number</i> aggregate forwarding-options load-balance state
<b>Release Information</b>	Command introduced in Junos OS Release 13.2R1.
<b>Description</b>	<p>Clear the specified aggregate Ethernet interface load balancing state and re-create it newly. If the traffic flows become aged frequently, then the device needs to remove or refresh the load balancing states. As a result, you must configure rebalancing or run the clear command at periodic intervals for proper load-balancing. Otherwise, traffic skewing can occur.</p> <p>If you observe load distribution to be not very effective, you can clear the load-balancing states or use rebalancing functionality to cause an automatic clearance of the hardware states. When you configure the rebalancing facility, traffic flows can get redirected to different links, which can cause packet reordering.</p>
<b>Options</b>	<p><b>aeX</b>—Name of a particular aggregated Ethernet interface.</p> <p><b>logical-unit-number</b>—Number of the logical unit of the interface.</p> <p><b>forwarding-options load-balance state</b>—Cause the load-balancing state to be cleared for the specific interface.</p>
<b>Required Privilege Level</b>	clear
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">show interfaces interval on page 1730</a></li></ul>
<b>List of Sample Output</b>	<a href="#">clear interfaces aeX aggregate forwarding-options on page 1314</a>

### Sample Output

#### clear interfaces aeX aggregate forwarding-options

```
user@host> clear interfaces ae1 aggregate forwarding-options load-balance state
```

---

## clear interfaces aggregate forwarding-options load-balance state

---

<b>Syntax</b>	clear interfaces aggregate forwarding-options load-balance state
<b>Release Information</b>	Command introduced in Junos OS Release 13.2R1.
<b>Description</b>	Clear all the aggregate Ethernet interface load balancing states and re-create them newly. If the traffic flows become aged frequently, then the device needs to remove or refresh the load balancing states. As a result, you must configure rebalancing or run the clear command at periodic intervals for proper load-balancing. Otherwise, traffic skewing can occur.
<b>Options</b>	<i>interface-name</i> —Name of a particular interface.
<b>Required Privilege Level</b>	clear
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">show interfaces interval on page 1730</a></li></ul>
<b>List of Sample Output</b>	<a href="#">clear interfaces aggregate forwarding-options on page 1315</a>

### Sample Output

#### clear interfaces aggregate forwarding-options

```
user@host> clear interfaces aggregate forwarding-options load-balance state
```

## clear interfaces transport pm

---

<b>Syntax</b>	clear interfaces transport pm (all   optics   otn) (all   current   current-day) (all   <i>interface-name</i> )
<b>Release Information</b>	Command introduced in Junos OS Release 14.2 on the PTX Series.
<b>Description</b>	Clear optics and OTN information from the transport performance monitoring data.
<b>Options</b>	<p>(all   optics   otn)—Clear both optics and OTN information or either only optics or only OTN information.</p> <p>(all   current   current-day)—Clear information for the current 15-minute interval, the ninety-six 15-minute intervals, the current day, and the previous day; information only for the current 15-minute interval; or information only for the current 24 hours.</p> <p>(all   <i>interface-name</i>)—Clear information for all interfaces or only for the specified interface (for example, <i>et-fpc/pic/port</i>).</p>
<b>Required Privilege Level</b>	clear
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">show interfaces transport pm on page 1748</a></li><li>• <a href="#">100-Gigabit Ethernet OTN Options Configuration Overview on page 457</a></li><li>• <a href="#">tca on page 895</a></li></ul>
<b>List of Sample Output</b>	<a href="#">clear interfaces transport pm on page 1316</a>
<b>Output Fields</b>	When you enter this command, you are provided feedback on the status of your request.

### Sample Output

#### clear interfaces transport pm

```
user@host> clear interfaces transport pm transport otn current all
```

## clear lldp neighbors

<b>Syntax</b>	<code>clear lldp neighbor</code> <code>&lt;interface <i>interface-name</i>&gt;</code>
<b>Release Information</b>	Command introduced in Junos OS Release 9.6.
<b>Description</b>	<p>Clear information regarding all Link Layer Discovery Protocol (LLDP) neighbors or LLDP neighbors of the specified interface.</p> <p>For information about interface names, see <i>Interface Naming Overview</i>. For information about interface names for TX Matrix routers, see <i>TX Matrix Router Chassis and Interface Names</i>. For information about FPC numbering on TX Matrix routers, see <i>Routing Matrix with a TX Matrix Router FPC Numbering</i>.</p> <p>For information about interface names in the Junos Fusion technology, see <i>Understanding Junos Fusion Ports</i>.</p>
<b>Options</b>	<code>interface <i>interface-name</i></code> —(Optional) Clear the LLDP neighbors on the specified interface.
<b>Required Privilege Level</b>	clear
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">clear lldp statistics on page 1318</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">clear lldp neighbors on page 1317</a> <a href="#">clear lldp neighbors interface ge-0/1/1.0 on page 1317</a>
<b>Output Fields</b>	When you enter this command, you are provided no feedback on the status of your request. You can enter the <code>show lldp neighbors</code> command before and after clearing the LLDP neighbors to verify the clear operation.

## Sample Output

### clear lldp neighbors

```
user@switch> clear lldp neighbors
```

### clear lldp neighbors interface ge-0/1/1.0

```
user@switch> clear lldp neighbors interface ge-0/1/1.0
```

## clear lldp statistics

---

<b>Syntax</b>	<b>clear lldpp neighbor</b> <b>&lt;interface <i>interface-name</i>&gt;</b>
<b>Release Information</b>	Command introduced in Junos OS Release 9.6.
<b>Description</b>	<p>Clear all Link Layer Discovery Protocols (LLDP) statistics or LLDP statistics associated with the specified interface.</p> <p>For information about interface names, see <i>Interface Naming Overview</i>. For information about interface names for TX Matrix routers, see <i>TX Matrix Router Chassis and Interface Names</i>. For information about FPC numbering on TX Matrix routers, see <i>Routing Matrix with a TX Matrix Router FPC Numbering</i>.</p> <p>For information about interface names in the Junos Fusion technology, see <i>Understanding Junos Fusion Ports</i>.</p>
<b>Options</b>	<b>interface <i>interface-name</i></b> —(Optional) Clear LLDP statistics on the specified interface.
<b>Required Privilege Level</b>	clear
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">clear lldp neighbors on page 1317</a></li></ul>
<b>List of Sample Output</b>	<a href="#">clear lldp statistics on page 1318</a> <a href="#">clear lldp statistics interface ge-0/1/1.0 on page 1318</a>
<b>Output Fields</b>	When you enter this command, you are provided no feedback on the status of your request. You can enter the <b>show lldp statistics</b> command before and after clearing the LLDP statistics to verify the clear operation.

### Sample Output

#### clear lldp statistics

```
user@switch> clear lldp statistics
```

#### clear lldp statistics interface ge-0/1/1.0

```
user@switch> clear lldp statistics interface ge-0/1/1.0
```

## clear oam ethernet connectivity-fault-management continuity-measurement

<b>Syntax</b>	clear oam ethernet connectivity-fault-management continuity-measurement maintenance-domain <i>md-name</i> maintenance-association <i>ma-name</i> <local-mep <i>local-mep-id</i> > <remote-mep <i>remote-mep-id</i> >
<b>Release Information</b>	Command introduced in Junos OS Release 11.1.
<b>Description</b>	For all routers that support IEEE 802.1ag OAM connectivity fault management (CFM), clear the existing continuity measurement and restart counting the operational uptime (that is, the total time during which CCM adjacency is active for a particular remote MEP.).
<b>Options</b>	<p><b>maintenance-domain <i>md-name</i></b>—Name of an existing CFM maintenance domain.</p> <p><b>maintenance-association <i>ma-name</i></b>—Name of an existing CFM maintenance association.</p> <p><b>local-mep <i>local-mep-id</i></b>—(Optional) Display connectivity fault management information for the specified local MEP only.</p> <p><b>remote-mep <i>remote-mep-id</i></b>—(Optional) Display connectivity fault management information for the specified remote MEP only.</p>
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Managing Continuity Measurement Statistics on page 747</a></li> <li>• <i>Ethernet Interfaces Feature Guide for Routing Devices</i></li> </ul>
<b>List of Sample Output</b>	<a href="#">clear oam ethernet connectivity-fault-management continuity-measurement on page 1319</a>
<b>Output Fields</b>	When you enter this command, you are provided feedback on the status of your request.

### Sample Output

#### clear oam ethernet connectivity-fault-management continuity-measurement

```
user@host> clear oam ethernet connectivity-fault-management continuity-measurement
maintenance-domain md5 maintenance-association ma5 local-mep 100 remote-mep 102
Continuity measurement restarted.
```

## clear oam ethernet connectivity-fault-management linktrace path-database

---

<b>Syntax</b>	<b>clear oam ethernet connectivity-fault-management linktrace path-database mac-address maintenance-association <i>ma-name</i> maintenance-domain <i>md-name</i></b>
<b>Release Information</b>	Command introduced in Junos OS Release 9.0.
<b>Description</b>	Clear all the linktrace entries and the relevant path information from the database for a particular remote host on M320, MX Series, T320, and T640 routers.
<b>Options</b>	<p><b>mac-address</b>—Clear connectivity fault management path database information for the specified MAC address of the remote host.</p> <p><b>maintenance-association <i>ma-name</i></b>—Clear connectivity fault management path database information for the specified maintenance association.</p> <p><b>maintenance-domain <i>md-name</i></b>—Clear connectivity fault management path database information for the specified maintenance domain.</p>
<b>Required Privilege Level</b>	view

### Sample Output

#### clear oam ethernet connectivity-fault-management linktrace path-database

```
user@host> clear oam ethernet connectivity-fault-management linktrace path-database
maintenance-domain md1 maintenance-association ma3 00058573e483
This command produces no output.
```

## clear oam ethernet connectivity-fault-management loss-statistics

<b>Syntax</b>	<code>clear oam ethernet connectivity-fault-management loss-statistics</code> <code>&lt;interface ethernet-interface-name&gt;</code> <code>&lt;level md-level&gt;</code>
<b>Release Information</b>	Command introduced in Junos OS Release 11.1.
<b>Description</b>	<p>For all routers that support IEEE 802.1ag OAM connectivity fault management (CFM), clear all loss statistics maintained by CFM for a given maintenance domain and maintenance association.</p> <p>In addition, for Ethernet interfaces on MX Series routers, clear any ITU-T Y.1731 Ethernet frame loss measurement (ETH-LM) statistics.</p> <p>By default, the command clears ETH-LM statistics for CFM maintenance association end points (MEPs) attached to any interface on the router.</p>
<b>Options</b>	<p><code>interface ethernet-interface-name</code>—(Optional) Clear ETH-LM statistics and ETH-LM frame counts only for MEPs attached to the specified Ethernet physical interface.</p> <p><code>level md-level</code>—(Optional) Clear ETH-LM statistics and ETH-LM frame counts only for MEPs within CFM maintenance domains (MDs) of the specified level.</p>
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Clearing ETH-LM Statistics on page 746</a></li> <li>• <a href="#">Displaying ETH-LM Statistics on page 745</a></li> <li>• <a href="#">Managing ETH-LM Statistics on page 745</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">clear oam ethernet connectivity-fault-management loss-statistics on page 1321</a>
<b>Output Fields</b>	When you enter this command, you are provided feedback on the status of your request.

### Sample Output

#### clear oam ethernet connectivity-fault-management loss-statistics

```
user@host> clear oam ethernet connectivity-fault-management loss-statistics
Cleared loss measurements statistics of all CFM sessions
```

## clear oam ethernet connectivity-fault-management policer

---

<b>Syntax</b>	clear oam ethernet connectivity-fault-management policer maintenance-domain <i>md-name</i> maintenance-association <i>ma-name</i>
<b>Release Information</b>	Command introduced in Junos OS Release 10.0.
<b>Description</b>	On M7i and M10i with the Enhanced CFEB (CFEB-E), M320, M120, MX Series, T320, and T640 routers, clear connectivity-fault-management policer statistics.
<b>Options</b>	<p>The following options are supported:</p> <p><b>maintenance-domain <i>md-name</i></b>—Name of an existing CFM maintenance domain. If this option is not specified, policer statistics are cleared for all maintenance associations for all maintenance domains.</p> <p><b>maintenance-association <i>ma-name</i></b>—Name of an existing CFM maintenance association. If this option is not specified, policer statistics are cleared for all maintenance associations for given maintenance domain. This option cannot be specified without specifying maintenance-domain name.</p>
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">show oam ethernet connectivity-fault-management policer on page 1832</a></li></ul>
<b>Output Fields</b>	When you enter this command, you are provided feedback on the status of your request.

### clear oam ethernet connectivity-fault-management policer

```
user@host> clear oam ethernet connectivity-fault-management policer
Policer statistics cleared
```

### clear oam ethernet connectivity-fault-management policer maintenance-domain *md-name* maintenance-association *ma-name*

```
user@host> clear oam ethernet connectivity-fault-management policer
maintenance-domain md5 maintenance-association ma5-1
Policer statistics cleared
```

## clear oam ethernet connectivity-fault-management statistics

<b>Syntax</b>	<code>clear oam ethernet connectivity-fault-management statistics</code> <code>&lt;interface ethernet-interface-name&gt;</code> <code>&lt;level md-level&gt;</code>
<b>Release Information</b>	Command introduced in Junos OS Release 8.4. Support for ETH-DM statistics and frame counts added in Junos OS Release 9.5.
<b>Description</b>	For all routers that support IEEE 802.1ag OAM connectivity-fault management (CFM), clear all statistics maintained by CFM.  In addition, for Ethernet interfaces on Dense Port Concentrators (DPCs) in MX Series routers only, also clear any ITU-T Y.1731 Ethernet frame delay measurement (ETH-DM) statistics and ETH-DM frame counts.  By default, the command clears CFM statistics and ETH-DM statistics and frame counts for CFM maintenance association end points (MEPs) attached to any interface on the router.
<b>Options</b>	<b>ethernet-interface-name</b> —(Optional) Clear CFM statistics, ETH-DM statistics, and ETH-DM frame counts only for MEPs attached to the specified Ethernet physical interface.  <b>level</b> —(Optional) Clear CFM statistics, ETH-DM statistics, and ETH-DM frame counts only for MEPs within CFM maintenance domains (MDs) of the specified level.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">show oam ethernet connectivity-fault-management delay-statistics on page 1782</a></li> <li>• <a href="#">show oam ethernet connectivity-fault-management interfaces on page 1790</a></li> <li>• <a href="#">show oam ethernet connectivity-fault-management mep-database on page 1808</a></li> <li>• <a href="#">show oam ethernet connectivity-fault-management mep-statistics on page 1819</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">clear oam ethernet connectivity-fault-management statistics on page 1323</a>
<b>Output Fields</b>	When you enter this command, you are provided feedback on the status of your request.

### Sample Output

clear oam ethernet connectivity-fault-management statistics

```
user@host> clear oam ethernet connectivity-fault-management statistics
Cleared statistics of all CFM sessions
```

## clear oam ethernet connectivity-fault-management synthetic-loss-measurement

---

<b>Syntax</b>	<code>clear oam ethernet connectivity-fault-management synthetic-loss-measurement maintenance-domain <i>md-name</i> maintenance-association <i>ma-name</i> &lt;local-mep <i>local-mep-id</i>&gt; &lt;remote-mep <i>remote-mep-id</i>&gt;</code>
<b>Release Information</b>	Command introduced in Junos OS Release 13.2 for MX Series routers.
<b>Description</b>	(MX Series routers)—For all routers that support IEEE 802.1ag OAM connectivity fault management (CFM), clear the existing on-demand Ethernet synthetic loss measurement (ETH-SLM) statistics and restart counting the ETH-SLM frame counts and statistics.
<b>Options</b>	<p><b>maintenance-domain <i>md-name</i></b>—Name of an existing CFM maintenance domain.</p> <p><b>maintenance-association <i>ma-name</i></b>—Name of an existing CFM maintenance association.</p> <p><b>local-mep <i>local-mep-id</i></b>—(Optional) Clear connectivity fault management information for the specified local MEP only.</p> <p><b>remote-mep <i>remote-mep-id</i></b>—(Optional) Clear connectivity fault management information for the specified remote MEP only.</p>
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">monitor ethernet synthetic-loss-measurement on page 1340</a></li><li>• <a href="#">show oam ethernet connectivity-fault-management synthetic-loss-statistics on page 1840</a></li></ul>

<b>Output Fields</b>	When you enter this command, you are provided feedback on the status of your request.

### Sample Output

clear oam ethernet connectivity-fault-  
management synthetic-loss-  
measurement

```
user@host> clear oam ethernet connectivity-fault-management synthetic-loss-measurement  
maintenance-domain md5 maintenance-association ma5 local-mep 100 remote-mep 102  
Synthetic loss measurement restarted.
```

## clear oam ethernet link-fault-management state

<b>Syntax</b>	clear oam ethernet link-fault-management state < <i>interface-name</i> >
<b>Release Information</b>	Command introduced in Junos OS Release 8.4.
<b>Description</b>	On all M Series, MX Series, ACX series, PTX Series, T320, and T640 routers, clear link fault management state information, restart the link discovery process, and reset OAM loopback state (if set previously) on Ethernet interfaces.
<b>Options</b>	<p><b>none</b>—Clear OAM link fault management state information, restart the link discovery process, and reset OAM loopback state (if set previously) on all Ethernet interfaces.</p> <p><b><i>interface-name</i></b>—(Optional) Clear OAM link fault management state information, restart the link discovery process, and reset OAM loopback state (if set previously) on the specified Ethernet interface only.</p>
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">clear oam ethernet link-fault-management state on page 1325</a>
<b>Output Fields</b>	When you enter this command, you are provided feedback on the status of your request.

### Sample Output

#### clear oam ethernet link-fault-management state

```
user@host> clear oam ethernet link-fault-management state ge-0/3/3
Cleared link-fault-management state for interface ge-0/3/3
```

## clear oam ethernet link-fault-management statistics

---

<b>Syntax</b>	clear oam ethernet link-fault-management < <i>interface-name</i> >
<b>Release Information</b>	Command introduced in Junos OS Release 8.2.
<b>Description</b>	On M320, M120, MX Series, PTX Series, T320, and T640 routers, clear Operation, Administration, and Management (OAM) link fault management statistics or state information from Ethernet interfaces.
<b>Options</b>	<b>none</b> —Clear OAM link fault management statistics from all Ethernet interfaces.  <b><i>interface-name</i></b> —(Optional) Clear OAM link fault management statistics from the specified Ethernet interface only.
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">clear oam ethernet link-fault-management statistics on page 1326</a>
<b>Output Fields</b>	When you enter this command, you are provided feedback on the status of your request.

### Sample Output

#### clear oam ethernet link-fault-management statistics

```
user@host> clear oam ethernet link-fault-management statistics
Cleared link-fault-management statistics for all interfaces
```

## clear protection-group ethernet-ring statistics

<b>Syntax</b>	clear protection-group ethernet-ring statistics <group-name <i>group-name</i> >
<b>Release Information</b>	Command introduced in Junos OS Release 9.4.
<b>Description</b>	On MX Series routers, clear the statistics for all Ethernet ring protection groups or a specific Ethernet ring protection group.
<b>Options</b>	<b>group-name <i>group-name</i></b> —(Optional) Clear the Ethernet ring protection statistics for the specified group.
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">clear protection-group ethernet-ring statistics on page 1327</a> <a href="#">clear protection-group ethernet-ring statistics on page 1327</a>
<b>Output Fields</b>	When you enter this command, you are provided feedback on the status of your request.

### Sample Output

#### clear protection-group ethernet-ring statistics

To clear all Ethernet ring protection group statistics for all protection groups, use the following command:

```
user@host> clear protection-group ethernet-ring statistics
```

### Sample Output

#### clear protection-group ethernet-ring statistics

To clear Ethernet ring protection group statistics for the group *my\_prot\_group*, use the following command:

```
user@host> clear protection-group ethernet-ring statistics group-name my_prot_group
```

## clear security mka statistics (MX Series)

---

<b>Syntax</b>	clear security mka statistics <interface <i>interface-name</i> >
<b>Release Information</b>	Command introduced in Junos OS Release 15.1 for MX240, MX480, and MX960 routers.
<b>Description</b>	<p>Clear—reset to zero (0)—all MACsec Key Agreement (MKA) protocol statistics.</p> <p>You are clearing the statistics that are viewed using the <b>show security mka statistics</b> when you enter this command.</p>
<b>Options</b>	<p><b>none</b>—Clear all MKA counters for all interfaces on the switch.</p> <p><b>interface <i>interface-name</i></b>—(Optional) Clear MKA traffic counters for the specified interface only.</p>
<b>Required Privilege Level</b>	clear

### Sample Output

#### clear security mka statistics

```
user@switch> clear security mka statistics
```

## clear security mka statistics (MX Series)

---

<b>Syntax</b>	clear security mka statistics <interface <i>interface-name</i> >
<b>Release Information</b>	Command introduced in Junos OS Release 15.1 for MX240, MX480, and MX960 routers.
<b>Description</b>	<p>Clear—reset to zero (0)—all MACsec Key Agreement (MKA) protocol statistics.</p> <p>You are clearing the statistics that are viewed using the <b>show security mka statistics</b> when you enter this command.</p>
<b>Options</b>	<p><b>none</b>—Clear all MKA counters for all interfaces on the switch.</p> <p><b>interface <i>interface-name</i></b>—(Optional) Clear MKA traffic counters for the specified interface only.</p>
<b>Required Privilege Level</b>	clear

## Sample Output

### clear security mka statistics

```
user@switch> clear security mka statistics
```

## monitor ethernet delay-measurement

**Syntax**    monitor ethernet delay-measurement  
                  maintenance-domain *md-name*  
                  maintenance-association *ma-name*  
                  (one-way | two-way)  
                  (*remote-mac-address* | mep *remote-mep-id*)  
                  <count *frame-count*>  
                  <local-mep *mep-id*>  
                  <wait *interval-seconds*>  
                  <priority *802.1p value*>  
                  <size>  
                  <no-session-id-tlv>  
                  <xml>

**Release Information**    Command introduced in Junos OS Release 9.5.  
                  **local-mep** option introduced in Junos OS Release 15.1.

**Description**    Start an ITU-T Y.1731 Ethernet frame delay measurement session between the specified local connectivity fault management (CFM) maintenance association end point (MEP) and the specified remote MEP, and display a summary of the frames exchanged in the measurement session. Frame delay measurement statistics are stored at one of the MEPs for later retrieval.

**NOTE:** If you attempt to monitor delays to a nonexistent MAC address, you must type Ctrl +c to explicitly quit the **monitor ethernet delay-measurement** command and return to the CLI command prompt.

To start an Ethernet frame delay measurement session, the router initiates an exchange of frames carrying one-way or two-way frame delay measurement protocol data units (PDUs) between the local and remote MEPs. The frame counts—the types of and number of Ethernet frame delay measurement PDU frames exchanged to measure frame delay times—are displayed as the runtime output of the **monitor ethernet delay-measurement** command and are also stored at both the initiator and receiver MEPs for later retrieval. Ethernet frame delay measurement statistics, described below, are measured and stored at only one of the MEPs:

Frame delay—The difference, in microseconds, between the time a frame is sent and when it is received.

Frame delay variation—The difference, in microseconds, between consecutive frame delay values. Frame delay variation is sometimes called “frame jitter.”

For one-way Ethernet frame delay measurement, only the receiver MEP (on the remote system) collects statistics. For two-way Ethernet frame delay measurement, only the initiator MEP (on the local system) collects statistics.

**Options**    **maintenance-domain *md-name***—Name of an existing CFM maintenance domain.

**maintenance-association *ma-name***—Name of an existing CFM maintenance association.

**one-way**—Measurement type is one-way Ethernet frame delay measurement, which is based on the difference between the time at which the initiator MEP sends a one-way delay measurement request (IDM) frame and the time at which the receiver MEP receives the frame.

**two-way**—Measurement type is two-way Ethernet frame delay measurement, which is based on the difference between the time at which the initiator MEP sends a two-way delay measurement message (DMM) frame and the time at which the initiator MEP receives an associated two-way delay measurement reply (DMR) frame from the responder MEP, subtracting the time elapsed at the responder MEP.

**mep *remote-mep-id***—Numeric identifier of the peer MEP with which to perform Ethernet frame delay measurement. The discovered MAC address of the peer MEP is used. The range of values is 1 through 8191.

**remote-mac-address**—Unicast MAC address of the peer MEP with which to perform Ethernet frame delay measurement. Specify the MAC address as six hexadecimal bytes in one of the following formats: *nnnn.nnnn.nnnn* or *nn:nn:nn:nn:nn:nn*. For example, **0011.2233.4455** or **00:11:22:33:44:55**. Multicast MAC addresses are not supported.

**count *frame-count***—(Optional) Number of frames to send to the specified peer MEP. The range of values is 1 through 65,535 frames. The default value is 10 frames.

**local-mep *mep-id***—(Required when multiple MEPs are configured) Identifier for the local maintenance association end point.

**wait *interval-seconds***—(Optional) Number of seconds to wait between sending frames. The range of values is from 1 through 255 seconds. The default value is 1 second.

**priority *802.1p value***—(Optional) Priority of the delay measurement request frame supported by both one-way delay measurement and two-way delay measurement. The range of values is from 0 through 7. The default value is zero.

**size**—(Optional) Size of the data TLV to be included in the request frame. The range of values is from 1 through 1400 bytes.

**no-session-id-tlv**—(Optional) Prevent insertion of the session ID TLV in the request frame.

**xml**—(Optional) Allow the output of the command to be displayed in XML format supported by both one-way delay measurement and two-way delay measurement. Note that the only way to get output in XML format is to use the **xml** argument. The **display xml** command does not work.

**Additional Information** To display the frame counts collected at an MEP as the result of this command, see the following command descriptions in the [CLI Explorer](#):

- **show oam ethernet connectivity-fault-management interfaces detail**
- **show oam ethernet connectivity-fault-management mep-database**

- **show oam ethernet connectivity-fault-management mep-statistics**

To display the statistics collected at an MEP as the result of this command, see the following command descriptions in the [CLI Explorer](#).

- **show oam ethernet connectivity-fault-management delay-statistics**
- **show oam ethernet connectivity-fault-management mep-statistics**

To clear both the frame counts and the statistics collected for MEPs, use the **clear oam ethernet connectivity-fault-management statistics** command, described in the [CLI Explorer](#).

For a complete description of Ethernet frame delay measurement, see the *ITU-T Y.1731 Ethernet Service OAM* topics in the *Junos OS Network Interfaces Library for Routing Devices*.

**Required Privilege Level** trace and maintenance

**List of Sample Output** [monitor ethernet delay-measurement one-way on page 1333](#)  
[monitor ethernet delay-measurement two-way on page 1334](#)  
[monitor ethernet delay-measurement two-way \(Invalid DMR Frames Received\) on page 1334](#)

**Output Fields** The **monitor ethernet delay-measurement** command displays different output at the CLI, depending on whether you start a one-way or two-way frame delay measurement:

- [Table 85 on page 1332](#) lists the run-time output fields for the **monitor ethernet delay-measurement one-way** command.
- [Table 86 on page 1333](#) lists the run-time output fields for the **monitor ethernet delay-measurement two-way** command.

Output fields are listed in the approximate order in which they appear.

**Table 85: monitor ethernet delay-measurement one-way Output Fields**

Output Field Name	Output Field Description
One-way ETH-DM request to	Unicast MAC address of the remote peer MEP.
Interface	Name of the Ethernet physical, logical, or trunk interface to which the local MEP is attached.
IDM Frames sent	PDU frames sent to the remote MEP in this ETH-DM session.
Packets transmitted	Total number of IDM PDU frames sent to the remote MEP during this measurement session.
Average delay	Average two-way frame delay measured in this session.
Average delay variation	Average frame jitter measured in this session.
Best case delay	Lowest two-way frame delay measured in this session.

Table 85: monitor ethernet delay-measurement one-way Output Fields (*continued*)

Output Field Name	Output Field Description
<b>Worst case delay</b>	Highest two-way frame delay measured in this session.

**NOTE:** For one-way delay measurement, these CLI output fields display **NA** ("not applicable") at the initiator MEP because one-way frame delay measurements occur at the receiver MEP.

Table 86: monitor ethernet delay-measurement two-way Output Fields

Output Field Name	Output Field Description
<b>Two-way Ethernet frame delay measurement request to</b>	Unicast MAC address of the remote peer MEP.
<b>Interface</b>	Name of the Ethernet physical, logical, or trunk interface to which the local MEP is attached.
<b>DMR received from</b>	Unicast MAC address of the remote MEP that transmitted this DMR frame in response to a DMM frame.
<b>Delay</b>	Two-way delay, in microseconds, for the initiator-transmitted DMM frame.
<b>Delay variation</b>	Difference, in microseconds, between the current and previous delay values. This is also known as frame jitter.
<b>Packets transmitted</b>	Total number of DMM PDU frames sent to the remote MEP in this measurement session.
<b>Valid packets received</b>	Total number of DMR PDU frames received from the remote MEP in this measurement session.
<b>Average delay</b>	Average two-way frame delay measured in this session.
<b>Average delay variation</b>	Average frame jitter measured in this session.
<b>Best case delay</b>	Lowest two-way frame delay measured in this session.
<b>Worst case delay</b>	Highest two-way frame delay measured in this session.

```

## monitor ethernet loss-measurement

**Syntax** monitor ethernet loss-measurement  
 maintenance-domain *md-name*  
 maintenance-association *ma-name*  
 (*remote-mac-address* | mep *remote-mep-id*)  
 <count *frame-count*>  
 <local-mep *mep-id*>  
 <wait *interval-seconds*>  
 <priority *802.1p value*>  
 <no-session-id-tlv>  
 <xml>

**Release Information** Command introduced in Junos OS Release 11.1.  
**local-mep** option introduced in Junos OS Release 15.1

**Description** Start an ITU-T Y.1731 Ethernet frame loss measurement session between the specified local connectivity fault management (CFM) maintenance association end point (MEP) and the specified remote MEP, and display a count of transmitted and received data frames between the pair of MEPs. Frame loss measurement statistics are stored at one of the MEPs for later retrieval. For MX Series routers, supports point-to-point down MEPs for Ethernet interfaces (as per IEEE 802.1ag over VPWS).

**NOTE:** If you attempt to monitor loss to a nonexistent MAC address, you must type Ctrl + c to explicitly quit the **monitor ethernet loss-measurement** command and return to the CLI command prompt.

To start an Ethernet frame loss measurement session, the router first sends frames with ETH-LM information to a peer MEP and similarly receives frames with ETH-LM information from the peer MEP. Frame loss is calculated by collecting the counter values applicable for ingress and egress service frames where the counters maintain a count of transmitted and received data frames between a pair of MEPs. The loss measurement statistics are retrieved as the output of the **monitor ethernet loss-measurement** command and are also stored at the initiator. The frames counts are stored at both the initiator and the receiver MEPs for later retrieval.

**Options** **maintenance-domain** *md-name*—Name of an existing CFM maintenance domain.

**maintenance-association** *ma-name*—Name of an existing CFM maintenance association.

**mep** *remote-mep-id*—Numeric identifier of the peer MEP with which to perform Ethernet frame loss measurement. The discovered MAC address of the peer MEP is used. The range of values is from 1 through 8192.

**remote-mac-address**—Unicast MAC address of the peer MEP with which to perform Ethernet frame loss measurement. Specify the MAC address as six hexadecimal bytes in one of the following formats: *nnnn.nnnn.nnnn* or *nn:nn:nn:nn:nn:nn* (for

example, **0011.2233.4455** or **00:11:22:33:44:55**). Multicast MAC addresses are not supported.

**count** *frame-count*—(Optional) Number of frames to send to the specified peer MEP. The range of values is from 1 through 65535 frames. The default value is 10 frames.

**local-mep** *mep-id*—(Required when multiple MEPs are configured) Identifier for the local maintenance endpoint.

**wait** *interval-seconds*—(Optional) Number of seconds to wait between sending frames. The range of values is from 1 through 255 seconds. The default value is 1 second.

**priority** *802.1p value*—(Optional) Priority of the delay measurement request frame. The range of values is from 0 through 7. The default value is 1 second.

**no-session-id-tlv**—(Optional) Disable the **session id TLV** argument set in the request frame.

**xml**—(Optional) Allow the output of the command to be displayed in XML format.

**Additional Information** To display the iterator output for an LM session, run the following command:

- **show oam ethernet connectivity-fault-management sla-iterator-statistics sla-iterator <profile> maintenance-association <MA> maintenance-domain <MD> local-mep <MEP> remote-mep <RMEP>**

To display the frame counts collected at an MEP as the result of this command, see the following command descriptions in the [CLI Explorer](#):

- **show oam ethernet connectivity-fault-management loss-statistics**
- **show oam ethernet connectivity-fault-management interfaces detail**
- **show oam ethernet connectivity-fault-management mep-database**
- **show oam ethernet connectivity-fault-management mep-statistics**

To display the statistics collected at an MEP as the result of this command, see the following command descriptions in the [CLI Explorer](#):

- **show oam ethernet connectivity-fault-management delay-statistics**
- **show oam ethernet connectivity-fault-management mep-statistics**

To clear both the frame counts and the statistics collected for MEPs, use the **clear oam ethernet connectivity-fault-management loss-statistics maintenance-domain *md-name* maintenance-association *ma-name*** command, as described in the [CLI Explorer](#).

For a complete description of Ethernet frame loss measurement, see the *ITU-T Y.1731 Ethernet Service OAM* topics in the *Junos OS Network Interfaces Library for Routing Devices*.

**Required Privilege Level** trace and maintenance

  - [CLI Explorer](#)

**List of Sample Output** [monitor ethernet loss-measurement on page 1338](#)

**Output Fields** [Table 87 on page 1337](#) lists the output fields for the **monitor ethernet loss-measurement** command and their descriptions. Output fields are listed in the approximate order in which they appear.

**Table 87: monitor ethernet loss-measurement output fields**

Output Field Name	Output Field Description
Ethernet loss delay measurement request to	Unicast MAC address of the remote peer MEP.
Interface	Name of the Ethernet physical, logical, or trunk interface to which the local MEP is attached.
LMR received from	Unicast MAC address of the remote MEP that transmitted this LMR frame in response to a loss measurement message (LMM) frame.
Near-end frame loss	Count of frame loss associated with ingress data frames.
Far-end frame loss	Count of frame loss associated with egress data frames.
Near-end loss ratio	Ratio, expressed as a percentage, of the number of service frames not delivered divided by the total number of service frames during time interval T at the ingress interface.
Far-end loss ratio	Ratio, expressed as a percentage, of the number of service frames not delivered divided by the total number of service frames during time interval T at the egress interface.
LMM packets transmitted	Total number of LMM PDU frames sent to the remote MEP in this measurement session.
LMR packets received	Total number of LMR PDU frames received from the remote MEP in this measurement session.
Average near-end frame loss	Average frame loss measured in this session associated with ingress data frames.
Average near-end loss ratio	Average frame loss ratio measured in this session associated with ingress data frames.
Average far-end frame loss	Average frame loss measured in this session associated with egress data frames.
Average far-end loss ratio	Average frame loss ratio measured in this session associated with egress data frames.
Near-end best case frame loss	Lowest frame loss measured in this session associated with ingress data frames.
Near-end best case loss ratio	Lowest frame loss ratio measured in this session associated with ingress data frames.

Table 87: monitor ethernet loss-measurement output fields (*continued*)

Output Field Name	Output Field Description
Near-end worst case frame loss	Highest frame loss measured in this session associated with ingress data frames.
Near-end worst case loss ratio	Highest frame loss ratio measured in this session associated with ingress data frames.
Far-end best case frame loss	Lowest frame loss measured in this session associated with egress data frames.
Far-end best case loss ratio	Lowest frame loss ratio measured in this session associated with egress data frames.
Far-end worst case frame loss	Highest frame loss measured in this session associated with egress data frames.
Far-end worst case loss ratio	Highest frame loss ratio measured in this session associated with egress data frames.

Note that in the preceding table, the term *number of service frames not delivered* is the difference between the number of service frames arriving at the ingress Ethernet flow point and the number of service frames delivered at the egress Ethernet flow point in a point-to-point Ethernet connection.

## monitor ethernet synthetic-loss-measurement

**Syntax** monitor ethernet synthetic-loss-measurement  
 maintenance-domain *md-name*  
 maintenance-association *ma-name*  
 (*remote-mac-address* | mep *remote-mep-id*)  
 <count *frame-count*>  
 <local-mep *mep-id*>  
 <wait *interval-milliseconds*>  
 <priority *802.1p value*>  
 <size>  
 <xml>

**Release Information** Command introduced in Junos OS Release 13.2 for MX Series routers.  
**local-mep** option introduced in Junos OS Release 15.1

**Description** (MX Series routers) Start an ITU-T Y.1731 Ethernet synthetic loss measurement (ETH-SLM) session between the specified local connectivity fault management (CFM) maintenance association end point (MEP) and the specified remote MEP, and display a summary of the frames exchanged in the measurement session. ETH-SLM (also called synthetic frame loss measurement) statistics are stored at one of the MEPs for later retrieval.

**NOTE:** If you attempt to monitor delays to a nonexistent MAC address, you must press Ctrl +c to explicitly quit the **monitor ethernet synthetic-loss-measurement** command and return to the CLI command prompt.

To start an Ethernet synthetic frame loss measurement session, the router initiates an exchange of frames carrying synthetic frame loss measurement protocol data units (PDUs) between the local and remote MEPs. The frame counts—the types of and number of Ethernet synthetic frame loss measurement PDU frames exchanged to measure frame delay times—are displayed as the run-time output of the **monitor ethernet synthetic-loss-measurement** command and are also stored at both the initiator and receiver MEPs for later retrieval. Ethernet synthetic frame loss measurement statistics, described below, are measured and stored at only one of the MEPs:

Frame delay—The difference, in microseconds, between the time a frame is sent and when it is received.

Frame delay variation—The difference, in microseconds, between consecutive frame delay values. Frame delay variation is sometimes called “frame jitter.”

**Options** **maintenance-domain** *md-name*—Name of an existing CFM maintenance domain.  
**maintenance-association** *ma-name*—Name of an existing CFM maintenance association.

**mep remote-mep-id**—Numeric identifier of the peer MEP with which to perform Ethernet synthetic frame loss measurement. The discovered MAC address of the peer MEP is used. The range of values is from 1 through 8191.

**remote-mac-address**—Unicast MAC address of the peer MEP with which to perform Ethernet synthetic frame loss measurement. Specify the MAC address as six hexadecimal bytes in one of the following formats: *nnnn.nnnn.nnnn* or *nn:nn:nn:nn:nn:nn*. For example, **0011.2233.4455** or **00:11:22:33:44:55**. Multicast MAC addresses are not supported.

**count frame-count**—(Optional) Number of frames to send to the specified peer MEP. The range of values is from 1 through 65,535 frames. The default value is 10 frames.

**local-mep mep-id**—(Required when multiple MEPs are configured) Identifier for the local maintenance endpoint.

**wait interval-milliseconds**—(Optional) Number of milliseconds to wait between sending frames. You must specify this value in multiples of 100 milliseconds. The range of values is from 100 through 50000 milliseconds. The default value is 100 milliseconds.

**priority 802.1p value**—(Optional) Priority of the ETH-SLM request frame supported. The range of values is from 0 through 7. The default value is zero.

**size**—(Optional) Size of the data TLV to be included in the request frame. The range of values is from 1 through 1400 bytes.

**xml**—(Optional) Allow the output of the command to be displayed in XML format for ETH-SLM. Note that the only way to get output in XML format is to use the **xml** argument. The **display xml** command does not work.

**Additional Information** To display the frame counts collected at a MEP as the result of this command, use the following commands as described in the [CLI Explorer](#):

- **show oam ethernet connectivity-fault-management interfaces detail**
- **show oam ethernet connectivity-fault-management mep-database**
- **show oam ethernet connectivity-fault-management mep-statistics**

To display the statistics collected at a MEP as the result of this command, use the following commands as described in the [CLI Explorer](#).

- **show oam ethernet connectivity-fault-management synthetic-loss-measurement**
- **show oam ethernet connectivity-fault-management mep-statistics**

To clear both the frame counts and the statistics collected for MEPs, use the **clear oam ethernet connectivity-fault-management statistics** command, described in the [CLI Explorer](#).

For a complete description of Ethernet synthetic frame loss measurement, see the *ITU-T Y.1731 Ethernet Service OAM* topics in the *Junos OS Network Interfaces Library for Routing Devices*.

**Required Privilege Level** trace and maintenance

**List of Sample Output** [monitor ethernet synthetic-loss-measurement on page 1343](#)

**Output Fields** The **monitor ethernet synthetic-loss-measurement** command displays different output at the CLI, depending on when you start a synthetic frame loss measurement:

- [Table 88 on page 1342](#) lists the run-time output fields for the **monitor ethernet synthetic-loss-measurement** command.

Output fields are listed in the approximate order in which they appear.

**Table 88: monitor ethernet synthetic-loss-measurement Output Fields**

Output Field Name	Output Field Description
<b>ETH-SLM request to</b>	Unicast MAC address of the remote peer MEP.
<b>Interface</b>	Name of the Ethernet physical, logical, or trunk interface to which the local MEP is attached.
<b>SLM packets sent</b>	Total number of synthetic loss message (SLM) PDU frames sent from the source MEP to the remote MEP during this ETH-SLM session.
<b>SLR packets received</b>	Total number of synthetic loss reply (SLR) PDU frames received by the source MEP from the remote MEP during this measurement session.
<b>Local TXFCI value</b>	Number of synthetic frames transmitted to the peer MEP for a test ID. A test ID is used to distinguish each synthetic loss measurement because multiple measurements can be simultaneously activated also on a given CoS and MEP pair. It must be unique at least within the context of any SLM for the MEG and initiating MEP.
<b>Local RXFCI value</b>	Number of synthetic frames received from the peer MEP for a test ID. The MEP generates a unique test ID for the session, adds the source MEP ID, and initializes the local counters for the session before SLM initiation. For each SLM PDU transmitted for the session (test ID), the local counter TXFCI is sent in the packet.
<b>Last Received SLR frame TXFCf(tc)</b>	Value of the local counter TxFCI at the time of SLM frame transmission.
<b>Last Received SLR frame TXFCb(t)</b>	Value of the local counter RxFCI at the time of SLR frame transmission.
<b>Frame loss (near-end)</b>	Count of frame loss associated with ingress data frames.
<b>Frame loss (far-end)</b>	Count of frame loss associated with egress data frames.

## Sample Output

### monitor ethernet synthetic-loss-measurement

```
user@host> monitor ethernet synthetic-loss-measurement 00:05:85:73:39:4a
maintenance-domain md6 maintenance-association ma6 count 10
ETH-SLM request to 00:05:85:73:39:4a, interface ge-1/0/0.0
Synthetic Loss measurement statistics:
  SLM packets sent                : 100
  SLR packets received            : 100
  Accumulated SLM statistics:
    Local TXFC1 value             : 100
    Local RXFC1 value             : 100
    Last Received SLR frame TXFCf(tc) : 100
    Last Received SLR frame TXFCb(tc) : 100
  SLM Frame Loss:

```

## request interface mc-ae switchover (Multichassis Link Aggregation)

<b>Syntax</b>	request interface mc-ae switchover <immediate> mcae-id <i>mcae-id</i> ; mcae-id <i>mcae-id</i> ;
<b>Release Information</b>	Command introduced in Junos OS Release 13.3.
<b>Description</b>	Manually revert egress traffic from the active node to the designated preferred node of a multichassis aggregated Ethernet interface. You can use this command to manually switch over traffic to the preferred node when the <b>switchover-mode</b> statement for the multichassis aggregated Ethernet interface is configured as <b>non-revertive</b> at the <b>[edit interfaces aeX mc-ae]</b> hierarchy level.
<div>  <b>NOTE:</b> To run this command successfully, the <b>status-control</b> statement should be configured as <b>active</b> at the <b>[edit interfaces aeX mc-ae]</b> hierarchy level. </div>	
<b>Options</b>	<p><b>immediate</b>—(Optional) Trigger immediate switchover to the preferred node. If this option is not configured, Junos OS waits for the timer configured using the <b>revert-time</b> statement at the <b>[edit interfaces aeX mc-ae]</b> hierarchy level to expire before it triggers the switchover.</p> <p><b>mcae-id <i>mcae-id</i></b>—Triggers switchover for the specified mc-ae interface.</p>
<b>Required Privilege Level</b>	view

user@host >request interface mc-ae switchover mcae-id 2
```

Switchover In Progress: Please check after 1 minutes,  
Use “show interfaces mc-ae revertive-info” to check for the status

## request interface (revert | switchover) (Aggregated Ethernet Link Protection)

**Syntax** request interface (revert | switchover) aex

**Release Information** Command introduced in Junos OS Release 8.3.

**Description** Manually revert egress traffic from the designated backup link to the designated primary link of an aggregated Ethernet interface for which link protection is enabled, or manually switch egress traffic from the primary link to the backup link. This traffic includes transit traffic and local traffic originated on the router itself.

**NOTE:** When link protection is enabled on an aggregated Ethernet interface, if the primary link fails, the router automatically routes egress traffic to the backup link. However, the router does not automatically route egress traffic back to the primary link when the primary link is subsequently reestablished. Instead, you manually control when to have traffic diverted back to the primary link by issuing the `request interface (revert | switchover) (Aggregated Ethernet Link Protection)` operational command and specifying the `revert` keyword.

On M Series and T Series routers, use the `request interface (revert | switchover) (Adaptive Services)` operational command to manually revert to the primary adaptive services interface or link services interface, or to switch from the primary to the secondary interface. For information about this command, see *request interface (revert | switchover) (Adaptive Services)*.

**Options** `revert`—Restores egress traffic processing to the primary link.

`switchover`—Transfers egress traffic processing to the secondary (backup) link.

`aex`—Aggregated Ethernet logical interface number: 0 through 15.

**Required Privilege Level** view

**List of Sample Output** [request interface revert on page 1350](#)

**Output Fields** When you enter this command, you are provided feedback on the status of your request.

### Sample Output

request interface revert

```
user@host >request interface revert ael
```

## request lacp link-switchover

<b>Syntax</b>	request lacp link-switchover aex
<b>Release Information</b>	Command introduced in Junos OS Release 9.3.
<b>Description</b>	Manually switch aggregated Ethernet active or standby LACP links.
<div>  <p><b>NOTE:</b> Because this command overrides LACP priority calculations, we strongly recommend that you use this command only when the actor (in this case, the Juniper Networks router) is controlling the active or standby link and the partner (peer) is following. This scenario occurs when you configure only the actor for link protection.</p> </div>	
<b>Options</b>	aex—Aggregated Ethernet logical interface number: 0 through 15.
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">request lacp link-switchover aeX on page 1351</a>
<b>Output Fields</b>	When you enter this command, you are provided feedback on the status of your request. To view the switchover, use the <b>show lacp interfaces</b> command.

## Sample Output

### request lacp link-switchover aeX

```
user@host >request lacp link-switchover ae0ae0: Request succeeded
```

## show chassis hardware

Description	<p>Display a list of all Flexible PIC Concentrators (FPCs) and PICs installed in the router or switch chassis, including the hardware version level and serial number.</p>

In the EX Series switch command output, FPC refers to the following:

- On EX2200 switches, EX3200 switches, EX4200 standalone switches, and EX4500 switches—Refers to the switch; FPC *number* is always 0.
- On EX4200 switches in a Virtual Chassis configuration—Refers to the member of a Virtual Chassis; FPC *number* equals the member ID, from 0 through 9.
- On EX8208 and EX8216 switches—Refers to a line card; FPC *number* equals the slot number for the line card.

On QFX3500, QFX5100, and OCX Series standalone switches, and PTX1000 routers both the FPC and FPC *number* are always 0.

On T4000 Type 5 FPCs, there are no **top temperature sensor** or **bottom temperature sensor** parameters. Instead, **fan intake temperature sensor** and **fan exhaust temperature sensors** parameters are displayed.

Starting from Junos OS Release 11.4, the output of the **show chassis hardware models** operational mode command displays the enhanced midplanes FRU model numbers (CHAS-BP3-MX240-S, CHAS-BP3-MX480-S or CHAS-BP3-MX960-S) based on the router. Prior to release 11.4, the FRU model numbers are left blank when the router has enhanced midplanes. Note that the enhanced midplanes are introduced through the Junos OS Release 13.3, but can be supported on all Junos OS releases.

Starting with Junos OS Release 14.1, the output of the **show chassis hardware detail | extensive | clei-models | models** operational mode command displays the new DC power supply module (PSM) and power distribution unit (PDU) that are added to provide power to the high-density FPC (FPC2-PTX-P1A) and other components in a PTX5000 Packet Transport Router.

- Options**
- none**—Display information about hardware. For a TX Matrix router, display information about the TX Matrix router and its attached T640 routers. For a TX Matrix Plus router, display information about the TX Matrix Plus router and its attached routers.
  - clei-models**—(Optional) Display Common Language Equipment Identifier (CLEI) barcode and model number for orderable field-replaceable units (FRUs).
  - detail**—(Optional) Include RAM and disk information in output.
  - extensive**—(Optional) Display ID EEPROM information.
  - all-members**—(MX Series routers only) (Optional) Display hardware-specific information for all the members of the Virtual Chassis configuration.
  - interconnect-device name**—(QFabric systems only) (Optional) Display hardware-specific information for the Interconnect device.
  - lcc number**—(TX Matrix routers and TX Matrix Plus router only) (Optional) On a TX Matrix router, display hardware information for a specified T640 router (line-card chassis) that is connected to the TX Matrix router. On a TX Matrix Plus router, display hardware information for a specified router (line-card chassis) that is connected to the TX Matrix Plus router.

Replace *number* with the following values depending on the LCC configuration:

- 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.
- 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.
- 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.
- 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.

**local**—(MX Series routers only) (Optional) Display hardware-specific information for the local Virtual Chassis members.

**member *member-id***—(MX Series routers and EX Series switches) (Optional) Display hardware-specific information for the specified member of the Virtual Chassis configuration. Replace *member-id* variable with a value 0 or 1.

**models**—(Optional) Display model numbers and part numbers for orderable FRUs and, for components that use ID EEPROM format v2, the CLEI code.

**node-device *name***—(QFabric systems only) (Optional) Display hardware-specific information for the Node device.

**satellite [*slot-id slot-id* | *device-alias alias-name*]**—(Junos Fusion only) (Optional) Display hardware information for the specified satellite device in a Junos Fusion, or for all satellite devices in the Junos Fusion if no satellite devices are specified.

**scc**—(TX Matrix router only) (Optional) Display hardware information for the TX Matrix router (switch-card chassis).

**sfc *number***—(TX Matrix Plus router only) (Optional) Display hardware information for the TX Matrix Plus router (switch-fabric chassis). Replace *number* variable with 0.

**Additional Information** The **show chassis hardware detail** command now displays DIMM information for the following Routing Engines, as shown in [Table 90 on page 1355](#).

**Table 90: Routing Engines Displaying DIMM Information**

Routing Engines	Routers
RE-S-1800x2 and RE-S-1800x4	MX240, MX480, and MX960 routers
RE-A-1800x2	M120 and M320 routers

In Junos OS Release 11.4 and later, the output for the **show chassis hardware models** operational mode command for MX Series routers display the enhanced midplanes FRU model numbers—CHAS-BP3-MX240-S, CHAS-BP3-MX480-S, or CHAS-BP3-MX960-S—based on the router. In releases before Junos OS Release 11.4, the FRU model numbers are left blank when the router has enhanced midplanes. Note

that the enhanced midplanes are introduced through Junos OS Release 13.3, but can be supported on all Junos OS releases.

**Output Fields** [Table 91 on page 1360](#) lists the output fields for the **show chassis hardware** command. Output fields are listed in the approximate order in which they appear.

