## Sample Output

### show interfaces (Channelized STM1 IQ) (Physical)

```
user@host> show interfaces cstm1-0/0/0
Physical interface: cstm1-0/0/0, Enabled, Physical link is Up
  Interface index: 146, SNMP ifIndex: 35
  Link-level type: Frame-relay, Controller, Clocking: Internal, SDH mode,
  Speed: OC3, Loopback: None, Parent: None  Device flags   : Present Running
  Interface flags: Point-To-Point SNMP-Traps
  Link flags      : Keepalives DTE
  ANSI LMI settings: n391dte 6, n392dte 3, n393dte 4, t391dte 10 seconds
  LMI: Input: 51700 (00:00:02 ago), Output: 51701 (00:00:02 ago)
  DTE statistics:
    Enquiries sent                : 43186
    Full enquiries sent           : 8515
    Enquiry responses received    : 43185
    Full enquiry responses received : 8515
  DCE statistics:
    Enquiries received            : 0
    Full enquiries received       : 0
    Enquiry responses sent        : 0
    Full enquiry responses sent   : 0
  Common statistics:
    Unknown messages received     : 0
    Asynchronous updates received : 0
    Out-of-sequence packets received : 0
    Keepalive responses timeout   : 0
  Nonmatching DCE-end DLCIs:
    2

```

### show interfaces (Channelized AU-4) (Physical)

```
user@host> show interfaces cau4-0/0/0
Physical interface: cau4-0/0/0, Enabled, Physical link is Up
  Interface index: 147, SNMP ifIndex: 36
  Link-level type: Controller, Clocking: Internal, SDH mode, Speed: OC3,
  Loopback: None, Parent: cstm1-0/0/0 Interface index 146
  Device flags   : Present Running
  Interface flags: Point-To-Point SNMP-Traps
  Link flags      : None
  Last flapped   : 2003-02-06 19:36:31 PST (02:40:42 ago)
  SDH alarms     : None
  SDH defects    : None
...
```

### show interfaces (Channelized E1) (Physical)

```
user@host> show interfaces ce1-0/0/0:11
Physical interface: ce1-0/0/0:11, Enabled, Physical link is Up
  Interface index: 169, SNMP ifIndex: 288
  Link-level type: Frame-relay, Controller, Clocking: Internal, Speed: E1,
  Loopback: None, Framing: G704, Parent: cau4-0/0/0 Interface index 147
  Device flags   : Present Running
  Interface flags: Point-To-Point SNMP-Traps
  Link flags      : Keepalives DTE
  ANSI LMI settings: n391dte 6, n392dte 3, n393dte 4, t391dte 10 seconds
```

```

LMI: Input: 51700 (00:00:02 ago), Output: 51701 (00:00:02 ago)

## show interfaces (Channelized STM1)

**Syntax** `show interfaces e1-fpc/pic/port:e1channel`  
`<brief | detail | extensive | terse>`  
`<descriptions>`  
`<media>`  
`<snmp-index snmp-index>`  
`<statistics>`

**Release Information** Command introduced before Junos OS Release 7.4.

**Description** (M Series and T Series routers only) Display status information about the specified channelized STM1 interface.

**Options** `e1-fpc/pic/port:e1channel`—Display standard status information about the specified channelized STM1 interface.

`brief | detail | extensive | terse`—(Optional) Display the specified level of output.

`descriptions`—(Optional) Display interface description strings.

`media`—(Optional) Display media-specific information about network interfaces.

`snmp-index snmp-index`—(Optional) Display information for the specified SNMP index of the interface.

`statistics`—(Optional) Display static interface statistics.

**Required Privilege Level** view

**List of Sample Output** [show interfaces extensive \(Channelized STM1, SDH\) on page 1171](#)

**Output Fields** [Table 53 on page 1160](#) lists the output fields for the **show interfaces** (all Channelized STM1 interfaces) command. Output fields are listed in the approximate order in which they appear.

**Table 53: Channelized STM1 show interfaces Output Fields**

| Field Name                | Field Description                                                                                                                                            | Level of Output              |
|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Physical Interface</b> |                                                                                                                                                              |                              |
| <b>Physical interface</b> | Name of the physical interface.                                                                                                                              | All levels                   |
| <b>Enabled</b>            | State of the interface. Possible values are described in the “Enabled Field” section under <a href="#">“Common Output Fields Description” on page 1032</a> . | All levels                   |
| <b>Interface index</b>    | Physical interface's index number, which reflects its initialization sequence.                                                                               | <b>detail extensive none</b> |
| <b>SNMP ifIndex</b>       | SNMP index number for the physical interface.                                                                                                                | <b>detail extensive none</b> |

Table 53: Channelized STM1 show interfaces Output Fields (*continued*)

| Field Name                | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Level of Output              |

| <b>Generation</b>         | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>detail extensive</b>      |
| <b>Link-level type</b>    | Encapsulation being used on the physical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | All levels                   |
| <b>MTU</b>                | MTU size on the physical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | All levels                   |
| <b>Clocking</b>           | Reference clock source. It can be <b>Internal</b> or <b>External</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | All levels                   |
| <b>Speed</b>              | Speed at which the interface is running.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | All levels                   |
| <b>Loopback</b>           | Whether loopback is enabled and the type of loopback ( <b>local</b> or <b>remote</b> ).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | All levels                   |
| <b>FCS</b>                | Frame check sequence on the interface (either <b>16</b> or <b>32</b> ). The default is <b>16</b> bits.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | All levels                   |
| <b>Framing</b>            | Physical layer framing format used on the link. It can be <b>G704</b> , <b>G704-NO-CRC4</b> , or <b>Unframed</b> . The default is <b>G704</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | All levels                   |
| <b>Parent</b>             | (Channelized STM1 IQ interfaces only) Name and interface index of the interface to which a particular child interface belongs. <b>None</b> indicates that this interface is the top level.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | All levels                   |
| <b>Device flags</b>       | Information about the physical device. Possible values are described in the "Device Flags" section under " <a href="#">Common Output Fields Description</a> " on page 1032.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | All levels                   |
| <b>Interface flags</b>    | Information about the interface. Possible values are described in the "Interface Flags" section under " <a href="#">Common Output Fields Description</a> " on page 1032.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | All levels                   |
| <b>Link flags</b>         | Information about the link. Possible values are described in the "Link Flags" section under " <a href="#">Common Output Fields Description</a> " on page 1032.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | All levels                   |
| <b>Hold-times</b>         | Current interface hold-time up and hold-time down, in milliseconds.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>detail extensive</b>      |
| <b>Keepalive settings</b> | (PPP and HDLC) Configured settings for keepalives. <ul style="list-style-type: none"> <li><b>intervalseconds</b>—The time in seconds between successive keepalive requests. The range is <b>10</b> seconds through <b>32,767</b> seconds, with a default of <b>10</b> seconds.</li> <li><b>down-count number</b>—The number of keepalive packets a destination must fail to receive before the network takes a link down. The range is <b>1</b> through <b>255</b>, with a default of <b>3</b>.</li> <li><b>up-count number</b>—The number of keepalive packets a destination must receive to change a link's status from down to up. The range is <b>1</b> through <b>255</b>, with a default of <b>1</b>.</li> </ul> | <b>detail extensive none</b> |

The format is <b>Last flapped: year-month-day hour:minute:second timezone (hour:minute:second ago)</b> . For example, <b>Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>detail extensive none</b> |

Table 53: Channelized STM1 show interfaces Output Fields (*continued*)

| Field Name                     | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Level of Output         |
|--------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
| <b>Statistics last cleared</b> | Time when the statistics for the interface were last set to zero.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>detail extensive</b> |
| <b>Traffic statistics</b>      | <p>Number and rate of bytes and packets received and transmitted on the physical interface.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>detail extensive</b> |
| <b>Input errors</b>            | <p>Input errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of the incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that the Junos OS does not handle.</li> <li>• <b>L3 incompletes</b>—Number of incoming packets discarded because they failed Layer 3 (usually IPv4) sanity checks of the header. For example, a frame with less than 20 bytes of available IP header is discarded.</li> <li>• <b>L2 channel errors</b>—Number of times the software did not find a valid logical interface for an incoming frame.</li> <li>• <b>L2 mismatch timeouts</b>—Number of malformed or short packets that caused the incoming packet handler to discard the frame as unreadable.</li> <li>• <b>HS link CRC errors</b>—Number of errors on the high-speed links between the ASICs responsible for handling the router interfaces.</li> <li>• <b>SRAM errors</b>—Number of hardware errors that occurred in the static RAM (SRAM) on the PIC. If the value of this field increments, the PIC is malfunctioning.</li> </ul> | <b>extensive</b>        |

Table 53: Channelized STM1 show interfaces Output Fields (*continued*)

| Field Name                              | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Level of Output              |
|-----------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Output errors</b>                    | <p>Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and then up, or another problem occurs. If the number of carrier transitions increments quickly (perhaps once every 10 seconds), the cable, the far-end system, or the PIC is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Aged packets</b>—Number of packets that remained in shared packet SDRAM so long that the system automatically purged them. The value in this field should never increment. If it does, it is most likely a software bug or possibly malfunctioning hardware.</li> </ul> | <b>extensive</b>             |
| <b>DS1 alarms</b><br><b>DS1 defects</b> | <p>E1 media-specific defects that can prevent the interface from passing packets. When a defect persists for a certain period, it is promoted to an alarm. Based on the router configuration, an alarm can ring the red or yellow alarm bell on the router, or turn on the red or yellow alarm LED on the craft interface. The following lists all possible alarms and defects. For complete explanations of most of these alarms and defects, see <i>Bellcore Telcordia GR-499-CORE</i>.</p> <ul style="list-style-type: none"> <li>• <b>LOS</b>—Loss of signal.</li> <li>• <b>LOF</b>—Loss of frame.</li> <li>• <b>AIS</b>—Alarm indication signal.</li> <li>• <b>YLW</b>—Yellow alarm. Indicates errors at the remote site receiver.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>detail extensive none</b> |
| <b>SDH alarms</b><br><b>SDH defects</b> | <p>SDH media-specific defects that can prevent the interface from passing packets. When a defect persists for a certain period, it is promoted to an alarm. Based on the router configuration, an alarm can ring the red or yellow alarm bell on the router or light the red or yellow alarm LED on the craft interface. See these fields for possible alarms and defects: SDH PHY, SDH regenerator section, SDH multiplex section, and SDH path.</p> <p><b>NOTE:</b> For controller-based SONET PICs, the SDH alarms and SDH defects output in the <b>show interface cstm1 extensive</b> command output only shows the section and line level defects. The path level defects can be found under the SONET (so) interface output.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>All levels</b>            |

| Transmitted SDH overhead               | <ul style="list-style-type: none"> <li>• <b>C2</b>—Signal label. Allocated to identify the construction and content of the STS-level SPE and for PDI-P.</li> <li>• <b>F1</b>—Section user channel byte. This byte is set aside for the purposes of users.</li> <li>• <b>K1</b> and <b>K2</b>—These bytes are allocated for APS signaling for the protection of the multiplex section.</li> <li>• <b>J0</b>—Section trace. This byte is defined for STS-1 number 1 of an STS-<i>N</i> signal. Used to transmit a 1-byte fixed-length string or a 16-byte message so that a receiving terminal in a section can verify its continued connection to the intended transmitter.</li> <li>• <b>S1</b>—Synchronization status. The S1 byte is located in the first STS-1 of an STS-<i>N</i> signal.</li> <li>• <b>Z3</b> and <b>Z4</b>—Allocated for future use.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                               |                 |
| Received path trace                    | Channelized OC12 interfaces allow path trace bytes to be sent inband across the SONET/SDH link. The received path trace value is the message received from the router at the other end of the fiber. The transmitted path trace value is the message that this router transmits. This information is specific to each of the 12 channelized OC12 interfaces.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | extensive       |

Possible values are described in the “Addresses Flags” section under <a href="#">“Common Output Fields Description” on page 1032</a> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>detail extensive none</b> |

Table 53: Channelized STM1 show interfaces Output Fields (*continued*)

| Field Name             | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Level of Output              |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Destination</b>     | IP address of the remote side of the connection.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>detail extensive none</b> |
| <b>Local</b>           | IP address of the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>detail extensive none</b> |
| <b>Broadcast</b>       | Broadcast address.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>detail extensive none</b> |
| <b>DLCI</b>            | <p>(Frame Relay) DLCI number of the logical interface. The following DLCI information is displayed: <b>Flags</b>, <b>Total down time</b>, <b>Last down</b>, and <b>Traffic statistics</b>. <b>Flags</b> is one or more of the following:</p> <ul style="list-style-type: none"> <li>• <b>Active</b>—Set when the link is active and the DTE and DCE are exchanging information.</li> <li>• <b>Down</b>—Set when the link is active, but no information is received from the DCE.</li> <li>• <b>Unconfigured</b>—Set when the corresponding DLCI in the DCE is not configured.</li> <li>• <b>Configured</b>—Set when the corresponding DLCI in the DCE is configured.</li> <li>• <b>Dce-configured</b>—Displayed when the command is issued from the DTE.</li> </ul> | <b>detail extensive none</b> |
| <b>DLCI statistics</b> | <p>(Frame Relay) Data-link connection identifier (DLCI) statistics.</p> <ul style="list-style-type: none"> <li>• <b>Active DLCI</b>—Number of active DLCIs.</li> <li>• <b>Inactive DLCI</b>—Number of inactive DLCIs.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>detail extensive none</b> |

## Sample Output

### show interfaces extensive (Channelized STM1, SDH)

```

user@host> show interfaces e1-1/0/0:1 extensive
Physical interface: e1-1/0/0:1, Enabled, Physical link is Up
  Interface index: 148, SNMP ifIndex: 285, Generation: 2915
  Link-level type: Frame-relay, MTU: 1504, SDH mode, Speed: E1, Loopback: None,
  FCS: 16, Framing: G704
  Device flags   : Present Running
  Interface flags: Point-To-Point SNMP-Traps
  Link flags     : Keepalives DTE
  ANSI LMI settings: n391dte 6, n392dte 3, n393dte 4, t391dte 10 seconds
  LMI: Input: 51700 (00:00:02 ago), Output: 51701 (00:00:02 ago)
  DTE statistics:
    Enquiries sent           : 43186
    Full enquiries sent      : 8515
    Enquiry responses received : 43185
    Full enquiry responses received : 8515
  DCE statistics:
    Enquiries received       : 0
    Full enquiries received   : 0
    Enquiry responses sent    : 0
    Full enquiry responses sent : 0
  Common statistics:
    Unknown messages received : 0
    Asynchronous updates received : 0
    Out-of-sequence packets received : 0
    Keepalive responses timedout : 0

```

```

Nonmatching DCE-end DLCIs:
    2
Hold-times      : Up 0 ms, Down 0 ms
Last flapped   : 2002-05-23 17:02:59 PDT (17:23:45 ago)
Statistics last cleared: Never
Traffic statistics:
  Input bytes :          592          48 bps
  Output bytes :          644          48 bps
  Input packets:          46           0 pps
  Output packets:          46           0 pps
Input errors:
  Errors: 0, Drops: 9, Framing errors: 0, Policed discards: 0,
  L3 incompletes: 0, L2 channel errors: 11, L2 mismatch timeouts: 0,
  HS link CRC errors: 0, SRAM errors: 0
Output errors:
  Carrier transitions: 1, Errors: 0, Drops: 0, Aged packets: 0

| Field Name                | Field Description                                                                                                                                                          | Level of Output              |
|---------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Physical Interface</b> |                                                                                                                                                                            |                              |
| <b>Physical interface</b> | Name of the physical interface.                                                                                                                                            | All levels                   |
| <b>Enabled</b>            | State of the interface. Possible values are described in the “Enabled Field” section under <a href="#">“Common Output Fields Description” on page 1032</a> .               | All levels                   |
| <b>Interface index</b>    | Physical interface's index number, which reflects its initialization sequence.                                                                                             | <b>detail extensive none</b> |
| <b>SNMP ifIndex</b>       | SNMP index number for the physical interface.                                                                                                                              | <b>detail extensive none</b> |
| <b>Generation</b>         | Unique number for use by Juniper Networks technical support only.                                                                                                          | <b>detail extensive</b>      |
| <b>Link-level type</b>    | Encapsulation being used on the physical interface.                                                                                                                        | All levels                   |
| <b>MTU</b>                | MTU size on the physical interface.                                                                                                                                        | All levels                   |
| <b>Clocking</b>           | Reference clock source. It can be <b>Internal</b> or <b>External</b> .                                                                                                     | All levels                   |
| <b>Speed</b>              | Speed at which the interface is running.                                                                                                                                   | All levels                   |
| <b>Loopback</b>           | Whether loopback is enabled and the type of loopback ( <b>local</b> or <b>remote</b> ).                                                                                    | All levels                   |
| <b>FCS</b>                | Frame check sequence on the interface (either <b>16</b> or <b>32</b> ). The default is <b>16</b> bits.                                                                     | All levels                   |
| <b>Framing</b>            | Physical layer framing format used on the link. It can be <b>ESF</b> or <b>SF</b> . The default is <b>ESF</b> .                                                            | All levels                   |
| <b>Parent</b>             | Name and interface index of the interface to which a particular child interface belongs. <b>None</b> indicates that this interface is the top level.                       | All levels                   |
| <b>Device flags</b>       | Information about the physical device. Possible values are described in the “Device Flags” section under <a href="#">“Common Output Fields Description” on page 1032</a> . | All levels                   |
| <b>Interface flags</b>    | Information about the interface. Possible values are described in the “Interface Flags” section under <a href="#">“Common Output Fields Description” on page 1032</a> .    | All levels                   |
| <b>Link flags</b>         | Information about the link. Possible values are described in the “Link Flags” section under <a href="#">“Common Output Fields Description” on page 1032</a> .              | All levels                   |
| <b>Hold-times</b>         | Current interface hold-time up and hold-time down, in milliseconds.                                                                                                        | <b>detail extensive</b>      |

Table 54: Channelized T1 IQ and T3 IQ show interfaces Output Fields (*continued*)

| Field Name           | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Level of Output       |
|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------|
| Keepalive settings   | Configured settings for keepalives. <ul style="list-style-type: none"> <li><b>interval <i>seconds</i></b>—The time in seconds between successive keepalive requests. The range is 10 seconds through 32,767 seconds, with a default of 10 seconds.</li> <li><b>down-count <i>number</i></b>—The number of keepalive packets a destination must fail to receive before the network takes a link down. The range is 1 through 255, with a default of 3.</li> <li><b>up-count <i>number</i></b>—The number of keepalive packets a destination must receive to change a link's status from down to up. The range is 1 through 255, with a default of 1.</li> </ul>                                                                              | detail extensive none |
| Keepalive statistics | Information about keepalive packets. <ul style="list-style-type: none"> <li><b>Input</b>—Number of keepalive packets received by PPP. <ul style="list-style-type: none"> <li><b>(last seen 00:00:00 ago)</b>—Time since the last keepalive packet was received, in the format <i>hh:mm:ss</i>.</li> </ul> </li> <li><b>Output</b>—Number of keepalive packets sent by PPP and how long ago the last keepalive packets were sent and received. <ul style="list-style-type: none"> <li><b>(last seen 00:00:00 ago)</b>—Time since the last keepalive packet was sent, in the format <i>hh:mm:ss</i>.</li> </ul> </li> </ul>                                                                                                                   | detail extensive none |
| LMI settings         | (Frame Relay) Settings for Local Management Interface (LMI) can be either <b>ANSI LMI settings</b> or <b>ITU LMI settings</b> . ANSI LMI settings is the default. The format is (ANSI or ITU) LMI settings: <i>value, value... xx seconds</i> , where <i>value</i> can be: <ul style="list-style-type: none"> <li><b>n391dte</b>—DTE full status polling interval (1–255)</li> <li><b>n392dce</b>—DCE error threshold (1–10)</li> <li><b>n392dte</b>—DTE error threshold (1–10)</li> <li><b>n393dce</b>—DCE monitored event count (1–10)</li> <li><b>n393dte</b>—DTE monitored event count (1–10)</li> <li><b>t391dte</b>—DTE polling timer (5–30 seconds)</li> <li><b>t392dce</b>—DCE polling verification timer (5–30 seconds)</li> </ul> | detail extensive none |
| LMI                  | (Frame Relay) LMI packet statistics: <ul style="list-style-type: none"> <li><b>Input</b>—Number of packets coming in on the interface (<i>nn</i>) and how much time has passed since the last packet arrived. The format is <b>Input: <i>nn</i> (last seen <i>hh:mm:ss</i> ago)</b>.</li> <li><b>Output</b>—Number of packets sent out on the interface (<i>nn</i>) and how much time has passed since the last packet was sent. The format is <b>Output: <i>nn</i> (last sent <i>hh:mm:ss</i> ago)</b>.</li> </ul>                                                                                                                                                                                                                         | detail extensive none |
| DTE statistics       | (Frame Relay) Statistics about messages transmitted from the data terminal equipment (DTE) to the data communication equipment (DCE): <ul style="list-style-type: none"> <li><b>Enquiries sent</b>—Number of link status enquiries sent from the DTE to the DCE.</li> <li><b>Full enquiries sent</b>—Number of full enquiries sent from the DTE to the DCE.</li> <li><b>Enquiry responses received</b>—Number of enquiry responses received by the DTE from the DCE.</li> <li><b>Full enquiry responses received</b>—Number of full enquiry responses sent from the DTE to the DCE.</li> </ul>                                                                                                                                              | detail extensive none |

Table 54: Channelized T1 IQ and T3 IQ show interfaces Output Fields (*continued*)

| Field Name                       | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Level of Output              |
|----------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>DCE statistics</b>            | (Frame Relay) Statistics about messages transmitted from the DCE to the DTE: <ul style="list-style-type: none"> <li>• <b>Enquiries received</b>—Number of enquiries received by the DCE from the DTE.</li> <li>• <b>Full enquiries received</b>—Number of full enquiries received by the DCE from the DTE.</li> <li>• <b>Enquiry responses sent</b>—Number of enquiry responses sent from the DCE to the DTE.</li> <li>• <b>Full enquiry responses sent</b>—Number of full enquiry responses sent from the DCE to the DTE.</li> </ul>                                                                                                                                                          | <b>detail extensive none</b> |
| <b>Common statistics</b>         | (Frame Relay) Statistics about messages sent between the DTE and the DCE: <ul style="list-style-type: none"> <li>• <b>Unknown messages received</b>—Number of received packets that do not fall into any category.</li> <li>• <b>Asynchronous updates received</b>—Number of link status peer changes received.</li> <li>• <b>Out-of-sequence packets received</b>—Number of packets for which the sequence of the packets received is different from the expected sequence.</li> <li>• <b>Keepalive responses timedout</b>—Number of keepalive responses that timed out when no LMI packet was reported for <b>n392dte</b> or <b>n393dce</b> intervals. (See <b>LMI settings</b>.)</li> </ul> | <b>detail extensive none</b> |
| <b>Nonmatching DCE-end DLCIs</b> | (Frame Relay) Number of DLCIs configured from the DCE, displayed only from the DTE.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>detail extensive none</b> |

Table 54: Channelized T1 IQ and T3 IQ show interfaces Output Fields (*continued*)

| Field Name           | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Level of Output  |
|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| <b>Input errors</b>  | <p>Input errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of the incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Giants</b>—Number of frames received that are larger than the giant threshold.</li> <li>• <b>Runts</b>—Number of frames received that are smaller than the runt threshold.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that the Junos OS does not handle.</li> <li>• <b>L3 incompletes</b>—Number of incoming packets discarded because they failed Layer 3 (usually IPv4) sanity checks of the header. For example, a frame with less than 20 bytes of available IP header is discarded.</li> <li>• <b>L2 channel errors</b>—Counter increments when the software could not find a valid logical interface for an incoming frame.</li> <li>• <b>L2 mismatch timeouts</b>—Count of malformed or short packets that caused the incoming packet handler to discard the frame as unreadable.</li> <li>• <b>HS link CRC errors</b>—Count of errors on the high-speed links between the ASICs responsible for handling the router interfaces.</li> <li>• <b>SRAM errors</b>—Number of hardware errors that occurred in the static RAM (SRAM) on the PIC. If the value in this field increments, the PIC is malfunctioning.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul> | <b>extensive</b> |
| <b>Output errors</b> | <p>Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and then up, or another problem occurs. If the number of carrier transitions increments quickly, (perhaps once every 10 seconds), the cable, the far-end system, or the PIC is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Aged packets</b>—Number of packets that remained in shared packet SDRAM so long that the system automatically purged them. The value in this field should never increment. If it does, it is most likely a software bug or possibly malfunctioning hardware.</li> <li>• <b>MTU errors</b>—Number of packets whose size exceeds the MTU of the interface.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>extensive</b> |

## Sample Output

### show interfaces extensive (Channelized T3 IQ) (Physical)

```
user@host> show interfaces extensive ct3-0/0/1
Physical interface: ct3-0/0/1, Enabled, Physical link is Up
  Interface index: 30, SNMP ifIndex: 317, Generation: 29
  Link-level type: Controller, MTU: 4474, Clocking: Internal, Speed: T3,
  Loopback: None, FCS: 16, Mode: C/Bit parity, Parent: None
  Device flags   : Present Running
  Interface flags: Point-To-Point SNMP-Traps
  Link flags     : None
...
```

### show interfaces extensive (Channelized T1 on Channelized T3 IQ)

```
user@host> show interfaces extensive ct1-0/0/1:2
Physical interface: ct1-0/0/1:2, Enabled, Physical link is Up
  Interface index: 175, SNMP ifIndex: 1505, Generation: 174
  Link-level type: Controller, MTU: 1504, Clocking: Internal, Speed: T1,
  Loopback: None, FCS: 16, Framing: ESF, Parent: ct3-0/0/1 (Index 32)
  Device flags   : Present Running
  Interface flags: Point-To-Point SNMP-Traps
  Link flags     : None
...
```

### show interfaces extensive (DSO on Channelized T3 IQ)

```
user@host> show interfaces extensive ds-0/0/1:2:1
Physical interface: ds-0/0/1:2:1, Enabled, Physical link is Up
  Interface index: 176, SNMP ifIndex: 1563, Generation: 175
  Link-level type: PPP, MTU: 1504, Clocking: Internal, Speed: 640kbps,
  Loopback: None, FCS: 16, Parent: ct1-0/0/1:2(Index 175)
  Device flags   : Present Running
  Interface flags: Point-To-Point SNMP-Traps
  Link flags     : Keepalives
...
```

## show interfaces (Discard)

|                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| <b>Output Fields</b>            | Table 55 on page 1189 lists the output fields for the <b>show interfaces</b> (discard) command. Output fields are listed in the approximate order in which they appear.                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

**Table 55: Discard show interfaces Output Fields**

| Field Name         | Field Description | Level of Output |
|--------------------|-------------------|-----------------|
| Physical Interface |                   |                 |

Table 55: Discard show interfaces Output Fields (*continued*)

| Field Name                               | Field Description                                                                                                                                                                                                                                    | Level of Output               |
|------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------|
| <b>Physical interface</b>                | Name of the physical interface, whether the interface is enabled, and the state of the physical interface: <b>Up</b> or <b>Down</b> .                                                                                                                | All levels                    |
| <b>Interface index</b>                   | Physical interface's index number, which reflects its initialization sequence.                                                                                                                                                                       | <b>detail extensive</b> none  |
| <b>Generation</b>                        | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                    | <b>detail extensive</b>       |
| <b>SNMP ifIndex</b>                      | SNMP index number for the physical interface.                                                                                                                                                                                                        | <b>detail extensive</b> none  |
| <b>Type</b>                              | Type of interface. <b>Software-Pseudo</b> indicates a standard software interface with no associated hardware device.                                                                                                                                | All levels                    |
| <b>Link-level type</b>                   | Encapsulation being used on the physical interface.                                                                                                                                                                                                  | All levels                    |
| <b>MTU</b>                               | MTU size on the physical interface.                                                                                                                                                                                                                  | All levels                    |
| <b>Clocking</b>                          | Reference clock source. It can be <b>Internal</b> or <b>External</b> .                                                                                                                                                                               | <b>brief detail extensive</b> |
| <b>Speed</b>                             | Speed at which the interface is running.                                                                                                                                                                                                             | <b>brief detail extensive</b> |
| <b>Device flags</b>                      | Information about the physical device. Possible values are described in the "Device Flags" section under <a href="#">"Common Output Fields Description" on page 1032</a> .                                                                           | All levels                    |
| <b>Interface flags</b>                   | Information about the interface. Possible values are described in the "Interface Flags" section under <a href="#">"Common Output Fields Description" on page 1032</a> .                                                                              | All levels                    |
| <b>Link type</b>                         | Encapsulation being used on the physical interface.                                                                                                                                                                                                  | <b>detail extensive</b>       |
| <b>Link flags</b>                        | Information about the link. Possible values are described in the "Link Flags" section under <a href="#">"Common Output Fields Description" on page 1032</a> .                                                                                        | <b>detail extensive</b>       |
| <b>Physical info</b>                     | Information about the physical interface.                                                                                                                                                                                                            | <b>detail extensive</b>       |
| <b>Hold-times</b>                        | Current interface hold-time up and hold-time down. Value is in milliseconds.                                                                                                                                                                         | <b>detail extensive</b>       |
| <b>Current address, Hardware address</b> | Configured MAC address and hardware MAC address.                                                                                                                                                                                                     | <b>detail extensive</b>       |
| <b>Alternate link address</b>            | Backup address of the link.                                                                                                                                                                                                                          | <b>detail extensive</b>       |
| <b>Last flapped</b>                      | Date, time, and how long ago the interface went from down to up. The format is <b>Last flapped: year-month-day hour:minute:second timezone (hour:minute:second ago)</b> . For example, <b>Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> . | <b>detail extensive</b> none  |
| <b>Statistics last cleared</b>           | Time when the statistics for the interface were last set to zero.                                                                                                                                                                                    | <b>detail extensive</b>       |

Table 55: Discard show interfaces Output Fields (*continued*)

| Field Name                | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Level of Output         |
|---------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
| <b>Traffic statistics</b> | <p>Number and rate of bytes and packets received and transmitted on the physical interface.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes, Output bytes</b>—Number of bytes received and transmitted on the interface.</li> <li>• <b>Input packets, Output packets</b>—Number of packets received and transmitted on the interface.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>detail extensive</b> |
| <b>Input errors</b>       | <p>Input errors on the interface:</p> <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Runts</b>—Number of frames received that are smaller than the runt threshold.</li> <li>• <b>Giants</b>—Number of frames received that are larger than the giant threshold.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that the Junos OS does not handle.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>                                                                                                                       | <b>detail extensive</b> |
| <b>Output errors</b>      | <p>(Extensive only) Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and then up, or another problem occurs. If the number of carrier transitions increments quickly (perhaps once every 10 seconds), the cable, the far-end system, or the PIC is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>MTU errors</b>—Number of packets whose size exceeded the MTU of the interface.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul> | <b>detail extensive</b> |
| <b>Logical Interface</b>  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                         |
| <b>Logical interface</b>  | Name of the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | All levels              |
| <b>Index</b>              | Logical interface index number, which reflects its initialization sequence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>detail extensive</b> |
| <b>SNMP ifIndex</b>       | Logical interface SNMP interface index number.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>detail extensive</b> |
| <b>Generation</b>         | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>detail extensive</b> |

Table 55: Discard show interfaces Output Fields (*continued*)

| Field Name           | Field Description                                                                                                                                                                        | Level of Output              |
|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Flags</b>         | Information about the logical interface. Possible values are described in the “Logical Interface Flags” section under “ <a href="#">Common Output Fields Description</a> ” on page 1032. | All levels                   |
| <b>Encapsulation</b> | Encapsulation on the logical interface.                                                                                                                                                  | All levels                   |
| <b>Protocol</b>      | Protocol family configured on the logical interface, such as <b>iso</b> , <b>inet6</b> , or <b>mpls</b> .                                                                                | All levels                   |
| <b>MTU</b>           | MTU size on the logical interface.                                                                                                                                                       | <b>detail extensive none</b> |
| <b>Generation</b>    | Unique number for use by Juniper Networks technical support only.                                                                                                                        | <b>detail extensive</b>      |
| <b>Route Table</b>   | Routing table in which the logical interface address is located. For example, <b>0</b> refers to the routing table <b>inet.0</b> .                                                       | <b>detail extensive</b>      |

## Sample Output

### show interfaces dsc

```

user@host> show interfaces dsc
Physical interface: dsc, Enabled, Physical link is Up
  Interface index: 5, SNMP ifIndex: 5
  Type: Software-Pseudo, MTU: Unlimited
  Device flags   : Present Running
  Interface flags: Point-To-Point SNMP-Traps
  Link flags     : None
  Last flapped  : Never
    Input packets : 0
    Output packets: 0

  Logical interface dsc.0 (Index 66) (SNMP ifIndex 235)
    Flags: Point-To-Point SNMP-Traps Encapsulation: Unspecified
    Protocol inet, MTU: Unlimited
    Flags: None

```

### show interfaces dsc brief

```

user@host> show interfaces dsc brief
Physical interface: dsc, Enabled, Physical link is Up
  Type: Software-Pseudo, Link-level type: Unspecified, MTU: Unlimited, Clocking:
  Unspecified, Speed: Unspecified
  Device flags   : Present Running
  Interface flags: Point-To-Point SNMP-Traps

  Logical interface dsc.0
    Flags: Point-To-Point SNMP-Traps Encapsulation: Unspecified
    inet

```

### show interfaces dsc detail

```

user@host> show interfaces dsc detail

```

```

Physical interface: dsc, Enabled, Physical link is Up
  Interface index: 5, SNMP ifIndex: 5, Generation: 9
  Type: Software-Pseudo, Link-level type: Unspecified, MTU: Unlimited, Clocking:
Unspecified, Speed: Unspecified
  Device flags   : Present Running
  Interface flags: Point-To-Point SNMP-Traps
  Link type      : Unspecified
  Link flags     : None
  Physical info  : Unspecified
  Hold-times     : Up 0 ms, Down 0 ms
  Current address: Unspecified, Hardware address: Unspecified
  Alternate link address: Unspecified
  Last flapped   : Never
  Statistics last cleared: Never
  Traffic statistics:
    Input bytes   : 0
    Output bytes  : 0
    Input packets : 0
    Output packets: 0

Logical interface dsc.0 (Index 66) (SNMP ifIndex 235) (Generation 6)
  Flags: Point-To-Point SNMP-Traps Encapsulation: Unspecified
  Protocol inet, MTU: Unlimited, Generation: 14, Route table: 0
  Flags: None

```

#### show interfaces dsc extensive

```

user@host> show interfaces dsc extensive
Physical interface: dsc, Enabled, Physical link is Up
  Interface index: 5, SNMP ifIndex: 5, Generation: 9
  Type: Software-Pseudo, Link-level type: Unspecified, MTU: Unlimited, Clocking:
Unspecified, Speed: Unspecified
  Device flags   : Present Running
  Interface flags: Point-To-Point SNMP-Traps
  Link type      : Unspecified
  Link flags     : None
  Physical info  : Unspecified
  Hold-times     : Up 0 ms, Down 0 ms
  Current address: Unspecified, Hardware address: Unspecified
  Alternate link address: Unspecified
  Last flapped   : Never
  Statistics last cleared: Never
  Traffic statistics:
    Input bytes   : 0
    Output bytes  : 0
    Input packets : 0
    Output packets: 0
  Input errors:
    Errors: 0, Drops: 0, Framing errors: 0, Runts: 0, Giants: 0,
    Policed discards: 0, Resource errors: 0
  Output errors:
    Carrier transitions: 0, Errors: 0, Drops: 0, MTU errors: 0,
    Resource errors: 0
Logical interface dsc.0 (Index 66) (SNMP ifIndex 235) (Generation 6)
  Flags: Point-To-Point SNMP-Traps Encapsulation: Unspecified
  Protocol inet, MTU: Unlimited, Generation: 14, Route table: 0

```

## show interfaces (Fast Ethernet)

**Syntax** `show interfaces interface-type`  
`<brief | detail | extensive | terse>`  
`<descriptions>`  
`<media>`  
`<snmp-index snmp-index>`  
`<statistics>`

**Release Information** Command introduced before Junos OS Release 7.4.

**Description** Display status information about the specified Fast Ethernet interface.

**Options** *interface-type*—On M Series and T Series routers, the interface type is **fe-fpc/pic/port**.  
**brief | detail | extensive | terse**—(Optional) Display the specified level of output.  
**descriptions**—(Optional) Display interface description strings.  
**media**—(Optional) Display media-specific information about network interfaces.  
**snmp-index *snmp-index***—(Optional) Display information for the specified SNMP index of the interface.  
**statistics**—(Optional) Display static interface statistics.

