## monitor ethernet synthetic-loss-measurement

**Syntax** monitor ethernet synthetic-loss-measurement  
 maintenance-domain *md-name*  
 maintenance-association *ma-name*  
 (*remote-mac-address* | mep *remote-mep-id*)  
 <count *frame-count*>  
 <local-mep *mep-id*>  
 <wait *interval-milliseconds*>  
 <priority *802.1p value*>  
 <size>  
 <xml>

**Release Information** Command introduced in Junos OS Release 13.2 for MX Series routers.  
**local-mep** option introduced in Junos OS Release 15.1

**Description** (MX Series routers) Start an ITU-T Y.1731 Ethernet synthetic loss measurement (ETH-SLM) session between the specified local connectivity fault management (CFM) maintenance association end point (MEP) and the specified remote MEP, and display a summary of the frames exchanged in the measurement session. ETH-SLM (also called synthetic frame loss measurement) statistics are stored at one of the MEPs for later retrieval.

**NOTE:** If you attempt to monitor delays to a nonexistent MAC address, you must press Ctrl +c to explicitly quit the **monitor ethernet synthetic-loss-measurement** command and return to the CLI command prompt.

To start an Ethernet synthetic frame loss measurement session, the router initiates an exchange of frames carrying synthetic frame loss measurement protocol data units (PDUs) between the local and remote MEPs. The frame counts—the types of and number of Ethernet synthetic frame loss measurement PDU frames exchanged to measure frame delay times—are displayed as the run-time output of the **monitor ethernet synthetic-loss-measurement** command and are also stored at both the initiator and receiver MEPs for later retrieval. Ethernet synthetic frame loss measurement statistics, described below, are measured and stored at only one of the MEPs:

Frame delay—The difference, in microseconds, between the time a frame is sent and when it is received.

Frame delay variation—The difference, in microseconds, between consecutive frame delay values. Frame delay variation is sometimes called “frame jitter.”

**Options** **maintenance-domain *md-name***—Name of an existing CFM maintenance domain.  
**maintenance-association *ma-name***—Name of an existing CFM maintenance association.

**mep remote-mep-id**—Numeric identifier of the peer MEP with which to perform Ethernet synthetic frame loss measurement. The discovered MAC address of the peer MEP is used. The range of values is from 1 through 8191.

**remote-mac-address**—Unicast MAC address of the peer MEP with which to perform Ethernet synthetic frame loss measurement. Specify the MAC address as six hexadecimal bytes in one of the following formats: *nnnn.nnnn.nnnn* or *nn:nn:nn:nn:nn:nn*. For example, **0011.2233.4455** or **00:11:22:33:44:55**. Multicast MAC addresses are not supported.

**count frame-count**—(Optional) Number of frames to send to the specified peer MEP. The range of values is from 1 through 65,535 frames. The default value is 10 frames.

**local-mep mep-id**—(Required when multiple MEPs are configured) Identifier for the local maintenance endpoint.

**wait interval-milliseconds**—(Optional) Number of milliseconds to wait between sending frames. You must specify this value in multiples of 100 milliseconds. The range of values is from 100 through 50000 milliseconds. The default value is 100 milliseconds.

**priority 802.1p value**—(Optional) Priority of the ETH-SLM request frame supported. The range of values is from 0 through 7. The default value is zero.

**size**—(Optional) Size of the data TLV to be included in the request frame. The range of values is from 1 through 1400 bytes.

**xml**—(Optional) Allow the output of the command to be displayed in XML format for ETH-SLM. Note that the only way to get output in XML format is to use the **xml** argument. The **display xml** command does not work.

**Additional Information** To display the frame counts collected at a MEP as the result of this command, use the following commands as described in the [CLI Explorer](#):

- **show oam ethernet connectivity-fault-management interfaces detail**
- **show oam ethernet connectivity-fault-management mep-database**
- **show oam ethernet connectivity-fault-management mep-statistics**

To display the statistics collected at a MEP as the result of this command, use the following commands as described in the [CLI Explorer](#).

- **show oam ethernet connectivity-fault-management synthetic-loss-measurement**
- **show oam ethernet connectivity-fault-management mep-statistics**

To clear both the frame counts and the statistics collected for MEPs, use the **clear oam ethernet connectivity-fault-management statistics** command, described in the [CLI Explorer](#).

For a complete description of Ethernet synthetic frame loss measurement, see the *ITU-T Y.1731 Ethernet Service OAM* topics in the *Junos OS Network Interfaces Library for Routing Devices*.