Table 91: show chassis hardware Output Fields

Field Name	Field Description	Level of Output
<b>Item</b>	<p>Chassis component:</p> <ul style="list-style-type: none"> <li>(EX Series switches)—Information about the chassis, Routing Engine (SRE and Routing Engine modules in EX8200 switches), power supplies, fan trays, and LCD panel. Also displays information about Flexible PIC Concentrators (FPCs) and associated Physical Interface Cards (PICs). Information about the backplane, midplane, and SIBs (SF modules) is displayed for EX8200 switches.</li> <li>(MX Series routers and EX Series switches)—Information about the backplane, Routing Engine, Power Entry Modules (PEMs), and fan trays. Also displays information about Flexible PIC Concentrators (FPCs) and associated Physical Interface Cards (PICs), Modular Port Concentrators (MPCs) and associated Modular Interface Cards (MICs), or Dense Port Concentrators (DPCs). MX80 routers have a single Routing Engine and a built-in Packet Forwarding Engine that attaches directly to MICs. The Packet Forwarding Engine has two “pseudo” FPCs (FPC 0 and FPC1). MX80 routers also have a Forwarding Engine Board (FEB). MX104 routers have a built-in Packet forwarding Engine and a Forwarding Engine Board (FEB). The Packet Forwarding Engine of the MX104 router has three “pseudo” FPCs (FPC0, FPC1, and FPC2).</li> <li>(M Series routers, except for the M320 router)—Information about the backplane; power supplies; fan trays; Routing Engine; maxicab (the connection between the Routing Engine and the backplane, for the M40 router only); SCB, SSB, SFM, or FEB; MCS and PCG (for the M160 router only); each FPC and PIC; and each fan, blower, and impeller.</li> <li>(M120, M320, and T Series routers)—Information about the backplane, power supplies, fan trays, midplane, FPM (craft interface), CIP, PEM, SCG, CB, FPC, PIC, SFP, SPMB, and SIB.</li> <li>(QFX Series)—Information about the chassis, Pseudo CB, Routing Engine, power supplies, fan trays, Interconnect devices, and Node devices. Also displays information about Flexible PIC Concentrators (FPCs) and associated Physical Interface Cards (PICs).</li> <li>(PTX Series)—Information about the chassis, midplane, craft interface (FPM), power distribution units (PDUs) and Power Supply Modules (PSMs), Centralized Clock Generators (CCGs), Routing Engines, Control Boards (CBs) and Switch Processor Mezzanine Boards (SPMBs), Flexible PIC Concentrators (FPCs), PICs, Switch Interface Boards (SIBs), and fan trays (vertical and horizontal).</li> <li>(MX2010 and MX2020 routers)—Information about the chassis, midplane, craft interface (FPM), power midplane (PMP), Power Supply Modules (PSMs), Power Distribution Modules (PDMs), Routing Engines, Control Boards (CBs) and Switch Processor Mezzanine Boards (SPMBs), Switch Fabric Boards (SFBs), Flexible PIC Concentrators (FPCs), PICs, adapter cards (ADCs) and fan trays.</li> </ul>	All levels
<b>Version</b>	Revision level of the chassis component.	All levels
<b>Part number</b>	Part number of the chassis component.	All levels
<b>Serial number</b>	Serial number of the chassis component. The serial number of the backplane is also the serial number of the router chassis. Use this serial number when you need to contact Juniper Networks Customer Support about the router or switch chassis.	All levels

Table 91: show chassis hardware Output Fields (*continued*)

Field Name	Field Description	Level of Output
Assb ID or Assembly ID	( <b>extensive</b> keyword only) Identification number that describes the FRU hardware.	<b>extensive</b>
Assembly Version	( <b>extensive</b> keyword only) Version number of the FRU hardware.	<b>extensive</b>
Assembly Flags	( <b>extensive</b> keyword only) Flags.	<b>extensive</b>
FRU model number	( <b>clei-models</b> , <b>extensive</b> , and <b>models</b> keyword only) Model number of the FRU hardware component.	none specified
CLEI code	( <b>clei-models</b> and <b>extensive</b> keyword only) Common Language Equipment Identifier code. This value is displayed only for hardware components that use ID EEPROM format v2. This value is not displayed for components that use ID EEPROM format v1.	none specified
EEPROM Version	ID EEPROM version used by the hardware component: <b>0x00</b> (version 0), <b>0x01</b> (version 1), or <b>0x02</b> (version 2).	<b>extensive</b>
Description	<p>Brief description of the hardware item:</p> <ul style="list-style-type: none"> <li>Type of power supply.</li> <li>Type of PIC. If the PIC type is not supported on the current software release, the output states <b>Hardware Not Supported</b>.</li> <li>Type of FPC: <b>FPC Type 1</b>, <b>FPC Type 2</b>, <b>FPC Type 3</b>, <b>FPC Type 4</b>, or <b>FPC TypeOC192</b>.</li> </ul> <p>On EX Series switches, a brief description of the FPC.</p> <p>The following list shows the PIM abbreviation in the output and the corresponding PIM name.</p> <ul style="list-style-type: none"> <li><b>2x FE</b>—Either two built-in Fast Ethernet interfaces (fixed PIM) or dual-port Fast Ethernet PIM</li> <li><b>4x FE</b>—4-port Fast Ethernet ePIM</li> <li><b>1x GE Copper</b>—Copper Gigabit Ethernet ePIM (one 10-Mbps, 100-Mbps, or 1000-Mbps port)</li> <li><b>1x GE SFP</b>—SFP Gigabit Ethernet ePIM (one fiber port)</li> <li><b>2x Serial</b>—Dual-port serial PIM</li> <li><b>2x T1</b>—Dual-port T1 PIM</li> <li><b>2x E1</b>—Dual-port E1 PIM</li> <li><b>2x CT1E1</b>—Dual-port channelized T1/E1 PIM</li> <li><b>1x T3</b>—T3 PIM (one port)</li> <li><b>1x E3</b>—E3 PIM (one port)</li> <li><b>4x BRI S/T</b>—4-port ISDN BRI S/T PIM</li> <li><b>4x BRI U</b>—4-port ISDN BRI U PIM</li> <li><b>1x ADSL Annex A</b>—ADSL 2/2+ Annex A PIM (one port, for POTS)</li> <li><b>1x ADSL Annex B</b>—ADSL 2/2+ Annex B PIM (one port, for ISDN)</li> <li><b>2x SHDSL (ATM)</b>—G SHDSL PIM (2-port two-wire module or 1-port four-wire module)</li> </ul>	All levels

Table 91: show chassis hardware Output Fields (*continued*)

Field Name	Field Description	Level of Output
	<ul style="list-style-type: none"> <li>• <b>1x TGM550</b>—TGM550 Telephony Gateway Module (Avaya VoIP gateway module with one console port, two analog <b>LINE</b> ports, and two analog <b>TRUNK</b> ports)</li> <li>• <b>1x DS1 TIM510</b>—TIM510 E1/T1 Telephony Interface Module (Avaya VoIP media module with one E1 or T1 trunk termination port and ISDN PRI backup)</li> <li>• <b>4x FXS, 4x FXO, TIM514</b>—TIM514 Analog Telephony Interface Module (Avaya VoIP media module with four analog <b>LINE</b> ports and four analog <b>TRUNK</b> ports)</li> <li>• <b>4x BRI TIM521</b>—TIM521 BRI Telephony Interface Module (Avaya VoIP media module with four ISDN BRI ports)</li> <li>• <b>Crypto Accelerator Module</b>—For enhanced performance of cryptographic algorithms used in IP Security (IPsec) services</li> <li>• <b>MPC M16x10GE</b>—16-port 10-Gigabit Module Port Concentrator that supports SFP+ optical transceivers. (Not on EX Series switches.)</li> <li>• For hosts, the Routing Engine type.</li> <li>• For small form-factor pluggable transceiver (SFP) modules, the type of fiber: <b>LX</b>, <b>SX</b>, <b>LH</b>, or <b>T</b>.</li> <li>• LCD description for EX Series switches (except EX2200 switches).</li> <li>• <b>MPC2</b>—1-port MPC2 that supports two separate slots for MICs.</li> <li>• <b>MPC3E</b>—1-port MPC3E that supports two separate slots for MICs (MIC-3D-1X100GE-CFP and MIC-3D-20GE-SFP) on MX960, MX480, and MX240 routers. The MPC3E maps one MIC to one PIC (1 MIC, 1 PIC), which differs from the mapping of legacy MPCs.</li> <li>• 100GBASE-LR4, pluggable CFP optics</li> <li>• Supports the Enhanced MX Switch Control Board with fabric redundancy and existing SCBs without fabric redundancy.</li> <li>• Interoperates with existing MX Series line cards, including Flexible Port Concentrators (FPC), Dense Port Concentrators (DPCs), and Modular Port Concentrators (MPCs).</li> <li>• <b>MPC4E</b>—Fixed configuration MPC4E that is available in two flavors: MPC4E-3D-32XGE-SFP and MPC4E-3D-2CGE-8XGE on MX2020, MX960, MX480, and MX240 routers.</li> <li>• LCD description for MX Series routers</li> </ul>	

## Sample Output

### show chassis hardware (EX8216 Switch)

```

- Release Information** Command introduced before Junos OS Release 7.4.  
 Command introduced in Junos OS Release 9.0 for EX Series switches.  
 Command introduced in Junos OS Release 11.1 for QFX Series.  
 Command introduced in Junos OS Release 12.2 for ACX Series Universal Access Routers.  
 Command introduced in Junos OS Release 12.3 for MX2020 3D Universal Edge Routers.  
 Command introduced in Junos OS Release 12.3 for MX2010 3D Universal Edge Routers.  
 Command introduced in Junos OS Release 13.2 for PTX Series Packet Transport Routers.  
 Command introduced in Junos OS Release 13.2 for MX104 3D Universal Edge Routers.  
 Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.  
**transport** option introduced in Junos OS Release 16.1R1 for MX Series Routers.
- Description** Display status information about the PIC installed in the specified Flexible PIC Concentrator (FPC) and PIC slot.
- Options** **fpc-slot slot-number**—Display information about the PIC in this particular FPC slot:
- On a TX Matrix router, if you specify the number of the T640 router by using the **lcc number** option (the recommended method), replace **slot-number** with a value from 0 through 7. Otherwise, replace **slot-number** with a value from 0 through 31.
- Likewise, on a TX Matrix Plus router, if you specify the number of the T1600 router by using the **lcc number** option (the recommended method), replace **slot-number** with a value from 0 through 7. Otherwise, replace **slot-number** with a value from 0 through 31. For example, the following commands have the same result:
- ```
user@host> show chassis pic fpc-slot 1 lcc 1 pic-slot 1
user@host> show chassis pic fpc-slot 9 pic-slot 1
```
- M120 routers only—Replace **slot-number** with a value from 0 through 5.
  - MX80 routers only—Replace **slot-number** with a value from 0 through 1.
  - MX104 routers only—Replace **slot-number** with a value from 0 through 2.
  - MX240 routers only—Replace **slot-number** with a value from 0 through 2.
  - MX480 routers only—Replace **slot-number** with a value from 0 through 5.
  - MX960 routers only—Replace **slot-number** with a value from 0 through 11.
  - MX2010 routers only—Replace **slot-number** with a value from 0 through 9.
  - MX2020 routers only—Replace **slot-number** with a value from 0 through 19.
  - Other routers—Replace **slot-number** with a value from 0 through 7.
  - EX Series switches:
    - EX3200 switches and EX4200 standalone switches—Replace **slot-number** with 0.
    - EX4200 switches in a Virtual Chassis configuration—Replace **slot-number** with a value from 0 through 9 (switch's member ID).

- EX8208 switches—Replace **slot-number** with a value from 0 through 7 (line card).
- EX8216 switches—Replace **slot-number** with a value from 0 through 15 (line card).
- QFX Series:
  - QFX3500, QFX3600, QFX5100, and OCX Series standalone switches—Replace **slot-number** with 0. In the command output, FPC refers to a line card. The FPC number equals the slot number for the line card.
  - QFabric systems—Replace **slot-number** with any number between 0 and 15. In the command output, FPC refers to a line card. The FPC number equals the slot number for the line card.

**all-members**—(MX Series routers and EX Series switches only) (Optional) Display PIC information for all member routers in the Virtual Chassis configuration.

**interconnect-device name**—(QFabric systems only) (Optional) Display PIC information for a specified Interconnect device.

**lcc-number**—(TX Matrix and TX Matrix Plus routers only) (Optional) On a TX Matrix router, display PIC information for a specified T640 router (or line-card chassis) that is connected to the TX Matrix router. On a TX Matrix Plus router, display PIC information for a specified router (line-card chassis) that is connected to the TX Matrix Plus router.

Replace *number* with the following values depending on the LCC configuration:

- 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.
- 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.
- 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.
- 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.

**local**—(MX Series routers and EX Series switches only) (Optional) Display PIC information for the local Virtual Chassis member.

**member member-id**—(MX Series routers and EX Series switches only) (Optional) Display PIC information for the specified member of the Virtual Chassis configuration. Replace **member-id** with a value of 0 or 1.

**node-device name**—(QFabric systems only) (Optional) Display PIC information for a specified Node device.

**pic-slot slot-number**—Display information about the PIC in this particular PIC slot. For routers, replace **slot-number** with a value from 0 through 3. For EX3200 and EX4200

switches, replace *slot-number* with 0 for built-in network interfaces and 1 for interfaces on uplink modules. For EX8208 and EX8216 switches, replace *slot-number* with 0. For the QFX3500 standalone switch and the QFabric system, replace *slot-number* with 0 or 1.

**transport**—Display PIC information for optical transport network.

**Output Fields** [Table 92 on page 1542](#) lists the output fields for the **show chassis pic** command. Output fields are listed in the approximate order in which they appear.

**Table 92: show chassis pic Output Fields**

| Field Name                     | Field Description                                                                                                                                                                                                                                                                                                           |
|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Type</b>                    | <p>PIC type.</p> <p><b>NOTE:</b> On the 1-port OC192/STM64 MICs with the SDH framing mode, the type is displayed as <b>MIC-3D-1STM64-XFP</b> and with the SONET framing mode, the type is displayed as <b>MIC-3D-1OC192-XFP</b>. By default, the 1-port OC192/STM64 MICs displays the type as <b>MIC-3D-1OC192-XFP</b>.</p> |
| <b>Account Layer2 Overhead</b> | (MX Series routers) Indicates whether functionality to count the Layer 2 overhead bytes in the interface statistics at the PIC level is enabled or disabled.                                                                                                                                                                |
| <b>ASIC type</b>               | Type of ASIC on the PIC.                                                                                                                                                                                                                                                                                                    |

Table 92: show chassis pic Output Fields (*continued*)

| Field Name                                                          | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|---------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>State</b>                                                        | Status of the PIC. State is displayed only when a PIC is in the slot. <ul style="list-style-type: none"> <li>• <b>Online</b>— PIC is online and running.</li> <li>• <b>Offline</b>—PIC is powered down.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>PIC version</b>                                                  | PIC hardware version.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Uptime</b>                                                       | How long the PIC has been online.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Package</b>                                                      | (Multiservices PICs only) Services package supported: <b>Layer-2</b> or <b>Layer-3</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Port Number</b>                                                  | Port number for the PIC.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Cable Type</b>                                                   | Type of cable connected to the port: <b>LH</b> , <b>LX</b> , or <b>SX</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>PIC Port Information (MX480 Router 100-Gigabit Ethernet CFP)</b> | Port-level information for the PIC. <ul style="list-style-type: none"> <li>• Port—Port number</li> <li>• Cable type—Type of optical transceiver installed.</li> <li>• Fiber type—Type of fiber. SM is single-mode.</li> <li>• Xcvr vendor—Transceiver vendor name.</li> <li>• Xcvr vendor part number—Transceiver vendor part number.</li> <li>• Wavelength—Wavelength of the transmitted signal. Uplinks and downlinks are always 1550 nm. There is a separate fiber for each direction</li> <li>• Xcvr Firmware—Transceiver firmware version.</li> </ul>                                                                                                                                                                                               |
| <b>PIC Port Information (MX960 Router Bidirectional Optics )</b>    | Port-level information for the PIC. <ul style="list-style-type: none"> <li>• Port—Port number</li> <li>• Cable type—Type of small form-factor pluggable (SFP) optical transceiver installed. Uplink interfaces display -U. Down link interfaces display -D.</li> <li>• Fiber type—Type of fiber. SM is single-mode.</li> <li>• Xcvr vendor—Transceiver vendor name.</li> <li>• Xcvr vendor part number—Transceiver vendor part number. <ul style="list-style-type: none"> <li>• BX10-10-km bidirectional optics.</li> <li>• BX40-40-km bidirectional optics.</li> <li>• SFP-LX-40-km SFP optics.</li> </ul> </li> <li>• Wavelength—Wavelength of the transmitted signal. Uplinks are always 1310 nm. Downlinks are either 1490 nm or 1550 nm.</li> </ul> |

Table 92: show chassis pic Output Fields (*continued*)

| Field Name                                                  | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>PIC Port Information (Next-Generation SONET/SDH SFP)</b> | <p>Port-level information for the next-generation SONET/SDH SFP PIC.</p> <ul style="list-style-type: none"> <li>Port—Port number.</li> <li>Cable type—Type of small form-factor pluggable (SFP) optical transceiver installed.</li> <li>Fiber type—Type of fiber: <b>SM</b> (single-mode) or <b>MM</b> (multimode).</li> <li>Xcvr vendor—Transceiver vendor name.</li> <li>Xcvr vendor part number—Transceiver vendor part number.</li> <li>Wavelength—Wavelength of the transmitted signal. | <b>Channelization</b>                                       | Indicates whether channelization is enabled or disabled on the DS3/E3 MIC.                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Administrative State</b>                                 | Indicates the administrative state of the PIC. Possible values are: In Service (Default) and Out of Service.                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Operational State</b>                                    | Indicates the operational state of the PIC. Possible values are: Normal and Fault.                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

## Sample Output

### show chassis pic fpc-slot pic-slot

```

user@host> show chassis pic fpc-slot 2 pic-slot 0
PIC fpc slot 2 pic slot 0 information:
  Type                10x 1GE(LAN), 1000 BASE
  ASIC type           H chip
  State               Online
  PIC version         1.1
  Uptime              1 day, 50 minutes, 58 seconds
PIC Port Information:
  Port      Cable      Xcvr      Xcvr Vendor
  Number    Type        Vendor Name  Part Number
  0         GIGE 1000EX  FINISAR CORP.  FTRJ8519P1BNL-J3
  1         GIGE 1000EX  FINISAR CORP.  FTRJ-8519-7D-JUN

```

**show chassis pic fpc-slot pic-slot (PIC Offline)**

```

user@host> show chassis pic fpc-slot 1 pic-slot 0
PIC fpc slot 1 pic slot 0 information:
  State                               Offline

```

**show chassis pic fpc-slot pic-slot (FPC Offline)**

```

user@host> show chassis pic fpc-slot 1 pic-slot 0
FPC 1 is not online

```

**show chassis pic fpc-slot pic-slot (FPC Not Present)**

```

user@host> show chassis pic fpc-slot 4 pic-slot 0
FPC slot 4 is empty

```

**show chassis pic fpc-slot pic-slot (PIC Not Present)**

```

user@host> show chassis pic fpc-slot 5 pic-slot 2
FPC 5, PIC 2 is empty

```

**show chassis pic fpc-slot 3 pic-slot 0 (M120 Router)**

```

user@host> show chassis pic fpc-slot 3 pic-slot 0
PC slot 3, PIC slot 0 information:
  Type                2x G/E IQ, 1000 BASE
  ASIC type           IQ GE 2 VLAN-TAG FPGA
  State               Online
  PIC version         1.16
  Uptime              3 hours, 3 minutes

PIC Port Information:
  Port      Cable      Xcvr      Xcvr Vendor
  Number    Type        Vendor Name Part Number
  0         GIGE 1000SX  FINISAR CORP.  FTRJ8519P1BNL-J3
  1         GIGE 1000SX  FINISAR CORP.  FTRJ-8519-7D-JUN

```

**show chassis pic fpc-slot pic-slot (MX104 Router)**

```

user@host> show chassis pic fpc-slot 1 pic-slot 1
FPC slot 1, PIC slot 1 information:
  Type                10x 1GE(LAN) -E SFP
  State               Online
  PIC version         1.1
  Uptime              1 hour, 30 minutes, 59 seconds

PIC port information:

```

| Port | Cable type    | Fiber type | Xcvr vendor   | Xcvr part number | Wave-length | Xcvr |
|------|---------------|------------|---------------|------------------|-------------|------|
| 3    | GIGE 1000T    | n/a        | Methode Elec. | SP7041-M1-JN     | n/a         | 0.0  |
| 6    | GIGE 1000LX10 | SM         | FINISAR CORP. | FTLF1318P2BTL-J1 | 1310 nm     | 0.0  |
| 8    | GIGE 1000T    | n/a        | Methode Elec. | SP7041-M1-JN     | n/a         | 0.0  |
| 9    | GIGE 1000T    | n/a        | Methode Elec. | SP7041-M1-JN     | n/a         | 0.0  |

#### show chassis pic fpc-slot 3 pic-slot 0 (8-port Channelized SONET/SDH OC3/STM1 [Multi-Rate] MIC with SFP)

```

user@host> show chassis pic fpc-slot 3 pic-slot 0
FPC slot 3, PIC slot 0 information:
  Type                MIC-3D-8CHOC3-4CHOC12
  State                Online
  PIC version          1.9
  Uptime               1 hour, 21 minutes, 24 seconds

PIC port information:

```

| Port | Cable type       | Fiber type | Xcvr vendor   | part number      | Wavelength |
|------|------------------|------------|---------------|------------------|------------|
| 0    | OC12 short reach | SM         | FINISAR CORP. | FTRJ1322P1BTR-J3 | 1310 nm    |
| 1    | OC12 short reach | SM         | FINISAR CORP. | FTRJ1322P1BTR-J3 | 1310 nm    |
| 2    | OC12 inter reach | SM         | FINISAR CORP. | FTRJ1322P1BTR-J2 | 1310 nm    |
| 4    | OC12 short reach | SM         | FINISAR CORP. | FTRJ1322P1BTR-J3 | 1310 nm    |
| 5    | OC12 short reach | SM         | FINISAR CORP. | FTRJ1322P1BTR-J3 | 1310 nm    |
| 6    | OC12 short reach | SM         | FINISAR CORP. | FTRJ1322P1BTR-J3 | 1310 nm    |
| 7    | OC12 short reach | SM         | FINISAR CORP. | FTRJ1322P1BTR-J3 | 1310 nm    |

#### show chassis pic fpc-slot 5 pic-slot 0 (4-port Channelized SONET/SDH OC3/STM1 [Multi-Rate] MIC with SFP)

```

user@host> show chassis pic fpc-slot 5 pic-slot 0
FPC slot 5, PIC slot 0 information:
  Type                MIC-3D-4CHOC3-2CHOC12
  State                Online
  PIC version          1.9
  Uptime               1 hour, 21 minutes

PIC port information:

```

| Port | Cable type       | Fiber type | Xcvr vendor   | part number      | Wavelength |
|------|------------------|------------|---------------|------------------|------------|
| 1    | OC12 inter reach | SM         | FINISAR CORP. | FTRJ1322P1BTR-J3 | 1310 nm    |
| 2    | OC12 inter reach | SM         | FINISAR CORP. | FTRJ1322P1BTR-J3 | 1310 nm    |
| 3    | OC12 short reach | SM         | FINISAR CORP. | FTRJ1322P1BTR-J3 | 1310 nm    |

#### show chassis pic fpc-slot 1 pic-slot 0 (1-port OC192/STM64 MIC with XFP)

```

user@host> show chassis pic fpc-slot 1 pic-slot 0
FPC slot 1, PIC slot 0 information:
  Type                MIC-3D-10C192-XFP
  State                Online
  PIC version          1.2

```

Uptime 1 day, 11 hours, 4 minutes, 6 seconds

PIC port information:

| Port | Cable type        | Fiber type | Xcvr vendor   | Xcvr vendor part number | Wavelength |
|------|-------------------|------------|---------------|-------------------------|------------|
| 0    | OC192 short reach | n/a        | FINISAR CORP. | FTLX1412M3BCL-J3        | 1310 nm    |

### show chassis pic fpc-slot 1 pic-slot 2 (8-port DS3/E3 MIC)

```
user@host> show chassis pic fpc-slot 1 pic-slot 2
FPC slot 1, PIC slot 2 information:
Type          MIC-3D-8DS3-E3
State         Online
PIC version   1.10
Uptime        4 days, 1 hour, 29 minutes, 19 seconds
Channelization Mode Disabled
```

### show chassis pic fpc-slot pic-slot (OTN)

```
user@host> show chassis pic fpc-slot 5 pic-slot 0
FPC slot 5, PIC slot 0 information:
Type          1x10GE(LAN),OTN
ASIC type     H chip
State         Online
PIC version   1.0
Uptime        5 minutes, 50 seconds
```

### show chassis pic fpc-slot pic-slot (QFX3500 Switch)

```
user@switch> show chassis pic fpc-slot 0 pic-slot 0
FPC slot 0, PIC slot 0 information:
Type 48x 10G-SFP+ Builtin
State Online
Uptime 3 days, 3 hours, 5 minutes, 20 seconds
```

### show chassis pic fpc-slot pic-slot (QFX5100 Switches and OCX Series )

```
user@switch> show chassis pic fpc-slot 0 pic-slot 0
FPC slot 0, PIC slot 0 information:
Type          Unknown Builtin
State         Online
Uptime        1 day, 17 hours, 5 minutes, 9 seconds
```

### show chassis pic interconnect-device fpc-slot pic-slot (QFabric Systems)

```
user@switch> show chassis pic interconnect-device interconnect1 fpc-slot 9 pic-slot 0
FPC slot 9, PIC slot 0 information:
Type          16x 40G-GE Builtin
State         Online
Uptime        2 hours, 47 minutes, 40 seconds
```

### show chassis pic node-device fpc-slot pic-slot (QFabric System)

```
user@switch> show chassis pic node-device node1 pic-slot 0
FPC slot node1, PIC slot 0 information:
Type          48x 10G-SFP+ Builtin
State         Online
Uptime        2 hours, 52 minutes, 37 seconds
```

| <b>Output Fields</b>            | Table 93 on page 1561 lists the output fields for the <b>show interfaces</b> (adaptive services and redundant adaptive services) command. Output fields are listed in the approximate order in which they appear.                                                                                                                                                                                                                                                                                                                                                                                        |

**Table 93: Adaptive Services and Redundant Adaptive Services show interfaces Output Fields**

| Field Name                | Field Description                                                                                                                    | Level of Output              |
|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Physical Interface</b> |                                                                                                                                      |                              |
| <b>Physical interface</b> | Name of the physical interface.                                                                                                      | All levels                   |
| <b>Enabled</b>            | State of the interface. Possible values are described in the “Enabled Field” section under <i>Common Output Fields Description</i> . | All levels                   |
| <b>Interface index</b>    | Physical interface's index number, which reflects its initialization sequence.                                                       | <b>detail extensive none</b> |
| <b>SNMP ifIndex</b>       | SNMP index number for the physical interface.                                                                                        | <b>detail extensive none</b> |

Table 93: Adaptive Services and Redundant Adaptive Services show interfaces Output Fields (continued)

| Field Name                     | Field Description                                                                                                                                                                                                                                    | Level of Output              |
|--------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Generation</b>              | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                    | <b>detail extensive</b>      |
| <b>Type</b>                    | Encapsulation being used on the interface.                                                                                                                                                                                                           | All levels                   |
| <b>Link-level type</b>         | Encapsulation being used on the physical interface.                                                                                                                                                                                                  | All levels                   |
| <b>MTU</b>                     | MTU size on the physical interface.                                                                                                                                                                                                                  | All levels                   |
| <b>Clocking</b>                | Reference clock source: can be <b>Internal</b> or <b>External</b> .                                                                                                                                                                                  | All levels                   |
| <b>Speed</b>                   | Speed at which the interface is running.                                                                                                                                                                                                             | All levels                   |
| <b>Device flags</b>            | Information about the physical device. Possible values are described in the "Device Flags" section under <i>Common Output Fields Description</i> .                                                                                                   | All levels                   |
| <b>Interface flags</b>         | Information about the interface. Possible values are described in the "Interface Flags" section under <i>Common Output Fields Description</i> .                                                                                                      | All levels                   |
| <b>Link type</b>               | Physical interface link type: <b>Full-Duplex</b> or <b>Half-Duplex</b> .                                                                                                                                                                             | <b>detail extensive none</b> |
| <b>Link flags</b>              | Information about the link. Possible values are described in the "Link Flags" section under <i>Common Output Fields Description</i> .                                                                                                                | <b>detail extensive none</b> |
| <b>Physical info</b>           | Information about the physical interface.                                                                                                                                                                                                            | <b>detail extensive</b>      |
| <b>Hold-times</b>              | Current interface hold-time up and hold-time down, in milliseconds.                                                                                                                                                                                  | <b>detail extensive</b>      |
| <b>Current address</b>         | Configured MAC address.                                                                                                                                                                                                                              | <b>detail extensive none</b> |
| <b>Hardware address</b>        | MAC address of the hardware.                                                                                                                                                                                                                         | <b>detail extensive none</b> |
| <b>Alternate link address</b>  | Backup address of the link.                                                                                                                                                                                                                          | <b>detail extensive none</b> |
| <b>Last flapped</b>            | Date, time, and how long ago the interface went from down to up. The format is <b>Last flapped: year-month-day hour:minute:second timezone (hour:minute:second ago)</b> . For example, <b>Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> . | <b>detail extensive none</b> |
| <b>Input Rate</b>              | Input rate in bits per second (bps) and packets per second (pps).                                                                                                                                                                                    | None specified               |
| <b>Output Rate</b>             | Output rate in bps and pps.                                                                                                                                                                                                                          | None specified               |
| <b>Statistics last cleared</b> | Time when the statistics for the interface were last set to zero.                                                                                                                                                                                    | <b>detail extensive</b>      |

Table 93: Adaptive Services and Redundant Adaptive Services show interfaces Output Fields (continued)

| Field Name                | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Level of Output              |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Traffic statistics</b> | <p>Number and rate of bytes and packets received and transmitted on the physical interface.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>detail extensive</b>      |
| <b>Input errors</b>       | <p>Input errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of the incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Runts</b>—Frames received smaller than the runt threshold.</li> <li>• <b>Giants</b>—Frames received larger than the giant threshold.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that the Junos OS does not handle.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>                                       | <b>extensive</b>             |
| <b>Output errors</b>      | <p>Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and then up, or another problem occurs. If the number of carrier transitions increments quickly (perhaps once every 10 seconds), the cable, the far-end system, or the PIC is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>MTU errors</b>—Number of packets larger than the MTU threshold.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul> | <b>extensive</b>             |
| <b>Logical Interface</b>  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                              |
| <b>Logical interface</b>  | Name of the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | All levels                   |
| <b>Index</b>              | Logical interface index number, which reflects its initialization sequence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>detail extensive none</b> |
| <b>SNMP ifIndex</b>       | SNMP interface index number.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>detail extensive none</b> |
| <b>Generation</b>         | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>detail extensive</b>      |

| Field Name                    | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                           | Level of Output              |
|-------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Flags</b>                  | Information about the logical interface. Possible values are described in the “Logical Interface Flags” section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                             | All levels                   |
| <b>Encapsulation</b>          | Encapsulation on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                     | All levels                   |
| <b>Input packets</b>          | Number of packets received on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                        | None specified               |
| <b>Output packets</b>         | Number of packets transmitted on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                     | None specified               |
| <b>Traffic statistics</b>     | <p>Number and rate of bytes and packets received and transmitted on the logical interface.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul> | <b>detail extensive</b>      |
| <b>Local statistics</b>       | Statistics for traffic received from and transmitted to the Routing Engine. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. It takes awhile (generally, less than 1 second) for this counter to stabilize.                                                                                                                                                                          | <b>detail extensive</b>      |
| <b>Transit statistics</b>     | Statistics for traffic transiting the router. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. It takes generally less than 1 second for the counter to stabilize.                                                                                                                                                                                                                   | <b>detail extensive</b>      |
| <b><i>protocol-family</i></b> | Protocol family configured on the logical interface. If the protocol is <b>inet</b> , the IP address of the interface is also displayed.                                                                                                                                                                                                                                                                                                                    | <b>brief</b>                 |
| <b>Protocol</b>               | Protocol family configured on the logical interface, such as <b>iso</b> , <b>inet6</b> , <b>mpls</b> .                                                                                                                                                                                                                                                                                                                                                      | <b>detail extensive none</b> |
| <b>MTU</b>                    | MTU size on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>detail extensive none</b> |
| <b>Generation</b>             | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                                                                                                                                                                           | <b>detail extensive</b>      |
| <b>Route table</b>            | Routing table in which the logical interface address is located. For example, <b>0</b> refers to the routing table <b>inet.0</b> .                                                                                                                                                                                                                                                                                                                          | <b>detail extensive</b>      |
| <b>Flags</b>                  | Information about the protocol family flags. Possible values are described in the “Family Flags” section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                    | <b>detail extensive none</b> |
| <b>Addresses, Flags</b>       | Information about the address flags. Possible values are described in the “Addresses Flags” section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                         | <b>detail extensive none</b> |
| <b>Destination</b>            | IP address of the remote side of the connection.                                                                                                                                                                                                                                                                                                                                                                                                            | <b>detail extensive none</b> |
| <b>Local</b>                  | IP address of the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>detail extensive none</b> |

**Table 93: Adaptive Services and Redundant Adaptive Services show interfaces Output Fields**  
(continued)

| Field Name        | Field Description                                                 | Level of Output              |
|-------------------|-------------------------------------------------------------------|------------------------------|
| <b>Broadcast</b>  | Broadcast address.                                                | <b>detail extensive none</b> |
| <b>Generation</b> | Unique number for use by Juniper Networks technical support only. | <b>detail extensive</b>      |

## Sample Output

### show interfaces (Adaptive Services)

```
user@host> show interfaces sp-1/2/0
Physical interface: sp-1/2/0, Enabled, Physical link is Up
  Interface index: 147, SNMP ifIndex: 72
  Type: Adaptive-Services, Link-level type: Adaptive-Services, MTU: 9192,
  Speed: 800mbps
  Device flags   : Present Running
  Interface flags: Point-To-Point SNMP-Traps Internal: 0x4000
  Link type      : Full-Duplex
  Link flags     : None
  Last flapped   : 2006-03-06 11:37:18 PST (00:57:29 ago)
  Input rate     : 0 bps (0 pps)
  Output rate    : 0 bps (0 pps)

Logical interface sp-1/2/0.16383 (Index 68) (SNMP ifIndex 73)
  Flags: Point-To-Point SNMP-Traps Encapsulation: Adaptive-Services
  Input packets : 3057
  Output packets: 3044
  Protocol inet, MTU: 9192
    Flags: Receive-options, Receive-TTL-Exceeded
    Addresses, Flags: Is-Preferred Is-Primary
      Destination: 10.0.0.34, Local: 10.0.0.1
```

### show interfaces brief (Adaptive Services)

```
user@host> show interfaces sp-1/2/0 brief
Physical interface: sp-1/2/0, Enabled, Physical link is Up
  Type: Adaptive-Services, Link-level type: Adaptive-Services, MTU: 9192,
  Clocking: Unspecified, Speed: 800mbps
  Device flags   : Present Running
  Interface flags: Point-To-Point SNMP-Traps Internal: 0x4000

Logical interface sp-1/2/0.16383
  Flags: Point-To-Point SNMP-Traps Encapsulation: Adaptive-Services
  inet 10.0.0.1      --> 10.0.0.34
```

### show interfaces detail (Adaptive Services)

```
user@host> show interfaces sp-1/2/0 detail
Physical interface: sp-1/2/0, Enabled, Physical link is Up
  Interface index: 147, SNMP ifIndex: 72, Generation: 30
  Type: Adaptive-Services, Link-level type: Adaptive-Services, MTU: 9192,
  Clocking: Unspecified, Speed: 800mbps
  Device flags   : Present Running
  Interface flags: Point-To-Point SNMP-Traps Internal: 0x4000
  Link type      : Full-Duplex
  Link flags     : None
  Physical info  : Unspecified
  Hold-times     : Up 0 ms, Down 0 ms
  Current address: Unspecified, Hardware address: Unspecified
  Alternate link address: Unspecified
  Last flapped   : 2006-03-06 11:37:18 PST (00:57:56 ago)
  Statistics last cleared: Never
  Traffic statistics:
    Input bytes :          125147          0 bps
    Output bytes :         1483113          0 bps
    Input packets:           3061          0 pps
    Output packets:          3048          0 pps
```

```

Logical interface sp-1/2/0.16383 (Index 68) (SNMP ifIndex 73) (Generation 7)
Flags: Point-To-Point SNMP-Traps Encapsulation: Adaptive-Services
Traffic statistics:
  Input bytes :          125147
  Output bytes :        1483113
  Input packets:          3061
  Output packets:        3048
Local statistics:
  Input bytes :          125147
  Output bytes :        1483113
  Input packets:          3061
  Output packets:        3048
Transit statistics:
  Input bytes :           0          0 bps
  Output bytes :           0          0 bps
  Input packets:           0          0 pps
  Output packets:          0          0 pps
Protocol inet, MTU: 9192, Generation: 20, Route table: 1
Flags: Receive-options, Receive-TTL-Exceeded
Addresses, Flags: Is-Preferred Is-Primary
  Destination: 10.0.0.34, Local: 10.0.0.1, Broadcast: Unspecified,
  Generation: 22

```

#### show interfaces extensive (Adaptive Services)

```

user@host> show interfaces sp-1/2/0 extensive
Physical interface: sp-1/2/0, Enabled, Physical link is Up
Interface index: 147, SNMP ifIndex: 72, Generation: 30

| <b>Output Fields</b>            | Table 94 on page 1569 lists the output fields for the <b>show interfaces</b> (Aggregated Ethernet) command. Output fields are listed in the approximate order in which they appear.                                                                                                                                                                                                                                                                                                                                                                                                         |

Table 94: Aggregated Ethernet show interfaces Output Fields

| Field Name         | Field Description                                                                                                                             | Level of Output |
|--------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| Physical Interface |                                                                                                                                               |                 |
| Physical interface | Name of the physical interface and state of the interface.                                                                                    | All levels      |
| Enabled            | State of the physical interface. Possible values are described in the “Enabled Field” section under <i>Common Output Fields Description</i> . | All levels      |

Table 94: Aggregated Ethernet show interfaces Output Fields (*continued*)

| Field Name                     | Field Description                                                                                                                                                                                                                                                             | Level of Output              |
|--------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Interface index</b>         | Index number of the physical interface, which reflects its initialization sequence.                                                                                                                                                                                           | All levels                   |
| <b>SNMP ifIndex</b>            | SNMP index number for the physical interface.                                                                                                                                                                                                                                 | <b>detail extensive</b> none |
| <b>Generation</b>              | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                             | <b>detail extensive</b>      |
| <b>Link-level type</b>         | Encapsulation being used on the physical interface.                                                                                                                                                                                                                           | All levels                   |
| <b>MTU</b>                     | Maximum transmission unit size on the physical interface.                                                                                                                                                                                                                     | All levels                   |
| <b>Speed</b>                   | Speed at which the interface is running.                                                                                                                                                                                                                                      | All levels                   |
| <b>Loopback</b>                | Loopback status: <b>Enabled</b> or <b>Disabled</b> . If loopback is enabled, type of loopback: <b>Local</b> or <b>Remote</b> .                                                                                                                                                | All levels                   |
| <b>Source filtering</b>        | Source filtering status: <b>Enabled</b> or <b>Disabled</b> .                                                                                                                                                                                                                  | All levels                   |
| <b>Flow control</b>            | Flow control status: <b>Enabled</b> or <b>Disabled</b> .                                                                                                                                                                                                                      | All levels                   |
| <b>Minimum links needed</b>    | Number of child links that must be operational for the aggregate interface to be operational.                                                                                                                                                                                 | All levels                   |
| <b>Device flags</b>            | Information about the physical device. Possible values are described in the "Device Flags" section under <i>Common Output Fields Description</i> .                                                                                                                            | All levels                   |
| <b>Interface flags</b>         | Information about the interface. Possible values are described in the "Interfaces Flags" section under <i>Common Output Fields Description</i> .                                                                                                                              | All levels                   |
| <b>Current address</b>         | Configured MAC address.                                                                                                                                                                                                                                                       | <b>detail extensive</b>      |
| <b>Hardware address</b>        | Hardware MAC address.                                                                                                                                                                                                                                                         | <b>detail extensive</b>      |
| <b>Last flapped</b>            | Date, time, and how long ago the interface went from down to up or from up to down. The format is <b>Last flapped: year-month-day hours:minutes:seconds timezone (hours:minutes:seconds ago)</b> . For example, <b>Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> . | <b>detail extensive</b>      |
| <b>Input Rate</b>              | Input rate in bits per second (bps) and packets per second (pps).                                                                                                                                                                                                             | None specified               |
| <b>Output Rate</b>             | Output rate in bps and pps.                                                                                                                                                                                                                                                   | None specified               |
| <b>Statistics last cleared</b> | Time when the statistics for the interface were last set to zero.                                                                                                                                                                                                             | <b>detail extensive</b>      |

Table 94: Aggregated Ethernet show interfaces Output Fields (*continued*)

| Field Name                | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Level of Output         |
|---------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
| <b>Traffic statistics</b> | <p>Number and rate of bytes and packets received and transmitted on the physical interface.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes and rate, in bps, at which bytes are received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes and rate, in bps, at which bytes are transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets and rate, in pps, at which packets are received on the interface.</li> <li>• <b>Output packets</b>—Number of packets and rate, in pps, at which packets are transmitted on the interface.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>detail extensive</b> |
| <b>Input errors</b>       | <p>Input errors on the interface:</p> <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of incoming frame aborts and frame check sequence (FCS) errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's random early detection (RED) mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Runts</b>—Number of frames received that are smaller than the runt threshold.</li> <li>• <b>Giants</b>—Number of frames received that are larger than the giant threshold.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or were not of interest. Usually, this field reports protocols that Junos OS does not handle.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>                                                           | <b>detail extensive</b> |
| <b>Output errors</b>      | <p>Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b> —Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and then up, or another problem occurs. If the number of carrier transitions increments quickly (perhaps once every 10 seconds), then the cable, the far-end system, or the PIC is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>MTU errors</b>—Number of packets whose size exceeded the MTU of the interface.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul> | <b>detail extensive</b> |

| IPv6 transit statistics  | <p>Number of IPv6 transit bytes and packets received and transmitted on the physical interface if IPv6 statistics tracking is enabled.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | detail extensive      |
| Queue counters           | <p>CoS queue number and its associated user-configured forwarding class name.</p> <ul style="list-style-type: none"> <li>• <b>Queued packets</b>—Number of queued packets.</li> <li>• <b>Transmitted packets</b>—Number of transmitted packets.</li> <li>• <b>Dropped packets</b>—Number of packets dropped by the ASIC's RED mechanism.</li> </ul> <p><b>NOTE:</b> In DPCs that are not of the enhanced type, such as DPC 40x 1GE R, DPCE 20x 1GE + 2x 10GE R, or DPCE 40x 1GE R, you might notice a discrepancy in the output of the <b>show interfaces</b> command because incoming packets might be counted in the Egress queues section of the output. This problem occurs on non-enhanced DPCs because the egress queue statistics are polled from IMQ (Inbound Message Queuing) block of the I-chip. The IMQ block does not differentiate between ingress and egress WAN traffic; as a result, the combined statistics are displayed in the egress queue counters on the Routing Engine. In a simple VPLS scenario, if there is no MAC entry in DMAC table (by sending unidirectional traffic), traffic is flooded and the input traffic is accounted in IMQ. For bidirectional traffic (MAC entry in DMAC table), if the outgoing interface is on the same I-chip then both ingress and egress statistics are counted in a combined way. If the outgoing interface is on a different I-chip or FPC, then only egress statistics are accounted in IMQ. This behavior is expected with non-enhanced DPCs</p> | detail extensive      |
| <b>Logical Interface</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                       |

| <i>protocol-family</i> | Protocol family configured on the logical interface. Possible values are described in the "Protocol Field" section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                                                                               | brief                 |
| Protocol               | Protocol family configured on the logical interface. Possible values are described in the "Protocol Field" section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                                                                               | detail extensive none |
| MTU                    | Maximum transmission unit size on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | detail extensive none |
| Maximum labels         | Maximum number of MPLS labels configured for the MPLS protocol family on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                  | detail extensive none |
| Generation             | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                | detail extensive      |
| Route Table            | Routing table in which the logical interface address is located. For example, 0 refers to the routing table inet.0.                                                                                                                                                                                                                                                                                                                                                                                                              | detail extensive      |
| Flags                  | Information about protocol family flags. Possible values are described in the "Family Flags Field" section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                                                                                       | detail extensive none |
| Mac-Validate Failures  | Number of MAC address validation failures for packets and bytes. This field is displayed when MAC address validation is enabled for the logical interface.                                                                                                                                                                                                                                                                                                                                                                       | detail extensive none |
| Addresses, Flags       | Information about address flags. Possible values are described in the "Addresses Flags" section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                                                                                                  | detail extensive none |
| Destination            | IP address of the remote side of the connection.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | detail extensive none |
| Local                  | IP address of the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | detail extensive none |
| Broadcast              | Broadcast address of the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | detail extensive none |
| Generation             | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                | detail extensive      |

## Sample Output

### show interfaces (Aggregated Ethernet)

```
user@host> show interfaces ae0
```

```

Physical interface: ae0, Enabled, Physical link is Up
Interface index: 153, SNMP ifIndex: 59
Link-level type: Ethernet, MTU: 1514, Speed: 300mbps, Loopback: Disabled,
Source filtering: Disabled, Flow control: Disabled, Minimum links needed: 1
Device flags : Present Running
Interface flags: SNMP-Traps 16384
Current address: 00:00:5e:00:53:f0, Hardware address: 00:00:5e:00:53:f0
Last flapped : Never
Input rate : 0 bps (0 pps)
Output rate : 0 bps (0 pps)

Logical interface ae0.0 (Index 72) (SNMP ifIndex 60)
Flags: SNMP-Traps 16384 Encapsulation: ENET2
Statistics Packets pps Bytes bps
Bundle:
  Input : 0 0 0 0
  Output: 0 0 0 0
Protocol inet, MTU: 1500
Flags: None
Addresses, Flags: Is-Preferred Is-Primary
Destination: 203.0.113/24, Local: 203.0.113.2, Broadcast: 10.100.1.255

```

#### show interfaces brief (Aggregated Ethernet)

```

user@host> show interfaces ae0 brief
Physical interface: ae0, Enabled, Physical link is Up
Link-level type: Ethernet, MTU: 1514, Speed: 300mbps, Loopback: Disabled,
Source filtering: Disabled, Flow control: Disabled
Device flags : Present Running
Interface flags: SNMP-Traps 16384

Logical interface ae0.0
Flags: SNMP-Traps 16384 Encapsulation: ENET2
inet 203.0.113.2/24

```

#### show interfaces detail (Aggregated Ethernet)

```

user@host> show interfaces ae0 detail
Physical interface: ae0, Enabled, Physical link is Up
Interface index: 153, SNMP ifIndex: 59, Generation: 36
Link-level type: Ethernet, MTU: 1514, Speed: 300mbps, Loopback: Disabled,
Source filtering: Disabled, Flow control: Disabled, Minimum links needed: 1
Device flags : Present Running
Interface flags: SNMP-Traps 16384
Current address: 00:00:5e:00:53:f0, Hardware address: 00:00:5e:00:53:f0

Table 95: show interfaces demux0 (Demux Interfaces) Output Fields (*continued*)

| Field Name               | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Level of Output                    |
|--------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------|
| <b>Input errors</b>      | Input errors on the interface whose definitions are as follows: <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of the incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Runts</b>—Number of frames received that are smaller than the runt threshold.</li> <li>• <b>Giants</b>—Number of frames received that are larger than the giant packet threshold.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that the Junos OS does not handle.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>                                                                 | <b>extensive</b>                   |
| <b>Input Rate</b>        | Input rate in bits per second (bps) and packets per second (pps).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>none</b>                        |
| <b>Output errors</b>     | Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious: <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and then up, or another problem occurs. If the number of carrier transitions increments quickly (perhaps once every 10 seconds), the cable, the far-end system, or the PIC or PIM is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>MTU errors</b>—Number of packets whose size exceeded the MTU of the interface.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul> | <b>extensive</b>                   |
| <b>Output Rate</b>       | Output rate in bps and pps.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>none</b>                        |

| <b>Broadcast</b>            | Broadcast address of the logical interlace.                                                                                                                                                                                                                                                          | <b>detail extensive none</b>          |
| <b>Generation</b>           | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                    | <b>detail extensive</b>               |
| <b>Link</b>                 | Name of the physical interfaces for member links in an aggregated Ethernet bundle for a PPPoE over aggregated Ethernet configuration. PPPoE traffic goes out on these interfaces.                                                                                                                    | <b>detail extensive none</b>          |
| <b>Dynamic-profile</b>      | Name of the PPPoE dynamic profile assigned to the underlying interface.                                                                                                                                                                                                                              | <b>detail extensive none</b>          |
| <b>Service Name Table</b>   | Name of the PPPoE service name table assigned to the PPPoE underlying interface.                                                                                                                                                                                                                     | <b>detail extensive none</b>          |
| <b>Max Sessions</b>         | Maximum number of dynamic PPPoE logical interfaces that the router can activate on the underlying interface.                                                                                                                                                                                         | <b>detail extensive none</b>          |
| <b>Duplicate Protection</b> | State of duplicate protection: <b>On</b> or <b>Off</b> . Duplicate protection prevents the activation of another dynamic PPPoE logical interface on the same underlying interface when a dynamic PPPoE logical interface for a client with the same MAC address is already active on that interface. | <b>detail extensive none</b>          |
| <b>Direct Connect</b>       | State of the configuration to ignore DSL Forum VSAs: <b>On</b> or <b>Off</b> . When configured, the router ignores any of these VSAs received from a directly connected CPE device on the interface.                                                                                                 | <b>detail extensive none</b>          |
| <b>AC Name</b>              | Name of the access concentrator.                                                                                                                                                                                                                                                                     | <b>detail extensive none</b>          |

## Sample Output

### show interfaces demux0 (Demux)

```

user@host> show interfaces demux0
Physical interface: demux0, Enabled, Physical link is Up
Interface index: 128, SNMP ifIndex: 79, Generation: 129
Type: Software-Pseudo, Link-level type: Unspecified, MTU: 9192, Clocking: 1,
Speed: Unspecified
Device flags   : Present Running
Interface flags: Point-To-Point SNMP-Traps
Link type      : Full-Duplex
Link flags     : None
Physical info  : Unspecified
Hold-times     : Up 0 ms, Down 0 ms
Current address: Unspecified, Hardware address: Unspecified
Alternate link address: Unspecified
Last flapped   : Never
Statistics last cleared: Never

```

Addresses, Flags: Is-Preferred Is-Primary
Destination: 203.0.113/24, Local: 203.0.113.13, Broadcast: 203.0.113.255,

Generation: 434

```

#### show interfaces demux0 (PPPoE over Aggregated Ethernet)

```

user@host> show interfaces demux0.100
Logical interface demux0.100 (Index 76) (SNMP ifIndex 61160)
Flags: SNMP-Traps 0x4000 VLAN-Tag [ 0x8100.100 ]

```

```
Encapsulation: ENET2
Demux:
  Underlying interface: ae0 (Index 199)
Link:
  ge-1/0/0
  ge-1/1/0
Input packets : 0
Output packets: 0
Protocol pppoe
  Dynamic Profile: pppoe-profile,
  Service Name Table: service-table1,
  Max Sessions: 100, Duplicate Protection: On,
  Direct Connect: Off,
  AC Name: pppoe-server-1
```

### show interfaces demux0 extensive (Targeted Distribution for Aggregated Ethernet Links)

```
user@host> show interfaces demux0.1073741824 extensive
```

```
Logical interface demux0.1073741824 (Index 75) (SNMP ifIndex 558) (Generation 346)
Flags: SNMP-Traps 0x4000 VLAN-Tag [ 0x8100.1 ] Encapsulation: ENET2
Demux:
  Underlying interface: ae0 (Index 201)
Link:
  ge-1/0/0
  ge-1/1/0
  ge-2/0/7
  ge-2/0/8
Targeting summary:
  ge-1/1/0, primary, Physical link is Up
  ge-2/0/8, backup, Physical link is Up
Bandwidth: 1000mbps
```

### show interfaces demux0 (ACI Interface Set Configured)

```
user@host> show interfaces demux0.1073741827
Logical interface demux0.1073741827 (Index 346) (SNMP ifIndex 527)
Flags: SNMP-Traps 0x4000 VLAN-Tag [ 0x8100.1802 0x8100.302 ] Encapsulation: ENET2
Demux: Source Family Inet
ACI VLAN:
  Dynamic Profile: aci-vlan-set-profile
Demux:
  Underlying interface: ge-1/0/0 (Index 138)
Input packets : 18
Output packets: 16
Protocol inet, MTU: 1500
  Flags: Sendbroadcast-pkt-to-re, Unnumbered
  Donor interface: lo0.0 (Index 322)
  Preferred source address: 203.0.113.202
  Addresses, Flags: Primary Is-Default Is-Primary
    Local: 203.0.113.119
Protocol pppoe
  Dynamic Profile: aci-vlan-pppoe-profile,
  Service Name Table: None,
  Max Sessions: 32000, Max Sessions VSA Ignore: Off,
  Duplicate Protection: On, Short Cycle Protection: Off,
  Direct Connect: Off,
  AC Name: nbc
```

## show interfaces diagnostics optics (Gigabit Ethernet, 10-Gigabit Ethernet, 40-Gigabit Ethernet, 100-Gigabit Ethernet, and Virtual Chassis Port)

|                               |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| <b>Syntax</b>                 | show interfaces diagnostics optics <i>interface-name</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Release Information</b>    | Command introduced before Junos OS Release 7.4.<br>Command introduced in Junos OS Release 12.1 for PTX Series routers.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Description</b>            | Display diagnostics data, warnings, and alarms for Gigabit Ethernet, 10-Gigabit Ethernet, 40-Gigabit Ethernet, 100-Gigabit Ethernet, or Virtual Chassis port interfaces.                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Options</b>                | <i>interface-name</i> —Interface name. For example:<br><i>ge-fpc/pic/port</i><br><i>et-fpc/pic/port</i><br><i>et-fpc/pic/port:channel</i><br><i>xe-fpc/pic/port</i><br><i>vcp-fpc/pic/port</i>                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Additional Information</b> | <p>The transceivers are polled in 1-second intervals for diagnostics data, warnings, and alarms. The alarms do not cause the links to go down or the LEDs to change color, nor generate SNMP traps. Changes in alarm and warning status generate system log messages.</p> <p>Thresholds that trigger a high alarm, low alarm, high warning, or low warning are set by the transceiver vendors. Generally, a high alarm or low alarm indicates that the optics module is not operating properly. This information can be used to diagnose why a device is not working.</p> |

**NOTE:** Some transceivers do not support all optical diagnostics features described in the output fields.

If optics measures transmit or receive power as zero, then, the measured power is displayed as 0.000 mW / - Inf dBm

You can configure the P2-10G-40G-QSFPP PIC to operate either in 10-Gigabit Ethernet mode or in 40-Gigabit Ethernet mode. When the PIC is in 40-Gigabit Ethernet mode, you must execute the **show interfaces diagnostics optics et-fpc/pic/port** command. The output of this command displays the diagnostic optics information about the corresponding 40-Gigabit Ethernet port of the PIC. However, when the PIC is in 10-Gigabit Ethernet mode, you must execute the **show interfaces diagnostics optics et-fpc/pic/port:channel** command. The output of this command displays the diagnostic optics information about the corresponding 10-Gigabit Ethernet port of the PIC. For information about the P2-10G-40G-QSFPP PIC, see “P2-10G-40G-QSFPP PIC Overview” on page 393.