**Required Privilege Level** view

**List of Sample Output** [show interfaces \(Fast Ethernet\) on page 1208](#)  
[show interfaces brief \(Fast Ethernet\) on page 1208](#)  
[show interfaces detail \(Fast Ethernet\) on page 1208](#)  
[show interfaces extensive \(Fast Ethernet\) on page 1209](#)

**Output Fields** [Table 56 on page 1194](#) lists the output fields for the **show interfaces** (Fast Ethernet) command. Output fields are listed in the approximate order in which they appear.

**Table 56: show interfaces Fast Ethernet Output Fields**

| Field Name                | Field Description                                                                                                                                            | Level of Output              |
|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Physical Interface</b> |                                                                                                                                                              |                              |
| <b>Physical interface</b> | Name of the physical interface.                                                                                                                              | All levels                   |
| <b>Enabled</b>            | State of the interface. Possible values are described in the “Enabled Field” section under <a href="#">“Common Output Fields Description” on page 1032</a> . | All levels                   |
| <b>Interface index</b>    | Index number of the physical interface, which reflects its initialization sequence.                                                                          | <b>detail extensive none</b> |
| <b>SNMP ifIndex</b>       | SNMP index number for the physical interface.                                                                                                                | <b>detail extensive none</b> |

Table 56: show interfaces Fast Ethernet Output Fields (*continued*)

| Field Name              | Field Description                                                                                                                                                                                                                                   | Level of Output         |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
| <b>Generation</b>       | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                   | <b>detail extensive</b> |
| <b>Link-level type</b>  | Encapsulation being used on the physical interface.                                                                                                                                                                                                 | All levels              |
| <b>MTU</b>              | Maximum transmission unit size on the physical interface.                                                                                                                                                                                           | All levels              |
| <b>Link-mode</b>        | Type of link connection configured for the physical interface: <b>Full-duplex</b> or <b>Half-duplex</b>                                                                                                                                             | <b>extensive</b>        |
| <b>Speed</b>            | Speed at which the interface is running.                                                                                                                                                                                                            | All levels              |
| <b>Loopback</b>         | Loopback status: <b>Enabled</b> or <b>Disabled</b> . If loopback is enabled, type of loopback: <b>Local</b> or <b>Remote</b> .                                                                                                                      | All levels              |
| <b>Source filtering</b> | Source filtering status: <b>Enabled</b> or <b>Disabled</b> .                                                                                                                                                                                        | All levels              |
| <b>LAN-PHY mode</b>     | 10-Gigabit Ethernet interface operating in Local Area Network Physical Layer Device (LAN PHY) mode. LAN PHY allows 10-Gigabit Ethernet wide area links to use existing Ethernet applications.                                                       | All levels              |
| <b>WAN-PHY mode</b>     | 10-Gigabit Ethernet interface operating in Wide Area Network Physical Layer Device (WAN PHY) mode. WAN PHY allows 10-Gigabit Ethernet wide area links to use fiber-optic cables and other devices intended for SONET/SDH.                           | All levels              |
| <b>Unidirectional</b>   | Unidirectional link mode status for 10-Gigabit Ethernet interface: <b>Enabled</b> or <b>Disabled</b> for parent interface; <b>Rx-only</b> or <b>Tx-only</b> for child interfaces.                                                                   | All levels              |
| <b>Flow control</b>     | Flow control status: <b>Enabled</b> or <b>Disabled</b> .                                                                                                                                                                                            | All levels              |
| <b>Auto-negotiation</b> | (Gigabit Ethernet interfaces) Autonegotiation status: <b>Enabled</b> or <b>Disabled</b> .                                                                                                                                                           | All levels              |
| <b>Remote-fault</b>     | (Gigabit Ethernet interfaces) Remote fault status: <ul style="list-style-type: none"> <li>• <b>Online</b>—Autonegotiation is manually configured as online.</li> <li>• <b>Offline</b>—Autonegotiation is manually configured as offline.</li> </ul> | All levels              |
| <b>Device flags</b>     | Information about the physical device. Possible values are described in the "Device Flags" section under <a href="#">"Common Output Fields Description" on page 1032</a> .                                                                          | All levels              |
| <b>Interface flags</b>  | Information about the interface. Possible values are described in the "Interface Flags" section under <a href="#">"Common Output Fields Description" on page 1032</a> .                                                                             | All levels              |
| <b>Link flags</b>       | Information about the link. Possible values are described in the "Links Flags" section under <a href="#">"Common Output Fields Description" on page 1032</a> .                                                                                      | All levels              |
| <b>Wavelength</b>       | (10-Gigabit Ethernet dense wavelength-division multiplexing [DWDM] interfaces) Displays the configured wavelength, in nanometers (nm).                                                                                                              | All levels              |

Table 56: show interfaces Fast Ethernet Output Fields (*continued*)

| Field Name                     | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Level of Output              |
|--------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Frequency</b>               | (10-Gigabit Ethernet DWDM interfaces only) Displays the frequency associated with the configured wavelength, in terahertz (THz).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | All levels                   |
| <b>CoS queues</b>              | Number of CoS queues configured.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>detail extensive</b> none |
| <b>Schedulers</b>              | (GigabitEthernet intelligent queuing 2 (IQ2) interfaces only) Number of CoS schedulers configured.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>extensive</b>             |
| <b>Hold-times</b>              | Current interface hold-time up and hold-time down, in milliseconds.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>detail extensive</b>      |
| <b>Current address</b>         | Configured MAC address.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>detail extensive</b> none |
| <b>Hardware address</b>        | Hardware MAC address.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>detail extensive</b> none |
| <b>Last flapped</b>            | Date, time, and how long ago the interface went from down to up. The format is <b>Last flapped: year-month-day hour:minute:second:timezone (hour:minute:second ago)</b> . For example, <b>Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>detail extensive</b> none |

| Field Name          | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Level of Output  |
|---------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| <b>Input errors</b> | <p>Input errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of the incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Runts</b>—Number of frames received that are smaller than the runt threshold.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that the Junos OS does not handle.</li> <li>• <b>L3 incompletes</b>—Number of incoming packets discarded because they failed Layer 3 (usually IPv4) sanity checks of the header. For example, a frame with less than 20 bytes of available IP header is discarded. L3 incomplete errors can be ignored by configuring the <b>ignore-l3-incompletes</b> statement.</li> <li>• <b>L2 channel errors</b>—Number of times the software did not find a valid logical interface for an incoming frame.</li> <li>• <b>L2 mismatch timeouts</b>—Number of malformed or short packets that caused the incoming packet handler to discard the frame as unreadable.</li> <li>• <b>FIFO errors</b>—Number of FIFO errors in the receive direction that are reported by the ASIC on the PIC. If this value is ever nonzero, the PIC is probably malfunctioning.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul> | <b>extensive</b> |

Table 56: show interfaces Fast Ethernet Output Fields (*continued*)

| Field Name                     | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Level of Output         |
|--------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
| <b>Output errors</b>           | <p>Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and then up, or another problem occurs. If the number of carrier transitions increments quickly (perhaps once every 10 seconds), the cable, the far-end system, or the PIC or PIM is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Collisions</b>—Number of Ethernet collisions. The Gigabit Ethernet PIC supports only full-duplex operation, so for Gigabit Ethernet PICs, this number should always remain 0. If it is nonzero, there is a software bug.</li> <li>• <b>Aged packets</b>—Number of packets that remained in shared packet SDRAM so long that the system automatically purged them. The value in this field should never increment. If it does, it is most likely a software bug or possibly malfunctioning hardware.</li> <li>• <b>FIFO errors</b>—Number of FIFO errors in the send direction as reported by the ASIC on the PIC. If this value is ever nonzero, the PIC is probably malfunctioning.</li> <li>• <b>HS link CRC errors</b>—Number of errors on the high-speed links between the ASICs responsible for handling the router interfaces.</li> <li>• <b>MTU errors</b>—Number of packets whose size exceeded the MTU of the interface.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul> | <b>extensive</b>        |
| <b>Egress queues</b>           | <p>Total number of egress queues supported on the specified interface.</p> <p><b>NOTE:</b> In DPCs that are not of the enhanced type, such as DPC 40x 1GE R, DPCE 20x 1GE + 2x 10GE R, or DPCE 40x 1GE R, you might notice a discrepancy in the output of the <b>show interfaces</b> command because incoming packets might be counted in the Egress queues section of the output. This problem occurs on non-enhanced DPCs because the egress queue statistics are polled from IMQ (Inbound Message Queuing) block of the I-chip. The IMQ block does not differentiate between ingress and egress WAN traffic; as a result, the combined statistics are displayed in the egress queue counters on the Routing Engine. In a simple VPLS scenario, if there is no MAC entry in DMAC table (by sending unidirectional traffic), traffic is flooded and the input traffic is accounted in IMQ. For bidirectional traffic (MAC entry in DMAC table), if the outgoing interface is on the same I-chip then both ingress and egress statistics are counted in a combined way. If the outgoing interface is on a different I-chip or FPC, then only egress statistics are accounted in IMQ. This behavior is expected with non-enhanced DPCs</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>detail extensive</b> |
| <b>Queue counters (Egress)</b> | <p>CoS queue number and its associated user-configured forwarding class name.</p> <ul style="list-style-type: none"> <li>• <b>Queued packets</b>—Number of queued packets.</li> <li>• <b>Transmitted packets</b>—Number of transmitted packets.</li> <li>• <b>Dropped packets</b>—Number of packets dropped by the ASIC's RED mechanism.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>detail extensive</b> |

Table 56: show interfaces Fast Ethernet Output Fields (*continued*)

| Field Name                              | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Level of Output              |
|-----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Ingress queues</b>                   | Total number of ingress queues supported on the specified interface. Displayed on IQ2 interfaces.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>extensive</b>             |
| <b>Queue counters (Ingress)</b>         | CoS queue number and its associated user-configured forwarding class name. Displayed on IQ2 interfaces. <ul style="list-style-type: none"> <li>• <b>Queued packets</b>—Number of queued packets.</li> <li>• <b>Transmitted packets</b>—Number of transmitted packets.</li> <li>• <b>Dropped packets</b>—Number of packets dropped by the ASIC's RED mechanism.</li> </ul>                                                                                                                                                                                                                                                                                                                               | <b>extensive</b>             |
| <b>Active alarms and Active defects</b> | Ethernet-specific defects that can prevent the interface from passing packets. When a defect persists for a certain amount of time, it is promoted to an alarm. Based on the routing device configuration, an alarm can ring the red or yellow alarm bell on the routing device, or turn on the red or yellow alarm LED on the craft interface. These fields can contain the value <b>None</b> or <b>Link</b> . <ul style="list-style-type: none"> <li>• <b>None</b>—There are no active defects or alarms.</li> <li>• <b>Link</b>—Interface has lost its link state, which usually means that the cable is unplugged, the far-end system has been turned off, or the PIC is malfunctioning.</li> </ul> | <b>detail extensive none</b> |
| <b>OTN FEC statistics</b>               | The forward error correction (FEC) counters provide the following statistics: <ul style="list-style-type: none"> <li>• <b>Corrected Errors</b>—The count of corrected errors in the last second.</li> <li>• <b>Corrected Error Ratio</b>—The corrected error ratio in the last 25 seconds. For example, 1e-7 is 1 error per 10 million bits.</li> </ul>                                                                                                                                                                                                                                                                                                                                                 |                              |
| <b>PCS statistics</b>                   | (10-Gigabit Ethernet interfaces) Displays Physical Coding Sublayer (PCS) fault conditions from the WAN PHY or the LAN PHY device. <ul style="list-style-type: none"> <li>• <b>Bit errors</b>—The number of seconds during which at least one bit error rate (BER) occurred while the PCS receiver is operating in normal mode.</li> <li>• <b>Errored blocks</b>—The number of seconds when at least one errored block occurred while the PCS receiver is operating in normal mode.</li> </ul>                                                                                                                                                                                                           | <b>detail extensive</b>      |

Table 56: show interfaces Fast Ethernet Output Fields (*continued*)

| Field Name                     | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Level of Output |
|--------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| MAC statistics                 | <p>Receive and Transmit statistics reported by the PIC's MAC subsystem, including the following:</p> <ul style="list-style-type: none"> <li>• <b>Total octets</b> and <b>total packets</b>—Total number of octets and packets. For Gigabit Ethernet IQ PICs, the received octets count varies by interface type. For more information, see Table 31 under the <a href="#">show interfaces (10-Gigabit Ethernet)</a> command.</li> <li>• <b>Unicast packets</b>, <b>Broadcast packets</b>, and <b>Multicast packets</b>—Number of unicast, broadcast, and multicast packets.</li> <li>• <b>CRC/Align errors</b>—Total number of packets received that had a length (excluding framing bits, but including FCS octets) of between 64 and 1518 octets, inclusive, and had either a bad FCS with an integral number of octets (FCS Error) or a bad FCS with a nonintegral number of octets (Alignment Error).</li> <li>• <b>FIFO error</b>—Number of FIFO errors that are reported by the ASIC on the PIC. If this value is ever nonzero, the PIC or a cable is probably malfunctioning.</li> <li>• <b>MAC control frames</b>—Number of MAC control frames.</li> <li>• <b>MAC pause frames</b>—Number of MAC control frames with <b>pause</b> operational code.</li> <li>• <b>Oversized frames</b>—Number of frames that exceed 1518 octets.</li> <li>• <b>Jabber frames</b>—Number of frames that were longer than 1518 octets (excluding framing bits, but including FCS octets), and had either an FCS error or an alignment error. This definition of jabber is different from the definition in IEEE-802.3 section 8.2.1.5 (10BASE5) and section 10.3.1.4 (10BASE2). These documents define jabber as the condition in which any packet exceeds 20 ms. The allowed range to detect jabber is from 20 ms to 150 ms.</li> <li>• <b>Fragment frames</b>—Total number of packets that were less than 64 octets in length (excluding framing bits, but including FCS octets), and had either an FCS error or an alignment error. Fragment frames normally increment because both runts (which are normal occurrences caused by collisions) and noise hits are counted.</li> <li>• <b>VLAN tagged frames</b>—Number of frames that are VLAN tagged. The system uses the TPID of 0x8100 in the frame to determine whether a frame is tagged or not.</li> <li>• <b>Code violations</b>—Number of times an event caused the PHY to indicate "Data reception error" or "invalid data symbol error."</li> </ul> | extensive       |
| OTN Received Overhead Bytes    | APS/PCC0: 0x02, APS/PCC1: 0x11, APS/PCC2: 0x47, APS/PCC3: 0x58 Payload Type: 0x08                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | extensive       |

| <b>Filter statistics</b> | <p><b>Receive</b> and <b>Transmit</b> statistics reported by the PIC's MAC address filter subsystem. The filtering is done by the content-addressable memory (CAM) on the PIC. The filter examines a packet's source and destination MAC addresses to determine whether the packet should enter the system or be rejected.</p> <ul style="list-style-type: none"> <li>• <b>Input packet count</b>—Number of packets received from the MAC hardware that the filter processed.</li> <li>• <b>Input packet rejects</b>—Number of packets that the filter rejected because of either the source MAC address or the destination MAC address.</li> <li>• <b>Input DA rejects</b>—Number of packets that the filter rejected because the destination MAC address of the packet is not on the accept list. It is normal for this value to increment. When it increments very quickly and no traffic is entering the routing device from the far-end system, either there is a bad ARP entry on the far-end system, or multicast routing is not on and the far-end system is sending many multicast packets to the local routing device (which the routing device is rejecting).</li> <li>• <b>Input SA rejects</b>—Number of packets that the filter rejected because the source MAC address of the packet is not on the accept list. The value in this field should increment only if source MAC address filtering has been enabled. If filtering is enabled, if the value increments quickly, and if the system is not receiving traffic that it should from the far-end system, it means that the user-configured source MAC addresses for this interface are incorrect.</li> <li>• <b>Output packet count</b>—Number of packets that the filter has given to the MAC hardware.</li> <li>• <b>Output packet pad count</b>—Number of packets the filter padded to the minimum Ethernet size (60 bytes) before giving the packet to the MAC hardware. Usually, padding is done only on small ARP packets, but some very small IP packets can also require padding. If this value increments rapidly, either the system is trying to find an ARP entry for a far-end system that does not exist or it is misconfigured.</li> <li>• <b>Output packet error count</b>—Number of packets with an indicated error that the filter was given to transmit. These packets are usually aged packets or are the result of a bandwidth problem on the FPC hardware. On a normal system, the value of this field should not increment.</li> <li>• <b>CAM destination filters, CAM source filters</b>—Number of entries in the CAM dedicated to destination and source MAC address filters. There can only be up to 64 source entries. If source filtering is disabled, which is the default, the values for these fields should be 0.</li> </ul> | <b>extensive</b> |
| <b>PMA PHY</b>           | <p>(10-Gigabit Ethernet interfaces, WAN PHY mode) SONET error information:</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. | Received path trace, Transmitted path trace | <p>(10-Gigabit Ethernet interfaces, WAN PHY mode) SONET/SDH interfaces allow path trace bytes to be sent inband across the SONET/SDH link. Juniper Networks and other routing device manufacturers use these bytes to help diagnose misconfigurations and network errors by setting the transmitted path trace message so that it contains the system hostname and name of the physical interface. The received path trace value is the message received from the routing device at the other end of the fiber. The transmitted path trace value is the message that this routing device transmits.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | extensive       |

| <b>Transit statistics</b>       | Number and rate of bytes and packets transiting the switch.<br><br><b>NOTE:</b> For Gigabit Ethernet intelligent queuing 2 (IQ2) interfaces, the logical interface egress statistics might not accurately reflect the traffic on the wire when output shaping is applied. Traffic management output shaping might drop packets after they are tallied by the <b>Output bytes</b> and <b>Output packets</b> interface counters. However, correct values display for both of these egress statistics when per-unit scheduling is enabled for the Gigabit Ethernet IQ2 physical interface, or when a single logical interface is actively using a shared scheduler. | <b>extensive</b>             |
| <b>Generation</b>               | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>detail extensive</b>      |

For example, 0 refers to the routing table inet.0.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>detail extensive none</b> |
| <b>Flags</b>                    | Information about protocol family flags. Possible values are described in the “Family Flags” section under “ <a href="#">Common Output Fields Description</a> ” on page 1032.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>detail extensive</b>      |
| <b>Donor interface</b>          | (Unnumbered Ethernet) Interface from which an unnumbered Ethernet interface borrows an IPv4 address.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>detail extensive none</b> |
| <b>Preferred source address</b> | (Unnumbered Ethernet) Secondary IPv4 address of the donor loopback interface that acts as the preferred source address for the unnumbered Ethernet interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>detail extensive none</b> |
| <b>Input Filters</b>            | Names of any input filters applied to this interface. If you specify a precedence value for any filter in a dynamic profile, filter precedence values appear in parenthesis next to all interfaces.                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>detail extensive</b>      |
| <b>Output Filters</b>           | Names of any output filters applied to this interface. If you specify a precedence value for any filter in a dynamic profile, filter precedence values appear in parenthesis next to all interfaces.                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>detail extensive</b>      |
| <b>Mac-Validate Failures</b>    | Number of MAC address validation failures for packets and bytes. This field is displayed when MAC address validation is enabled for the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>detail extensive none</b> |
| <b>Addresses, Flags</b>         | Information about the address flags. Possible values are described in the “Addresses Flags” section under “ <a href="#">Common Output Fields Description</a> ” on page 1032.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>detail extensive none</b> |
| <b><i>protocol-family</i></b>   | Protocol family configured on the logical interface. If the protocol is <b>inet</b> , the IP address of the interface is also displayed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>brief</b>                 |
| <b>Flags</b>                    | Information about address flag (possible values are described in the “Addresses Flags” section under “ <a href="#">Common Output Fields Description</a> ” on page 1032.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>detail extensive none</b> |
| <b>Destination</b>              | IP address of the remote side of the connection.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>detail extensive none</b> |
| <b>Local</b>                    | IP address of the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>detail extensive none</b> |
| <b>Broadcast</b>                | Broadcast address of the logical interlace.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>detail extensive none</b> |

Table 56: show interfaces Fast Ethernet Output Fields (*continued*)

| Field Name | Field Description                                                 | Level of Output  |
|------------|-------------------------------------------------------------------|------------------|
| Generation | Unique number for use by Juniper Networks technical support only. | detail extensive |

## Sample Output

### show interfaces (Fast Ethernet)

```

user@host> show interfaces fe-0/0/0
Physical interface: fe-0/0/0, Enabled, Physical link is Up
  Interface index: 128, SNMP ifIndex: 22
  Link-level type: Ethernet, MTU: 1514, Speed: 100mbps, Loopback: Disabled,
  Source filtering: Disabled, Flow control: Enabled
  Device flags   : Present Running
  Interface flags: SNMP-Traps Internal: 0x4000
  CoS queues     : 4 supported, 4 maximum usable queues
  Current address: 00:00:5e:00:53:38, Hardware address: 00:00:5e:00:53:38
  Last flapped   : 2006-01-20 14:50:58 PST (2w4d 00:44 ago)
  Input rate     : 0 bps (0 pps)
  Output rate    : 0 bps (0 pps)
  Active alarms  : None
  Active defects : None
  Logical interface fe-0/0/0.0 (Index 66) (SNMP ifIndex 198)
    Flags: SNMP-Traps Encapsulation: ENET2
    Protocol inet, MTU: 1500
    Flags: None
    Addresses, Flags: Is-Preferred Is-Primary
      Destination: 203.0.113/24, Local: 203.0.113.1, Broadcast: 203.0.113.255

```

### show interfaces brief (Fast Ethernet)

```

user@host> show interfaces fe-0/0/0 brief
Physical interface: fe-0/0/0, Enabled, Physical link is Up
  Link-level type: Ethernet, MTU: 1514, Speed: 100mbps, Loopback: Disabled,
  Source filtering: Disabled, Flow control: Enabled
  Device flags   : Present Running
  Interface flags: SNMP-Traps Internal: 0x4000
  Logical interface fe-0/0/0.0
    Flags: SNMP-Traps Encapsulation: ENET2
    inet 203.0.113.1/24

```

### show interfaces detail (Fast Ethernet)

```

user@host> show interfaces fe-0/0/0 detail
Physical interface: fe-0/0/0, Enabled, Physical link is Up
  Interface index: 128, SNMP ifIndex: 22, Generation: 5391
  Link-level type: Ethernet, MTU: 1514, Speed: 100mbps, Loopback: Disabled,
  Source filtering: Disabled, Flow control: Enabled
  Device flags   : Present Running
  Interface flags: SNMP-Traps Internal: 0x4000
  CoS queues     : 4 supported, 4 maximum usable queues
  Hold-times     : Up 0 ms, Down 0 ms
  Current address: 00:00:5e:00:53:38, Hardware address: 00:00:5e:00:53:3f:38
  Last flapped   : 2006-01-20 14:50:58 PST (2w4d 00:45 ago)
  Statistics last cleared: Never
  Traffic statistics:

```

```

Input bytes : 0 0 bps
Output bytes : 42 0 bps
Input packets: 0 0 pps
Output packets: 1 0 pps
Active alarms : None
Active defects : None
Logical interface fe-0/0/0.0 (Index 66) (SNMP ifIndex 198) (Generation 67)
  Flags: SNMP-Traps Encapsulation: ENET2
  Protocol inet, MTU: 1500, Generation: 105, Route table: 0
    Flags: Is-Primary, Mac-Validate-Strict
    Mac-Validate Failures: Packets: 0, Bytes: 0
    Addresses, Flags: Is-Preferred Is-Primary
    Destination: 203.0.113/24, Local: 203.0.113.1, Broadcast: 203.0.113.255,
    Generation: 136