**Output Fields** The **monitor ethernet synthetic-loss-measurement** command displays different output at the CLI, depending on when you start a synthetic frame loss measurement:

- [Table 91 on page 1443](#) lists the run-time output fields for the **monitor ethernet synthetic-loss-measurement** command.

Output fields are listed in the approximate order in which they appear.

**Table 91: monitor ethernet synthetic-loss-measurement Output Fields**

| Output Field Name                 | Output Field Description                                                                                                                                                                                                                                                                                                          |
|-----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ETH-SLM request to                | Unicast MAC address of the remote peer MEP.                                                                                                                                                                                                                                                                                       |
| Interface                         | Name of the Ethernet physical, logical, or trunk interface to which the local MEP is attached.                                                                                                                                                                                                                                    |
| SLM packets sent                  | Total number of synthetic loss message (SLM) PDU frames sent from the source MEP to the remote MEP during this ETH-SLM session.                                                                                                                                                                                                   |
| SLR packets received              | Total number of synthetic loss reply (SLR) PDU frames received by the source MEP from the remote MEP during this measurement session.                                                                                                                                                                                             |
| Local TXFC1 value                 | Number of synthetic frames transmitted to the peer MEP for a test ID. A test ID is used to distinguish each synthetic loss measurement because multiple measurements can be simultaneously activated also on a given CoS and MEP pair. It must be unique at least within the context of any SLM for the MEG and initiating MEP.   |
| Local RXFC1 value                 | Number of synthetic frames received from the peer MEP for a test ID. The MEP generates a unique test ID for the session, adds the source MEP ID, and initializes the local counters for the session before SLM initiation. For each SLM PDU transmitted for the session (test ID), the local counter TXFC1 is sent in the packet. |
| Last Received SLR frame TXFCf(tc) | Value of the local counter TxFC1 at the time of SLM frame transmission.                                                                                                                                                                                                                                                           |
| Last Received SLR frame TXFCb(t)  | Value of the local counter RxFC1 at the time of SLR frame transmission.                                                                                                                                                                                                                                                           |
| Frame loss (near-end)             | Count of frame loss associated with ingress data frames.                                                                                                                                                                                                                                                                          |
| Frame loss (far-end)              | Count of frame loss associated with egress data frames.                                                                                                                                                                                                                                                                           |

**Release Information** Command introduced in Junos OS Release 13.2 for MX Series routers.  
**local-mep** option introduced in Junos OS Release 15.1

**Description** (MX Series routers) Start an ITU-T Y.1731 Ethernet synthetic loss measurement (ETH-SLM) session between the specified local connectivity fault management (CFM) maintenance association end point (MEP) and the specified remote MEP, and display a summary of the frames exchanged in the measurement session. ETH-SLM (also called synthetic frame loss measurement) statistics are stored at one of the MEPs for later retrieval.

**NOTE:** If you attempt to monitor delays to a nonexistent MAC address, you must press Ctrl +c to explicitly quit the **monitor ethernet synthetic-loss-measurement** command and return to the CLI command prompt.

To start an Ethernet synthetic frame loss measurement session, the router initiates an exchange of frames carrying synthetic frame loss measurement protocol data units (PDUs) between the local and remote MEPs. The frame counts—the types of and number of Ethernet synthetic frame loss measurement PDU frames exchanged to measure frame delay times—are displayed as the run-time output of the **monitor ethernet synthetic-loss-measurement** command and are also stored at both the initiator and receiver MEPs for later retrieval. Ethernet synthetic frame loss measurement statistics, described below, are measured and stored at only one of the MEPs:

Frame delay—The difference, in microseconds, between the time a frame is sent and when it is received.

Frame delay variation—The difference, in microseconds, between consecutive frame delay values. Frame delay variation is sometimes called “frame jitter.”

**Options** **maintenance-domain *md-name***—Name of an existing CFM maintenance domain.  
**maintenance-association *ma-name***—Name of an existing CFM maintenance association.

**mep remote-mep-id**—Numeric identifier of the peer MEP with which to perform Ethernet synthetic frame loss measurement. The discovered MAC address of the peer MEP is used. The range of values is from 1 through 8191.

**remote-mac-address**—Unicast MAC address of the peer MEP with which to perform Ethernet synthetic frame loss measurement. Specify the MAC address as six hexadecimal bytes in one of the following formats: *nnnn.nnnn.nnnn* or *nn:nn:nn:nn:nn:nn*. For example, **0011.2233.4455** or **00:11:22:33:44:55**. Multicast MAC addresses are not supported.