**Output Fields** [Table 96 on page 1590](#) lists the output fields for the **show interfaces diagnostics optics** command for DWDM and DWDM OTN PICs. Output fields are listed in the approximate order in which they appear.

**Table 96: show interfaces diagnostics optics Output Fields for 10-Gigabit Ethernet DWDM and DWDM OTN PICs**

| Field Name                            | Field Description                                                                                                                                                        |
|---------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Physical interface                    | Name of the physical interface.                                                                                                                                          |
| Laser bias current                    | Magnitude of the laser bias power setting current, in milliamperes (mA). The laser bias provides direct modulation of laser diodes and modulates currents.               |
| Laser output power                    | Laser output power, in milliwatts (mW) and decibels, referenced to 1.0 mW (dBm). This is a software equivalent to the <b>LsPOWMON</b> pin in hardware.                   |
| Receiver signal average optical power | Average received optical power, in mW and dBm. This indicator is a software equivalent to the <b>RxPOWMON</b> pin in hardware. Average optical power is vendor-specific. |
| Laser end-of-life alarm               | Laser end-of-life alarm: <b>On</b> or <b>Off</b> .                                                                                                                       |
| Laser wavelength alarm                | Laser wavelength alarm: <b>On</b> or <b>Off</b> .                                                                                                                        |

**Table 96: show interfaces diagnostics optics Output Fields for 10-Gigabit Ethernet DWDM and DWDM OTN PICs (*continued*)**

| Field Name                             | Field Description                                                                                                      |
|----------------------------------------|------------------------------------------------------------------------------------------------------------------------|
| Laser bias current alarm               | Laser bias current alarm: <b>On</b> or <b>Off</b> .                                                                    |
| Laser temperature alarm                | Laser temperature alarm: <b>On</b> or <b>Off</b> .                                                                     |
| Laser power alarm                      | Laser power alarm: <b>On</b> or <b>Off</b> .                                                                           |
| Modulator temperature alarm            | Modulator temperature alarm: <b>On</b> or <b>Off</b> .<br>Transceivers from some vendors do not support this field.    |
| Modulator bias alarm                   | Modulator bias alarm: <b>On</b> or <b>Off</b> .                                                                        |
| Tx multiplexer FIFO error alarm        | Transmit multiplexer first in, first out (FIFO) error alarm: <b>On</b> or <b>Off</b> .                                 |
| Tx loss of PLL lock alarm              | Transmit loss of phase-locked loop (PLL) lock alarm: <b>On</b> or <b>Off</b> .                                         |
| Rx loss of average optical power alarm | Receive loss of average optical power alarm: <b>On</b> or <b>Off</b> .                                                 |
| Rx loss of AC power alarm              | Receive loss of AC power alarm: <b>On</b> or <b>Off</b> .<br>Transceivers from some vendors do not support this field. |
| Rx loss of PLL lock alarm              | Receive loss of phase-locked loop (PLL) lock alarm: <b>On</b> or <b>Off</b> .                                          |

[Table 97 on page 1591](#) lists the output fields for the **show interfaces diagnostics optics** command when the router is operating with bidirectional SFP optics. Output fields are listed in the approximate order in which they appear.

**Table 97: show interfaces diagnostics optics Output Fields for Gigabit Ethernet Bidirectional SFP Optics**

| Field Name         | Field Description                                                                                                                                          |
|--------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Physical interface | Name of the physical interface.                                                                                                                            |
| Laser bias current | Magnitude of the laser bias power setting current, in milliamperes (mA). The laser bias provides direct modulation of laser diodes and modulates currents. |
| Laser output power | Laser output power, in milliwatts (mW) and decibels, referenced to 1.0 mW (dBm).                                                                           |
| Module temperature | Temperature of the optics module, in Celsius and Fahrenheit.                                                                                               |
| Module voltage     | Internally measured module voltage.                                                                                                                        |

Table 97: show interfaces diagnostics optics Output Fields for Gigabit Ethernet Bidirectional SFP Optics (*continued*)

| Field Name                            | Field Description                                                                |
|---------------------------------------|----------------------------------------------------------------------------------|
| Receiver signal average optical power | Average received optical power, in mW and dBm.                                   |
| Wavelength Channel number             | Wavelength channel number set in the optics module.                              |
| Wavelength setpoint                   | Wavelength set in the optics module.                                             |
| Tx Dither                             | Transmit dither status. Displays whether transmit dither is enabled or disabled. |
| Frequency Error                       | Frequency error reported from optics module.                                     |
| Wavelength Error                      | Wavelength error reported from optics module.                                    |
| Laser bias current high alarm         | Laser bias power setting high alarm. Displays <b>on</b> or <b>off</b> .          |
| Laser bias current low alarm          | Laser bias power setting low alarm. Displays <b>on</b> or <b>off</b> .           |
| Laser bias current high warning       | Laser bias power setting high warning. Displays <b>on</b> or <b>off</b> .        |
| Laser bias current low warning        | Laser bias power setting low warning. Displays <b>on</b> or <b>off</b> .         |
| Laser output power high alarm         | Laser output power high alarm. Displays <b>on</b> or <b>off</b> .                |
| Laser output power low alarm          | Laser output power low alarm. Displays <b>on</b> or <b>off</b> .                 |
| Laser output power high warning       | Laser output power high warning. Displays <b>on</b> or <b>off</b> .              |
| Laser output power low warning        | Laser output power low warning. Displays <b>on</b> or <b>off</b> .               |
| Module temperature high alarm         | Module temperature high alarm. Displays <b>on</b> or <b>off</b> .                |
| Module temperature low alarm          | Module temperature low alarm. Displays <b>on</b> or <b>off</b> .                 |
| Module temperature high warning       | Module temperature high warning. Displays <b>on</b> or <b>off</b> .              |

Table 97: show interfaces diagnostics optics Output Fields for Gigabit Ethernet Bidirectional SFP Optics (*continued*)

| Field Name                                | Field Description                                                                                       |
|-------------------------------------------|---------------------------------------------------------------------------------------------------------|
| Module temperature low warning            | Module temperature low warning. Displays <b>on</b> or <b>off</b> .                                      |
| Module voltage high alarm                 | Module voltage high alarm. Displays <b>on</b> or <b>off</b> .                                           |
| Module voltage low alarm                  | Module voltage low alarm. Displays <b>on</b> or <b>off</b> .                                            |
| Module voltage high warning               | Module voltage high warning. Displays <b>on</b> or <b>off</b> .                                         |
| Module voltage low warning                | Module voltage high warning. Displays <b>on</b> or <b>off</b> .                                         |
| Laser rx power high alarm                 | Receive laser power high alarm. Displays <b>on</b> or <b>off</b> .                                      |
| Laser rx power low alarm                  | Receive laser power low alarm. Displays <b>on</b> or <b>off</b> .                                       |
| Laser rx power high warning               | Receive laser power high warning. Displays <b>on</b> or <b>off</b> .                                    |
| Laser rx power low warning                | Receive laser power low warning. Displays <b>on</b> or <b>off</b> .                                     |
| TEC fault alarm                           | TEC fault alarm. Displays <b>on</b> or <b>off</b> .                                                     |
| Wavelength unlocked alarm                 | Wavelength unlocked alarm. Displays <b>on</b> or <b>off</b> .                                           |
| TxTune                                    | Optical transmit side status. Displays whether optical transmit side is not ready due to tuning.        |
| Laser bias current high alarm threshold   | Vendor-specified threshold for the laser bias current high alarm: <b>70.000 mA</b> .                    |
| Laser bias current low alarm threshold    | Vendor-specified threshold for the laser bias current low alarm: <b>0.0002 mA</b> .                     |
| Laser bias current high warning threshold | Vendor-specified threshold for the laser bias current high warning: <b>65.000 mA</b> .                  |
| Laser bias current low warning threshold  | Vendor-specified threshold for the laser bias current low warning: <b>0.0002 mA</b> .                   |
| Laser output power high alarm threshold   | Vendor-specified threshold for the laser output power high alarm: <b>1.0000 mW</b> or <b>0.00 dBm</b> . |

Table 97: show interfaces diagnostics optics Output Fields for Gigabit Ethernet Bidirectional SFP Optics (*continued*)

| Field Name                                | Field Description                                                                                          |
|-------------------------------------------|------------------------------------------------------------------------------------------------------------|
| Laser output power low alarm threshold    | Vendor-specified threshold for the laser output power low alarm: <b>0.0560 mW</b> or <b>-12.52 dBm</b> .   |
| Laser output power high warning threshold | Vendor-specified threshold for the laser output power high warning: <b>0.6300 mW</b> or <b>-2.01 dBm</b> . |
| Laser output power low warning threshold  | Vendor-specified threshold for the laser output power low warning: <b>0.0890 mW</b> or <b>-10.51 dBm</b> . |
| Module temperature high alarm threshold   | Vendor-specified threshold for the module temperature high alarm: <b>100° C</b> or <b>212° F</b> .         |
| Module temperature low alarm threshold    | Vendor-specified threshold for the module temperature low alarm: <b>-50° C</b> or <b>-58° F</b> .          |
| Module temperature high warning threshold | Vendor-specified threshold for the module temperature high warning: <b>95 ° C</b> or <b>203 ° F</b> .      |
| Module temperature low warning threshold  | Vendor-specified threshold for the module temperature low warning: <b>-48° C</b> or <b>-54° F</b> .        |
| Module voltage high alarm threshold       | Module voltage high alarm threshold: <b>3.700 v</b> .                                                      |
| Module voltage low alarm threshold        | Module voltage low alarm threshold: <b>2.900 v</b> .                                                       |
| Module voltage high warning threshold     | Module voltage high warning threshold: <b>3.7600 v</b> .                                                   |
| Module voltage low warning threshold      | Module voltage low warning threshold: <b>3.000 v</b> .                                                     |
| Laser rx power high alarm threshold       | Vendor-specified threshold for the laser Rx power high alarm: <b>1.9953 mW</b> or <b>3.00 dBm</b> .        |
| Laser rx power low alarm threshold        | Vendor-specified threshold for the laser Rx power low alarm: <b>0.0001 mW</b> or <b>-40.00 dBm</b> .       |
| Laser rx power high warning threshold     | Vendor-specified threshold for the laser Rx power high warning: <b>1.0000 mW</b> or <b>0.00 dBm</b> .      |
| Laser rx power low warning threshold      | Vendor-specified threshold for the laser Rx power low warning: <b>0.0010 mW</b> or <b>-30.00 dBm</b> .     |

[Table 98 on page 1595](#) lists the output fields for the **show interfaces diagnostics optics** command for SFP transceivers. Output fields are listed in the approximate order in which they appear.

Table 98: show interfaces diagnostics Output Fields for Gigabit Ethernet SFP Transceivers

| Field Name                      | Field Description                                                                              |
|---------------------------------|------------------------------------------------------------------------------------------------|
| Physical interface              | Name of the physical interface.                                                                |
| Laser bias current              | Measured laser bias current in uA.                                                             |
| Laser output power              | Measured laser output power in mW.                                                             |
| Module temperature              | Internally measured module temperature.                                                        |
| Module voltage                  | Internally measured module voltage.                                                            |
| Laser rx power                  | Measured receive optical power in mW.                                                          |
| Laser bias current high alarm   | Laser bias current high alarm: <b>On</b> or <b>Off</b> . Alarm ranges are vendor-specific.     |
| Laser bias current low alarm    | Laser bias current low alarm: <b>On</b> or <b>Off</b> . Alarm ranges are vendor-specific.      |
| Laser output power high alarm   | Laser output power high alarm: <b>On</b> or <b>Off</b> . Alarm ranges are vendor-specific.     |
| Laser output power low alarm    | Laser output power low alarm: <b>On</b> or <b>Off</b> . Alarm ranges are vendor-specific.      |
| Module temp high alarm          | Module temperature high alarm: <b>On</b> or <b>Off</b> . Alarm ranges are vendor-specific.     |
| Module temp low alarm           | Module temperature low alarm: <b>On</b> or <b>Off</b> . Alarm ranges are vendor-specific.      |
| Laser rx power high alarm       | Laser receive power high alarm: <b>On</b> or <b>Off</b> . Alarm ranges are vendor-specific.    |
| Laser rx power low alarm        | Laser receive power low alarm: <b>On</b> or <b>Off</b> . Alarm ranges are vendor-specific.     |
| Laser bias current high warning | Laser bias current high warning: <b>On</b> or <b>Off</b> . Warning ranges are vendor-specific. |
| Laser bias current low warning  | Laser bias current low warning: <b>On</b> or <b>Off</b> . Warning ranges are vendor-specific.  |
| Laser output power high warning | Laser output power high warning: <b>On</b> or <b>Off</b> . Warning ranges are vendor-specific. |
| Laser output power low warning  | Laser output power low warning: <b>On</b> or <b>Off</b> . Warning ranges are vendor-specific.  |
| Module temperature high warning | Module temperature high warning: <b>On</b> or <b>Off</b> . Warning ranges are vendor-specific. |

Table 98: show interfaces diagnostics Output Fields for Gigabit Ethernet SFP Transceivers (*continued*)

| Field Name                                | Field Description                                                                               |
|-------------------------------------------|-------------------------------------------------------------------------------------------------|
| Module temperature low warning            | Module temperature low warning: <b>On</b> or <b>Off</b> . Warning ranges are vendor-specific.   |
| Laser rx power high warning               | Laser receive power high warning: <b>On</b> or <b>Off</b> . Warning ranges are vendor-specific. |
| Laser rx power low warning                | Laser receive power low warning: <b>On</b> or <b>Off</b> . Warning ranges are vendor-specific.  |
| Laser bias current high alarm threshold   | Laser bias current high alarm threshold. Alarm threshold ranges are vendor-specific.            |
| Laser bias current low alarm threshold    | Laser bias current low alarm threshold. Alarm threshold ranges are vendor-specific.             |
| Laser bias current high warning threshold | Laser bias current high warning threshold. Warning ranges are vendor-specific.                  |
| Laser bias current low warning threshold  | Laser bias current low warning threshold. Warning ranges are vendor-specific.                   |
| Laser output power high alarm threshold   | Laser output power high alarm threshold. Alarm threshold ranges are vendor-specific.            |
| Laser output power low alarm threshold    | Laser output power low alarm threshold. Alarm threshold ranges are vendor-specific.             |
| Laser output power high warning threshold | Laser output power high warning threshold. Warning ranges are vendor-specific.                  |
| Laser output power low warning threshold  | Laser output power low warning threshold. Warning ranges are vendor-specific.                   |
| Module temperature high alarm threshold   | Module temperature high alarm threshold. Alarm threshold ranges are vendor-specific.            |
| Module temperature low alarm threshold    | Module temperature low alarm threshold. Alarm threshold ranges are vendor-specific.             |
| Module temperature high warning threshold | Module temperature high warning threshold. Warning ranges are vendor-specific.                  |
| Module temperature low warning threshold  | Module temperature low warning threshold. Warning ranges are vendor-specific.                   |
| Module voltage high alarm threshold       | Module voltage high alarm threshold. Alarm ranges are vendor-specific.                          |

**Table 98: show interfaces diagnostics Output Fields for Gigabit Ethernet SFP Transceivers (*continued*)**

| Field Name                            | Field Description                                                                         |
|---------------------------------------|-------------------------------------------------------------------------------------------|
| Module voltage low alarm threshold    | Module voltage low alarm threshold. Alarm ranges are vendor-specific.                     |
| Module voltage high warning threshold | Module voltage high warning threshold. Warning ranges are vendor-specific.                |
| Module voltage low warning threshold  | Module voltage low warning threshold. Warning ranges are vendor-specific.                 |
| Laser rx power high alarm threshold   | Laser receive power high alarm threshold. Alarm threshold ranges are vendor-specific.     |
| Laser rx power low alarm threshold    | Laser receive power low alarm threshold. Alarm threshold ranges are vendor-specific.      |
| Laser rx power high warning threshold | Laser receive power high warning threshold. Warning threshold ranges are vendor-specific. |
| Laser rx power high low threshold     | Laser receive power high warning threshold. Warning threshold ranges are vendor-specific. |

[Table 99 on page 1597](#) lists the output fields for the **show interfaces diagnostics optics** command for 10-Gigabit Ethernet transceivers. Output fields are listed in the approximate order in which they appear.

**Table 99: show interfaces diagnostics optics Output Fields for 10-Gigabit Ethernet Transceivers**

| Field Name                    | Field Description                                                                          |
|-------------------------------|--------------------------------------------------------------------------------------------|
| Physical interface            | Name of the physical interface.                                                            |
| Laser bias current            | Measured laser bias current in mA.                                                         |
| Laser output power            | Measured laser output power in mW.                                                         |
| Module temperature            | Internally measured module temperature.                                                    |
| Laser rx power                | Measured receive optical power in mW.                                                      |
| Laser bias current high alarm | Laser bias current high alarm: <b>On</b> or <b>Off</b> . Alarm ranges are vendor-specific. |
| Laser bias current low alarm  | Laser bias current low alarm: <b>On</b> or <b>Off</b> . Alarm ranges are vendor-specific.  |
| Laser output power high alarm | Laser output power high alarm: <b>On</b> or <b>Off</b> . Alarm ranges are vendor-specific. |

Table 99: show interfaces diagnostics optics Output Fields for 10-Gigabit Ethernet Transceivers (*continued*)

| Field Name                              | Field Description                                                                               |
|-----------------------------------------|-------------------------------------------------------------------------------------------------|
| Laser output power low alarm            | Laser output power low alarm: <b>On</b> or <b>Off</b> . Alarm ranges are vendor-specific.       |
| Module temp high alarm                  | Module temperature high alarm: <b>On</b> or <b>Off</b> . Alarm ranges are vendor-specific.      |
| Module temp low alarm                   | Module temperature low alarm: <b>On</b> or <b>Off</b> . Alarm ranges are vendor-specific.       |
| Laser rx power high alarm               | Laser receive power high alarm: <b>On</b> or <b>Off</b> . Alarm ranges are vendor-specific.     |
| Laser rx power low alarm                | Laser receive power low alarm: <b>On</b> or <b>Off</b> . Alarm ranges are vendor-specific.      |
| Laser bias current high warning         | Laser bias current high warning: <b>On</b> or <b>Off</b> . Warning ranges are vendor-specific.  |
| Laser bias current low warning          | Laser bias current low warning: <b>On</b> or <b>Off</b> . Warning ranges are vendor-specific.   |
| Laser output power high warning         | Laser output power high warning: <b>On</b> or <b>Off</b> . Warning ranges are vendor-specific.  |
| Laser output power low warning          | Laser output power low warning: <b>On</b> or <b>Off</b> . Warning ranges are vendor-specific.   |
| Module temperature high warning         | Module temperature high warning: <b>On</b> or <b>Off</b> . Warning ranges are vendor-specific.  |
| Module temperature low warning          | Module temperature low warning: <b>On</b> or <b>Off</b> . Warning ranges are vendor-specific.   |
| Laser rx power high warning             | Laser receive power high warning: <b>On</b> or <b>Off</b> . Warning ranges are vendor-specific. |
| Laser rx power low warning              | Laser receive power low warning: <b>On</b> or <b>Off</b> . Warning ranges are vendor-specific.  |
| Laser bias current high alarm threshold | Laser bias current high alarm threshold. Alarm threshold ranges are vendor-specific.            |
| Laser bias current low alarm threshold  | Laser bias current low alarm threshold. Alarm threshold ranges are vendor-specific.             |
| Laser output power high alarm threshold | Laser output power high alarm threshold. Alarm threshold ranges are vendor-specific.            |

**Table 99: show interfaces diagnostics optics Output Fields for 10-Gigabit Ethernet Transceivers (continued)**

| Field Name                                | Field Description                                                                         |
|-------------------------------------------|-------------------------------------------------------------------------------------------|
| Laser output power low alarm threshold    | Laser output power low alarm threshold. Alarm threshold ranges are vendor-specific.       |

| Laser rx power low warning threshold      | Laser receive power low warning threshold. Warning threshold ranges are vendor-specific.  |

[Table 100 on page 1600](#) lists the output fields for the **show interfaces diagnostics optics** command for XFP transceivers. Output fields are listed in the approximate order in which they appear.

Table 100: show interfaces diagnostics optics Output Fields for 10-Gigabit Ethernet XFP Transceivers

| Field Name                      | Field Description                                                                                                                                          |
|---------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Physical interface              | Name of the physical interface.                                                                                                                            |
| Laser bias current              | Magnitude of the laser bias power setting current, in milliamperes (mA). The laser bias provides direct modulation of laser diodes and modulates currents. |
| Laser output power              | Laser output power, in milliwatts (mW) and decibels, referenced to 1.0 mW (dBm). This is a software equivalent to the <b>LsPOWMON</b> pin in hardware.     |
| Module temperature              | Temperature of the XFP optics module, in Celsius and Fahrenheit.                                                                                           |
| Laser rx power                  | Laser received optical power, in mW and dBm.                                                                                                               |
| Laser bias current high alarm   | Laser bias power setting high alarm. Displays <b>on</b> or <b>off</b> .                                                                                    |
| Laser bias current low alarm    | Laser bias power setting low alarm. Displays <b>on</b> or <b>off</b> .                                                                                     |
| Laser bias current high warning | Laser bias power setting high warning. Displays <b>on</b> or <b>off</b> .                                                                                  |
| Laser bias current low warning  | Laser bias power setting low warning. Displays <b>on</b> or <b>off</b> .                                                                                   |
| Laser output power high alarm   | Laser output power high alarm. Displays <b>on</b> or <b>off</b> .                                                                                          |
| Laser output power low alarm    | Laser output power low alarm. Displays <b>on</b> or <b>off</b> .                                                                                           |
| Laser output power high warning | Laser output power high warning. Displays <b>on</b> or <b>off</b> .                                                                                        |
| Laser output power low warning  | Laser output power low warning. Displays <b>on</b> or <b>off</b> .                                                                                         |
| Module temperature high alarm   | Module temperature high alarm. Displays <b>on</b> or <b>off</b> .                                                                                          |
| Module temperature low alarm    | Module temperature low alarm. Displays <b>on</b> or <b>off</b> .                                                                                           |
| Module temperature high warning | Module temperature high warning. Displays <b>on</b> or <b>off</b> .                                                                                        |
| Module temperature low warning  | Module temperature low warning. Displays <b>on</b> or <b>off</b> .                                                                                         |

Table 100: show interfaces diagnostics optics Output Fields for 10-Gigabit Ethernet XFP Transceivers (*continued*)

| Field Name                                | Field Description                                                                                                                           |
|-------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|
| Laser rx power high alarm                 | Receive laser power high alarm. Displays <b>on</b> or <b>off</b> .                                                                          |
| Laser rx power low alarm                  | Receive laser power low alarm. Displays <b>on</b> or <b>off</b> .                                                                           |
| Laser rx power high warning               | Receive laser power high warning. Displays <b>on</b> or <b>off</b> .                                                                        |
| Laser rx power low warning                | Receive laser power low warning. Displays <b>on</b> or <b>off</b> .                                                                         |
| Module not ready alarm                    | Module not ready alarm. When <b>on</b> , indicates the module has an operational fault. Displays <b>on</b> or <b>off</b> .                  |
| Module power down alarm                   | Module power down alarm. When <b>on</b> , module is in a limited power mode, low for normal operation. Displays <b>on</b> or <b>off</b> .   |
| Tx data not ready alarm                   | Any condition leading to invalid data on the transmit path. Displays <b>on</b> or <b>off</b> .                                              |
| Tx not ready alarm                        | Any condition leading to invalid data on the transmit path. Displays <b>on</b> or <b>off</b> .                                              |
| Tx laser fault alarm                      | Laser fault condition. Displays <b>on</b> or <b>off</b> .                                                                                   |
| Tx CDR loss of lock alarm                 | Transmit clock and data recovery (CDR) loss of lock. Loss of lock on the transmit side of the CDR. Displays <b>on</b> or <b>off</b> .       |
| Rx not ready alarm                        | Any condition leading to invalid data on the receive path. Displays <b>on</b> or <b>off</b> .                                               |
| Rx loss of signal alarm                   | Receive Loss of Signal alarm. When <b>on</b> , indicates insufficient optical input power to the module. Displays <b>on</b> or <b>off</b> . |
| Rx CDR loss of lock alarm                 | Receive CDR loss of lock. Loss of lock on the receive side of the CDR. Displays <b>on</b> or <b>off</b> .                                   |
| Laser bias current high alarm threshold   | Vendor-specified threshold for the laser bias current high alarm: <b>130.000 mA</b> .                                                       |
| Laser bias current low alarm threshold    | Vendor-specified threshold for the laser bias current low alarm: <b>10.000 mA</b> .                                                         |
| Laser bias current high warning threshold | Vendor-specified threshold for the laser bias current high warning: <b>120.000 mA</b> .                                                     |
| Laser bias current low warning threshold  | Vendor-specified threshold for the laser bias current low warning: <b>12.000 mA</b> .                                                       |
| Laser output power high alarm threshold   | Vendor-specified threshold for the laser output power high alarm: <b>0.8910 mW</b> or <b>-0.50 dBm</b> .                                    |

Table 100: show interfaces diagnostics optics Output Fields for 10-Gigabit Ethernet XFP Transceivers *(continued)*

| Field Name                                | Field Description                                                                          |
|-------------------------------------------|--------------------------------------------------------------------------------------------|
| Laser output power low alarm threshold    | Vendor-specified threshold for the laser output power low alarm: 0.2230 mW or -6.52 dBm.   |
| Laser output power high warning threshold | Vendor-specified threshold for the laser output power high warning: 0.7940 mW or -100 dBm. |
| Laser output power low warning threshold  | Vendor-specified threshold for the laser output power low warning: 0.2510 mW or -600 dBm.  |
| Module temperature high alarm threshold   | Vendor-specified threshold for the module temperature high alarm: 90° C or 194° F.         |
| Module temperature low alarm threshold    | Vendor-specified threshold for the module temperature low alarm: -5° C or 23° F.           |
| Module temperature high warning threshold | Vendor-specified threshold for the module temperature high warning: 85 ° C or 185 ° F.     |
| Module temperature low warning threshold  | Vendor-specified threshold for the module temperature low warning: 0° C or 32° F.          |
| Laser rx power high alarm threshold       | Vendor-specified threshold for the laser Rx power high alarm: 1.2589 mW or 1.00 dBm.       |
| Laser rx power low alarm threshold        | Vendor-specified threshold for the laser Rx power low alarm: 0.0323 mW or -14.91 dBm.      |
| Laser rx power high warning threshold     | Vendor-specified threshold for the laser Rx power high warning: 1.1220 mW or 0.50 dBm.     |
| Laser rx power low warning threshold      | Vendor-specified threshold for the laser Rx power low warning: 0.0363 mW or -14.40 dBm.    |

Table 101 on page 1602 lists the output fields for the **show interfaces diagnostics optics** command for VCP. Output fields are listed in the approximate order in which they appear.

Table 101: show interfaces diagnostics optics Output for Virtual Chassis Ports

| Field Name         | Field Description                                                                                                                                          |
|--------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Physical interface | Name of the physical interface.                                                                                                                            |
| Laser bias current | Magnitude of the laser bias power setting current, in milliamperes (mA). The laser bias provides direct modulation of laser diodes and modulates currents. |
| Laser output power | Laser output power, in milliwatts (mW) and decibels, referenced to 1.0 mW (dBm).                                                                           |
| Module temperature | Temperature of the optics module, in Celsius and Fahrenheit.                                                                                               |

Table 101: show interfaces diagnostics optics Output for Virtual Chassis Ports (*continued*)

| Field Name                            | Field Description                                                         |
|---------------------------------------|---------------------------------------------------------------------------|
| Module voltage                        | Internally measured module voltage.                                       |
| Receiver signal average optical power | Average received optical power, in mW and dBm.                            |
| Laser bias current high alarm         | Laser bias power setting high alarm. Displays <b>on</b> or <b>off</b> .   |
| Laser bias current low alarm          | Laser bias power setting low alarm. Displays <b>on</b> or <b>off</b> .    |
| Laser bias current high warning       | Laser bias power setting high warning. Displays <b>on</b> or <b>off</b> . |
| Laser bias current low warning        | Laser bias power setting low warning. Displays <b>on</b> or <b>off</b> .  |
| Laser output power high alarm         | Laser output power high alarm. Displays <b>on</b> or <b>off</b> .         |
| Laser output power low alarm          | Laser output power low alarm. Displays <b>on</b> or <b>off</b> .          |
| Laser output power high warning       | Laser output power high warning. Displays <b>on</b> or <b>off</b> .       |
| Laser output power low warning        | Laser output power low warning. Displays <b>on</b> or <b>off</b> .        |
| Module temperature high alarm         | Module temperature high alarm. Displays <b>on</b> or <b>off</b> .         |
| Module temperature low alarm          | Module temperature low alarm. Displays <b>on</b> or <b>off</b> .          |
| Module temperature high warning       | Module temperature high warning. Displays <b>on</b> or <b>off</b> .       |
| Module temperature low warning        | Module temperature low warning. Displays <b>on</b> or <b>off</b> .        |
| Module voltage high alarm             | Module voltage high alarm. Displays <b>on</b> or <b>off</b> .             |
| Module voltage low alarm              | Module voltage low alarm. Displays <b>on</b> or <b>off</b> .              |
| Module voltage high warning           | Module voltage high warning. Displays <b>on</b> or <b>off</b> .           |

|---------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>                   | <code>show interfaces far-end-interval <i>interface-fpc/pic/port</i></code>                                                                                                                     |
| <b>Release Information</b>      | Command introduced in Junos OS Release 9.4.                                                                                                                                                     |
| <b>Description</b>              | On channelized interfaces, display the far end interval data for the specified interface.                                                                                                       |
| <b>Required Privilege Level</b> | view                                                                                                                                                                                            |
| <b>List of Sample Output</b>    | <a href="#">show interfaces far-end-interval coc12-5/2/0 on page 1624</a><br><a href="#">show interfaces far-end-interval coc1-5/2/1:1 on page 1625</a>                                         |
| <b>Output Fields</b>            | <a href="#">Table 102 on page 1624</a> lists the output fields for the <b>show interfaces far-end-interval</b> command. Output fields are listed in the approximate order in which they appear. |

**Table 102: show interfaces far-end-interval Output Fields**

| Field Name         | Field Description                         |
|--------------------|-------------------------------------------|
| Physical interface | Interface FPC/PIC/port values.            |
| SNMP ifIndex       | SNMP interface index value.               |
| ES-L/P             | Error detection—Errored seconds.          |
| SES-L/P            | Error detection—Severely errored seconds. |
| UAS-L/P            | Error detection—Unavailable seconds.      |

## Sample Output

| <b>Output Fields</b>            | Table 103 on page 1626 lists the output fields for the <b>show interfaces (Fast Ethernet)</b> command. Output fields are listed in the approximate order in which they appear.                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

Table 103: show interfaces Fast Ethernet Output Fields

| Field Name                | Field Description                                                                                                                    | Level of Output              |
|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Physical Interface</b> |                                                                                                                                      |                              |
| <b>Physical interface</b> | Name of the physical interface.                                                                                                      | All levels                   |
| <b>Enabled</b>            | State of the interface. Possible values are described in the "Enabled Field" section under <i>Common Output Fields Description</i> . | All levels                   |
| <b>Interface index</b>    | Index number of the physical interface, which reflects its initialization sequence.                                                  | <b>detail extensive none</b> |
| <b>SNMP ifIndex</b>       | SNMP index number for the physical interface.                                                                                        | <b>detail extensive none</b> |
| <b>Generation</b>         | Unique number for use by Juniper Networks technical support only.                                                                    | <b>detail extensive</b>      |

Table 103: show interfaces Fast Ethernet Output Fields (*continued*)

| Field Name       | Field Description                                                                                                                                                                                                                                   | Level of Output  |
|------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| Link-level type  | Encapsulation being used on the physical interface.                                                                                                                                                                                                 | All levels       |
| MTU              | Maximum transmission unit size on the physical interface.                                                                                                                                                                                           | All levels       |
| Link-mode        | Type of link connection configured for the physical interface: <b>Full-duplex</b> or <b>Half-duplex</b>                                                                                                                                             | <b>extensive</b> |
| Speed            | Speed at which the interface is running.                                                                                                                                                                                                            | All levels       |
| Loopback         | Loopback status: <b>Enabled</b> or <b>Disabled</b> . If loopback is enabled, type of loopback: <b>Local</b> or <b>Remote</b> .                                                                                                                      | All levels       |
| Source filtering | Source filtering status: <b>Enabled</b> or <b>Disabled</b> .                                                                                                                                                                                        | All levels       |
| LAN-PHY mode     | 10-Gigabit Ethernet interface operating in Local Area Network Physical Layer Device (LAN PHY) mode. LAN PHY allows 10-Gigabit Ethernet wide area links to use existing Ethernet applications.                                                       | All levels       |
| WAN-PHY mode     | 10-Gigabit Ethernet interface operating in Wide Area Network Physical Layer Device (WAN PHY) mode. WAN PHY allows 10-Gigabit Ethernet wide area links to use fiber-optic cables and other devices intended for SONET/SDH.                           | All levels       |
| Unidirectional   | Unidirectional link mode status for 10-Gigabit Ethernet interface: <b>Enabled</b> or <b>Disabled</b> for parent interface; <b>Rx-only</b> or <b>Tx-only</b> for child interfaces.                                                                   | All levels       |
| Flow control     | Flow control status: <b>Enabled</b> or <b>Disabled</b> .                                                                                                                                                                                            | All levels       |
| Auto-negotiation | (Gigabit Ethernet interfaces) Autonegotiation status: <b>Enabled</b> or <b>Disabled</b> .                                                                                                                                                           | All levels       |
| Remote-fault     | (Gigabit Ethernet interfaces) Remote fault status: <ul style="list-style-type: none"> <li>• <b>Online</b>—Autonegotiation is manually configured as online.</li> <li>• <b>Offline</b>—Autonegotiation is manually configured as offline.</li> </ul> | All levels       |
| Device flags     | Information about the physical device. Possible values are described in the "Device Flags" section under <i>Common Output Fields Description</i> .                                                                                                  | All levels       |
| Interface flags  | Information about the interface. Possible values are described in the "Interface Flags" section under <i>Common Output Fields Description</i> .                                                                                                     | All levels       |
| Link flags       | Information about the link. Possible values are described in the "Links Flags" section under <i>Common Output Fields Description</i> .                                                                                                              | All levels       |
| Wavelength       | (10-Gigabit Ethernet dense wavelength-division multiplexing [DWDM] interfaces) Displays the configured wavelength, in nanometers (nm).                                                                                                              | All levels       |
| Frequency        | (10-Gigabit Ethernet DWDM interfaces only) Displays the frequency associated with the configured wavelength, in terahertz (THz).                                                                                                                    | All levels       |

Table 103: show interfaces Fast Ethernet Output Fields (*continued*)

| Field Name              | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Level of Output       |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------|
| CoS queues              | Number of CoS queues configured.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | detail extensive none |
| Schedulers              | (GigabitEthernet intelligent queuing 2 (IQ2) interfaces only) Number of CoS schedulers configured.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | extensive             |
| Hold-times              | Current interface hold-time up and hold-time down, in milliseconds.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | detail extensive      |
| Current address         | Configured MAC address.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | detail extensive none |
| Hardware address        | Hardware MAC address.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | detail extensive none |
| Last flapped            | Date, time, and how long ago the interface went from down to up. The format is <b>Last flapped: year-month-day hour:minute:second:timezone (hour:minute:second ago)</b> . For example, <b>Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | detail extensive none |
| Input Rate              | Input rate in bits per second (bps) and packets per second (pps).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | None specified        |
| Output Rate             | Output rate in bps and pps.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | None specified        |
| Statistics last cleared | Time when the statistics for the interface were last set to zero.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | detail extensive      |

Table 103: show interfaces Fast Ethernet Output Fields (*continued*)

| Field Name          | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Level of Output  |
|---------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| <b>Input errors</b> | <p>Input errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of the incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Runts</b>—Number of frames received that are smaller than the runt threshold.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that the Junos OS does not handle.</li> <li>• <b>L3 incompletes</b>—Number of incoming packets discarded because they failed Layer 3 (usually IPv4) sanity checks of the header. For example, a frame with less than 20 bytes of available IP header is discarded. L3 incomplete errors can be ignored by configuring the <b>ignore-l3-incompletes</b> statement.</li> <li>• <b>L2 channel errors</b>—Number of times the software did not find a valid logical interface for an incoming frame.</li> <li>• <b>L2 mismatch timeouts</b>—Number of malformed or short packets that caused the incoming packet handler to discard the frame as unreadable.</li> <li>• <b>FIFO errors</b>—Number of FIFO errors in the receive direction that are reported by the ASIC on the PIC. If this value is ever nonzero, the PIC is probably malfunctioning.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul> | <b>extensive</b> |

Table 103: show interfaces Fast Ethernet Output Fields (*continued*)

| Field Name                     | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Level of Output         |
|--------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
| <b>Output errors</b>           | <p>Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and then up, or another problem occurs. If the number of carrier transitions increments quickly (perhaps once every 10 seconds), the cable, the far-end system, or the PIC or PIM is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Collisions</b>—Number of Ethernet collisions. The Gigabit Ethernet PIC supports only full-duplex operation, so for Gigabit Ethernet PICs, this number should always remain 0. If it is nonzero, there is a software bug.</li> <li>• <b>Aged packets</b>—Number of packets that remained in shared packet SDRAM so long that the system automatically purged them. The value in this field should never increment. If it does, it is most likely a software bug or possibly malfunctioning hardware.</li> <li>• <b>FIFO errors</b>—Number of FIFO errors in the send direction as reported by the ASIC on the PIC. If this value is ever nonzero, the PIC is probably malfunctioning.</li> <li>• <b>HS link CRC errors</b>—Number of errors on the high-speed links between the ASICs responsible for handling the router interfaces.</li> <li>• <b>MTU errors</b>—Number of packets whose size exceeded the MTU of the interface.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul> | <b>extensive</b>        |
| <b>Egress queues</b>           | <p>Total number of egress queues supported on the specified interface.</p> <p><b>NOTE:</b> In DPCs that are not of the enhanced type, such as DPC 40x 1GE R, DPCE 20x 1GE + 2x 10GE R, or DPCE 40x 1GE R, you might notice a discrepancy in the output of the <b>show interfaces</b> command because incoming packets might be counted in the Egress queues section of the output. This problem occurs on non-enhanced DPCs because the egress queue statistics are polled from IMQ (Inbound Message Queuing) block of the I-chip. The IMQ block does not differentiate between ingress and egress WAN traffic; as a result, the combined statistics are displayed in the egress queue counters on the Routing Engine. In a simple VPLS scenario, if there is no MAC entry in DMAC table (by sending unidirectional traffic), traffic is flooded and the input traffic is accounted in IMQ. For bidirectional traffic (MAC entry in DMAC table), if the outgoing interface is on the same I-chip then both ingress and egress statistics are counted in a combined way. If the outgoing interface is on a different I-chip or FPC, then only egress statistics are accounted in IMQ. This behavior is expected with non-enhanced DPCs</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>detail extensive</b> |
| <b>Queue counters (Egress)</b> | <p>CoS queue number and its associated user-configured forwarding class name.</p> <ul style="list-style-type: none"> <li>• <b>Queued packets</b>—Number of queued packets.</li> <li>• <b>Transmitted packets</b>—Number of transmitted packets.</li> <li>• <b>Dropped packets</b>—Number of packets dropped by the ASIC's RED mechanism.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>detail extensive</b> |

Table 103: show interfaces Fast Ethernet Output Fields (*continued*)

| Field Name                              | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Level of Output              |
|-----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Ingress queues</b>                   | Total number of ingress queues supported on the specified interface. Displayed on IQ2 interfaces.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>extensive</b>             |
| <b>Queue counters (Ingress)</b>         | CoS queue number and its associated user-configured forwarding class name. Displayed on IQ2 interfaces. <ul style="list-style-type: none"> <li>• <b>Queued packets</b>—Number of queued packets.</li> <li>• <b>Transmitted packets</b>—Number of transmitted packets.</li> <li>• <b>Dropped packets</b>—Number of packets dropped by the ASIC's RED mechanism.</li> </ul>                                                                                                                                                                                                                                                                                                                               | <b>extensive</b>             |
| <b>Active alarms and Active defects</b> | Ethernet-specific defects that can prevent the interface from passing packets. When a defect persists for a certain amount of time, it is promoted to an alarm. Based on the routing device configuration, an alarm can ring the red or yellow alarm bell on the routing device, or turn on the red or yellow alarm LED on the craft interface. These fields can contain the value <b>None</b> or <b>Link</b> . <ul style="list-style-type: none"> <li>• <b>None</b>—There are no active defects or alarms.</li> <li>• <b>Link</b>—Interface has lost its link state, which usually means that the cable is unplugged, the far-end system has been turned off, or the PIC is malfunctioning.</li> </ul> | <b>detail extensive none</b> |
| <b>OTN FEC statistics</b>               | The forward error correction (FEC) counters provide the following statistics: <ul style="list-style-type: none"> <li>• <b>Corrected Errors</b>—The count of corrected errors in the last second.</li> <li>• <b>Corrected Error Ratio</b>—The corrected error ratio in the last 25 seconds. For example, 1e-7 is 1 error per 10 million bits.</li> </ul>                                                                                                                                                                                                                                                                                                                                                 |                              |
| <b>PCS statistics</b>                   | (10-Gigabit Ethernet interfaces) Displays Physical Coding Sublayer (PCS) fault conditions from the WAN PHY or the LAN PHY device. <ul style="list-style-type: none"> <li>• <b>Bit errors</b>—The number of seconds during which at least one bit error rate (BER) occurred while the PCS receiver is operating in normal mode.</li> <li>• <b>Errored blocks</b>—The number of seconds when at least one errored block occurred while the PCS receiver is operating in normal mode.</li> </ul>                                                                                                                                                                                                           | <b>detail extensive</b>      |

Table 103: show interfaces Fast Ethernet Output Fields (*continued*)

| Field Name                     | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Level of Output |
|--------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| MAC statistics                 | <p>Receive and Transmit statistics reported by the PIC's MAC subsystem, including the following:</p> <ul style="list-style-type: none"> <li><b>Total octets and total packets</b>—Total number of octets and packets. For Gigabit Ethernet IQ PICs, the received octets count varies by interface type. For more information, see Table 31 under the <a href="#">show interfaces (10-Gigabit Ethernet)</a> command.</li> <li><b>Unicast packets, Broadcast packets, and Multicast packets</b>—Number of unicast, broadcast, and multicast packets.</li> <li><b>CRC/Align errors</b>—Total number of packets received that had a length (excluding framing bits, but including FCS octets) of between 64 and 1518 octets, inclusive, and had either a bad FCS with an integral number of octets (FCS Error) or a bad FCS with a nonintegral number of octets (Alignment Error).</li> <li><b>FIFO error</b>—Number of FIFO errors that are reported by the ASIC on the PIC. If this value is ever nonzero, the PIC or a cable is probably malfunctioning.</li> <li><b>MAC control frames</b>—Number of MAC control frames.</li> <li><b>MAC pause frames</b>—Number of MAC control frames with <b>pause</b> operational code.</li> <li><b>Oversized frames</b>—Number of frames that exceed 1518 octets.</li> <li><b>Jabber frames</b>—Number of frames that were longer than 1518 octets (excluding framing bits, but including FCS octets), and had either an FCS error or an alignment error. This definition of jabber is different from the definition in IEEE-802.3 section 8.2.1.5 (10BASE5) and section 10.3.1.4 (10BASE2). These documents define jabber as the condition in which any packet exceeds 20 ms. The allowed range to detect jabber is from 20 ms to 150 ms.</li> <li><b>Fragment frames</b>—Total number of packets that were less than 64 octets in length (excluding framing bits, but including FCS octets), and had either an FCS error or an alignment error. Fragment frames normally increment because both runts (which are normal occurrences caused by collisions) and noise hits are counted.</li> <li><b>VLAN tagged frames</b>—Number of frames that are VLAN tagged. The system uses the TPID of 0x8100 in the frame to determine whether a frame is tagged or not.</li> <li><b>Code violations</b>—Number of times an event caused the PHY to indicate "Data reception error" or "invalid data symbol error."</li> </ul> | extensive       |

Table 103: show interfaces Fast Ethernet Output Fields (*continued*)

| Field Name               | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Level of Output  |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| <b>Filter statistics</b> | <p><b>Receive</b> and <b>Transmit</b> statistics reported by the PIC's MAC address filter subsystem. The filtering is done by the content-addressable memory (CAM) on the PIC. The filter examines a packet's source and destination MAC addresses to determine whether the packet should enter the system or be rejected.</p> <ul style="list-style-type: none"> <li>• <b>Input packet count</b>—Number of packets received from the MAC hardware that the filter processed.</li> <li>• <b>Input packet rejects</b>—Number of packets that the filter rejected because of either the source MAC address or the destination MAC address.</li> <li>• <b>Input DA rejects</b>—Number of packets that the filter rejected because the destination MAC address of the packet is not on the accept list. It is normal for this value to increment. When it increments very quickly and no traffic is entering the routing device from the far-end system, either there is a bad ARP entry on the far-end system, or multicast routing is not on and the far-end system is sending many multicast packets to the local routing device (which the routing device is rejecting).</li> <li>• <b>Input SA rejects</b>—Number of packets that the filter rejected because the source MAC address of the packet is not on the accept list. The value in this field should increment only if source MAC address filtering has been enabled. If filtering is enabled, if the value increments quickly, and if the system is not receiving traffic that it should from the far-end system, it means that the user-configured source MAC addresses for this interface are incorrect.</li> <li>• <b>Output packet count</b>—Number of packets that the filter has given to the MAC hardware.</li> <li>• <b>Output packet pad count</b>—Number of packets the filter padded to the minimum Ethernet size (60 bytes) before giving the packet to the MAC hardware. Usually, padding is done only on small ARP packets, but some very small IP packets can also require padding. If this value increments rapidly, either the system is trying to find an ARP entry for a far-end system that does not exist or it is misconfigured.</li> <li>• <b>Output packet error count</b>—Number of packets with an indicated error that the filter was given to transmit. These packets are usually aged packets or are the result of a bandwidth problem on the FPC hardware. On a normal system, the value of this field should not increment.</li> <li>• <b>CAM destination filters, CAM source filters</b>—Number of entries in the CAM dedicated to destination and source MAC address filters. There can only be up to 64 source entries. If source filtering is disabled, which is the default, the values for these fields should be 0.</li> </ul> | <b>extensive</b> |
| <b>PMA PHY</b>           | <p>(10-Gigabit Ethernet interfaces, WAN PHY mode) SONET error information:</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. | Received path trace, Transmitted path trace | <p>(10-Gigabit Ethernet interfaces, WAN PHY mode) SONET/SDH interfaces allow path trace bytes to be sent inband across the SONET/SDH link. Juniper Networks and other routing device manufacturers use these bytes to help diagnose misconfigurations and network errors by setting the transmitted path trace message so that it contains the system hostname and name of the physical interface. The received path trace value is the message received from the routing device at the other end of the fiber. The transmitted path trace value is the message that this routing device transmits.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | extensive       |
| Packet Forwarding Engine configuration      | <p>Information about the configuration of the Packet Forwarding Engine:</p> <ul style="list-style-type: none"> <li>• <b>Destination slot</b>—FPC slot number.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | extensive       |

Table 103: show interfaces Fast Ethernet Output Fields (*continued*)

| Field Name               | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Level of Output                    |

| <b>Flags</b>             | Information about the logical interface. Possible values are described in the “Logical Interface Flags” section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | All levels                         |
| <b>VLAN-Tag</b>          | Rewrite profile applied to incoming or outgoing frames on the outer ( <b>Out</b> ) VLAN tag or for both the outer and inner ( <b>In</b> ) VLAN tags. <ul style="list-style-type: none"> <li>• <b>push</b>—An outer VLAN tag is pushed in front of the existing VLAN tag.</li> <li>• <b>pop</b>—The outer VLAN tag of the incoming frame is removed.</li> <li>• <b>swap</b>—The outer VLAN tag of the incoming frame is overwritten with the user specified VLAN tag information.</li> <li>• <b>push-pop</b>—An outer VLAN tag is pushed in front of the existing VLAN tag, and then removed.</li> <li>• <b>push-push</b>—Two VLAN tags are pushed in from the incoming frame.</li> <li>• <b>swap-push</b>—The outer VLAN tag of the incoming frame is replaced by a user-specified VLAN tag value. A user-specified outer VLAN tag is pushed in front. The outer tag becomes an inner tag in the final frame.</li> <li>• <b>swap-swap</b>—Both the inner and the outer VLAN tags of the incoming frame are replaced by the user specified VLAN tag value.</li> <li>• <b>pop-swap</b>—The outer VLAN tag of the incoming frame is removed, and the inner VLAN tag of the incoming frame is replaced by the user-specified VLAN tag value. The inner tag becomes the outer tag in the final frame.</li> <li>• <b>pop-pop</b>—Both the outer and inner VLAN tags of the incoming frame are removed.</li> </ul> | <b>brief detail extensive</b> none |

Table 103: show interfaces Fast Ethernet Output Fields (*continued*)

| Field Name                     | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Level of Output              |
|--------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Demux:</b>                  | IP demultiplexing (demux) value that appears if this interface is used as the demux underlying interface. The output is one of the following: <ul style="list-style-type: none"> <li>Source Family Inet</li> <li>Destination Family Inet</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                              | <b>detail extensive none</b> |
| <b>Encapsulation</b>           | Encapsulation on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | All levels                   |
| <b>Protocol</b>                | Protocol family. Possible values are described in the "Protocol Field" section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>detail extensive none</b> |
| <b>MTU</b>                     | Maximum transmission unit size on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>detail extensive none</b> |
| <b>Maximum labels</b>          | Maximum number of MPLS labels configured for the MPLS protocol family on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>detail extensive none</b> |
| <b>Traffic statistics</b>      | Number and rate of bytes and packets received and transmitted on the specified interface set. <ul style="list-style-type: none"> <li><b>Input bytes, Output bytes</b>—Number of bytes received and transmitted on the interface set</li> <li><b>Input packets, Output packets</b>—Number of packets received and transmitted on the interface set.</li> </ul>                                                                                                                                                                                                                                                                                                    | <b>detail extensive</b>      |
| <b>IPv6 transit statistics</b> | Number of IPv6 transit bytes and packets received and transmitted on the logical interface if IPv6 statistics tracking is enabled.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>extensive</b>             |
| <b>Local statistics</b>        | Number and rate of bytes and packets destined to the routing device.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>extensive</b>             |
| <b>Transit statistics</b>      | Number and rate of bytes and packets transiting the switch. <p><b>NOTE:</b> For Gigabit Ethernet intelligent queuing 2 (IQ2) interfaces, the logical interface egress statistics might not accurately reflect the traffic on the wire when output shaping is applied. Traffic management output shaping might drop packets after they are tallied by the <b>Output bytes</b> and <b>Output packets</b> interface counters. However, correct values display for both of these egress statistics when per-unit scheduling is enabled for the Gigabit Ethernet IQ2 physical interface, or when a single logical interface is actively using a shared scheduler.</p> | <b>extensive</b>             |
| <b>Generation</b>              | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>detail extensive</b>      |
| <b>Route Table</b>             | Route table in which the logical interface address is located. For example, 0 refers to the routing table inet.0.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>detail extensive none</b> |
| <b>Flags</b>                   | Information about protocol family flags. Possible values are described in the "Family Flags" section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>detail extensive</b>      |
| <b>Donor interface</b>         | (Unnumbered Ethernet) Interface from which an unnumbered Ethernet interface borrows an IPv4 address.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>detail extensive none</b> |

Table 103: show interfaces Fast Ethernet Output Fields (*continued*)

| Field Name                      | Field Description                                                                                                                                                                                    | Level of Output              |
|---------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Preferred source address</b> | (Unnumbered Ethernet) Secondary IPv4 address of the donor loopback interface that acts as the preferred source address for the unnumbered Ethernet interface.                                        | <b>detail extensive none</b> |
| <b>Input Filters</b>            | Names of any input filters applied to this interface. If you specify a precedence value for any filter in a dynamic profile, filter precedence values appear in parenthesis next to all interfaces.  | <b>detail extensive</b>      |
| <b>Output Filters</b>           | Names of any output filters applied to this interface. If you specify a precedence value for any filter in a dynamic profile, filter precedence values appear in parenthesis next to all interfaces. | <b>detail extensive</b>      |
| <b>Mac-Validate Failures</b>    | Number of MAC address validation failures for packets and bytes. This field is displayed when MAC address validation is enabled for the logical interface.                                           | <b>detail extensive none</b> |
| <b>Addresses, Flags</b>         | Information about the address flags. Possible values are described in the “Addresses Flags” section under <i>Common Output Fields Description</i> .                                                  | <b>detail extensive none</b> |
| <b><i>protocol-family</i></b>   | Protocol family configured on the logical interface. If the protocol is <b>inet</b> , the IP address of the interface is also displayed.                                                             | <b>brief</b>                 |
| <b>Flags</b>                    | Information about address flag (possible values are described in the “Addresses Flags” section under <i>Common Output Fields Description</i> ).                                                      | <b>detail extensive none</b> |
| <b>Destination</b>              | IP address of the remote side of the connection.                                                                                                                                                     | <b>detail extensive none</b> |
| <b>Local</b>                    | IP address of the logical interface.                                                                                                                                                                 | <b>detail extensive none</b> |
| <b>Broadcast</b>                | Broadcast address of the logical interface.                                                                                                                                                          | <b>detail extensive none</b> |
| <b>Generation</b>               | Unique number for use by Juniper Networks technical support only.                                                                                                                                    | <b>detail extensive</b>      |