```

### show interfaces extensive (Fast Ethernet)

```

user@host> show interfaces fe-0/0/0 extensive
Physical interface: fe-0/0/0, Enabled, Physical link is Up
  Interface index: 128, SNMP ifIndex: 22, Generation: 5391
  Link-level type: Ethernet, MTU: 1514, Link-mode: Full-duplex, Speed:
  100mbps, Loopback: Disabled,

[show interfaces \(ALI Interface Set\) on page 1235](#)

**Output Fields** [Table 57 on page 1212](#) describes the output fields for the **show interfaces** (Gigabit Ethernet) command. Output fields are listed in the approximate order in which they appear. For Gigabit Ethernet IQ and IQE PICs, the traffic and MAC statistics vary by interface type. For more information, see [Table 58 on page 1227](#).

**Table 57: show interfaces (Gigabit Ethernet) Output Fields**

| Field Name                | Field Description                                                                                                                                                                                                         | Level of Output              |
|---------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|

| <b>Physical interface</b> | Name of the physical interface.                                                                                                                                                                                           | All levels                   |
| <b>Enabled</b>            | State of the interface. Possible values are described in the “Enabled Field” section under <a href="#">“Common Output Fields Description” on page 1032</a> .                                                              | All levels                   |
| <b>Interface index</b>    | Index number of the physical interface, which reflects its initialization sequence.                                                                                                                                       | <b>detail extensive none</b> |
| <b>SNMP ifIndex</b>       | SNMP index number for the physical interface.                                                                                                                                                                             | <b>detail extensive none</b> |
| <b>Generation</b>         | Unique number for use by Juniper Networks technical support only.                                                                                                                                                         | <b>detail extensive</b>      |
| <b>Link-level type</b>    | Encapsulation being used on the physical interface.                                                                                                                                                                       | All levels                   |
| <b>MTU</b>                | Maximum transmission unit size on the physical interface.                                                                                                                                                                 | All levels                   |
| <b>Speed</b>              | Speed at which the interface is running.                                                                                                                                                                                  | All levels                   |
| <b>Loopback</b>           | Loopback status: <b>Enabled</b> or <b>Disabled</b> . If loopback is enabled, type of loopback: <b>Local</b> or <b>Remote</b> .                                                                                            | All levels                   |
| <b>Source filtering</b>   | Source filtering status: <b>Enabled</b> or <b>Disabled</b> .                                                                                                                                                              | All levels                   |
| <b>LAN-PHY mode</b>       | 10-Gigabit Ethernet interface operating in Local Area Network Physical Layer Device (LAN PHY) mode. LAN PHY allows 10-Gigabit Ethernet wide area links to use existing Ethernet applications.                             | All levels                   |
| <b>WAN-PHY mode</b>       | 10-Gigabit Ethernet interface operating in Wide Area Network Physical Layer Device (WAN PHY) mode. WAN PHY allows 10-Gigabit Ethernet wide area links to use fiber-optic cables and other devices intended for SONET/SDH. | All levels                   |
| <b>Unidirectional</b>     | Unidirectional link mode status for 10-Gigabit Ethernet interface: <b>Enabled</b> or <b>Disabled</b> for parent interface; <b>Rx-only</b> or <b>Tx-only</b> for child interfaces.                                         | All levels                   |
| <b>Flow control</b>       | Flow control status: <b>Enabled</b> or <b>Disabled</b> .                                                                                                                                                                  | All levels                   |
| <b>Auto-negotiation</b>   | (Gigabit Ethernet interfaces) Autonegotiation status: <b>Enabled</b> or <b>Disabled</b> .                                                                                                                                 | All levels                   |

Table 57: show interfaces (Gigabit Ethernet) Output Fields (*continued*)

| Field Name                     | Field Description                                                                                                                                                                                                                                                           | Level of Output              |
|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Remote-fault</b>            | (Gigabit Ethernet interfaces) Remote fault status: <ul style="list-style-type: none"> <li>• <b>Online</b>—Autonegotiation is manually configured as online.</li> <li>• <b>Offline</b>—Autonegotiation is manually configured as offline.</li> </ul>                         | All levels                   |
| <b>Device flags</b>            | Information about the physical device. Possible values are described in the “Device Flags” section under “ <a href="#">Common Output Fields Description</a> ” on page 1032.                                                                                                 | All levels                   |
| <b>Interface flags</b>         | Information about the interface. Possible values are described in the “Interface Flags” section under “ <a href="#">Common Output Fields Description</a> ” on page 1032.                                                                                                    | All levels                   |
| <b>Link flags</b>              | Information about the link. Possible values are described in the “Links Flags” section under “ <a href="#">Common Output Fields Description</a> ” on page 1032.                                                                                                             | All levels                   |
| <b>Wavelength</b>              | (10-Gigabit Ethernet dense wavelength-division multiplexing [DWDM] interfaces) Displays the configured wavelength, in nanometers (nm).                                                                                                                                      | All levels                   |
| <b>Frequency</b>               | (10-Gigabit Ethernet DWDM interfaces only) Displays the frequency associated with the configured wavelength, in terahertz (THz).                                                                                                                                            | All levels                   |
| <b>CoS queues</b>              | Number of CoS queues configured.                                                                                                                                                                                                                                            | <b>detail extensive</b> none |
| <b>Schedulers</b>              | (Gigabit Ethernet intelligent queuing 2 [IQ2] interfaces only) Number of CoS schedulers configured.                                                                                                                                                                         | <b>extensive</b>             |
| <b>Hold-times</b>              | Current interface hold-time up and hold-time down, in milliseconds (ms).                                                                                                                                                                                                    | <b>detail extensive</b>      |
| <b>Current address</b>         | Configured MAC address.                                                                                                                                                                                                                                                     | <b>detail extensive</b> none |
| <b>Hardware address</b>        | Hardware MAC address.                                                                                                                                                                                                                                                       | <b>detail extensive</b> none |
| <b>Last flapped</b>            | Date, time, and how long ago the interface went from down to up. The format is <b>Last flapped: year-month-day hour:minute:second:timezone (hour:minute:second ago)</b> . For example, <b>Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> .                        | <b>detail extensive</b> none |
| <b>Input Rate</b>              | Input rate in bits per second (bps) and packets per second (pps). The value in this field also includes the Layer 2 overhead bytes for ingress traffic on Ethernet interfaces if you enable accounting of Layer 2 overhead at the PIC level or the logical interface level. | None                         |
| <b>Output Rate</b>             | Output rate in bps and pps. The value in this field also includes the Layer 2 overhead bytes for egress traffic on Ethernet interfaces if you enable accounting of Layer 2 overhead at the PIC level or the logical interface level.                                        | None                         |
| <b>Statistics last cleared</b> | Time when the statistics for the interface were last set to zero.                                                                                                                                                                                                           | <b>detail extensive</b>      |
| <b>Egress account overhead</b> | Layer 2 overhead in bytes that is accounted in the interface statistics for egress traffic.                                                                                                                                                                                 | <b>detail extensive</b>      |

Table 57: show interfaces (Gigabit Ethernet) Output Fields (*continued*)

| Field Name                      | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Level of Output         |
|---------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
| <b>Ingress account overhead</b> | Layer 2 overhead in bytes that is accounted in the interface statistics for ingress traffic.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>detail extensive</b> |
| <b>Traffic statistics</b>       | <p>Number and rate of bytes and packets received and transmitted on the physical interface.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface. The value in this field also includes the Layer 2 overhead bytes for ingress traffic on Ethernet interfaces if you enable accounting of Layer 2 overhead at the PIC level or the logical interface level.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface. The value in this field also includes the Layer 2 overhead bytes for egress traffic on Ethernet interfaces if you enable accounting of Layer 2 overhead at the PIC level or the logical interface level.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul> <p>Gigabit Ethernet and 10-Gigabit Ethernet IQ PICs count the overhead and CRC bytes.</p> <p>For Gigabit Ethernet IQ PICs, the input byte counts vary by interface type. For more information, see Table 31 under the <a href="#">show interfaces (10-Gigabit Ethernet)</a> command.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>detail extensive</b> |
| <b>Input errors</b>             | <p>Input errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of the incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Runts</b>—Number of frames received that are smaller than the runt threshold.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that Junos OS does not handle.</li> <li>• <b>L3 incompletes</b>—Number of incoming packets discarded because they failed Layer 3 (usually IPv4) sanity checks of the header. For example, a frame with less than 20 bytes of available IP header is discarded. L3 incomplete errors can be ignored by configuring the <b>ignore-l3-incompletes</b> statement.</li> <li>• <b>L2 channel errors</b>—Number of times the software did not find a valid logical interface for an incoming frame.</li> <li>• <b>L2 mismatch timeouts</b>—Number of malformed or short packets that caused the incoming packet handler to discard the frame as unreadable.</li> <li>• <b>FIFO errors</b>—Number of FIFO errors in the receive direction that are reported by the ASIC on the PIC. If this value is ever nonzero, the PIC is probably malfunctioning.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul> | <b>extensive</b>        |

Table 57: show interfaces (Gigabit Ethernet) Output Fields (*continued*)

| Field Name           | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Level of Output         |
|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
| <b>Output errors</b> | <p>Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and then up, or another problem occurs. If the number of carrier transitions increments quickly (perhaps once every 10 seconds), the cable, the far-end system, or the PIC or PIM is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> </ul> <p><b>NOTE:</b> Due to accounting space limitations on certain Type 3 FPCs (which are supported in M320 and T640 routers), the <b>Drops</b> field does not always use the correct value for queue 6 or queue 7 for interfaces on 10-port 1-Gigabit Ethernet PICs.</p> <ul style="list-style-type: none"> <li>• <b>Collisions</b>—Number of Ethernet collisions. The Gigabit Ethernet PIC supports only full-duplex operation, so for Gigabit Ethernet PICs, this number must always be 0. If it is nonzero, there is a software bug.</li> <li>• <b>Aged packets</b>—Number of packets that remained in shared packet SDRAM so long that the system automatically purged them. The value in this field must never increment. If it does, it is most likely a software bug or possibly malfunctioning hardware.</li> <li>• <b>FIFO errors</b>—Number of FIFO errors in the send direction as reported by the ASIC on the PIC. If this value is ever nonzero, the PIC is probably malfunctioning.</li> <li>• <b>HS link CRC errors</b>—Number of errors on the high-speed links between the ASICs responsible for handling the router interfaces.</li> <li>• <b>MTU errors</b>—Number of packets whose size exceeded the MTU of the interface.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul> | <b>extensive</b>        |
| <b>Egress queues</b> | <p>Total number of egress queues supported on the specified interface.</p> <p><b>NOTE:</b> In DPCs that are not of the enhanced type, such as DPC 40x 1GER, DPCE 20x 1GE + 2x 10GE R, or DPCE 40x 1GE R, you might notice a discrepancy in the output of the <b>show interfaces</b> command because incoming packets might be counted in the Egress queues section of the output. This problem occurs on non-enhanced DPCs because the egress queue statistics are polled from IMQ (Inbound Message Queuing) block of the I-chip. The IMQ block does not differentiate between ingress and egress WAN traffic; as a result, the combined statistics are displayed in the egress queue counters on the Routing Engine. In a simple VPLS scenario, if there is no MAC entry in DMAC table (by sending unidirectional traffic), traffic is flooded and the input traffic is accounted in IMQ. For bidirectional traffic (MAC entry in DMAC table), if the outgoing interface is on the same I-chip then both ingress and egress statistics are counted in a combined way. If the outgoing interface is on a different I-chip or FPC, then only egress statistics are accounted in IMQ. This behavior is expected with non-enhanced DPCs</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>detail extensive</b> |

| <b>PCS statistics</b> | <p>(10-Gigabit Ethernet interfaces) Displays Physical Coding Sublayer (PCS) fault conditions from the WAN PHY or the LAN PHY device.</p> <ul style="list-style-type: none"> <li>• <b>Bit errors</b>—Number of seconds during which at least one bit error rate (BER) occurred while the PCS receiver is operating in normal mode.</li> <li>• <b>Errored blocks</b>—Number of seconds when at least one errored block occurred while the PCS receiver is operating in normal mode.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>detail extensive</b> |
| <b>Link Degrad</b>    | <p>Shows the physical link-degrade status and the estimated Bit Error Rates (BERs). This field is available only for the PICs supporting the physical link monitoring feature.</p> <ul style="list-style-type: none"> <li>• <b>Link Monitoring</b>—Indicates if physical link monitoring is enabled on the interface. <ul style="list-style-type: none"> <li>• <b>Enable</b>—Indicates that link monitoring has been enabled (using the <b>link-degrade-monitor</b> statement) on the interface.</li> <li>• <b>Disable</b>—Indicates that link monitoring has not been enabled on the interface. If link monitoring has not been enabled, the output does not show any related information, such as BER values and thresholds.</li> </ul> </li> <li>• <b>Link Degrad Set Threshold</b>—The BER threshold value at which the link is considered degraded and a corrective action is triggered.</li> <li>• <b>Link Degrad Clear Threshold</b>—The BER threshold value at which the degraded link is considered recovered and the corrective action applied to the interface is reverted.</li> <li>• <b>Estimated BER</b>—The estimated Bit Error Rate.</li> <li>• <b>Link-degrade event</b>—Shows link degrade event information. <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Time (in seconds) elapsed after a link degrade event occurred.</li> <li>• <b>Count</b>—The number of link degrade events recorded.</li> <li>• <b>State</b>—Shows the link degrade status (example: <b>Defect Active</b>).</li> </ul> </li> </ul> | <b>detail extensive</b> |

Table 57: show interfaces (Gigabit Ethernet) Output Fields (*continued*)

| Field Name                     | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Level of Output |
|--------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| MAC statistics                 | <p>Receive and Transmit statistics reported by the PIC's MAC subsystem, including the following:</p> <ul style="list-style-type: none"> <li>• <b>Total octets</b> and <b>total packets</b>—Total number of octets and packets. For Gigabit Ethernet IQ PICs, the received octets count varies by interface type. For more information, see Table 31 under the <a href="#">show interfaces (10-Gigabit Ethernet)</a> command.</li> <li>• <b>Unicast packets</b>, <b>Broadcast packets</b>, and <b>Multicast packets</b>—Number of unicast, broadcast, and multicast packets.</li> <li>• <b>CRC/Align errors</b>—Total number of packets received that had a length (excluding framing bits, but including FCS octets) of between 64 and 1518 octets, inclusive, and had either a bad FCS with an integral number of octets (FCS Error) or a bad FCS with a nonintegral number of octets (Alignment Error).</li> <li>• <b>FIFO error</b>—Number of FIFO errors that are reported by the ASIC on the PIC. If this value is ever nonzero, the PIC or a cable is probably malfunctioning.</li> <li>• <b>MAC control frames</b>—Number of MAC control frames.</li> <li>• <b>MAC pause frames</b>—Number of MAC control frames with <b>pause</b> operational code.</li> <li>• <b>Oversized frames</b>—There are two possible conditions regarding the number of oversized frames: <ul style="list-style-type: none"> <li>• Packet length exceeds 1518 octets, or</li> <li>• Packet length exceeds MRU</li> </ul> </li> <li>• <b>Jabber frames</b>—Number of frames that were longer than 1518 octets (excluding framing bits, but including FCS octets), and had either an FCS error or an alignment error. This definition of jabber is different from the definition in IEEE-802.3 section 8.2.1.5 (10BASE5) and section 10.3.1.4 (10BASE2). These documents define jabber as the condition in which any packet exceeds 20 ms. The allowed range to detect jabber is from 20 ms to 150 ms.</li> <li>• <b>Fragment frames</b>—Total number of packets that were less than 64 octets in length (excluding framing bits, but including FCS octets) and had either an FCS error or an alignment error. Fragment frames normally increment because both runs (which are normal occurrences caused by collisions) and noise hits are counted.</li> <li>• <b>VLAN tagged frames</b>—Number of frames that are VLAN tagged. The system uses the TPID of 0x8100 in the frame to determine whether a frame is tagged or not. <p><b>NOTE:</b> The 20-port Gigabit Ethernet MIC (MIC-3D-20GE-SFP) does not have hardware counters for VLAN frames. Therefore, the <b>VLAN tagged frames</b> field displays 0 when the <b>show interfaces</b> command is executed on a 20-port Gigabit Ethernet MIC. In other words, the number of VLAN tagged frames cannot be determined for the 20-port Gigabit Ethernet MIC.</p> </li> <li>• <b>Code violations</b>—Number of times an event caused the PHY to indicate "Data reception error" or "invalid data symbol error."</li> </ul> | extensive       |
| OTN Received Overhead Bytes    | APS/PCC0: 0x02, APS/PCC1: 0x11, APS/PCC2: 0x47, APS/PCC3: 0x58 Payload Type: 0x08                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | extensive       |
| OTN Transmitted Overhead Bytes | APS/PCC0: 0x00, APS/PCC1: 0x00, APS/PCC2: 0x00, APS/PCC3: 0x00 Payload Type: 0x08                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | extensive       |

Table 57: show interfaces (Gigabit Ethernet) Output Fields (*continued*)

| Field Name        | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Level of Output |
|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| Filter statistics | <p>Receive and Transmit statistics reported by the PIC's MAC address filter subsystem. The filtering is done by the content-addressable memory (CAM) on the PIC. The filter examines a packet's source and destination MAC addresses to determine whether the packet may enter the system or be rejected.</p> <ul style="list-style-type: none"> <li>• <b>Input packet count</b>—Number of packets received from the MAC hardware that the filter processed.</li> <li>• <b>Input packet rejects</b>—Number of packets that the filter rejected because of either the source MAC address or the destination MAC address.</li> <li>• <b>Input DA rejects</b>—Number of packets that the filter rejected because the destination MAC address of the packet is not on the accept list. It is normal for this value to increment. When it increments very quickly and no traffic is entering the router from the far-end system, either there is a bad ARP entry on the far-end system, or multicast routing is not on and the far-end system is sending many multicast packets to the local router (which the router is rejecting).</li> <li>• <b>Input SA rejects</b>—Number of packets that the filter rejected because the source MAC address of the packet is not on the accept list. The value in this field must increment only if source MAC address filtering has been enabled. If filtering is enabled, if the value increments quickly, and if the system is not receiving traffic that it should from the far-end system, it means that the user-configured source MAC addresses for this interface are incorrect.</li> <li>• <b>Output packet count</b>—Number of packets that the filter has given to the MAC hardware.</li> <li>• <b>Output packet pad count</b>—Number of packets the filter padded to the minimum Ethernet size (60 bytes) before giving the packet to the MAC hardware. Usually, padding is done only on small ARP packets, but some very small IP packets can also require padding. If this value increments rapidly, either the system is trying to find an ARP entry for a far-end system that does not exist or it is misconfigured.</li> <li>• <b>Output packet error count</b>—Number of packets with an indicated error that the filter was given to transmit. These packets are usually aged packets or are the result of a bandwidth problem on the FPC hardware. On a normal system, the value of this field must not increment.</li> <li>• <b>CAM destination filters, CAM source filters</b>—Number of entries in the CAM dedicated to destination and source MAC address filters. There can only be up to 64 source entries. If source filtering is disabled, which is the default, the values for these fields must be 0.</li> </ul> | extensive       |
| PMA PHY           | <p>(10-Gigabit Ethernet interfaces, WAN PHY mode) SONET error information:</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. For Gigabit Ethernet interfaces, types are <b>Symmetric</b> (link partner supports <b>PAUSE</b> on receive and transmit), <b>Asymmetric</b> (link partner supports <b>PAUSE</b> on transmit), <b>Symmetric/Asymmetric</b> (link partner supports <b>PAUSE</b> on receive and transmit or only <b>PAUSE</b> on transmit), and <b>None</b> (link partner does not support flow control).</li> <li>• <b>Remote fault</b>—Remote fault information from the link partner—<b>Failure</b> indicates a receive link error. <b>OK</b> indicates that the link partner is receiving. <b>Negotiation error</b> indicates a negotiation error. <b>Offline</b> indicates that the link partner is going offline.</li> </ul> </li> <li>• <b>Local resolution</b>—Information from the local Ethernet device: <ul style="list-style-type: none"> <li>• <b>Flow control</b>—Types of flow control supported by the local device. For Gigabit Ethernet interfaces, advertised capabilities are <b>Symmetric/Asymmetric</b> (local device supports <b>PAUSE</b> on receive and transmit or only <b>PAUSE</b> on receive) and <b>None</b> (local device does not support flow control). Depending on the result of the negotiation with the link partner, local resolution flow control type will display <b>Symmetric</b> (local device supports <b>PAUSE</b> on receive and transmit), <b>Asymmetric</b> (local device supports <b>PAUSE</b> on receive), and <b>None</b> (local device does not support flow control).</li> <li>• <b>Remote fault</b>—Remote fault information. <b>Link OK</b> (no error detected on receive), <b>Offline</b> (local interface is offline), and <b>Link Failure</b> (link error detected on receive).</li> </ul> </li> </ul> | extensive       |
| Received path trace, Transmitted path trace | <p>(10-Gigabit Ethernet interfaces, WAN PHY mode) SONET/SDH interfaces allow path trace bytes to be sent inband across the SONET/SDH link. Juniper Networks and other router manufacturers use these bytes to help diagnose misconfigurations and network errors by setting the transmitted path trace message so that it contains the system hostname and name of the physical interface. The received path trace value is the message received from the router at the other end of the fiber. The transmitted path trace value is the message that this router transmits.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | extensive       |

| <b>Service Name Table</b>                                 | Name of the service name table for the interface configured with a PPPoE family.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>detail extensive none</b> |
| <b>Max Sessions</b>                                       | Maximum number of PPPoE logical interfaces that can be activated on the underlying interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>detail extensive none</b> |
| <b>Duplicate Protection</b>                               | State of PPPoE duplicate protection: <b>On</b> or <b>Off</b> . When duplicate protection is configured for the underlying interface, a dynamic PPPoE logical interface cannot be activated when an existing active logical interface is present for the same PPPoE client.                                                                                                                                                                                                                                                                                                             | <b>detail extensive none</b> |
| <b>Direct Connect</b>                                     | State of the configuration to ignore DSL Forum VSAs: <b>On</b> or <b>Off</b> . When configured, the router ignores any of these VSAs received from a directly connected CPE device on the interface.                                                                                                                                                                                                                                                                                                                                                                                   | <b>detail extensive none</b> |
| <b>AC Name</b>                                            | Name of the access concentrator.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>detail extensive none</b> |
| <b>Maximum labels</b>                                     | Maximum number of MPLS labels configured for the MPLS protocol family on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>detail extensive none</b> |
| <b>Traffic statistics</b>                                 | Number and rate of bytes and packets received and transmitted on the specified interface set. <ul style="list-style-type: none"> <li>• <b>Input bytes, Output bytes</b>—Number of bytes received and transmitted on the interface set. The value in this field also includes the Layer 2 overhead bytes for ingress or egress traffic on Ethernet interfaces if you enable accounting of Layer 2 overhead at the PIC level or the logical interface level.</li> <li>• <b>Input packets, Output packets</b>—Number of packets received and transmitted on the interface set.</li> </ul> | <b>detail extensive</b>      |
| <b>IPv6 transit statistics</b>                            | Number of IPv6 transit bytes and packets received and transmitted on the logical interface if IPv6 statistics tracking is enabled.                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>extensive</b>             |
| <b>Local statistics</b>                                   | Number and rate of bytes and packets destined to the router.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>extensive</b>             |

Table 57: show interfaces (Gigabit Ethernet) Output Fields (*continued*)

| Field Name                      | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Level of Output              |
|---------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Transit statistics</b>       | Number and rate of bytes and packets transiting the switch.<br><br><b>NOTE:</b> For Gigabit Ethernet intelligent queuing 2 (IQ2) interfaces, the logical interface egress statistics might not accurately reflect the traffic on the wire when output shaping is applied. Traffic management output shaping might drop packets after they are tallied by the <b>Output bytes</b> and <b>Output packets</b> interface counters. However, correct values display for both of these egress statistics when per-unit scheduling is enabled for the Gigabit Ethernet IQ2 physical interface, or when a single logical interface is actively using a shared scheduler. | <b>extensive</b>             |
| <b>Generation</b>               | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>detail extensive</b>      |
| <b>Route Table</b>              | Route table in which the logical interface address is located. For example, <b>0</b> refers to the routing table inet.0.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>detail extensive none</b> |
| <b>Flags</b>                    | Information about protocol family flags. Possible values are described in the "Family Flags" section under " <a href="#">Common Output Fields Description</a> " on page 1032.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>detail extensive</b>      |
| <b>Donor interface</b>          | (Unnumbered Ethernet) Interface from which an unnumbered Ethernet interface borrows an IPv4 address.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>detail extensive none</b> |
| <b>Preferred source address</b> | (Unnumbered Ethernet) Secondary IPv4 address of the donor loopback interface that acts as the preferred source address for the unnumbered Ethernet interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>detail extensive none</b> |
| <b>Input Filters</b>            | Names of any input filters applied to this interface. If you specify a precedence value for any filter in a dynamic profile, filter precedence values appear in parentheses next to all interfaces.                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>detail extensive</b>      |
| <b>Output Filters</b>           | Names of any output filters applied to this interface. If you specify a precedence value for any filter in a dynamic profile, filter precedence values appear in parentheses next to all interfaces.                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>detail extensive</b>      |
| <b>Mac-Validate Failures</b>    | Number of MAC address validation failures for packets and bytes. This field is displayed when MAC address validation is enabled for the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>detail extensive none</b> |
| <b>Addresses, Flags</b>         | Information about the address flags. Possible values are described in the "Addresses Flags" section under " <a href="#">Common Output Fields Description</a> " on page 1032.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>detail extensive none</b> |
| <b><i>protocol-family</i></b>   | Protocol family configured on the logical interface. If the protocol is <b>inet</b> , the IP address of the interface is also displayed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>brief</b>                 |
| <b>Flags</b>                    | Information about the address flag. Possible values are described in the "Addresses Flags" section under " <a href="#">Common Output Fields Description</a> " on page 1032.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>detail extensive none</b> |
| <b>Destination</b>              | IP address of the remote side of the connection.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>detail extensive none</b> |
| <b>Local</b>                    | IP address of the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>detail extensive none</b> |

Table 57: show interfaces (Gigabit Ethernet) Output Fields (*continued*)

| Field Name        | Field Description                                                 | Level of Output              |
|-------------------|-------------------------------------------------------------------|------------------------------|
| <b>Broadcast</b>  | Broadcast address of the logical interface.                       | <b>detail extensive none</b> |
| <b>Generation</b> | Unique number for use by Juniper Networks technical support only. | <b>detail extensive</b>      |

## Sample Output

### show interfaces (Gigabit Ethernet)

```

user@host> show interfaces ge-3/0/2
Physical interface: ge-3/0/2, Enabled, Physical link is Up
  Interface index: 167, SNMP ifIndex: 35
  Link-level type: 52, MTU: 1522, Speed: 1000mbps, Loopback: Disabled,
  Source filtering: Disabled, Flow control: Enabled, Auto-negotiation: Enabled
  Remote fault: Online
  Device flags   : Present Running
  Interface flags: SNMP-Traps Internal: 0x4000
  CoS queues    : 4 supported, 4 maximum usable queues
  Current address: 00:00:5e:00:53:7c, Hardware address: 00:00:5e:00:53:7c
  Last flapped  : 2006-08-10 17:25:10 PDT (00:01:08 ago)

```

```
Input rate      : 0 bps (0 pps)
Output rate     : 0 bps (0 pps)
Ingress rate at Packet Forwarding Engine      : 0 bps (0 pps)
Ingress drop rate at Packet Forwarding Engine : 0 bps (0 pps)
Active alarms   : None
Active defects  : None

Logical interface ge-3/0/2.0 (Index 72) (SNMP ifIndex 69)
  Flags: SNMP-Traps 0x4000
  VLAN-Tag [ 0x8100.512 0x8100.513 ] In(pop-swap 0x8100.530) Out(swap-push
0x8100.512 0x8100.513)
  Encapsulation: VLAN-CCC
  Egress account overhead: 100
  Ingress account overhead: 90
  Input packets : 0
  Output packets: 0
  Protocol ccc, MTU: 1522
  Flags: Is-Primary
```

### show interfaces (Gigabit Ethernet on MX Series Routers)

```
user@host> show interfaces ge-2/2/2
Physical interface: ge-2/2/2, Enabled, Physical link is Up
  Interface index: 156, SNMP ifIndex: 188
  Link-level type: Ethernet, MTU: 1514, Speed: 1000mbps, MAC-REWRITE Error: None,
  Loopback: Disabled,
  Source filtering: Disabled, Flow control: Enabled, Auto-negotiation: Enabled,
  Remote fault: Online
  Device flags   : Present Running
  Interface flags: SNMP-Traps Internal: 0x4000
  Link flags     : None
  CoS queues     : 8 supported, 4 maximum usable queues
  Schedulers     : 0
  Current address: 00:00:5e:00:53:c0, Hardware address: 00:00:5e:00:53:76
  Last flapped   : 2008-09-05 16:44:30 PDT (3d 01:04 ago)
  Input rate     : 0 bps (0 pps)
  Output rate    : 0 bps (0 pps)
  Active alarms  : None
  Active defects : None
  Logical interface ge-2/2/2.0 (Index 82) (SNMP ifIndex 219)
    Flags: Up SNMP-Traps 0x4004000 Encapsulation: ENET2
    Input packets : 10232
    Output packets: 10294
    Protocol inet, MTU: 1500
      Flags: Sendbroadcast-pkt-to-re
      Addresses, Flags: Is-Preferred Is-Primary
        Destination: 203.0.113/24, Local: 203.0.113.1, Broadcast: 203.0.113.255

                        782          1    Defect Active

```

**show interfaces extensive (Gigabit Ethernet on MX Series Routers showing interface transmit statistics configuration)**

```

user@host> show interfaces ge-2/1/2 extensive | match "output|interface"
Physical interface: ge-2/1/2, Enabled, Physical link is Up
  Interface index: 151, SNMP ifIndex: 530, Generation: 154
  Interface flags: SNMP-Traps Internal: 0x4000
  Output bytes   : 240614363944      772721536 bps
  Output packets: 3538446506        1420444 pps
  Direction     : Output
  Interface transmit statistics: Enabled

  Logical interface ge-2/1/2.0 (Index 331) (SNMP ifIndex 955) (Generation 146)
    Output bytes   : 195560312716      522726272 bps
    Output packets: 4251311146        1420451 pps

```

**show interfaces brief (Gigabit Ethernet)**

```

user@host> show interfaces ge-3/0/2 brief
Physical interface: ge-3/0/2, Enabled, Physical link is Up
  Link-level type: 52, MTU: 1522, Speed: 1000mbps, Loopback: Disabled,
  Source filtering: Disabled, Flow control: Enabled, Auto-negotiation: Enabled,
  Remote fault: Online
  Device flags   : Present Running
  Interface flags: SNMP-Traps Internal: 0x4000
  Link flags     : None

  Logical interface ge-3/0/2.0
    Flags: SNMP-Traps 0x4000
    VLAN-Tag [ 0x8100.512 0x8100.513 ] In(pop-swap 0x8100.530) Out(swap-push
    0x8100.512 0x8100.513)
    Encapsulation: VLAN-CCC

```

ccc

Logical interface ge-3/0/2.32767

Flags: SNMP-Traps 0x4000 VLAN-Tag [ 0x0000.0 ] Encapsulation: ENET2

### show interfaces detail (Gigabit Ethernet)

user@host> show interfaces ge-3/0/2 detail

Physical interface: ge-3/0/2, Enabled, Physical link is Up

Interface index: 167, SNMP ifIndex: 35, Generation: 177

Link-level type: 52, MTU: 1522, Speed: 1000mbps, Loopback: Disabled,

Source filtering: Disabled, Flow control: Enabled, Auto-negotiation: Enabled,

Remote fault: Online

Device flags : Present Running

Interface flags: SNMP-Traps Internal: 0x4000

Policer: Input: __default_arp_policer__

```

**NOTE:** For Gigabit Ethernet intelligent queuing 2 (IQ2) interfaces, the logical interface egress statistics displayed in the **show interfaces** command output might not accurately reflect the traffic on the wire when output shaping is applied. Traffic management output shaping might drop packets after they are tallied by the interface counters. For detailed information, see the description of the logical interface **Transit statistics** fields in [Table 57 on page 1212](#).

**Output Fields** [Table 59 on page 1237](#) lists the output fields for the **show interfaces** (management) command on the M Series routers, T Series routers, TX Matrix Plus routers, and PTX Series. Output fields are listed in the approximate order in which they appear.

**Table 59: show interfaces Output Fields for M Series, MX Series, T Series, and PTX Series Routers Management Ethernet Interface**

| Field Name                | Field Description                                                                                                                                            | Level of Output              |
|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Physical Interface</b> |                                                                                                                                                              |                              |
| <b>Physical interface</b> | Name of the physical interface.                                                                                                                              | All levels                   |
| <b>Enabled</b>            | State of the interface. Possible values are described in the “Enabled Field” section under <a href="#">“Common Output Fields Description” on page 1032</a> . | All levels                   |
| <b>Interface index</b>    | Physical interface index number, which reflects its initialization sequence.                                                                                 | <b>detail extensive none</b> |
| <b>SNMP ifIndex</b>       | SNMP index number for the physical interface.                                                                                                                | <b>detail extensive none</b> |
| <b>Generation</b>         | Unique number for use by Juniper Networks technical support only.                                                                                            | <b>detail extensive</b>      |
| <b>Type</b>               | Type of interface.                                                                                                                                           | All levels                   |

**Table 59: show interfaces Output Fields for M Series, MX Series, T Series, and PTX Series Routers Management Ethernet Interface (*continued*)**

| Field Name                     | Field Description                                                                                                                                                                                                                                                                                                                                                 | Level of Output              |
|--------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Link-level type</b>         | Encapsulation type used on the physical interface.                                                                                                                                                                                                                                                                                                                | All levels                   |
| <b>MTU</b>                     | Maximum transmission unit (MTU)—Size of the largest packet to be transmitted.                                                                                                                                                                                                                                                                                     | All levels                   |
| <b>Clocking</b>                | Reference clock source of the interface.                                                                                                                                                                                                                                                                                                                          | All levels                   |
| <b>Speed</b>                   | Network speed on the interface.                                                                                                                                                                                                                                                                                                                                   | All levels                   |
| <b>Device flags</b>            | Information about the physical device. Possible values are described in the “Device Flags” section under <a href="#">“Common Output Fields Description” on page 1032</a> .                                                                                                                                                                                        | All levels                   |
| <b>Interface flags</b>         | Information about the interface. Possible values are described in the “Interface Flags” section under <a href="#">“Common Output Fields Description” on page 1032</a> .                                                                                                                                                                                           | All levels                   |
| <b>Link type</b>               | Data transmission type.                                                                                                                                                                                                                                                                                                                                           | <b>detail extensive none</b> |
| <b>Link flags</b>              | Information about the link. Possible values are described in the “Link Flags” section under <a href="#">“Common Output Fields Description” on page 1032</a> .                                                                                                                                                                                                     | <b>detail extensive</b>      |
| <b>Physical info</b>           | Information about the physical interface.                                                                                                                                                                                                                                                                                                                         | <b>detail extensive</b>      |
| <b>Hold-times</b>              | Current interface hold-time up and hold-time down. Value is in milliseconds.                                                                                                                                                                                                                                                                                      | <b>detail extensive</b>      |
| <b>Current address</b>         | Configured MAC address.                                                                                                                                                                                                                                                                                                                                           | <b>detail extensive none</b> |
| <b>Hardware address</b>        | Media access control (MAC) address of the interface.                                                                                                                                                                                                                                                                                                              | <b>detail extensive none</b> |
| <b>Alternate link address</b>  | Backup link address.                                                                                                                                                                                                                                                                                                                                              | <b>detail extensive</b>      |
| <b>Last flapped</b>            | Date, time, and how long ago the interface went from down to up. The format is <b>Last flapped: year-month-day hour:minute:second timezone (hour:minute:second ago)</b> . For example, <b>Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> .                                                                                                              | <b>detail extensive none</b> |
| <b>Input packets</b>           | Number of packets received on the physical interface.                                                                                                                                                                                                                                                                                                             | None specified               |
| <b>Output packets</b>          | Number of packets transmitted on the physical interface.                                                                                                                                                                                                                                                                                                          | None specified               |
| <b>Statistics last cleared</b> | Time when the statistics for the interface were last set to zero.                                                                                                                                                                                                                                                                                                 | <b>detail extensive</b>      |
| <b>Traffic statistics</b>      | Number and rate of bytes and packets received and transmitted on the logical and physical interface. <ul style="list-style-type: none"> <li>• <b>Input bytes, Output bytes</b>—Number of bytes received and transmitted on the interface.</li> <li>• <b>Input packets, Output packets</b>—Number of packets received and transmitted on the interface.</li> </ul> | <b>detail extensive</b>      |

Table 59: show interfaces Output Fields for M Series, MX Series, T Series, and PTX Series Routers Management Ethernet Interface (*continued*)

| Field Name               | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Level of Output              |
|--------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Input errors</b>      | <ul style="list-style-type: none"> <li>• <b>Errors</b>—Input errors on the interface.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Runts</b>—Frames received smaller than the runt threshold.</li> <li>• <b>Giants</b>—Frames received larger than the giant threshold.</li> <li>• <b>Policed Discards</b>—Frames that the incoming packet match code discarded because they were not recognized or were not of interest. Usually, this field reports protocols that Junos does not support.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>                                                                                                    | <b>extensive</b>             |
| <b>Output errors</b>     | <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and then up, or another problem occurs. If the number of carrier transitions increments quickly, possibly once every 10 seconds, the cable, the remote system, or the interface is malfunctioning.</li> <li>• <b>Errors</b>—Sum of outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet dropped by the ASIC RED mechanism.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul> | <b>extensive</b>             |
| <b>Logical Interface</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                              |

| <b>Generation</b>        | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>detail extensive</b>      |

Table 59: show interfaces Output Fields for M Series, MX Series, T Series, and PTX Series Routers Management Ethernet Interface (*continued*)

| Field Name       | Field Description                                                                                                                                                                 | Level of Output       |
|------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------|
| Route table      | Route table in which this address exists. For example, <b>Route table:0</b> refers to inet.0.                                                                                     | detail extensive      |
| Flags            | Information about the protocol family flags. Possible values are described in the “Family Flags” section under “ <a href="#">Common Output Fields Description</a> ” on page 1032. | detail extensive none |
| Addresses, Flags | Information about address flags. Possible values are described in the “Addresses Flags” section under “ <a href="#">Common Output Fields Description</a> ” on page 1032.          | detail extensive none |
| Destination      | IP address of the remote side of the connection.                                                                                                                                  | detail extensive none |
| Local            | IP address of the logical interface.                                                                                                                                              | detail extensive none |
| Broadcast        | Broadcast address.                                                                                                                                                                | detail extensive none |
| Generation       | Unique number for use by Juniper Networks technical support only.                                                                                                                 | detail extensive      |

## Sample Output

### show interfaces brief (Management Ethernet)

```

user@host> show interfaces fxp0 brief
Physical interface: fxp0, Enabled, Physical link is Up
  Type: Ethernet, Link-level type: Ethernet, MTU: 1514, Clocking: Unspecified,
  Speed: 100mbps
  Device flags   : Present Running
  Interface flags: SNMP-Traps

Logical interface fxp0.0
  Flags: SNMP-Traps Encapsulation: ENET2
  inet 192.168.70.143/21

```

### show interfaces (Management Ethernet)

```

user@host> show interfaces fxp0
Physical interface: fxp0, Enabled, Physical link is Up
  Interface index: 1, SNMP ifIndex: 1
  Type: Ethernet, Link-level type: Ethernet, MTU: 1514, Speed: 100mbps
  Device flags   : Present Running
  Interface flags: SNMP-Traps
  Link type      : Half-Duplex
  Current address: 00:00:5E:00:53:89, Hardware address: 00:00:5E:00:53:89
  Last flapped   : Never
    Input packets : 80804
    Output packets: 1105

Logical interface fxp0.0 (Index 2) (SNMP ifIndex 13)
  Flags: SNMP-Traps Encapsulation: ENET2
  Protocol inet, MTU: 1500
    Flags: Is-Primary

```

```

Addresses, Flags: Is-Preferred Is-Primary
Destination: 192.168.64/21, Local: 192.168.70.143,
Broadcast: 192.168.71.255

```

### show interfaces (Management Ethernet [TX Matrix Plus Router])

```

user@host> show interfaces em0
Physical interface: em0, Enabled, Physical link is Up
  Interface index: 8, SNMP ifIndex: 17
  Type: Ethernet, Link-level type: Ethernet, MTU: 1514, Speed: 100mbps
  Device flags   : Present Running
  Interface flags: SNMP-Traps
  Link type      : Full-Duplex
  Current address: 00:00:5E:00:53:c0, Hardware address: 00:00:5E:00:53:c0
  Last flapped   : Never
    Input packets : 1424
    Output packets: 5282

Logical interface em0.0 (Index 3) (SNMP ifIndex 18)
  Flags: SNMP-Traps Encapsulation: ENET2
  Input packets : 1424
  Output packets: 5282
  Protocol inet, MTU: 1500
  Flags: Is-Primary
  Addresses, Flags: Is-Preferred Is-Primary
    Destination: 192.168.178.0/25, Local: 192.168.178.11, Broadcast:
    192.168.178.127