**count frame-count**—(Optional) Number of frames to send to the specified peer MEP. The range of values is from 1 through 65,535 frames. The default value is 10 frames.

**local-mep mep-id**—(Required when multiple MEPs are configured) Identifier for the local maintenance endpoint.

**wait interval-milliseconds**—(Optional) Number of milliseconds to wait between sending frames. You must specify this value in multiples of 100 milliseconds. The range of values is from 100 through 50000 milliseconds. The default value is 100 milliseconds.

**priority 802.1p value**—(Optional) Priority of the ETH-SLM request frame supported. The range of values is from 0 through 7. The default value is zero.

**size**—(Optional) Size of the data TLV to be included in the request frame. The range of values is from 1 through 1400 bytes.

**xml**—(Optional) Allow the output of the command to be displayed in XML format for ETH-SLM. Note that the only way to get output in XML format is to use the **xml** argument. The **display xml** command does not work.

**Additional Information** To display the frame counts collected at a MEP as the result of this command, use the following commands as described in the [CLI Explorer](#):

- **show oam ethernet connectivity-fault-management interfaces detail**
- **show oam ethernet connectivity-fault-management mep-database**
- **show oam ethernet connectivity-fault-management mep-statistics**

To display the statistics collected at a MEP as the result of this command, use the following commands as described in the [CLI Explorer](#).

- **show oam ethernet connectivity-fault-management synthetic-loss-measurement**
- **show oam ethernet connectivity-fault-management mep-statistics**

To clear both the frame counts and the statistics collected for MEPs, use the **clear oam ethernet connectivity-fault-management statistics** command, described in the [CLI Explorer](#).

For a complete description of Ethernet synthetic frame loss measurement, see the *ITU-T Y.1731 Ethernet Service OAM* topics in the *Junos OS Network Interfaces Library for Routing Devices*.

| ETH-SLM request to                | Unicast MAC address of the remote peer MEP.                                                                                                                                                                                                                                                                                       |
| Interface                         | Name of the Ethernet physical, logical, or trunk interface to which the local MEP is attached.                                                                                                                                                                                                                                    |
| SLM packets sent                  | Total number of synthetic loss message (SLM) PDU frames sent from the source MEP to the remote MEP during this ETH-SLM session.                                                                                                                                                                                                   |
| SLR packets received              | Total number of synthetic loss reply (SLR) PDU frames received by the source MEP from the remote MEP during this measurement session.                                                                                                                                                                                             |
| Local TXFC1 value                 | Number of synthetic frames transmitted to the peer MEP for a test ID. A test ID is used to distinguish each synthetic loss measurement because multiple measurements can be simultaneously activated also on a given CoS and MEP pair. It must be unique at least within the context of any SLM for the MEG and initiating MEP.   |
| Local RXFC1 value                 | Number of synthetic frames received from the peer MEP for a test ID. The MEP generates a unique test ID for the session, adds the source MEP ID, and initializes the local counters for the session before SLM initiation. For each SLM PDU transmitted for the session (test ID), the local counter TXFC1 is sent in the packet. |
| Last Received SLR frame TXFCf(tc) | Value of the local counter TxFC1 at the time of SLM frame transmission.                                                                                                                                                                                                                                                           |
| Last Received SLR frame TXFCb(t)  | Value of the local counter RxFC1 at the time of SLR frame transmission.                                                                                                                                                                                                                                                           |
| Frame loss (near-end)             | Count of frame loss associated with ingress data frames.                                                                                                                                                                                                                                                                          |
| Frame loss (far-end)              | Count of frame loss associated with egress data frames.                                                                                                                                                                                                                                                                           |

| <b>Release Information</b>      | Command introduced in Junos OS Release 15.1.                                                                                                                                                                                                                                                                                                                |
| <b>Description</b>              | Manually recover a degraded physical link. Manual recovery is used when the interface has any Layer 2 and Layer 3 protocols that prevents autorecovery. This command is applicable only if you have configured the manual link recovery option on the interface.                                                                                            |
|                                 | <div>  <p><b>NOTE:</b> Manual recovery option is recommended for user deployments that have static route configurations causing the remote end of the link to start forwarding packets (as soon as the physical link is up) while auto-recovery is in progress.</p> </div> |
| <b>Options</b>                  | <i>interfaces-name</i> —Name of the interface.                                                                                                                                                                                                                                                                                                              |

### Sample Output

#### request interface mc-ae switchover immediate mcae-id

```
user@host >request interface mc-ae switchover immediate mcae-id 2
MCAE: Switchover Done
```