## Sample Output

### show interfaces (Fast Ethernet)

```

user@host> show interfaces fe-0/0/0
Physical interface: fe-0/0/0, Enabled, Physical link is Up
  Interface index: 128, SNMP ifIndex: 22
  Link-level type: Ethernet, MTU: 1514, Speed: 100mbps, Loopback: Disabled,
  Source filtering: Disabled, Flow control: Enabled
  Device flags   : Present Running
  Interface flags: SNMP-Traps Internal: 0x4000
  CoS queues     : 4 supported, 4 maximum usable queues
  Current address: 00:00:5e:00:53:38, Hardware address: 00:00:5e:00:53:38
  Last flapped   : 2006-01-20 14:50:58 PST (2w4d 00:44 ago)
  Input rate     : 0 bps (0 pps)
  Output rate    : 0 bps (0 pps)
  Active alarms  : None
  Active defects : None
  Logical interface fe-0/0/0.0 (Index 66) (SNMP ifIndex 198)
    Flags: SNMP-Traps Encapsulation: ENET2

```

```
Protocol inet, MTU: 1500
Flags: None
Addresses, Flags: Is-Preferred Is-Primary
Destination: 203.0.113/24, Local: 203.0.113.1, Broadcast: 203.0.113.255
```

### show interfaces brief (Fast Ethernet)

```
user@host> show interfaces fe-0/0/0 brief
Physical interface: fe-0/0/0, Enabled, Physical link is Up
Link-level type: Ethernet, MTU: 1514, Speed: 100mbps, Loopback: Disabled,
Source filtering: Disabled, Flow control: Enabled
Device flags : Present Running
Interface flags: SNMP-Traps Internal: 0x4000
Logical interface fe-0/0/0.0
Flags: SNMP-Traps Encapsulation: ENET2
inet 203.0.113.1/24
```

### show interfaces detail (Fast Ethernet)

```
user@host> show interfaces fe-0/0/0 detail
Physical interface: fe-0/0/0, Enabled, Physical link is Up
Interface index: 128, SNMP ifIndex: 22, Generation: 5391
Link-level type: Ethernet, MTU: 1514, Speed: 100mbps, Loopback: Disabled,
Source filtering: Disabled, Flow control: Enabled
Device flags : Present Running
Interface flags: SNMP-Traps Internal: 0x4000
CoS queues : 4 supported, 4 maximum usable queues
Hold-times : Up 0 ms, Down 0 ms
Current address: 00:00:5e:00:53:38, Hardware address: 00:00:5e:00:53:3f:38
Last flapped : 2006-01-20 14:50:58 PST (2w4d 00:45 ago)
Statistics last cleared: Never
Traffic statistics:
Input bytes : 0 0 bps
Output bytes : 42 0 bps
Input packets: 0 0 pps
Output packets: 1 0 pps
Active alarms : None
Active defects : None
Logical interface fe-0/0/0.0 (Index 66) (SNMP ifIndex 198) (Generation 67)
Flags: SNMP-Traps Encapsulation: ENET2
Protocol inet, MTU: 1500, Generation: 105, Route table: 0
Flags: Is-Primary, Mac-Validate-Strict
Mac-Validate Failures: Packets: 0, Bytes: 0
Addresses, Flags: Is-Preferred Is-Primary
Destination: 203.0.113/24, Local: 203.0.113.1, Broadcast: 203.0.113.255,
Generation: 136
```

### show interfaces extensive (Fast Ethernet)

```
user@host> show interfaces fe-0/0/0 extensive
Physical interface: fe-0/0/0, Enabled, Physical link is Up
Interface index: 128, SNMP ifIndex: 22, Generation: 5391
Link-level type: Ethernet, MTU: 1514, Link-mode: Full-duplex, Speed:
100mbps, Loopback: Disabled,
Source filtering: Disabled, Flow control: Enabled
Device flags : Present Running
Interface flags: SNMP-Traps Internal: 0x4000
CoS queues : 4 supported, 4 maximum usable queues
Hold-times : Up 0 ms, Down 0 ms
Current address: 00:00:5e:00:53:38, Hardware address: 00:00:5e:00:53:38
Last flapped : 2006-01-20 14:50:58 PST (2w4d 00:46 ago)
Statistics last cleared: Never
```

```

Traffic statistics:
Input bytes :          0          0 bps
Output bytes :         42          0 bps
Input packets:         0          0 pps
Output packets:        1          0 pps
Input errors:
  Errors: 0, Drops: 0, Framing errors: 0, Runts: 0, Policed discards: 0,
  L3 incompletes: 0, L2 channel errors: 0, L2 mismatch timeouts: 0,
  FIFO errors: 0, Resource errors: 0
Output errors:
  Carrier transitions: 3, Errors: 0, Drops: 0, Collisions: 0, Aged packets: 0,

  FIFO errors: 0, HS link CRC errors: 0, MTU errors: 0, Resource errors: 0
Active alarms : None
Active defects : None
MAC statistics:
Total octets          Receive      Transmit
Total packets         0            1
Unicast packets       0            0
Broadcast packets     0            1
Multicast packets     0            0
CRC/Align errors      0            0
FIFO errors           0            0

| <b>Physical Interface</b> |                                                                                                                                                                                                                                                     |                              |
| <b>Physical interface</b> | Name of the physical interface.                                                                                                                                                                                                                     | All levels                   |
| <b>Enabled</b>            | State of the interface. Possible values are described in the “Enabled Field” section under <i>Common Output Fields Description</i> .                                                                                                                | All levels                   |
| <b>Interface index</b>    | Index number of the physical interface, which reflects its initialization sequence.                                                                                                                                                                 | <b>detail extensive none</b> |
| <b>SNMP ifIndex</b>       | SNMP index number for the physical interface.                                                                                                                                                                                                       | <b>detail extensive none</b> |
| <b>Generation</b>         | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                   | <b>detail extensive</b>      |
| <b>Link-level type</b>    | Encapsulation being used on the physical interface.                                                                                                                                                                                                 | All levels                   |
| <b>MTU</b>                | Maximum transmission unit size on the physical interface.                                                                                                                                                                                           | All levels                   |
| <b>Speed</b>              | Speed at which the interface is running.                                                                                                                                                                                                            | All levels                   |
| <b>Loopback</b>           | Loopback status: <b>Enabled</b> or <b>Disabled</b> . If loopback is enabled, type of loopback: <b>Local</b> or <b>Remote</b> .                                                                                                                      | All levels                   |
| <b>Source filtering</b>   | Source filtering status: <b>Enabled</b> or <b>Disabled</b> .                                                                                                                                                                                        | All levels                   |
| <b>LAN-PHY mode</b>       | 10-Gigabit Ethernet interface operating in Local Area Network Physical Layer Device (LAN PHY) mode. LAN PHY allows 10-Gigabit Ethernet wide area links to use existing Ethernet applications.                                                       | All levels                   |
| <b>WAN-PHY mode</b>       | 10-Gigabit Ethernet interface operating in Wide Area Network Physical Layer Device (WAN PHY) mode. WAN PHY allows 10-Gigabit Ethernet wide area links to use fiber-optic cables and other devices intended for SONET/SDH.                           | All levels                   |
| <b>Unidirectional</b>     | Unidirectional link mode status for 10-Gigabit Ethernet interface: <b>Enabled</b> or <b>Disabled</b> for parent interface; <b>Rx-only</b> or <b>Tx-only</b> for child interfaces.                                                                   | All levels                   |
| <b>Flow control</b>       | Flow control status: <b>Enabled</b> or <b>Disabled</b> .                                                                                                                                                                                            | All levels                   |
| <b>Auto-negotiation</b>   | (Gigabit Ethernet interfaces) Autonegotiation status: <b>Enabled</b> or <b>Disabled</b> .                                                                                                                                                           | All levels                   |
| <b>Remote-fault</b>       | (Gigabit Ethernet interfaces) Remote fault status: <ul style="list-style-type: none"> <li>• <b>Online</b>—Autonegotiation is manually configured as online.</li> <li>• <b>Offline</b>—Autonegotiation is manually configured as offline.</li> </ul> | All levels                   |
| <b>Device flags</b>       | Information about the physical device. Possible values are described in the “Device Flags” section under <i>Common Output Fields Description</i> .                                                                                                  | All levels                   |

Table 104: show interfaces (Gigabit Ethernet) Output Fields (*continued*)

| Field Name                      | Field Description                                                                                                                                                                                                                                                           | Level of Output              |
|---------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Interface flags</b>          | Information about the interface. Possible values are described in the “Interface Flags” section under <i>Common Output Fields Description</i> .                                                                                                                             | All levels                   |
| <b>Link flags</b>               | Information about the link. Possible values are described in the “Links Flags” section under <i>Common Output Fields Description</i> .                                                                                                                                      | All levels                   |
| <b>Wavelength</b>               | (10-Gigabit Ethernet dense wavelength-division multiplexing [DWDM] interfaces) Displays the configured wavelength, in nanometers (nm).                                                                                                                                      | All levels                   |
| <b>Frequency</b>                | (10-Gigabit Ethernet DWDM interfaces only) Displays the frequency associated with the configured wavelength, in terahertz (THz).                                                                                                                                            | All levels                   |
| <b>CoS queues</b>               | Number of CoS queues configured.                                                                                                                                                                                                                                            | <b>detail extensive</b> none |
| <b>Schedulers</b>               | (Gigabit Ethernet intelligent queuing 2 [IQ2] interfaces only) Number of CoS schedulers configured.                                                                                                                                                                         | <b>extensive</b>             |
| <b>Hold-times</b>               | Current interface hold-time up and hold-time down, in milliseconds (ms).                                                                                                                                                                                                    | <b>detail extensive</b>      |
| <b>Current address</b>          | Configured MAC address.                                                                                                                                                                                                                                                     | <b>detail extensive</b> none |
| <b>Hardware address</b>         | Hardware MAC address.                                                                                                                                                                                                                                                       | <b>detail extensive</b> none |
| <b>Last flapped</b>             | Date, time, and how long ago the interface went from down to up. The format is <b>Last flapped: year-month-day hour:minute:second:timezone (hour:minute:second ago)</b> . For example, <b>Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> .                        | <b>detail extensive</b> none |
| <b>Input Rate</b>               | Input rate in bits per second (bps) and packets per second (pps). The value in this field also includes the Layer 2 overhead bytes for ingress traffic on Ethernet interfaces if you enable accounting of Layer 2 overhead at the PIC level or the logical interface level. | None                         |
| <b>Output Rate</b>              | Output rate in bps and pps. The value in this field also includes the Layer 2 overhead bytes for egress traffic on Ethernet interfaces if you enable accounting of Layer 2 overhead at the PIC level or the logical interface level.                                        | None                         |
| <b>Statistics last cleared</b>  | Time when the statistics for the interface were last set to zero.                                                                                                                                                                                                           | <b>detail extensive</b>      |
| <b>Egress account overhead</b>  | Layer 2 overhead in bytes that is accounted in the interface statistics for egress traffic.                                                                                                                                                                                 | <b>detail extensive</b>      |
| <b>Ingress account overhead</b> | Layer 2 overhead in bytes that is accounted in the interface statistics for ingress traffic.                                                                                                                                                                                | <b>detail extensive</b>      |

Table 104: show interfaces (Gigabit Ethernet) Output Fields (*continued*)

| Field Name                | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Level of Output         |
|---------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
| <b>Traffic statistics</b> | <p>Number and rate of bytes and packets received and transmitted on the physical interface.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface. The value in this field also includes the Layer 2 overhead bytes for ingress traffic on Ethernet interfaces if you enable accounting of Layer 2 overhead at the PIC level or the logical interface level.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface. The value in this field also includes the Layer 2 overhead bytes for egress traffic on Ethernet interfaces if you enable accounting of Layer 2 overhead at the PIC level or the logical interface level.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul> <p>Gigabit Ethernet and 10-Gigabit Ethernet IQ PICs count the overhead and CRC bytes.</p> <p>For Gigabit Ethernet IQ PICs, the input byte counts vary by interface type. For more information, see Table 31 under the <a href="#">show interfaces (10-Gigabit Ethernet)</a> command.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>detail extensive</b> |
| <b>Input errors</b>       | <p>Input errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of the incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Runts</b>—Number of frames received that are smaller than the runt threshold.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that Junos OS does not handle.</li> <li>• <b>L3 incompletes</b>—Number of incoming packets discarded because they failed Layer 3 (usually IPv4) sanity checks of the header. For example, a frame with less than 20 bytes of available IP header is discarded. L3 incomplete errors can be ignored by configuring the <b>ignore-l3-incompletes</b> statement.</li> <li>• <b>L2 channel errors</b>—Number of times the software did not find a valid logical interface for an incoming frame.</li> <li>• <b>L2 mismatch timeouts</b>—Number of malformed or short packets that caused the incoming packet handler to discard the frame as unreadable.</li> <li>• <b>FIFO errors</b>—Number of FIFO errors in the receive direction that are reported by the ASIC on the PIC. If this value is ever nonzero, the PIC is probably malfunctioning.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul> | <b>extensive</b>        |

Table 104: show interfaces (Gigabit Ethernet) Output Fields (*continued*)

| Field Name           | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Level of Output         |
|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
| <b>Output errors</b> | <p>Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and then up, or another problem occurs. If the number of carrier transitions increments quickly (perhaps once every 10 seconds), the cable, the far-end system, or the PIC or PIM is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> </ul> <p><b>NOTE:</b> Due to accounting space limitations on certain Type 3 FPCs (which are supported in M320 and T640 routers), the <b>Drops</b> field does not always use the correct value for queue 6 or queue 7 for interfaces on 10-port 1-Gigabit Ethernet PICs.</p> <ul style="list-style-type: none"> <li>• <b>Collisions</b>—Number of Ethernet collisions. The Gigabit Ethernet PIC supports only full-duplex operation, so for Gigabit Ethernet PICs, this number must always be 0. If it is nonzero, there is a software bug.</li> <li>• <b>Aged packets</b>—Number of packets that remained in shared packet SDRAM so long that the system automatically purged them. The value in this field must never increment. If it does, it is most likely a software bug or possibly malfunctioning hardware.</li> <li>• <b>FIFO errors</b>—Number of FIFO errors in the send direction as reported by the ASIC on the PIC. If this value is ever nonzero, the PIC is probably malfunctioning.</li> <li>• <b>HS link CRC errors</b>—Number of errors on the high-speed links between the ASICs responsible for handling the router interfaces.</li> <li>• <b>MTU errors</b>—Number of packets whose size exceeded the MTU of the interface.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul> | <b>extensive</b>        |
| <b>Egress queues</b> | <p>Total number of egress queues supported on the specified interface.</p> <p><b>NOTE:</b> In DPCs that are not of the enhanced type, such as DPC 40x 1GER, DPCE 20x 1GE + 2x 10GE R, or DPCE 40x 1GE R, you might notice a discrepancy in the output of the <b>show interfaces</b> command because incoming packets might be counted in the Egress queues section of the output. This problem occurs on non-enhanced DPCs because the egress queue statistics are polled from IMQ (Inbound Message Queuing) block of the I-chip. The IMQ block does not differentiate between ingress and egress WAN traffic; as a result, the combined statistics are displayed in the egress queue counters on the Routing Engine. In a simple VPLS scenario, if there is no MAC entry in DMAC table (by sending unidirectional traffic), traffic is flooded and the input traffic is accounted in IMQ. For bidirectional traffic (MAC entry in DMAC table), if the outgoing interface is on the same I-chip then both ingress and egress statistics are counted in a combined way. If the outgoing interface is on a different I-chip or FPC, then only egress statistics are accounted in IMQ. This behavior is expected with non-enhanced DPCs</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>detail extensive</b> |

Table 104: show interfaces (Gigabit Ethernet) Output Fields (*continued*)

| Field Name                     | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Level of Output |
|--------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| MAC statistics                 | <p>Receive and Transmit statistics reported by the PIC's MAC subsystem, including the following:</p> <ul style="list-style-type: none"> <li>• <b>Total octets</b> and <b>total packets</b>—Total number of octets and packets. For Gigabit Ethernet IQ PICs, the received octets count varies by interface type. For more information, see Table 31 under the <a href="#">show interfaces (10-Gigabit Ethernet)</a> command.</li> <li>• <b>Unicast packets</b>, <b>Broadcast packets</b>, and <b>Multicast packets</b>—Number of unicast, broadcast, and multicast packets.</li> <li>• <b>CRC/Align errors</b>—Total number of packets received that had a length (excluding framing bits, but including FCS octets) of between 64 and 1518 octets, inclusive, and had either a bad FCS with an integral number of octets (FCS Error) or a bad FCS with a nonintegral number of octets (Alignment Error).</li> <li>• <b>FIFO error</b>—Number of FIFO errors that are reported by the ASIC on the PIC. If this value is ever nonzero, the PIC or a cable is probably malfunctioning.</li> <li>• <b>MAC control frames</b>—Number of MAC control frames.</li> <li>• <b>MAC pause frames</b>—Number of MAC control frames with <b>pause</b> operational code.</li> <li>• <b>Oversized frames</b>—There are two possible conditions regarding the number of oversized frames: <ul style="list-style-type: none"> <li>• Packet length exceeds 1518 octets, or</li> <li>• Packet length exceeds MRU</li> </ul> </li> <li>• <b>Jabber frames</b>—Number of frames that were longer than 1518 octets (excluding framing bits, but including FCS octets), and had either an FCS error or an alignment error. This definition of jabber is different from the definition in IEEE-802.3 section 8.2.1.5 (10BASE5) and section 10.3.1.4 (10BASE2). These documents define jabber as the condition in which any packet exceeds 20 ms. The allowed range to detect jabber is from 20 ms to 150 ms.</li> <li>• <b>Fragment frames</b>—Total number of packets that were less than 64 octets in length (excluding framing bits, but including FCS octets) and had either an FCS error or an alignment error. Fragment frames normally increment because both runs (which are normal occurrences caused by collisions) and noise hits are counted.</li> <li>• <b>VLAN tagged frames</b>—Number of frames that are VLAN tagged. The system uses the TPID of 0x8100 in the frame to determine whether a frame is tagged or not. <p><b>NOTE:</b> The 20-port Gigabit Ethernet MIC (MIC-3D-20GE-SFP) does not have hardware counters for VLAN frames. Therefore, the <b>VLAN tagged frames</b> field displays 0 when the <b>show interfaces</b> command is executed on a 20-port Gigabit Ethernet MIC. In other words, the number of VLAN tagged frames cannot be determined for the 20-port Gigabit Ethernet MIC.</p> </li> <li>• <b>Code violations</b>—Number of times an event caused the PHY to indicate "Data reception error" or "invalid data symbol error."</li> </ul> | extensive       |

| OTN Transmitted Overhead Bytes | APS/PCC0: 0x00, APS/PCC1: 0x00, APS/PCC2: 0x00, APS/PCC3: 0x00 Payload Type: 0x08                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | extensive       |

Table 104: show interfaces (Gigabit Ethernet) Output Fields (*continued*)

| Field Name               | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Level of Output  |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| <b>Filter statistics</b> | <p><b>Receive</b> and <b>Transmit</b> statistics reported by the PIC's MAC address filter subsystem. The filtering is done by the content-addressable memory (CAM) on the PIC. The filter examines a packet's source and destination MAC addresses to determine whether the packet may enter the system or be rejected.</p> <ul style="list-style-type: none"> <li>• <b>Input packet count</b>—Number of packets received from the MAC hardware that the filter processed.</li> <li>• <b>Input packet rejects</b>—Number of packets that the filter rejected because of either the source MAC address or the destination MAC address.</li> <li>• <b>Input DA rejects</b>—Number of packets that the filter rejected because the destination MAC address of the packet is not on the accept list. It is normal for this value to increment. When it increments very quickly and no traffic is entering the router from the far-end system, either there is a bad ARP entry on the far-end system, or multicast routing is not on and the far-end system is sending many multicast packets to the local router (which the router is rejecting).</li> <li>• <b>Input SA rejects</b>—Number of packets that the filter rejected because the source MAC address of the packet is not on the accept list. The value in this field must increment only if source MAC address filtering has been enabled. If filtering is enabled, if the value increments quickly, and if the system is not receiving traffic that it should from the far-end system, it means that the user-configured source MAC addresses for this interface are incorrect.</li> <li>• <b>Output packet count</b>—Number of packets that the filter has given to the MAC hardware.</li> <li>• <b>Output packet pad count</b>—Number of packets the filter padded to the minimum Ethernet size (60 bytes) before giving the packet to the MAC hardware. Usually, padding is done only on small ARP packets, but some very small IP packets can also require padding. If this value increments rapidly, either the system is trying to find an ARP entry for a far-end system that does not exist or it is misconfigured.</li> <li>• <b>Output packet error count</b>—Number of packets with an indicated error that the filter was given to transmit. These packets are usually aged packets or are the result of a bandwidth problem on the FPC hardware. On a normal system, the value of this field must not increment.</li> <li>• <b>CAM destination filters, CAM source filters</b>—Number of entries in the CAM dedicated to destination and source MAC address filters. There can only be up to 64 source entries. If source filtering is disabled, which is the default, the values for these fields must be 0.</li> </ul> | <b>extensive</b> |
| <b>PMA PHY</b>           | <p>(10-Gigabit Ethernet interfaces, WAN PHY mode) SONET error information:</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. For Gigabit Ethernet interfaces, types are <b>Symmetric</b> (link partner supports <b>PAUSE</b> on receive and transmit), <b>Asymmetric</b> (link partner supports <b>PAUSE</b> on transmit), <b>Symmetric/Asymmetric</b> (link partner supports <b>PAUSE</b> on receive and transmit or only <b>PAUSE</b> on transmit), and <b>None</b> (link partner does not support flow control).</li> <li>• <b>Remote fault</b>—Remote fault information from the link partner—<b>Failure</b> indicates a receive link error. <b>OK</b> indicates that the link partner is receiving. <b>Negotiation error</b> indicates a negotiation error. <b>Offline</b> indicates that the link partner is going offline.</li> </ul> </li> <li>• <b>Local resolution</b>—Information from the local Ethernet device: <ul style="list-style-type: none"> <li>• <b>Flow control</b>—Types of flow control supported by the local device. For Gigabit Ethernet interfaces, advertised capabilities are <b>Symmetric/Asymmetric</b> (local device supports <b>PAUSE</b> on receive and transmit or only <b>PAUSE</b> on receive) and <b>None</b> (local device does not support flow control). Depending on the result of the negotiation with the link partner, local resolution flow control type will display <b>Symmetric</b> (local device supports <b>PAUSE</b> on receive and transmit), <b>Asymmetric</b> (local device supports <b>PAUSE</b> on receive), and <b>None</b> (local device does not support flow control).</li> <li>• <b>Remote fault</b>—Remote fault information. <b>Link OK</b> (no error detected on receive), <b>Offline</b> (local interface is offline), and <b>Link Failure</b> (link error detected on receive).</li> </ul> </li> </ul> | extensive       |
| Received path trace, Transmitted path trace | <p>(10-Gigabit Ethernet interfaces, WAN PHY mode) SONET/SDH interfaces allow path trace bytes to be sent inband across the SONET/SDH link. Juniper Networks and other router manufacturers use these bytes to help diagnose misconfigurations and network errors by setting the transmitted path trace message so that it contains the system hostname and name of the physical interface. The received path trace value is the message received from the router at the other end of the fiber. The transmitted path trace value is the message that this router transmits.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | extensive       |

| <b>Dynamic Profile</b>                                    | Name of the dynamic profile that was used to create this interface configured with a Point-to-Point Protocol over Ethernet (PPPoE) family.                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>detail extensive none</b> |
| <b>Service Name Table</b>                                 | Name of the service name table for the interface configured with a PPPoE family.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>detail extensive none</b> |
| <b>Max Sessions</b>                                       | Maximum number of PPPoE logical interfaces that can be activated on the underlying interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>detail extensive none</b> |
| <b>Duplicate Protection</b>                               | State of PPPoE duplicate protection: <b>On</b> or <b>Off</b> . When duplicate protection is configured for the underlying interface, a dynamic PPPoE logical interface cannot be activated when an existing active logical interface is present for the same PPPoE client.                                                                                                                                                                                                                                                                                                             | <b>detail extensive none</b> |
| <b>Direct Connect</b>                                     | State of the configuration to ignore DSL Forum VSAs: <b>On</b> or <b>Off</b> . When configured, the router ignores any of these VSAs received from a directly connected CPE device on the interface.                                                                                                                                                                                                                                                                                                                                                                                   | <b>detail extensive none</b> |
| <b>AC Name</b>                                            | Name of the access concentrator.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>detail extensive none</b> |
| <b>Maximum labels</b>                                     | Maximum number of MPLS labels configured for the MPLS protocol family on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>detail extensive none</b> |
| <b>Traffic statistics</b>                                 | Number and rate of bytes and packets received and transmitted on the specified interface set. <ul style="list-style-type: none"> <li>• <b>Input bytes, Output bytes</b>—Number of bytes received and transmitted on the interface set. The value in this field also includes the Layer 2 overhead bytes for ingress or egress traffic on Ethernet interfaces if you enable accounting of Layer 2 overhead at the PIC level or the logical interface level.</li> <li>• <b>Input packets, Output packets</b>—Number of packets received and transmitted on the interface set.</li> </ul> | <b>detail extensive</b>      |
| <b>IPv6 transit statistics</b>                            | Number of IPv6 transit bytes and packets received and transmitted on the logical interface if IPv6 statistics tracking is enabled.                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>extensive</b>             |
| <b>Local statistics</b>                                   | Number and rate of bytes and packets destined to the router.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>extensive</b>             |

Table 104: show interfaces (Gigabit Ethernet) Output Fields (*continued*)

| Field Name                      | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Level of Output              |
|---------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Transit statistics</b>       | Number and rate of bytes and packets transiting the switch.<br><br><b>NOTE:</b> For Gigabit Ethernet intelligent queuing 2 (IQ2) interfaces, the logical interface egress statistics might not accurately reflect the traffic on the wire when output shaping is applied. Traffic management output shaping might drop packets after they are tallied by the <b>Output bytes</b> and <b>Output packets</b> interface counters. However, correct values display for both of these egress statistics when per-unit scheduling is enabled for the Gigabit Ethernet IQ2 physical interface, or when a single logical interface is actively using a shared scheduler. | <b>extensive</b>             |
| <b>Generation</b>               | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>detail extensive</b>      |
| <b>Route Table</b>              | Route table in which the logical interface address is located. For example, <b>0</b> refers to the routing table inet.0.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>detail extensive none</b> |
| <b>Flags</b>                    | Information about protocol family flags. Possible values are described in the “Family Flags” section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>detail extensive</b>      |
| <b>Donor interface</b>          | (Unnumbered Ethernet) Interface from which an unnumbered Ethernet interface borrows an IPv4 address.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>detail extensive none</b> |
| <b>Preferred source address</b> | (Unnumbered Ethernet) Secondary IPv4 address of the donor loopback interface that acts as the preferred source address for the unnumbered Ethernet interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>detail extensive none</b> |
| <b>Input Filters</b>            | Names of any input filters applied to this interface. If you specify a precedence value for any filter in a dynamic profile, filter precedence values appear in parentheses next to all interfaces.                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>detail extensive</b>      |
| <b>Output Filters</b>           | Names of any output filters applied to this interface. If you specify a precedence value for any filter in a dynamic profile, filter precedence values appear in parentheses next to all interfaces.                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>detail extensive</b>      |
| <b>Mac-Validate Failures</b>    | Number of MAC address validation failures for packets and bytes. This field is displayed when MAC address validation is enabled for the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>detail extensive none</b> |
| <b>Addresses, Flags</b>         | Information about the address flags. Possible values are described in the “Addresses Flags” section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>detail extensive none</b> |
| <b><i>protocol-family</i></b>   | Protocol family configured on the logical interface. If the protocol is <b>inet</b> , the IP address of the interface is also displayed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>brief</b>                 |
| <b>Flags</b>                    | Information about the address flag. Possible values are described in the “Addresses Flags” section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>detail extensive none</b> |
| <b>Destination</b>              | IP address of the remote side of the connection.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>detail extensive none</b> |
| <b>Local</b>                    | IP address of the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>detail extensive none</b> |
| <b>Broadcast</b>                | Broadcast address of the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>detail extensive none</b> |

Table 104: show interfaces (Gigabit Ethernet) Output Fields (*continued*)

| Field Name        | Field Description                                                 | Level of Output         |
|-------------------|-------------------------------------------------------------------|-------------------------|
| <b>Generation</b> | Unique number for use by Juniper Networks technical support only. | <b>detail extensive</b> |

## Sample Output

### show interfaces (Gigabit Ethernet)

```

user@host> show interfaces ge-3/0/2
Physical interface: ge-3/0/2, Enabled, Physical link is Up
  Interface index: 167, SNMP ifIndex: 35
  Link-level type: 52, MTU: 1522, Speed: 1000mbps, Loopback: Disabled,
  Source filtering: Disabled, Flow control: Enabled, Auto-negotiation: Enabled
  Remote fault: Online
  Device flags   : Present Running
  Interface flags: SNMP-Traps Internal: 0x4000
  CoS queues     : 4 supported, 4 maximum usable queues
  Current address: 00:00:5e:00:53:7c, Hardware address: 00:00:5e:00:53:7c
  Last flapped   : 2006-08-10 17:25:10 PDT (00:01:08 ago)
  Input rate      : 0 bps (0 pps)
  Output rate     : 0 bps (0 pps)
  Ingress rate at Packet Forwarding Engine : 0 bps (0 pps)

```

```

Ingress drop rate at Packet Forwarding Engine : 0 bps (0 pps)
Active alarms : None
Active defects : None

Logical interface ge-3/0/2.0 (Index 72) (SNMP ifIndex 69)
  Flags: SNMP-Traps 0x4000
  VLAN-Tag [ 0x8100.512 0x8100.513 ] In(pop-swap 0x8100.530) Out(swap-push
    0x8100.512 0x8100.513)
  Encapsulation: VLAN-CCC
  Egress account overhead: 100
  Ingress account overhead: 90
  Input packets : 0
  Output packets: 0
  Protocol ccc, MTU: 1522
  Flags: Is-Primary

```

### show interfaces (Gigabit Ethernet on MX Series Routers)

```

user@host> show interfaces ge-2/2/2
Physical interface: ge-2/2/2, Enabled, Physical link is Up
  Interface index: 156, SNMP ifIndex: 188
  Link-level type: Ethernet, MTU: 1514, Speed: 1000mbps, MAC-REWRITE Error: None,
  Loopback: Disabled,
  Source filtering: Disabled, Flow control: Enabled, Auto-negotiation: Enabled,
  Remote fault: Online
  Device flags : Present Running
  Interface flags: SNMP-Traps Internal: 0x4000
  Link flags : None
  CoS queues : 8 supported, 4 maximum usable queues
  Schedulers : 0
  Current address: 00:00:5e:00:53:c0, Hardware address: 00:00:5e:00:53:76
  Last flapped : 2008-09-05 16:44:30 PDT (3d 01:04 ago)
  Input rate : 0 bps (0 pps)
  Output rate : 0 bps (0 pps)
  Active alarms : None
  Active defects : None
Logical interface ge-2/2/2.0 (Index 82) (SNMP ifIndex 219)
  Flags: Up SNMP-Traps 0x4004000 Encapsulation: ENET2
  Input packets : 10232
  Output packets: 10294
  Protocol inet, MTU: 1500
    Flags: Sendbroadcast-pkt-to-re
    Addresses, Flags: Is-Preferred Is-Primary
      Destination: 203.0.113/24, Local: 203.0.113.1, Broadcast: 203.0.113.255
  Protocol inet6, MTU: 1500
    Max nh cache: 4, New hold nh limit: 100000, Curr nh cnt: 4, Curr new hold
    cnt: 4, NH drop cnt: 0
    Flags: Is-Primary
    Addresses, Flags: Is-Default Is-Preferred Is-Primary
      Destination: 2001:db8:/32, Local: 2001:db8::5
    Addresses, Flags: Is-Preferred
      Destination: 2001:db8:1::/32, Local: 2001:db8:223:9cff:fe9f:3e78
  Protocol multiservice, MTU: Unlimited
  Flags: Is-Primary

```

### show interfaces extensive (Gigabit Ethernet on MX Series Routers showing interface transmit statistics configuration)

```

user@host> show interfaces ge-2/1/2 extensive | match "output|interface"

```

```

Physical interface: ge-2/1/2, Enabled, Physical link is Up
Interface index: 151, SNMP ifIndex: 530, Generation: 154
Interface flags: SNMP-Traps Internal: 0x4000
Output bytes :          240614363944          772721536 bps
Output packets:          3538446506          1420444 pps
Direction : Output
Interface transmit statistics: Enabled

```

**NOTE:** For Gigabit Ethernet intelligent queuing 2 (IQ2) interfaces, the logical interface egress statistics displayed in the **show interfaces** command output might not accurately reflect the traffic on the wire when output shaping is applied. Traffic management output shaping might drop packets after they are tallied by the interface counters. For detailed information, see the description of the logical interface **Transit statistics** fields in [Table 104 on page 1643](#).

#### show interfaces (Gigabit Ethernet Unnumbered Interface)

Table 106: show interfaces Gigabit Ethernet Output Fields

| Field Name                | Field Description                                                                                                                                                                                                                                   | Level of Output              |
|---------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Physical Interface</b> |                                                                                                                                                                                                                                                     |                              |
| <b>Physical interface</b> | Name of the physical interface.                                                                                                                                                                                                                     | All levels                   |
| <b>Enabled</b>            | State of the interface. Possible values are described in the “Enabled Field” section under <i>Common Output Fields Description</i> .                                                                                                                | All levels                   |
| <b>Interface index</b>    | Index number of the physical interface, which reflects its initialization sequence.                                                                                                                                                                 | <b>detail extensive none</b> |
| <b>SNMP ifIndex</b>       | SNMP index number for the physical interface.                                                                                                                                                                                                       | <b>detail extensive none</b> |
| <b>Generation</b>         | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                   | <b>detail extensive</b>      |
| <b>Link-level type</b>    | Encapsulation being used on the physical interface.                                                                                                                                                                                                 | All levels                   |
| <b>MTU</b>                | Maximum transmission unit size on the physical interface.                                                                                                                                                                                           | All levels                   |
| <b>Speed</b>              | Speed at which the interface is running.                                                                                                                                                                                                            | All levels                   |
| <b>Loopback</b>           | Loopback status: <b>Enabled</b> or <b>Disabled</b> . If loopback is enabled, type of loopback: <b>Local</b> or <b>Remote</b> .                                                                                                                      | All levels                   |
| <b>Source filtering</b>   | Source filtering status: <b>Enabled</b> or <b>Disabled</b> .                                                                                                                                                                                        | All levels                   |
| <b>LAN-PHY mode</b>       | 10-Gigabit Ethernet interface operating in Local Area Network Physical Layer Device (LAN PHY) mode. LAN PHY allows 10-Gigabit Ethernet wide area links to use existing Ethernet applications.                                                       | All levels                   |
| <b>WAN-PHY mode</b>       | 10-Gigabit Ethernet interface operating in Wide Area Network Physical Layer Device (WAN PHY) mode. WAN PHY allows 10-Gigabit Ethernet wide area links to use fiber-optic cables and other devices intended for SONET/SDH.                           | All levels                   |
| <b>Unidirectional</b>     | Unidirectional link mode status for 10-Gigabit Ethernet interface: <b>Enabled</b> or <b>Disabled</b> for parent interface; <b>Rx-only</b> or <b>Tx-only</b> for child interfaces.                                                                   | All levels                   |
| <b>Flow control</b>       | Flow control status: <b>Enabled</b> or <b>Disabled</b> .                                                                                                                                                                                            | All levels                   |
| <b>Auto-negotiation</b>   | (Gigabit Ethernet interfaces) Autonegotiation status: <b>Enabled</b> or <b>Disabled</b> .                                                                                                                                                           | All levels                   |
| <b>Remote-fault</b>       | (Gigabit Ethernet interfaces) Remote fault status: <ul style="list-style-type: none"> <li>• <b>Online</b>—Autonegotiation is manually configured as online.</li> <li>• <b>Offline</b>—Autonegotiation is manually configured as offline.</li> </ul> | All levels                   |
| <b>Device flags</b>       | Information about the physical device. Possible values are described in the “Device Flags” section under <i>Common Output Fields Description</i> .                                                                                                  | All levels                   |
| <b>Interface flags</b>    | Information about the interface. Possible values are described in the “Interface Flags” section under <i>Common Output Fields Description</i> .                                                                                                     | All levels                   |

Table 106: show interfaces Gigabit Ethernet Output Fields (*continued*)

| Field Name                      | Field Description                                                                                                                                                                                                                                                           | Level of Output              |                         |
|---------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|-------------------------|
| <b>Link flags</b>               | Information about the link. Possible values are described in the “Links Flags” section under <i>Common Output Fields Description</i> .                                                                                                                                      | All levels                   |                         |
| <b>Wavelength</b>               | (10-Gigabit Ethernet dense wavelength-division multiplexing [DWDM] interfaces) Displays the configured wavelength, in nanometers (nm).                                                                                                                                      | All levels                   |                         |
| <b>Frequency</b>                | (10-Gigabit Ethernet DWDM interfaces only) Displays the frequency associated with the configured wavelength, in terahertz (THz).                                                                                                                                            | All levels                   |                         |
| <b>CoS queues</b>               | Number of CoS queues configured.                                                                                                                                                                                                                                            | <b>detail extensive</b> none |                         |
| <b>Schedulers</b>               | (Gigabit Ethernet intelligent queuing 2 (IQ2) interfaces only) Number of CoS schedulers configured.                                                                                                                                                                         | <b>extensive</b>             |                         |
| <b>Hold-times</b>               | Current interface hold-time up and hold-time down, in milliseconds.                                                                                                                                                                                                         | <b>detail extensive</b>      |                         |
| <b>Current address</b>          | Configured MAC address.                                                                                                                                                                                                                                                     | <b>detail extensive</b> none |                         |
| <b>Hardware address</b>         | Hardware MAC address.                                                                                                                                                                                                                                                       | <b>detail extensive</b> none |                         |
| <b>Last flapped</b>             | Date, time, and how long ago the interface went from down to up. The format is <b>Last flapped: year-month-day hour:minute:second:timezone (hour:minute:second ago)</b> . For example, <b>Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> .                        | <b>detail extensive</b> none |                         |
| <b>Input Rate</b>               | Input rate in bits per second (bps) and packets per second (pps). The value in this field also includes the Layer 2 overhead bytes for ingress traffic on Ethernet interfaces if you enable accounting of Layer 2 overhead at the PIC level or the logical interface level. | None specified               |                         |
| <b>Output Rate</b>              | Output rate in bps and pps. The value in this field also includes the Layer 2 overhead bytes for egress traffic on Ethernet interfaces if you enable accounting of Layer 2 overhead at the PIC level or the logical interface level.                                        | None specified               |                         |
| <b>Statistics last cleared</b>  | Time when the statistics for the interface were last set to zero.                                                                                                                                                                                                           | <b>detail extensive</b>      |                         |
| <b>Egress account overhead</b>  | Layer 2 overhead in bytes that is accounted in the interface statistics for egress traffic.                                                                                                                                                                                 | <b>detail extensive</b>      |                         |
| <b>Ingress account overhead</b> | Layer 2 overhead in bytes that is accounted in the interface statistics for ingress traffic.                                                                                                                                                                                | <b>detail extensive</b>      | <b>detail extensive</b> |

Table 106: show interfaces Gigabit Ethernet Output Fields (*continued*)

| Field Name                | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Level of Output         |
|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
| <b>Traffic statistics</b> | <p>Number and rate of bytes and packets received and transmitted on the physical interface.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface. The value in this field also includes the Layer 2 overhead bytes for ingress traffic on Ethernet interfaces if you enable accounting of Layer 2 overhead at the PIC level or the logical interface level.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface. The value in this field also includes the Layer 2 overhead bytes for egress traffic on Ethernet interfaces if you enable accounting of Layer 2 overhead at the PIC level or the logical interface level.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul> <p>Gigabit Ethernet and 10-Gigabit Ethernet IQ PICs count the overhead and CRC bytes.</p> <p>For Gigabit Ethernet IQ PICs, the input byte counts vary by interface type. For more information, see <a href="#">Table 106 on page 1667</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>detail extensive</b> |
| <b>Input errors</b>       | <p>Input errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of the incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Runts</b>—Number of frames received that are smaller than the runt threshold.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that the Junos OS does not handle.</li> <li>• <b>L3 incompletes</b>—Number of incoming packets discarded because they failed Layer 3 (usually IPv4) sanity checks of the header. For example, a frame with less than 20 bytes of available IP header is discarded. L3 incomplete errors can be ignored by configuring the <code>ignore-l3-incompletes</code> statement.</li> <li>• <b>L2 channel errors</b>—Number of times the software did not find a valid logical interface for an incoming frame.</li> <li>• <b>L2 mismatch timeouts</b>—Number of malformed or short packets that caused the incoming packet handler to discard the frame as unreadable.</li> <li>• <b>FIFO errors</b>—Number of FIFO errors in the receive direction that are reported by the ASIC on the PIC. If this value is ever nonzero, the PIC is probably malfunctioning.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul> | <b>extensive</b>        |

Table 106: show interfaces Gigabit Ethernet Output Fields (*continued*)

| Field Name                     | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Level of Output         |
|--------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
| <b>Output errors</b>           | <p>Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and then up, or another problem occurs. If the number of carrier transitions increments quickly (perhaps once every 10 seconds), the cable, the far-end system, or the PIC or PIM is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Collisions</b>—Number of Ethernet collisions. The Gigabit Ethernet PIC supports only full-duplex operation, so for Gigabit Ethernet PICs, this number should always remain 0. If it is nonzero, there is a software bug.</li> <li>• <b>Aged packets</b>—Number of packets that remained in shared packet SDRAM so long that the system automatically purged them. The value in this field should never increment. If it does, it is most likely a software bug or possibly malfunctioning hardware.</li> <li>• <b>FIFO errors</b>—Number of FIFO errors in the send direction as reported by the ASIC on the PIC. If this value is ever nonzero, the PIC is probably malfunctioning.</li> <li>• <b>HS link CRC errors</b>—Number of errors on the high-speed links between the ASICs responsible for handling the router interfaces.</li> <li>• <b>MTU errors</b>—Number of packets whose size exceeded the MTU of the interface.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul> | <b>extensive</b>        |
| <b>Egress queues</b>           | <p>Total number of egress queues supported on the specified interface.</p> <p><b>NOTE:</b> In DPCs that are not of the enhanced type, such as DPC 40x 1GE R, DPCE 20x 1GE + 2x 10GE R, or DPCE 40x 1GE R, you might notice a discrepancy in the output of the <b>show interfaces</b> command because incoming packets might be counted in the Egress queues section of the output. This problem occurs on non-enhanced DPCs because the egress queue statistics are polled from IMQ (Inbound Message Queuing) block of the I-chip. The IMQ block does not differentiate between ingress and egress WAN traffic; as a result, the combined statistics are displayed in the egress queue counters on the Routing Engine. In a simple VPLS scenario, if there is no MAC entry in DMAC table (by sending unidirectional traffic), traffic is flooded and the input traffic is accounted in IMQ. For bidirectional traffic (MAC entry in DMAC table), if the outgoing interface is on the same I-chip then both ingress and egress statistics are counted in a combined way. If the outgoing interface is on a different I-chip or FPC, then only egress statistics are accounted in IMQ. This behavior is expected with non-enhanced DPCs</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>detail extensive</b> |
| <b>Queue counters (Egress)</b> | <p>CoS queue number and its associated user-configured forwarding class name.</p> <ul style="list-style-type: none"> <li>• <b>Queued packets</b>—Number of queued packets.</li> <li>• <b>Transmitted packets</b>—Number of transmitted packets.</li> <li>• <b>Dropped packets</b>—Number of packets dropped by the ASIC's RED mechanism.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>detail extensive</b> |

Table 106: show interfaces Gigabit Ethernet Output Fields (*continued*)

| Field Name                              | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Level of Output              |
|-----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Ingress queues</b>                   | Total number of ingress queues supported on the specified interface. Displayed on IQ2 interfaces.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>extensive</b>             |
| <b>Queue counters (Ingress)</b>         | CoS queue number and its associated user-configured forwarding class name. Displayed on IQ2 interfaces. <ul style="list-style-type: none"> <li>• <b>Queued packets</b>—Number of queued packets.</li> <li>• <b>Transmitted packets</b>—Number of transmitted packets.</li> <li>• <b>Dropped packets</b>—Number of packets dropped by the ASIC's RED mechanism.</li> </ul>                                                                                                                                                                                                                                                                                                                               | <b>extensive</b>             |
| <b>Active alarms and Active defects</b> | Ethernet-specific defects that can prevent the interface from passing packets. When a defect persists for a certain amount of time, it is promoted to an alarm. Based on the routing device configuration, an alarm can ring the red or yellow alarm bell on the routing device, or turn on the red or yellow alarm LED on the craft interface. These fields can contain the value <b>None</b> or <b>Link</b> . <ul style="list-style-type: none"> <li>• <b>None</b>—There are no active defects or alarms.</li> <li>• <b>Link</b>—Interface has lost its link state, which usually means that the cable is unplugged, the far-end system has been turned off, or the PIC is malfunctioning.</li> </ul> | <b>detail extensive none</b> |
| <b>OTN alarms</b>                       | Active OTN alarms identified on the interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>detail extensive</b>      |
| <b>OTN defects</b>                      | OTN defects received on the interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>detail extensive</b>      |

| <b>MAC statistics</b>                 | <p>Receive and Transmit statistics reported by the PIC's MAC subsystem, including the following:</p> <ul style="list-style-type: none"> <li>• <b>Total octets</b> and <b>total packets</b>—Total number of octets and packets. For Gigabit Ethernet IQ PICs, the received octets count varies by interface type. For more information, see <a href="#">Table 107 on page 1681</a></li> <li>• <b>Unicast packets</b>, <b>Broadcast packets</b>, and <b>Multicast packets</b>—Number of unicast, broadcast, and multicast packets.</li> <li>• <b>CRC/Align errors</b>—Total number of packets received that had a length (excluding framing bits, but including FCS octets) of between 64 and 1518 octets, inclusive, and had either a bad FCS with an integral number of octets (FCS Error) or a bad FCS with a nonintegral number of octets (Alignment Error).</li> <li>• <b>FIFO error</b>—Number of FIFO errors that are reported by the ASIC on the PIC. If this value is ever nonzero, the PIC or a cable is probably malfunctioning.</li> <li>• <b>MAC control frames</b>—Number of MAC control frames.</li> <li>• <b>MAC pause frames</b>—Number of MAC control frames with <b>pause</b> operational code.</li> <li>• <b>Oversized frames</b>—Number of frames that exceed 1518 octets.</li> <li>• <b>Jabber frames</b>—Number of frames that were longer than 1518 octets (excluding framing bits, but including FCS octets), and had either an FCS error or an alignment error. This definition of jabber is different from the definition in IEEE-802.3 section 8.2.1.5 (10BASE5) and section 10.3.1.4 (10BASE2). These documents define jabber as the condition in which any packet exceeds 20 ms. The allowed range to detect jabber is from 20 ms to 150 ms.</li> <li>• <b>Fragment frames</b>—Total number of packets that were less than 64 octets in length (excluding framing bits, but including FCS octets), and had either an FCS error or an alignment error. Fragment frames normally increment because both runts (which are normal occurrences caused by collisions) and noise hits are counted.</li> <li>• <b>VLAN tagged frames</b>—Number of frames that are VLAN tagged. The system uses the TPID of 0x8100 in the frame to determine whether a frame is tagged or not.</li> <li>• <b>Code violations</b>—Number of times an event caused the PHY to indicate "Data reception error" or "invalid data symbol error."</li> </ul> | <b>extensive</b> |
| <b>OTN Received Overhead Bytes</b>    | APS/PCC0: 0x02, APS/PCC1: 0x11, APS/PCC2: 0x47, APS/PCC3: 0x58 Payload Type: 0x08                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>extensive</b> |

Table 106: show interfaces Gigabit Ethernet Output Fields (*continued*)

| Field Name               | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Level of Output  |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| <b>Filter statistics</b> | <p><b>Receive</b> and <b>Transmit</b> statistics reported by the PIC's MAC address filter subsystem. The filtering is done by the content-addressable memory (CAM) on the PIC. The filter examines a packet's source and destination MAC addresses to determine whether the packet should enter the system or be rejected.</p> <ul style="list-style-type: none"> <li>• <b>Input packet count</b>—Number of packets received from the MAC hardware that the filter processed.</li> <li>• <b>Input packet rejects</b>—Number of packets that the filter rejected because of either the source MAC address or the destination MAC address.</li> <li>• <b>Input DA rejects</b>—Number of packets that the filter rejected because the destination MAC address of the packet is not on the accept list. It is normal for this value to increment. When it increments very quickly and no traffic is entering the routing device from the far-end system, either there is a bad ARP entry on the far-end system, or multicast routing is not on and the far-end system is sending many multicast packets to the local routing device (which the routing device is rejecting).</li> <li>• <b>Input SA rejects</b>—Number of packets that the filter rejected because the source MAC address of the packet is not on the accept list. The value in this field should increment only if source MAC address filtering has been enabled. If filtering is enabled, if the value increments quickly, and if the system is not receiving traffic that it should from the far-end system, it means that the user-configured source MAC addresses for this interface are incorrect.</li> <li>• <b>Output packet count</b>—Number of packets that the filter has given to the MAC hardware.</li> <li>• <b>Output packet pad count</b>—Number of packets the filter padded to the minimum Ethernet size (60 bytes) before giving the packet to the MAC hardware. Usually, padding is done only on small ARP packets, but some very small IP packets can also require padding. If this value increments rapidly, either the system is trying to find an ARP entry for a far-end system that does not exist or it is misconfigured.</li> <li>• <b>Output packet error count</b>—Number of packets with an indicated error that the filter was given to transmit. These packets are usually aged packets or are the result of a bandwidth problem on the FPC hardware. On a normal system, the value of this field should not increment.</li> <li>• <b>CAM destination filters, CAM source filters</b>—Number of entries in the CAM dedicated to destination and source MAC address filters. There can only be up to 64 source entries. If source filtering is disabled, which is the default, the values for these fields should be 0.</li> </ul> | <b>extensive</b> |
| <b>PMA PHY</b>           | <p>(10-Gigabit Ethernet interfaces, WAN PHY mode) SONET error information:</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. | Received path trace, Transmitted path trace | <p>(10-Gigabit Ethernet interfaces, WAN PHY mode) SONET/SDH interfaces allow path trace bytes to be sent inband across the SONET/SDH link. Juniper Networks and other router manufacturers use these bytes to help diagnose misconfigurations and network errors by setting the transmitted path trace message so that it contains the system hostname and name of the physical interface. The received path trace value is the message received from the routing device at the other end of the fiber. The transmitted path trace value is the message that this routing device transmits.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | extensive       |
| Packet Forwarding Engine configuration      | <p>Information about the configuration of the Packet Forwarding Engine:</p> <ul style="list-style-type: none"> <li>• <b>Destination slot</b>—FPC slot number.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | extensive       |

Table 106: show interfaces Gigabit Ethernet Output Fields (*continued*)

| Field Name               | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Level of Output              |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CoS information</b>   | Information about the CoS queue for the physical interface. <ul style="list-style-type: none"> <li>• <b>CoS transmit queue</b>—Queue number and its associated user-configured forwarding class name.</li> <li>• <b>Bandwidth %</b>—Percentage of bandwidth allocated to the queue.</li> <li>• <b>Bandwidth bps</b>—Bandwidth allocated to the queue (in bps).</li> <li>• <b>Buffer %</b>—Percentage of buffer space allocated to the queue.</li> <li>• <b>Buffer usec</b>—Amount of buffer space allocated to the queue, in microseconds. This value is nonzero only if the buffer size is configured in terms of time.</li> <li>• <b>Priority</b>—Queue priority: <b>low</b> or <b>high</b>.</li> <li>• <b>Limit</b>—Displayed if rate limiting is configured for the queue. Possible values are <b>none</b> and <b>exact</b>. If <b>exact</b> is configured, the queue transmits only up to the configured bandwidth, even if excess bandwidth is available. If <b>none</b> is configured, the queue transmits beyond the configured bandwidth if bandwidth is available.</li> </ul> | <b>extensive</b>             |
| <b>Logical Interface</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                              |
| <b>Logical interface</b> | Name of the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | All levels                   |
| <b>Index</b>             | Index number of the logical interface, which reflects its initialization sequence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>detail extensive none</b> |
| <b>SNMP ifIndex</b>      | SNMP interface index number for the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>detail extensive none</b> |
| <b>Generation</b>        | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>detail extensive</b>      |
| <b>Flags</b>             | Information about the logical interface. Possible values are described in the "Logical Interface Flags" section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | All levels                   |

| <b>IPv6 transit statistics</b> | Number of IPv6 transit bytes and packets received and transmitted on the logical interface if IPv6 statistics tracking is enabled.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>extensive</b>                   |
| <b>Local statistics</b>        | Number and rate of bytes and packets destined to the routing device.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>extensive</b>                   |

Table 106: show interfaces Gigabit Ethernet Output Fields (*continued*)

| Field Name                      | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Level of Output              |
|---------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Transit statistics</b>       | Number and rate of bytes and packets transiting the switch.<br><br><b>NOTE:</b> For Gigabit Ethernet intelligent queuing 2 (IQ2) interfaces, the logical interface egress statistics might not accurately reflect the traffic on the wire when output shaping is applied. Traffic management output shaping might drop packets after they are tallied by the <b>Output bytes</b> and <b>Output packets</b> interface counters. However, correct values display for both of these egress statistics when per-unit scheduling is enabled for the Gigabit Ethernet IQ2 physical interface, or when a single logical interface is actively using a shared scheduler. | <b>extensive</b>             |
| <b>Generation</b>               | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>detail extensive</b>      |
| <b>Route Table</b>              | Route table in which the logical interface address is located. For example, 0 refers to the routing table inet.0.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>detail extensive none</b> |
| <b>Flags</b>                    | Information about protocol family flags. Possible values are described in the “Family Flags” section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>detail extensive</b>      |
| <b>Donor interface</b>          | (Unnumbered Ethernet) Interface from which an unnumbered Ethernet interface borrows an IPv4 address.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>detail extensive none</b> |
| <b>Preferred source address</b> | (Unnumbered Ethernet) Secondary IPv4 address of the donor loopback interface that acts as the preferred source address for the unnumbered Ethernet interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>detail extensive none</b> |
| <b>Input Filters</b>            | Names of any input filters applied to this interface. If you specify a precedence value for any filter in a dynamic profile, filter precedence values appear in parenthesis next to all interfaces.                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>detail extensive</b>      |
| <b>Output Filters</b>           | Names of any output filters applied to this interface. If you specify a precedence value for any filter in a dynamic profile, filter precedence values appear in parenthesis next to all interfaces.                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>detail extensive</b>      |
| <b>Mac-Validate Failures</b>    | Number of MAC address validation failures for packets and bytes. This field is displayed when MAC address validation is enabled for the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>detail extensive none</b> |
| <b>Addresses, Flags</b>         | Information about the address flags. Possible values are described in the “Addresses Flags” section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>detail extensive none</b> |
| <b><i>protocol-family</i></b>   | Protocol family configured on the logical interface. If the protocol is <b>inet</b> , the IP address of the interface is also displayed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>brief</b>                 |
| <b>Flags</b>                    | Information about address flag (possible values are described in the “Addresses Flags” section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>detail extensive none</b> |
| <b>Destination</b>              | IP address of the remote side of the connection.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>detail extensive none</b> |
| <b>Local</b>                    | IP address of the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>detail extensive none</b> |
| <b>Broadcast</b>                | Broadcast address of the logical interlace.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>detail extensive none</b> |

Table 106: show interfaces Gigabit Ethernet Output Fields (*continued*)

| Field Name | Field Description                                                 | Level of Output  |
|------------|-------------------------------------------------------------------|------------------|
| Generation | Unique number for use by Juniper Networks technical support only. | detail extensive |

For Gigabit Ethernet IQ PICs, traffic and MAC statistics output varies. [Table 107 on page 1681](#) describes the traffic and MAC statistics for two sample interfaces, each of which is sending traffic in packets of 500 bytes (including 478 bytes for the Layer 3 packet, 18 bytes for the Layer 2 VLAN traffic header, and 4 bytes for cyclic redundancy check [CRC] information). In [Table 107 on page 1681](#), the **ge-0/3/0** interface is the inbound physical interface, and the **ge-0/0/0** interface is the outbound physical interface. On both interfaces, traffic is carried on logical unit .50 (VLAN 50).

Table 107: Gigabit Ethernet IQ PIC Traffic and MAC Statistics by Interface Type

| Interface Type              | Sample Command                               | Byte and Octet Counts Include                                                                                                                                                                                 | Comments                                                                                                                                      |

- Output Fields** [Table 108 on page 1692](#) lists the output fields for the **show interfaces** (management) command on the M Series routers, T Series routers, TX Matrix Plus routers, and PTX Series. Output fields are listed in the approximate order in which they appear.

**Table 108: show interfaces Output Fields for M Series, MX Series, T Series, and PTX Series Routers Management Ethernet Interface**

| Field Name                | Field Description                                                                                                                    | Level of Output              |
|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Physical Interface</b> |                                                                                                                                      |                              |
| <b>Physical interface</b> | Name of the physical interface.                                                                                                      | All levels                   |
| <b>Enabled</b>            | State of the interface. Possible values are described in the “Enabled Field” section under <i>Common Output Fields Description</i> . | All levels                   |
| <b>Interface index</b>    | Physical interface index number, which reflects its initialization sequence.                                                         | <b>detail extensive none</b> |
| <b>SNMP ifIndex</b>       | SNMP index number for the physical interface.                                                                                        | <b>detail extensive none</b> |
| <b>Generation</b>         | Unique number for use by Juniper Networks technical support only.                                                                    | <b>detail extensive</b>      |
| <b>Type</b>               | Type of interface.                                                                                                                   | All levels                   |
| <b>Link-level type</b>    | Encapsulation type used on the physical interface.                                                                                   | All levels                   |
| <b>MTU</b>                | Maximum transmission unit (MTU)—Size of the largest packet to be transmitted.                                                        | All levels                   |

**Table 108: show interfaces Output Fields for M Series, MX Series, T Series, and PTX Series Routers Management Ethernet Interface (*continued*)**

| Field Name                     | Field Description                                                                                                                                                                                                                                                                                                                                                        | Level of Output              |
|--------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Clocking</b>                | Reference clock source of the interface.                                                                                                                                                                                                                                                                                                                                 | All levels                   |
| <b>Speed</b>                   | Network speed on the interface.                                                                                                                                                                                                                                                                                                                                          | All levels                   |
| <b>Device flags</b>            | Information about the physical device. Possible values are described in the “Device Flags” section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                       | All levels                   |
| <b>Interface flags</b>         | Information about the interface. Possible values are described in the “Interface Flags” section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                          | All levels                   |
| <b>Link type</b>               | Data transmission type.                                                                                                                                                                                                                                                                                                                                                  | <b>detail extensive none</b> |
| <b>Link flags</b>              | Information about the link. Possible values are described in the “Link Flags” section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                    | <b>detail extensive</b>      |
| <b>Physical info</b>           | Information about the physical interface.                                                                                                                                                                                                                                                                                                                                | <b>detail extensive</b>      |
| <b>Hold-times</b>              | Current interface hold-time up and hold-time down. Value is in milliseconds.                                                                                                                                                                                                                                                                                             | <b>detail extensive</b>      |
| <b>Current address</b>         | Configured MAC address.                                                                                                                                                                                                                                                                                                                                                  | <b>detail extensive none</b> |
| <b>Hardware address</b>        | Media access control (MAC) address of the interface.                                                                                                                                                                                                                                                                                                                     | <b>detail extensive none</b> |
| <b>Alternate link address</b>  | Backup link address.                                                                                                                                                                                                                                                                                                                                                     | <b>detail extensive</b>      |
| <b>Last flapped</b>            | Date, time, and how long ago the interface went from down to up. The format is <b>Last flapped: <i>year-month-day hour:minute:second timezone (hour:minute:second ago)</i></b> . For example, <b>Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> .                                                                                                              | <b>detail extensive none</b> |
| <b>Input packets</b>           | Number of packets received on the physical interface.                                                                                                                                                                                                                                                                                                                    | None specified               |
| <b>Output packets</b>          | Number of packets transmitted on the physical interface.                                                                                                                                                                                                                                                                                                                 | None specified               |
| <b>Statistics last cleared</b> | Time when the statistics for the interface were last set to zero.                                                                                                                                                                                                                                                                                                        | <b>detail extensive</b>      |

Table 108: show interfaces Output Fields for M Series, MX Series, T Series, and PTX Series Routers Management Ethernet Interface (*continued*)

| Field Name               | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Level of Output              |
|--------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Input errors</b>      | <ul style="list-style-type: none"> <li>• <b>Errors</b>—Input errors on the interface.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Runts</b>—Frames received smaller than the runt threshold.</li> <li>• <b>Giants</b>—Frames received larger than the giant threshold.</li> <li>• <b>Policed Discards</b>—Frames that the incoming packet match code discarded because they were not recognized or were not of interest. Usually, this field reports protocols that Junos does not support.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>                                                                                                    | <b>extensive</b>             |
| <b>Output errors</b>     | <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and then up, or another problem occurs. If the number of carrier transitions increments quickly, possibly once every 10 seconds, the cable, the remote system, or the interface is malfunctioning.</li> <li>• <b>Errors</b>—Sum of outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet dropped by the ASIC RED mechanism.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul> | <b>extensive</b>             |
| <b>Logical Interface</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                              |
| <b>Logical interface</b> | Name of the logical interface                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | All levels                   |
| <b>Index</b>             | Logical interface index number, which reflects its initialization sequence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>detail extensive none</b> |
| <b>SNMP ifIndex</b>      | Logical interface SNMP interface index number.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>detail extensive none</b> |
| <b>Generation</b>        | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>detail extensive</b>      |
| <b>Flags</b>             | Information about the logical interface; values are described in the "Device Flags" section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | All levels                   |
| <b>Encapsulation</b>     | Encapsulation on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>detail extensive none</b> |
| <b>inet</b>              | IP address of the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>brief</b>                 |
| <b>Protocol</b>          | Protocol family configured on the logical interface (such as <b>iso</b> or <b>inet6</b> ).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>detail extensive none</b> |
| <b>MTU</b>               | MTU size on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>detail extensive none</b> |
| <b>Generation</b>        | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>detail extensive</b>      |

Table 108: show interfaces Output Fields for M Series, MX Series, T Series, and PTX Series Routers Management Ethernet Interface (*continued*)

| Field Name              | Field Description                                                                                                                                        | Level of Output       |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------|
| <b>Route table</b>      | Route table in which this address exists. For example, <b>Route table:0</b> refers to inet.0.                                                            | detail extensive      |
| <b>Flags</b>            | Information about the protocol family flags. Possible values are described in the “Family Flags” section under <i>Common Output Fields Description</i> . | detail extensive none |
| <b>Addresses, Flags</b> | Information about address flags. Possible values are described in the “Addresses Flags” section under <i>Common Output Fields Description</i> .          | detail extensive none |
| <b>Destination</b>      | IP address of the remote side of the connection.                                                                                                         | detail extensive none |
| <b>Local</b>            | IP address of the logical interface.                                                                                                                     | detail extensive none |
| <b>Broadcast</b>        | Broadcast address.                                                                                                                                       | detail extensive none |
| <b>Generation</b>       | Unique number for use by Juniper Networks technical support only.                                                                                        | detail extensive      |

## Sample Output

### show interfaces brief (Management Ethernet)