```

### show interfaces (Management Ethernet [PTX Series Packet Transport Routers])

```

user@host> show interfaces em0
Physical interface: em0, Enabled, Physical link is Up
  Interface index: 8, SNMP ifIndex: 0
  Type: Ethernet, Link-level type: Ethernet, MTU: 1514, Speed: 1000mbps
  Device flags   : Present Running
  Interface flags: SNMP-Traps
  Link type      : Full-Duplex
  Current address: 00:00:5E:00:53:1b, Hardware address: 00:00:5E:00:53:1b
  Last flapped   : Never
    Input packets : 212581
    Output packets: 71

Logical interface em0.0 (Index 3) (SNMP ifIndex 0)
  Flags: SNMP-Traps Encapsulation: ENET2
  Input packets : 212551
  Output packets: 71
  Protocol inet, MTU: 1500
  Flags: Is-Primary
  Addresses, Flags: Is-Default Is-Preferred Is-Primary
    Destination: 192.168.3/24, Local: 192.168.3.30,
    Broadcast: 192.168.3.255

```

### show interfaces detail (Management Ethernet)

```

user@host> show interfaces fxp0 detail
Physical interface: fxp0, Enabled, Physical link is Up
  Interface index: 1, SNMP ifIndex: 1, Generation: 0
  Type: Ethernet, Link-level type: Ethernet, MTU: 1514, Clocking: Unspecified,
  Speed: 100mbps
  Device flags   : Present Running

```

```
Interface flags: SNMP-Traps
Link type      : Half-Duplex
Physical info  : Unspecified
Hold-times    : Up 0 ms, Down 0 ms
Current address: 00:00:5E:00:53:89, Hardware address: 00:00:5E:00:53:89
Alternate link address: Unspecified
Last flapped   : Never
Statistics last cleared: Never
Traffic statistics:
  Input bytes  :          6484031
  Output bytes :          167503
  Input packets:          81008
  Output packets:         1110

Logical interface fxp0.0 (Index 2) (SNMP ifIndex 13) (Generation 1)
  Flags: SNMP-Traps Encapsulation: ENET2
  Protocol inet, MTU: 1500, Generation: 6, Route table: 0
  Flags: Is-Primary
  Addresses, Flags: Is-Preferred Is-Primary
    Destination: 192.168.64/21, Local: 192.168.70.143,
    Broadcast: 192.168.71.255, Generation: 1
```

#### show interfaces detail (Management Ethernet [TX Matrix Plus Router])

```
user@host> show interfaces em0 detail
Physical interface: em0, Enabled, Physical link is Up
  Interface index: 8, SNMP ifIndex: 17, Generation: 2
  Type: Ethernet, Link-level type: Ethernet, MTU: 1514, Clocking: Unspecified,
  Speed: 100mbps
  Device flags   : Present Running
  Interface flags: SNMP-Traps
  Link type      : Full-Duplex
  Physical info  : Unspecified
  Hold-times    : Up 0 ms, Down 0 ms
  Current address: 00:00:5E:00:53:c0, Hardware address: 00:00:5E:00:53:c0

| <b>Output Fields</b>            | <a href="#">Table 60 on page 1252</a> lists the output fields for the <b>show interfaces (PPPoE)</b> command. Output fields are listed in the approximate order in which they appear.                                                                                                                                                                                                                                                                                                                                                                               |

**Table 60: show interfaces (PPPoE) Output Fields**

| Field Name                | Field Description                                                                                                                                            | Level of Output              |
|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Physical Interface</b> |                                                                                                                                                              |                              |
| <b>Physical interface</b> | Name of the physical interface.                                                                                                                              | All levels                   |
| <b>Enabled</b>            | State of the interface. Possible values are described in the “Enabled Field” section under <a href="#">“Common Output Fields Description” on page 1032</a> . | All levels                   |
| <b>Interface index</b>    | Physical interface index number, which reflects its initialization sequence.                                                                                 | <b>detail extensive none</b> |

Table 60: show interfaces (PPPoE) Output Fields (*continued*)

| Field Name                     | Field Description                                                                                                                                                          | Level of Output              |
|--------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>SNMP ifIndex</b>            | SNMP index number for the physical interface.                                                                                                                              | <b>detail extensive none</b> |
| <b>Generation</b>              | Unique number for use by Juniper Networks technical support only.                                                                                                          | <b>detail extensive</b>      |
| <b>Type</b>                    | Physical interface type (PPPoE).                                                                                                                                           | All levels                   |
| <b>Link-level type</b>         | Encapsulation on the physical interface (PPPoE).                                                                                                                           | All levels                   |
| <b>MTU</b>                     | MTU size on the physical interface.                                                                                                                                        | All levels                   |
| <b>Clocking</b>                | Reference clock source. It can be <b>Internal</b> or <b>External</b> .                                                                                                     | All levels                   |
| <b>Speed</b>                   | Speed at which the interface is running.                                                                                                                                   | All levels                   |
| <b>Device flags</b>            | Information about the physical device. Possible values are described in the "Device Flags" section under <a href="#">"Common Output Fields Description" on page 1032</a> . | All levels                   |
| <b>Interface flags</b>         | Information about the interface. Possible values are described in the "Interface Flags" section under <a href="#">"Common Output Fields Description" on page 1032</a> .    | All levels                   |
| <b>Link type</b>               | Physical interface link type: <b>full duplex</b> or <b>half duplex</b> .                                                                                                   | All levels                   |
| <b>Link flags</b>              | Information about the interface. Possible values are described in the "Link Flags" section under <a href="#">"Common Output Fields Description" on page 1032</a> .         | All levels                   |
| <b>Input rate</b>              | Input rate in bits per second (bps) and packets per second (pps).                                                                                                          | None specified               |
| <b>Output rate</b>             | Output rate in bps and pps.                                                                                                                                                | None specified               |
| <b>Physical Info</b>           | Physical interface information.                                                                                                                                            | All levels                   |
| <b>Hold-times</b>              | Current interface hold-time up and hold-time down, in milliseconds.                                                                                                        | <b>detail extensive</b>      |
| <b>Current address</b>         | Configured MAC address.                                                                                                                                                    | <b>detail extensive</b>      |
| <b>Hardware address</b>        | MAC address of the hardware.                                                                                                                                               | <b>detail extensive</b>      |
| <b>Alternate link address</b>  | Backup address of the link.                                                                                                                                                | <b>detail extensive</b>      |
| <b>Statistics last cleared</b> | Time when the statistics for the interface were last set to zero.                                                                                                          | <b>detail extensive</b>      |

Table 60: show interfaces (PPPoE) Output Fields (*continued*)

| Field Name                     | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Level of Output         |
|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
| <b>Traffic statistics</b>      | <p>Number and rate of bytes and packets received and transmitted on the physical interface.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>detail extensive</b> |
| <b>IPv6 transit statistics</b> | <p>Number of IPv6 transit bytes and packets received and transmitted on the physical interface if IPv6 statistics tracking is enabled.</p> <p><b>NOTE:</b> These fields include dropped traffic and exception traffic, as those fields are not separately defined.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>detail extensive</b> |
| <b>Input errors</b>            | <p>Input errors on the interface:</p> <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Runts</b>—Number of frames received that are smaller than the runt threshold.</li> <li>• <b>Giants</b>—Number of frames received that are larger than the giant threshold.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that the Junos OS does not handle.</li> <li>• <b>Resource errors</b>—Sum of B chip Tx drops and IXP Tx net transmit drops.</li> </ul>                                                                                                            | <b>extensive</b>        |
| <b>Output errors</b>           | <p>Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b> —Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and then up, or another problem occurs. If the number of carrier transitions increments quickly (perhaps once every 10 seconds), then the cable, the far-end system, or the PIM is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>MTU errors</b>—Number of packets whose size exceeded the MTU of the interface.</li> <li>• <b>Resource errors</b>—Sum of B chip Tx drops and IXP Tx net transmit drops.</li> </ul> | <b>extensive</b>        |

| <b>Logical interface</b>  | Name of the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | All levels                   |
| <b>Index</b>              | Logical interface index number (which reflects its initialization sequence).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>detail extensive none</b> |
| <b>SNMP ifIndex</b>       | Logical interface SNMP interface index number.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>detail extensive none</b> |
| <b>Generation</b>         | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>detail extensive</b>      |
| <b>Flags</b>              | Information about the logical interface. Possible values are described in the “Logical Interface Flags” section under “ <a href="#">Common Output Fields Description</a> ” on page 1032.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | All levels                   |
| <b>Encapsulation</b>      | Type of encapsulation configured on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | All levels                   |
| <b>PPP parameters</b>     | PPP status: <ul style="list-style-type: none"> <li>• LCP restart timer—Length of time (in milliseconds) between successive Link Control Protocol (LCP) configuration requests.</li> <li>• NCP restart timer—Length of time (in milliseconds) between successive Network Control Protocol (NCP) configuration requests.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>detail</b>                |
| <b>PPPoE</b>              | PPPoE status: <ul style="list-style-type: none"> <li>• <b>State</b>—State of the logical interface (<b>up</b> or <b>down</b>).</li> <li>• <b>Session ID</b>—PPPoE session ID.</li> <li>• <b>Service name</b>—Type of service required. Can be used to indicate an Internet service provider (ISP) name or a class or quality of service.</li> <li>• <b>Configured AC name</b>—Configured access concentrator name.</li> <li>• <b>Auto-reconnect timeout</b>—Time after which to try to reconnect after a PPPoE session is terminated, in seconds.</li> <li>• <b>Idle Timeout</b>—Length of time (in seconds) that a connection can be idle before disconnecting.</li> <li>• <b>Underlying interface</b>—Interface on which PPPoE is running.</li> </ul> | All levels                   |
| <b>Link</b>               | Name of the physical interfaces for member links in an aggregated Ethernet bundle for a PPPoE over aggregated Ethernet configuration. PPPoE traffic goes out on these interfaces.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | All levels                   |
| <b>Traffic statistics</b> | Total number of bytes and packets received and transmitted on the logical interface. These statistics are the sum of the local and transit statistics. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. This counter usually takes less than 1 second to stabilize.                                                                                                                                                                                                                                                                                                                                                                                                              | <b>detail extensive</b>      |

Table 60: show interfaces (PPPoE) Output Fields (*continued*)

| Field Name              | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Level of Output  |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| IPv6 transit statistics | <p>Number of IPv6 transit bytes and packets received and transmitted on the logical interface if IPv6 statistics tracking is enabled.</p> <p><b>NOTE:</b> The packet and byte counts in these fields include traffic that is dropped and does not leave the router.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>                                                                                                                                                                                                                                                                                                        | detail extensive |
| Local statistics        | <p>Statistics for traffic received from and transmitted to the Routing Engine. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. This counter usually takes less than 1 second to stabilize.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | detail extensive |
| Transit statistics      | <p>Statistics for traffic transiting the router. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. This counter usually takes less than 1 second to stabilize.</p> <p><b>NOTE:</b> The packet and byte counts in these fields include traffic that is dropped and does not leave the router.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | detail extensive |
| Keepalive settings      | <p>(PPP and HDLC) Configured settings for keepalives.</p> <ul style="list-style-type: none"> <li>• <b>interval seconds</b>—The time in seconds between successive keepalive requests. The range is 10 seconds through 32,767 seconds, with a default of 10 seconds.</li> <li>• <b>down-count number</b>—The number of keepalive packets a destination must fail to receive before the network takes a link down. The range is 1 through 255, with a default of 3.</li> <li>• <b>up-count number</b>—The number of keepalive packets a destination must receive to change a link's status from down to up. The range is 1 through 255, with a default of 1.</li> </ul>                                                                                                                                                                                                                                                                       | detail extensive |

| <b>Route table</b>            | Routing table in which the logical interface address is located. For example, <b>0</b> refers to the routing table <b>inet.0</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>detail extensive</b> none |
| <b>Flags</b>                  | Information about the protocol family flags. Possible values are described in the “Family Flags” section under <a href="#">“Common Output Fields Description” on page 1032</a> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>detail extensive</b> none |

Table 60: show interfaces (PPPoE) Output Fields (*continued*)

| Field Name              | Field Description                                                                                                                                                                                           | Level of Output       |
|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------|
| <b>Addresses, Flags</b> | Information about the addresses configured for the protocol family. Possible values are described in the “Addresses Flags” section under “ <a href="#">Common Output Fields Description</a> ” on page 1032. | detail extensive none |
| <b>Destination</b>      | IP address of the remote side of the connection.                                                                                                                                                            | detail extensive none |
| <b>Local</b>            | IP address of the logical interface.                                                                                                                                                                        | detail extensive none |
| <b>Broadcast</b>        | Broadcast address.                                                                                                                                                                                          | detail extensive none |

## Sample Output

### show interfaces (PPPoE)

```

user@host> show interfaces pp0
Physical interface: pp0, Enabled, Physical link is Up
  Interface index: 128, SNMP ifIndex: 24
  Type: PPPoE, Link-level type: PPPoE, MTU: 1532
  Device flags   : Present Running
  Interface flags: Point-To-Point SNMP-Traps
  Link type      : Full-Duplex
  Link flags     : None
  Input rate     : 0 bps (0 pps)
  Output rate    : 0 bps (0 pps)

Logical interface pp0.0 (Index 72) (SNMP ifIndex 72)
  Flags: Hardware-Down Point-To-Point SNMP-Traps 0x4000 Encapsulation: PPPoE
  PPPoE:
    State: SessionDown, Session ID: None,
    Service name: None, Configured AC name: sapphire,
    Auto-reconnect timeout: 100 seconds, Idle timeout: Never,
    Underlying interface: at-5/0/0.0 (Index 70)
  Input packets : 0
  Output packets: 0
  LCP state: Not-configured
  NCP state: inet: Not-configured, inet6: Not-configured, iso: Not-configured,
  mp1s: Not-configured
  CHAP state: Closed
    Protocol inet, MTU: 100
    Flags: User-MTU, Negotiate-Address

```

### show interfaces (PPPoE over Aggregated Ethernet)

```

user@host> show interfaces pp0.1073773821
Logical interface pp0.1073773821 (Index 80) (SNMP ifIndex 32584)
  Flags: Point-To-Point SNMP-Traps 0x4000 Encapsulation: PPPoE
  PPPoE:
    State: SessionUp, Session ID: 1,
    Session AC name: alcor, Remote MAC address: 00:00:5e:00:53:01,
    Underlying interface: demux0.100 (Index 88)
  Link:
    ge-1/0/0.32767
    ge-1/0/1.32767

```

```

    Input packets : 6
    Output packets: 6
    LCP state: Opened
    NCP state: inet: Opened, inet6: Not-configured, iso: Not-configured, mp1s:
Not-configured
    CHAP state: Closed
    PAP state: Success
    Protocol inet, MTU: 1500
    Flags: Sendbroadcast-pkt-to-re
    Addresses, Flags: Is-Primary
    Local: 203.0.113.1

```

### show interfaces brief (PPPoE)

```

user@host> show interfaces pp0 brief
Physical interface: pp0, Enabled, Physical link is Up
  Type: PPPoE, Link-level type: PPPoE, MTU: 1532, Speed: Unspecified
  Device flags   : Present Running
  Interface flags: Point-To-Point SNMP-Traps

Logical interface pp0.0
  Flags: Hardware-Down Point-To-Point SNMP-Traps 0x4000 Encapsulation: PPPoE
  PPPoE:
    State: SessionDown, Session ID: None,
    Service name: None, Configured AC name: sapphire,
    Auto-reconnect timeout: 100 seconds, Idle timeout: Never,
    Underlying interface: at-5/0/0.0 (Index 70)
  inet

```

### show interfaces detail (PPPoE)

```

user@host> show interfaces pp0 detail
Physical interface: pp0, Enabled, Physical link is Up
  Interface index: 128, SNMP ifIndex: 24, Generation: 9
  Type: PPPoE, Link-level type: PPPoE, MTU: 1532, Speed: Unspecified
  Device flags   : Present Running
  Interface flags: Point-To-Point SNMP-Traps
  Link type      : Full-Duplex
  Link flags     : None
  Physical info  : Unspecified
  Hold-times    : Up 0 ms, Down 0 ms
  Current address: Unspecified, Hardware address: Unspecified
  Alternate link address: Unspecified
  Statistics last cleared: Never
  Traffic statistics:
    Input bytes   : 0
    Output bytes  : 0
    Input packets : 0
    Output packets: 0
Logical interface pp0.0 (Index 72) (SNMP ifIndex 72) (Generation 14)
  Flags: Hardware-Down Point-To-Point SNMP-Traps 0x4000 Encapsulation: PPPoE
  PPPoE:
    State: SessionDown, Session ID: None,
    Service name: None, Configured AC name: sapphire,
    Auto-reconnect timeout: 100 seconds, Idle timeout: Never,
    Underlying interface: at-5/0/0.0 (Index 70)
  Traffic statistics:
    Input bytes   : 0
    Output bytes  : 0
    Input packets : 0

```

```

Output packets:                                0
Local statistics:
Input bytes :                                  0
Output bytes :                                0
Input packets:                                0
Output packets:                               0
Transit statistics:
Input bytes :                                  0          0 bps
Output bytes :                                0          0 bps
Input packets:                                0          0 pps
Output packets:                               0          0 pps
LCP state: Not-configured
NCP state: inet: Not-configured, inet6: Not-configured, iso: Not-configured,
mpls: Not-configured
CHAP state: Closed
Protocol inet, MTU: 100, Generation: 14, Route table: 0
Flags: User-MTU, Negotiate-Address

```

### show interfaces extensive (PPPoE on M120 and M320 Routers)

```

user@host> show interfaces pp0 extensive
Physical interface: pp0, Enabled, Physical link is Up
Interface index: 128, SNMP ifIndex: 93, Generation: 129
Type: PPPoE, Link-level type: PPPoE, MTU: 1532, Speed: Unspecified
Device flags : Present Running
Interface flags: Point-To-Point SNMP-Traps
Link type : Full-Duplex
Link flags : None
Physical info : Unspecified
Hold-times : Up 0 ms, Down 0 ms
Current address: Unspecified, Hardware address: Unspecified
Alternate link address: Unspecified
Statistics last cleared: Never
Traffic statistics:
Input bytes :          972192          0 bps
Output bytes :          975010          0 bps
Input packets:          1338          0 pps
Output packets:         1473          0 pps
IPv6 transit statistics:
Input bytes :          0
Output bytes :          0
Input packets:          0
Output packets:         0
Input errors:
Errors: 0, Drops: 0, Framing errors: 0, Runts: 0, Giants: 0, Policed discards:
0,
Resource errors: 0
Output errors:
Carrier transitions: 0, Errors: 0, Drops: 0, MTU errors: 0, Resource errors:
0

Logical interface pp0.0 (Index 69) (SNMP ifIndex 96) (Generation 194)
Flags: Point-To-Point SNMP-Traps 0x4000 Encapsulation: PPPoE
PPPoE:
State: SessionUp, Session ID: 26,
Session AC name: None, AC MAC address: 00:00:5e:00:53:12,
Service name: None, Configured AC name: None,
Auto-reconnect timeout: Never, Idle timeout: Never,
Underlying interface: ge-3/0/1.0 (Index 67)
Traffic statistics:
Input bytes :          252

```

```

Output bytes :                296
Input  packets:                7
Output packets:               8
IPv6 transit statistics:
  Input bytes :                0
  Output bytes :                0
  Input packets:               0
  Output packets:              0
Local statistics:
  Input bytes :                252
  Output bytes :                296
  Input packets:                7
  Output packets:               8
Transit statistics:
  Input bytes :                0                0 bps
  Output bytes :                0                0 bps
  Input packets:               0                0 pps
  Output packets:              0                0 pps

| <b>Description</b>              | (PTX Series Packet Transport Routers only) Display status information about the specified Ethernet interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Options</b>                  | <b>et-<i>fpc/pic/port</i></b> —Display standard information about the specified Ethernet interface.<br><br><b>brief   detail   extensive   terse</b> —(Optional) Display the specified level of output.<br><br><b>descriptions</b> —(Optional) Display interface description strings.<br><br><b>media</b> —(Optional) Display media-specific information about network interfaces.<br><br><b>snmp-index <i>snmp-index</i></b> —(Optional) Display information for the specified SNMP index of the interface.<br><br><b>statistics</b> —(Optional) Display static interface statistics. |
| <b>Required Privilege Level</b> | view                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>List of Sample Output</b>    | <a href="#">show interfaces brief (PTX5000 Packet Transport Router) on page 1272</a><br><a href="#">show interfaces extensive (PTX5000 Packet Transport Router) on page 1272</a><br><a href="#">show interfaces terse (PTX5000 Packet Transport Router) on page 1273</a>                                                                                                                                                                                                                                                                                                               |
| <b>Output Fields</b>            | See <a href="#">Table 61 on page 1263</a> for the output fields for the <b>show interfaces</b> (PTX Series Packet Transport Routers) command.                                                                                                                                                                                                                                                                                                                                                                                                                                          |

Table 61: show interfaces PTX Series Output Fields

| Field Name                | Field Description                                                                                                                                                          | Level of Output              |
|---------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Physical Interface</b> |                                                                                                                                                                            |                              |
| <b>Physical interface</b> | Name of the physical interface.                                                                                                                                            | All levels                   |
| <b>Enabled</b>            | State of the interface. Possible values are described in the “Enabled Field” section under <a href="#">“Common Output Fields Description” on page 1032</a> .               | All levels                   |
| <b>Interface index</b>    | Index number of the physical interface, which reflects its initialization sequence.                                                                                        | <b>detail extensive none</b> |
| <b>SNMP ifIndex</b>       | SNMP index number for the physical interface.                                                                                                                              | <b>detail extensive none</b> |
| <b>Generation</b>         | Unique number for use by Juniper Networks technical support only.                                                                                                          | <b>detail extensive</b>      |
| <b>Link-level type</b>    | Encapsulation being used on the physical interface.                                                                                                                        | All levels                   |
| <b>MTU</b>                | Maximum transmission unit size on the physical interface.                                                                                                                  | All levels                   |
| <b>Speed</b>              | Speed at which the interface is running.                                                                                                                                   | All levels                   |
| <b>BPDU Error</b>         | Bridge protocol data unit (BPDU) errors (if any).                                                                                                                          | All levels                   |
| <b>MAC-Rewrite</b>        | MAC Rewrite errors (if any).                                                                                                                                               | All levels                   |
| <b>Loopback</b>           | Loopback status: <b>Enabled</b> or <b>Disabled</b> . If loopback is enabled, type of loopback: <b>Local</b> or <b>Remote</b> .                                             | All levels                   |
| <b>Source filtering</b>   | Source filtering status: <b>Enabled</b> or <b>Disabled</b> .                                                                                                               | All levels                   |
| <b>Flow control</b>       | Flow control status: <b>Enabled</b> or <b>Disabled</b> .                                                                                                                   | All levels                   |
| <b>Device flags</b>       | Information about the physical device. Possible values are described in the “Device Flags” section under <a href="#">“Common Output Fields Description” on page 1032</a> . | All levels                   |
| <b>Interface flags</b>    | Information about the interface. Possible values are described in the “Interface Flags” section under <a href="#">“Common Output Fields Description” on page 1032</a> .    | All levels                   |
| <b>Link flags</b>         | Information about the link. Possible values are described in the “Links Flags” section under <a href="#">“Common Output Fields Description” on page 1032</a> .             | All levels                   |
| <b>CoS queues</b>         | Number of CoS queues configured.                                                                                                                                           | <b>detail extensive none</b> |
| <b>Hold-times</b>         | Current interface hold-time up and hold-time down, in milliseconds.                                                                                                        | <b>detail extensive</b>      |
| <b>Current address</b>    | Configured MAC address.                                                                                                                                                    | <b>detail extensive none</b> |
| <b>Hardware address</b>   | Hardware MAC address.                                                                                                                                                      | <b>detail extensive none</b> |

| Field Name                     | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Level of Output              |
|--------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Last flapped</b>            | Date, time, and how long ago the interface went from down to up. The format is <b>Last flapped: year-month-day hour:minute:second:timezone (hour:minute:second ago)</b> . For example, <b>Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>detail extensive none</b> |
| <b>Statistics last cleared</b> | Time when the statistics for the interface were last set to zero.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>detail extensive</b>      |
| <b>Traffic statistics</b>      | <p>Number and rate of bytes and packets received and transmitted on the physical interface.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul> <p><b>NOTE:</b> <b>Input bytes</b> and <b>output bytes</b> are counted as Layer 3 packet length.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>detail extensive</b>      |
| <b>Input errors</b>            | <p>Input errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of the incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Runts</b>—Number of frames received that are smaller than the runt threshold.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that the Junos OS does not handle.</li> <li>• <b>L3 incompletes</b>—Number of incoming packets discarded because they failed Layer 3 (usually IPv4) sanity checks of the header. For example, a frame with less than 20 bytes of available IP header is discarded. L3 incomplete errors can be ignored by configuring the <b>ignore-l3-incompletes</b> statement.</li> </ul> <p><b>NOTE:</b> The L3 incompletes field is <i>not</i> supported on PTX Series Packet Transport Routers.</p> <ul style="list-style-type: none"> <li>• <b>L2 channel errors</b>—Number of times the software did not find a valid logical interface for an incoming frame.</li> <li>• <b>L2 mismatch timeouts</b>—Number of malformed or short packets that caused the incoming packet handler to discard the frame as unreadable.</li> <li>• <b>FIFO errors</b>—Number of FIFO errors in the receive direction that are reported by the ASIC on the PIC. If this value is ever nonzero, the PIC is probably malfunctioning.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul> | <b>extensive</b>             |

Table 61: show interfaces PTX Series Output Fields (*continued*)

| Field Name                      | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Level of Output         |
|---------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
| <b>Output errors</b>            | <p>Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and then up, or another problem occurs. If the number of carrier transitions increments quickly (perhaps once every 10 seconds), the cable, the far-end system, or the PIC or PIM is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Collisions</b>—Number of Ethernet collisions. The Gigabit Ethernet PIC supports only full-duplex operation, so for Gigabit Ethernet PICs, this number should always remain 0. If it is nonzero, there is a software bug.</li> <li>• <b>Aged packets</b>—Number of packets that remained in shared packet SDRAM so long that the system automatically purged them. The value in this field should never increment. If it does, it is most likely a software bug or possibly malfunctioning hardware.</li> <li>• <b>FIFO errors</b>—Number of FIFO errors in the send direction as reported by the ASIC on the PIC. If this value is ever nonzero, the PIC is probably malfunctioning.</li> <li>• <b>HS link CRC errors</b>—Number of errors on the high-speed links between the ASICs responsible for handling the router interfaces.</li> <li>• <b>MTU errors</b>—Number of packets whose size exceeded the MTU of the interface.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul> | <b>extensive</b>        |
| <b>Egress queues</b>            | Total number of egress queues supported on the specified interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>detail extensive</b> |

| Field Name                              | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Level of Output              |
|-----------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Active alarms and Active defects</b> | <p>Ethernet-specific defects that can prevent the interface from passing packets. When a defect persists for a certain amount of time, it is promoted to an alarm. Based on the router configuration, an alarm can ring the red or yellow alarm bell on the router, or turn on the red or yellow alarm LED on the craft interface. These fields can contain the value <b>None</b> or <b>Link</b>.</p> <ul style="list-style-type: none"> <li>• <b>None</b>—There are no active defects or alarms.</li> <li>• <b>Link</b>—Interface has lost its link state, which usually means that the cable is unplugged, the far-end system has been turned off, or the PIC is malfunctioning.</li> <li>• <b>LOCAL-FAULT</b>—Link fault signaling operates between the remote PHY RS (Reconciliation sub-layer) and the local RS. A Local Fault is used to signal a detected fault between the remote RS and the local RS to the local Ethernet interface.</li> <li>• <b>REMOTE-FAULT</b>—When the Local Fault status reaches an RS, the RS stops sending MAC data and continuously generates the Remote Fault status on the transmit data path .</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>detail extensive none</b> |
| <b>MAC statistics</b>                   | <p><b>Receive</b> and <b>Transmit</b> statistics reported by the PIC's MAC subsystem, including the following:</p> <ul style="list-style-type: none"> <li>• <b>Total octets</b> and <b>total packets</b>—Total number of octets and packets.</li> <li>• <b>Unicast packets</b>, <b>Broadcast packets</b>, and <b>Multicast packets</b>—Number of unicast, broadcast, and multicast packets.</li> <li>• <b>CRC/Align errors</b>—Total number of packets received that had a length (excluding framing bits, but including FCS octets) of between 64 and 1518 octets, inclusive, and had either a bad FCS with an integral number of octets (FCS Error) or a bad FCS with a nonintegral number of octets (Alignment Error).</li> <li>• <b>FIFO error</b>—Number of FIFO errors that are reported by the ASIC on the PIC. If this value is ever nonzero, the PIC or a cable is probably malfunctioning.</li> <li>• <b>MAC control frames</b>—Number of MAC control frames.</li> <li>• <b>MAC pause frames</b>—Number of MAC control frames with <b>pause</b> operational code.</li> <li>• <b>Oversized frames</b>—Number of frames that exceed 1518 octets.</li> <li>• <b>Jabber frames</b>—Number of frames that were longer than 1518 octets (excluding framing bits, but including FCS octets), and had either an FCS error or an alignment error. This definition of jabber is different from the definition in IEEE-802.3 section 8.2.1.5 (10BASE5) and section 10.3.1.4 (10BASE2). These documents define jabber as the condition in which any packet exceeds 20 ms. The allowed range to detect jabber is from 20 ms to 150 ms.</li> <li>• <b>Fragment frames</b>—Total number of packets that were less than 64 octets in length (excluding framing bits, but including FCS octets), and had either an FCS error or an alignment error. Fragment frames normally increment because both runts (which are normal occurrences caused by collisions) and noise hits are counted.</li> <li>• <b>VLAN tagged frames</b>—Number of frames that are VLAN tagged. The system uses the TPID of 0x8100 in the frame to determine whether a frame is tagged or not.</li> <li>• <b>Code violations</b>—Number of times an event caused the PHY to indicate "Data reception error" or "invalid data symbol error."</li> </ul> | <b>extensive</b>             |

Table 61: show interfaces PTX Series Output Fields (*continued*)

| Field Name        | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Level of Output |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| Filter statistics | <p><b>Receive</b> and <b>Transmit</b> statistics reported by the PIC's MAC address filter subsystem. The filtering is done by the content-addressable memory (CAM) on the PIC. The filter examines a packet's source and destination MAC addresses to determine whether the packet should enter the system or be rejected.</p> <ul style="list-style-type: none"> <li>• <b>Input packet count</b>—Number of packets received from the MAC hardware that the filter processed.</li> <li>• <b>Input packet rejects</b>—Number of packets that the filter rejected because of either the source MAC address or the destination MAC address.</li> <li>• <b>Input DA rejects</b>—Number of packets that the filter rejected because the destination MAC address of the packet is not on the accept list. It is normal for this value to increment. When it increments very quickly and no traffic is entering the router from the far-end system, either there is a bad ARP entry on the far-end system, or multicast routing is not on and the far-end system is sending many multicast packets to the local router (which the router is rejecting).</li> <li>• <b>Input SA rejects</b>—Number of packets that the filter rejected because the source MAC address of the packet is not on the accept list. The value in this field should increment only if source MAC address filtering has been enabled. If filtering is enabled, if the value increments quickly, and if the system is not receiving traffic that it should from the far-end system, it means that the user-configured source MAC addresses for this interface are incorrect.</li> <li>• <b>Output packet count</b>—Number of packets that the filter has given to the MAC hardware.</li> <li>• <b>Output packet pad count</b>—Number of packets the filter padded to the minimum Ethernet size (60 bytes) before giving the packet to the MAC hardware. Usually, padding is done only on small ARP packets, but some very small IP packets can also require padding. If this value increments rapidly, either the system is trying to find an ARP entry for a far-end system that does not exist or it is misconfigured.</li> <li>• <b>Output packet error count</b>—Number of packets with an indicated error that the filter was given to transmit. These packets are usually aged packets or are the result of a bandwidth problem on the FPC hardware. On a normal system, the value of this field should not increment.</li> <li>• <b>CAM destination filters, CAM source filters</b>—Number of entries in the CAM dedicated to destination and source MAC address filters. There can only be up to 64 source entries. If source filtering is disabled, which is the default, the values for these fields should be 0.</li> </ul> | extensive       |

Table 61: show interfaces PTX Series Output Fields (*continued*)

| Field Name                             | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Level of Output |

| <b>IPv6 transit statistics</b> | Number of IPv6 transit bytes and packets received and transmitted on the logical interface if IPv6 statistics tracking is enabled.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>extensive</b>                      |
| <b>Local statistics</b>        | Number and rate of bytes and packets destined to the router.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>extensive</b>                      |

Table 61: show interfaces PTX Series Output Fields (*continued*)

| Field Name                      | Field Description                                                                                                                                                                                    | Level of Output              |
|---------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Transit statistics</b>       | Number and rate of bytes and packets transiting the switch.                                                                                                                                          | <b>extensive</b>             |
| <b>Generation</b>               | Unique number for use by Juniper Networks technical support only.                                                                                                                                    | <b>detail extensive</b>      |
| <b>Route Table</b>              | Route table in which the logical interface address is located. For example, <b>0</b> refers to the routing table inet.0.                                                                             | <b>detail extensive none</b> |
| <b>Flags</b>                    | Information about protocol family flags. Possible values are described in the “Family Flags” section under <a href="#">“Common Output Fields Description” on page 1032</a> .                         | <b>detail extensive</b>      |
| <b>Donor interface</b>          | (Unnumbered Ethernet) Interface from which an unnumbered Ethernet interface borrows an IPv4 address.                                                                                                 | <b>detail extensive none</b> |
| <b>Preferred source address</b> | (Unnumbered Ethernet) Secondary IPv4 address of the donor loopback interface that acts as the preferred source address for the unnumbered Ethernet interface.                                        | <b>detail extensive none</b> |
| <b>Input Filters</b>            | Names of any input filters applied to this interface. If you specify a precedence value for any filter in a dynamic profile, filter precedence values appear in parentheses next to all interfaces.  | <b>detail extensive</b>      |
| <b>Output Filters</b>           | Names of any output filters applied to this interface. If you specify a precedence value for any filter in a dynamic profile, filter precedence values appear in parentheses next to all interfaces. | <b>detail extensive</b>      |
| <b>Mac-Validate Failures</b>    | Number of MAC address validation failures for packets and bytes. This field is displayed when MAC address validation is enabled for the logical interface.                                           | <b>detail extensive none</b> |
| <b>Addresses, Flags</b>         | Information about the address flags. Possible values are described in the “Addresses Flags” section under <a href="#">“Common Output Fields Description” on page 1032</a> .                          | <b>detail extensive none</b> |
| <b><i>protocol-family</i></b>   | Protocol family configured on the logical interface. If the protocol is <b>inet</b> , the IP address of the interface is also displayed.                                                             | <b>brief</b>                 |
| <b>Flags</b>                    | Information about flags (possible values are described in the “Addresses Flags” section under <a href="#">“Common Output Fields Description” on page 1032</a> .                                      | <b>detail extensive none</b> |
| <b>Destination</b>              | IP address of the remote side of the connection.                                                                                                                                                     | <b>detail extensive none</b> |
| <b>Local</b>                    | IP address of the logical interface.                                                                                                                                                                 | <b>detail extensive none</b> |
| <b>Broadcast</b>                | Broadcast address of the logical interlace.                                                                                                                                                          | <b>detail extensive none</b> |
| <b>Generation</b>               | Unique number for use by Juniper Networks technical support only.                                                                                                                                    | <b>detail extensive</b>      |

## Sample Output

### show interfaces brief (PTX5000 Packet Transport Router)

```
user@host> show interfaces brief et-7/0/0
Physical interface: et-7/0/0, Enabled, Physical link is Up
  Link-level type: Ethernet, MTU: 1514, Speed: 10Gbps, Loopback: Disabled, Source
  filtering: Disabled, Flow control: Enabled
  Device flags   : Present Running
  Interface flags: SNMP-Traps Internal: 0x4000
  Link flags     : None
```

### show interfaces extensive (PTX5000 Packet Transport Router)

```
user@host> show interfaces et-7/0/0 extensive
Physical interface: et-7/0/0, Enabled, Physical link is Up
  Interface index: 168, SNMP ifIndex: 501, Generation: 171
  Link-level type: Ethernet, MTU: 1514, Speed: 10Gbps, BPDU Error: None,
  MAC-REWRITE Error: None, Loopback: Disabled, Source filtering: Disabled, Flow
  control: Enabled
  Device flags   : Present Running
  Interface flags: SNMP-Traps Internal: 0x4000
  Link flags     : None
  CoS queues     : 8 supported, 8 maximum usable queues
  Hold-times     : Up 0 ms, Down 0 ms
  Current address: 88:e0:f3:3b:de:43, Hardware address: 88:e0:f3:3b:de:43
  Last flapped   : 2012-01-18 11:48:24 PST (01:51:00 ago)
  Statistics last cleared: 2012-01-18 13:38:54 PST (00:00:30 ago)
  Traffic statistics:
    Input bytes   : 0 0 bps
    Output bytes  : 0 0 bps
    Input packets : 0 0 pps
    Output packets: 0 0 pps
  IPv6 transit statistics:
    Input bytes   : 0
    Output bytes  : 0
    Input packets : 0
    Output packets: 0
  Input errors:
    Errors: 0, Drops: 0, Framing errors: 0, Runts: 0, Policed discards: 0, L3
  incompletes: 0, L2 channel errors: 0, L2 mismatch timeouts: 0, FIFO errors: 0,
  Resource errors: 0
  Output errors:
    Carrier transitions: 0, Errors: 0, Drops: 0, Collisions: 0, Aged packets: 0,
  FIFO errors: 0, HS link CRC errors: 0, MTU errors: 0, Resource errors: 0
  Egress queues: 8 supported, 4 in use
  Queue counters:
    Queued packets  Transmitted packets  Dropped packets

| <b>Physical interface</b> | Name of the physical interface.                                                                                                                                                                                                                                                    | All levels                   |
| <b>Enabled</b>            | State of the interface. Possible values are described in the “Enabled Field” section under <a href="#">“Common Output Fields Description” on page 1032</a> .                                                                                                                       | All levels                   |
| <b>Interface index</b>    | Physical interface's index number, which reflects its initialization sequence.                                                                                                                                                                                                     | <b>detail extensive</b> none |
| <b>SNMP ifIndex</b>       | SNMP index number for the physical interface.                                                                                                                                                                                                                                      | <b>detail extensive</b> none |
| <b>Generation</b>         | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                  | <b>detail extensive</b>      |
| <b>Link-level type</b>    | Encapsulation being used on the physical interface.                                                                                                                                                                                                                                | All levels                   |
| <b>MTU</b>                | MTU size on the physical interface.                                                                                                                                                                                                                                                | All levels                   |
| <b>Clocking</b>           | SONET/SDH reference clock source: <b>Internal</b> or <b>External</b> . Clocking is configured and displayed only for channel 0.                                                                                                                                                    | All levels                   |
| <b>Framing mode</b>       | Framing mode: <b>SONET</b> or <b>SDH</b> .                                                                                                                                                                                                                                         | All levels                   |
| <b>Speed</b>              | Speed at which the interface is running.                                                                                                                                                                                                                                           | All levels                   |
| <b>Loopback</b>           | Whether loopback is enabled and the type of loopback ( <b>local</b> or <b>remote</b> ).                                                                                                                                                                                            | All levels                   |
| <b>FCS</b>                | Frame check sequence on the interface (either <b>16</b> or <b>32</b> ). The default is <b>16</b> bits.                                                                                                                                                                             | All levels                   |
| <b>Payload scrambler</b>  | Whether payload scrambling is enabled.                                                                                                                                                                                                                                             | All levels                   |
| <b>Device flags</b>       | Information about the physical device. Possible values are described in the “Device Flags” section under <a href="#">“Common Output Fields Description” on page 1032</a> .                                                                                                         | All levels                   |
| <b>Interface flags</b>    | Information about the interface. Possible values are described in the “Interface Flags” section under <a href="#">“Common Output Fields Description” on page 1032</a> .                                                                                                            | All levels                   |
| <b>Shared-interface</b>   | Indicates whether the routing domain is the owner or non-owner of the shared interface. If the routing domain is the Root System Domain (RSD), the value is <b>Owner</b> . If the routing domain is a Protected System Domain (PSD) under the RSD, the value is <b>Non-owner</b> . | All levels                   |
| <b>Link flags</b>         | Information about the link. Possible values are described in the “Link Flags” section under <a href="#">“Common Output Fields Description” on page 1032</a> .                                                                                                                      | All levels                   |

Table 62: SONET/SDH show interfaces Output Fields (*continued*)

| Field Name                      | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Level of Output              |
|---------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>ANSI or ITU LMI settings</b> | <p>(Frame Relay) Settings for Local Management Interface (LMI). The format is <b>(ANSI or ITU) LMI settings: value, value... xx seconds</b>, where <i>value</i> can be:</p> <ul style="list-style-type: none"> <li>• <b>n391dte</b>—DTE full status polling interval (1-255)</li> <li>• <b>n392dce</b>—DCE error threshold (1-10)</li> <li>• <b>n392dte</b>—DTE error threshold (1-10)</li> <li>• <b>n393dce</b>—DCE monitored event count (1-10)</li> <li>• <b>n393dte</b>—DTE monitored event count (1-10)</li> <li>• <b>t391dte</b>—DTE polling timer (5-30 seconds)</li> <li>• <b>t392dce</b>—DCE polling verification timer (5-30 seconds)</li> </ul> | All levels                   |

| Field Name                                  | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Level of Output         |
|---------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
| <b>Output errors</b>                        | <p>Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and up, or another problem occurs. If the number of carrier transitions increments quickly (perhaps once every 10 seconds), the cable, the far-end system, or the PIC is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Aged packets</b>—Number of packets that remained in shared packet SDRAM so long that the system automatically purged them. The value in this field should never increment. If it does, it is most likely a software bug or possibly malfunctioning hardware.</li> <li>• <b>HS link FIFO underflows</b>—Number of FIFO underflows on the high-speed links between the ASICs responsible for handling the router interfaces.</li> <li>• <b>MTU errors</b>—Number of packets whose size exceeds the MTU of the interface.</li> </ul> | <b>extensive</b>        |
| <b>IPv6 transit statistics</b>              | <p>Number of transit bytes and packets received and transmitted on the physical interface if IPv6 statistics tracking is enabled.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>detail extensive</b> |
| <b>Egress queues</b>                        | Total number of egress queues supported on the specified interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>detail extensive</b> |

| <b>SONET alarms</b><br><b>SONET defects</b> | (SONET) SONET media-specific alarms and defects that prevents the interface from passing packets. When a defect persists for a certain period, it is promoted to an alarm. Based on the router configuration, an alarm can ring the red or yellow alarm bell on the router or light the red or yellow alarm LED on the craft interface. See these fields for possible alarms and defects: <b>SONET PHY</b> , <b>SONET section</b> , <b>SONET line</b> , and <b>SONET path</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | All levels              |
| <b>Link</b>                                 | (For 4-port OC192c PIC operating in OC768-over-4xOC192 mode) The link number. Errors and alarms are displayed for each link.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>extensive</b>        |

| <b>Received SDH overhead</b><br><br><b>Transmitted SDH overhead</b> | <p>Values of the received and transmitted SONET overhead:</p> <ul style="list-style-type: none"> <li>• <b>C2</b>—Signal label. Allocated to identify the construction and content of the STS-level SPE and for PDI-P.</li> <li>• <b>F1</b>—Section user channel byte. This byte is set aside for the purposes of users.</li> <li>• <b>K1</b> and <b>K2</b>—These bytes are allocated for APS signaling for the protection of the multiplex section.</li> <li>• <b>J0</b>—Section trace. This byte is defined for STS-1 number 1 of an STS-<i>N</i> signal. Used to transmit a 1-byte fixed-length string or a 16-byte message so that a receiving terminal in a section can verify its continued connection to the intended transmitter.</li> <li>• <b>S1</b>—Synchronization status. The S1 byte is located in the first STS-1 of an STS-<i>N</i>.</li> <li>• <b>Z3</b> and <b>Z4</b>—Allocated for future use.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>extensive</b> |
| <b>Received path trace</b><br><br><b>Transmitted path trace</b>     | <p>SONET/SDH interfaces allow path trace bytes to be sent inband across the SONET/SDH link. Juniper Networks and other router manufacturers use these bytes to help diagnose misconfigurations and network errors by setting the transmitted path trace message so that it contains the system hostname and name of the physical interface. The received path trace value is the message received from the router at the other end of the fiber. The transmitted path trace value is the message that this router transmits.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>extensive</b> |

| <b>Flags</b>                                  | Information about the logical interface. Possible values are described in the "Logical Interface Flags" section under <a href="#">"Common Output Fields Description" on page 1032</a> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | All levels                   |
| <b>Encapsulation</b>                          | Encapsulation on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | All levels                   |
| <b>PPP parameters</b>                         | The PPP loopback clear timer value.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>extensive</b>             |

Table 62: SONET/SDH show interfaces Output Fields (*continued*)

| Field Name                    | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Level of Output              |
|-------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Shared interface</b>       | Provides the following information: <ul style="list-style-type: none"> <li>• <b>shared with</b>—(RSD only) Indicates which PSD owns the logical shared interface. For example, <b>psd3</b>.</li> <li>• <b>peer interface</b>—(PSD only) Lists the logical tunnel interface that peers with the logical shared interface. For example, <b>ut-2/1/0.2</b>.</li> <li>• <b>tunnel token</b>—Specifies the receive (RX) and transmit (TX) tunnel tokens. For example, <b>Rx: 5.519, Tx: 13.514</b>.</li> </ul> | All levels                   |
| <b>Input packets</b>          | Number of packets received on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                      | None specified               |
| <b>Output packets</b>         | Number of packets transmitted on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                   | None specified               |
| <b>Traffic statistics</b>     | Total number of bytes and packets received and transmitted on the logical interface. These statistics are the sum of the local and transit statistics. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. It takes awhile (generally, less than 1 second) for this counter to stabilize.                                                                                                                                             | <b>detail extensive</b>      |
| <b>Local statistics</b>       | Statistics for traffic received from and transmitted to the Routing Engine. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. It takes awhile (generally, less than 1 second) for this counter to stabilize.                                                                                                                                                                                                                        | <b>detail extensive</b>      |
| <b>Transit statistics</b>     | Statistics for traffic transiting the router. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. It takes awhile (generally, less than 1 second) for this counter to stabilize.                                                                                                                                                                                                                                                      | <b>detail extensive</b>      |
| <b>Protocol</b>               | Protocol family configured on the logical interface, such as <b>iso</b> , <b>inet6</b> , or <b>mpls</b> .                                                                                                                                                                                                                                                                                                                                                                                                 | <b>detail extensive none</b> |
| <b><i>protocol-family</i></b> | Protocol family configured on the logical interface. If the protocol is <b>inet</b> , the IP address of the interface is also displayed.                                                                                                                                                                                                                                                                                                                                                                  | <b>brief</b>                 |
| <b>Multilink bundle</b>       | (If the logical interface is configured as part of a multilink bundle.) Interface name for the multilink bundle.                                                                                                                                                                                                                                                                                                                                                                                          | <b>detail extensive none</b> |
| <b>AS bundle</b>              | (If the logical interface is configured as part of an aggregated SONET bundle.) AS bundle number.                                                                                                                                                                                                                                                                                                                                                                                                         | <b>detail extensive</b>      |
| <b>MTU</b>                    | MTU size on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>detail extensive none</b> |
| <b>Generation</b>             | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>detail extensive</b>      |
| <b>Route table</b>            | Routing table in which the logical interface address is located. For example, <b>0</b> refers to the routing table <b>inet.0</b> .                                                                                                                                                                                                                                                                                                                                                                        | <b>detail extensive</b>      |
| <b>Flags</b>                  | Information about the protocol family flags. Possible values are described in the “Family Flags” section under “ <a href="#">Common Output Fields Description</a> ” on <a href="#">page 1032</a> .                                                                                                                                                                                                                                                                                                        | <b>detail extensive none</b> |

Table 62: SONET/SDH show interfaces Output Fields (*continued*)

| Field Name              | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Level of Output              |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Addresses, Flags</b> | Information about the address flags. Possible values are described in the “Addresses Flags” section under <a href="#">“Common Output Fields Description” on page 1032</a> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>detail extensive none</b> |
| <b>Destination</b>      | IP address of the remote side of the connection.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>detail extensive none</b> |
| <b>Local</b>            | IP address of the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>detail extensive none</b> |
| <b>Broadcast</b>        | Broadcast address of the interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>detail extensive none</b> |
| <b>DLCI</b>             | (Frame Relay) DLCI number of the logical interface. The following DLCI information is displayed: <b>Flags</b> , <b>Total down time</b> , <b>Last down</b> , and <b>Traffic statistics</b> . <b>Flags</b> is one or more of the following: <ul style="list-style-type: none"> <li>• <b>Active</b>—Set when the link is active and the DTE and DCE are exchanging information.</li> <li>• <b>Down</b>—Set when the link is active, but no information is received from the DCE.</li> <li>• <b>Unconfigured</b>—Set when the corresponding DLCI in the DCE is not configured.</li> <li>• <b>Configured</b>—Set when the corresponding DLCI in the DCE is configured.</li> <li>• <b>Dce-configured</b>—Displayed when the command is issued from the DTE.</li> </ul> | <b>detail extensive</b>      |
| <b>DLCI statistics</b>  | (Frame Relay) Data-link connection identifier (DLCI) statistics. <ul style="list-style-type: none"> <li>• <b>Active DLCI</b>—Number of active DLCIs.</li> <li>• <b>Inactive DLCI</b>—Number of inactive DLCIs.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>detail extensive none</b> |

## Sample Output

### show interfaces (SDH Mode, PPP)

```

user@host> show interfaces so-0/0/0
Physical interface: so-0/0/0, Enabled, Physical link is Up
  Interface index: 149, SNMP ifIndex: 66
  Link-level type: PPP, MTU: 4474, Clocking: Internal, SDH mode, Speed: OC3,
  Loopback: None, FCS: 16, Payload scrambler: Enabled
  Device flags   : Present Running
  Interface flags: Point-To-Point SNMP-Traps Internal: 0x4000
  Link flags     : Keepalives
  Keepalive settings: Interval 10 seconds, Up-count 1, Down-count 3
  Keepalive: Input: 30 (00:00:07 ago), Output: 29 (00:00:05 ago)
  LCP state: Opened
  NCP state: inet: Opened, inet6: Not-configured, iso: Not-configured, mpls:
  Not-configured
  CHAP state: Closed
  CoS queues    : 4 supported, 4 maximum usable queues
  Last flapped  : 2006-03-24 13:20:56 PST (00:05:09 ago)
  Input rate    : 0 bps (0 pps)
  Output rate   : 0 bps (0 pps)
  SDH alarms    : None
  SDH defects   : None

```

```
Logical interface so-0/0/0.0 (Index 66) (SNMP ifIndex 43)
  Flags: Point-To-Point SNMP-Traps 0x4000 Encapsulation: PPP
  Protocol inet, MTU: 4470
    Flags: None
    Addresses, Flags: Is-Preferred Is-Primary
      Destination: 10.0.12.0/30, Local: 10.0.12.1, Broadcast: 10.0.12.3
  Protocol iso, MTU: 4470
    Flags: Protocol-Down
  Protocol mpls, MTU: 4458, Maximum labels: 3
    Flags: Protocol-Down, Is-Primary
```

### show interfaces brief (SDH Mode, PPP)

```
user@host> show interfaces so-0/0/0 brief
Physical interface: so-0/0/0, Enabled, Physical link is Up
  Link-level type: PPP, MTU: 4474, Clocking: Internal, SDH mode, Speed: OC3,
  Loopback: None, FCS: 16, Payload scrambler: Enabled
  Device flags   : Present Running
  Interface flags: Point-To-Point SNMP-Traps Internal: 0x4000
  Link flags     : Keepalives
  Keepalive settings: Interval 10 seconds, Up-count 1, Down-count 3
  Keepalive: Input: 25 (00:00:01 ago), Output: 24 (00:00:04 ago)
  SDH  alarms    : None
  SDH  defects   : None

Logical interface so-0/0/0.0
  Flags: Point-To-Point SNMP-Traps 0x4000 Encapsulation: PPP
  inet 10.0.12.1/30
  iso
  mpls
```

### show interfaces detail (SDH Mode, PPP)

```
user@host> show interfaces so-0/0/0 detail
Physical interface: so-0/0/0, Enabled, Physical link is Up
  Interface index: 149, SNMP ifIndex: 66, Generation: 35
  Link-level type: PPP, MTU: 4474, Clocking: Internal, SDH mode, Speed: OC3,
  Loopback: None, FCS: 16, Payload scrambler: Enabled
  Device flags   : Present Running
  Interface flags: Point-To-Point SNMP-Traps Internal: 0x4000
  Link flags     : Keepalives
  Hold-times     : Up 0 ms, Down 0 ms
  Keepalive settings: Interval 10 seconds, Up-count 1, Down-count 3
  Keepalive statistics:
    Input : 33 (last seen 00:00:05 ago)
    Output: 32 (last sent 00:00:06 ago)
  LCP state: Opened
  NCP state: inet: Opened, inet6: Not-configured, iso: Not-configured, mpls:
  Not-configured
  CHAP state: Closed
  CoS queues   : 4 supported, 4 maximum usable queues
  Last flapped : 2006-03-24 13:20:56 PST (00:05:38 ago)
  Statistics last cleared: Never
  Traffic statistics:
    Input bytes   :           862           0 bps
    Output bytes  :          3592          64 bps
    Input packets :            70           0 pps
    Output packets:           330           0 pps
  Egress queues: 4 supported, 4 in use
  Queue counters:      Queued packets  Transmitted packets      Dropped packets

| <b>Physical interface</b> | Name of the physical interface.                                                                                                                                                                                                                                                               | All levels                   |
| <b>Enabled</b>            | State of the interface. Possible values are described in the “Enabled Field” section under <a href="#">“Common Output Fields Description” on page 1032</a> .                                                                                                                                  | All levels                   |
| <b>Interface index</b>    | Physical interface's index number, which reflects its initialization sequence.                                                                                                                                                                                                                | <b>detail extensive</b> none |
| <b>SNMP ifIndex</b>       | SNMP index number for the physical interface.                                                                                                                                                                                                                                                 | <b>detail extensive</b> none |
| <b>Generation</b>         | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                             | <b>detail extensive</b>      |
| <b>Link-level type</b>    | Encapsulation being used on the physical interface.                                                                                                                                                                                                                                           | All levels                   |
| <b>MTU</b>                | MTU size on the physical interface.                                                                                                                                                                                                                                                           | All levels                   |
| <b>Clocking</b>           | Reference clock source: <b>Internal</b> or <b>External</b> .                                                                                                                                                                                                                                  | All levels                   |
| <b>Speed</b>              | Speed at which the interface is running.                                                                                                                                                                                                                                                      | All levels                   |
| <b>Loopback</b>           | Whether loopback is enabled and the type of loopback ( <b>local</b> or <b>remote</b> ).                                                                                                                                                                                                       | All levels                   |
| <b>FCS</b>                | Frame check sequence on the interface (either <b>16</b> or <b>32</b> ). The default is <b>16</b> bits.                                                                                                                                                                                        | All levels                   |
| <b>Framing</b>            | Physical layer framing format used for the E1 interface on the link: <b>G704</b> , <b>G704-NO-CRC4</b> , or <b>Unframed</b> . The default is <b>G704</b> .<br><br>Physical layer framing format used for the T1 interface on the link: <b>SF</b> and <b>ESF</b> . The default is <b>ESF</b> . | All levels                   |
| <b>Device flags</b>       | Information about the physical device. Possible values are described in the “Device Flags” section under <a href="#">“Common Output Fields Description” on page 1032</a> .                                                                                                                    | All levels                   |
| <b>Interface flags</b>    | Information about the interface. Possible values are described in the “Interface Flags” section under <a href="#">“Common Output Fields Description” on page 1032</a> .                                                                                                                       | All levels                   |
| <b>Link flags</b>         | Information about the link. Possible values are described in the “Link Flags” section under <a href="#">“Common Output Fields Description” on page 1032</a> .                                                                                                                                 | All levels                   |
| <b>Hold-times</b>         | Current interface hold-time up and hold-time down, in milliseconds.                                                                                                                                                                                                                           | <b>detail extensive</b>      |

| Field Name                              | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Level of Output              |
|-----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Output errors</b>                    | <p>Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and up, or another problem occurs. If the number of carrier transitions increments quickly (perhaps once every 10 seconds), the cable, the far-end system, or the PIC or PIM is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Aged packets</b>—Number of packets that remained in shared packet SDRAM so long that the system automatically purged them. The value in this field should never increment. If it does, it is most likely a software bug or possibly malfunctioning hardware.</li> <li>• <b>MTU errors</b>—Number of packets whose size exceeded the MTU of the interface.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul> | <b>extensive</b>             |
| <b>Queue counters</b>                   | <p>CoS queue number and its associated user-configured forwarding class name.</p> <ul style="list-style-type: none"> <li>• <b>Queued packets</b>—Number of queued packets.</li> <li>• <b>Transmitted packets</b>—Number of transmitted packets.</li> <li>• <b>Dropped packets</b>—Number of packets dropped by the ASIC's RED mechanism.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>detail extensive</b>      |
| <b>DS1 alarms</b><br><b>DS1 defects</b> | <p>E1 media-specific defects that can prevent the interface from passing packets. When a defect persists for a certain amount of time, it is promoted to an alarm. Based on the router configuration, an alarm can ring the red or yellow alarm bell on the router, or turn on the red or yellow alarm LED on the craft interface. The following lists all possible alarms and defects. For complete explanations of most of these alarms and defects, see <i>Bellcore Telcordia GR-499-CORE</i>.</p> <ul style="list-style-type: none"> <li>• <b>AIS</b>—Alarm indication signal.</li> <li>• <b>LOF</b>—Loss of frame.</li> <li>• <b>LOS</b>—Loss of signal.</li> <li>• <b>YLW</b>—Yellow alarm. Indicates errors at the remote site receiver.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>detail extensive none</b> |

Table 64: T1 or E1 show interfaces Output Fields (*continued*)

| Field Name           | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Level of Output |

| <b>Local statistics</b>   | (Frame Relay) Statistics for traffic received from and transmitted to the Routing Engine. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. It takes a while (generally, less than 1 second) for this counter to stabilize.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>detail extensive</b>      |

## show interfaces (T3 or E3)

**Syntax** `show interfaces interface-type`  
`<brief | detail | extensive | terse>`  
`<descriptions>`  
`<media>`  
`<snmp-index snmp-index>`  
`<statistics>`

**Release Information** Command introduced before Junos OS Release 7.4.

**Description** Display status information about the specified T3 or E3 interface.

**Options** *interface-type*—On M Series and T Series routers, the T3 interface type is **t3-fpc/pic/port**, whereas the E3 interface type is **e3-fpc/pic/port**.

**brief | detail | extensive | terse**—(Optional) Display the specified level of output.

**descriptions**—(Optional) Display interface description strings.

**media**—(Optional) Display media-specific information about network interfaces.

**snmp-index *snmp-index***—(Optional) Display information for the specified SNMP index of the interface.

**statistics**—(Optional) Display static interface statistics.

**Required Privilege Level** view

**List of Sample Output** [show interfaces \(T3, PPP\) on page 1351](#)  
[show interfaces detail \(T3, PPP\) on page 1352](#)  
[show interfaces extensive \(T3, PPP\) on page 1353](#)  
[show interfaces \(E3, Frame Relay\) on page 1354](#)  
[show interfaces detail \(E3, Frame Relay\) on page 1355](#)  
[show interfaces extensive \(E3, Frame Relay\) on page 1357](#)

**Output Fields** [Table 65 on page 1342](#) lists the output fields for the **show interfaces** (T3 or E3) command. Output fields are listed in the approximate order in which they appear.

**Table 65: T3 or E3 show interfaces Output Fields**

| Field Name                | Field Description                                                                                                                                            | Level of Output |
|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| Physical Interface        |                                                                                                                                                              |                 |
| <b>Physical interface</b> | Name of the physical interface.                                                                                                                              | All levels      |
| <b>Enabled</b>            | State of the interface. Possible values are described in the “Enabled Field” section under <a href="#">“Common Output Fields Description” on page 1032</a> . | All levels      |

Table 65: T3 or E3 show interfaces Output Fields (*continued*)

| Field Name                | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Level of Output              |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Interface index</b>    | Physical interface's index number, which reflects its initialization sequence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>detail extensive</b> none |
| <b>SNMP ifIndex</b>       | SNMP index number for the physical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>detail extensive</b> none |
| <b>Generation</b>         | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>detail extensive</b>      |

| <b>Clocking</b>           | Reference clock source. It can be <b>Internal</b> or <b>External</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | All levels                   |
| <b>Speed</b>              | Speed at which the interface is running.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | All levels                   |
| <b>Loopback</b>           | Whether loopback is enabled and the type of loopback ( <b>local</b> or <b>remote</b> ).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | All levels                   |
| <b>FCS</b>                | Frame check sequence on the interface (either <b>16</b> or <b>32</b> ). The default is <b>16</b> bits.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | All levels                   |
| <b>Mode</b>               | (T3 only) Whether C-bit parity mode or M13 mode is enabled.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | All levels                   |
| <b>Long buildout</b>      | (T3 only) Buildout setting: less than 255 feet (68 meters) or greater than 255 feet and shorter than 450 feet (137 meters).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | All levels                   |
| <b>Framing</b>            | (E3 only) Physical layer framing format used on the link. It can be <b>G751</b> or <b>Unframed</b> . The default is <b>G751</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | All levels                   |
| <b>Device flags</b>       | Information about the physical device. Possible values are described in the "Device Flags" section under <a href="#">"Common Output Fields Description" on page 1032</a> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | All levels                   |
| <b>Interface flags</b>    | Information about the interface. Possible values are described in the "Interface Flags" section under <a href="#">"Common Output Fields Description" on page 1032</a> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | All levels                   |
| <b>Link flags</b>         | Information about the link. Possible values are described in the "Link Flags" section under <a href="#">"Common Output Fields Description" on page 1032</a> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | All levels                   |
| <b>Hold-times</b>         | Current interface hold-time up and hold-time down, in milliseconds.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>detail extensive</b>      |
| <b>Keepalive settings</b> | (PPP and HDLC) Configured settings for keepalives. <ul style="list-style-type: none"> <li><b>interval seconds</b>—Time in seconds between successive keepalive requests. The range is <b>10</b> seconds through <b>32,767</b> seconds, with a default of <b>10</b> seconds.</li> <li><b>down-count number</b>—Number of keepalive packets a destination must fail to receive before the network takes a link down. The range is <b>1</b> through <b>255</b>, with a default of <b>3</b>.</li> <li><b>up-count number</b>—Number of keepalive packets a destination must receive to change a link's status from down to up. The range is <b>1</b> through <b>255</b>, with a default of <b>1</b>.</li> </ul> | <b>detail extensive</b> none |

Table 65: T3 or E3 show interfaces Output Fields (*continued*)

| Field Name                        | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Level of Output       |

| <b>Input errors</b>            | <p>Input errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of the incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Runts</b>—(T3 only) Number of frames received that are smaller than the runt threshold.</li> <li>• <b>Giants</b>—(T3 only) Number of frames received that are larger than the giant threshold.</li> <li>• <b>Bucket Drops</b>—Drops resulting from the traffic load exceeding the interface transmit/receive leaky bucket configuration. The default is <b>off</b>.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that the Junos OS does not handle.</li> <li>• <b>L3 incompletes</b>—Number of incoming packets discarded because they failed Layer 3 (usually IPv4) sanity checks of the header. For example, a frame with less than 20 bytes of available IP header is discarded.</li> <li>• <b>L2 channel errors</b>—Number of times the software did not find a valid logical interface for an incoming frame.</li> <li>• <b>L2 mismatch timeouts</b>—Number of malformed or short packets that caused the incoming packet handler to discard the frame as unreadable.</li> <li>• <b>HS link CRC errors</b>—Number of errors on the high-speed links between the ASICs responsible for handling the router interfaces.</li> <li>• <b>SRAM errors</b>—Number of hardware errors that occurred in the static RAM (SRAM) on the PIC or PIM. If the value of this field increments, the PIC or PIM is malfunctioning.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul> | <b>extensive</b>        |

Table 65: T3 or E3 show interfaces Output Fields (*continued*)

| Field Name                                    | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Level of Output              |
|-----------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Output errors</b>                          | <p>Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and up, or another problem occurs. If the number of carrier transitions increments (perhaps once every 10 seconds), the cable, the far-end system, or the PIC or PIM is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Aged packets</b>—Number of packets that remained in shared packet SDRAM so long that the system automatically purged them. The value in this field should never increment. If it does, it is most likely a software bug or possibly malfunctioning hardware.</li> <li>• <b>MTU errors</b>—Number of packets whose size exceeded the MTU of the interface.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul> | <b>extensive</b>             |
| <b>Queue counters</b>                         | <p>CoS queue number and its associated user-configured forwarding class name.</p> <ul style="list-style-type: none"> <li>• <b>Queued packets</b>—Number of queued packets.</li> <li>• <b>Transmitted packets</b>—Number of transmitted packets.</li> <li>• <b>Dropped packets</b>—Number of packets dropped by the ASIC's RED mechanism.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>detail extensive</b>      |
| <b>Active alarms</b><br><b>Active defects</b> | <p>E3 media-specific defects that can render the interface unable to pass packets. When a defect persists for a certain amount of time, it is promoted to an alarm. Based on the router configuration, an alarm can ring the red or yellow alarm bell on the router, or turn on the red or yellow alarm LED on the craft interface.</p> <ul style="list-style-type: none"> <li>• <b>AIS</b>—Alarm indication signal</li> <li>• <b>EXZ</b>—Excessive zeros</li> <li>• <b>FERF</b>—Far-end receive failures</li> <li>• <b>IDLE</b>—Idle code detected</li> <li>• <b>LCD</b>—Loss of cell delineation</li> <li>• <b>LCV</b>—Line code violation</li> <li>• <b>LOF</b>—Loss of frame</li> <li>• <b>LOS</b>—Loss of signal</li> <li>• <b>PLL</b>—Phase-locked loop</li> <li>• <b>YLW</b>—Remote defect indication</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>detail extensive none</b> |