```

user@host> show interfaces fxp0 brief
Physical interface: fxp0, Enabled, Physical link is Up
  Type: Ethernet, Link-level type: Ethernet, MTU: 1514, Clocking: Unspecified,
  Speed: 100mbps
  Device flags   : Present Running
  Interface flags: SNMP-Traps

Logical interface fxp0.0
  Flags: SNMP-Traps Encapsulation: ENET2
  inet  192.168.70.143/21

```

### show interfaces (Management Ethernet)

```

user@host> show interfaces fxp0
Physical interface: fxp0, Enabled, Physical link is Up
  Interface index: 1, SNMP ifIndex: 1
  Type: Ethernet, Link-level type: Ethernet, MTU: 1514, Speed: 100mbps
  Device flags   : Present Running
  Interface flags: SNMP-Traps
  Link type      : Half-Duplex
  Current address: 00:00:5E:00:53:89, Hardware address: 00:00:5E:00:53:89
  Last flapped   : Never
    Input packets : 80804
    Output packets: 1105

Logical interface fxp0.0 (Index 2) (SNMP ifIndex 13)
  Flags: SNMP-Traps Encapsulation: ENET2
  Protocol inet, MTU: 1500
    Flags: Is-Primary
    Addresses, Flags: Is-Preferred Is-Primary

```

Destination: 192.168.64/21, Local: 192.168.70.143,  
Broadcast: 192.168.71.255

### show interfaces (Management Ethernet [TX Matrix Plus Router])

```
user@host> show interfaces em0
Physical interface: em0, Enabled, Physical link is Up
  Interface index: 8, SNMP ifIndex: 17
  Type: Ethernet, Link-level type: Ethernet, MTU: 1514, Speed: 100mbps
  Device flags   : Present Running
  Interface flags: SNMP-Traps
  Link type      : Full-Duplex
  Current address: 00:00:5E:00:53:c0, Hardware address: 00:00:5E:00:53:c0
  Last flapped   : Never
    Input packets : 1424
    Output packets: 5282

Logical interface em0.0 (Index 3) (SNMP ifIndex 18)
  Flags: SNMP-Traps Encapsulation: ENET2
  Input packets : 1424
  Output packets: 5282
  Protocol inet, MTU: 1500
    Flags: Is-Primary
  Addresses, Flags: Is-Preferred Is-Primary
    Destination: 192.168.178.0/25, Local: 192.168.178.11, Broadcast:
    192.168.178.127
```

### show interfaces (Management Ethernet [PTX Series Packet Transport Routers])

```
user@host> show interfaces em0
Physical interface: em0, Enabled, Physical link is Up
  Interface index: 8, SNMP ifIndex: 0
  Type: Ethernet, Link-level type: Ethernet, MTU: 1514, Speed: 1000mbps
  Device flags   : Present Running
  Interface flags: SNMP-Traps
  Link type      : Full-Duplex
  Current address: 00:00:5E:00:53:1b, Hardware address: 00:00:5E:00:53:1b
  Last flapped   : Never
    Input packets : 212581
    Output packets: 71

Logical interface em0.0 (Index 3) (SNMP ifIndex 0)
  Flags: SNMP-Traps Encapsulation: ENET2
  Input packets : 212551
  Output packets: 71
  Protocol inet, MTU: 1500
    Flags: Is-Primary
  Addresses, Flags: Is-Default Is-Preferred Is-Primary
    Destination: 192.168.3/24, Local: 192.168.3.30,
    Broadcast: 192.168.3.255
```

### show interfaces detail (Management Ethernet)

```
user@host> show interfaces fxp0 detail
Physical interface: fxp0, Enabled, Physical link is Up
  Interface index: 1, SNMP ifIndex: 1, Generation: 0
  Type: Ethernet, Link-level type: Ethernet, MTU: 1514, Clocking: Unspecified,
  Speed: 100mbps
  Device flags   : Present Running
  Interface flags: SNMP-Traps
  Link type      : Half-Duplex
  Physical info   : Unspecified
```

```

Hold-times      : Up 0 ms, Down 0 ms
Current address: 00:00:5E:00:53:89, Hardware address: 00:00:5E:00:53:89
Alternate link address: Unspecified
Last flapped    : Never
Statistics last cleared: Never
Traffic statistics:
  Input bytes   :          6484031
  Output bytes  :          167503
  Input packets:          81008
  Output packets:         1110

Logical interface fxp0.0 (Index 2) (SNMP ifIndex 13) (Generation 1)
  Flags: SNMP-Traps Encapsulation: ENET2
  Protocol inet, MTU: 1500, Generation: 6, Route table: 0
  Flags: Is-Primary
  Addresses, Flags: Is-Preferred Is-Primary
    Destination: 192.168.64/21, Local: 192.168.70.143,
    Broadcast: 192.168.71.255, Generation: 1

```

### show interfaces detail (Management Ethernet [TX Matrix Plus Router])

```

user@host> show interfaces em0 detail
Physical interface: em0, Enabled, Physical link is Up
Interface index: 8, SNMP ifIndex: 17, Generation: 2
Type: Ethernet, Link-level type: Ethernet, MTU: 1514, Clocking: Unspecified,
Speed: 100mbps
Device flags   : Present Running
Interface flags: SNMP-Traps
Link type      : Full-Duplex
Physical info  : Unspecified
Hold-times     : Up 0 ms, Down 0 ms
Current address: 00:00:5E:00:53:c0, Hardware address: 00:00:5E:00:53:c0
Alternate link address: Unspecified
Last flapped   : Never
Statistics last cleared: Never
Traffic statistics:
  Input bytes   :          124351
  Output bytes  :          1353212
  Input packets:          1804
  Output packets:          5344
IPv6 transit statistics:
  Input bytes   :           0
  Output bytes  :           0
  Input packets:           0
  Output packets:           0

Logical interface em0.0 (Index 3) (SNMP ifIndex 18) (Generation 1)
  Flags: SNMP-Traps Encapsulation: ENET2
  Traffic statistics:
    Input bytes   :          117135
    Output bytes  :          1331647
    Input packets:          1804
    Output packets:          5344
  Local statistics:
    Input bytes   :          117135
    Output bytes  :          1331647
    Input packets:          1804
    Output packets:          5344
  Protocol inet, MTU: 1500, Generation: 1, Route table: 0
  Flags: Is-Primary
  Addresses, Flags: Is-Preferred Is-Primary

```

Destination: 192.168.178.0/25, Local: 192.168.178.11, Broadcast:  
192.168.178.127, Generation: 1

### show interfaces detail (Management Ethernet [PTX Packet Transport Routers])

```
user@host> show interfaces detail em0
Physical interface: em0, Enabled, Physical link is Up
  Interface index: 8, SNMP ifIndex: 0, Generation: 3
  Type: Ethernet, Link-level type: Ethernet, MTU: 1514, Clocking: Unspecified,

  Speed: 1000mbps
  Device flags   : Present Running
  Interface flags: SNMP-Traps
  Link type      : Full-Duplex
  Physical info  : Unspecified
  Hold-times     : Up 0 ms, Down 0 ms
  Current address: 00:00:5E:00:53:1b, Hardware address: 00:00:5E:00:53:1b
  Alternate link address: Unspecified
  Last flapped   : Never
  Statistics last cleared: Never
  Traffic statistics:
    Input bytes   :          15255909
    Output bytes  :           4608
    Input packets :          214753
    Output packets:           72
  IPv6 transit statistics:
    Input bytes   :           0
    Output bytes  :           0
    Input packets :           0
    Output packets:           0

  Logical interface em0.0 (Index 3) (SNMP ifIndex 0) (Generation 1)
  Flags: SNMP-Traps Encapsulation: ENET2
  Traffic statistics:
    Input bytes   :          14394630
    Output bytes  :           3024
    Input packets :          214723
    Output packets:           72
  Local statistics:
    Input bytes   :          14394630
    Output bytes  :           3024
    Input packets :          214723
    Output packets:           72
  Protocol inet, MTU: 1500, Generation: 1, Route table: 0
  Flags: Is-Primary
  Addresses, Flags: Is-Default Is-Preferred Is-Primary
    Destination: 192.168.3/24, Local: 192.168.3.30,
    Broadcast: 192.168.3.255, Generation: 1
```

### show interfaces extensive (Management Ethernet)

```
user@host> show interfaces fxp0 extensive
Physical interface: fxp0, Enabled, Physical link is Up
  Interface index: 1, SNMP ifIndex: 1, Generation: 0
  Type: Ethernet, Link-level type: Ethernet, MTU: 1514, Clocking: Unspecified,
  Speed: 100mbps
  Device flags   : Present Running
  Interface flags: SNMP-Traps
  Link type      : Half-Duplex
  Physical info  : Unspecified
  Hold-times     : Up 0 ms, Down 0 ms
```

```

Current address: 00:00:5E:00:53:89, Hardware address: 00:00:5E:00:53:89
Alternate link address: Unspecified
Last flapped : Never
Statistics last cleared: Never
Traffic statistics:
  Input bytes :          6678904
  Output bytes :          169657
  Input packets:          83946
  Output packets:         1127
Input errors:
  Errors: 12, Drops: 0, Framing errors: 0, Runts: 0, Giants: 0,
  Policed discards: 0, Resource errors: 0
Output errors:
  Carrier transitions: 0, Errors: 0, Drops: 0, MTU errors: 0,
  Resource errors: 0

Logical interface fxp0.0 (Index 2) (SNMP ifIndex 13) (Generation 1)
Flags: SNMP-Traps Encapsulation: ENET2
Protocol inet, MTU: 1500, Generation: 6, Route table: 0
  Flags: Is-Primary
  Addresses, Flags: Is-Preferred Is-Primary
    Destination: 192.168.64/21, Local: 192.168.70.143,
    Broadcast: 192.168.71.255, Generation: 1

```

#### show interfaces extensive (Management Ethernet [TX Matrix Plus Router])

```
user@host> show interfaces em0 extensive
```

```

Physical interface: em0, Enabled, Physical link is Up
  Interface index: 8, SNMP ifIndex: 17, Generation: 2
  Type: Ethernet, Link-level type: Ethernet, MTU: 1514, Clocking: Unspecified,
  Speed: 100mbps
  Device flags : Present Running
  Interface flags: SNMP-Traps
  Link type : Full-Duplex
  Physical info : Unspecified
  Hold-times : Up 0 ms, Down 0 ms

| Field Name                     | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                     | Level of Output         |
|--------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
| <b>Generation</b>              | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                                                                                                                                                                     | <b>detail extensive</b> |
| <b>Type</b>                    | Physical interface type (PPPoE).                                                                                                                                                                                                                                                                                                                                                                                                                      | All levels              |
| <b>Link-level type</b>         | Encapsulation on the physical interface (PPPoE).                                                                                                                                                                                                                                                                                                                                                                                                      | All levels              |
| <b>MTU</b>                     | MTU size on the physical interface.                                                                                                                                                                                                                                                                                                                                                                                                                   | All levels              |
| <b>Clocking</b>                | Reference clock source. It can be <b>Internal</b> or <b>External</b> .                                                                                                                                                                                                                                                                                                                                                                                | All levels              |
| <b>Speed</b>                   | Speed at which the interface is running.                                                                                                                                                                                                                                                                                                                                                                                                              | All levels              |
| <b>Device flags</b>            | Information about the physical device. Possible values are described in the "Device Flags" section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                    | All levels              |
| <b>Interface flags</b>         | Information about the interface. Possible values are described in the "Interface Flags" section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                       | All levels              |
| <b>Link type</b>               | Physical interface link type: <b>full duplex</b> or <b>half duplex</b> .                                                                                                                                                                                                                                                                                                                                                                              | All levels              |
| <b>Link flags</b>              | Information about the interface. Possible values are described in the "Link Flags" section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                            | All levels              |
| <b>Input rate</b>              | Input rate in bits per second (bps) and packets per second (pps).                                                                                                                                                                                                                                                                                                                                                                                     | None specified          |
| <b>Output rate</b>             | Output rate in bps and pps.                                                                                                                                                                                                                                                                                                                                                                                                                           | None specified          |
| <b>Physical Info</b>           | Physical interface information.                                                                                                                                                                                                                                                                                                                                                                                                                       | All levels              |
| <b>Hold-times</b>              | Current interface hold-time up and hold-time down, in milliseconds.                                                                                                                                                                                                                                                                                                                                                                                   | <b>detail extensive</b> |
| <b>Current address</b>         | Configured MAC address.                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>detail extensive</b> |
| <b>Hardware address</b>        | MAC address of the hardware.                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>detail extensive</b> |
| <b>Alternate link address</b>  | Backup address of the link.                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>detail extensive</b> |
| <b>Statistics last cleared</b> | Time when the statistics for the interface were last set to zero.                                                                                                                                                                                                                                                                                                                                                                                     | <b>detail extensive</b> |
| <b>Traffic statistics</b>      | Number and rate of bytes and packets received and transmitted on the physical interface. <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul> | <b>detail extensive</b> |

Table 109: show interfaces (PPPoE) Output Fields (*continued*)

| Field Name               | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Level of Output       |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------|
| IPv6 transit statistics  | <p>Number of IPv6 transit bytes and packets received and transmitted on the physical interface if IPv6 statistics tracking is enabled.</p> <p><b>NOTE:</b> These fields include dropped traffic and exception traffic, as those fields are not separately defined.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | detail extensive      |
| Input errors             | <p>Input errors on the interface:</p> <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Runts</b>—Number of frames received that are smaller than the runt threshold.</li> <li>• <b>Giants</b>—Number of frames received that are larger than the giant threshold.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that the Junos OS does not handle.</li> <li>• <b>Resource errors</b>—Sum of B chip Tx drops and IXP Tx net transmit drops.</li> </ul>                                                                                                            | extensive             |
| Output errors            | <p>Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b> —Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and then up, or another problem occurs. If the number of carrier transitions increments quickly (perhaps once every 10 seconds), then the cable, the far-end system, or the PIM is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>MTU errors</b>—Number of packets whose size exceeded the MTU of the interface.</li> <li>• <b>Resource errors</b>—Sum of B chip Tx drops and IXP Tx net transmit drops.</li> </ul> | extensive             |
| <b>Logical Interface</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                       |
| Logical interface        | Name of the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | All levels            |
| Index                    | Logical interface index number (which reflects its initialization sequence).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | detail extensive none |
| SNMP ifIndex             | Logical interface SNMP interface index number.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | detail extensive none |
| Generation               | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | detail extensive      |

Table 109: show interfaces (PPPoE) Output Fields (*continued*)

| Field Name                     | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Level of Output         |

| <b>Flags</b>                   | Information about the logical interface. Possible values are described in the “Logical Interface Flags” section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | All levels              |
| <b>Encapsulation</b>           | Type of encapsulation configured on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | All levels              |
| <b>PPP parameters</b>          | PPP status: <ul style="list-style-type: none"> <li>• LCP restart timer—Length of time (in milliseconds) between successive Link Control Protocol (LCP) configuration requests.</li> <li>• NCP restart timer—Length of time (in milliseconds) between successive Network Control Protocol (NCP) configuration requests.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>detail</b>           |
| <b>PPPoE</b>                   | PPPoE status: <ul style="list-style-type: none"> <li>• <b>State</b>—State of the logical interface (<b>up</b> or <b>down</b>).</li> <li>• <b>Session ID</b>—PPPoE session ID.</li> <li>• <b>Service name</b>—Type of service required. Can be used to indicate an Internet service provider (ISP) name or a class or quality of service.</li> <li>• <b>Configured AC name</b>—Configured access concentrator name.</li> <li>• <b>Auto-reconnect timeout</b>—Time after which to try to reconnect after a PPPoE session is terminated, in seconds.</li> <li>• <b>Idle Timeout</b>—Length of time (in seconds) that a connection can be idle before disconnecting.</li> <li>• <b>Underlying interface</b>—Interface on which PPPoE is running.</li> </ul> | All levels              |
| <b>Link</b>                    | Name of the physical interfaces for member links in an aggregated Ethernet bundle for a PPPoE over aggregated Ethernet configuration. PPPoE traffic goes out on these interfaces.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | All levels              |
| <b>Traffic statistics</b>      | Total number of bytes and packets received and transmitted on the logical interface. These statistics are the sum of the local and transit statistics. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. This counter usually takes less than 1 second to stabilize.                                                                                                                                                                                                                                                                                                                                                                                                              | <b>detail extensive</b> |
| <b>IPv6 transit statistics</b> | Number of IPv6 transit bytes and packets received and transmitted on the logical interface if IPv6 statistics tracking is enabled. <p><b>NOTE:</b> The packet and byte counts in these fields include traffic that is dropped and does not leave the router.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>                                                                                                                           | <b>detail extensive</b> |
| <b>Local statistics</b>        | Statistics for traffic received from and transmitted to the Routing Engine. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. This counter usually takes less than 1 second to stabilize.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>detail extensive</b> |

Table 109: show interfaces (PPPoE) Output Fields (*continued*)

| Field Name                  | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Level of Output              |
|-----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Transit statistics</b>   | <p>Statistics for traffic transiting the router. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. This counter usually takes less than 1 second to stabilize.</p> <p><b>NOTE:</b> The packet and byte counts in these fields include traffic that is dropped and does not leave the router.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>detail extensive</b>      |
| <b>Keepalive settings</b>   | <p>(PPP and HDLC) Configured settings for keepalives.</p> <ul style="list-style-type: none"> <li><b>interval seconds</b>—The time in seconds between successive keepalive requests. The range is <b>10</b> seconds through <b>32,767</b> seconds, with a default of <b>10</b> seconds.</li> <li><b>down-count number</b>—The number of keepalive packets a destination must fail to receive before the network takes a link down. The range is <b>1</b> through <b>255</b>, with a default of <b>3</b>.</li> <li><b>up-count number</b>—The number of keepalive packets a destination must receive to change a link's status from down to up. The range is <b>1</b> through <b>255</b>, with a default of <b>1</b>.</li> </ul>                                                                                                                                                                                                      | <b>detail extensive</b>      |
| <b>Keepalive statistics</b> | <p>(PPP and HDLC) Information about keepalive packets.</p> <ul style="list-style-type: none"> <li><b>Input</b>—Number of keepalive packets received by PPP. <ul style="list-style-type: none"> <li><b>(last seen 00:00:00 ago)</b>—Time the last keepalive packet was received, in the format <b>hh:mm:ss</b>.</li> </ul> </li> <li><b>Output</b>—Number of keepalive packets sent by PPP and how long ago the last keepalive packets were sent and received. <ul style="list-style-type: none"> <li><b>(last seen 00:00:00 ago)</b>—Time the last keepalive packet was sent, in the format <b>hh:mm:ss</b>.</li> </ul> </li> </ul> <p>(MX Series routers with MPCs/MICs) When an MX Series router with MPCs/MICs is using PPP fast keepalive for a PPP link, the display does not include the number of keepalive packets received or sent, or the amount of time since the router received or sent the last keepalive packet.</p> | <b>detail extensive</b>      |
| <b>Input packets</b>        | Number of packets received on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | None specified               |

| <b>Generation</b>             | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>detail extensive</b>      |
| <b>Route table</b>            | Routing table in which the logical interface address is located. For example, <b>0</b> refers to the routing table <b>inet.0</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>detail extensive none</b> |
| <b>Flags</b>                  | Information about the protocol family flags. Possible values are described in the “Family Flags” section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>detail extensive none</b> |
| <b>Addresses, Flags</b>       | Information about the addresses configured for the protocol family. Possible values are described in the “Addresses Flags” section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>detail extensive none</b> |
| <b>Destination</b>            | IP address of the remote side of the connection.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>detail extensive none</b> |
| <b>Local</b>                  | IP address of the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>detail extensive none</b> |
| <b>Broadcast</b>              | Broadcast address.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>detail extensive none</b> |

## Sample Output

### show interfaces (PPPoE)

```

user@host> show interfaces pp0
Physical interface: pp0, Enabled, Physical link is Up
  Interface index: 128, SNMP ifIndex: 24
  Type: PPPoE, Link-level type: PPPoE, MTU: 1532
  Device flags   : Present Running
  Interface flags: Point-To-Point SNMP-Traps
  Link type      : Full-Duplex
  Link flags     : None
  Input rate     : 0 bps (0 pps)
  Output rate    : 0 bps (0 pps)

Logical interface pp0.0 (Index 72) (SNMP ifIndex 72)
  Flags: Hardware-Down Point-To-Point SNMP-Traps 0x4000 Encapsulation: PPPoE
  PPPoE:
    State: SessionDown, Session ID: None,
    Service name: None, Configured AC name: sapphire,
    Auto-reconnect timeout: 100 seconds, Idle timeout: Never,
    Underlying interface: at-5/0/0.0 (Index 70)
  Input packets : 0
  Output packets: 0
  LCP state: Not-configured
  NCP state: inet: Not-configured, inet6: Not-configured, iso: Not-configured,
  mpls: Not-configured
  CHAP state: Closed
    Protocol inet, MTU: 100
    Flags: User-MTU, Negotiate-Address

```

### show interfaces (PPPoE over Aggregated Ethernet)

```

user@host> show interfaces pp0.1073773821
Logical interface pp0.1073773821 (Index 80) (SNMP ifIndex 32584)
  Flags: Point-To-Point SNMP-Traps 0x4000 Encapsulation: PPPoE
  PPPoE:
    State: SessionUp, Session ID: 1,
    Session AC name: alcor, Remote MAC address: 00:00:5e:00:53:01,
    Underlying interface: demux0.100 (Index 88)
  Link:
    ge-1/0/0.32767
    ge-1/0/1.32767
  Input packets : 6
  Output packets: 6
  LCP state: Opened
  NCP state: inet: Opened, inet6: Not-configured, iso: Not-configured, mpls:
  Not-configured
  CHAP state: Closed
  PAP state: Success
    Protocol inet, MTU: 1500
    Flags: Sendbroadcast-pkt-to-re
    Addresses, Flags: Is-Primary
    Local: 203.0.113.1

```

### show interfaces brief (PPPoE)

```

user@host> show interfaces pp0 brief
Physical interface: pp0, Enabled, Physical link is Up
  Type: PPPoE, Link-level type: PPPoE, MTU: 1532, Speed: Unspecified
  Device flags   : Present Running

```

Interface flags: Point-To-Point SNMP-Traps

Logical interface pp0.0

Flags: Hardware-Down Point-To-Point SNMP-Traps 0x4000 Encapsulation: PPPoE  
PPPoE:

State: SessionDown, Session ID: None,  
Service name: None, Configured AC name: sapphire,  
Auto-reconnect timeout: 100 seconds, Idle timeout: Never,  
Underlying interface: at-5/0/0.0 (Index 70)

inet

### show interfaces detail (PPPoE)

user@host> show interfaces pp0 detail

Physical interface: pp0, Enabled, Physical link is Up

Interface index: 128, SNMP ifIndex: 24, Generation: 9

Type: PPPoE, Link-level type: PPPoE, MTU: 1532, Speed: Unspecified

Device flags : Present Running

Interface flags: Point-To-Point SNMP-Traps

Link type : Full-Duplex

Link flags : None

Physical info : Unspecified

Hold-times : Up 0 ms, Down 0 ms

Current address: Unspecified, Hardware address: Unspecified

Alternate link address: Unspecified

Statistics last cleared: Never

Traffic statistics:

|                 |   |       |
|-----------------|---|-------|
| Input bytes :   | 0 | 0 bps |
| Output bytes :  | 0 | 0 bps |
| Input packets:  | 0 | 0 pps |
| Output packets: | 0 | 0 pps |

Logical interface pp0.0 (Index 72) (SNMP ifIndex 72) (Generation 14)

Flags: Hardware-Down Point-To-Point SNMP-Traps 0x4000 Encapsulation: PPPoE  
PPPoE:

State: SessionDown, Session ID: None,  
Service name: None, Configured AC name: sapphire,  
Auto-reconnect timeout: 100 seconds, Idle timeout: Never,  
Underlying interface: at-5/0/0.0 (Index 70)

Traffic statistics:

|                 |   |
|-----------------|---|
| Input bytes :   | 0 |
| Output bytes :  | 0 |
| Input packets:  | 0 |
| Output packets: | 0 |

Local statistics:

|                 |   |
|-----------------|---|
| Input bytes :   | 0 |
| Output bytes :  | 0 |
| Input packets:  | 0 |
| Output packets: | 0 |

Transit statistics:

|                 |   |       |
|-----------------|---|-------|
| Input bytes :   | 0 | 0 bps |
| Output bytes :  | 0 | 0 bps |
| Input packets:  | 0 | 0 pps |
| Output packets: | 0 | 0 pps |

LCP state: Not-configured

NCP state: inet: Not-configured, inet6: Not-configured, iso: Not-configured,  
mpls: Not-configured

CHAP state: Closed

Protocol inet, MTU: 100, Generation: 14, Route table: 0

Flags: User-MTU, Negotiate-Address

## show interfaces extensive (PPPoE on M120 and M320 Routers)

```

user@host> show interfaces pp0 extensive
Physical interface: pp0, Enabled, Physical link is Up
  Interface index: 128, SNMP ifIndex: 93, Generation: 129
  Type: PPPoE, Link-level type: PPPoE, MTU: 1532, Speed: Unspecified
  Device flags   : Present Running
  Interface flags: Point-To-Point SNMP-Traps
  Link type      : Full-Duplex
  Link flags     : None
  Physical info  : Unspecified
  Hold-times    : Up 0 ms, Down 0 ms
  Current address: Unspecified, Hardware address: Unspecified
  Alternate link address: Unspecified
  Statistics last cleared: Never
  Traffic statistics:
    Input bytes   :          972192          0 bps
    Output bytes  :          975010          0 bps
    Input packets :          1338          0 pps
    Output packets:          1473          0 pps
  IPv6 transit statistics:
    Input bytes   :          0
    Output bytes  :          0
    Input packets :          0
    Output packets:          0
  Input errors:
    Errors: 0, Drops: 0, Framing errors: 0, Runts: 0, Giants: 0, Policed discards:
0,
    Resource errors: 0
  Output errors:
    Carrier transitions: 0, Errors: 0, Drops: 0, MTU errors: 0, Resource errors:
0

Logical interface pp0.0 (Index 69) (SNMP ifIndex 96) (Generation 194)
  Flags: Point-To-Point SNMP-Traps 0x4000 Encapsulation: PPPoE
  PPPoE:
    State: SessionUp, Session ID: 26,
    Session AC name: None, AC MAC address: 00:00:5e:00:53:12,
    Service name: None, Configured AC name: None,
    Auto-reconnect timeout: Never, Idle timeout: Never,
    Underlying interface: ge-3/0/1.0 (Index 67)
  Traffic statistics:
    Input bytes   :          252
    Output bytes  :          296
    Input packets :          7
    Output packets:          8
  IPv6 transit statistics:
    Input bytes   :          0
    Output bytes  :          0
    Input packets :          0
    Output packets:          0
  Local statistics:
    Input bytes   :          252
    Output bytes  :          296
    Input packets :          7
    Output packets:          8
  Transit statistics:
    Input bytes   :          0          0 bps
    Output bytes  :          0          0 bps
    Input packets :          0          0 pps
    Output packets:          0          0 pps

```

```
IPv6 transit statistics:
  Input bytes : 0
  Output bytes : 0
  Input packets: 0
  Output packets: 0
Keepalive settings: Interval 10 seconds, Up-count 1, Down-count 3
Keepalive statistics:
  Input : 1 (last seen 00:00:00 ago)
  Output: 1 (last sent 00:00:03 ago)
LCP state: Opened

| <b>Description</b>              | Display information about the gigabit or 10-Gigabit Ethernet interface set queue. Supported in MX Series routers with enhanced queuing DPCs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Options</b>                  | <p><b><i>interface-set-name</i></b>—(Optional) Display information about the specified gigabit or 10-Gigabit Ethernet interface set. Wildcard values can be used in the interface set name.</p> <p><b>aggregate</b>—(Optional) Display the aggregated queuing statistics of all member logical interfaces for interface sets that have traffic-control profiles configured.</p> <p><b>both-ingress-egress</b>—(Optional) On Gigabit Ethernet Intelligent Queuing 2 (IQ2) PICs, display both ingress and egress queue statistics.</p> <p><b>egress</b>—(Optional) Display egress queue statistics.</p> <p><b>forwarding-class <i>class-name</i></b>—(Optional) Display queuing statistics for the specified forwarding class.</p> <p><b>ingress</b>—(Optional) On Gigabit Ethernet IQ2 PICs, display ingress queue statistics.</p> <p><b>remaining-traffic</b>—(Optional) Display the queuing statistics of all member logical interfaces for interface sets that do not have traffic-control profiles configured.</p> |
| <b>Required Privilege Level</b> | view                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Transmitted                  | <b>Packet and Byte</b> statistics for the specified forwarding class. <ul style="list-style-type: none"> <li><b>Packets</b>—Number of packets transmitted and transmit rate in packets per second.</li> <li><b>Bytes</b>—Number of bytes transmitted and transmit rate in bytes per second.</li> <li><b>Tail-dropped packets</b>—Number of packets tail dropped.</li> <li><b>RED-dropped packets</b>—Number of RED-dropped packets for the <b>low</b>, <b>medium-low</b>, <b>medium-high</b>, and <b>high</b> loss priorities.</li> <li><b>RED-dropped bytes</b>—Number of RED-dropped bytes for the <b>low</b>, <b>medium-low</b>, <b>medium-high</b>, and <b>high</b> loss priorities.</li> </ul> | All levels      |

## Sample Output

### show interfaces interface-set queue (Gigabit Ethernet)

```

user@host> show interfaces interface-set queue ge-2/2/0-0
Interface set: ge-2/2/0-0
Interface set index: 3
Forwarding classes: 8 supported, 4 in use
Egress queues: 4 supported, 4 in use
Queue: 0, Forwarding classes: best-effort
Queued:
Packets           :           3998482           1 pps

```

```

Bytes : 271896884 688 bps
Transmitted:
Packets : 1077474 1 pps
Bytes : 73268340 688 bps
Tail-dropped packets : 0 0 pps
RED-dropped packets : 2921008 0 pps
Low : 2921008 0 pps
Medium-low : 0 0 pps
Medium-high : 0 0 pps
High : 0 0 pps
RED-dropped bytes : 198628544 0 bps
Low : 198628544 0 bps
Medium-low : 0 0 bps
Medium-high : 0 0 bps
High : 0 0 bps
Queue: 2, Forwarding classes: assured-forwarding
Queued:
Packets : 0 0 pps

**Table 112: show interfaces interval Output Fields**

| Field Name         | Field Description                                                                                                                                                                                                                                                                                                                                             |
|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Physical interface | Name of the interface.                                                                                                                                                                                                                                                                                                                                        |
| SNMP ifIndex       | SNMP index number for the physical interface.                                                                                                                                                                                                                                                                                                                 |
| hh:mm-current      | Time of day (in hours and minutes) at the beginning of the latest counter interval. The value of the latest counter interval is always less than 15 minutes.                                                                                                                                                                                                  |
| hh:mm-hh:mm        | Time of day (in hours and minutes) at the beginning and end of each 15-minute interval.                                                                                                                                                                                                                                                                       |
| alarm or event: n  | Count of alarms and events within each 15-minute interval. The specific alarm or event depends on the interface media type. For a description of the alarm or event listed, see the <i>interface-type media</i> field (for example, <b>T1 media</b> ) under the <b>show interfaces</b> command for the particular interface type in which you are interested. |
| Interval Total     | Sum of all the alarm and defect counters for the last 24-hour period.                                                                                                                                                                                                                                                                                         |
| Interval Total     | Sum of all the alarm and defect counters for the last 24-hour period.                                                                                                                                                                                                                                                                                         |

Table 112: show interfaces interval Output Fields (*continued*)

| Field Name                         | Field Description                                                                                                                                      |
|------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Current Day Interval Total</b>  | Sum of all the alarm and defect counters in the current day.<br><br><b>NOTE:</b> The <b>Current Day Interval</b> output field is reset after 24 hours. |
| <b>Previous Day Interval Total</b> | Sum of all the alarm and defect counters in the previous day.                                                                                          |

## Sample Output

### show interfaces interval (Channelized OC12)

```

user@host> show interfaces interval t3-0/3/0:0

| <b>Release Information</b>      | Command introduced in Junos OS Release 8.4.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Description</b>              | Display integrated routing and bridging interfaces information.                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Options</b>                  | <p><b>brief   detail   extensive   terse</b>—(Optional) Display the specified level of output.</p> <p><b>descriptions</b>—(Optional) Display interface description strings.</p> <p><b>mac</b>—Display hardware MAC address</p> <p><b>media</b>—(Optional) Display media-specific information about network interfaces.</p> <p><b>snmp-index <i>snmp-index</i></b>—(Optional) Display information for the interface with the specified SNMP index.</p> <p><b>statistics</b>—(Optional) Display static interface statistics.</p> |
| <b>Additional Information</b>   | Integrated routing and bridging (IRB) provides simultaneous support for Layer 2 bridging and Layer 3 IP routing on the same interface. IRB enables you to route local packets to another routed interface or to another bridging domain that has a Layer 3 protocol configured.                                                                                                                                                                                                                                                |
| <b>Required Privilege Level</b> | view                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>List of Sample Output</b>    | <a href="#">show interfaces irb extensive on page 1738</a><br><a href="#">show interfaces irb snmp-index on page 1739</a>                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Output Fields</b>            | <a href="#">Table 113 on page 1734</a> lists the output fields for the <b>show interfaces irb</b> command. Output fields are listed in the approximate order in which they appear.                                                                                                                                                                                                                                                                                                                                             |

**Table 113: show interfaces irb Output Fields**

| Field Name                | Field Description                                                                                                                             | Level of Output |
|---------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| <b>Physical Interface</b> |                                                                                                                                               |                 |
| <b>Physical interface</b> | Name of the physical interface.                                                                                                               | All levels      |
| <b>Enabled</b>            | State of the physical interface. Possible values are described in the “Enabled Field” section under <i>Common Output Fields Description</i> . | All levels      |
| <b>Proto</b>              | Protocol configured on the interface.                                                                                                         | <b>terse</b>    |

Table 113: show interfaces irb Output Fields (*continued*)

| Field Name                     | Field Description                                                                                                                                                                                                                                          | Level of Output                    |
|--------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------|
| <b>Interface index</b>         | Physical interface index number, which reflects its initialization sequence.                                                                                                                                                                               | <b>detail extensive none</b>       |
| <b>SNMP ifIndex</b>            | SNMP index number for the physical interface.                                                                                                                                                                                                              | <b>detail extensive none</b>       |
| <b>Type</b>                    | Physical interface type.                                                                                                                                                                                                                                   | <b>detail extensive none</b>       |
| <b>Link-level type</b>         | Encapsulation being used on the physical interface.                                                                                                                                                                                                        | <b>detail extensive brief none</b> |
| <b>MTU</b>                     | MTU size on the physical interface.                                                                                                                                                                                                                        | <b>detail extensive brief none</b> |
| <b>Clocking</b>                | Reference clock source: <b>Internal</b> or <b>External</b> . Always unspecified on IRB interfaces.                                                                                                                                                         | <b>detail extensive brief</b>      |
| <b>Speed</b>                   | Speed at which the interface is running. Always unspecified on IRB interfaces.                                                                                                                                                                             | <b>detail extensive brief</b>      |
| <b>Device flags</b>            | Information about the physical device. Possible values are described in the “Device Flags” section under <i>Common Output Fields Description</i> .                                                                                                         | <b>detail extensive brief none</b> |
| <b>Interface flags</b>         | Information about the interface. Possible values are described in the “Interface Flags” section under <i>Common Output Fields Description</i> .                                                                                                            | <b>detail extensive brief none</b> |
| <b>Link type</b>               | Physical interface link type: <b>full duplex</b> or <b>half duplex</b> .                                                                                                                                                                                   | <b>detail extensive none</b>       |
| <b>Link flags</b>              | Information about the link. Possible values are described in the “Links Flags” section under <i>Common Output Fields Description</i> .                                                                                                                     | <b>detail extensive none</b>       |
| <b>Physical Info</b>           | Physical interface information.                                                                                                                                                                                                                            | All levels                         |
| <b>Hold-times</b>              | Current interface hold-time up and hold-time down, in milliseconds.                                                                                                                                                                                        | <b>detail extensive</b>            |
| <b>Current address</b>         | Configured MAC address.                                                                                                                                                                                                                                    | <b>detail extensive none</b>       |
| <b>Hardware address</b>        | MAC address of the hardware.                                                                                                                                                                                                                               | <b>detail extensive none</b>       |
| <b>Alternate link address</b>  | Backup address of the link.                                                                                                                                                                                                                                | <b>detail extensive</b>            |
| <b>Last flapped</b>            | Date, time, and how long ago the interface went from down to up. The format is <b>Last flapped: year-month-day hours:minutes:seconds timezone (hours:minutes:seconds ago)</b> . For example, <b>Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> . | <b>detail extensive none</b>       |
| <b>Statistics last cleared</b> | Time when the statistics for the interface were last set to zero.                                                                                                                                                                                          | <b>detail extensive</b>            |

Table 113: show interfaces irb Output Fields (*continued*)

| Field Name                     | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Level of Output         |
|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
| <b>Traffic statistics</b>      | <p>Number and rate of bytes and packets received and transmitted on the physical interface.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>detail extensive</b> |
| <b>IPv6 transit statistics</b> | <p>Number of IPv6 transit bytes and packets received and transmitted on the physical interface if IPv6 statistics tracking is enabled.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>detail extensive</b> |
| <b>Input errors</b>            | <p>Input errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of the incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Runts</b>—Number of frames received that are smaller than the runt threshold.</li> <li>• <b>Giants</b>—Number of frames received that are larger than the giant threshold.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that the Junos OS does not handle.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>           | <b>detail extensive</b> |
| <b>Output errors</b>           | <p>Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and up, or another problem occurs. If the number of carrier transitions increments quickly (perhaps once every 10 seconds), the cable, the far-end system, or the DPC is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>MTU errors</b>—Number of packets whose size exceeded the MTU of the interface.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul> | <b>detail extensive</b> |

| Field Name                     | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Level of Output                 |
|--------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------|
| <b>Logical interface</b>       | Name of the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | All levels                      |
| <b>Index</b>                   | Index number of the logical interface (which reflects its initialization sequence).                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>detail extensive</b><br>none |
| <b>SNMP ifIndex</b>            | SNMP interface index number of the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>detail extensive</b><br>none |
| <b>Generation</b>              | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>detail extensive</b>         |
| <b>Flags</b>                   | Information about the logical interface. Possible values are described in the “Logical Interface Flags” section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                                                        | <b>detail extensive</b>         |
| <b>Encapsulation</b>           | Encapsulation on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>detail extensive</b>         |
| <b>Bandwidth</b>               | Speed at which the interface is running.                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>detail extensive</b>         |
| <b>Routing Instance</b>        | Routing instance IRB is configured under.                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>detail extensive</b>         |
| <b>Bridging Domain</b>         | Bridging domain IRB is participating in.                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>detail extensive</b>         |
| <b>Traffic statistics</b>      | <p>Number and rate of bytes and packets received and transmitted on the logical interface.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>                                             | <b>detail extensive</b>         |
| <b>IPv6 transit statistics</b> | <p>Number of IPv6 transit bytes and packets received and transmitted on the logical interface if IPv6 statistics tracking is enabled.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul> | <b>detail extensive</b>         |
| <b>Local statistics</b>        | Statistics for traffic received from and transmitted to the Routing Engine.                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>detail extensive</b>         |
| <b>Transit statistics</b>      | Statistics for traffic transiting the router.                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>detail extensive</b>         |
| <b>Protocol</b>                | Protocol family configured on the local interface. Possible values are described in the “Protocol Field” section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                                                       | <b>detail extensive</b>         |
| <b>MTU</b>                     | Maximum transmission unit size on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>detail extensive</b>         |
| <b>Maximum labels</b>          | Maximum number of MPLS labels configured for the MPLS protocol family on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                        | <b>detail extensive</b><br>none |

Table 113: show interfaces irb Output Fields (*continued*)

| Field Name              | Field Description                                                                                                                                               | Level of Output         |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
| <b>Generation</b>       | Unique number for use by Juniper Networks technical support only.                                                                                               | <b>detail extensive</b> |
| <b>Route table</b>      | Routing table in which the logical interface address is located. For example, 0 refers to the routing table inet.0.                                             | <b>detail extensive</b> |
| <b>Addresses, Flags</b> | Information about address flags. Possible values are described in the “Addresses Flags” section under <i>Common Output Fields Description</i> .                 | <b>detail extensive</b> |
| <b>Policer</b>          | The policer that is to be evaluated when packets are received or transmitted on the interface.                                                                  | <b>detail extensive</b> |
| <b>Flags</b>            | Information about the logical interface. Possible values are described in the “Logical Interface Flags” section under <i>Common Output Fields Description</i> . | <b>detail extensive</b> |

## Sample Output

### show interfaces irb extensive

```

user@host> show interfaces irb extensive
Physical interface: irb, Enabled, Physical link is Up
  Interface index: 129, SNMP ifIndex: 23, Generation: 130
  Type: Ethernet, Link-level type: Ethernet, MTU: 1514, Clocking: Unspecified,
  Speed: Unspecified
  Device flags   : Present Running
  Interface flags: SNMP-Traps
  Link type      : Full-Duplex
  Link flags     : None
  Physical info  : Unspecified
  Hold-times     : Up 0 ms, Down 0 ms
  Current address: 02:00:00:00:00:30, Hardware address: 02:00:00:00:00:30
  Alternate link address: Unspecified
  Last flapped   : Never
  Statistics last cleared: Never
  Traffic statistics:
    Input bytes   :                0
    Output bytes  :                0
    Input packets :                0
    Output packets:                0
  IPv6 transit statistics:
    Input bytes   :                0
    Output bytes  :                0
    Input packets :                0
    Output packets:                0
  Input errors:
    Errors: 0, Drops: 0, Framing errors: 0, Runt: 0, Giants: 0, Policed discards:
0, Resource errors: 0
  Output errors:
    Carrier transitions: 0, Errors: 0, Drops: 0, MTU errors: 0, Resource errors:
0

Logical interface irb.0 (Index 68) (SNMP ifIndex 70) (Generation 143)
  Flags: Hardware-Down SNMP-Traps 0x4000 Encapsulation: ENET2
  Bandwidth: 1000mbps
  Routing Instance: customer_0 Bridging Domain: bd0

```

```

Traffic statistics:
  Input bytes : 0
  Output bytes : 0
  Input packets: 0
  Output packets: 0
IPv6 transit statistics:
  Input bytes : 0
  Output bytes : 0
  Input packets: 0
  Output packets: 0
Local statistics:
  Input bytes : 0
  Output bytes : 0
  Input packets: 0
  Output packets: 0
Transit statistics:
  Input bytes : 0 0 bps
  Output bytes : 0 0 bps
  Input packets: 0 0 pps
  Output packets: 0 0 pps
IPv6 transit statistics:
  Input bytes : 0
  Output bytes : 0
  Input packets: 0
  Output packets: 0
Protocol inet, MTU: 1500, Generation: 154, Route table: 0
  Addresses, Flags: Dest-route-down Is-Preferred Is-Primary
    Destination: 10.51.1/24, Local: 10.51.1.2, Broadcast: 10.51.1.255,
    Generation: 155
Protocol multiservice, MTU: 1500, Generation: 155, Route table: 0
  Flags: Is-Primary
  Policer: Input: __default_arp_policer

```

#### show interfaces irb snmp-index

```

user@host> show interfaces snmp-index 25
Physical interface: irb, Enabled, Physical link is Up
  Interface index: 128, SNMP ifIndex: 25
  Type: Ethernet, Link-level type: Ethernet, MTU: 1514
  Device flags : Present Running
  Interface flags: SNMP-Traps
  Link type : Full-Duplex
  Link flags : None
  Current address: 02:00:00:00:00:30, Hardware address: 02:00:00:00:00:30
  Last flapped : Never
    Input packets : 0
    Output packets: 0

Logical interface irb.0 (Index 68) (SNMP ifIndex 70)
  Flags: Hardware-Down SNMP-Traps 0x4000 Encapsulation: ENET2
  Bandwidth: 1000mbps
  Routing Instance: customer_0 Bridging Domain: bd0
  Input packets : 0
  Output packets: 0
  Protocol inet, MTU: 1500
    Addresses, Flags: Dest-route-down Is-Preferred Is-Primary

| <b>Description</b>              | (M Series, T Series, MX Series routers, and PTX Series Packet Transport Routers only)<br>Display media access control (MAC) address information for the specified interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Options</b>                  | <p><b>ge-fpc/pic/port</b>—Display MAC addresses that have been learned on all logical interfaces on a particular physical interface.</p> <p><b>ge-fpc/pic/port.n</b>—Display MAC addresses that have been learned on a particular logical interface.</p> <p><b>aex</b>—Display MAC addresses that have been learned on a particular aggregated Ethernet interface.</p> <p><b>xe-fpc/pic/port</b>—Display MAC addresses that have been learned on all logical interfaces on a particular physical interface.</p> <p><b>xe-fpc/pic/port.n</b>—Display MAC addresses that have been learned on a particular logical interface.</p> <p><b>et-fpc/pic/port</b>—Display MAC addresses that have been learned on all logical interfaces on a particular physical interface.</p> <p><b>et-fpc/pic/port.n</b>—Display MAC addresses that have been learned on a particular logical interface.</p> <p><b>mac-address mac-address</b>—(Optional) Display detailed MAC address statistics, including policer information for <b>ge</b>, <b>xe</b>, and <b>et</b> interfaces.</p> |
| <b>Additional Information</b>   | On IQ2 PIC interfaces, the default value for maximum retention of entries in the MAC address table has changed, for cases in which the table is not full. The new holding time is 12 hours. The previous retention time of 3 minutes is still in effect when the table is full.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

**Output Fields** Table 114 on page 1741 lists the output fields for the **show interfaces mac-database** command. Output fields are listed in the approximate order in which they appear.