Possible values are described in the “Interface Flags” section under <a href="#">“Common Output Fields Description” on page 1032</a> .                                                                                                                                                                                                                                                                                                   | <b>detail extensive none</b> |
| <b>Encapsulation</b>      | Encapsulation on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>detail extensive none</b> |
| <b>Input packets</b>      | Number of packets received on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                      | None specified               |
| <b>Output packets</b>     | Number of packets transmitted on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                   | None specified               |
| <b>Traffic statistics</b> | <p>(Frame Relay) Number and rate of bytes and packets received and transmitted on the logical interface.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul> | <b>detail extensive</b>      |
| <b>Local statistics</b>   | (Frame Relay) Statistics for traffic received from and transmitted to the Routing Engine. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. It takes awhile (generally, less than 1 second) for this counter to stabilize.                                                                                                                                                                          | <b>detail extensive</b>      |
| <b>Transit statistics</b> | (Frame Relay) Statistics for traffic transiting the router. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. This counter normally stabilizes in less than 1 second.                                                                                                                                                                                                                               | <b>detail extensive</b>      |
| <b>Protocol</b>           | Protocol family configured on the logical interface, such as <b>iso</b> , <b>inet6</b> , <b>mlfr</b> , or <b>mpls</b> .                                                                                                                                                                                                                                                                                                                                                   | <b>detail extensive none</b> |
| <b>Multilink bundle</b>   | (Multilink) Interface name for the multilink bundle.                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>detail extensive none</b> |
| <b>MTU</b>                | MTU size on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>detail extensive none</b> |
| <b>Generation</b>         | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                                                                                                                                                                                         | <b>detail extensive</b>      |
| <b>Route table</b>        | Routing table in which the logical interface address is located. For example, 0 refers to the routing table inet.0.                                                                                                                                                                                                                                                                                                                                                       | <b>detail extensive</b>      |
| <b>Flags</b>              | Information about the protocol family flags. Possible values are described in the “Family Flags” section under <a href="#">“Common Output Fields Description” on page 1032</a> .                                                                                                                                                                                                                                                                                          | <b>detail extensive none</b> |

Table 65: T3 or E3 show interfaces Output Fields (*continued*)

| Field Name              | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Level of Output              |

| <b>Generation</b>       | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>detail extensive none</b> |
| <b>DLCI</b>             | (Frame Relay) DLCI number of the logical interface. The following DLCI information is displayed: <b>Flags</b> , <b>Total down time</b> , <b>Last down</b> , and <b>Traffic statistics</b> (or <b>Input packets</b> , <b>Output packets</b> ). <b>Flags</b> is one or more of the following: <ul style="list-style-type: none"> <li>• <b>Active</b>—Set when the link is active and the DTE and DCE are exchanging information.</li> <li>• <b>Down</b>—Set when the link is active, but no information is received from the DCE.</li> <li>• <b>DCE Unconfigured</b>—Set when the corresponding DLCI in the DCE is not configured.</li> <li>• <b>Configured</b>—Set when the corresponding DLCI in the DCE is configured.</li> <li>• <b>DCE-configured</b>—Displayed when the command is issued from the DTE.</li> </ul> | <b>detail extensive none</b> |
| <b>DLCI statistics</b>  | (Frame Relay) Data-link connection identifier (DLCI) statistics. <ul style="list-style-type: none"> <li>• <b>Active DLCI</b>—Number of active DLCIs.</li> <li>• <b>Inactive DLCI</b>—Number of inactive DLCIs.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>detail extensive none</b> |

## Sample Output

### show interfaces (T3, PPP)

```

user@host> show interfaces t3-0/2/0
Physical interface: t3-0/2/0, Enabled, Physical link is Up
  Interface index: 139, SNMP ifIndex: 35
  Link-level type: PPP, MTU: 4474, Clocking: Internal, Speed: T3,
  Loopback: None, FCS: 16, Mode: C/Bit parity,
  Long buildout: Shorter than 255 feet
  Device flags   : Present Running
  Interface flags: Point-To-Point SNMP-Traps Internal: 0x4000
  Link flags     : Keepalives
  Keepalive settings: Interval 10 seconds, Up-count 1, Down-count 3
  Keepalive: Input: 0 (never), Output: 0 (never)
  LCP state: Down
  NCP state: inet: Not-configured, inet6: Not-configured, iso: Not-configured,
  mpls: Not-configured
  CHAP state: Closed
  CoS queues    : 4 supported, 4 in use
  Last flapped  : 2005-12-05 08:43:06 PST (02:18:40 ago)

```

```

Input rate      : 0 bps (0 pps)
Output rate     : 72 bps (0 pps)
Active alarms   : None
Active defects  : None
DS3 BERT configuration:
  BERT time period: 10 seconds, Elapsed: 0 seconds
  Algorithm: 2^15 - 1, 0.151, Pseudorandom (9), Induced error rate: 10e-0

Logical interface t3-0/2/0.0 (Index 66) (SNMP ifIndex 54)
  Flags: Hardware-Down Point-To-Point SNMP-Traps Encapsulation: PPP
  Protocol inet, MTU: 4470
  Flags: Protocol-Down
  Addresses, Flags: Dest-route-down Is-Preferred Is-Primary
    Destination: 198.51.100.0/24, Local: 198.51.100.1, Broadcast:
    198.51.100.255

```

### show interfaces detail (T3, PPP)

```

user@host> show interfaces t3-0/2/0 detail
Physical interface: t3-0/2/0, Enabled, Physical link is Up
  Interface index: 139, SNMP ifIndex: 35, Generation: 22
  Link-level type: PPP, MTU: 4474, Clocking: Internal, Speed: T3,
  Loopback: None, FCS: 16, Mode: C/Bit parity,
  Long buildout: Shorter than 255 feet
  Device flags      : Present Running
  Interface flags: Point-To-Point SNMP-Traps Internal: 0x4000
  Link flags        : Keepalives
  Hold-times        : Up 0 ms, Down 0 ms
  Keepalive settings: Interval 10 seconds, Up-count 1, Down-count 3
  Keepalive statistics:
    Input : 0 (last seen: never)
    Output: 0 (last sent: never)
  LCP state: Down
  NCP state: inet: Not-configured, inet6: Not-configured, iso: Not-configured,
  mpls: Not-configured
  CHAP state: Closed
  CoS queues      : 4 supported, 4 in use
  Last flapped    : 2005-12-05 08:43:06 PST (02:18:45 ago)
  Statistics last cleared: Never
  Traffic statistics:
    Input bytes   : 0          0 bps
    Output bytes  : 152        0 bps
    Input packets : 0          0 pps
    Output packets: 8          0 pps

| <b>Output Fields</b>            | Table 66 on page 1359 lists the output fields for the <b>show interfaces demux0 (Demux Interfaces)</b> command. Output fields are listed in the approximate order in which they appear.                                                                                                                                                                                                                                                                                                                                                                     |

Table 66: show interfaces demux0 (Demux Interfaces) Output Fields

| Field Name                | Field Description | Level of Output |
|---------------------------|-------------------|-----------------|
| <b>Physical Interface</b> |                   |                 |

Table 66: show interfaces demux0 (Demux Interfaces) Output Fields (*continued*)

| Field Name         | Field Description                                                                                                                                                          | Level of Output                |
|--------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------|
| Physical interface | Name of the physical interface.                                                                                                                                            | brief detail extensive<br>none |
| Interface index    | Index number of the physical interface, which reflects its initialization sequence.                                                                                        | brief detail extensive<br>none |
| Enabled            | State of the interface. Possible values are described in the “Enabled Field” section under <a href="#">“Common Output Fields Description” on page 1032</a> .               | brief detail extensive<br>none |
| Physical link      | Status of the physical link (Up or Down).                                                                                                                                  | detail extensive none          |
| Admin              | Administrative state of the interface (Up or Down).                                                                                                                        | terse                          |
| Interface index    | Index number of the physical interface, which reflects its initialization sequence.                                                                                        | detail extensive none          |
| Link               | Status of the physical link (Up or Down).                                                                                                                                  | terse                          |
| Targeting summary  | Status of aggregated Ethernet links that are configured with targeted distribution (primary or backup)                                                                     | extensive                      |
| Bandwidth          | Bandwidth allocated to the aggregated Ethernet links that are configured with targeted distribution.                                                                       | extensive                      |
| Proto              | Protocol family configured on the interface.                                                                                                                               | terse                          |
| SNMP ifIndex       | SNMP index number for the physical interface.                                                                                                                              | detail extensive none          |
| Generation         | Unique number for use by Juniper Networks technical support only.                                                                                                          | detail extensive               |
| Type               | Type of interface. <b>Software-Pseudo</b> indicates a standard software interface with no associated hardware device.                                                      | brief detail extensive<br>none |
| Link-level type    | Encapsulation being used on the physical interface.                                                                                                                        | brief detail extensive         |
| MTU                | Maximum transmission unit size on the physical interface.                                                                                                                  | brief detail extensive         |
| Clocking           | Reference clock source: <b>Internal</b> (1) or <b>External</b> (2).                                                                                                        | brief detail extensive         |
| Speed              | Speed at which the interface is running.                                                                                                                                   | brief detail extensive         |
| Device flags       | Information about the physical device. Possible values are described in the “Device Flags” section under <a href="#">“Common Output Fields Description” on page 1032</a> . | brief detail extensive<br>none |
| Interface flags    | Information about the interface. Possible values are described in the “Interface Flags” section under <a href="#">“Common Output Fields Description” on page 1032</a> .    | brief detail extensive<br>none |
| Link type          | Data transmission type.                                                                                                                                                    | detail extensive none          |

Table 66: show interfaces demux0 (Demux Interfaces) Output Fields (*continued*)

| Field Name                     | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Level of Output              |

Table 66: show interfaces demux0 (Demux Interfaces) Output Fields (*continued*)

| Field Name               | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Level of Output                    |
|--------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------|
| <b>Input errors</b>      | Input errors on the interface whose definitions are as follows: <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of the incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Runts</b>—Number of frames received that are smaller than the runt threshold.</li> <li>• <b>Giants</b>—Number of frames received that are larger than the giant packet threshold.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that the Junos OS does not handle.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>                                                                 | <b>extensive</b>                   |
| <b>Input Rate</b>        | Input rate in bits per second (bps) and packets per second (pps).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>none</b>                        |
| <b>Output errors</b>     | Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious: <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and then up, or another problem occurs. If the number of carrier transitions increments quickly (perhaps once every 10 seconds), the cable, the far-end system, or the PIC or PIM is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>MTU errors</b>—Number of packets whose size exceeded the MTU of the interface.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul> | <b>extensive</b>                   |
| <b>Output Rate</b>       | Output rate in bps and pps.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>none</b>                        |

  Direct Connect: Off,
  AC Name: nbc

```

## show interfaces extensive

---

**Syntax**    show interfaces extensive

**Release Information**    Command introduced before Junos OS Release 7.4.  
Command introduced in Junos OS Release 12.1x48 for PTX Series Packet Transport Routers.  
Command introduced in Junos OS Release 17.2 for PT1000 and PTX10008 Packet Transport Routers.

**Description**    Display extensive information about all interfaces configured on the router.

---

**NOTE:**

- At some times, the cumulative byte counters displayed with the `show interfaces extensive` command on the 10-Gigabit Ethernet MPC with SFP+ is not always increasing and cumulative and does not give the correct results. There is a time lag in collecting these statistics, during which the display might decrease or go from a nonzero number to zero. Eventually, the counter will display the correct result.
  - When the `show interfaces extensive` command is executed on a router with an MPC or a T4000 Type 5 FPC, the Input packet rejects counter of the Filter statistics field also displays statistics related to the following packet errors:
    - Invalid VLAN range
    - Tagged packet received on an untagged interface
  - When the `show interfaces extensive` command is executed on an interface that is configured on a T4000 Type 5 FPC, the IPv6 transit statistics field displays:
    - Total statistics (sum of transit and local statistics) at the physical interface level
    - Transit statistics at the logical interface level
  - When the `show interfaces extensive` command is executed on an aggregate interface in a T1600 Core Router, the IPv6 Input bytes is displayed for an aggregate interface. However, the IPv6 Input bytes is always zero on a member link of an aggregated bundle even when there is IPv6 transit traffic on the member link. This is because the logical interface index of the aggregate logical interface is updated but not the logical interface of the member links in the channel lookup table.
  - The Output packets field under the Traffic statistics section in the output of the `show interfaces extensive` command includes both IPv4 and IPv6 packets. For example, in a scenario in which both IPv4 and IPv6 packets are being mirrored on the same interface and when you deactivate an IPv4 port-mirroring instance on the chassis, the output of the `show interfaces extensive` command shows a value in the Output packets field of the Traffic statistics section, which is the value of IPv6 packets that are mirrored and not of the IPv4 packets. This behavior is expected.
  - For IQ2 PIC interfaces, the output of the `show interfaces extensive` command displays byte statistics that includes Layer 2 headers.
  - If there are active OTN defects when an ISSU is performed, and the defect persists after the upgrade completes, the OTN alarm count is incremented by 1. For example, if an OTN alarm is active with a count of 1 and the defect remains after ISSU, the alarm count is incremented to 2. This behavior is expected.
-

**Options** This command has no options.

**Output Fields** For more information, see the output fields table for the particular interface type in which you are interested. For information about destination class and source class statistics, see the “Destination Class Field” section and the “Source Class Field” section under [“Common Output Fields Description” on page 1032](#). For sample output for specific interfaces, see the other topics in this collection.

## Sample Output

### [show interfaces extensive \(Circuit Emulation\)](#)

If a Circuit Emulation (CE) PIC is configured for SAToP pseudowire, then pseudowire statistics are displayed in the CE information section of the **show interface extensive** output. If SAToP pseudowire is not configured on the CE PIC, then all CE information counters display 0 (zero).

## show interfaces lsi (Label-Switched Interface)

**Syntax** `show interfaces interface-type`  
`<brief | detail | extensive | terse>`  
`<descriptions>`  
`<media>`  
`<routing-instance instance-name>`  
`<snmp-index snmp-index>`  
`<statistics>`

**Release Information** Command introduced before Junos OS Release 7.4.

**Description** Display status information about the specified label-switched interface (LSI).

**Options** *interface-type*—On most routers, the interface type is *lt-fpc/pic/port*.

**brief | detail | extensive | terse**—(Optional) Display the specified level of output.

**descriptions**—(Optional) Display interface description strings.

**media**—(Optional) Display media-specific information about network interfaces.

**routing-instance *instance-name***—(Optional) Display information for the specified routing instance.

**snmp-index *snmp-index***—(Optional) Display information for the specified SNMP index of the interface.

**statistics**—(Optional) Display static interface statistics.

**Required Privilege Level** view

**Related Documentation**

**List of Sample Output** [show interfaces lsi extensive on page 1414](#)

**Output Fields** [Table 67 on page 1412](#) lists the output fields for the **show interfaces** (logical tunnel) command. Output fields are listed in the approximate order in which they appear.

**Table 67: Logical Tunnel show interfaces Output Fields**

| Field Name         | Field Description               | Level of Output |
|--------------------|---------------------------------|-----------------|
| Physical Interface |                                 |                 |
| Physical interface | Name of the physical interface. | All levels      |
| Logical Interface  |                                 |                 |

Table 67: Logical Tunnel show interfaces Output Fields (*continued*)

| Field Name         | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Level of Output              |
|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| Logical interface  | Name of the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | All levels                   |
| Index              | Logical interface index number, which reflects its initialization sequence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>detail extensive</b> none |
| SNMP ifIndex       | SNMP interface index number.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>detail extensive</b> none |
| Generation         | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>detail extensive</b>      |
| Flags              | Information about the logical interface. Possible values are described in the “Logical Interface Flags” section under <a href="#">“Common Output Fields Description” on page 1032</a> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | All levels                   |
| Encapsulation      | Encapsulation on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | All levels                   |
| Traffic statistics | <p>Total number of bytes and packets received and transmitted on the logical interface. These statistics are the sum of the local and transit statistics. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. It takes awhile (generally, less than 1 second) for this counter to stabilize.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Rate of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Rate of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Rate of packets received on the interface.</li> <li>• <b>Output packets</b>—Rate of packets transmitted on the interface.</li> </ul> | <b>detail extensive</b>      |
| Local statistics   | Statistics for traffic received from and transmitted to the Routing Engine. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. It takes awhile (generally, less than 1 second) for this counter to stabilize.                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>detail extensive</b>      |
| Transit statistics | Statistics for traffic transiting the router. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. It takes awhile (generally, less than 1 second) for this counter to stabilize.                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>detail extensive</b>      |
| Protocol           | Protocol family configured on the logical interface, such as <b>iso</b> , <b>inet6</b> , <b>mpls</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>detail extensive</b> none |
| MTU                | MTU size on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>detail extensive</b> none |
| Generation         | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>detail extensive</b>      |
| Flags              | Information about the protocol family flags. Possible values are described in the “Family Flags” section under <a href="#">“Common Output Fields Description” on page 1032</a> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>detail extensive</b> none |

## Sample Output

### show interfaces lsi extensive

```
user@host> show interfaces lsi extensive
Physical interface: lsi

Logical interface lsi.84934656 (Index 363) (SNMP ifIndex 586) (Generation 194)

Flags: Up Point-To-Point SNMP-Traps 0x4000000 Encapsulation: LSI-NULL
Traffic statistics:
  Input bytes : 0
  Output bytes : 0
  Input packets: 0
  Output packets: 0
Local statistics:
  Input bytes : 0
  Output bytes : 0
  Input packets: 0
  Output packets: 0
Transit statistics:
  Input bytes : 0 0 bps
  Output bytes : 0 0 bps
  Input packets: 0 0 pps
  Output packets: 0 0 pps
Protocol vpls, MTU: Unlimited, Generation: 279, Route table: 10

Logical interface lsi.84934657 (Index 366) (SNMP ifIndex 589) (Generation 197)

  Input packets: 0 0 pps
  Output packets: 0 0 pps
Protocol vpls, MTU: Unlimited, Generation: 282, Route table: 10
```

## show interfaces media

**Syntax**    show interfaces media

**Release Information**    Command introduced before Junos OS Release 7.4.  
Command introduced on PTX Series Packet Transport Routers for Junos OS Release 12.1.

**Description**    Display media-specific information about all configured network interfaces.

**NOTE:** `show interfaces media` lists details for all interfaces, whereas `show interfaces media interface-name` lists details only for the specified interface.

**Options**    This command has no options.

**Additional Information**    Output from both the `show interfaces interface-name detail` and the `show interfaces interface-name extensive` commands includes all the information displayed in the output from the `show interfaces media` command.

**Required Privilege Level**    view

**List of Sample Output**    [show interfaces media \(SONET/SDH\) on page 1416](#)  
[show interfaces media \(MX Series Routers\) on page 1416](#)  
[show interfaces media \(PTX Series Packet Transport Routers\) on page 1417](#)

**Output Fields**    The output from the `show interfaces media` command includes fields that display interface media-specific information. These fields are also included in the `show interfaces interface-name` command for each particular interface type, and the information provided in the fields is unique to each interface type.

One field unique to the `show interfaces media` command is **interface-type errors** (for example, **SONET errors**). This field appears for channelized E3, channelized T3, channelized OC, E1, E3, SONET, T1, and T3 interfaces. The information provided in this output field is also provided in the output from the `show interfaces interface-name` command. (For example, for SONET interfaces, these fields are **SONET section**, **SONET line**, and **SONET path**). For a description of errors, see the chapter with the particular interface type in which you are interested.

## Sample Output

### show interfaces media (SONET/SDH)

The following example displays the output fields unique to the **show interfaces media** command for a SONET interface (with no level of output specified):

```
user@host> show interfaces media so-4/1/2
Physical interface: so-4/1/2, Enabled, Physical link is Up
  Interface index: 168, SNMP ifIndex: 495
  Link-level type: PPP, MTU: 4474, Clocking: Internal, SONET mode, Speed: OC48,
  Loopback: None, FCS: 16, Payload scrambler: Enabled
  Device flags   : Present Running
  Interface flags: Point-To-Point SNMP-Traps 16384
  Link flags     : Keepalives
  Keepalive settings: Interval 10 seconds, Up-count 1, Down-count 3
  Keepalive: Input: 1783 (00:00:00 ago), Output: 1786 (00:00:08 ago)
  LCP state: Opened
  NCP state: inet: Not-configured, inet6: Not-configured, iso: Not-configured,
  mpls: Not-configured
  CHAP state: Not-configured
  CoS queues    : 8 supported
  Last flapped  : 2005-06-15 12:14:59 PDT (04:31:29 ago)
  Input rate    : 0 bps (0 pps)
  Output rate   : 0 bps (0 pps)
  SONET alarms  : None
  SONET defects : None
  SONET errors:
    BIP-B1: 121, BIP-B2: 916, REI-L: 0, BIP-B3: 137, REI-P: 16747, BIP-BIP2: 0
  Received path trace: routerb so-1/1/2
  Transmitted path trace: routera so-4/1/2
```

### show interfaces media (MX Series Routers)

```
user@host>show interfaces media xe-0/0/0
Physical interface: xe-0/0/0, Enabled, Physical link is Up
  Interface index: 145, SNMP ifIndex: 592
  Link-level type: Ethernet, MTU: 1514, LAN-PHY mode, Speed: 10Gbps, BPDU Error:
  None,
  Loopback: None, Source filtering: Disabled, Flow control: Enabled
  Pad to minimum frame size: Enabled
  Device flags   : Present Running
  Interface flags: Hardware-Down SNMP-Traps Internal: 0x0
  Link flags     : None
  CoS queues    : 8 supported, 8 maximum usable queues
  Current address: 08:81:f4:82:a3:f0, Hardware address: 08:81:f4:82:a3:f0
  Last flapped  : 2013-10-26 03:20:40 test (1w6d 00:19 ago)
  Input rate    : 0 bps (0 pps)
  Output rate   : 0 bps (0 pps)
  Active alarms  : LINK
  Active defects : LINK
  PCS statistics
    Bit errors          Seconds
    Errored blocks      78
  MAC statistics:
    Input bytes: 0, Input packets: 0, Output bytes: 0, Output packets: 0
  Filter statistics:
    Filtered packets: 0, Padded packets: 0, Output packet errors: 0
  Interface transmit statistics: Disabled
```

**show interfaces media (PTX Series Packet Transport Routers)**

```
user@host> show interfaces media em0
Physical interface: em0, Enabled, Physical link is Up
  Interface index: 8, SNMP ifIndex: 0
  Type: Ethernet, Link-level type: Ethernet, MTU: 1514, Speed: 1000mbps
  Device flags   : Present Running
  Interface flags: SNMP-Traps
  Link type      : Full-Duplex
  Current address: 00:80:f9:25:00:1b, Hardware address: 00:80:f9:25:00:1b
  Last flapped   : Never
  Input packets  : 215151
  Output packets: 72
```

## show interfaces terse

---

|                                 |                                                                                                                                                                                                                              |
|---------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| <b>Release Information</b>      | Command introduced in Junos OS Release 9.4.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Description</b>              | <p>Clear the ANCP agent connection with all ANCP neighbors or with the specified ANCP neighbor. This command deletes information for subscribers associated with the neighbor, causing the adjusted traffic rates to revert to the configured rate for the subscriber interfaces. The neighbor remains configured (its administrative state is <i>enabled</i>) and can reestablish adjacencies.</p> <p>This command initiates logout of ANCP-triggered dynamic VLAN sessions on the physical interface associated with the specified neighbor; conventionally autosensed dynamic VLAN sessions and their associated logical interfaces are not affected.</p> |
| <b>Options</b>                  | <p><b>none</b>—Clear all ANCP neighbors.</p> <p><b>ip-address <i>ip-address</i></b>—(Optional) Clear the ANCP neighbor specified by the IP address.</p> <p><b>system-name <i>mac-address</i></b>—(Optional) Clear the ANCP neighbor specified by the MAC address.</p>                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Required Privilege Level</b> | clear                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| <b>Release Information</b>      | Command introduced in Junos OS Release 11.4.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Description</b>              | Trigger the access node to run a loopback test on the local loop between the access node and the customer premises equipment. You must specify both the access node and the subscriber. The access node responds to the NAS with the results of the test.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Options</b>                  | <p><b>ip-address <i>ip-address</i></b>—IP address that specifies the access node on whose local loop the loopback test is run.</p> <p><b>system-name <i>neighbor-name</i></b>—System name that specifies the access node on whose local loop the loopback test is run.</p> <p><b>subscriber <i>identifier-string</i></b>—Access identifier that specifies the subscriber on whose local loop the loopback test is run.</p> <p><b>count <i>count</i></b>—(Optional) Number of times a loopback message is sent on the local loop. Range: 1 through 32. Default: 1.</p> <p><b>timeout <i>duration</i></b>—(Optional) Period of time in seconds that the NAS waits for a response to the OAM request. Range: 0 through 255. Default: 5.</p> |
| <b>Required Privilege Level</b> | view                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Per-DSL CoS adjustment | Adjustment values applied by the ANCP agent to the actual downstream rates and frame overhead for frame-mode DSL types. The agent then reports the adjusted rates to CoS to establish a shaping rate for the CoS node that corresponds to the subscriber access line.                                         |
| QoS Adjust Flag        | State of QoS adjust: <ul style="list-style-type: none"> <li>• <b>TRUE</b>—The ANCP agent is enabled to adjust the actual downstream data rates and frame overhead and report the adjusted values to CoS.</li> <li>• <b>FALSE</b>—The ANCP agent is not enabled to adjust and report values to CoS.</li> </ul> |

Table 69: show ancp cos Output Fields (*continued*)

| Field Name                              | Field Description                                                                                                                                                                      |
|-----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>ADSL bytes</b>                       | Number of bytes by which the actual ADSL downstream cell overhead is adjusted before reporting it to CoS.                                                                              |
| <b>ADSL2 bytes</b>                      | Number of bytes by which the actual ADSL2 downstream cell overhead is adjusted before reporting it to CoS.                                                                             |
| <b>ADSL2-PLUS bytes</b>                 | Number of bytes by which the actual ADSL2+ downstream cell overhead is adjusted before reporting it to CoS.                                                                            |
| <b>SDSL overhead adjusted</b>           | Percentage by which the actual SDSL downstream rate is adjusted before reporting it to CoS.                                                                                            |
| <b>SDSL bytes</b>                       | Number of bytes by which the actual SDSL downstream frame overhead is adjusted before reporting it to CoS.                                                                             |
| <b>OTHER overhead adjusted</b>          | Percentage by which the actual OTHER downstream rate is adjusted before reporting it to CoS.                                                                                           |
| <b>OTHER bytes</b>                      | Number of bytes by which the actual OTHER downstream frame overhead is adjusted before reporting it to CoS.                                                                            |
| <b>VDSL overhead adjusted</b>           | Percentage by which the actual VDSL downstream rate is adjusted before reporting it to CoS.                                                                                            |
| <b>VDSL bytes</b>                       | Number of bytes by which the actual VDSL downstream frame overhead is adjusted before reporting it to CoS.                                                                             |
| <b>VDSL2 overhead adjusted</b>          | Percentage by which the actual VDSL2 downstream rate is adjusted before reporting it to CoS.                                                                                           |
| <b>VDSL2 bytes</b>                      | Number of bytes by which the actual VDSL2 downstream frame overhead is adjusted before reporting it to CoS.                                                                            |
| <b>Per-DSL adjustment for reporting</b> | Adjustment values applied by the ANCP agent to the actual downstream rates for individual DSL types to account for traffic overhead. The agent then reports the adjusted rates to AAA. |
| <b>ADSL adjustment factor</b>           | Percentage by which the actual ADSL downstream rate is adjusted before reporting it to AAA.                                                                                            |
| <b>ADSL2 adjustment factor</b>          | Percentage by which the actual ADSL2 downstream rate is adjusted before reporting it to AAA.                                                                                           |
| <b>ADSL2+ adjustment factor</b>         | Percentage by which the actual ADSL2+ downstream rate is adjusted before reporting it to AAA.                                                                                          |
| <b>VDSL adjustment factor</b>           | Percentage by which the actual VDSL downstream rate is adjusted before reporting it to AAA.                                                                                            |

Table 69: show ancp cos Output Fields (*continued*)

| Field Name                     | Field Description                                                                                                                                                                                                                                                               |
|--------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>VDSL2 adjustment factor</b> | Percentage by which the actual VDSL2 downstream rate is adjusted before reporting it to AAA.                                                                                                                                                                                    |
| <b>SDSL adjustment factor</b>  | Percentage by which the actual SDSL downstream rate is adjusted before reporting it to AAA.                                                                                                                                                                                     |
| <b>OTHER adjustment factor</b> | Percentage by which the actual OTHER downstream rate is adjusted before reporting it to AAA.                                                                                                                                                                                    |
| <b>Keepalive Timer</b>         | Interval between the keepalive messages that the ANCP agent sends to CoS.                                                                                                                                                                                                       |
| <b>Cos State</b>               | State of the interaction between the ANCP agent and CoS: <ul style="list-style-type: none"> <li>• ANCPD_COS_CONNECT_NEEDED</li> <li>• ANCPD_COS_CONNECT_PENDING</li> <li>• ANCPD_COS_CONNECT_DONE</li> <li>• ANCPD_COS_SESSION_SENT</li> <li>• ANCPD_COS_WRITE_READY</li> </ul> |
| <b>Connect Time</b>            | Time at which the ANCP agent connected to CoS; useful for debugging.                                                                                                                                                                                                            |
| <b>Session Time</b>            | Time at which the ANCP agent sent a session connect message to CoS; useful for debugging.                                                                                                                                                                                       |
| <b>Routing Instance Time</b>   | Time at which the ANCP agent sent the routing instance to CoS; useful for debugging.                                                                                                                                                                                            |
| <b>Keepalive Time</b>          | Time at which the last keepalive message was sent.                                                                                                                                                                                                                              |
| <b>Update Time</b>             | Time at which the shaping rate was last updated.                                                                                                                                                                                                                                |
| <b>Type</b>                    | Subscriber access type: <b>ifl</b> indicates that a single VLAN carries subscriber traffic and <b>iflset</b> indicates that a set of VLANs carries subscriber traffic.                                                                                                          |
| <b>Name</b>                    | System-wide name of the particular subscriber access.                                                                                                                                                                                                                           |
| <b>Index</b>                   | Access identifier.                                                                                                                                                                                                                                                              |
| <b>Pending Update</b>          | Actual downstream data rate to be applied next to this local loop, in Kbps.                                                                                                                                                                                                     |
| <b>Last Update</b>             | Adjusted downstream data rate last reported to CoS by the ANCP agent for this local loop, in Kbps.                                                                                                                                                                              |

| <b>TCP Port</b>         | TCP port on which ANCP messages are exchanged.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>detail</b>            |
| <b>System Instance</b>  | Number identifying the ANCP link instance from the edge device's perspective.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>detail</b>            |
| <b>Peer Instance</b>    | Number identifying the ANCP instance from the access node's perspective. This number is unique and changes when the node or link comes back up after going down.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>detail</b>            |
| <b>Timer</b>            | Adjacency timer value advertised by the ANCP peer in 100 ms increments; the interval between ANCP ACK messages. This value remains constant for the duration of an ANCP session.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>detail</b>            |
| <b>Partition Type</b>   | Number that identifies whether partitions are used and how the ID is negotiated: <ul style="list-style-type: none"> <li><b>0</b>—No partition.</li> <li><b>1</b>—Fixed partition requested.</li> <li><b>2</b>—Fixed partition assigned.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>detail</b>            |

Table 70: show ancp neighbor Output Fields (*continued*)

| Field Name                             | Field Description                                                                                                                                                                                                                                                                                                 | Level of Output |
|----------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| <b>Partition Flag</b>                  | Number that specifies the type of partition requested: 1 (new adjacency) or 2 (recovered adjacency).                                                                                                                                                                                                              | <b>detail</b>   |
| <b>Partition Identifier</b>            | Number that associates the ANCP message with a specific partition.                                                                                                                                                                                                                                                | <b>detail</b>   |
| <b>Partition Adjacencies</b>           | Number of adjacencies that share the partition.                                                                                                                                                                                                                                                                   | <b>detail</b>   |
| <b>Dead Timer</b>                      | Remaining period that the edge device waits for adjacency packets from a neighbor before declaring the neighbor to be down. The maximum dead time value is three times the configured adjacency timer value. This field displays the current value based on the time that the last adjacency packet was received. | <b>detail</b>   |
| <b>Received Syn Count</b>              | Number of synchronization messages received from neighbors to maintain adjacencies.                                                                                                                                                                                                                               | <b>detail</b>   |
| <b>Received Synack Count</b>           | Number of synchronization acknowledgment messages received from neighbors in response to the node's synchronization messages.                                                                                                                                                                                     | <b>detail</b>   |
| <b>Received Rstack Count</b>           | Number of messages received from neighbors indicating that the link to the neighbor needs to be reset.                                                                                                                                                                                                            | <b>detail</b>   |
| <b>Received Ack Count</b>              | Number of acknowledgment messages periodically received from neighbors after an adjacency has been established.                                                                                                                                                                                                   | <b>detail</b>   |
| <b>Received Port Up Count</b>          | Number of status messages received from neighbors indicating that a port has transitioned to the up state.                                                                                                                                                                                                        | <b>detail</b>   |
| <b>Received Port Down Count</b>        | Number of status messages received from neighbors indicating that a port has transitioned to the down state.                                                                                                                                                                                                      | <b>detail</b>   |
| <b>Received Generic Resp Count</b>     | Number of generic response messages received from neighbors.                                                                                                                                                                                                                                                      | <b>detail</b>   |
| <b>Received Adjacency Update Count</b> | Number of adjacency update messages received from neighbors.                                                                                                                                                                                                                                                      | <b>detail</b>   |
| <b>Received OAM Count</b>              | Number of OAM responses received from neighbors in reply to <b>request</b> commands.                                                                                                                                                                                                                              | <b>detail</b>   |
| <b>Received Other Count</b>            | Number of all other ANCP message packets received from neighbors that do not fit into one of the other categories.                                                                                                                                                                                                | <b>detail</b>   |
| <b>Sent Syn Count</b>                  | Number of synchronization messages sent to neighbors to maintain adjacencies.                                                                                                                                                                                                                                     | <b>detail</b>   |
| <b>Sent Synack Count</b>               | Number of synchronization acknowledgment messages sent to neighbors in response to their synchronization messages.                                                                                                                                                                                                | <b>detail</b>   |
| <b>Sent Rstack Count</b>               | Number of messages sent to neighbors indicating that the link to the neighbor needs to be reset.                                                                                                                                                                                                                  | <b>detail</b>   |

Table 70: show ancp neighbor Output Fields (*continued*)

| Field Name                              | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Level of Output |

| <b>Output Fields</b>            | <a href="#">Table 71 on page 1444</a> lists the output fields for the <b>show ancp statistics</b> command. Output fields are listed in the approximate order in which they appear.                                                                                                                                                                                                          |

**Table 71: show ancp statistics Output Fields**

| Field Name            | Field Description                                               |
|-----------------------|-----------------------------------------------------------------|
| Number of neighbors   | Total count of ANCP neighbors.                                  |
| Number of subscribers | Total count of ANCP subscribers.                                |
| Accept Count          | Number of neighbor TCP/IP sessions accepted on listener socket. |

Table 71: show ancp statistics Output Fields (*continued*)

| Field Name                             | Field Description                                                                                                                                                                                                         |
|----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Accept Fail Count</b>               | Number of neighbor TCP/IP sessions that failed due to one of the following causes: session already exists, maximum number of ANCP connections exceeded, creation of session or neighbor failed, or protocol start failed. |
| <b>No Config Accept Deny Count</b>     | Number of neighbor TCP/IP sessions that failed because the neighbor was not configured.                                                                                                                                   |
| <b>Received Syn Count</b>              | Number of synchronization messages received from neighbors to maintain adjacencies.                                                                                                                                       |
| <b>Received Synack Count</b>           | Number of synchronization acknowledgment messages received from neighbors in response to the node's synchronization messages.                                                                                             |
| <b>Received Rstack Count</b>           | Number of messages received from neighbors indicating that the link to the neighbor needs to be reset.                                                                                                                    |
| <b>Received Ack Count</b>              | Number of acknowledgment messages periodically received from neighbors after an adjacency has been established.                                                                                                           |
| <b>Received Port Up Count</b>          | Number of status messages received from neighbors indicating that a port has transitioned to the up state.                                                                                                                |
| <b>Received Port Down Count</b>        | Number of status messages received from neighbors indicating that a port has transitioned to the down state.                                                                                                              |
| <b>Received Generic Resp Count</b>     | Number of generic response messages received from neighbors.                                                                                                                                                              |
| <b>Received Adjacency Update Count</b> | Number of adjacency update messages received from neighbors.                                                                                                                                                              |
| <b>Received OAM Count</b>              | Number of OAM responses received from neighbors in reply to <b>request</b> commands.                                                                                                                                      |
| <b>Received Other Count</b>            | Number of all other ANCP message packets received from neighbors that do not fit into one of the other categories.                                                                                                        |
| <b>Sent Syn Count</b>                  | Number of synchronization messages sent to neighbors to maintain adjacencies.                                                                                                                                             |
| <b>Sent Synack Count</b>               | Number of synchronization acknowledgment messages sent to neighbors in response to the their synchronization messages.                                                                                                    |
| <b>Sent Rstack Count</b>               | Number of messages sent to neighbors indicating that the link to the neighbor needs to be reset.                                                                                                                          |
| <b>Sent Ack Count</b>                  | Number of acknowledgment messages periodically sent to neighbors after an adjacency has been established.                                                                                                                 |
| <b>Sent Generic Resp Count</b>         | Number of generic response messages sent to neighbors.                                                                                                                                                                    |

Table 71: show ancp statistics Output Fields (*continued*)

| Field Name            | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| <b>Sent OAM Count</b> | Number of OAM <b>request</b> commands sent to neighbors.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Result Codes</b>   | <p>Number of generic response messages sent to neighbors that include each of the following result codes:</p> <ul style="list-style-type: none"> <li>• <b>Invalid Request Message Count</b>—A properly formed request messages violated the protocol because of timing (such as a race condition) or direction of transmission.</li> <li>• <b>Specified Port(s) Down Count</b>—One or more of the specified ports are down because of a state mismatch between the router and an ANCP control application.</li> <li>• <b>Out of Resources Count</b>—the ANCP agent is out of resources, probably not related to the access lines. This result code is sent only by an access node.</li> <li>• <b>Request Msg Not Implemented Count</b>—</li> <li>• <b>Malformed Msg Count</b>—Message is malformed because it was corrupted in transit or there was an implementation error at either end of the connection.</li> <li>• <b>TLV Missing Count</b>—One or more mandatory TLVs was missing from a request.</li> <li>• <b>Invalid TLV Contents Count</b>—The contents of one or more TLVs in the request do not match its required specification.</li> <li>• <b>Non-Existent Port(s) Count</b>—One or more of the ports specified in a request do not exist, possibly because of a configuration mismatch between the access node and the router or AAA.</li> </ul> |

## Sample Output

| <b>Description</b>              | <p>Display information about active subscribers regardless of the subscriber's operational state, for all subscribers (local access loops), the subscriber associated with the access line specified by an ACI, or the subscriber associated with the specified ANCP neighbor (access node).</p> <p>After an ancpd restart, this command displays orphaned entries (marked with an <b>o</b>) for subscriber sessions that were established before the restart but which have not yet been reestablished. As sessions are reestablished, the number of orphaned entries displayed by the command decreases. The number reaches zero when all sessions are reestablished or when the orphaned-interface timer expires.</p> |

**Output Fields** Table 72 on page 1450 lists the output fields for the **show ancp subscriber** command. Output fields are listed in the approximate order in which they appear.

**Table 72: show ancp subscriber Output Fields**

| Field Name             | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Level of Output          |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|
| <b>Loop Identifier</b> | <p>Access loop identifier as sent by the access node and configured to map the subscriber to an interface.</p> <p>An asterisk (*) indicates that the information might be stale due to receiving a Port Down message with a DSL Line State of Idle.</p> <p>Two asterisks (**) indicate that the neighbor associated with the subscriber has lost its adjacency. In this case, the DSL Line State might be Established.</p> <p>An o indicates that the entry is for an orphaned interface and represents a previously established subscriber session that has not been reestablished after an ancpd restart.</p> <p>The number of orphaned entries decreases as the ANCP neighbors reestablish adjacencies and the protocol subscriber sessions are reestablished. The command output indicates this by removing the o marker.</p> <p>Eventually the number of orphaned entries reaches zero, because either all the adjacencies and subscriber sessions have been reestablished or any remaining orphaned entries are removed when the orphaned-interface timer expires.</p> | <b>brief none</b>        |
| <b>DSL Line State</b>  | State of the DSL line: <b>Idle</b> , <b>Showtime</b> , or <b>Silent</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>brief detail</b>      |

**Table 73: show ancp summary Output Fields**

| Field Name          | Field Description                                                                                                                                          |
|---------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Configured</b>   | Number of ANCP neighbors in the <b>Configured</b> state; that is, that have been configured but never established.                                         |
| <b>Establishing</b> | Number of ANCP neighbors in the <b>Establishing</b> state; that is, where negotiations are in progress.                                                    |
| <b>Established</b>  | Number of ANCP neighbors in the <b>Established</b> state; that is, where negotiations have succeeded and the ANCP session has been established.            |
| <b>Not Estblshd</b> | Number of ANCP neighbors in the <b>Not Estblshd</b> state; that is, that have lost a previously established adjacency and are ready to begin negotiations. |
| <b>Total</b>        | Total number of ANCP neighbors; sum of neighbors in the <b>Configured</b> , <b>Establishing</b> , <b>Established</b> , and <b>Not Estblshd</b> states.     |
| <b>Showtime</b>     | Number of DSL lines in <b>Showtime</b> state.                                                                                                              |
| <b>Idle</b>         | Number of DSL lines in <b>Idle</b> state.                                                                                                                  |
| <b>Silent</b>       | Number of DSL lines in <b>Silent</b> state.                                                                                                                |

Table 73: show ancp summary Output Fields (*continued*)

| Field Name     | Field Description                                                                                                                                |
|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Unknown</b> | Number of DSL lines where the state is not <b>Showtime</b> , <b>Idle</b> , or <b>Silent</b> .                                                    |
| <b>Total</b>   | Total number of DSL lines (ANCP subscribers); sum of DSL lines in the <b>Showtime</b> , <b>Idle</b> , <b>Silent</b> , and <b>Unknown</b> states. |

## Sample Output

### show ancp summary

```
user@host> show ancp summary
```

#### Neighbors Summary:

| Configured | Establishing | Established | Not Established | Total |
|------------|--------------|-------------|-----------------|-------|
| -----      | -----        | -----       | -----           | ----- |
| 22         | 0            | 2           | 0               | 24    |

#### Subscribers Summary:

| Showtime | Idle  | Silent | Unknown | Total |
|----------|-------|--------|---------|-------|
| -----    | ----- | -----  | -----   | ----- |
| 4        | 0     | 0      | 0       | 4     |

| <b>Showtime</b> | Number of DSL lines for the neighbor in <b>Showtime</b> state.                                                                                   |
| <b>Idle</b>     | Number of DSL lines for the neighbor in <b>Idle</b> state.                                                                                       |
| <b>Silent</b>   | Number of DSL lines for the neighbor in <b>Silent</b> state.                                                                                     |
| <b>Unknown</b>  | Number of DSL lines for the neighbor where the state is not <b>Showtime</b> , <b>Idle</b> , or <b>Silent</b> .                                   |
| <b>Total</b>    | Total number of DSL lines (ANCP subscribers); sum of DSL lines in the <b>Showtime</b> , <b>Idle</b> , <b>Silent</b> , and <b>Unknown</b> states. |

## Sample Output

### show ancp summary neighbor

```
user@host> show ancp summary neighbor
```

```
Neighbors Summary:
```

| Configured | Establishing | Established | Not Established | Total |
|------------|--------------|-------------|-----------------|-------|
| 22         | 0            | 2           | 0               | 24    |

### show ancp summary neighbor (IP Address)

```
user@host> show ancp summary neighbor ip-address 192.168.10.1
```

```
Neighbor Summary:192.168.10.1 status Established
```

```
Subscribers Summary:
```

| Show Time | Idle | Silent | Unknown | Total |
|-----------|------|--------|---------|-------|
| 6         | 0    | 0      | 0       | 6     |

### show ancp summary neighbor (MAC Address)

```
user@host> show ancp summary neighbor system-name 00:00:5E:00:53:02
```

```
Neighbor Summary:00:00:5E:00:53:02 status Established
```

```
Subscribers Summary:
```

| Show Time | Idle | Silent | Unknown | Total |
|-----------|------|--------|---------|-------|
| 5         | 1    | 2      | 0       | 8     |

## show ancp summary subscriber

|                                 |                                                                                                                                                                                                                                  |

| <b>Syntax</b>                   | <code>clear bfd adaptation</code><br><code>&lt;all&gt;</code><br><code>&lt;address <i>session-address</i>&gt;</code><br><code>&lt;discriminator <i>discr-number</i>&gt;</code>                                                                                                                                                                                                                                                                   |
| <b>Release Information</b>      | Command introduced before Junos OS Release 7.4.                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Description</b>              | <p>Clear adaptation for Bidirectional Forwarding Detection (BFD) sessions. BFD is a simple hello mechanism that detects failures in a network. Configured BFD interval timers can change, adapting to network situations. Use this command to return BFD interval timers to their configured values.</p> <p>The <b>clear bfd adaptation</b> command is hitless, meaning that the command does not affect traffic flow on the routing device.</p> |
| <b>Options</b>                  | <p><b>all</b>—Clear adaptation for all BFD sessions.</p> <p><b>address <i>session-address</i></b>—(Optional) Clear adaptation for all BFD sessions matching the specified address.</p> <p><b>discriminator <i>discr-number</i></b>—(Optional) Clear adaptation for the local BFD session matching the specified discriminator.</p>                                                                                                               |
| <b>Additional Information</b>   | For more information, see the description of the <b>bfd-liveness-detection</b> configuration statement in the <i>Junos Routing Protocols Configuration Guide</i> .                                                                                                                                                                                                                                                                               |
| <b>Required Privilege Level</b> | clear                                                                                                                                                                                                                                                                                                                                                                                                                                            |

**Release Information**    Command introduced before Junos OS Release 7.4.  
                              Options **discriminator** and **address** introduced in Junos OS Release 8.2.  
                              Option **prefix** introduced in Junos OS Release 9.0.  
                              Command introduced in Junos OS Release 12.1 for the QFX Series.  
                              Option **client** introduced in Junos OS Release 12.3R3.  
                              Option **subscriber** introduced in Junos OS Release 15.1 for the MX Series.

**Description**    Display information about active Bidirectional Forwarding Detection (BFD) sessions.

**Options**    **none**—(Same as **brief**) Display information about active BFD sessions.

**brief | detail | extensive | summary**—(Optional) Display the specified level of output.

**address *address***—(Optional) Display information about the BFD session for the specified neighbor address.

**client rsvp-oam**  
                  (**brief | detail | extensive | summary**)  
                  | **vpls-oam**  
                  (**brief | detail | extensive | instance *instance-name* | summary**)—(Optional) Display information about RSVP-OAM or VPLS-OAM BFD sessions in the specified level of output. For VPLS-OAM, display the specified level of output or display information about all of the BFD sessions for the specified VPLS routing instance.

**discriminator *discriminator***—(Optional) Display information about the BFD session using the specified local discriminator.

**logical-system** (**all** | *logical-system-name*)—(Optional) Perform this operation on all logical systems or on a particular logical system.

**<subscriber (address *destination-address* | discriminator *discriminator* | extensive)>**—(Optional) Display information about all BFD sessions for subscribers, or for a single BFD subscriber session with a particular destination address, or with a particular denominator.

| Interface         | Interface on which the BFD session is active.                                                                                                                                                                                                                                                                                                                                                                      | brief detail extensive<br>none |
| Detect Time       | Negotiated time interval, in seconds, used to detect BFD control packets.                                                                                                                                                                                                                                                                                                                                          | brief detail extensive<br>none |
| Transmit Interval | Time interval, in seconds, used by the transmitting system to send BFD control packets.                                                                                                                                                                                                                                                                                                                            | brief detail extensive<br>none |
| Multiplier        | Negotiated multiplier by which the time interval is multiplied to determine the detection time for the transmitting system.                                                                                                                                                                                                                                                                                        | detail extensive               |
| Session up time   | How long a BFD session has been established.                                                                                                                                                                                                                                                                                                                                                                       | detail extensive               |
| Client            | Protocol or process for which the BFD session is active: <b>ISIS</b> , <b>OSPF</b> , <b>DHCP</b> , <b>Static</b> , or <b>VGD</b> .                                                                                                                                                                                                                                                                                 | detail extensive               |
| TX interval       | Time interval, in seconds, used by the host system to transmit BFD control packets.                                                                                                                                                                                                                                                                                                                                | brief detail extensive<br>none |
| RX interval       | Time interval, in seconds, used by the host system to receive BFD control packets.                                                                                                                                                                                                                                                                                                                                 | brief detail extensive<br>none |
| Authenticate      | Indicates that BFD authentication is configured.                                                                                                                                                                                                                                                                                                                                                                   | detail extensive               |
| keychain          | Name of the security authentication keychain being used by a specific client.<br><br>BFD authentication information for a client is provided in a single line and includes the <b>keychain</b> , <b>algo</b> , and <b>mode</b> parameters. Multiple clients can be configured on a BFD session.                                                                                                                    | extensive                      |
| algo              | BFD authentication algorithm being used for a specific client: <b>keyed-md5</b> , <b>keyed-sha-1</b> , <b>meticulous-keyed-md5</b> , <b>meticulous-keyed-sha-1</b> , or <b>simple-password</b> .<br><br>BFD authentication information for a client is provided in a single line and includes the <b>keychain</b> , <b>algo</b> , and <b>mode</b> parameters. Multiple clients can be configured on a BFD session. | extensive                      |

Table 76: show bfd session Output Fields (*continued*)

| Field Name         | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Level of Output  |
|--------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| mode               | <p>Level of BFD authentication enforcement being used by a specific client: <b>strict</b> or <b>loose</b>. Strict enforcement indicates that authentication is configured at both ends of the session (the default). Loose enforcement indicates that one end of the session might not be authenticated.</p> <p>BFD authentication information for a client is provided in a single line and includes the <b>keychain</b>, <b>algo</b>, and <b>mode</b> parameters. Multiple clients can be configured on a BFD session.</p>                                                                                      | extensive        |
| Local diagnostic   | <p>Local diagnostic information about failing BFD sessions.</p> <p>Following are the expected values for Local Diagnostic output field:</p> <ul style="list-style-type: none"> <li>• <b>None</b>—No diagnostic</li> <li>• <b>CtlExpire</b>—Control detection time expired</li> <li>• <b>EchoExpire</b>—Echo detection time expired</li> <li>• <b>NbrSignal</b>—Neighbor signalled session down</li> <li>• <b>FwdPlaneReset</b>—Forwarding plane reset</li> <li>• <b>PathDown</b>—Path down</li> <li>• <b>ConcatPathDown</b>—Concatenated path down</li> <li>• <b>AdminDown</b>—Administratively down</li> </ul>   | detail extensive |
| Remote diagnostic  | <p>Remote diagnostic information about failing BFD sessions.</p> <p>Following are the expected values for Remote Diagnostic output field:</p> <ul style="list-style-type: none"> <li>• <b>None</b>—No diagnostic</li> <li>• <b>CtlExpire</b>—Control detection time expired</li> <li>• <b>EchoExpire</b>—Echo detection time expired</li> <li>• <b>NbrSignal</b>—Neighbor signalled session down</li> <li>• <b>FwdPlaneReset</b>—Forwarding plane reset</li> <li>• <b>PathDown</b>—Path down</li> <li>• <b>ConcatPathDown</b>—Concatenated path down</li> <li>• <b>AdminDown</b>—Administratively down</li> </ul> | detail extensive |
| Remote state       | Reports whether the remote system's BFD packets have been received and whether the remote system is receiving transmitted control packets.                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | detail extensive |
| Version            | BFD version: <b>0</b> or <b>1</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | extensive        |
| Replicated         | The <b>replicated</b> flag appears when nonstop routing or graceful Routing Engine switchover is configured and the BFD session has been replicated to the backup Routing Engine.                                                                                                                                                                                                                                                                                                                                                                                                                                 | detail extensive |
| Min async interval | Minimum amount of time, in seconds, between asynchronous control packet transmissions across the BFD session.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | extensive        |
| Min slow interval  | Minimum amount of time, in seconds, between synchronous control packet transmissions across the BFD session.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | extensive        |

                  <all>  
                  <as *as-number*>  
                  <gracefully>  
                  <instance *instance-name*>  
                  <logical-system (all | *logical-system-name*)>  
                  <malformed-route>  
                  <neighbor>  
                  <soft | soft-inbound>  
                  <soft-minimum-igp>  
                  <stale-routes>

**Syntax (EX Series Switch and QFX Series)**    clear bgp neighbor  
                  <all>  
                  <as *as-number*>  
                  <instance *instance-name*>  
                  <malformed-route>  
                  <neighbor>  
                  <soft | soft-inbound>  
                  <soft-minimum-igp>

**Release Information**    Command introduced before Junos OS Release 7.4.  
                                  Command introduced in Junos OS Release 9.0 for EX Series switches.  
                                  Command introduced in Junos OS Release 11.3 for the QFX Series.  
                                  Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.  
                                  **malformed-route** option introduced in Junos OS Release 13.2.  
                                  **all** option introduced in Junos OS Release 14.2.  
                                  **gracefully** and **stale-routes** options introduced in Junos OS Release 15.1.

**Description**    Perform one of the following tasks:

- Change the state of one or more BGP neighbors to **IDLE**. For neighbors in the **ESTABLISHED** state, this command drops the TCP connection to the neighbors and then reestablishes the connection.
- (**soft** keyword only) Reapply export policies and send refresh updates to one or more BGP neighbors without changing their state.
- (**soft-inbound** keyword only) Send a route-refresh message to one or more BGP neighbors without changing their state, and reapply import policies on the received updates.

**Options**    **all**—Change the state of all BGP neighbors to **IDLE**.

**as *as-number***—(Optional) Apply this command only to neighbors in the specified autonomous system (AS).

**gracefully**—(Optional) Enable the BGP peer to start graceful-restart receiving-speaker mode. The receiving speaker also sends its own routes to the restarted speaker, and sends an End-of-RIB marker when it completes the update. The **clear bgp neighbor *neighbor-address* gracefully** command is the same as **clear bgp neighbor hard** (the default for **clear bgp neighbor**), but it does not use the new Hard Reset subcode on the Notify and Cease messages that are sent. This allows the neighbor to enter GR or LLGR helper mode, if negotiated. The session is still cleared on this router, and this router does not enter GR or LLGR helper mode.

**instance *instance-name***—(Optional) Apply this command only to neighbors for the specified routing instance.

**logical-system (all | *logical-system-name*)**—(Optional) Perform this operation on all logical systems or on a particular logical system.

**malformed-route**—(Optional) Remove malformed routes. If a specific neighbor is provided, Junos OS removes malformed routes for that particular neighbor. Otherwise, Junos OS removes malformed routes for all BGP neighbors. To find routes that have malformed attributes, run the **show route hidden** command, and look for routes marked with **MalformedAttr** in the AS path field.

**neighbor**—(Optional) IP address of a BGP peer. Apply this command only to the specified neighbor.

**soft**—(Optional) Reapply any export policies and send refresh updates to neighbors without clearing the state.

**soft-inbound**—(Optional) Send a route-refresh message to BGP neighbors and reapply import policies on the route updates received from the BGP neighbors without clearing the BGP state.

**soft-minimum-igp**—(Optional) Provide soft refresh of the outbound state when the interior gateway protocol (IGP) metric is reset.

**stale-routes**—(Optional) Any stale route currently being held for the specified neighbor because of BGP graceful restart (GR) or long-lived graceful restart (LLGR) receiver mode operations.

**Required Privilege Level**

clear

| Description                              | Request that BGP refresh routes in a specified routing table.                                                                                                                                                                                                                                                                                                                                            |
| Options                                  | <b>logical-system (all   <i>logical-system-name</i>)</b> —(Optional) Perform this operation on all logical systems or on a particular logical system.<br><br><b><i>table-name</i></b> —Request that BGP refresh routes in the specified table.                                                                                                                                                           |
| Additional Information                   | In some cases, a prefix limit is associated with a routing table for a VPN instance. When this limit is exceeded (for example, because of a network misconfiguration), some routes might not be inserted in the table. Such routes need to be added to the table after the network issue is resolved. Use the <b>clear bgp table</b> command to request that BGP refresh routes in a VPN instance table. |

| Field Name                          | Field Description                                                                                                                                              |
|-------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>BMP station address/port</b>     | IP address and port number of the monitoring station to which BGP Monitoring Protocol (BMP) statistics are sent.                                               |
| <b>BMP session state</b>            | Status of the BMP session: <b>UP</b> or <b>DOWN</b> .                                                                                                          |
| <b>Memory consumed by BMP</b>       | Memory used by the active BMP session.                                                                                                                         |
| <b>Statistics timeout</b>           | Amount of time, in seconds, between transmissions of BMP data to the monitoring station.                                                                       |
| <b>Memory limit</b>                 | Threshold, in bytes, at which the routing device stops collecting BMP data.                                                                                    |
| <b>Memory-connect retry timeout</b> | Amount of time, in seconds, after which the routing device attempts to resume a BMP session that was ended after the configured memory threshold was exceeded. |

## Sample Output

### show bgp bmp

```
user@host> show bgp bmp
  BMP station address/port: 172.24.24.157+5454
  BMP session state: DOWN
```

```
Memory consumed by BMP: 0  
Statistics timeout: 15  
Memory limit: 10485760  
Memory connect retry timeout: 600
```

show bgp group

| <b>Description</b> | Display information about the configured BGP groups. |
|--------------------|------------------------------------------------------|

**Options** **none**—Display group information about all BGP groups.

**brief | detail | summary**—(Optional) Display the specified level of output.

**group-name**—(Optional) Display group information for the specified group.

**exact-instance *instance-name***—(Optional) Display information for the specified instance only.

**instance *instance-name***—(Optional) Display information about BGP groups for all routing instances whose name begins with this string (for example, **cust1**, **cust11**, and **cust111** are all displayed when you run the **show bgp group instance cust1** command). The instance name can be master for the main instance, or any valid configured instance name or its prefix.

**logical-system (all | *logical-system-name*)**—(Optional) Perform this operation on all logical systems or on a particular logical system.

**rtf**—(Optional) Display BGP group route targeting information.

**Output Fields** Table 78 on page 1485 describes the output fields for the **show bgp group** command. Output fields are listed in the approximate order in which they appear.

Table 78: show bgp group Output Fields

| Field Name                             | Field Description                                                                                                                                                                                                                                      | Level of Output             |
|----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|
| <b>Group Type or Group</b>             | Type of BGP group: <b>Internal</b> or <b>External</b> .                                                                                                                                                                                                | All levels                  |
| <b>group-index</b>                     | Index number for the BGP peer group. The index number differentiates between groups when a single BGP group is split because of different configuration options at the group and peer levels.                                                          | <b>rtf detail</b>           |
| <b>AS</b>                              | AS number of the peer. For internal BGP (IBGP), this number is the same as <b>Local AS</b> .                                                                                                                                                           | <b>brief detail</b><br>none |
| <b>Local AS</b>                        | AS number of the local routing device.                                                                                                                                                                                                                 | <b>brief detail</b><br>none |
| <b>Name</b>                            | Name of a specific BGP group.                                                                                                                                                                                                                          | <b>brief detail</b><br>none |
| <b>Options</b>                         | The Network Layer Reachability Information (NLRI) format used for BGP VPN multicast.                                                                                                                                                                   | <b>none</b> none            |
| <b>Index</b>                           | Unique index number of a BGP group.                                                                                                                                                                                                                    | <b>brief detail</b><br>none |
| <b>Flags</b>                           | Flags associated with the BGP group. This field is used by Juniper Networks customer support.                                                                                                                                                          | <b>brief detail</b><br>none |
| <b>BGP-Static Advertisement Policy</b> | Policies configured for the BGP group with the <b>advertise-bgp-static policy</b> statement.                                                                                                                                                           | <b>brief</b> none           |
| <b>Remove-private options</b>          | Options associated with the <b>remove-private</b> statement.                                                                                                                                                                                           | <b>brief detail</b><br>none |
| <b>Holdtime</b>                        | Maximum number of seconds allowed to elapse between successive keepalive or update messages that BGP receives from a peer in the BGP group, after which the connection to the peer is closed and routing devices through that peer become unavailable. | <b>brief detail</b><br>none |
| <b>Export</b>                          | Export policies configured for the BGP group with the <b>export</b> statement.                                                                                                                                                                         | <b>brief detail</b><br>none |

Table 78: show bgp group Output Fields (*continued*)

| Field Name                                | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Level of Output             |
|-------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|
| <b>Optimal Route Reflection</b>           | Client nodes (primary and backup) configured in the BGP group.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>brief detail</b><br>none |
| <b>MED tracks IGP metric update delay</b> | Time, in seconds, that updates to multiple exit discriminator (MED) are delayed. Also displays the time remaining before the interval is set to expire                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | All levels                  |

| <b>Table</b>             | Name of a routing table.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>brief</b> , none |
| <b>Tot Paths</b>         | Total number of routes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>brief</b> , none |
| <b>Act Paths</b>         | Number of active routes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>brief</b> , none |
| <b>Suppressed</b>        | Number of routes currently inactive because of damping or other reasons. These routes do not appear in the forwarding table and are not exported by routing protocols.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>brief</b> , none |

Table 78: show bgp group Output Fields (*continued*)

| Field Name   | Field Description                                                                                                                                                                                           | Level of Output |
|--------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| History      | Number of withdrawn routes stored locally to keep track of damping history.                                                                                                                                 | brief, none     |
| Damp State   | Number of active routes with a figure of merit greater than zero, but lower than the threshold at which suppression occurs.                                                                                 | brief, none     |
| Pending      | Routes being processed by the BGP import policy.                                                                                                                                                            | brief, none     |
| Group        | Group the peer belongs to in the BGP configuration.                                                                                                                                                         | detail          |
| Receive mask | Mask of the received target included in the advertised route.                                                                                                                                               | detail          |
| Entries      | Number of route entries received.                                                                                                                                                                           | detail          |
| Target       | Route target that is to be passed by route-target filtering. If a route advertised from the provider edge (PE) routing device matches an entry in the route-target filter, the route is passed to the peer. | detail          |
| Mask         | Mask which specifies that the peer receive routes with the given route target.                                                                                                                              | detail          |

|                    |                                      |
|--------------------|--------------------------------------|
| <b>Description</b> | Display information about BGP peers. |
|--------------------|--------------------------------------|

**Options** none—Display information about all BGP peers.

**exact-instance *instance-name***—(Optional) Display information for the specified instance only.

**instance *instance-name***—(Optional) Display information about BGP peers for all routing instances whose name begins with this string (for example, **cust1**, **cust11**, and **cust111** are all displayed when you run the **show bgp neighbor instance cust1** command).

**logical-system** (all | *logical-system-name*)—(Optional) Perform this operation on all logical systems or on a particular logical system.

***neighbor-address***—(Optional) Display information for only the BGP peer at the specified IP address.

**output-queue**—(Optional) Display information regarding the number of routes currently queued in the 17 prioritized BGP output queues.

**orf** (**detail** | *neighbor-address*)—(Optional) Display outbound route-filtering information for all BGP peers or only for the BGP peer at the specified IP address. The default is to display brief output. Use the **detail** option to display detailed output.