**Table 114: show interfaces mac-database Output Fields**

| Field Name                      | Field Description                                                                                                                                                                                                                                                                                                       |
|---------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Physical Interface</b>       |                                                                                                                                                                                                                                                                                                                         |
| <b>Physical interface</b>       | Name of the physical interface.                                                                                                                                                                                                                                                                                         |
| <b>Enabled</b>                  | State of the physical interface. Possible values are described in the “Enabled Field” section under <i>Common Output Fields Description</i> .                                                                                                                                                                           |
| <b>Interface index</b>          | Physical interface index number, which reflects its initialization sequence.                                                                                                                                                                                                                                            |
| <b>SNMP ifIndex</b>             | SNMP index number for the physical interface.                                                                                                                                                                                                                                                                           |
| <b>Description</b>              | Description and name of the interface.                                                                                                                                                                                                                                                                                  |
| <b>Link-level type</b>          | Encapsulation being used on the physical interface.                                                                                                                                                                                                                                                                     |
| <b>MTU</b>                      | MTU size on the physical interface.                                                                                                                                                                                                                                                                                     |
| <b>Speed</b>                    | Speed at which the interface is running.                                                                                                                                                                                                                                                                                |
| <b>Loopback</b>                 | Whether loopback is enabled and the type of loopback: <b>local</b> or <b>remote</b> .                                                                                                                                                                                                                                   |
| <b>Source filtering</b>         | Whether source filtering is configured.                                                                                                                                                                                                                                                                                 |
| <b>Flow control</b>             | Whether flow control is enabled or disabled.                                                                                                                                                                                                                                                                            |
| <b>Minimum links needed</b>     | (Aggregated Ethernet interfaces only) Number of child links that must be operational for the aggregated interface to be operational.                                                                                                                                                                                    |
| <b>Minimum bandwidth needed</b> | (Aggregated Ethernet interfaces only) Minimum amount of bandwidth of child links that must be operational for the aggregated interface to be operational.                                                                                                                                                               |
| <b>Device flags</b>             | Information about the physical device. Possible values are described in the “Device Flags” section under <i>Common Output Fields Description</i> .                                                                                                                                                                      |
| <b>Current address</b>          | (Aggregated Ethernet interfaces only) Configured MAC address.                                                                                                                                                                                                                                                           |
| <b>Hardware address</b>         | (Aggregated Ethernet interfaces only) Hardware MAC address.                                                                                                                                                                                                                                                             |
| <b>Last flapped</b>             | (Aggregated Ethernet interfaces only) Date, time, and how long ago the interface went from down to up or from up to down. The format is <b>Last flapped: year-month-day hours:minutes:seconds timezone (wwksddays hours:minutes ago)</b> . For example, <b>Last flapped: 2013-12-18 04:33:22 PST (1w5d 22:23 ago)</b> . |
| <b>Input Rate</b>               | (Aggregated Ethernet interfaces only) Input rate in bits per second (bps) and packets per second (pps).                                                                                                                                                                                                                 |

Table 114: show interfaces mac-database Output Fields (*continued*)

| Field Name                                                                 | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

It can be one or more of the following: <ul style="list-style-type: none"> <li>• <b>Input premium</b>—Number of high-priority rating out-of-spec frames or bytes received.</li> <li>• <b>Output premium</b>—Number of high-priority rating out-of-spec frames or bytes sent.</li> <li>• <b>Input aggregate</b>—Total number of out-of-spec frames or bytes received.</li> <li>• <b>Output aggregate</b>—Total number of out-of-spec frames or bytes sent.</li> </ul> </li> <li>• <b>Discarded Frames</b>—Number of discarded frames.</li> <li>• <b>Discarded Bytes</b>—Number of discarded bytes.</li> </ul> |

## Sample Output

### show interfaces mac-database (All MAC Addresses on a Port)

```

user@host> show interfaces mac-database xe-0/3/3
Physical interface: xe-0/3/3, Enabled, Physical link is Up
  Interface index: 372, SNMP ifIndex: 788
  Link-level type: Ethernet, MTU: 1514, LAN-PHY mode, Speed: 10Gbps, Loopback:
None, Source filtering: Disabled, Flow control: Enabled

```

```

Device flags   : Present Running
Interface flags: SNMP-Traps Internal: 0x4000
Link flags     : None

```

Logical interface xe-0/3/3.0 (Index 364) (SNMP ifIndex 829)

Flags: SNMP-Traps 0x4004000 Encapsulation: ENET2

#### show interfaces mac-database (All MAC Addresses on an Aggregated Ethernet Interface)

```
user@host> show interfaces mac-database ae4
```

Physical interface: ae4, Enabled, Physical link is Up

Interface index: 132, SNMP ifIndex: 588

Description: Member links xe-0/2/0

Link-level type: Ethernet, MTU: 9188, Speed: Unspecified, BPDU Error: None,  
MAC-REWRITE Error: None, Loopback: Disabled,

Source filtering: Disabled, Flow control: Disabled, Minimum links needed: 1,  
Minimum bandwidth needed: 0

Device flags : Present Running

Interface flags: Interface flags: SNMP-Traps Internal: 0x4000

Current address: 00:22:83:76:ff:c4, Hardware address: 00:22:83:76:ff:c4

Last flapped : 2013-12-18 04:33:22 PST (1w5d 22:23 ago)

Input rate : 62756384 bps (85266 pps)

Output rate : 62759472 bps (85272 pps)

Logical interface ae4.0 (Index 334) (SNMP ifIndex 647)

Flags: SNMP-Traps 0x4004000 Encapsulation: ENET2

| MAC address       | Input frames | Input bytes | Output frames | Output bytes |
|-------------------|--------------|-------------|---------------|--------------|

| <b>switchover mode</b>           | The configured switchover mode for the multichassis aggregated Ethernet interface: <b>revertive</b> or <b>non-revertive</b> .                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>switchover status</b>         | Status of the switchover if the <b>revert-time</b> statement is configured at the <b>[edit interfaces aex mc-ae]</b> hierarchy level.                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>revert time</b>               | Revert time configured for the multichassis aggregated Ethernet interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>switchover time remaining</b> | Seconds left to trigger the switchover if the switchover is in progress.                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

## Sample Output

### show interfaces mc-ae

```

user@host> show interfaces mc-ae ae0 unit 512
  Member Links   : ae0
  Local Status   : active
  Peer Status     : active
  Logical Interface      : ae0.512
  Core Facing Interface : Label Ethernet Interface
  ICL-PL          : Label Ethernet Interface

```

### show interfaces mc-ae (Active/Active Bridging and VRRP over IRB on MX Series Routers)

```

user@host# show interfaces mc-ae ge-0/0/0.0
  Member Link      : ae0
  Current State Machine's State: active

```

```

Local Status      : active
Local State       : up
Peer Status       : active
Peer State        : up
  Logical Interface : ae0.0
  Topology Type     : bridge
  Local State       : up
  Peer State        : up
  Peer Ip/ICL-PL/State : 192.168.100.10 ge-0/0/0.0 up

```

#### show interfaces mc-ae revertive-info

```

user@host> show interfaces mc-ae revertive-info id 2
Member Link      : ae1
Current State Machine's State: mcae active state
Local Status     : active
Local State      : up
Peer Status      : standby
Peer State       : up
Switchover Mode  : Non Revertive
Switchover Status : N/A
Revert Time      : 1 Minutes
Switchover Remaining Time : N/A
  Logical Interface : ae1.1024
  Topology Type     : bridge
  Local State       : up
  Peer State        : up
  Peer Ip/MCP/State : N/A

```

| <b>Output Fields</b>            | Table 116 on page 1749 lists the output fields for the <b>show interfaces transport pm optics</b> command. Fields are listed in the approximate order in which they appear.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

Table 116: show interfaces transport pm Output Fields

| Field Name                    | Field Description                                                                                                                |
|-------------------------------|----------------------------------------------------------------------------------------------------------------------------------|
| Physical interface            | Name of the physical interface.                                                                                                  |
| Interval                      | The 15 minute interval for performance monitoring.                                                                               |
| Suspect Flag                  | TRUE if the performance monitoring data for the interval appears to be suspect.                                                  |
| Reason                        | Reason for setting the suspect flag.                                                                                             |
| COUNT                         | Measured value.                                                                                                                  |
| THRESHOLD                     | Threshold value set.                                                                                                             |
| TCA-ENABLED                   | Threshold crossing alert. Set to TRUE if enabled.                                                                                |
| TCA-RAISED                    | TRUE if enabled and the value crosses the threshold.                                                                             |
| Near End PM                   | Near end threshold crossing defect trigger. For more information about this field, see <a href="#">tca</a> .                     |
| Far End PM                    | Far end threshold crossing defect trigger. For more information about this field, see <a href="#">tca</a> .                      |
| FEC PM                        | Forwarding equivalence class threshold crossing defect trigger. For more information about this field, see <a href="#">tca</a> . |
| BER PM                        | Bit error rate threshold crossing defect trigger. For more information about this field, see <a href="#">tca</a> .               |
| CURRENT                       | Current value measured.                                                                                                          |
| PM                            | Performance monitor.                                                                                                             |
| MIN                           | Minimum value measured.                                                                                                          |
| MAX                           | Maximum value measured.                                                                                                          |
| AVG                           | Average value.                                                                                                                   |
| Lane Chromatic dispersion     | Residual chromatic dispersion measured.                                                                                          |
| Lane differential group delay | Measured differential group delay.                                                                                               |
|                               |                                                                                                                                  |
| q Value                       | Measured Quality factor value.                                                                                                   |
| SNR                           | Signal to noise ratio.                                                                                                           |
| Tx output power               | The transmit laser output power.                                                                                                 |

Table 116: show interfaces transport pm Output Fields (*continued*)

| Field Name                     | Field Description                                                                                  |
|--------------------------------|----------------------------------------------------------------------------------------------------|
| Rx input power                 | The laser's received optical power.                                                                |
| Module temperature (Celsius)   | The laser's temperature.                                                                           |
| Tx Laser bias current (0.1mA)  | Magnitude of the laser bias power setting current. The laser bias provides and modulates currents. |
| Rx Laser bias current (0.1mA)  | Magnitude of the laser bias power setting current.                                                 |
| Carrier frequency offset (MHz) | Measured carrier frequency offset.                                                                 |

| <b>Release Information</b>      | (MX Series routers only) Command introduced in Junos OS Release 8.4.                                                                                                                         |
| <b>Description</b>              | Display Layer 2 learning properties for all the configured routing instances.                                                                                                                |
| <b>Options</b>                  | This command has no options.                                                                                                                                                                 |
| <b>Required Privilege Level</b> | view                                                                                                                                                                                         |
| <b>List of Sample Output</b>    | <a href="#">show l2-learning instance on page 1754</a>                                                                                                                                       |
| <b>Output Fields</b>            | <a href="#">Table 117 on page 1754</a> describes the output fields for the <b>show l2-learning instance</b> command. Output fields are listed in the approximate order in which they appear. |

Table 117: show l2-learning instance Output Fields

| Field Name                    | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Routing Instance</b>       | Name of routing instance.                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Bridging Domain</b>        | Name of bridging domain.<br><br>On MX Series routers you can use the <b>show l2-learning instance &lt;extensive&gt;</b> command option to display the Bridge Service-id information which includes the Config Service ID and the Active Service ID.                                                                                                                                                                                                              |
| <b>Index</b>                  | Number associated with the routing instance or bridging domain.                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Logical System</b>         | Name of logical system or <b>Default</b> if no logical system is configured.                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Routing instance flags</b> | Status of Layer 2 learning properties for each routing instance: <ul style="list-style-type: none"> <li>• <b>DL</b>—MAC learning is disabled.</li> <li>• <b>SE</b>—MAC accounting is enabled.</li> <li>• <b>AD</b>—Packets are dropped after MAC address limit is reached.</li> <li>• <b>LH</b>—The maximum number of MAC addresses has been learned on the routing instance. The routing instance is not able to learn any additional MAC addresses.</li> </ul> |
| <b>MAC limit</b>              | Maximum number of MAC addresses that can be learned from each interface in the routing instance or bridging domain.                                                                                                                                                                                                                                                                                                                                              |

## Sample Output

### show l2-learning instance

```
user@host> show l2-learning instance
Information for routing instance:

Routing Instance flags (DL -disable learning, SE -stats enabled,
```

AD -packet action drop, LH -mac limit hit)

| Routing<br>Instance  | Bridging<br>Domain | Index | Logical<br>System | Routing<br>flags | MAC<br>limit |
|----------------------|--------------------|-------|-------------------|------------------|--------------|
| __juniper_private1__ |                    | 1     | Default           |                  | 5000         |
| vs1                  | vlan100            | 3     | Default           |                  | 5120         |
| vs1                  | vlan200            | 4     | Default           |                  | 5120         |

## show l2-learning redundancy-groups

|                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

**Output Fields** Output fields are listed in the approximate order in which they appear.

**Table 118: show l2-learning redundancy-groups arp-statistics Output Fields**

| Field Name                        | Field Description                                                              |
|-----------------------------------|--------------------------------------------------------------------------------|
| Redundancy Group ID               | Redundancy Group to which the following details apply.                         |
| MCLAG ARP Statistics Group ID     | ARP statistics for this Multichassis Link Aggregation Group (MC-LAG) instance. |
| ARP Rx Count From Line            | Total number of ARPs received from the Line.                                   |
| ARP Tx Count To Peer              | Total number of ARPs sent to the peer.                                         |
| ARP Rx Count From Peer            | Total number of ARPs received from the peer.                                   |
| ARP Drop Count received from line | Total number of ARPs sent by the peer that were received.                      |
| ARP Drop Count received from peer | Total number of ARPs sent by the peer that were dropped                        |
| Service-id                        | Service ID (configured at the routing instance level).                         |

**Table 119: show l2-learning redundancy-groups nd-statistics Output Fields**

| Field Name                       | Field Description                                                                             |
|----------------------------------|-----------------------------------------------------------------------------------------------|
| Redundancy Group ID              | Redundancy Group to which the following details apply.                                        |
| MCLAG ND Statistics Group ID     | Neighbor Discovery statistics for this Multichassis Link Aggregation Group (MC-LAG) instance. |
| ND Rx Count From Line            | Total number of Neighbor Discovery packets received from the Line.                            |
| ND Tx Count To Peer              | Total number of Neighbor Discovery packets sent to the peer.                                  |
| ND Rx Count From Peer            | Total number of Neighbor Discovery packets received from the peer.                            |
| ND Drop Count received from line | Total number of Neighbor Discovery packets sent by the peer that were received.               |
| ND Drop Count received from peer | Total number of Neighbor Discovery packets sent by the peer that were dropped                 |

Table 119: show l2-learning redundancy-groups nd-statistics Output Fields (*continued*)

| Field Name | Field Description                                      |
|------------|--------------------------------------------------------|
| Service-id | Service ID (configured at the routing instance level). |

Table 120: show l2-learning redundancy-groups remote-macs Output Fields

| Field Name          | Field Description                                                                                                  |
|---------------------|--------------------------------------------------------------------------------------------------------------------|
| Redundancy Group ID | Redundancy Group to which the following details apply.                                                             |
| Peer-Addr           | IP address of the remote peer.                                                                                     |
| VLAN                | Virtual LAN identifier associated with the redundancy group.                                                       |
| MAC                 | Hardware media access control address associated with the redundancy group.                                        |
| MCAE-ID             | ID number of the MC-AE used by the redundancy group.                                                               |
| Flags               | Connection state: local connect or Remote connect. If no flag is shown, the redundancy group may not be connected. |
| Status              | Installation state: Installed or Not Installed.                                                                    |

## Sample Output

### show l2-learning redundancy-groups arp-statistics

```

user@host> show l2-learning redundancy-groups arp-statistics
Logical System : default
Redundancy Group ID : 1      Flags : Local Connect, Remote Connect

MCLAG ARP Statistics
Group ID                  : 1
ARP Rx Count From Line    : 52
ARP Tx Count To Peer      : 15
ARP Rx Count From Peer    : 39
ARP Install Count         : 34
ARP Drop Count received from line : 37
ARP Drop Count received from peer : 5

```

### show l2-learning redundancy-groups nd-statistics

```

user@host> show l2-learning redundancy-groups nd-statistics
Logical System : default
Redundancy Group ID : 1      Flags : Local Connect, Remote Connect

MCLAG ND Statistics
Group ID                  : 1
ND Rx Count From Line    : 52
ND Tx Count To Peer      : 15
ND Rx Count From Peer    : 39
ND Install Count         : 34
ND Drop Count received from line : 37
ND Drop Count received from peer : 5

```

**show l2-learning redundancy-groups remote-macs**

```

user@host> show l2-learning redundancy-groups <redundancy-group-id> remote-macs
Redundancy Group ID : 1      Flags : Local Connect, Remote Connect

Service-id Peer-Addr  VLAN      MAC              MCAE-ID Subunit Opcode
Flags      Status
10         10.1.1.2    100      64:87:88:6a:df:f0  1        0        1
0          Installed

```

**show l2-learning redundancy-groups logical-system arp-statistics (for Logical Systems)**

```

user@host> show l2-learning redundancy-groups logical-system LS1 arp-statistics

Redundancy Group ID : 1      Flags : Local Connect, Remote Connect

MCLAG ARP Statistics
Group ID              : 1
ARP Rx Count From Line : 52
ARP Tx Count To Peer   : 15
ARP Rx Count From Peer : 39
ARP Install Count      : 34
ARP Drop Count received from line : 37
ARP Drop Count received from peer : 5

```

**show l2-learning redundancy-groups logical-system nd-statistics (for Logical Systems)**

```

user@host> show l2-learning redundancy-groups logical-system LS1 nd-statistics

Redundancy Group ID : 1      Flags : Local Connect, Remote Connect

MCLAG ND Statistics
Group ID              : 1
ND Rx Count From Line : 52
ND Tx Count To Peer   : 15
ND Rx Count From Peer : 39
ND Install Count      : 34
ND Drop Count received from line : 37
ND Drop Count received from peer : 5

```

**show l2-learning redundancy-groups group-id**

```

user@host> show l2-learning redundancy-groups 1

Redundancy Group ID : 1      Flags : Local Connect, Remote Connect

```

**show l2-learning redundancy-groups logical-system**

```

user@host> show l2-learning redundancy-groups logical-system ls1

Redundancy Group ID : 2      Flags : Local Connect, Remote Connect

```

## show lacp interfaces

**Syntax** `show lacp interfaces`  
`<interface-name>`

**Release Information** Command introduced in Junos OS Release 7.6.

**Description** Display Link Aggregation Control Protocol (LACP) information about the specified aggregated Ethernet, Fast Ethernet, or Gigabit Ethernet interface.

**Options** **none**—Display LACP information for all interfaces.

**interface-name**—(Optional) Display LACP information for the specified interface:

- Aggregated Ethernet—**aenumber**
- Fast Ethernet—**fe-fpc/pic/port**
- Gigabit Ethernet—**ge-fpc/pic/port**
- 10 Gigabit Ethernet—**xe-fpc/pic/port**

**NOTE:** The `show lacp interfaces` command returns the following error message if your system is not configured in either active or passive LACP mode:

“Warning: lacp subsystem not running – not needed by configuration”

**Required Privilege Level** view

**List of Sample Output** [show lacp interfaces \(Aggregated Ethernet\) on page 1763](#)  
[show lacp interfaces \(Gigabit Ethernet\) on page 1763](#)  
[show lacp interfaces \(10 Gigabit Ethernet\) on page 1764](#)

**Output Fields** [Table 121 on page 1760](#) lists the output fields for the `show lacp interfaces` command. Output fields are listed in the approximate order in which they appear.

**Table 121: show lacp interfaces Output Fields**

| Field Name           | Field Description           |
|----------------------|-----------------------------|
| Aggregated interface | Aggregated interface value. |

Table 121: show lacp interfaces Output Fields (*continued*)

| Field Name | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| LACP State | <p>LACP state information for each aggregated interface:</p> <ul style="list-style-type: none"> <li>• <b>Role</b>—Role played by the interface. It can be one of the following: <ul style="list-style-type: none"> <li>• <b>Actor</b>—Local device participating in LACP negotiation.</li> <li>• <b>Partner</b>—Remote device participating in LACP negotiation.</li> </ul> </li> <li>• <b>Exp</b>—Expired state. <b>Yes</b> indicates the actor or partner is in an expired state. <b>No</b> indicates the actor or partner is not in an expired state.</li> <li>• <b>Def</b>—Default. <b>Yes</b> indicates that the actor's receive machine is using the default operational partner information, administratively configured for the partner. <b>No</b> indicates the operational partner information in use has been received in an LACP PDU.</li> <li>• <b>Dist</b>—Distribution of outgoing frames. <b>No</b> indicates distribution of outgoing frames on the link is currently disabled and is not expected to be enabled. Otherwise, the value is <b>Yes</b>.</li> <li>• <b>Col</b>—Collection of incoming frames. <b>Yes</b> indicates collection of incoming frames on the link is currently enabled and is not expected to be disabled. Otherwise, the value is <b>No</b>.</li> <li>• <b>Syn</b>—Synchronization. If the value is <b>Yes</b>, the link is considered synchronized. It has been allocated to the correct link aggregation group, the group has been associated with a compatible aggregator, and the identity of the link aggregation group is consistent with the system ID and operational key information transmitted. If the value is <b>No</b>, the link is not synchronized. It is currently not in the right aggregation.</li> <li>• <b>Aggr</b>—Ability of aggregation port to aggregate (<b>Yes</b>) or to operate only as an individual link (<b>No</b>).</li> <li>• <b>Timeout</b>—LACP timeout preference. Periodic transmissions of LACP PDUs occur at either a slow or fast transmission rate, depending upon the expressed LACP timeout preference (<b>Long Timeout</b> or <b>Short Timeout</b>).</li> <li>• <b>Activity</b>—Actor or partner's port activity. <b>Passive</b> indicates the port's preference for not transmitting LAC PDUs unless its partner's control value is <b>Active</b>. <b>Active</b> indicates the port's preference to participate in the protocol regardless of the partner's control value.</li> </ul> |

| <b>Description</b>              | Display information about the Link Layer Discovery Protocol (LLDP).                                                                                                          |
| <b>Options</b>                  | <b>detail</b> —(Optional) Display the detailed output level.                                                                                                                 |
| <b>Required Privilege Level</b> | view                                                                                                                                                                         |
| <b>List of Sample Output</b>    | <a href="#">show lldp on page 1767</a><br><a href="#">show lldp detail on page 1767</a>                                                                                      |
| <b>Output Fields</b>            | <a href="#">Table 122 on page 1765</a> describes the output fields for the <b>show lldp</b> command. Output fields are listed in the approximate order in which they appear. |

**Table 122: show lldp Output Fields**

| Field Name             | Field Description                                                                                                                                                                                                                                                                                                                                                                                 |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| LLDP                   | Status of LLDP: <b>Enabled</b> or <b>Disabled</b> .                                                                                                                                                                                                                                                                                                                                               |
| Advertisement interval | Value of the advertisement interval parameter.                                                                                                                                                                                                                                                                                                                                                    |
| Transmit delay         | Value of the transmit delay parameter.                                                                                                                                                                                                                                                                                                                                                            |
| Hold timer             | Value of the hold timer parameter.                                                                                                                                                                                                                                                                                                                                                                |
| Notification interval  | Value of the notification interval parameter.                                                                                                                                                                                                                                                                                                                                                     |
| Config Trap Interval   | Value of the configuration trap parameter.                                                                                                                                                                                                                                                                                                                                                        |
| Connection Hold timer  | Value of the connection hold timer parameter.                                                                                                                                                                                                                                                                                                                                                     |
| Port ID TLV subtype    | <ul style="list-style-type: none"> <li><i>interface-name</i>—Indicates the interface name as the port information for the local device.</li> <li><b>locally-assigned</b>—Indicates that the sub-type for port ID TLV generation is locally assigned value of SNMP index of the interface.</li> </ul> <p>For more information about port ID TLV subtype, see <a href="#">port-id-subtype..</a></p> |

Table 122: show lldp Output Fields (*continued*)

| Field Name                | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|---------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Port Description TLV type | <p>Following value used for port description TLV:</p> <ul style="list-style-type: none"> <li><b>interface-alias (ifAlias)</b>—Indicates that the <i>ifAlias</i> MIB object value is used to generate the port description TLV.</li> <li><b>interface-description (ifDescr)</b>—Indicates that the <i>ifDescr</i> MIB object value is used to generate the port description TLV.</li> </ul> <p>For more information about port description TLV type, see <a href="#">port-description-type</a>.</p> |
| Interface                 | <p>Name of the interface for which LLDP configuration information is being reported</p> <p>For information about interface names, see <i>Interface Naming Overview</i>. For information about interface names for TX Matrix routers, see <i>TX Matrix Router Chassis and Interface Names</i>. For information about FPC numbering on TX Matrix routers, see <i>Routing Matrix with a TX Matrix Router FPC Numbering</i>.</p>                                                                       |
| Parent Interface          | Name of the aggregated Ethernet interface, if any, to which the interface belongs.                                                                                                                                                                                                                                                                                                                                                                                                                 |
| LLDP                      | LLDP operating state. The state can be Enabled or Disabled.                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| LLDP-MED                  | LLDP-MED operating state. The state can be Enabled or Disabled.                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Power Negotiation         | LLDP power negotiation operating state. The state can be Enabled or Disabled.                                                                                                                                                                                                                                                                                                                                                                                                                      |
| LLDP basic TLVs supported | List of basic LLDP TLVs supported by this device ( <b>detail</b> only).                                                                                                                                                                                                                                                                                                                                                                                                                            |
| LLDP 802 TLVs supported   | List of IEEE 802.1 LLDP TLVs supported by this device ( <b>detail</b> only).                                                                                                                                                                                                                                                                                                                                                                                                                       |

## Sample Output

### show lldp

```

user@host> show lldp
LLDP                               : Enabled
Advertisement interval             : 30 seconds
Transmit delay                     : 2 seconds
Hold timer                         : 120 seconds
Notification interval             : 0 Second(s)
Config Trap Interval              : 0 seconds
Connection Hold timer             : 300 seconds
Port ID TLV subtype               : locally-assigned
Port Description TLV type         : interface-description (ifDescr)

Interface      Parent Interface  LLDP      LLDP-MED      Power Negotiation
all            -                Enabled

```

## Sample Output

### show lldp detail

```

user@host> show lldp detail
LLDP                               : Enabled
Advertisement interval             : 30 seconds

```

## show lldp neighbors

**Syntax** `show lldp neighbors`  
`<interface interface-name>`

**Release Information** Command introduced in Junos OS Release 9.6.

**Description** Display information about LLDP neighbors.

For information about interface names, see *Interface Naming Overview*. For information about interface names for TX Matrix routers, see *TX Matrix Router Chassis and Interface Names*. For information about FPC numbering on TX Matrix routers, see *Routing Matrix with a TX Matrix Router FPC Numbering*.

For information about extended port names in the Junos Fusion technology, see *Understanding Junos Fusion Ports*.

**Options** `interface interface-name`—(Optional) Display the neighbor information about a particular physical interface.

**NOTE:** Starting with Junos OS Release 14.2, you can also display LLDP neighbor details for management interfaces, such as `fxp` or `me`, on MX Series routers.

**Required Privilege Level** view

**Related Documentation**

[show lldp neighbors interface ge-0/0/4 \(Management Address is IPv4\) on page 1774](#)  
[show lldp neighbors interface ge-0/0/4 \(Management Address is IPv6\) on page 1775](#)  
[show lldp neighbors \(Management Ethernet Interfaces\) on page 1776](#)

**Output Fields** [Table 124 on page 1771](#) describes the output fields for the `show lldp neighbors` command. Output fields are listed in the approximate order in which they appear.

**Table 124: show lldp neighbors Output Fields**

| Field Name                      | Field Description                                                     |
|---------------------------------|-----------------------------------------------------------------------|
| LLDP Remote Devices Information | Information about remote devices.                                     |
| LocalInterface                  | List of local interfaces for which neighbor information is available. |
| ChassisId                       | List of chassis identifiers for neighbors.                            |

Table 124: show lldp neighbors Output Fields (*continued*)

| Field Name                       | Field Description                                                                                                      |
|----------------------------------|------------------------------------------------------------------------------------------------------------------------|
| <b>PortInfo</b>                  | List of port information gathered from neighbors. This could be the port identifier or port description.               |
| <b>SysName</b>                   | List of system names gathered from neighbors.                                                                          |
| <b>LLDP Neighbor Information</b> | Information about both local and neighbor systems on the interface (appears when the <b>interface</b> option is used). |
| <b>Local Information</b>         | Information about local systems on the interface (appears when the <b>interface</b> option is used).                   |
| <b>Neighbor Information</b>      | Information about both local and neighbor system on the interface (appears when the <b>interface</b> option is used).  |
| <b>Index</b>                     | Local interface index (appears when the <b>interface</b> option is used).                                              |
| <b>Time Mark</b>                 | Date and timestamp of information (appears when the <b>interface</b> option is used).                                  |
| <b>Time To Live</b>              | Number of seconds for which this information is valid (appears when the <b>interface</b> option is used).              |
| <b>Local Interface</b>           | Name of the local physical interface (appears when the <b>interface</b> option is used).                               |
| <b>Parent Interface</b>          | Name of the <b>ae</b> interface to which the interface belongs                                                         |
| <b>Local Port ID</b>             | Local port identifier (appears when the interface option is used).                                                     |
| <b>Neighbor Information</b>      | Information about neighbor systems on the interface (appears when the <b>interface</b> option is used).                |
| <b>Chassis type</b>              | Type of chassis identifier supplied, such as <b>MAC address</b> (appears when the <b>interface</b> option is used).    |
| <b>Chassis ID</b>                | Chassis identifier of type listed (appears when the <b>interface</b> option is used).                                  |
| <b>Port type</b>                 | Type of port identifier supplied, such as <b>local</b> (appears when the <b>interface</b> option is used).             |
| <b>Port ID</b>                   | Port identifier of type listed (appears when the <b>interface</b> option is used).                                     |
| <b>Port description</b>          | Port description (appears when the <b>interface</b> option is used).                                                   |
| <b>System name</b>               | Name supplied by the system on the interface (appears when the <b>interface</b> option is used).                       |
| <b>System Description</b>        | Description supplied by the system on the interface (appears when the <b>interface</b> option is used).                |

00:00:76 (76 sec)   192        0          0        0
```

## show lldp statistics

**Syntax** `show lldp statistics`  
`<interface interface-name>`

**Release Information** Command introduced in Junos OS Release 9.6.

**Description** Display information about Link Layer Discovery Protocol (LLDP) statistics.

**Options** `interface interface-name`—(Optional) Display the statistics about a particular physical interface.

**NOTE:** Starting with Junos OS Release 14.2, you can also display LLDP statistical details for management interfaces, such as `fxp` or `me`, on MX Series routers.

**Required Privilege Level** view

**Related Documentation** • [clear lldp statistics on page 1318](#)

**List of Sample Output** [show lldp statistics on page 1781](#)  
[show lldp statistics interface ge-0/1/1 on page 1781](#)

**Output Fields** [Table 126 on page 1779](#) describes the output fields for the `show lldp statistics` command. Output fields are listed in the approximate order in which they appear.

**Table 126: show lldp statistics Output Fields**

| Field Name          | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| <b>Maintenance domain name</b>          | Maintenance domain name.                                                                                                                                                                                                                                                                        | <b>detail extensive</b> |
| <b>Format (Maintenance domain)</b>      | Maintenance domain name format configured.                                                                                                                                                                                                                                                      | <b>detail extensive</b> |
| <b>Level</b>                            | Maintenance domain level configured.                                                                                                                                                                                                                                                            | All levels              |
| <b>Maintenance association name</b>     | Maintenance association name.                                                                                                                                                                                                                                                                   | <b>detail extensive</b> |
| <b>Format (Maintenance association)</b> | Maintenance association name format configured.                                                                                                                                                                                                                                                 | <b>detail extensive</b> |
| <b>Continuity-check status</b>          | Continuity-check status.                                                                                                                                                                                                                                                                        | <b>detail extensive</b> |
| <b>Ethernet-ais status</b>              | Status of alarm indication signal (AIS). <b>active</b> or <b>in-active</b> .                                                                                                                                                                                                                    | <b>detail extensive</b> |
| <b>Interval</b>                         | Continuity-check message interval.                                                                                                                                                                                                                                                              | <b>detail extensive</b> |
| <b>Loss-threshold</b>                   | Lost continuity-check message threshold.                                                                                                                                                                                                                                                        | <b>detail extensive</b> |
| <b>Interface status TLV</b>             | Status of the interface status TLV, if configured on the MEP interface: <b>none</b> , <b>up</b> , <b>down</b> , <b>testing</b> , <b>unknown</b> , <b>dormant</b> , <b>notPresent</b> , <b>lowerLayerDown</b>                                                                                    | <b>detail extensive</b> |
| <b>Port status TLV</b>                  | Status of the port status TLV, if configured on the MEP interface: <b>none</b> , <b>no</b> , <b>yes</b>                                                                                                                                                                                         | <b>detail extensive</b> |
| <b>Connection Protection TLV</b>        | Status of the connection protection TLV if configured on the MEP interface: <b>no</b> , <b>yes</b><br><br>If <b>yes</b> , then the transmitted connection protection TLV is decoded and the following three fields are displayed: <b>Prefer me</b> , <b>Protection in use</b> , <b>FRR Flag</b> | <b>detail extensive</b> |

**Table 129: show oam ethernet connectivity-fault-management interfaces Output Fields (*continued*)**

| Field Name                                  | Field Description                                                                                                                                                                                                               | Level of Output         |
|---------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
| <b>Prefer me</b>                            | If set to <b>yes</b> , the path through which CCM was transmitted is preferred (unless the path fails). It is used for signaling a manual-switch command to the remote side.<br><br>Its value can be <b>yes</b> or <b>no</b> .  | <b>detail extensive</b> |
| <b>Protection in use</b>                    | Used for protection decision coordination. Its value is set to <b>yes</b> if the endpoint transmitting the CCM is currently transmitting the user traffic to protection path.<br><br>Its value can be <b>yes</b> or <b>no</b> . | <b>detail extensive</b> |
| <b>FRR Flag</b>                             | LSR/LER forwarding the CCM Frame into a bypass tunnel is set.<br><br>Its value can be <b>yes</b> or <b>no</b> .                                                                                                                 | <b>detail extensive</b> |
| <b>MEP identifier</b>                       | Maintenance association end point (MEP) identifier.                                                                                                                                                                             | All levels              |
| <b>Neighbors</b>                            | Number of MEP neighbors.                                                                                                                                                                                                        | All levels              |
| <b>Direction</b>                            | MEP direction configured.                                                                                                                                                                                                       | <b>detail extensive</b> |
| <b>MAC address</b>                          | MAC address configured for the MEP.                                                                                                                                                                                             | <b>detail extensive</b> |
| <b>MEP status</b>                           | Indicates the status of the connectivity fault management (CFM) protocol running on the MEP: <b>Running</b> , <b>inactive</b> , <b>disabled</b> , or <b>unsupported</b> .                                                       | <b>detail extensive</b> |
| <b>Remote MEP not receiving CCM</b>         | Whether the remote MEP is not receiving connectivity check messages (CCMs).                                                                                                                                                     | <b>detail extensive</b> |
| <b>Erroneous CCM received</b>               | Whether erroneous CCMs have been received.                                                                                                                                                                                      | <b>detail extensive</b> |
| <b>Cross-connect CCM received</b>           | Whether cross-connect CCMs have been received.                                                                                                                                                                                  | <b>detail extensive</b> |
| <b>RDI sent by some MEP</b>                 | Whether the remote defect indication (RDI) bit is set in messages that have been received. The absence of the RDI bit in a CCM indicates that the transmitting MEP is receiving CCMs from all configured MEPs.                  | <b>detail extensive</b> |
| <b>Some remote MEP's MAC in error state</b> | Indicates whether the remote MEP's MAC is in error state.                                                                                                                                                                       | <b>detail extensive</b> |
| <b>Alarm Indication Signal</b>              | Indicates whether the AIS is triggered or is cleared.                                                                                                                                                                           | <b>detail extensive</b> |
| <b>CCMs sent</b>                            | Number of CCMs transmitted.                                                                                                                                                                                                     | <b>detail extensive</b> |

**Table 129: show oam ethernet connectivity-fault-management interfaces Output Fields (*continued*)**

| Field Name                                 | Field Description                                                                                                                                                                                                                   | Level of Output         |
|--------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
| <b>CCMs received out of sequence</b>       | Number of CCMs received out of sequence.                                                                                                                                                                                            | <b>detail extensive</b> |
| <b>LBM sent</b>                            | Number of loopback request messages (LBMs) sent.                                                                                                                                                                                    | <b>detail extensive</b> |
| <b>Valid in-order LBRs received</b>        | Number of loopback response messages (LBRs) received that were valid messages and in sequence.                                                                                                                                      | <b>detail extensive</b> |
| <b>Valid out-of-order LBRs received</b>    | Number of LBRs received that were valid messages and not in sequence.                                                                                                                                                               | <b>detail extensive</b> |
| <b>LBRs received with corrupted data</b>   | Number of LBRs received that were corrupted.                                                                                                                                                                                        | <b>detail extensive</b> |
| <b>LBRs sent</b>                           | Number of LBRs transmitted.                                                                                                                                                                                                         | <b>detail extensive</b> |
| <b>LTM sent</b>                            | Linktrace messages (LTMs) transmitted.                                                                                                                                                                                              | <b>detail extensive</b> |
| <b>LTM received</b>                        | Linktrace messages received.                                                                                                                                                                                                        | <b>detail extensive</b> |
| <b>LTR sent</b>                            | Linktrace responses (LTRs) transmitted.                                                                                                                                                                                             | <b>detail extensive</b> |
| <b>LTR received</b>                        | Linktrace responses received.                                                                                                                                                                                                       | <b>detail extensive</b> |
| <b>Sequence number of next LTM request</b> | Sequence number of next LTM request to be transmitted.                                                                                                                                                                              | <b>detail extensive</b> |
| <b>1DMs sent</b>                           | <p>If the interface is attached to an initiator MEP for a one-way ETH-DM session: Number of one-way delay measurement (1DM) PDU frames sent to the peer MEP in this session.</p> <p>For all other cases, this field displays 0.</p> | <b>detail extensive</b> |
| <b>Valid 1DMs received</b>                 | <p>If the interface is attached to a receiver MEP for a one-way ETH-DM session: Number of valid 1DM frames received.</p> <p>For all other cases, this field displays 0.</p>                                                         | <b>detail extensive</b> |
| <b>Invalid 1DMs received</b>               | <p>If the interface is attached to a receiver MEP for a one-way ETH-DM session: Number of invalid 1DM frames received.</p> <p>For all other cases, this field displays 0.</p>                                                       | <b>detail extensive</b> |
| <b>Out of sync 1DMs received</b>           | <p>If the interface is attached to a receiver MEP for a one-way ETH-DM session: Number of out-of-sync one-way delay measurement request packets received.</p>                                                                       | <b>detail extensive</b> |

**Table 129: show oam ethernet connectivity-fault-management interfaces Output Fields (*continued*)**

| Field Name                          | Field Description                                                                                                                                                                                                                    | Level of Output         |
|-------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
| <b>DMMs sent</b>                    | If the interface is attached to an initiator MEP for a two-way ETH-DM session: Number of Delay Measurement Message (DMM) PDU frames sent to the peer MEP in this session.<br><br>For all other cases, this field displays <b>0</b> . | <b>detail extensive</b> |
| <b>Valid DMMs received</b>          | If the interface is attached to an initiator MEP for a two-way ETH-DM session: Number of valid two-way delay measurement request packets received.                                                                                   | <b>detail extensive</b> |
| <b>Invalid DMMs received</b>        | If the interface is attached to an initiator MEP for a two-way ETH-DM session: Number of invalid two-way delay measurement request packets received.                                                                                 | <b>detail extensive</b> |
| <b>DMRs sent</b>                    | If the interface is attached to a responder MEP for a two-way ETH-DM session: Number of delay measurement reply (DMR) frames sent.<br><br>For all other cases, this field displays <b>0</b> .                                        | <b>detail extensive</b> |
| <b>Valid DMRs received</b>          | If the interface is attached to an initiator MEP for a two-way ETH-DM session: Number of valid DMRs received.<br><br>For all other cases, this field displays <b>0</b> .                                                             | <b>detail extensive</b> |
| <b>Invalid DMRs received</b>        | If the interface is attached to an initiator MEP for a two-way ETH-DM session: Number of invalid DMRs received.<br><br>For all other cases, this field displays <b>0</b> .                                                           | <b>detail extensive</b> |
| <b>LMM sent</b>                     | If the interface is attached to an initiator MEP for a ETH-LM session: Number of loss measurement message (LMM) PDU frames sent to the peer MEP in this session.                                                                     | <b>detail extensive</b> |
| <b>Valid LMM received</b>           | If the interface is attached to an initiator MEP for a ETH-LM session: Number of valid loss measurement request packets received.                                                                                                    | <b>detail extensive</b> |
| <b>Invalid LMM received</b>         | If the interface is attached to an initiator MEP for a ETH-LM session: Number of invalid loss measurement request packets received.                                                                                                  | <b>detail extensive</b> |
| <b>LMR sent</b>                     | If the interface is attached to a responder MEP for a ETH-LM session: Number of loss measurement reply (LMR) frames sent.                                                                                                            | <b>detail extensive</b> |
| <b>Valid LMR received</b>           | If the interface is attached to an initiator MEP for a ETH-LM session: Number of valid LMR frames received.                                                                                                                          | <b>detail extensive</b> |
| <b>Invalid LMR received</b>         | If the interface is attached to an initiator MEP for a ETH-LM session: Number of invalid LMR frames received.                                                                                                                        | <b>detail extensive</b> |
| <b>Valid AIS frames transmitted</b> | Number of valid AIS frames transmitted to the peer MEPs.                                                                                                                                                                             | <b>detail extensive</b> |

**Table 129: show oam ethernet connectivity-fault-management interfaces Output Fields (continued)**

| Field Name                | Field Description                                                                                                                                                                                                    | Level of Output  |
|---------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| Valid AIS frames received | Number of valid AIS frames received from the peer MEPs.                                                                                                                                                              | detail extensive |
| SLM sent                  | If the interface is attached to an initiator MEP for a ETH-SLM session: Number of synthetic loss measurement (SLM) request packets transmitted from the source MEP to the remote or destination MEP in this session. | detail extensive |
| Valid SLM received        | If the interface is attached to a responder MEP for a ETH-SLM session: Number of valid SLM PDUs transmitted from the source MEP to the remote or destination MEP.                                                    | detail extensive |
| Invalid SLM received      | If the interface is attached to a responder MEP for a ETH-SLM session: Number of invalid SLM PDUs transmitted from the source MEP to the remote or destination MEP.                                                  | detail extensive |
| SLR sent                  | If the interface is attached to a responder MEP for a ETH-SLM session: Number detail extensive of synthetic loss reply (SLR) frames sent.                                                                            | detail extensive |
| Valid SLR received        | If the interface is attached to an initiator MEP for a ETH-SLM session: Number of valid SLR PDUs that the source MEP received from the remote or destination MEP.                                                    | detail extensive |
| Invalid SLR received      | If the interface is attached to an initiator MEP for a ETH-SLM session: Number of invalid SLR PDUs that the source MEP received from the remote or destination MEP.                                                  | detail extensive |
| Remote MEP count          | Number of remote MEPs.                                                                                                                                                                                               | extensive        |
| Identifier (remote MEP)   | MEP identifier of the remote MEP.                                                                                                                                                                                    | extensive        |
| MAC address (remote MEP)  | MAC address of the remote MEP.                                                                                                                                                                                       | extensive        |
| State (remote MEP)        | State of the remote MEP.                                                                                                                                                                                             | extensive        |
| Interface (remote MEP)    | Interface of the remote MEP.                                                                                                                                                                                         | extensive        |

### show oam ethernet connectivity-fault-management interfaces detail

```

user@host> show oam ethernet connectivity-fault-management interfaces detail
Interface name: ge-5/2/9.0, Interface status: Active, Link status: Up
Maintenance domain name: md0, Format: string, Level: 5
Maintenance association name: ma1, Format: string
Continuity-check status: enabled, Interval: 100ms, Loss-threshold: 3 frames
MEP identifier: 1, Direction: down, MAC address: 00:90:69:0b:4b:94
MEP status: running
Defects:
  Remote MEP not receiving CCM                : no
  Erroneous CCM received                      : yes
  Cross-connect CCM received                  : no
  RDI sent by some MEP                       : yes
  Alarm Indication Signal                     : yes
Statistics:
  CCMs sent                                  : 76
  CCMs received out of sequence               : 0
  LBMs sent                                  : 0
  Valid in-order LBRs received                : 0
  Valid out-of-order LBRs received            : 0
  LBRs received with corrupted data           : 0
  LBRs sent                                  : 0
  LTMs sent                                  : 0
  LTMs received                              : 0
  LTRs sent                                  : 0
  LTRs received                              : 0
  Sequence number of next LTM request         : 1320235363

| <b>Output Fields</b>            | Table 130 on page 1801 lists the output fields for the <b>show oam ethernet connectivity-fault-management linktrace path-database</b> command. Output fields are listed in the approximate order in which they appear.                                                                                                                                                                                                                                            |

**Table 130: show oam ethernet connectivity-fault-management linktrace path-database Output Fields**

| Field Name                     | Field Description                                                           |
|--------------------------------|-----------------------------------------------------------------------------|
| <b>Linktrace to</b>            | MAC address of the 802.1ag node to which the linktrace message is targeted. |
| <b>Interface</b>               | Interface used by the local MEP to send the linktrace message (LTM).        |
| <b>Maintenance Domain</b>      | Maintenance domain identifier specified in the traceroute command.          |
| <b>Maintenance Association</b> | Maintenance association identifier specified in the traceroute command.     |
| <b>Level</b>                   | Maintenance domain level configured for the maintenance domain.             |
| <b>Local Mep</b>               | MEP identifier of the local MEP originating the linktrace.                  |
| <b>Hop</b>                     | Sequential hop count of the linktrace path.                                 |

Table 130: show oam ethernet connectivity-fault-management linktrace path-database Output Fields (*continued*)

| Field Name             | Field Description                                                                                                                                                                                                                                                             |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| TTL                    | Number of hops remaining in the linktrace message (LTM). The time to live (TTL) is decremented at each hop.                                                                                                                                                                   |
| Source MAC address     | MAC address of the 802.1ag node responding to the LTM or the source MAC address of the LTR.                                                                                                                                                                                   |
| Next hop MAC address   | MAC address of the egress interface of the node to which the LTM is forwarded or the next-hop MAC address derived from the next egress identifier in the Egress-ID TLV of the LTR PDU.                                                                                        |
| Transaction Identifier | 4-byte identifier maintained by the MEP. Each LTM uses a transaction identifier. The transaction identifier is maintained globally across all maintenance domains. Use the transaction identifier to match an incoming linktrace responses (LTR), with a previously sent LTM. |