**Additional Information** For information about the **local-address**, **nlri**, **hold-time**, and **preference** statements, see the *Junos OS Routing Protocols Library*.

| Options                                                        | <p>Configured BGP options:</p> <ul style="list-style-type: none"> <li>• <b>AddressFamily</b>—Configured address family: <b>inet</b> or <b>inet-vpn</b>.</li> <li>• <b>AdvertiseBGPStatic</b>—Configured BGP static routes are advertised.</li> <li>• <b>AuthKeyChain</b>—Authentication key change is enabled.</li> <li>• <b>DropPathAttributes</b>—Certain path attributes are configured to be dropped from neighbor updates during inbound processing.</li> <li>• <b>GracefulRestart</b>—Graceful restart is configured.</li> <li>• <b>HoldTime</b>—Hold time configured with the <b>hold-time</b> statement. The hold time is three times the interval at which keepalive messages are sent.</li> <li>• <b>IgnorePathAttributes</b>—Certain path attributes are configured to be ignored in neighbor updates during inbound processing.</li> <li>• <b>Local Address</b>—Address configured with the <b>local-address</b> statement.</li> <li>• <b>LLGR</b>—BGP long-lived graceful restart capability is configured.</li> <li>• <b>LLGRHelperDisabled</b>—BGP long-lived graceful restart is completely disabled for a neighbor.</li> <li>• <b>Multihop</b>—Allow BGP connections to external peers that are not on a directly connected network.</li> <li>• <b>NLRI</b>—Configured MBGP state for the BGP group: <b>multicast</b>, <b>unicast</b>, or both if you have configured <b>nlri any</b>.</li> <li>• <b>Peer AS</b>—Configured peer autonomous system (AS).</li> <li>• <b>Preference</b>—Preference value configured with the <b>preference</b> statement.</li> <li>• <b>Refresh</b>—Configured to refresh automatically when the policy changes.</li> <li>• <b>Rib-group</b>—Configured routing table group.</li> <li>• <b>RFC6514CompliantSafi129</b>—Configured SAFI 129 according to RFC 6514 (BGP VPN multicast used to use SAFI 128).</li> </ul> |
| Path-attributes dropped                                        | Path attribute codes that are dropped from neighbor updates.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Path-attributes ignored                                        | Path attribute codes that are ignored during neighbor updates.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Peer does not support LLGR Restarter or Receiver functionality | BGP neighbor does not support long-lived graceful restart (LLGR) restarter mode completely.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

Table 80: show bgp neighbor Output Fields (*continued*)

| Field Name                                         | Field Description                                                                                                                                                                                                                                                                                                                                                               |
|----------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Peer does not support LLGR Restarter functionality | BGP neighbor does not support long-lived graceful restart (LLGR) restarter mode for any family.                                                                                                                                                                                                                                                                                 |
| Authentication key change                          | (appears only if the <b>authentication-keychain</b> statement has been configured) Name of the authentication keychain enabled.                                                                                                                                                                                                                                                 |
| Authentication algorithm                           | (appears only if the <b>authentication-algorithm</b> statement has been configured) Type of authentication algorithm enabled: <b>hmac</b> or <b>md5</b> .                                                                                                                                                                                                                       |
| Address families configured                        | Names of configured address families for the VPN.                                                                                                                                                                                                                                                                                                                               |
| BGP-Static Advertisement Policy                    | Name of the bgp static policy that is configured on the peer.                                                                                                                                                                                                                                                                                                                   |
| Local Address                                      | Address of the local routing device.                                                                                                                                                                                                                                                                                                                                            |
| Remove-private options                             | Options associated with the <b>remove-private</b> statement.                                                                                                                                                                                                                                                                                                                    |
| Holdtime                                           | Hold time configured with the <b>hold-time</b> statement. The hold time is three times the interval at which keepalive messages are sent.                                                                                                                                                                                                                                       |
| Flags for NLRI inet-label-unicast                  | Flags related to labeled-unicast: <ul style="list-style-type: none"> <li>• <b>TrafficStatistics</b>—Collection of statistics for labeled-unicast traffic is enabled.</li> </ul>                                                                                                                                                                                                 |
| Traffic statistics                                 | Information about labeled-unicast traffic statistics: <ul style="list-style-type: none"> <li>• <b>Options</b>—Options configured for collecting statistics about labeled-unicast traffic.</li> <li>• <b>File</b>—Name and location of statistics log files.</li> <li>• <b>size</b>—Size of all the log files, in bytes.</li> <li>• <b>files</b>—Number of log files.</li> </ul> |
| Traffic Statistics Interval                        | Time between sample periods for labeled-unicast traffic statistics, in seconds.                                                                                                                                                                                                                                                                                                 |
| Preference                                         | Preference value configured with the <b>preference</b> statement.                                                                                                                                                                                                                                                                                                               |
| Outbound Timer                                     | Time for which the route is available in Junos OS routing table before it is exported to BGP. This field is displayed in the output only if the <b>out-delay</b> parameter is configured to a non-zero value.                                                                                                                                                                   |
| Number of flaps                                    | Number of times the BGP session has gone down and then come back up.                                                                                                                                                                                                                                                                                                            |
| Peer ID                                            | Router identifier of the peer.                                                                                                                                                                                                                                                                                                                                                  |
| Group index                                        | Index number for the BGP peer group. The index number differentiates between groups when a single BGP group is split because of different configuration options at the group and peer levels.                                                                                                                                                                                   |

Table 80: show bgp neighbor Output Fields (*continued*)

| Field Name                                                     | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|----------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Peer index                                                     | Index that is unique within the BGP group to which the peer belongs.                                                                                                                                                                                                                                                                                                                                                                                  |
| Local ID                                                       | Router identifier of the local routing device.                                                                                                                                                                                                                                                                                                                                                                                                        |
| Local Interface                                                | Name of the interface on the local routing device.                                                                                                                                                                                                                                                                                                                                                                                                    |
| Active holdtime                                                | Hold time that the local routing device negotiated with the peer.                                                                                                                                                                                                                                                                                                                                                                                     |
| Keepalive Interval                                             | Keepalive interval, in seconds.                                                                                                                                                                                                                                                                                                                                                                                                                       |
| BFD                                                            | Status of BFD failure detection.                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Local Address                                                  | Name of directly connected interface over which direct EBGP peering is established.                                                                                                                                                                                                                                                                                                                                                                   |
| NLRI and times for LLGR configured on peer                     | <p>Names of address families and stale time for BGP long-lived graceful restart configured on the BGP peer or neighbor.</p> <p>Times are displayed using the routing protocol daemon (rpd) %#OT format:</p> <p><b>&lt;weeks&gt;w&lt;days&gt;d &lt;hours&gt;:&lt;minutes&gt;:&lt;seconds&gt;</b></p> <p>Zero leading elements are omitted, for example, a value less than one week do not include the weeks.</p>                                       |
| NLRI and times that peer supports LLGR Restarter for           | <p>Names of address families and stale time that the BGP peer supports for restarter mode for BGP long-lived graceful restart.</p> <p>Times are displayed using the routing protocol daemon (rpd) %#OT format:</p> <p><b>&lt;weeks&gt;w&lt;days&gt;d &lt;hours&gt;:&lt;minutes&gt;:&lt;seconds&gt;</b></p> <p>Zero leading elements are omitted, for example, a value less than one week do not include the weeks.</p>                                |
| NLRI that peer saved LLGR forwarding for                       | Name of the address family for which the BGP peer saved BGP long-lived graceful restart forwarding.                                                                                                                                                                                                                                                                                                                                                   |
| Graceful Restart Details                                       | Amount of time that is remaining until LLGR expires and the time remaining on the GR stale timer, along with RIB details, are displayed while LLGR receiver mode is active (a peer that negotiated LLGR has disconnected and not yet reconnected)                                                                                                                                                                                                     |
| NLRI we are holding stale routes for                           | Names of address families (NLRIs) for which that stale routes are held or preserved when BGP graceful restart receiver mode is active for a neighbor.                                                                                                                                                                                                                                                                                                 |
| Time until end-of-rib is assumed for stale routes              | <p>Amount of time remaining on the stale timer until which end-of-RIB (EoR) markers are assumed when BGP graceful restart receiver mode is active for a neighbor.</p> <p>Time is displayed in Coordinated Universal Time (UTC) format (YYYY-MM-DD-HH:MM:SS). Note that the stale timer display ('Time until end-of-rib is assumed') is also present when a session is active, but the neighbor as not yet sent all of the end-of-rib indications.</p> |
| Time until stale routes are deleted or become long-lived stale | Amount of time up to which stale routes are deleted or become long-lived stale routes when BGP graceful restart receiver mode is active for a neighbor.                                                                                                                                                                                                                                                                                               |

Table 80: show bgp neighbor Output Fields (*continued*)

| Field Name                                           | Field Description                                                                                                                                                                                           |
|------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>NLRI for restart configured on peer</b>           | Names of address families configured for restart.                                                                                                                                                           |
| <b>NLRI advertised by peer</b>                       | Address families supported by the peer: <b>unicast</b> or <b>multicast</b> .                                                                                                                                |
| <b>NLRI for this session</b>                         | Address families being used for this session.                                                                                                                                                               |
| <b>Peer supports Refresh capability</b>              | Remote peer's ability to send and request full route table readvertisement (route refresh capability). For more information, see RFC 2918, <i>Route Refresh Capability for BGP-4</i> .                      |
| <b>Restart time configured on peer</b>               | Configured time allowed for restart on the neighbor.                                                                                                                                                        |
| <b>Stale routes from peer are kept for</b>           | When graceful restart is negotiated, the maximum time allowed to hold routes from neighbors after the BGP session has gone down.                                                                            |
| <b>Peer does not support Restarter functionality</b> | Graceful restart restarter-mode is disabled on the peer.                                                                                                                                                    |
| <b>Peer does not support Receiver functionality</b>  | Graceful restart helper-mode is disabled on the peer.                                                                                                                                                       |
| <b>Restart time requested by this peer</b>           | Restart time requested by this neighbor during capability negotiation.                                                                                                                                      |
| <b>Restart flag received from the peer</b>           | When this field appears, the BGP speaker has restarted (Restarting), and this peer should not wait for the <b>end-of-rib</b> marker from the speaker before advertising routing information to the speaker. |
| <b>NLRI that peer supports restart for</b>           | Neighbor supports graceful restart for this address family.                                                                                                                                                 |
| <b>NLRI peer can save forwarding state</b>           | Neighbor supporting this address family saves all forwarding states.                                                                                                                                        |
| <b>NLRI that peer saved forwarding for</b>           | Neighbor saves all forwarding states for this address family.                                                                                                                                               |
| <b>NLRI that restart is negotiated for</b>           | Router supports graceful restart for this address family.                                                                                                                                                   |
| <b>NLRI of received end-of-rib markers</b>           | Address families for which end-of-routing-table markers are received from the neighbor.                                                                                                                     |
| <b>NLRI of all end-of-rib markers sent</b>           | Address families for which end-of-routing-table markers are sent to the neighbor.                                                                                                                           |
| <b>Peer supports 4 byte AS extension (peer-as 1)</b> | Peer understands 4-byte AS numbers in BGP messages. The peer is running Junos OS Release 9.1 or later.                                                                                                      |

Table 80: show bgp neighbor Output Fields (*continued*)

| Field Name                                                 | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| NLRIs for which peer can receive multiple paths            | <p>Appears in the command output of the local router if the downstream peer is configured to receive multiple BGP routes to a single destination, instead of only receiving the active route.</p> <p>Possible value is <b>inet-unicast</b>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| NLRIs for which peer can send multiple paths: inet-unicast | <p>Appears in the command output of the local router if the upstream peer is configured to send multiple BGP routes to a single destination, instead of only sending the active route.</p> <p>Possible value is <b>inet-unicast</b>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Table inet.number                                          | <p>Information about the routing table:</p> <ul style="list-style-type: none"> <li>• <b>RIB State</b>—BGP is in the graceful restart process for this routing table: <b>restart is complete</b> or <b>restart in progress</b>.</li> <li>• <b>Bit</b>—Number that represents the entry in the routing table for this peer.</li> <li>• <b>Send state</b>—State of the BGP group: <b>in sync</b>, <b>not in sync</b>, or <b>not advertising</b>.</li> <li>• <b>Active prefixes</b>—Number of prefixes received from the peer that are active in the routing table.</li> <li>• <b>Received prefixes</b>—Total number of prefixes from the peer, both active and inactive, that are in the routing table.</li> <li>• <b>Accepted prefixes</b>—Total number of prefixes from the peer that have been accepted by a routing policy.</li> <li>• <b>Suppressed due to damping</b>—Number of routes currently inactive because of damping or other reasons. These routes do not appear in the forwarding table and are not exported by routing protocols.</li> </ul> |
| Last traffic (seconds)                                     | Last time any traffic was received from the peer or sent to the peer, and the last time the local routing device checked.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Input messages                                             | Messages that BGP has received from the receive socket buffer, showing the total number of messages, number of update messages, number of times a policy is changed and refreshed, and the buffer size in octets. The buffer size is 16 KB.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Output messages                                            | Messages that BGP has written to the transmit socket buffer, showing the total number of messages, number of update messages, number of times a policy is changed and refreshed, and the buffer size in octets. The buffer size is 16 KB.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Input dropped path attributes                              | <p>Information about dropped path attributes:</p> <ul style="list-style-type: none"> <li>• <b>Code</b>—Path attribute code.</li> <li>• <b>Count</b>—Path attribute count.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Input ignored path attributes                              | <p>Information about ignored path attributes:</p> <ul style="list-style-type: none"> <li>• <b>Code</b>—Path attribute code.</li> <li>• <b>Count</b>—Path attribute count.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

Table 80: show bgp neighbor Output Fields (*continued*)

| Field Name                     | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|--------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Output queue</b>            | <p>Number of BGP packets that are queued to be transmitted to a particular neighbor for a particular routing table. Output queue <b>0</b> is for unicast NLRIs, and queue <b>1</b> is for multicast NLRIs.</p> <p>It also specifies the routing table name and the NLRI that the table was advertised through, in the format (<i>routing table name, NLRI</i>).</p> <p><b>NOTE:</b> The output queue of routing tables that are not advertised, will only show up at <b>extensive</b> output level.</p> |
| <b>Trace options</b>           | Configured tracing of BGP protocol packets and operations.                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Trace file</b>              | Name of the file to receive the output of the tracing operation.                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Filter Updates rcv</b>      | <p>(<b>orf</b> option only) Number of outbound-route filters received for each configured address family.</p> <p><b>NOTE:</b> The counter is cumulative. For example, the counter is increased after the remote peer either resends or clears the outbound route filtering prefix list.</p>                                                                                                                                                                                                             |
| <b>Immediate</b>               | <p>(<b>orf</b> option only) Number of route updates received with the immediate flag set. The immediate flag indicates that the BGP peer should readvertise the updated routes.</p> <p><b>NOTE:</b> The counter is cumulative. For example, the counter is increased after the remote peer either resends or clears the outbound route filtering prefix list.</p>                                                                                                                                       |
| <b>Filter</b>                  | ( <b>orf</b> option only) Type of prefix filter received: <b>prefix-based</b> or <b>extended-community</b> .                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Received filter entries</b> | ( <b>orf</b> option only) List of received filters displayed.                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>seq</b>                     | ( <b>orf</b> option only) Numerical order assigned to this prefix entry among all the received outbound route filter prefix entries.                                                                                                                                                                                                                                                                                                                                                                    |
| <b>prefix</b>                  | ( <b>orf</b> option only) Address for the prefix entry that matches the filter.                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>minlength</b>               | ( <b>orf</b> option only) Minimum prefix length, in bits, required to match this prefix.                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>maxlength</b>               | ( <b>orf</b> option only) Maximum prefix length, in bits, required to match this prefix.                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>match</b>                   | ( <b>orf</b> option only) For this prefix match, whether to <b>permit</b> or <b>deny</b> route updates.                                                                                                                                                                                                                                                                                                                                                                                                 |

## Sample Output

### show bgp neighbor

```
user@host > show bgp neighbor
```

For M Series, MX Series, and T Series routers running Junos OS Release 16.1 or later, the **show bgp neighbor** output includes the BGP group the peer belongs to, the routing instance (if any) that the peer is configured in, and the routing instance that the peer is using for the forwarding context (if applicable). An example follows.

```

Peer: 10.255.7.250+179 AS 10   Local: 10.255.7.248+63740 AS 10
  Group: toAsbr2               Routing-Instance: master
  Forwarding routing-instance: toAs2
    Type: Internal   State: Established   Flags: <Sync>
  Last State: OpenConfirm   Last Event: RecvKeepAlive
  Last Error: None
  Export: [ redist_static ]
  Options: <Preference LocalAddress PeerAS Refresh>

## show bgp replication

---

**Syntax**    `show bgp replication`

**Release Information**    Command introduced in Junos OS Release 8.5.  
Command introduced in Junos OS Release 11.3 for the QFX Series.  
Support for **logical-system** option introduced in Junos OS Release 13.3

**Description**    Displays the status of BGP state replication between the master and backup Routing Engines on devices that have nonstop active routing configured on them.

**CAUTION:** Before attempting nonstop active routing switchover, check the output of `show bgp replication` to confirm that BGP routing table synchronization has completed on the backup Routing Engine. The **complete** status in the output of `show task replication` only indicates that the socket replication has completed and the BGP synchronization is in progress.

To determine whether BGP synchronization is complete, you must check the **Protocol state** and **Synchronization state** fields in the output of `show bgp replication` on the master Routing Engine. The **Protocol state** must be **idle** and the **Synchronization state** must be **complete**. If you perform NSR switchover before the BGP synchronization has completed, the BGP session might flap.

---

**Options**    This command has no options.

**Required Privilege Level**    view

**Output Fields** [Table 82 on page 1516](#) describes the output fields for the **show bgp summary** command. Output fields are listed in the approximate order in which they appear.

**Table 82: show bgp summary Output Fields**

| Field Name          | Field Description                                                                                                                                                      |
|---------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Groups</b>       | Number of BGP groups.                                                                                                                                                  |
| <b>Peers</b>        | Number of BGP peers.                                                                                                                                                   |
| <b>Down peers</b>   | Number of down BGP peers.                                                                                                                                              |
| <b>Table</b>        | Name of routing table.                                                                                                                                                 |
| <b>Tot Paths</b>    | Total number of paths.                                                                                                                                                 |
| <b>Act Paths</b>    | Number of active routes.                                                                                                                                               |
| <b>Suppressed</b>   | Number of routes currently inactive because of damping or other reasons. These routes do not appear in the forwarding table and are not exported by routing protocols. |
| <b>History</b>      | Number of withdrawn routes stored locally to keep track of damping history.                                                                                            |
| <b>Damp State</b>   | Number of routes with a figure of merit greater than zero, but still active because the value has not reached the threshold at which suppression occurs.               |
| <b>Pending</b>      | Routes in process by BGP import policy.                                                                                                                                |
| <b>Peer</b>         | Address of each BGP peer. Each peer has one line of output.                                                                                                            |
| <b>AS</b>           | Peer's AS number.                                                                                                                                                      |
| <b>InPkt</b>        | Number of packets received from the peer.                                                                                                                              |
| <b>OutPkt</b>       | Number of packets sent to the peer.                                                                                                                                    |
| <b>OutQ</b>         | Number of BGP packets that are queued to be transmitted to a particular neighbor. It normally is 0 because the queue usually is emptied quickly.                       |
| <b>Flaps</b>        | Number of times the BGP session has gone down and then come back up.                                                                                                   |
| <b>Last Up/Down</b> | Last time since the neighbor transitioned to or from the established state.                                                                                            |

Table 82: show bgp summary Output Fields (*continued*)

| Field Name                                              | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|---------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>State #Active<br/>/Received/Accepted<br/>/Damped</b> | <p>Multipurpose field that displays information about BGP peer sessions. The field's contents depend upon whether a session is established and whether it was established on the main routing device or in a routing instance.</p> <ul style="list-style-type: none"> <li>If a peer is not established, the field shows the state of the peer session: <b>Active</b>, <b>Connect</b>, or <b>Idle</b>. In general, the Idle state is the first stage of a connection. BGP is waiting for a Start event. A session can be idle for other reasons as well. The reason that a session is idle is sometimes displayed. For example: <b>Idle (Removal in progress)</b> or <b>Idle (LicenseFailure)</b>.</li> <li>If a BGP session is established on the main routing device, the field shows the number of active, received, accepted, and damped routes that are received from a neighbor and appear in the <b>inet.0</b> (main) and <b>inet.2</b> (multicast) routing tables. For example, <b>8/10/10/2</b> and <b>2/4/4/0</b> indicate the following: <ul style="list-style-type: none"> <li>8 active routes, 10 received routes, 10 accepted routes, and 2 damped routes from a BGP peer appear in the <b>inet.0</b> routing table.</li> <li>2 active routes, 4 received routes, 4 accepted routes, and no damped routes from a BGP peer appear in the <b>inet.2</b> routing table.</li> </ul> </li> <li>If a BGP session is established in a routing instance, the field indicates the established (<b>Establ</b>) state, identifies the specific routing table that receives BGP updates, and shows the number of active, received, and damped routes that are received from a neighbor. For example, <b>Establ VPN-AB.inet.0: 2/4/0</b> indicates the following: <ul style="list-style-type: none"> <li>The BGP session is established.</li> <li>Routes are received in the <b>VPN-AB.inet.0</b> routing table.</li> <li>The local routing device has two active routes, four received routes, and no damped routes from a BGP peer.</li> </ul> </li> </ul> <p>When a BGP session is established, the peers are exchanging update messages.</p> <p><b>NOTE:</b> When graceful restart or LLGR helper mode is active, the RIB information is now displayed by the <b>show bgp summary</b> command. If a BGP session is established on the main routing device, the field shows the number of active, received, accepted, and damped routes that are received from a neighbor and appear in the <b>inet.0</b> (main) and <b>inet.2</b> (multicast) routing tables. For example, <b>8/10/10/2</b> and <b>2/4/4/0</b> indicate the following:</p> <ul style="list-style-type: none"> <li>8 active routes, 10 received routes, 10 accepted routes, and 2 damped routes from a BGP peer appear in the <b>inet.0</b> routing table.</li> <li>2 active routes, 4 received routes, 4 accepted routes, and no damped routes from a BGP peer appear in the <b>inet.2</b> routing table.</li> </ul> |

| <b>Description</b>                              | Display information about BGP route flap damping parameters.                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Options</b>                                  | <p><b>none</b>—Display information about BGP route flap damping parameters.</p> <p><b>logical-system (all   <i>logical-system-name</i>)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p>                                                                                                                                                                                                                          |
| <b>Additional Information</b>                   | In the output from this command, figure-of-merit values correlate with the probability of future instability of a routing device. Routes with higher figure-of-merit values are suppressed for longer periods of time. The figure-of-merit value decays exponentially over time. A figure-of-merit value of zero is assigned to each new route. The value is increased each time the route is withdrawn or readvertised, or when one of its path attributes changes. |
| <b>Required Privilege Level</b>                 | view                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

Output fields are listed in the approximate order in which they appear.</p>                                                                                                                                                                                                                                                                         |

Table 83: show policy damping Output Fields

| Field Name                   | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Halflife</b>              | Decay half-life, in minutes. The value represents the period during which the accumulated figure-of-merit value is reduced by half if the route remains stable. If a route has flapped, but then becomes stable, the figure-of-merit value for the route decays exponentially. For example, for a route with a figure-of-merit value of 1500, if no incidents occur, its figure-of-merit value is reduced to 750 after 15 minutes and to 375 after another 15 minutes. |
| <b>Reuse merit</b>           | Figure-of-merit value below which a suppressed route can be used again. A suppressed route becomes reusable when its figure-of-merit value decays to a value below a reuse threshold, and the route once again is considered usable and can be installed in the forwarding table and exported from the routing table.                                                                                                                                                  |
| <b>Suppress/cutoff merit</b> | Figure-of-merit value above which a route is suppressed for use or inclusion in advertisements. When a route's figure-of-merit value reaches a particular level, called the cutoff or suppression threshold, the route is suppressed. When a route is suppressed, the routing table no longer installs the route into the forwarding table and no longer exports this route to any of the routing protocols.                                                           |
| <b>Maximum suppress time</b> | Maximum hold-down time, in minutes. The value represents the maximum time that a route can be suppressed no matter how unstable it has been before this period of stability.                                                                                                                                                                                                                                                                                           |
| <b>Computed values</b>       | <ul style="list-style-type: none"> <li>• <b>Merit ceiling</b>—Maximum merit that a flapping route can collect.</li> <li>• <b>Maximum decay</b>—Maximum decay half-life, in minutes.</li> </ul>                                                                                                                                                                                                                                                                         |

## Sample Output

### show policy damping

```

user@host> show policy damping
Default damping information:
  Halflife: 15 minutes
  Reuse merit: 750 Suppress/cutoff merit: 3000
  Maximum suppress time: 60 minutes
  Computed values:
    Merit ceiling: 12110
    Maximum decay: 6193
Damping information for "standard-damping":
  Halflife: 10 minutes
  Reuse merit: 4000 Suppress/cutoff merit: 8000
  Maximum suppress time: 30 minutes
  Computed values:
    Merit ceiling: 32120
    Maximum decay: 12453

```

## CHAPTER 18

# ES-IS Operational Commands

- `clear esis adjacency`
- `clear esis statistics`
- `show esis adjacency`
- `show esis interface`

## Sample Output

### show esis adjacency

```

user@host> show esis adjacency
Nbr   NSAP/NET                               Hold  Interface
Type                                     (secs)
IS    47.0005.80ff.f800.0000.0108.0001.0102.5501.6008  135 fe-0/0/0.0

```

### show esis adjacency brief

The output for the **show esis adjacency brief** command is identical to that for the **show esis adjacency** command. For sample output, see [show esis adjacency on page 1527](#).

### show esis adjacency detail

```

user@host> show esis adjacency detail
NSAP/NET: 47.0005.80ff.f800.0000.0108.0001.0102.5501.6008, Type: IS
Interface: fe-0/0/0.0, Advertised hold time: 180 secs, Expires in: 173 secs
SNPA: 0:5:85:c1:73:71

```

### show esis adjacency extensive

```

user@host> show esis adjacency extensive
NSAP/NET: 47.0005.80ff.f800.0000.0108.0001.0102.5501.6008, Type: IS
Interface: fe-0/0/0.0, Advertised hold time: 180 secs, Expires in: 167 secs
SNPA: 0:5:85:c1:73:71
Transition log:
When           State      Event           Down reason
Sun Nov 26 22:07:35  Up        Received ISH

```

## show esis interface

## Sample Output

### show esis interface

```

user@host> show esis interface
Interface          Receives    Sends Hello Interval  Num Adj
fe-0/0/0.0         ISH         ISH         60.00                1
lo0.0              ISH         -           60.00                0

```

### show esis interface brief

The output for the **show esis interface brief** command is identical to that for the **show esis interface** command. For sample output, see [show esis interface on page 1529](#).

### show esis interface detail

```

user@host> show esis interface detail
Interface: fe-0/0/0.0
  Receives: ISH, Sends: ISH, Hello interval: 60.00
  Adjacencies: 1, Holdtime: 180, End system configuration timer: 180
  Interface index: 68, State: 0x2
  NET used in hello: 47.0005.80ff.f800.0000.0108.0001.0102.5501.6007

Interface: lo0.0
  Receives: ISH, Sends: - , Hello interval: 60.00
  Adjacencies: 0, Holdtime: 180, End system configuration timer: 180
  Interface index: 64, State: 0x2
  NET used in hello: 47.0005.80ff.f800.0000.0108.0001.0102.5501.6007

```

### show esis interface extensive

The output for the **show esis interface extensive** command is identical to that for the **show esis interface detail** command. For sample output, see [show esis interface detail on page 1529](#).

## show esis statistics

| <b>Output Fields</b>            | <p><a href="#">Table 86 on page 1530</a> describes the output fields for the <b>show esis statistics</b> command. Output fields are listed in the approximate order in which they appear.</p>          |

**Table 86: show esis statistics Output Fields**

| Field Name                         | Field Description                                                                                           |
|------------------------------------|-------------------------------------------------------------------------------------------------------------|
| <b>PDU type</b>                    | Protocol data unit type.                                                                                    |
| <b>Received</b>                    | Number of PDUs received since IS-IS started or since the statistics were set to zero.                       |
| <b>Processed</b>                   | Number of PDUs received less the number dropped.                                                            |
| <b>Drops</b>                       | Number of PDUs dropped.                                                                                     |
| <b>Sent</b>                        | Number of PDUs transmitted since IS-IS started or since the statistics were set to zero.                    |
| <b>Total packets received/sent</b> | Total number of PDUs received and transmitted since IS-IS started or since the statistics were set to zero. |

## Sample Output

### show esis statistics

```
user@host> show esis statistics
PDU type  Received Processed Drops   Sent
ESH              3         3     0     8
ISH             11        10     1     4
RD              0         0     0     0
Unknown         0         0     0     0
Totals        14         13     1    12
Total packets received: 14 sent: 0
```

## CHAPTER 19

# IP Multicast Operational Commands

- clear amt statistics
- clear amt tunnel
- clear igmp membership
- clear igmp snooping membership
- clear igmp snooping statistics
- clear igmp statistics
- clear mld membership
- clear mld statistics
- clear msdp cache
- clear msdp statistics
- clear multicast bandwidth-admission
- clear multicast forwarding-cache
- clear multicast scope
- clear multicast sessions
- clear multicast snooping statistics

## Sample Output

### clear igmp statistics

The following sample output displays IGMP statistics information before and after the **clear igmp statistics** command is entered:

```
user@host> show igmp statistics
IGMP packet statistics for all interfaces
IGMP Message type      Received      Sent  Rx errors
Membership Query        8883         459      0
V1 Membership Report    0            0        0
```

## Sample Output

### clear msdp statistics

```
user@host> clear msdp statistics
```

## clear multicast bandwidth-admission

**Syntax** clear multicast bandwidth-admission  
 <group *group-address*>  
 <inet | inet6>  
 <instance *instance-name*>  
 <interface *interface-name*>  
 <source *source-address*>

**Release Information** Command introduced in Junos OS Release 8.3.  
 Command introduced in Junos OS Release 9.0 for EX Series switches.  
**inet6** and **instance** options introduced in Junos OS Release 10.0 for EX Series switches.  
 Command introduced in Junos OS Release 11.3 for the QFX Series.  
 Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.

**Description** Reapply IP multicast bandwidth admissions.

**Options** **none**—Reapply multicast bandwidth admissions for all IPv4 forwarding entries in the master routing instance.

**group *group-address***—(Optional) Reapply multicast bandwidth admissions for the specified group.

**inet**—(Optional) Reapply multicast bandwidth admission settings for IPv4 flows.

**inet6**—(Optional) Reapply multicast bandwidth admission settings for IPv6 flows.

**instance *instance-name***—(Optional) Reapply multicast bandwidth admission settings for the specified instance. If you do not specify an instance, the command applies to the master routing instance.

**interface *interface-name***—(Optional) Examines the corresponding outbound interface in the relevant entries and acts as follows:

- If the interface is congested, and it was admitted previously, it is removed.
- If the interface was rejected previously, the **clear multicast bandwidth-admission** command enables the interface to be admitted as long as enough bandwidth exists on the interface.
- If you do not specify an interface, issuing the **clear multicast bandwidth-admission** command readmits any previously rejected interface for the relevant entries as long as enough bandwidth exists on the interface.

To manually reject previously admitted outbound interfaces, you must specify the interface.

**source *source-address***—(Optional) Use with the **group** option to reapply multicast bandwidth admission settings for the specified (source, group) entry.

**Required Privilege Level**    clear

**Related Documentation**    • [show multicast interface on page 1647](#)

**List of Sample Output**    [clear multicast bandwidth-admission on page 1552](#)

**Output Fields**    When you enter this command, you are provided feedback on the status of your request.

## Sample Output

`clear multicast bandwidth-admission`

```
user@host> clear multicast bandwidth-admission
```

## clear multicast forwarding-cache

**Release Information**    Command introduced before Junos OS Release 7.4.  
                              Command introduced in Junos OS Release 9.0 for EX Series switches.  
                              **inet6** and **instance** options introduced in Junos OS Release 10.0 for EX Series switches.  
                              Command introduced in Junos OS Release 11.3 for the QFX Series.  
                              Multiple new filter options introduced in Junos OS Release 13.2.  
                              Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.

**Description**    Clear the Protocol Independent Multicast (PIM) join and prune states.

**Options**    **all**—Clear the PIM join and prune states for all groups and family addresses in the master instance.

**group-address**—(Optional) Clear the PIM join and prune states for a group address.

**bidirectional | dense | sparse**—(Optional) Clear PIM bidirectional mode, dense mode, or sparse and source-specific multicast (SSM) mode entries.

**exact**—(Optional) Clear only the group that exactly matches the specified group address.

**inet | inet6**—(Optional) Clear the PIM entries for IPv4 or IPv6 family addresses, respectively.

**instance *instance-name***—(Optional) Clear the entries for a specific PIM-enabled routing instance.

**logical-system** (**all** | *logical-system-name*)—(Optional) Perform this operation on all logical systems or on a particular logical system.

**rp** *ip-address/prefix* | **source** *ip-address/prefix*—(Optional) Clear the PIM entries with a specified rendezvous point (RP) address and prefix or with a specified source address and prefix. You can omit the prefix.

**sg** | **star-g**—(Optional) Clear PIM (S,G) or (\*G) entries.

**Additional Information** The **clear pim join** command cannot be used to clear the PIM join and prune state on a backup Routing Engine when nonstop active routing is enabled.

**Required Privilege Level** clear

**Output Fields** When you enter this command, you are provided feedback on the status of your request.

## Sample Output

### clear pim join all

```
user@host> clear pim join all
Cleared 8 Join/Prune states
```

### clear pim join inet6

```
user@host> clear pim join inet6
Cleared 4 Join/Prune states
```

### clear pim join inet6 star-g

```
user@host> clear pim join inet6 star-g
Cleared 1 Join/Prune states
```

## clear pim join-distribution

| Description              | <p>Clear the PIM <b>join-redistribute</b> states.</p> <p>Use the <b>show pim source</b> command to find out if there are multiple paths available for a source (for example, an RP).</p> <p>When you include the <b>join-load-balance</b> statement in the configuration, the PIM join states are distributed evenly on available equal-cost multipath links. When an upstream neighbor link fails, Junos OS redistributes the PIM join states to the remaining links. However, when new links are added or the failed link is restored, the existing PIM joins are not redistributed to the new link. New flows will be distributed to the new links. However, in a network without new joins and prunes, the new link is not used for multicast traffic. The <b>clear pim join-distribution</b> command redistributes the existing flows to the new upstream neighbors. Redistributing the existing flows causes traffic to be disrupted, so we recommend that you run the <b>clear pim join-distribution</b> command during a maintenance window.</p> |
| Options                  | <p><b>all</b>— (Optional) Clear the PIM <b>join-redistribute</b> states for all groups and family addresses in the master instance.</p> <p><b>none</b>— Automatically clear all PIM join/prune states.</p> <p><b>instance <i>instance-name</i></b>— (Optional) Redistribute the join states for a specific PIM-enabled routing instance.</p> <p><b>logical-system (all   <i>logical-system-name</i>)</b>— (Optional) Perform this operation on all logical systems or on a particular logical system.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Additional Information   | The <b>clear pim join-distribution</b> command cannot be used to redistribute the PIM join states on a backup Routing Engine when nonstop active routing is enabled.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Required Privilege Level | clear                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

## Sample Output

### clear pim snooping join

The following sample output displays information about PIM snooping joins before and after the **clear pim snooping join** command is entered:

```
user@host> show pim snooping join extensive
Instance: vpls1
Learning-Domain: vlan-id 10
Learning-Domain: vlan-id 20

Group: 198.51.100.2
Source: *
Flags: sparse,rptree,wildcard
Upstream state: None
Upstream neighbor: 192.0.2.5, port: ge-1/3/7.20
Downstream port: ge-1/3/1.20
```

```
Downstream neighbors:
192.0.2.2 State: Join Flags: SRW Timeout: 185

Group: 198.51.100.3
Source: *
Flags: sparse,rptree,wildcard
Upstream state: None
Upstream neighbor: 192.0.2.4, port: ge-1/3/5.20
Downstream port: ge-1/3/3.20
Downstream neighbors:
192.0.2.3 State: Join Flags: SRW Timeout: 175

user@host> clear pim snooping join
Clearing the Join/Prune state for 203.0.113.0/24
Clearing the Join/Prune state for 203.0.113.0/24

user@host> show pim snooping join extensive
Instance: vpls1
Learning-Domain: vlan-id 10
Learning-Domain: vlan-id 20
```

## Sample Output

### clear pim snooping statistics

The following sample output displays PIM snooping statistics before and after the **clear pim snooping statistics** command is entered:

```
user@host> show pim snooping statistics
Instance: vpls1
Learning-Domain: vlan-id 10

Tx J/P messages 0
RX J/P messages 660
Rx J/P messages -- seen 0
```

```
Rx J/P messages -- received 660
Rx Hello messages 1396
Rx Version Unknown 0
Rx Neighbor Unknown 0
Rx Upstream Neighbor Unknown 0
Rx Bad Length 0
Rx J/P Busy Drop 0
Rx J/P Group Aggregate 0
Rx Malformed Packet 0
```

```
Learning-Domain: vlan-id 20
```

```
user@host> clear pim snooping statistics
```

```
user@host> show pim snooping statistics
```

```
Instance: vpls1
```

```
Learning-Domain: vlan-id 10
```

```
Tx J/P messages 0
RX J/P messages 0
Rx J/P messages -- seen 0
Rx J/P messages -- received 0
Rx Hello messages 0
Rx Version Unknown 0
Rx Neighbor Unknown 0
Rx Upstream Neighbor Unknown 0
Rx Bad Length 0
Rx J/P Busy Drop 0
Rx J/P Group Aggregate 0
Rx Malformed Packet 0
```

```
Learning-Domain: vlan-id 20
```

## clear pim statistics

## Sample Output

### clear pim statistics

The following sample output displays PIM statistics before and after the **clear pim statistics** command is entered:

```
user@host> show pim statistics
PIM statistics on all interfaces:
PIM Message type      Received      Sent  Rx errors
Hello                  0             0      0
Register               0             0      0