## Sample Output

### show oam ethernet connectivity-fault-management linktrace path-database

```

user@host> show oam ethernet connectivity-fault-management linktrace path-database

| <b>Output Fields</b>            | <a href="#">Table 131 on page 1804</a> lists the output fields for the <b>show oam ethernet connectivity-fault-management loss-statistics</b> command. Output fields are listed in the approximate order in which they appear.                                                                                                                                                                                                                                                                                                                                                                                                                                      |

Table 131: show oam ethernet connectivity-fault-management loss-statistics Output Fields

| Output Field Name     | Field Description                                                        |
|-----------------------|--------------------------------------------------------------------------|
| MEP identifier        | Maintenance association end point (MEP) numeric identifier.              |
| MAC address           | Unicast MAC address configured for the MEP.                              |
| Remote MEP count      | Number of remote MEPs (unless you specify the <b>remote-mep</b> option). |
| Remote MEP identifier | Numeric identifier of the remote MEP.                                    |
| Remote MAC address    | Unicast MAC address of the remote MEP.                                   |
| Index                 | Index number that corresponds to the ETH-LM entry in the CFM database.   |

**Table 131: show oam ethernet connectivity-fault-management loss-statistics Output Fields (*continued*)**

| Output Field Name              | Field Description                                                                                                                                                              |
|--------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Near-end frame loss            | Count of frame loss associated with ingress data frames.                                                                                                                       |
| Far-end frame loss             | Count of frame loss associated with egress data frames.                                                                                                                        |
| Near-end loss ratio            | Ratio, expressed as a percentage, of the number of service frames not delivered divided by the total number of service frames during time interval T at the ingress interface. |
| Far-end loss ratio             | Ratio, expressed as a percentage, of the number of service frames not delivered divided by the total number of service frames during time interval T at the egress interface.  |
| Average near-end frame loss    | Average frame loss measured in this session associated with ingress data frames.                                                                                               |
| Average near-end loss ratio    | Average frame loss ratio measured in this session associated with ingress data frames.                                                                                         |
| Average far-end frame loss     | Average frame loss measured in this session associated with egress data frames.                                                                                                |
| Average far-end loss ratio     | Average frame loss ratio measured in this session associated with egress data frames.                                                                                          |
| Near-end best case loss        | Lowest frame loss measured in this session associated with ingress data frames.                                                                                                |
| Near-end best case loss ratio  | Lowest frame loss ratio measured in this session associated with ingress data frames.                                                                                          |
| Near-end worst case loss       | Highest frame loss measured in this session associated with ingress data frames.                                                                                               |
| Near-end worst case loss ratio | Highest frame loss ratio measured in this session associated with ingress data frames.                                                                                         |
| Far-end best case frame loss   | Lowest frame loss measured in this session associated with egress data frames.                                                                                                 |
| Far-end best case loss ratio   | Lowest frame loss ratio measured in this session associated with egress data frames.                                                                                           |
| Far-end worst case loss        | Highest frame loss measured in this session associated with egress data frames.                                                                                                |
| Far-end worst case loss ratio  | Highest frame loss ratio measured in this session associated with egress data frames.                                                                                          |

| Maintenance domain name          | Maintenance domain name.                                                                                                                                                                                                                                                                         |
| Format (Maintenance domain)      | Maintenance domain name format configured.                                                                                                                                                                                                                                                       |
| Level                            | Maintenance domain level configured.                                                                                                                                                                                                                                                             |
| Maintenance association name     | Maintenance association name.                                                                                                                                                                                                                                                                    |
| Format (Maintenance association) | Maintenance association name format configured.                                                                                                                                                                                                                                                  |
| Continuity-check status          | Continuity-check status.                                                                                                                                                                                                                                                                         |
| Interval                         | Continuity-check message interval.                                                                                                                                                                                                                                                               |
| Loss-threshold                   | Lost continuity-check message threshold.                                                                                                                                                                                                                                                         |
| Connection Protection TLV        | Status of the connection protection TLV, if configured on the MEP interface: <b>no</b> , <b>yes</b><br><br>If <b>yes</b> , then the transmitted connection protection TLV is decoded and the following three fields are displayed: <b>Prefer me</b> , <b>Protection in use</b> , <b>FRR Flag</b> |
| Prefer me                        | If set to <b>yes</b> , the path through which CCM was transmitted is preferred (unless the path fails). It is used for signaling a manual-switch command to remote side.<br><br>Its value can be <b>yes</b> or <b>no</b> .                                                                       |
| Protection in use                | Used for protection decision coordination. Its value is set to <b>yes</b> if the endpoint transmitting the CCM is currently transmitting the user traffic to protection path.<br><br>Its value can be <b>yes</b> or <b>no</b> .                                                                  |
| FRR Flag                         | LSR/LER forwarding the CCM Frame into a bypass tunnel is set.<br><br>Its value can be <b>yes</b> or <b>no</b> .                                                                                                                                                                                  |

Table 132: show oam ethernet connectivity-fault-management mep-database Output Fields (*continued*)

| Field Name                           | Field Description                                                                                                                                                                                              |
|--------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>MEP identifier</b>                | Maintenance association end point (MEP) identifier.                                                                                                                                                            |
| <b>Direction</b>                     | MEP direction configured.                                                                                                                                                                                      |
| <b>MAC address</b>                   | MAC address configured for the MEP.                                                                                                                                                                            |
| <b>Auto-discovery</b>                | Whether automatic discovery is enabled or disabled.                                                                                                                                                            |
| <b>Priority</b>                      | Priority used for CCMs and linktrace messages transmitted by the MEP.                                                                                                                                          |
| <b>Interface name</b>                | Interface identifier.                                                                                                                                                                                          |
| <b>Interface status</b>              | Local interface status.                                                                                                                                                                                        |
| <b>Link status</b>                   | Local link status.                                                                                                                                                                                             |
| <b>Remote MEP not receiving CCM</b>  | Whether the remote MEP is not receiving CCMs.                                                                                                                                                                  |
| <b>Erroneous CCM received</b>        | Whether erroneous CCMs have been received.                                                                                                                                                                     |
| <b>Cross-connect CCM received</b>    | Whether cross-connect CCMs have been received.                                                                                                                                                                 |
| <b>RDI sent by some MEP</b>          | Whether the remote defect indication (RDI) bit is set in messages that have been received. The absence of the RDI bit in a CCM indicates that the transmitting MEP is receiving CCMs from all configured MEPs. |
| <b>CCMs sent</b>                     | Number of CCMs transmitted.                                                                                                                                                                                    |
| <b>CCMs received out of sequence</b> | Number of CCMs received out of sequence.                                                                                                                                                                       |
| <b>LBMs sent</b>                     | Number of loopback messages (LBMs) sent.                                                                                                                                                                       |
| <b>Valid in-order LBRs received</b>  | Number of loopback response messages (LBRs) received that were valid messages and in sequence.                                                                                                                 |
| <b>1DMs sent</b>                     | <p>If the MEP is an initiator for a one-way ETH-DM session: Number of one-way delay measurement (1DM) PDU frames sent to the peer MEP in this session.</p> <p>For all other cases, this field displays 0.</p>  |
| <b>Valid 1DMs received</b>           | <p>If the MEP is a receiver for a one-way ETH-DM session: Number of valid 1DM frames received.</p> <p>For all other cases, this field displays 0.</p>                                                          |

**Table 132: show oam ethernet connectivity-fault-management mep-database Output Fields (*continued*)**

| Field Name                                 | Field Description                                                                                                                                                                                      |
|--------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Invalid 1DMs received</b>               | If the MEP is a receiver for a one-way ETH-DM session: Number of invalid 1DM frames received.<br><br>For all other cases, this field displays 0.                                                       |
| <b>Out of sync 1DMs received</b>           | If the MEP is a receiver for a one-way ETH-DM session: Number of out-of-sync one-way delay measurement request packets received.                                                                       |
| <b>DMMs sent</b>                           | If the MEP is an initiator for a two-way ETH-DM session: Number of Delay Measurement Message (DMM) PDU frames sent to the peer MEP in this session.<br><br>For all other cases, this field displays 0. |
| <b>Valid DMMs received</b>                 | If the MEP is an initiator for a two-way ETH-DM session: Number of valid two-way delay measurement packets received.                                                                                   |
| <b>Invalid DMMs received</b>               | If the MEP is an initiator for a two-way ETH-DM session: Number of invalid two-way delay measurement packets received.                                                                                 |
| <b>DMRs sent</b>                           | If the MEP is a responder for a ETH-DM session: Number of Delay Measurement Reply (DMR) frames sent.<br><br>For all other cases, this field displays 0.                                                |
| <b>Valid DMRs received</b>                 | If the MEP is an initiator for a two-way ETH-DM session: Number of valid DMRs received.<br><br>For all other cases, this field displays 0.                                                             |
| <b>Invalid DMRs received</b>               | If the MEP is an initiator for a two-way ETH-DM session: Number of invalid DMRs received.<br><br>For all other cases, this field displays 0.                                                           |
| <b>Valid out-of-order LBRs received</b>    | Number of LBRs received that were valid messages and not in sequence.                                                                                                                                  |
| <b>LBRs received with corrupted data</b>   | Number of LBRs received that were corrupted.                                                                                                                                                           |
| <b>LBRs sent</b>                           | Number of LBRs transmitted.                                                                                                                                                                            |
| <b>LTMs sent</b>                           | Linktrace messages (LTMs) transmitted.                                                                                                                                                                 |
| <b>LTMs received</b>                       | Linktrace messages received.                                                                                                                                                                           |
| <b>LTRs sent</b>                           | Linktrace responses (LTRs) transmitted.                                                                                                                                                                |
| <b>LTRs received</b>                       | Linktrace responses received.                                                                                                                                                                          |
| <b>Sequence number of next LTM request</b> | Sequence number of the next linktrace message request to be transmitted.                                                                                                                               |

Table 132: show oam ethernet connectivity-fault-management mep-database Output Fields (*continued*)

| Field Name                   | Field Description                                                                                                                                                                                                    |
|------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>LMM sent</b>              | If the interface is attached to an initiator MEP for a ETH-LM session: Number of loss measurement message (LMM) PDU frames sent to the peer MEP in this session.                                                     |
| <b>Valid LMM received</b>    | If the interface is attached to an initiator MEP for a ETH-LM session: Number of valid loss measurement request packets received.                                                                                    |
| <b>Invalid LMM received</b>  | If the interface is attached to an initiator MEP for a ETH LM session: Number of invalid loss measurement request packets received.                                                                                  |
| <b>LMR sent</b>              | If the interface is attached to a responder MEP for a ETH-LM session: Number of loss measurement reply (LMR) frames sent.                                                                                            |
| <b>Valid LMR received</b>    | If the interface is attached to an initiator MEP for a ETH LM session: Number of valid LMR frames received.                                                                                                          |
| <b>Invalid LMR received</b>  | If the interface is attached to an initiator MEP for a ETH-LM session: Number of invalid LMR frames received.                                                                                                        |
| <b>SLM sent</b>              | If the interface is attached to an initiator MEP for a ETH-SLM session: Number of synthetic loss measurement (SLM) request packets transmitted from the source MEP to the remote or destination MEP in this session. |
| <b>Valid SLM received</b>    | If the interface is attached to a responder MEP for a ETH-SLM session: Number of valid SLM PDUs transmitted from the source MEP to the remote or destination MEP.                                                    |
| <b>Invalid SLM received</b>  | If the interface is attached to a responder MEP for a ETH-SLM session: Number of invalid SLM PDUs transmitted from the source MEP to the remote or destination MEP.                                                  |
| <b>SLR sent</b>              | If the interface is attached to a responder MEP for a ETH-SLM session: Number detail extensive of synthetic loss reply (SLR) frames sent.                                                                            |
| <b>Valid SLR received</b>    | If the interface is attached to an initiator MEP for a ETH-SLM session: Number of valid SLR PDUs that the source MEP received from the remote or destination MEP.                                                    |
| <b>Invalid SLR received</b>  | If the interface is attached to an initiator MEP for a ETH-SLM session: Number of invalid SLR PDUs that the source MEP received from the remote or destination MEP.                                                  |
| <b>Remote MEP identifier</b> | MEP identifier of the remote MEP.                                                                                                                                                                                    |
| <b>State (remote MEP)</b>    | State of the remote MEP: <b>idle</b> , <b>start</b> , <b>ok</b> , or <b>failed</b> .                                                                                                                                 |
| <b>MAC address</b>           | MAC address of the remote MEP.                                                                                                                                                                                       |
| <b>Type</b>                  | Whether the remote MEP MAC address was learned using automatic discovery or configured.                                                                                                                              |
| <b>Interface</b>             | Interface of the remote MEP. A seven-digit number is appended if CFM is configured to run on a routing instance of type VPLS.                                                                                        |

Table 132: show oam ethernet connectivity-fault-management mep-database Output Fields (*continued*)

| Field Name               | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Last flapped             | Date, time, and how long ago the remote MEP interface went from down to up. The format is <b>Last flapped: year-month-day hours:minutes:seconds timezone (hours:minutes:seconds ago)</b> . For example, Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago).                                                                                                                                                                                                                                                                                       |
| Remote defect indication | Whether the remote defect indication (RDI) bit is set in messages that have been received or transmitted.                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Port status TLV          | <ul style="list-style-type: none"> <li>In the Maintenance domain section, displays the last transmitted port status TLV value.</li> <li>In the Remote MEP section, displays the last value of port status TLV received from the remote MEP.</li> </ul> <p>In the Action profile section, displays, the last occurred event <b>port-status-tlv blocked</b> event. This event occurred due to the reception of <b>blocked</b> value in the port status TLV from remote MEP.</p>                                                                       |
| Interface status TLV     | <ul style="list-style-type: none"> <li>In the Maintenance domain section, displays the last transmitted interface status TLV value.</li> <li>In the Remote MEP section, displays the last value of interface status TLV received from the remote MEP.</li> </ul> <p>In the Action profile section, if displays, the last occurred event interface-status-tlv event ( either <b>lower-layer-down</b> or <b>down</b>). This event occurred due to the reception of either lower or <b>down</b> value in the interface status TLV from remote MEP.</p> |
| Action profile           | Name of the action profile occurrence associated with a remote MEP.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Last event               | When an action profile occurs, displays the last event that triggered it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Last event cleared       | When all the configured and occurred events (under action profile) are cleared, then the action taken gets reverted (such as down interface is made up) and the corresponding time is noted and displayed.                                                                                                                                                                                                                                                                                                                                          |
| Action                   | Action taken and the corresponding time of the action occurrence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

## Sample Output

### show oam ethernet connectivity-fault-management mep-database

```

user@host> show oam ethernet connectivity-fault-management mep-database

#### show oam ethernet connectivity-fault-management mep-database (Connection Protection TLV Configured)

```

user@host> show oam ethernet connectivity-fault-management mep-database
maintenance-domain md5 maintenance-association ma5

```

If connection-protection is not enabled on down MEPs, but connection-protection TLV is used, MX always sets the protection-in-use flag in connection-protection tlv, while CCMs are sent out. During reversion, this is an indicator to the receiver that protect-path is in use, otherwise the peer (receiver) assumes working is active and reversion does not work as expected. Setting this bit does not affect protection-switching/traffic-loss.

```

**Output Fields** Table 133 on page 1820 lists the output fields for the **show oam ethernet connectivity-fault-management mep-statistics** command. Output fields are listed in the approximate order in which they appear.

**Table 133: show oam ethernet connectivity-fault-management delay-statistics and mep-statistics Output Fields**

| Output Field Name               | Field Description                                                                                                                                                                                                                                                                                                        |
|---------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MEP identifier                  | Maintenance association end point (MEP) numeric identifier.                                                                                                                                                                                                                                                              |
| MAC address                     | Unicast MAC address configured for the MEP.                                                                                                                                                                                                                                                                              |
| Remote MEP count                | Number of remote MEPs (unless you specify the <b>remote-mep</b> option).                                                                                                                                                                                                                                                 |
| Remote MEP identifier           | Numeric identifier of the remote MEP.                                                                                                                                                                                                                                                                                    |
| Remote MAC address              | Unicast MAC address of the remote MEP.                                                                                                                                                                                                                                                                                   |
| Index                           | Index number that corresponds to the ETH-DM entry in the CFM database.                                                                                                                                                                                                                                                   |
| One-way delay (usec)            | <p>For a one-way ETH-DM session, the frame delay time, in microseconds, measured at the receiver MEP.</p> <p>For a detailed description of one-way Ethernet frame delay measurement, see the <i>ITU-T Y.1731 Ethernet Service OAM</i> topics in the <i>Junos OS Network Interfaces Library for Routing Devices</i>.</p>  |
| Two-way delay (usec)            | <p>For a two-way ETH-DM session, the frame delay time, in microseconds, measured at the initiator MEP.</p> <p>For a detailed description of two-way Ethernet frame delay measurement, see the <i>ITU-T Y.1731 Ethernet Service OAM</i> topics in the <i>Junos OS Network Interfaces Library for Routing Devices</i>.</p> |
| Average one-way delay           | Average one-way frame delay for the statistics displayed.                                                                                                                                                                                                                                                                |
| Average one-way delay variation | Average one-way “frame jitter” for the statistics displayed.                                                                                                                                                                                                                                                             |
| Best-case one-way delay         | Lowest one-way frame delay for the statistics displayed.                                                                                                                                                                                                                                                                 |
| Worst-case one-way delay        | Highest one-way frame delay for the statistics displayed.                                                                                                                                                                                                                                                                |
| Average two-way delay           | Average two-way frame delay for the statistics displayed.                                                                                                                                                                                                                                                                |
| Average two-way delay variation | Average two-way “frame jitter” for the statistics displayed.                                                                                                                                                                                                                                                             |

Table 133: show oam ethernet connectivity-fault-management delay-statistics and mep-statistics Output Fields (*continued*)

| Output Field Name                 | Field Description                                                                                                                                                                                                                                                                                                                 |
|-----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Best-case two-way delay           | Lowest two-way frame delay for the statistics displayed.                                                                                                                                                                                                                                                                          |
| Worst-case two-way delay          | Highest two-way frame delay calculated in this session.                                                                                                                                                                                                                                                                           |
| SLM packets sent                  | Total number of synthetic loss message (SLM) PDU frames sent from the source MEP to the remote MEP during this ETH-SLM session.                                                                                                                                                                                                   |
| SLM packets received              | Total number of synthetic loss message (SLM) PDU frames that the remote MEP received from the source MEP during this ETH-SLM session.                                                                                                                                                                                             |
| SLR packets sent                  | Total number of synthetic loss reply (SLR) PDU frames that the remote MEP sent to the source MEP during this measurement session.                                                                                                                                                                                                 |
| SLR packets received              | Total number of synthetic loss reply (SLR) PDU frames that the source MEP received from the remote MEP during this measurement session.                                                                                                                                                                                           |
| Local TXFC1 value                 | Number of synthetic frames transmitted to the peer MEP for a test ID. A test ID is used to distinguish each synthetic loss measurement because multiple measurements can be simultaneously activated also on a given CoS and MEP pair. It must be unique at least within the context of any SLM for the MEG and initiating MEP.   |
| Local RXFC1 value                 | Number of synthetic frames received from the peer MEP for a test ID. The MEP generates a unique Test ID for the session, adds the source MEP ID, and initializes the local counters for the session before SLM initiation. For each SLM PDU transmitted for the session (test ID), the local counter TXFC1 is sent in the packet. |
| Last Received SLR frame TXFCf(tc) | Value of the local counter TxFC1 at the time of SLM frame transmission.                                                                                                                                                                                                                                                           |
| Last Received SLR frame TXFCb(t)  | Value of the local counter RxFC1 at the time of SLR frame transmission.                                                                                                                                                                                                                                                           |
| Frame loss (near-end)             | Count of frame loss associated with ingress data frames.                                                                                                                                                                                                                                                                          |
| Frame loss (far-end)              | Count of frame loss associated with egress data frames.                                                                                                                                                                                                                                                                           |

| <b>Output Fields</b>            | <a href="#">Table 136 on page 1835</a> lists the output fields for the <b>show oam ethernet connectivity-fault-management sla-iterator-statistics</b> command. Output fields are listed in the approximate order in which they appear.                                                                                                                                                                                                                                                                                                                                                 |

**Table 136: show oam ethernet connectivity-fault-management sla-iterator-statistics Output Fields**

| Output Field Name  | Output Field Description        |
|--------------------|---------------------------------|
| Maintenance domain | Name of the maintenance domain. |

Table 136: show oam ethernet connectivity-fault-management sla-iterator-statistics Output Fields (*continued*)

| Output Field Name                     | Output Field Description                                                                                     |
|---------------------------------------|--------------------------------------------------------------------------------------------------------------|
| Level                                 | Level of the maintenance domain level configured.                                                            |
| Maintenance association               | Name of the maintenance association.                                                                         |
| Local MEP id                          | Numeric identifier of the local MEP.                                                                         |
| Remote MEP id                         | Numeric identifier of the remote MEP.                                                                        |
| Remote MAC address                    | Unicast MAC address of the remote MEP.                                                                       |
| Iterator name                         | Name of iterator.                                                                                            |
| Iterator Id                           | Numeric identifier of the iterator.                                                                          |
| Iterator cycle time                   | Number of cycles (in milliseconds) taken between back-to-back transmission of SLA frames for this connection |
| Iteration period                      | Maximum number of cycles per iteration                                                                       |
| Iterator status                       | Current status of iterator whether running or stopped.                                                       |
| Infinite iterations                   | Status of iteration as infinite or finite.                                                                   |
| Counter reset time                    | Date and time when the counter was reset.                                                                    |
| Reset reason                          | Reason to reset counter.                                                                                     |
| Delay weight                          | Calculation weight of delay.                                                                                 |
| Delay variation weight                | Calculation weight of delay variation.                                                                       |
| DMM sent                              | Delay measurement message (DMM) PDU frames sent to the peer MEP in this session.                             |
| DMM skipped for threshold hit         | Number of DMM frames sent to the peer MEP in this session skipped during threshold hit.                      |
| DMM skipped for threshold hit window  | Number of DMM frames sent to the peer MEP in this session skipped during the last threshold hit window.      |
| DMR received                          | Number of delay measurement reply (DMR) frames received.                                                     |
| DMR out of sequence                   | Total number of DMR out of sequence packets received.                                                        |
| DMR received with invalid time stamps | Total number of DMR frames received with invalid timestamps.                                                 |

Table 136: show oam ethernet connectivity-fault-management sla-iterator-statistics Output Fields (*continued*)

| Output Field Name                                 | Output Field Description                                                                                                                                                                                                                                                                                                          |
|---------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Average two-way delay                             | Average two-way frame delay for the statistics displayed.                                                                                                                                                                                                                                                                         |
| Average two-way delay variation                   | Average two-way "frame jitter" for the statistics displayed.                                                                                                                                                                                                                                                                      |
| Average one-way forward delay variation           | Average one-way forward delay variation for the statistics displayed in microseconds.                                                                                                                                                                                                                                             |
| Average one-way backward delay variation          | Average one-way backward delay variation for the statistics displayed in microseconds.                                                                                                                                                                                                                                            |
| Weighted average two-way delay                    | Weighted average two-way delay for the statistics displayed in microseconds.                                                                                                                                                                                                                                                      |

| SLM packets sent                                  | Total number of synthetic loss message (SLM) PDU frames sent from the source MEP to the remote MEP during this ETH-SLM session.                                                                                                                                                                                                   |
| SLM packets received                              | Total number of synthetic loss message (SLM) PDU frames that the remote MEP received from the source MEP during this ETH-SLM session.                                                                                                                                                                                             |
| SLR packets sent                                  | Total number of synthetic loss reply (SLR) PDU frames that the remote MEP sent to the source MEP during this measurement session.                                                                                                                                                                                                 |
| SLR packets received                              | Total number of synthetic loss reply (SLR) PDU frames that the source MEP received from the remote MEP during this measurement session.                                                                                                                                                                                           |
| Local TXFC1 value                                 | Number of synthetic frames transmitted to the peer MEP for a test ID. A test ID is used to distinguish each synthetic loss measurement because multiple measurements can be simultaneously activated also on a given CoS and MEP pair. It must be unique at least within the context of any SLM for the MEG and initiating MEP.   |
| Local RXFC1 value                                 | Number of synthetic frames received from the peer MEP for a test ID. The MEP generates a unique Test ID for the session, adds the source MEP ID, and initializes the local counters for the session before SLM initiation. For each SLM PDU transmitted for the session (test ID), the local counter TXFC1 is sent in the packet. |
| Last Received SLR frame TXFCf(tc)                 | Value of the local counter TxFC1 at the time of SLM frame transmission.                                                                                                                                                                                                                                                           |

Table 136: show oam ethernet connectivity-fault-management sla-iterator-statistics Output Fields (*continued*)

| Output Field Name               | Output Field Description                                                |
|---------------------------------|-------------------------------------------------------------------------|
| Last Received SLR frame TXFCb(t | Value of the local counter RxFCI at the time of SLR frame transmission. |
| Frame loss (near-end)           | Count of frame loss associated with ingress data frames.                |
| Frame loss (far-end)            | Count of frame loss associated with egress data frames.                 |

Table 137: show oam ethernet connectivity-fault-management synthetic-loss-statistics Output Fields

| Output Field Name                 | Field Description                                                                                                                                                                                                                                                                                                                 |
|-----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MEP identifier                    | Maintenance association end point (MEP) numeric identifier.                                                                                                                                                                                                                                                                       |
| MAC address                       | Unicast MAC address configured for the MEP.                                                                                                                                                                                                                                                                                       |
| Remote MEP count                  | Number of remote MEPs (unless you specify the <b>remote-mep</b> option).                                                                                                                                                                                                                                                          |
| Remote MEP identifier             | Numeric identifier of the remote MEP.                                                                                                                                                                                                                                                                                             |
| Remote MAC address                | Unicast MAC address of the remote MEP.                                                                                                                                                                                                                                                                                            |
| SLM packets sent                  | Total number of synthetic loss message (SLM) PDU frames sent from the source MEP to the remote MEP during this ETH-SLM session.                                                                                                                                                                                                   |
| SLM packets received              | Total number of synthetic loss message (SLM) PDU frames that the remote MEP received from the source MEP during this ETH-SLM session.                                                                                                                                                                                             |
| SLR packets sent                  | Total number of synthetic loss reply (SLR) PDU frames that the remote MEP sent to the source MEP during this measurement session.                                                                                                                                                                                                 |
| SLR packets received              | Total number of synthetic loss reply (SLR) PDU frames that the source MEP received from the remote MEP during this measurement session.                                                                                                                                                                                           |
| Local TXFCI value                 | Number of synthetic frames transmitted to the peer MEP for a test ID. A test ID is used to distinguish each synthetic loss measurement because multiple measurements can be simultaneously activated also on a given CoS and MEP pair. It must be unique at least within the context of any SLM for the MEG and initiating MEP.   |
| Local RXFCI value                 | Number of synthetic frames received from the peer MEP for a test ID. The MEP generates a unique Test ID for the session, adds the source MEP ID, and initializes the local counters for the session before SLM initiation. For each SLM PDU transmitted for the session (test ID), the local counter TxFCI is sent in the packet. |
| Last Received SLR frame TXFCf(tc) | Value of the local counter TxFCI at the time of SLM frame transmission.                                                                                                                                                                                                                                                           |
| Last Received SLR frame TXFCb(t)  | Value of the local counter RxFCI at the time of SLR frame transmission.                                                                                                                                                                                                                                                           |
| Frame loss (near-end)             | Count of frame loss associated with ingress data frames.                                                                                                                                                                                                                                                                          |
| Frame loss (far-end)              | Count of frame loss associated with egress data frames.                                                                                                                                                                                                                                                                           |

| <b>Output Fields</b>            | <a href="#">Table 142 on page 1849</a> lists the output fields for the <b>show oam ethernet link-fault-management</b> command. Output fields are listed in the approximate order in which they appear.                                                      |

**Table 142: show oam ethernet link-fault-management Output Fields**

| Field Name             | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Level of Output |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| <b>Status</b>          | Indicates the status of the OAM discovery state mechanism .<br><br><ul style="list-style-type: none"> <li>• <b>Down</b>—Discovery mechanism is not running..</li> <li>• <b>Running</b>—Discovery mechanism is running.</li> </ul>                                                                                                                                                                                                                                                                | All levels      |
| <b>Discovery state</b> | State of the discovery mechanism. If the status of the discovery mechanism is Down then the state of discovery mechanism is Fault. However, if the status of the discovery mechanism is Running then the state can be any one of the following:<br><br><ul style="list-style-type: none"> <li>• <b>Passive Wait</b></li> <li>• <b>Active Send Local</b></li> <li>• <b>Send Any</b></li> <li>• <b>Send Local Remote</b></li> <li>• <b>Send Local Remote Ok</b></li> <li>• <b>Fault</b></li> </ul> | All levels      |
| <b>ISSU</b>            | Specifies that the local end is undergoing a unified in-service software upgrade (ISSU).                                                                                                                                                                                                                                                                                                                                                                                                         | All levels      |

Table 142: show oam ethernet link-fault-management Output Fields (*continued*)

| Field Name                | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Level of Output |
|---------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| Peer address              | Address of the OAM peer.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | All levels      |
| Flags                     | <p>Information about the interface. Possible values are described in the “Link Flags” section under <i>Common Output Fields Description</i>.</p> <ul style="list-style-type: none"> <li>• <b>Remote-Stable</b>—Indicates remote OAM client acknowledgment of and satisfaction with local OAM state information. <b>False</b> indicates that remote DTE either has not seen or is unsatisfied with local state information. <b>True</b> indicates that remote DTE has seen and is satisfied with local state information.</li> <li>• <b>Local-Stable</b>—Indicates local OAM client acknowledgment of and satisfaction with remote OAM state information. <b>False</b> indicates that local DTE either has not seen or is unsatisfied with remote state information. <b>True</b> indicates that local DTE has seen and is satisfied with remote state information.</li> <li>• <b>Remote-State-Valid</b>—Indicates the OAM client has received remote state information found within Local Information TLVs of received Information OAM PDUs. <b>False</b> indicates that OAM client has not seen remote state information. <b>True</b> indicates that the OAM client has seen remote state information.</li> </ul>                                                                             | All levels      |
| Remote loopback status    | Indicates the remote loopback status. An OAM entity can put its remote peer into loopback mode using the Loopback control OAM PDU. In loopback mode, every frame received is transmitted back on the same port (except for OAM PDUs, which are needed to maintain the OAM session).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | All levels      |
| Remote entity information | <p>Remote entity information.</p> <ul style="list-style-type: none"> <li>• <b>Remote MUX action</b>—Indicates the state of the multiplexer functions of the OAM sublayer. Device is forwarding non-OAM PDUs to the lower sublayer or discarding non-OAM PDUs.</li> <li>• <b>Remote parser action</b>—Indicates the state of the parser function of the OAM sublayer. Device is forwarding non-OAM PDUs to higher sublayer, looping back non-OAM PDUs to the lower sublayer, or discarding non-OAM PDUs.</li> <li>• <b>Discovery mode</b>—Indicates whether discovery mode is active or inactive.</li> <li>• <b>Unidirectional mode</b>—Indicates the ability to operate a link in a unidirectional mode for diagnostic purposes.</li> <li>• <b>Remote loopback mode</b>—Indicates whether remote loopback is supported or unsupported.</li> <li>• <b>Link events</b>—Indicates whether interpreting link events is supported or unsupported on the remote peer.</li> <li>• <b>Variable requests</b>—Indicates whether variable requests are supported. The Variable Request OAM PDU, is used to request one or more MIB variables from the remote peer.</li> <li>• <b>Remote in ISSU</b>—Indicates that the remote end is undergoing a unified in-service software upgrade (ISSU).</li> </ul> | All levels      |
| Loopback Tracking         | Indicates that loopback detection is enabled or disabled.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | All levels      |
| Loop Status               | Indicates that a loopback issue is either found, not found, or unknown when loopback tracking is enabled.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | All levels      |
| Detect LOC                | Indicates that loss-of-continuity (LOC) detection is enabled or disabled.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | All levels      |

Table 142: show oam ethernet link-fault-management Output Fields (*continued*)

## Sample Output

### show oam ethernet link-fault-management brief

```

user@host> show oam ethernet link-fault-management brief
Interface: ge-3/1/3
Status: Running, Discovery state: Send Any, ISSU
Peer address: 00:90:69:72:2c:83

```

```
Flags:Remote-Stable Remote-State-Valid Local-Stable 0x50 Remote loopback status:
Disabled on local port, Enabled on peer port
Remote entity information:
  Remote MUX action: discarding, Remote parser action: loopback
  Discovery mode: active, Unidirectional mode: unsupported
  Remote loopback mode: supported, Link events: supported
  Variable requests: unsupported, Remote in ISSU
```

### show oam ethernet link-fault-management brief (Loopback tracking)

```
user@host> show oam ethernet link-fault-management
Interface: ge-3/1/3
Status: Running, Discovery state: Active Send Local
Peer address: 00:00:00:00:00:00
Flags:0x8
Loopback tracking: Enabled,      Loop Status: Found
```

### show oam ethernet link-fault-management detail

```
user@host> show oam ethernet link-fault-management detail
Interface: ge-6/1/0
Status: Running, Discovery state: Send Any, ISSU

Remote entity information:
  Remote MUX action: forwarding, Remote parser action: forwarding
  Discovery mode: active, Unidirectional mode: unsupported
  Remote loopback mode: supported, Link events: supported
  Variable requests: unsupported, Remote in ISSU
```

## show oam ethernet lmi

**Syntax** `show oam ethernet lmi (interface <interface-name>)`

**Release Information** Command introduced in Junos OS Release 9.5.

**Description** On routers with Gigabit Ethernet, Fast Ethernet, or aggregated Ethernet, and OAM Ethernet Local Management Interface (E-LMI) configuration, display the LMI information for the configured interfaces or optionally for a specified interface.

**NOTE:** On MX Series routers, E-LMI is supported on Gigabit Ethernet (ge), 10-Gigabit Ethernet (xe), and Aggregated Ethernet (ae) interfaces configured on MX Series routers with DPC only.

**Options** `interface`—(Optional) Display LMI information for a specified interface.

`interface-name`—(Optional) Display Ethernet LMI information for the specified interface only.

**Required Privilege Level** View

**Output Fields** [Table 143 on page 1855](#) lists the output fields for the `show oam ethernet lmi` command. Output fields are listed in the approximate order in which they appear.

**Table 143: show oam ethernet lmi Output Fields**

| Field Name                 | Field Description                                                                                                          |
|----------------------------|----------------------------------------------------------------------------------------------------------------------------|
| Physical Interface         | Header for the EVC information showing the Ethernet virtual circuit (EVC) name, configuration, and active/inactive status. |
| UNI Identifier             | Name of the UNI.                                                                                                           |
| EVC map type               | EVC configuration.                                                                                                         |
| Polling verification timer | Polling verification timer status.                                                                                         |
| E-LMI state                | Operational status of the E-LMI configuration in the interfaces or specified interface.                                    |
| Priority/Untagged VLAN ID  | To be provided.                                                                                                            |
| Default EVC                | The EVC set as the default EVC.                                                                                            |
| Associated EVCs            | Heading for the list of configured EVCs.                                                                                   |
| EVC Identifier             | EVC name.                                                                                                                  |

Table 143: show oam ethernet lmi Output Fields (*continued*)

| Field Name   | Field Description              |
|--------------|--------------------------------|
| Reference ID | To be provided.                |
| Status       | Status active or not active.   |
| CE VLAN IDs  | Customer edge VLAN ID numbers. |

## Sample Output

### show oam ethernet lmi interface

```
user@host> show oam ethernet lmi interface ge-1/1/1
Physical interface: ge-1/1/1, Physical link is Up
UNI identifier: uni-ce1, EVC map type: Bundling
Polling verification timer: Enabled, E-LMI state: Operational
Priority/Untagged VLAN ID: 20, Default EVC: evc1
Associated EVCs:
  EVC      Reference   Status      CE VLAN IDs
  Identifier ID
  evc1      1       Active (New)  1-2048
  evc2      2       Not Active   2049-4096
```

|-----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Service name</b>                     | Type of service required (can be used to indicate an ISP name or a class or quality of service).                                                                                                                                                                                                                                                       | <b>detail extensive none</b> |
| <b>Configured AC name</b>               | Configured access concentrator name.                                                                                                                                                                                                                                                                                                                   | <b>detail extensive none</b> |
| <b>Session AC name</b>                  | Name of the access concentrator.                                                                                                                                                                                                                                                                                                                       | <b>detail extensive none</b> |
| <b>Remote MAC address or Remote MAC</b> | MAC address of the remote side of the connection, either the access concentrator or the PPPoE client.                                                                                                                                                                                                                                                  | All levels                   |
| <b>Session uptime</b>                   | Length of time the session has been up, in <i>hh:mm:ss</i> .                                                                                                                                                                                                                                                                                           | <b>detail extensive none</b> |
| <b>Dynamic Profile</b>                  | Name of the dynamic profile that was used to create this interface. If the interface was statically created, this field is not displayed.                                                                                                                                                                                                              | <b>detail extensive none</b> |
| <b>Underlying interface</b>             | Interface on which PPPoE is running.                                                                                                                                                                                                                                                                                                                   | All levels                   |
| <b>Agent Circuit ID</b>                 | Agent circuit identifier (ACI) that corresponds to the DSLAM interface that initiated the client service request. An asterisk is interpreted as a wildcard character and can appear at the beginning, the end, or both the beginning and end of the string. If the agent circuit ID is not configured, this field is not displayed.                    | <b>detail extensive none</b> |
| <b>Agent Remote ID</b>                  | Agent remote identifier that corresponds to the subscriber associated with the DSLAM interface that initiated the service request. An asterisk is interpreted as a wildcard character and can appear at the beginning, the end, or both at the beginning and end of the string. If the agent remote ID is not configured, this field is not displayed. | <b>detail extensive none</b> |
| <b>ACI Interface Set</b>                | Internally-generated name of the dynamic ACI interface set, if configured, and the set index number of the ACI entry in the session database.                                                                                                                                                                                                          | <b>detail extensive none</b> |

Table 145: show pppoe interfaces Output Fields (*continued*)

| Field Name         | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Level of Output  |
|--------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| <b>Packet Type</b> | <p>Number of packets sent and received during the PPPoE session, categorized by packet type and packet errors:</p> <ul style="list-style-type: none"> <li>• <b>PADI</b>—PPPoE Active Discovery Initiation packets.</li> <li>• <b>PADO</b>—PPPoE Active Discovery Offer packets.</li> <li>• <b>PADR</b>—PPPoE Active Discovery Request packets.</li> <li>• <b>PADS</b>—PPPoE Active Discovery Session-Confirmation packets.</li> <li>• <b>PADT</b>—PPPoE Active Discovery Termination packets.</li> <li>• <b>Service name error</b>—Packets for which the Service-Name request could not be honored.</li> <li>• <b>AC system error</b>—Packets for which the access concentrator experienced an error in performing the host request. For example, the host had insufficient resources to create a virtual circuit.</li> <li>• <b>Generic error</b>—Packets that indicate an unrecoverable error occurred.</li> <li>• <b>Malformed packets</b>—Malformed or short packets that caused the packet handler to discard the frame as unreadable.</li> <li>• <b>Unknown packets</b>—Unrecognized packets.</li> </ul> | <b>extensive</b> |

## Sample Output

### show pppoe interfaces

```
user@host> show pppoe interfaces
pp0.0 Index 66
  State: Down, Session ID: None,
  Service name: None, Configured AC name: sapphire,
  Session AC name: None, Remote MAC address: 00:00:5e:00:53:00,
  Auto-reconnect timeout: 100 seconds, Idle timeout: Never,
  Underlying interface: at-5/0/0.0 Index 71
```

### show pppoe interfaces (Status for the Specified Interface)

```
user@host> show pppoe interfaces pp0.1073741827
pp0.1073741827 Index 70
  State: Session Up, Session ID: 30, Type: Dynamic,
  Session AC name: velorum,
  Remote MAC address: 00:00:5e:00:53:c1,
  Session uptime: 16:45:46 ago,
  Underlying interface: ge-2/0/3.1 Index 73
  Service name: premium
  Dynamic Profile: PppoeProfile
  Agent Circuit ID: velorum-ge-2/0/3
  Agent Remote ID: westford
```

### show pppoe interfaces brief

```
user@host> show pppoe interfaces brief
Interface      Underlying      State      Session      Remote
                interface
pp0.0          ge-2/0/3.2      Session Up  27           00:00:5e:00:53:c1
pp0.1          ge-2/0/3.2      Session Up  28           00:00:5e:00:53:c1

| <b>Service Name Table</b> | Name of the PPPoE service name table.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | none            |
| <b>Service Name</b>       | Name of a configured service in the PPPoE service name table: <ul style="list-style-type: none"> <li>• <b>&lt;empty&gt;</b>—Service of zero length that represents an unspecified service</li> <li>• <b>&lt;any&gt;</b>—Default service for non-empty service entries that do not match the configured empty or named service entries</li> <li>• <b>service-name</b>—Named service entry</li> </ul>                                                                                                                                          | none            |
| <b>Action</b>             | Action taken when the PPPoE underlying interface receives a PPPoE Active Discovery Initiation (PADI) packet with the specified named service, <b>empty</b> service, <b>any</b> service, or ACI/ARI pair: <ul style="list-style-type: none"> <li>• <b>Delay seconds</b>—Number of seconds that the interface delays before responding with a PPPoE Active Discovery Offer (PADO) packet</li> <li>• <b>Drop</b>—Interface drops (ignores) the packet.</li> <li>• <b>Terminate</b>—Interface responds immediately with a PADO packet</li> </ul> | none            |
| <b>Dynamic Profile</b>    | Name of the dynamic profile with which the router creates a dynamic PPPoE subscriber interface. A dynamic profile can be assigned to a named service, <b>empty</b> service, <b>any</b> service, or ACI/ARI pair.                                                                                                                                                                                                                                                                                                                             | none            |

Table 146: show pppoe service-name-tables Output Fields (*continued*)

| Field Name              | Field Description                                                                                                                                                                                                                                                                                                                                                                                           | Level of Output |
|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| <b>Routing Instance</b> | Name of the routing instance in which to instantiate the dynamic PPPoE subscriber interface. A routing instance can be assigned to a named service, <b>empty</b> service, <b>any</b> service, or ACI/ARI pair.                                                                                                                                                                                              | none            |
| <b>Max Sessions</b>     | Maximum number of active PPPoE sessions that the router can establish with the specified named service, <b>empty</b> service, or <b>any</b> service.                                                                                                                                                                                                                                                        | none            |
| <b>Active Sessions</b>  | Current count of active PPPoE sessions created using the specified named service, <b>empty</b> service, or <b>any</b> service. The Active Sessions value cannot exceed the Max Sessions value.                                                                                                                                                                                                              | none            |
| <b>ACI</b>              | Agent circuit identifier (ACI) that corresponds to the DSLAM interface that initiated the client service request. An asterisk is interpreted as a wildcard character and can appear at the beginning, the end, or both the beginning and end of the string. An ACI can be configured as part of an ACI/ARI pair for a named service, <b>empty</b> service, or <b>any</b> service.                           | none            |
| <b>ARI</b>              | Agent remote identifier (ARI) that corresponds to the subscriber associated with the DSLAM interface that initiated the service request. An asterisk is interpreted as a wildcard character and can appear at the beginning, the end, or both at the beginning and end of the string. An ARI can be configured as part of an ACI/ARI pair for a named service, <b>empty</b> service, or <b>any</b> service. | none            |
| <b>Static Interface</b> | Name of the static PPPoE interface reserved for exclusive use by the PPPoE client with matching ACI/ARI information. A static interface can be configured only for an ACI/ARI pair.                                                                                                                                                                                                                         | none            |

## Sample Output

### show pppoe service-name-tables

```

user@host> show pppoe service-name-tables
Service Name Table: test1
Service Name Table: test2
Service Name Table: test3

```

### show pppoe service-name-tables (For the Specified Table Name)

| <b>Service Name Table</b>       | Name of the service name table.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | All levels                   |
| <b>Dynamic Profile</b>          | Name of the dynamic profile that was used to create this interface. If the interface was statically created, then the value is <b>none</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | All levels                   |
| <b>Index</b>                    | Index number of the logical interface, which reflects its initialization sequence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>detail extensive</b>      |
| <b>State</b>                    | Origin of the logical interface: <b>Static</b> or <b>Dynamic</b> . Indicates whether the interface was statically or dynamically created.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>detail extensive</b>      |
| <b>Operational States</b>       | Fields in this block are actual operational values rather than simply the configured values. The operational values can be the result of RADIUS-initiated changes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>detail extensive</b>      |
| <b>Max Sessions</b>             | Maximum number of PPPoE logical interfaces that can be activated on the underlying interface. When this number of logical interfaces has been established, all subsequent PPPoE Active Discovery Initiation (PADI) packets are dropped and all subsequent PPPoE Active Discovery Request (PADR) packets trigger PPPoE Active Discovery Session (PADS) error responses.                                                                                                                                                                                                                                                                                                             | <b>detail extensive</b>      |
| <b>Max Sessions VSA Ignore</b>  | Whether the router is configured to ignore (clear) the PPPoE maximum session value returned by RADIUS in the Max-Clients-Per-Interface Juniper Networks VSA [26-143] and restore the PPPoE maximum session value on the underlying interface to the value configure with the <b>max-sessions</b> statement: <b>Off</b> (default) or <b>On</b> .                                                                                                                                                                                                                                                                                                                                    | <b>detail extensive none</b> |
| <b>Active Sessions</b>          | Number of active PPPoE sessions on the underlying interface. If a dynamic profile is listed, then it is the number of active PPPoE sessions on the underlying interface that are using this profile. The Active Sessions value must not exceed the Max Sessions value.                                                                                                                                                                                                                                                                                                                                                                                                             | <b>detail extensive</b>      |
| <b>Agent Circuit Identifier</b> | <p>Whether the underlying interface is configured with the <b>agent-circuit-identifier</b> statement to enable creation of autosensed dynamic VLAN subscriber interfaces based on agent circuit identifier (ACI) information.</p> <p><b>Autosensing</b> indicates that creation of ACI-based dynamic VLAN interfaces is enabled on the underlying interface. If creation of ACI-based dynamic VLANs is not configured on the underlying interface, this field does not appear.</p> <p><b>NOTE:</b> The Agent Circuit Identifier field is replaced with the Line Identity field when an ALI interface set is configured with the <b>line-identity</b> autoconfiguration stanza.</p> | <b>detail extensive none</b> |

Table 149: show pppoe underlying-interfaces Output Fields (*continued*)

| Field Name                    | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Level of Output              |
|-------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Line Identity</b>          | <p>Whether the underlying interface is configured with the <b>line-identity</b> statement to enable creation of autosensed dynamic VLAN subscriber interfaces based on the specified trusted option: ACI, ARI, both, or neither.</p> <p><b>Autosensing</b> indicates that creation of ALI-based dynamic VLAN interfaces is enabled on the underlying interface. If creation of ALI dynamic VLANs based on trusted options is not configured on the underlying interface, this field does not appear.</p> <p><b>NOTE:</b> The Line Identity field is replaced with the ACI VLAN field when an ACI interface set is configured with the <b>agent-circuit-id</b> autoconfiguration stanza.</p>                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>detail extensive none</b> |
| <b>Duplicate Protection</b>   | State of PPPoE duplicate protection: <b>On</b> or <b>Off</b> . When duplicate protection is configured for the underlying interface, a dynamic PPPoE logical interface cannot be activated when an existing active logical interface is present for the same PPPoE client. The uniqueness of the PPPoE client is determined by the client's MAC address.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>detail extensive</b>      |
| <b>Short Cycle Protection</b> | State of PPPoE short cycle protection: <b>mac-address</b> , <b>circuit-id</b> , or <b>Off</b> . Enabling short cycle protection, also known as PPPoE lockout, on the PPPoE underlying interface temporarily prevents (locks out) a failed or short-lived (short-cycle) PPPoE subscriber session from reconnecting to the router for a default or configurable period of time. PPPoE client sessions are identified by their unique media access control (MAC) source address or agent circuit identifier (ACI) value.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>detail extensive</b>      |
| <b>Direct Connect</b>         | State of the configuration to ignore DSL Forum VSAs: <b>On</b> or <b>Off</b> . When configured, the router ignores any of these VSAs received from a directly connected CPE device on the interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>detail extensive none</b> |
| <b>AC Name</b>                | Name of the access concentrator.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>detail extensive</b>      |
| <b>PacketType</b>             | <p>Number of packets sent and received during the PPPoE session, categorized by packet type and packet errors:</p> <ul style="list-style-type: none"> <li>• <b>PADI</b>—PPPoE Active Discovery Initiation packets.</li> <li>• <b>PADO</b>—PPPoE Active Discovery Offer packets.</li> <li>• <b>PADR</b>—PPPoE Active Discovery Request packets.</li> <li>• <b>PADS</b>—PPPoE Active Discovery Session-Confirmation packets.</li> <li>• <b>PADT</b>—PPPoE Active Discovery Termination packets.</li> <li>• <b>Service name error</b>—Packets for which the Service-Name request could not be honored.</li> <li>• <b>AC system error</b>—Packets for which the access concentrator experienced an error in performing the host request. For example, the host had insufficient resources to create a virtual circuit.</li> <li>• <b>Generic error</b>—Packets that indicate an unrecoverable error occurred.</li> <li>• <b>Malformed packets</b>—Malformed or short packets that caused the packet handler to discard the frame as unreadable.</li> <li>• <b>Unknown packets</b>—Unrecognized packets.</li> </ul> | <b>detail extensive</b>      |

Table 149: show pppoe underlying-interfaces Output Fields (*continued*)

| Field Name                | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Level of Output  |
|---------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| <b>Lockout Time (sec)</b> | The PPPoE lockout time range, the number of PPPoE clients in lockout condition, and the number of PPPoE clients in a lockout grace period if <b>Short Cycle Protection</b> is enabled (On): <ul style="list-style-type: none"> <li><b>Min</b>—Minimum lockout time, in seconds, configured on the PPPoE underlying interface.</li> <li><b>Max</b>—Maximum lockout time, in seconds, configured on the PPPoE underlying interface.</li> <li><b>Total clients in lockout</b>—Number of PPPoE clients currently undergoing lockout.</li> <li><b>Total clients in lockout grace period</b>—Number of PPPoE clients currently in a lockout grace period. A <i>lockout grace period</i> occurs when the time between lockout events is greater than either 15 minutes or the maximum lockout time.</li> </ul> | <b>extensive</b> |
| <b>Client Address</b>     | MAC source address of the PPPoE client.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>extensive</b> |
| <b>Current</b>            | Current lockout time, in seconds; displays 0 (zero) if the PPPoE client is not undergoing lockout.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>extensive</b> |
| <b>Elapsed</b>            | Time elapsed into the lockout period, in seconds; displays 0 if the PPPoE client is not undergoing lockout                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>extensive</b> |
| <b>Next</b>               | Lockout time, in seconds, that the router uses for the next lockout event; displays a nonzero value if the PPPoE client is currently in a lockout grace period.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>extensive</b> |

| <b>Output Fields</b>            | <a href="#">Table 150 on page 1876</a> lists the output fields for the <b>show pppoe version</b> command. Output fields are listed in the approximate order in which they appear. |

Table 150: show pppoe version Output Fields

| Field Name                | Field Description                                                                                                                                                                                                                                                                   |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| version <i>n</i>          | PPPoE version number and RFC. For example, <b>version 1, rfc 2516</b> .                                                                                                                                                                                                             |
| PPPoE protocol            | State of the PPPoE protocol: <b>enabled</b> or <b>disabled</b> .                                                                                                                                                                                                                    |
| Maximum Sessions          | Maximum active sessions supported per router. The default is 256 sessions.                                                                                                                                                                                                          |
| PADI resend timeout       | Initial time, in seconds, that the router waits to receive a PPOE Active Discovery Offer (PADO) packet for the PPOE Active Discovery Initiation (PADI) packet sent. This timeout doubles for each successive PADI packet sent. Not displayed for M120 and M320 routers.             |
| PADR resend timeout       | Initial time, in seconds, that the router waits to receive a PPOE Active Discovery Session Confirmation (PADS) packet for the PPOE Active Discovery Request (PADR) packet sent. This timeout doubles for each successive PADR packet sent. Not displayed for M120 and M320 routers. |
| Max resend timeout        | Maximum value, in seconds, that the PADI or PADR resend timer can accept. The maximum value is 64. Not displayed for M120 and M320 routers.                                                                                                                                         |
| Max Configured AC timeout | Time, in seconds, during which the configured access concentrator must respond. Not displayed for M120 and M320 routers.                                                                                                                                                            |

## Sample Output

### show pppoe version

```

user@host> show pppoe version
Point-to-Point Protocol Over Ethernet, version 1. rfc2516
  PPPoE protocol           = Enabled
  Maximum Sessions         = 256
  PADI resend timeout      = 2 seconds
  PADR resend timeout      = 16 seconds

```

Max resend timeout           = 64 seconds  
Max Configured AC timeout   = 4 seconds

## show protection-group ethernet-ring aps

|                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| Field Name                          | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Request/State</b>                | <p>Status of the Ethernet ring RAPS messages.</p> <ul style="list-style-type: none"> <li><b>NR</b>—Indicates that there is no request for APS on the ring.</li> <li><b>SF</b>—Indicates that there is a signal failure on the ring.</li> <li><b>FS</b>—Indicates that there are active forced-switch requests in the ring.</li> <li><b>MS</b>—Indicates that there are active manual-switch requests in the ring.</li> </ul> <p><b>NOTE:</b> Both <b>FS</b> and <b>MS</b> values are valid only when G.8032v2 is supported.</p> |
| <b>Ring Protection Link Blocked</b> | Blocking on the ring protection link: <b>Yes</b> or <b>No</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>No Flush</b>                     | Indicates the value of the Do Not Flush (DNF) flag in the received RAPS PDU. If the value is Yes, then FDB flush is not triggered as part of processing of the received RAPS PDU.                                                                                                                                                                                                                                                                                                                                               |
| <b>Blocked Port Reference</b>       | This parameter is the reference to the blocked ring port. If the east ring port is blocked, the Blocked Port Reference (BPR) value is 0. If the west ring port is blocked, the BPR value is 1. If both ring ports are blocked, this parameter can take any value. If both east and west ports are blocked or not blocked, the value would be 0. This field is valid only when G.8032v2 is supported.                                                                                                                            |
| <b>Blocked Port Reference</b>       | Reference of the ring port on which traffic is blocked.                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Originator</b>                   | Indicates whether the node is the originator of the RAPS messages.                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Remote Node ID</b>               | Identifier (in MAC address format) of the remote node.                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

## Sample Output

### show protection-group ethernet-ring aps (EX Switches)

```

user@switch>show protection-group ethernet-ring aps
Ring Name   Request/state No Flush  RPL Blocked  Originator  Remote Node ID
erp1        NR           No       Yes          No          00:1F:12:30:B8:81

```

## Sample Output

### show protection-group ethernet-ring aps (Owner Node, Normal Operation on ACX and MX Routers)

```

user@host> show protection-group ethernet-ring aps
Ethernet Ring Request/state RPL Blocked No Flush BPR Originator Remote
Node ID

Output fields are listed in the approximate order in which they appear.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

**Table 152: show protection-group ethernet-ring configuration Output Fields**

| Output Fields                      | Field Description                                                                                                                                                  |
|------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>G8032 Compatability Version</b> | This is the compatibility version mode of ERP. This parameter always takes the value 1 in the case of G8032v1. This parameter is valid only for MX Series routers. |
| <b>East Interface</b>              | One of the two switch interfaces that participates in a ring link. When Junos supports G8032v2, this interface is treated as interface 0.                          |
| <b>West Interface</b>              | One of the two interfaces in a switch that participates in a ring link. When Junos supports G8032v2, this interface is treated as interface 1.                     |

**Table 152: show protection-group ethernet-ring configuration Output Fields (continued)**

| Output Fields                      | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Restore Interval</b>            | Configured interval of wait time after a link is restored. When a link goes down, the RPL link is activated. When the down link becomes active again, the RPL owner receives a notification. The RPL owner waits for the restore interval before issuing a block on the RPL link. The configured restore interval can be 5 through 12 minutes for ERPV1 and 1 through 12 minutes for ERPV2. This configuration is a global configuration and applies to all Ethernet rings if the Ethernet ring does not have a more specific configuration for this value. If no parameter is configured at the protection group level, the global configuration of this parameter uses the default value. |
| <b>Wait to Block Interval</b>      | Configured interval of wait time for link restoration when a manual command (manual switch or force switch) is cleared. On clearing the manual command, the RPL owner receives NR messages, which starts a timer with interval 'Wait to Block' to restore the RPL link after its expiration. This delay timer is set to be 5 seconds longer than the guard timer. The configured number can be from 5 seconds through 10 seconds. The parameter is valid only for G.8032v2.                                                                                                                                                                                                                 |
| <b>Guard Interval</b>              | Configured number of milliseconds (in 10 millisecond intervals, 10 milliseconds through 2000 milliseconds) that the node does not process any Ethernet ring protection protocol data units (PDUs). This configuration is a global configuration and applies to all Ethernet rings if the Ethernet ring does not have a more specific configuration for this value. If no parameter is configured at the protection group level, the global configuration of this parameter uses the default value.                                                                                                                                                                                          |
| <b>Hold off interval</b>           | This is the interval at which the link is held down even before declaring that the link is down. Because the parameter is not supported at present, its value is always considered 0. This parameter is valid only for MX Series routers.                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Node ID</b>                     | Node ID for the switch or router. If the node ID is not configured, it is assigned by default. For EX Series switches, the Node ID value cannot be configured, whereas for MX Series routers, it can be configured..                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Ring ID</b>                     | In G8032v2, the ring ID can be within the range 1–239. All the nodes in a ring should have the same ring ID. In the case of G8032v1, the value of the ring ID is always 1. This parameter is valid only for MX Series routers.                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Node Role</b>                   | Indicates whether the ring node is operating as a normal ring-node or RPL-owner or RPL-neighbor. For G8032v1 RPL-neighbor role is not supported. This parameter is valid only for MX Series routers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Revertive Mode of Operation</b> | This parameter indicates whether the ring is operating in revertive mode or nonrevertive mode. In nonrevertive mode of operation, when all links in the ring and Ethernet Ring Nodes have recovered and no external requests are active, the Ethernet Ring does not automatically revert. G8032v1 supports only revertive mode of operation. This parameter is valid only for MX Series routers.                                                                                                                                                                                                                                                                                            |
| <b>RAPS Tx Dot1p priority</b>      | The RAPS Tx Dot1p priority is a parameter with which the RAPS is transmitted from the ring node. For G8032v1, the value of this parameter is always 0. For G8032v2, the value of this parameter can be within the range 0–7. This parameter is valid only for MX Series routers.                                                                                                                                                                                                                                                                                                                                                                                                            |

Table 152: show protection-group ethernet-ring configuration Output Fields (*continued*)

| Output Fields                          | Field Description                                                                                                                                                                                                                                                                                                                                                                                                        |
|----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Node type</b>                       | Indicates whether ring node is a normal ring node having two ring-links or a open ring-node having only a single ring-link or a interconnection ring-node. An interconnection ring node can be connected to major ring in non virtual-channel mode or in virtual channel mode. Ring interconnection is not supported for G8032v1. This parameter is valid only for MX Series routers.                                    |
| <b>Major ring name</b>                 | If the node type is interconnection in the ring, this parameter takes the name of the major ring to which the sub-ring node is connected. This parameter is valid only for MX Series routers.                                                                                                                                                                                                                            |
| <b>Interconnection mode</b>            | Indicates the interconnection mode if the type of the node is interconnection. An interconnection ring node can be connected to major ring in non-virtual channel mode or in virtual channel mode. This parameter is valid only for MX Series routers.                                                                                                                                                                   |
| <b>Propagate Topology Change event</b> | When Propagate Topology Change event is set to 1, the change in the topology of sub-ring is propagated to the major ring, enabling the transmission of EVENT FLUSH RAPS PDU in the major ring. When the parameter is set to 0, the topology change in the sub-ring is not propagated to the major ring blocking EVENT FLUSH RAPS PDU transmission in the major ring. This parameter is valid only for MX Series routers. |
| <b>Control Vlan</b>                    | The VLAN that transfers ERP PDUs from one node to another.                                                                                                                                                                                                                                                                                                                                                               |
| <b>Physical Ring</b>                   | Physical ring if the east and west interfaces are nontrunk ports. For MX Series routers, the ring is termed a physical ring if no data channels are defined for the ring and the entire physical port forwarding is controlled by ERP.                                                                                                                                                                                   |
| <b>Data Channel VLAN(s)</b>            | Data VLANs for which forwarding behavior is controlled by the ring instance.                                                                                                                                                                                                                                                                                                                                             |

## Sample Output

### show protection-group ethernet-ring configuration (EX Switch)

```

user@switch>show protection-group ethernet-ring configuration
Ethernet ring configuration parameters for protection group erp1
East Interface   : ge-0/0/3.0
West Interface   : ge-0/0/9.0
Restore Interval : 5 minutes
Guard Interval   : 500 ms
Node Id          : 00:1F:12:30:B8:81
Control Vlan     : 101
Physical Ring     : yes

```

### show protection-group ethernet-ring configuration detail (MX Series Router)

```

user@switch>show protection-group ethernet-ring configuration detail
Ethernet Ring configuration information for protection group pg_101
G8032 Compatibility Version      : 2
East interface (interface 0)     : xe-2/3/0.1
West interface (interface 1)     : xe-2/2/1.1
Restore interval                  : 5 minutes

```

```

Wait to Block interval          : 5 seconds
Guard interval                  : 500 ms
Hold off interval               : 0 ms
Node ID                         : 64:87:88:65:37:D0
Ring ID (1 ... 239)            : 1
Node role (normal/rpl-owner/rpl-neighbour) : normal
Revertive mode of operation     : 1
RAPS Tx Dot1p priority (0 .. 7) : 0
Node type (normal/open/interconnection)   : Normal
Control Vlan                    : 100
Physical Ring                   : No
Data Channel Vlan(s)            : 200,300

```

**Table 153: show protection-group ethernet-ring data-channel Output Fields**

| Field Name       | Field Description                                                                                                                                                                                                                                                                                                                                                                                                      |
|------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Interface</b> | Name of the interface configured for the Ethernet ring.                                                                                                                                                                                                                                                                                                                                                                |
| <b>STP index</b> | The Spanning Tree Protocol (STP) index number used by each interface in an Ethernet ring. The STP index controls the forwarding behavior for a set of VLANs on a data channel on an Ethernet ring port. For multiple Ethernet ring instances on a physical ring port, there are multiple STP index numbers. Different ring instances will have different STP index numbers and may have different forwarding behavior. |

Table 153: show protection-group ethernet-ring data-channel Output Fields (*continued*)

| Field Name           | Field Description                                                                                                                                                                                                       |
|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Forward State</b> | Forwarding state on the Ethernet ring. <ul style="list-style-type: none"> <li>• <b>forwarding</b>—Indicates packets are being forwarded.</li> <li>• <b>discarding</b>—Indicates packets are being discarded.</li> </ul> |

## Sample Output

### show protection-group ethernet-ring data-channel

```
user@host> show protection-group ethernet-ring data-channel
Ethernet ring data channel information for protection group pg301

Interface    STP index  Forward State
xe-5/0/2     78         forwarding
xe-2/2/0     79         discarding

Ethernet ring data channel parameters for protection group pg302

Interface    STP index  Forward State
xe-5/0/2     80         forwarding
xe-2/2/0     81         forwarding
```

### show protection-group ethernet-ring data-channel detail

```
user@host> show protection-group ethernet-ring data-channel detail
Ethernet ring data channel parameters for protection group pg301

Interface name      : xe-5/0/2
STP index           : 78
Forward State       : forwarding

Interface name      : xe-2/2/0
STP index           : 79
Forward State       : discarding

Ethernet ring data channel parameters for protection group pg302

Interface name      : xe-5/0/2
STP index           : 80
Forward State       : forwarding

Interface name      : xe-2/2/0
STP index           : 81
Forward State       : forwarding
```

## show protection-group ethernet-ring flush-info

|                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| <b>Output Fields</b>            | Table 154 on page 1890 lists the output fields for the <b>show protection-group ethernet-ring flush-info</b> command. Output fields are listed in the approximate order in which they appear.                                                                                                                                                                                                                                                                                    |

**Table 154: show protection-group ethernet-ring flush-info Output Fields**

| Field Name                    | Field Description                                                                                  |
|-------------------------------|----------------------------------------------------------------------------------------------------|
| <b>Interface</b>              | Physical interface configured for the Ethernet ring. This can be an aggregated Ethernet link also. |
| <b>Originating Node</b>       | Node from which RAPS protocol data units originates on the Ethernet Ring.                          |
| <b>Blocked Port Reference</b> | Reference of the ring port on which traffic is blocked.                                            |

## Sample Output

### show protection-group ethernet-ring flush-info (ACX and MX Series Routers)

```

user@host> show protection-group ethernet-ring flush-info
Ethernet ring flush port information for protection group pg100

Interface      Originating Node  Blocked Port Reference

```

```
xe-5/0/2.4001 00:00:00:00:00:00 0
xe-2/2/0.4001 00:00:00:00:00:00 0
```

#### show protection-group ethernet-ring flush-info detail (ACX and MX Series Routers)

```
user@host> show protection-group ethernet-ring flush-info detail
Ethernet ring flush port information for protection group pg100
```

```
Interface name           : xe-5/0/2.4001
Originating Node         : 00:00:00:00:00:00
Blocked Port Reference    : 0
```

```
Interface name           : xe-2/2/0.4001
Originating Node         : 00:00:00:00:00:00
Blocked Port Reference    : 0
```

Output fields are listed in the approximate order in which they appear.                                                                                                                                                                                                                                                                                         |

**Table 155: MX Series Routers show protection-group ethernet-ring interface Output Fields**

| Field Name                                                           | Field Description                                                                                   |
|----------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------|
| Ethernet ring port parameters for protection group <i>group-name</i> | Output is organized by configured protection group.                                                 |
| Interface                                                            | Physical interfaces configured for the Ethernet ring. This can be an aggregated Ethernet link also. |
| Control Channel                                                      | (MX Series router only) Logical unit configured on the physical interface.                          |

Table 155: MX Series Routers show protection-group ethernet-ring interface Output Fields (*continued*)

| Field Name               | Field Description                                                                                                                                        |
|--------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| Direction                | Direction of the traffic.                                                                                                                                |
| Forward State            | State of the ring forwarding on the interface: <b>discarding</b> or <b>forwarding</b> .                                                                  |
| Ring Protection Link End | Whether this interface is the end of the ring: <b>Yes</b> or <b>No</b> .                                                                                 |
| Signal Failure           | Whether there a signal failure exists on the link: <b>Clear</b> or <b>Set</b> .                                                                          |
| Admin State              | State of the interface: For EX switches, <b>ready</b> , <b>ifl ready</b> , or <b>waiting</b> . For MX routers, <b>IFF ready</b> or <b>IFF disabled</b> . |

## Sample Output

### show protection-group ethernet-ring interface (EX Series Switch Owner Node)

```
user@host> show protection-group ethernet-ring interface
Ethernet ring port parameters for protection group pg101

Interface      Forward State  RPL End  Signal Failure  Admin State
ge-0/0/3.0     discarding     Yes      Clear          ready
ge-0/0/9.0     forwarding     No       Clear          ready
```

### show protection-group ethernet-ring interface (Owner Node MX Series Router )

```
user@host> show protection-group ethernet-ring interface
Ethernet ring port parameters for protection group pg101

Interface  Control Channel  Direction  Forward State  RPL End  SF      Admin State
ge-1/2/0   ge-1/2/0.100    east      forwarding     No       Clear   IFF ready
ge-1/2/2   ge-1/2/2.100    west      forwarding     No       Clear   IFF ready
```

### show protection-group ethernet-ring interface detail (Owner Node MX Series Router )

```
user@host> show protection-group ethernet-ring interface detail
Ethernet ring port parameters for protection group pg101

Interface name           : ge-1/2/0
Control channel name     : ge-1/2/0.100
Interface direction      : east
Ring Protection Link End : No
Signal Failure           : Clear
Forward State            : forwarding
Interface Admin State    : IFF ready

Interface name           : ge-1/2/2
Control channel name     : ge-1/2/2.100
Interface direction      : west
Ring Protection Link End : No
Signal Failure           : Clear
```

```
Forward State           : forwarding
Interface Admin State   : IFF ready
```

#### show protection-group ethernet-ring interface (EX Series Switch Ring Node)

```
user@host> show protection-group ethernet-ring interface
Ethernet ring port parameters for protection group pg102

Ethernet ring port parameters for protection group pg101

Interface      Forward State  RPL End  Signal Failure  Admin State
ge-0/0/3.0     discarding    Yes      Clear           ready
ge-0/0/9.0     forwarding    No       Clear           ready
```

#### show protection-group ethernet-ring interface detail (ACX Series and MX Series)

```
user@host> show protection-group ethernet-ring interface detail
Ethernet ring port parameters for protection group Erp_1

Interface name           : xe-0/0/0
Control channel name     : xe-0/0/0.1
Interface direction      : east
Ring Protection Link End : No
Signal Failure           : Clear
Forward State            : forwarding
Interface Admin State    : IFF ready

Interface name           : et-0/0/48
Control channel name     : et-0/0/48.1
Interface direction      : west
Ring Protection Link End : No
Signal Failure           : Clear
Forward State            : forwarding
Interface Admin State    : IFF ready
```

Table 156: show protection-group ethernet-ring node-state Output Fields (*continued*)

| Field Name                   | Field Description                                           |
|------------------------------|-------------------------------------------------------------|
| Op State / Operational State | State of the node: Operational or any internal wait state.. |

## Sample Output

### show protection-group ethernet-ring node-state (MX Series Router - RPL Owner Node, Normal Operation)

```

user@host> show protection-group ethernet-ring node-state
Ethernet ring  APS State  Event      RPL Owner  WTR Timer  WTB Timer  Guard
Timer  Operation state
pg101      idle      NR-RB      Yes        disabled   disabled   disabled
operational
pg102      idle      NR-RB      No         disabled   disabled   disabled
operational

```

### show protection-group ethernet-ring node-state (MX Series Router - Normal Ring Node, Normal Operation)

```

user@host> show protection-group ethernet-ring node-state
Ethernet ring  APS State  Event      RPL Owner
pg102          idle      NR-RB      No

WTR Timer  WTB Timer  Guard Timer  Operation state
disabled   disabled   disabled     operational

```

### show protection-group ethernet-ring node-state (MX Series Router - RPL Owner Node, Remote Failure Condition)

```

user@host> show protection-group ethernet-ring node-state
Ethernet ring  APS State  Event      RPL Owner
pg101          protected  remote SF   Yes

WTR Timer  WTB Timer  Guard Timer  Operation state
disabled   disabled   disabled     operational

```

### show protection-group ethernet-ring node-state detail (ACX Series and MX Series Router)

```

user@host> show protection-group ethernet-ring node-state detail
Ethernet-Ring name      : Erp_1
APS State                : idle
Event                   : NR-RB
Ring Protection Link Owner : No
Wait to Restore Timer    : disabled
Wait to Block Timer      : disabled
Guard Timer              : disabled
Operation state          : operational

```

### show protection-group ethernet-ring node-state detail (MX Series Router - RPL Owner Node, Normal Operation)

```

user@host> show protection-group ethernet-ring node-state detail
Ethernet-Ring name      : pg101
APS State                : idle
Event                   : NR-RB
Ring Protection Link Owner : Yes
Wait to Restore Timer    : disabled
Wait to Block Timer      : disabled
Guard Timer              : disabled

```

**Table 157: show protection-group ethernet-ring statistics Output Fields**

| Field Name                      | Field Description                                                |
|---------------------------------|------------------------------------------------------------------|
| Ethernet Ring Statistics for PG | Name of the protection group for which statistics are displayed. |

**Table 157: show protection-group ethernet-ring statistics Output Fields (*continued*)**

| Field Name                      | Field Description                                                                                                                                               |
|---------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>RAPS event sent</b>          | Number of times Ring Automatic Protection Switching (RAPS) message transmission event occurred locally. This field is applicable only to MX Series routers.     |
| <b>RAPS event received</b>      | Number of RAPS messages received and processed by ERP state-machine and which resulted in state transition. This field is applicable only to MX Series routers. |
| <b>Local SF</b>                 | Number of times a signal failure has occurred locally.                                                                                                          |
| <b>Remote SF</b>                | Number of times a signal failure has occurred anywhere else on the ring.                                                                                        |
| <b>NR event</b>                 | Number of times a No Request event has occurred on the ring. This field is applicable only to EX Series switches.                                               |
| <b>NR event sent</b>            | Number of times a No Request event has occurred locally. This field is applicable only to MX Series routers.                                                    |
| <b>NR event received</b>        | Number of times a No Request event has occurred anywhere else on the ring. This field is applicable only to MX Series routers.                                  |
| <b>NR-RB event</b>              | Number of times a No Request, Ring Blocked event has occurred on the ring. This field is applicable only to EX Series switches.                                 |
| <b>NR-RB event sent</b>         | Number of times a No Request, Ring Blocked event has occurred locally. This field is applicable only to MX Series routers.                                      |
| <b>NR-RB event received</b>     | Number of times a No Request, Ring Blocked event has occurred anywhere else on the ring. This field is applicable only to MX Series routers.                    |
| <b>Flush event sent</b>         | Number of times flush-event RAPS message transmission event occurred locally. This field is applicable only to MX Series routers.                               |
| <b>Flush event received</b>     | Number of flush-event RAPS messages received and processed by the ring instance control process. This field is applicable only to MX Series routers.            |
| <b>Local FS event sent</b>      | Number of times a forced switch event has occurred locally. This field is applicable only to MX Series routers.                                                 |
| <b>Remote FS event received</b> | Number of times a forced switch event has occurred anywhere else on the ring. This field is applicable only to MX Series routers.                               |
| <b>Local MS event sent</b>      | Number of times a manual switch event has occurred locally. This field is applicable only to MX Series routers.                                                 |

**Table 157: show protection-group ethernet-ring statistics Output Fields (continued)**

| Field Name               | Field Description                                                                                                                 |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| Remote MS event received | Number of times a manual switch event has occurred anywhere else on the ring. This field is applicable only to MX Series routers. |

Table 158 on page 1901 lists the output fields for the **show protection-group ethernet-ring statistics** command when the **detail** option is used. These fields are valid only for MX Series routers.

**Table 158: show protection-group ethernet-ring statistics detail Output Fields (for MX Series Routers)**

| Field Name                               | Field Description                                                                                                                |
|------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------|
| Total number of FDB flush                | Number of times forwarding database (FDB) flush has happened for the ring instance.                                              |
| Flush-logic triggered flush              | Number of times FDB flush has happened because of flush-logic based on node ID and Blocked Port Reference (BPR).                 |
| Remote RAPS PDU received                 | Number of valid RAPS PDU messages received. This counter counts only RAPS messages generated by other devices on the ring.       |
| Remote RAPS dropped due to guard-timer   | Number of RAPS messages dropped by the device because the guard timer is running.                                                |
| Invalid remote RAPS PDU dropped          | Number of RAPS messages dropped by the device because the messages are invalid.                                                  |
| RAPS dropped due to miscellaneous errors | Number of RAPS messages dropped because of any other reason. For example, messages dropped because of unsupported functionality. |
| Local received RAPS PDU dropped          | Number of self-generated RAPS messages received and dropped.                                                                     |

## Sample Output

### show protection-group ethernet-ring statistics (EX Series Switch)

```
user@switch> show protection-group ethernet-ring statistics
Ring Name Local SF Remote SF NR Event NR-RB Event
erp1      2      1      2      3
```

### show protection-group ethernet-ring statistics (MX Series Router)

```
user@host> show protection-group ethernet-ring statistics
Ethernet Ring statistics for PG Pg-1
RAPS event sent           : 1
RAPS event received       : 1152
Local SF happened:        : 0
Remote SF happened:       : 428
```

```
NR event sent:           : 1
NR event received:       : 133
NR-RB event sent:        : 0
NR-RB event received:    : 591
Flush event sent         : 0
Flush event received:    : 0
Local FS event sent:     : 0
Remote FS event received: : 0
Local MS event sent:     : 0
Remote MS event received: : 0
```

#### show protection-group ethernet-ring statistics detail (Specific Group)(MX Series Router)

```
user@host> show protection-group ethernet-ring statistics detail
Ethernet Ring statistics for PG Pg-1
RAPS event sent           : 1
RAPS event received       : 0
Local SF happened         : 0
Remote SF happened        : 0
NR event sent             : 1
NR event received         : 0
NR-RB event sent          : 0
NR-RB event received      : 0
Flush event sent          : 0
Flush event received      : 0
Local FS event sent       : 0
Remote FS event received   : 0
Local MS event sent       : 0
Remote MS event received   : 0
Total number of FDB flush : 0
Flush-logic triggered flush : 0
Remote raps PDU received  : 0
Remote raps dropped due to guard-timer : 0
Invalid remote raps PDU dropped : 0
Raps dropped due to miscellaneous errors : 0
Local received raps PDU dropped : 0
```

#### show protection-group ethernet-ring statistics (Owner Node, Failure Condition on ACX and MX Router)

```
user@host> show protection-group ethernet-ring statistics group-name pg101
Ethernet Ring statistics for PG pg101
RAPS sent                 : 1
RAPS received             : 0
Local SF happened:        : 0
Remote SF happened:       : 0
NR event happened:        : 0
NR-RB event happened:     : 1
NR event sent:            : 0
NR event received:        : 0
NR-RB event sent:         : 1
NR-RB event received:     : 0
Flush event sent          : 0
Flush event received:     : 0
Local FS event sent:      : 0
Remote FS event received:  : 0
Local MS event sent:      : 0
Remote MS event received:  : 0
```

#### show protection-group ethernet-ring statistics (Ring Node, Failure Condition on ACX and MX Router)

```
user@host> show protection-group ethernet-ring statistics group-name pg102
```

```
Ethernet Ring statistics for PG pg102
RAPS sent                : 1
RAPS received            : 0
Local SF happened:       : 0
Remote SF happened:       : 0
NR event happened:        : 0
NR-RB event happened:     : 1
NR event sent:           : 0
NR event received:        : 0
NR-RB event sent:         : 1
NR-RB event received:     : 0
Flush event sent         : 0
Flush event received:     : 0
Local FS event sent:      : 0
Remote FS event received: : 0
Local MS event sent:      : 0
Remote MS event received: : 0
```

## show protection-group ethernet-ring vlan

|                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| <b>Output Fields</b>            | Table 159 on page 1904 lists the output fields for the <b>show protection-group ethernet-ring vlan</b> command. Output fields are listed in the approximate order in which they appear.                                                                                                                                                                                                                                                                                               |

**Table 159: show protection-group ethernet-ring vlan Output Fields**

| Field Name       | Field Description                                                                                                                                                                                                                                                                                                                                                                                                      |
|------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Interface</b> | Name of the interface configured for the Ethernet protection ring.                                                                                                                                                                                                                                                                                                                                                     |
| <b>Vlan</b>      | Name of the VLAN associated with the interface configured for the Ethernet protection ring.                                                                                                                                                                                                                                                                                                                            |
| <b>STP index</b> | The Spanning Tree Protocol (STP) index number used by each interface in an Ethernet ring. The STP index controls the forwarding behavior for a set of VLANs on a data channel on an Ethernet ring port. For multiple Ethernet ring instances on a physical ring port, there are multiple STP index numbers. Different ring instances will have different STP index numbers and may have different forwarding behavior. |

Table 159: show protection-group ethernet-ring vlan Output Fields (*continued*)

| Field Name    | Field Description                                                                                       |
|---------------|---------------------------------------------------------------------------------------------------------|
| Bridge Domain | Name of the bridge domain that is associated with the VLAN configured for the Ethernet protection ring. |

## Sample Output

### show protection-group ethernet-ring vlan

```
user@host> show protection-group ethernet-ring vlan
Ethernet ring IFBD parameters for protection group vkm01
```

| Interface | Vlan | STP Index | Bridge Domain       |
|-----------|------|-----------|---------------------|
| xe-5/0/2  | 1    | 78        | default-switch/bd1  |
| xe-2/2/0  | 1    | 79        | default-switch/bd1  |
| xe-5/0/2  | 2    | 78        | default-switch/bd2  |
| xe-2/2/0  | 2    | 79        | default-switch/bd2  |
| xe-5/0/2  | 3    | 78        | default-switch/bd3  |
| xe-2/2/0  | 3    | 79        | default-switch/bd3  |
| xe-5/0/2  | 4    | 78        | default-switch/bd4  |
| xe-2/2/0  | 4    | 79        | default-switch/bd4  |
| xe-5/0/2  | 5    | 78        | default-switch/bd5  |
| xe-2/2/0  | 5    | 79        | default-switch/bd5  |
| xe-5/0/2  | 6    | 78        | default-switch/bd6  |
| xe-2/2/0  | 6    | 79        | default-switch/bd6  |
| xe-5/0/2  | 7    | 78        | default-switch/bd7  |
| xe-2/2/0  | 7    | 79        | default-switch/bd7  |
| xe-5/0/2  | 8    | 78        | default-switch/bd8  |
| xe-2/2/0  | 8    | 79        | default-switch/bd8  |
| xe-5/0/2  | 9    | 78        | default-switch/bd9  |
| xe-2/2/0  | 9    | 79        | default-switch/bd9  |
| xe-5/0/2  | 10   | 78        | default-switch/bd10 |
| xe-2/2/0  | 10   | 79        | default-switch/bd10 |
| xe-5/0/2  | 11   | 78        | default-switch/bd11 |
| xe-2/2/0  | 11   | 79        | default-switch/bd11 |
| xe-5/0/2  | 12   | 78        | default-switch/bd12 |
| xe-2/2/0  | 12   | 79        | default-switch/bd12 |
| xe-5/0/2  | 13   | 78        | default-switch/bd13 |
| xe-2/2/0  | 13   | 79        | default-switch/bd13 |
| xe-5/0/2  | 14   | 78        | default-switch/bd14 |
| xe-2/2/0  | 14   | 79        | default-switch/bd14 |
| xe-5/0/2  | 15   | 78        | default-switch/bd15 |
| xe-2/2/0  | 15   | 79        | default-switch/bd15 |

### show protection-group ethernet-ring vlan brief

```
user@host> show protection-group ethernet-ring vlan brief
Ethernet ring IFBD parameters for protection group vkm01
```

| Interface | Vlan | STP Index | Bridge Domain      |
|-----------|------|-----------|--------------------|
| xe-5/0/2  | 1    | 78        | default-switch/bd1 |
| xe-2/2/0  | 1    | 79        | default-switch/bd1 |
| xe-5/0/2  | 2    | 78        | default-switch/bd2 |
| xe-2/2/0  | 2    | 79        | default-switch/bd2 |
| xe-5/0/2  | 3    | 78        | default-switch/bd3 |
| xe-2/2/0  | 3    | 79        | default-switch/bd3 |

|          |    |    |                     |

| Interface name       | Name of the interface.                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| CA name              | Name of the connectivity association.<br><br>A connectivity association is named using the <b>connectivity-association</b> statement when you are enabling MACsec.                                                                                                                                                                                                                                                                                     |
| Cipher suite         | Name of the cipher suite used for encryption.                                                                                                                                                                                                                                                                                                                                                                                                          |
| Encryption           | Encryption setting. Encryption is enabled when this output is <b>on</b> and disabled when this output is <b>off</b> .<br><br>The encryption setting is set using the <b>no-encryption</b> statement in the connectivity association when using static connectivity association key (CAK) security mode and is set using the <b>encryption</b> statement in the secure channel when using static secure association key (SAK) or dynamic security mode. |
| Key server offset    | The offset value in a packet from which encryption can be performed.<br><br>The offset is set using the <b>offset</b> statement when configuring the connectivity association when using static connectivity association key (CAK) or dynamic security mode or the secure channel when using static secure association key (SAK) security mode.                                                                                                        |

Table 160: show security macsec connections Output Fields (*continued*)

| Field Name            | Field Description                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Include SCI</b>    | <p>SCI tagging. The SCI tag is included on packets in a secure channel when this output is <b>yes</b>, and not included on packets in a secure channel when this output is <b>no</b>. SCI tagging is automatically enabled on MX Series routers.</p> <p>By default, include SCI tag is disabled. You can enable SCI tagging using the <b>include-sci</b> statement in the connectivity association configuration.</p> |
| <b>Replay protect</b> | <p>By default, replay protection is disabled. Replay protection ensures that a snooped packet is not replayed or a packet number is reused. Replay protection is enabled when this output is <b>on</b> and disabled when this output is <b>off</b>.</p> <p>You can enable replay protection using the <b>replay-protect</b> statement in the connectivity association configuration.</p>                              |
| <b>Replay window</b>  | <p>Number of packets that can be replayed. Must be configured with replay protection. This output is set to <b>0</b> when replay protection is disabled, and is the size of the replay window, in number of packets, when replay protection is enabled.</p> <p>The size of the replay window is configured using the <b>replay-window-size</b> statement in the connectivity association configuration.</p>           |

## Sample Output

### show security macsec connections

```

user@host> show security macsec connections
Interface name: xe-0/1/0
  CA name: CA1
  Cipher suite: GCM-AES-128   Encryption: on
  Key server offset: 0        Include SCI: no
  Replay protect: off         Replay window: 0

```

### show security macsec connections (MX480 routers with MPC7E-10G)

```

user@host> show security macsec connections
Interface name: xe-4/0/18
  CA name: ca1
  Cipher suite: GCM-AES-128   Encryption: on
  Key server offset: 30       Include SCI: no
  Replay protect: off         Replay window: 0
  Outbound secure channels
    SC Id: 54:1E:56:B4:0D:3A/1
    Outgoing packet number: 11
  Secure associations
    AN: 1 Status: inuse Create time: 1d 17:31:10
  Inbound secure channels
    SC Id: 54:1E:56:B3:CA:A7/1
    Secure associations
    AN: 1 Status: inuse Create time: 1d 17:31:10

```

### show security macsec connections (MX480 routers with MPC7E-10G)

```

user@host> show security macsec connections interface xe-1/0/7

```

```
CA name: caae1
  Cipher suite: AES_GCM_128   Encryption: off
  Key server offset: 0        Include SCI: no
  Replay protect: off         Replay window: 0
    Outbound secure channels
      SC Id: 54:1E:56:B3:CA:9C/1
      Outgoing packet number: 1
      Secure associations
        AN: 0 Status: inuse Create time: 4d 05:56:06

        AN: 0 Status: inuse Create time: 4d 05:56:06
```

## show security macsec statistics (MX Series)

**Syntax** show security macsec statistics  
<brief | detail>  
<interface *interface-name*>

**Release Information** Command introduced in Junos OS Release 15.1 for MX240, MX480, and MX960 routers. Support for MPC7E-10G introduced in Junos OS Release 16.1R1 for MX240, MX480, and MX960 routers.

**Description** Display Media Access Control Security (MACsec) statistics.

**Options** **none**—Display MACsec statistics in brief form for all interfaces on the router.

**brief | detail**—(Optional) Display the specified level of output. Using the **brief** option is equivalent to entering the command with no options (the default). The **detail** option displays additional fields that are not visible in the **brief** output.

**NOTE:** The field names that only appear in this command output when you enter the **detail** option are mostly useful for debugging purposes by Juniper Networks support personnel.

**interface interface-name**—(Optional) Display MACsec statistics for the specified interface only.

**Required Privilege Level** view

**List of Sample Output** [show security macsec statistics interface detail on page 1913](#)  
[show security macsec statistics \(MX480 router with MPC7E-10G\) on page 1914](#)  
[show security macsec statistics \(MX480 router with MPC7E-10G\) on page 1914](#)  
[show security macsec statistics detail \(MX480 router with MPC7E-10G\) on page 1915](#)

**Output Fields** [Table 161 on page 1911](#) lists the output fields for the **show security macsec statistics** command. Output fields are listed in the approximate order in which they appear.

The field names that appear in this command's output only when you enter the **detail** option are mostly useful for debugging purposes by Juniper Networks support personnel. Those field names are, therefore, not included in this table.

**Table 161: show security macsec statistics Output Fields**

| Field Name                            | Field Description      | Level of Output |
|---------------------------------------|------------------------|-----------------|
| Interface name                        | Name of the interface. | All levels      |
| Fields for Secure Channel transmitted |                        |                 |

Table 161: show security macsec statistics Output Fields (*continued*)

| Field Name                                       | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                 | Level of Output |
|--------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| <b>Encrypted packets</b>                         | <p>Total number of packets transmitted out of the interface in the secure channel that were secured and encrypted using MACsec.</p> <p>Data packets are sent in the secure channel when MACsec is enabled, and are secured using a secure association key (SAK).</p>                                                                                                                                                              | All levels      |
| <b>Encrypted bytes</b>                           | <p>Total number of bytes transmitted out of the interface in the secure channel that were secured and encrypted using MACsec.</p> <p>Data packets are sent in the secure channel when MACsec is enabled, and are secured using a secure association key (SAK).</p>                                                                                                                                                                | All levels      |
| <b>Protected packets</b>                         | <p>Total number of packets transmitted out of the interface in the secure channel that were secured but not encrypted using MACsec.</p> <p>Data packets are sent in the secure channel when MACsec is enabled, and are secured using a secure association key (SAK).</p>                                                                                                                                                          | All levels      |
| <b>Protected bytes</b>                           | <p>Total number of bytes transmitted out of the interface in the secure channel that were secured but not encrypted using MACsec.</p> <p>Data packets are sent in the secure channel when MACsec is enabled, and are secured using a secure association key (SAK).</p>                                                                                                                                                            | All levels      |
| <b>Fields for Secure Association transmitted</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                   |                 |
| <b>Encrypted packets</b>                         | <p>Total number of packets transmitted out of the interface in the connectivity association that were secured and encrypted using MACsec.</p> <p>The total includes the data packets transmitted in the secure channel and secured using a SAK and the control packets secured using a connectivity association key (CAK).</p>                                                                                                    | All levels      |
| <b>Protected packets</b>                         | <p>Total number of packets transmitted out of the interface in the connectivity association that were secured but not encrypted using MACsec.</p> <p>The total includes the data packets transmitted in the secure channel and secured using a SAK and the control packets secured using a connectivity association key (CAK).</p>                                                                                                | All levels      |
| <b>Fields for Secure Channel received</b>        |                                                                                                                                                                                                                                                                                                                                                                                                                                   |                 |
| <b>Accepted packets</b>                          | <p>The number of received packets that have been accepted by the secure channel on the interface. The secure channel is used to send all data plane traffic on a MACsec-enabled link.</p> <p>A packet is considered accepted for this counter when it has been received by this interface and it has passed the MACsec integrity check.</p> <p>This counter increments for traffic that is and is not encrypted using MACsec.</p> | All levels      |

Table 161: show security macsec statistics Output Fields (*continued*)

| Field Name                                    | Field Description                                                                                                                                                                                                                                                                                                                                                                                     | Level of Output |
|-----------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| <b>Validated bytes</b>                        | <p>The number of bytes that have been validated by the MACsec integrity check and received on the secure channel on the interface. The secure channel is used to send all data plane traffic on a MACsec-enabled link.</p> <p>This counter does not increment when MACsec encryption is disabled.</p>                                                                                                 | All levels      |
| <b>Decrypted bytes</b>                        | <p>The number of bytes received in the secure channel on the interface that have been decrypted. The secure channel is used to send all data plane traffic on a MACsec-enabled link.</p> <p>An encrypted byte has to be decrypted before it can be received on the receiving interface. The decrypted bytes counter is incremented for received traffic that was encrypted using MACsec.</p>          | All levels      |
| <b>Fields for Secure Association received</b> |                                                                                                                                                                                                                                                                                                                                                                                                       |                 |
| <b>Accepted packets</b>                       | <p>The number of received packets that have been accepted in the connectivity association on the interface. The counter includes all control and data plane traffic accepted on the interface.</p> <p>A packet is considered accepted for this counter when it has been received by this interface and it has passed the MACsec integrity check.</p>                                                  | All levels      |
| <b>Validated bytes</b>                        | <p>The number of bytes that have been validated by the MACsec integrity check and received on the connectivity association on the interface. The counter includes all control and data plane traffic accepted on the interface.</p> <p>This counter does not increment when MACsec encryption is disabled.</p>                                                                                        | All levels      |
| <b>Decrypted bytes</b>                        | <p>The number of bytes received in the connectivity association on the interface that have been decrypted. The counter includes all control and data plane traffic accepted on the interface.</p> <p>An encrypted byte has to be decrypted before it can be received on the receiving interface. The decrypted bytes counter is incremented for received traffic that was encrypted using MACsec.</p> | All levels      |

## Sample Output

### show security macsec statistics interface detail

```
user@host> show security macsec statistics interface xe-0/1/0 detail

## show security mka sessions (MX Series)

|                                 |                                                                                                                                                                                                                                                        |
|---------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>                   | show security mka sessions<br><interface <i>interface-name</i> >                                                                                                                                                                                       |
| <b>Release Information</b>      | Command introduced in Junos OS Release 15.1 for MX240, MX480, and MX960 routers. Support for MPC7E-10G introduced in Junos OS Release 16.1R1 for MX240, MX480, and MX960 routers.                                                                      |
| <b>Description</b>              | Display MACsec Key Agreement (MKA) session information for all interfaces. The MKA protocol is responsible for maintaining MACsec on the link, and decides which router on the point-to-point link becomes the key server.                             |
| <b>Options</b>                  | <ul style="list-style-type: none"> <li><b>interface <i>interface-name</i></b>—(Optional) Display the MKA session information for the specified interface only.</li> <li><b>none</b>—Display the MKA session information for all interfaces.</li> </ul> |
| <b>Required Privilege Level</b> | view                                                                                                                                                                                                                                                   |
| <b>List of Sample Output</b>    | <a href="#">show security mka sessions on page 1917</a><br><a href="#">show security mka sessions (MX480 with MPC7E-10G) on page 1917</a><br><a href="#">show security mka sessions (MX480 with MPC7E-10G) on page 1918</a>                            |
| <b>Output Fields</b>            | Table 162 on page 1916 lists the output fields for the <b>show security mka sessions</b> command. Output fields are listed in the approximate order in which they appear.                                                                              |

Table 162: show security mka sessions Output Fields

| Field Name        | Field Description                                                                                                                                                                    |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Interface name    | Name of the interface.                                                                                                                                                               |
| Member identifier | Name of the member identifier.                                                                                                                                                       |
| CAK name          | Name of the connectivity association key (CAK). The CAK is configured using the <b>cak</b> keyword when configuring the pre-shared key.                                              |
| Transmit interval | The transmit interval. Both ends of the point-to-point link should be configured to the same value. Default value is 2000 seconds. Possible values: 2000 through 10000 milliseconds. |
| Outbound SCI      | Name of the outbound secure channel identifier.                                                                                                                                      |
| Message number    | Number of the last data message.                                                                                                                                                     |
| Key number        | Key number.                                                                                                                                                                          |

Table 162: show security mka sessions Output Fields (*continued*)

| Field Name           | Field Description                                                                                                                                                                 |
|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Key server           | Key server status.<br><br>The router is the key server when this output is <b>yes</b> . The router is not the key server when this output is <b>no</b> .                          |
| Key server priority  | Displays the priority of the key server. Lower value indicates higher priority. Use the <b>key-server-priority</b> statement to set the priority. Possible values: 0 through 255. |
| Latest SAK AN        | Name of the latest secure association key (SAK) association number.                                                                                                               |
| Latest SAK KI        | Name of the latest secure association key (SAK) key identifier.                                                                                                                   |
| Fields for Peer list |                                                                                                                                                                                   |
| Member identifier    | Name of the member identifier.                                                                                                                                                    |
| Hold time            | Hold time, in seconds.                                                                                                                                                            |
| Message number       | Number of the last data message                                                                                                                                                   |
| SCI                  | Name of the secure channel identifier.                                                                                                                                            |
| Lowest acceptable PN | Number of the lowest acceptable packet number (PN).                                                                                                                               |

| <b>Output Fields</b>            | <a href="#">Table 163 on page 1919</a> lists the output fields for the <b>show security mka statistics</b> command. Output fields are listed in the approximate order in which they appear.                                                       |

**Table 163: show security mka statistics Output Fields**

| Field Name                      | Field Description                                                                                                                                                                                                                                                                                    |
|---------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Received packets</b>         | Number of received MKA control packets.<br><br>This counter increments for received MKA control packets only. This counter does not increment when data packets are received.                                                                                                                        |
| <b>Transmitted packets</b>      | Number of transmitted MKA packets<br><br>This counter increments for transmitted MKA control packets only. This counter does not increment when data packets are transmitted.                                                                                                                        |
| <b>Version mismatch packets</b> | Number of version mismatch packets.                                                                                                                                                                                                                                                                  |
| <b>CAK mismatch packets</b>     | Number of Connectivity Association Key (CAK) mismatch packets.<br><br>This counter increments when the connectivity association key (CAK) and connectivity association key name (CKN), which are user-configured values that have to match to enable MACsec, do not match for an MKA control packet. |

Table 163: show security mka statistics Output Fields (*continued*)

| Field Name                           | Field Description                                                                                                                                                                 |
|--------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ICV mismatch packets                 | Number of ICV mismatched packets.<br><br>This counter increments when the connectivity association key (CAK) value does not match on both ends of a MACsec-secured Ethernet link. |
| Duplicate message identifier packets | Number of duplicate message identifier packets.                                                                                                                                   |
| Duplicate message number packets     | Number of duplicate message number packets.                                                                                                                                       |
| Duplicate address packets            | Number of duplicate source MAC address packets.                                                                                                                                   |
| Invalid destination address packets  | Number of invalid destination MAC address packets.                                                                                                                                |
| Formatting error packets             | Number of formatting error packets.                                                                                                                                               |
| Old Replayed message number packets  | Number of old replayed message number packets.                                                                                                                                    |

## Sample Output

### show security mka statistics

```

user@host> show security mka statistics

Received packets:          1525844
Transmitted packets:       1525841
Version mismatch packets:  0
CAK mismatch packets:      0
ICV mismatch packets:      0
Duplicate message identifier packets: 0
Duplicate message number packets: 0
Duplicate address packets:  0
Invalid destination address packets: 0
Formatting error packets:   0
Old Replayed message number packets: 0

```

### show security mka statistics (MX480 routers with MPC7E-10G)

```

user@host> show security mka statistics
Interface name: xe-4/0/18
Received packets:          73009
Transmitted packets:       73011
Version mismatch packets:  0
CAK mismatch packets:      1
ICV mismatch packets:      0
Duplicate message identifier packets: 0
Duplicate message number packets: 0
Duplicate address packets:  0
Invalid destination address packets: 0
Formatting error packets:   0
Old Replayed message number packets: 0

```

**show security mka statistics (MX480 routers with MPC7E-10G)**

```
user@host> show security mka statistics interface xe-1/0/7
Received packets:                179211
  Transmitted packets:           179186
  Version mismatch packets:      0
  CAK mismatch packets:          0
  ICV mismatch packets:          0
  Duplicate message identifier packets: 0
  Duplicate message number packets: 0
  Duplicate address packets:     0
  Invalid destination address packets: 0
  Formatting error packets:      0
  Old Replayed message number packets: 0
```

| <b>Advertisement Threshold</b>               | A value from 1 through 15, used for setting the time when a peer should be considered down.<br><br><ul style="list-style-type: none"> <li>The time a peer is considered down is equal to the advertisement-threshold multiplied by the advertisement-interval.</li> <li>(advertisement-threshold *advertisement-interval) = Peer down.</li> </ul> | <b>detail extensive</b> |
| <b>Computed Send Rate</b>                    | How many protocol data units (PDUs) are generated per second.<br><br>Based on the number of instances and the advertisement interval.                                                                                                                                                                                                             | <b>detail extensive</b> |
| <b>Preempt</b>                               | Whether preemption is allowed on the interface: <b>yes</b> or <b>no</b> .                                                                                                                                                                                                                                                                         | <b>detail extensive</b> |
| <b>Accept-data mode</b>                      | Whether the interface is configured to accept packets destined for the virtual IP address: <b>yes</b> or <b>no</b> .                                                                                                                                                                                                                              | <b>detail extensive</b> |
| <b>VIP count</b>                             | Number of virtual IP addresses that have been configured on the interface.                                                                                                                                                                                                                                                                        | <b>detail extensive</b> |
| <b>VIP</b>                                   | List of virtual IP addresses configured on the interface.                                                                                                                                                                                                                                                                                         | <b>detail extensive</b> |
| <b>Advertisement timer</b>                   | How long, in seconds, until the advertisement timer expires.                                                                                                                                                                                                                                                                                      | <b>detail extensive</b> |
| <b>Master router</b>                         | IP address of the interface that is acting as the master. If the VRRP interface is down, the output is <b>N/A</b> .                                                                                                                                                                                                                               | <b>detail extensive</b> |
| <b>Virtual router uptime</b>                 | How long, in seconds, that the virtual router has been up.                                                                                                                                                                                                                                                                                        | <b>detail extensive</b> |
| <b>Master router uptime</b>                  | How long, in seconds, that the master route has been up.                                                                                                                                                                                                                                                                                          | <b>detail extensive</b> |
| <b>Virtual MAC</b>                           | MAC address associated with the virtual IP address.                                                                                                                                                                                                                                                                                               | <b>detail extensive</b> |
| <b>Tracking</b>                              | Whether tracking is <b>enabled</b> or <b>disabled</b> .                                                                                                                                                                                                                                                                                           | <b>detail extensive</b> |
| <b>Current priority</b>                      | Current operational priority for being the VRRP master.                                                                                                                                                                                                                                                                                           | <b>detail extensive</b> |
| <b>Configured priority</b>                   | Configured base priority for being the VRRP master.                                                                                                                                                                                                                                                                                               | <b>detail extensive</b> |
| <b>Priority hold-time</b>                    | Minimum time interval, in seconds, between successive changes to the current priority. <b>Disabled</b> indicates no minimum interval.                                                                                                                                                                                                             | <b>detail extensive</b> |
| <b>Remaining-time</b>                        | ( <b>track</b> option only) Displays the time remaining in the priority hold-time interval.                                                                                                                                                                                                                                                       | <b>detail</b>           |
| <b>Interface tracking</b>                    | Whether interface tracking is enabled or disabled. When enabled, the output also displays the number of tracked interfaces.                                                                                                                                                                                                                       | <b>detail extensive</b> |
| <b>Interface/Tracked interface/Track Int</b> | Name of the tracked interface.                                                                                                                                                                                                                                                                                                                    | <b>detail extensive</b> |

Table 164: show vrrp Output Fields (*continued*)

| Field Name                             | Field Description                                                                                                                                                                                                                                                                                              | Level of Output         |
|----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
| <b>Int state/Interface state/State</b> | Current operational state of the tracked interface: <b>up</b> or <b>down</b> .                                                                                                                                                                                                                                 | <b>detail extensive</b> |
| <b>Int speed/Speed</b>                 | Current operational speed, in bits per second, of the tracked interface.                                                                                                                                                                                                                                       | <b>detail extensive</b> |
| <b>Incurred priority cost</b>          | Operational priority cost incurred due to the state and speed of this tracked interface. This cost is applied to the configured priority to obtain the current priority.                                                                                                                                       | <b>detail extensive</b> |
| <b>Threshold</b>                       | Speed below which the corresponding priority cost is incurred. In other words, when the speed of the interface drops below the threshold speed, the corresponding priority cost is incurred.<br><br>An entry of <b>down</b> means that the corresponding priority cost is incurred when the interface is down. | <b>detail extensive</b> |
| <b>Route tracking</b>                  | Whether route tracking is enabled or disabled. When enabled, the output also displays the number of tracked routes.                                                                                                                                                                                            | <b>detail extensive</b> |
| <b>Route count</b>                     | The number of routes being tracked.                                                                                                                                                                                                                                                                            | <b>detail extensive</b> |
| <b>Route</b>                           | The IP address of the route being tracked.                                                                                                                                                                                                                                                                     | <b>detail extensive</b> |
| <b>VRF name</b>                        | The VPN routing and forwarding (VRF) routing instance that the tracked route is in.                                                                                                                                                                                                                            | <b>detail extensive</b> |
| <b>Route state</b>                     | The state of the route being tracked: <b>up</b> , <b>down</b> , or <b>unknown</b> .                                                                                                                                                                                                                            | <b>detail extensive</b> |
| <b>Priority cost</b>                   | Configured priority cost. This value is incurred when the interface speed drops below the corresponding threshold or when the tracked route goes down.                                                                                                                                                         | <b>detail extensive</b> |
| <b>Active</b>                          | Whether the threshold is active (*). If the threshold is active, the corresponding priority cost is incurred.                                                                                                                                                                                                  | <b>detail extensive</b> |
| <b>Group VRRP PDU statistics</b>       | Number of VRRP advertisements sent and received by the group.                                                                                                                                                                                                                                                  | <b>extensive</b>        |

Table 164: show vrrp Output Fields (*continued*)

| Field Name                        | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Level of Output    |

### show vrrp nsr

This command is similar to **show vrrp**. Here, the **VR state** column displays the current VRRP state on the master Routing Engine, which is the future VRRP state for the backup Routing Engine. Do not use on the master Routing Engine.

NSR is yes if VRRP nonstop active routing is enabled for the configured VRRP group.

RPD-NSR is yes if the routing options have been set to nonstop active routing.

```

| <b>Description</b>              | <p>Triggers the linktrace protocol to trace the route between two maintenance points. The result of the traceroute protocol is stored in the path database. To display the path database, use the <b>show oam ethernet connectivity-fault-management path-database</b> command.</p> <p>Before using the traceroute command, you can verify the remote MEP's MAC address using the <b>show oam ethernet connectivity-fault-management path-database</b> command.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Options</b>                  | <p><b>local-mep <i>mep-id</i></b>—(Required when multiple MEPs are configured) Identifier for the local maintenance endpoint.</p> <p><b>detail</b>—(Optional) Provide detailed information of the responder hostname, ingress port name, egress port name, TTL, and relay action.</p> <p><b>mac-address</b>—Destination unicast MAC address of the remote maintenance point.</p> <p><b>mep-id</b>—MEP identifier of the remote maintenance point. The range of values is 1 through 8191.</p> <p><b>maintenance-association <i>ma-name</i></b>—Specifies an existing maintenance association from the set of configured maintenance associations.</p> <p><b>maintenance-domain <i>md-name</i></b>—Specifies an existing maintenance domain from the set of configured maintenance domains.</p> <p><b>ttl <i>value</i></b>—Number of hops to use in the linktrace request. The range is 1 to 255 hops. The default is 4.</p> <p><b>wait <i>seconds</i></b>—(Optional) Maximum time to wait for a response to the traceroute request. The range is 1 to 255 seconds. The default is 5.</p> |
| <b>Required Privilege Level</b> | network                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>List of Sample Output</b>    | <p><a href="#">traceroute ethernet on page 1935</a></p> <p><a href="#">traceroute ethernet detail on page 1935</a></p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

**Output Fields** Table 165 on page 1934 lists the output fields for the **traceroute ethernet** command. Output fields are listed in the approximate order in which they appear.

**Table 165: traceroute ethernet Output Fields**

| Field Name                     | Field Description                                                                                                                                                                                                                                                            |
|--------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Linktrace to</b>            | MAC address of the destination maintenance point.                                                                                                                                                                                                                            |
| <b>Interface</b>               | Local interface used to send the linktrace message (LTM).                                                                                                                                                                                                                    |
| <b>Maintenance Domain</b>      | Maintenance domain specified in the traceroute command.                                                                                                                                                                                                                      |
| <b>Level</b>                   | Maintenance domain level configured.                                                                                                                                                                                                                                         |
| <b>Maintenance Association</b> | Maintenance association specified in the traceroute command.                                                                                                                                                                                                                 |
| <b>Local Mep</b>               | The local maintenance end point identifier.                                                                                                                                                                                                                                  |
| <b>Transaction Identifier</b>  | 4-byte identifier maintained by the MEP. Each LTM uses a transaction identifier. The transaction identifier is maintained globally across all Maintenance Domains. Use the transaction identifier to match an incoming linktrace response (LTR), with a previously sent LTM. |
| <b>Hop</b>                     | Sequential hop count of the linktrace path.                                                                                                                                                                                                                                  |
| <b>TTL</b>                     | Number of hops remaining in the linktrace message. The time to live (TTL) is decremented at each hop.                                                                                                                                                                        |
| <b>Source MAC address</b>      | MAC address of the 802.1ag node responding to the LTM or the source MAC address of the LTR.                                                                                                                                                                                  |
| <b>Next-hop MAC address</b>    | MAC address of the egress interface of the node to which the LTM is forwarded or<br><br>the next-hop MAC address derived from the next egress identifier in the Egress-ID TLV of the LTR PDU.                                                                                |
| <b>Responder Hostname</b>      | The hostname of the responding router. A valid hostname is received only when the responding system is a Juniper Networks router.                                                                                                                                            |
| <b>Ingress port name</b>       | The port name for ingress connections.                                                                                                                                                                                                                                       |
| <b>Egress port name</b>        | The port name for egress connections.                                                                                                                                                                                                                                        |
| <b>Flags</b>                   | The configurable flags can include: <ul style="list-style-type: none"> <li>• H— Hardware only, incoming LT frame has hardware bit set.</li> <li>• T— Terminal MEP, responder is a terminating MEP.</li> <li>• F— FWD yes, LTM frame is relayed further.</li> </ul>           |

Table 165: traceroute ethernet Output Fields (*continued*)

| Field Name          | Field Description                                                                                                                                                                                                                                                                                                                                          |
|---------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Relay Action</b> | The associated relay action. Relay action can be one of the following: <ul style="list-style-type: none"> <li>RlyHit— Relay hit; target MAC address matches the MP mac address.</li> <li>RlyFDB— Relay FDB; output port decided by consulting forwarding database.</li> <li>RlyMPDB— Relay MIP; output port decided by consulting MIP database.</li> </ul> |

## Sample Output

### traceroute ethernet

```
user@host> traceroute ethernet maintenance-domain md1 maintenance-association ma1
00:01:02:03:04:05
```

```
Linktrace to 00:01:02:03:04:05, Interface : ge-5/0/0.0
```

```
Maintenance Domain: MD1, Level: 7
```

```
Maintenance Association: MA1, Local Mep: 1
```

| Hop                           | TTL | Source MAC address | Next hop MAC address |
|-------------------------------|-----|--------------------|----------------------|
| Transaction Identifier:100001 |     |                    |                      |
| 1                             | 63  | 00:00:aa:aa:aa:aa  | 00:00:ab:ab:ab:ab    |
| 2                             | 62  | 00:00:bb:bb:bb:bb  | 00:00:bc:bc:bc:bc    |
| 3                             | 61  | 00:00:cc:cc:cc:cc  | 00:00:cd:cd:cd:cd    |
| 4                             | 60  | 00:01:02:03:04:05  | 00:00:00:00:00:00    |

### traceroute ethernet detail

```
user@host> run traceroute ethernet maintenance-domain md6 maintenance-association ma6
mep 101 detail
```

```
Linktrace to 00:00:5E:00:53:CC, Interface : ge-1/0/0.1
```

```
Maintenance Domain: md6, Level: 6
```

```
Maintenance Association: ma6, Local Mep: 201
```

```
Transaction Identifier: 2077547465
```

#### Legend for RelayAction:

```
RlyHit -- Relay hit, Target MAC address matches the MP mac address
```

```
RlyFDB -- Relay FDB, output port decided by consulting FDB database
```

```
RlyMPDB -- Relay MIP, output port decided by consulting MIP database
```

#### Legend for Flags:

```
H -- Hardware only, incoming LT frame has hardware bit set
```

```
T -- Terminal MEP, responder is a terminating MEP
```

```
F -- FWD yes, LTM frame is relayed further
```

| TTL               | Responder | Hostname | Ingress port name | Egress port name  | RelayAction |
|-------------------|-----------|----------|-------------------|-------------------|-------------|
| Responder Service |           |          |                   |                   |             |