## Sample Output

### `request interface mc-ae switchover mcae-id`

```
user@host >request interface mc-ae switchover mcae-id 2
Switchover In Progress: Please check after 1 minutes,
Use "show interfaces mc-ae revertive-info" to check for the status
```

## request interface (revert | switchover) (Aggregated Ethernet Link Protection)

---

**Syntax**    request interface (revert | switchover) aex

**Release Information**    Command introduced in Junos OS Release 8.3.

**Description**    Manually revert egress traffic from the designated backup link to the designated primary link of an aggregated Ethernet interface for which link protection is enabled, or manually switch egress traffic from the primary link to the backup link. This traffic includes transit traffic and local traffic originated on the router itself.

**NOTE:** When link protection is enabled on an aggregated Ethernet interface, if the primary link fails, the router automatically routes egress traffic to the backup link. However, the router does not automatically route egress traffic back to the primary link when the primary link is subsequently reestablished. Instead, you manually control when to have traffic diverted back to the primary link by issuing the **request interface (revert | switchover) (Aggregated Ethernet Link Protection)** operational command and specifying the **revert** keyword.

On M Series and T Series routers, use the **request interface (revert | switchover) (Adaptive Services)** operational command to manually revert to the primary adaptive services interface or link services interface, or to switch from the primary to the secondary interface. For information about this command, see *request interface (revert | switchover) (Adaptive Services)*.

**Options**    **revert**—Restores egress traffic processing to the primary link.

**switchover**—Transfers egress traffic processing to the secondary (backup) link.

**aex**—Aggregated Ethernet logical interface number: 0 through 15.

**Required Privilege Level**    view

**List of Sample Output**    [request interface revert on page 1454](#)

**Output Fields**    When you enter this command, you are provided feedback on the status of your request.

### Sample Output

**request interface revert**

```
user@host >request interface revert ae1
```

## request lacp link-switchover

**Syntax**    request lacp link-switchover aex

**Release Information**    Command introduced in Junos OS Release 9.3.

**Description**    Manually switch aggregated Ethernet active or standby LACP links.

**NOTE:** Because this command overrides LACP priority calculations, we strongly recommend that you use this command only when the actor (in this case, the Juniper Networks router) is controlling the active or standby link and the partner (peer) is following. This scenario occurs when you configure only the actor for link protection.

**Options**    aex—Aggregated Ethernet logical interface number: 0 through 15.

**Required Privilege Level**    view

**List of Sample Output**    [request lacp link-switchover aeX on page 1455](#)

**Output Fields**    When you enter this command, you are provided feedback on the status of your request. To view the switchover, use the **show lacp interfaces** command.

## Sample Output

### request lacp link-switchover aeX

```
user@host >request lacp link-switchover ae0ae0: Request succeeded
```

## show chassis hardware

| <b>Release Information</b>                                                                  | Command introduced before Junos OS Release 7.4.<br><b>models</b> option introduced in Junos OS Release 8.2.<br>Command introduced in Junos OS Release 9.0 for EX Series switches.<br><b>sfc</b> option introduced in Junos OS Release 9.6 for the TX Matrix Plus router.<br>Command introduced in Junos OS Release 11.1 for QFX Series. |

Command introduced in Junos OS Release 12.1X48 for PTX Series Packet Transport Routers.

Command introduced in Junos OS Release 12.2 for ACX Series Universal Access Routers.

Command introduced in Junos OS Release 12.3 for MX2010 and MX2020 3D Universal Edge Routers.

Information for **disk** and **usb** introduced in Junos OS Release 15.1X53-D60 for QFX10002, QFX10008, and QFX10016 switches.

Command introduced in Junos OS Release 15.1X54-D20 for ACX5048 and ACX5096 Routers.

Command introduced in Junos OS Release 17.2 for MX2008 3D Universal Edge Routers.

Command introduced in Junos OS Release 17.2 for PTX10008 Routers.

Command introduced in Junos OS Release 17.3 for MX10003 3D Universal Edge Routers.

Command introduced in Junos OS Release 17.3 for MX150 Router Appliance.

Command introduced in Junos OS Release 17.4 for MX204 Routers.

**Description** Display a list of all Flexible PIC Concentrators (FPCs) and PICs installed in the router or switch chassis, including the hardware version level and serial number.

In the EX Series switch command output, FPC refers to the following:

- On EX2200 switches, EX3200 switches, EX4200 standalone switches, and EX4500 switches—Refers to the switch; FPC *number* is always 0.
- On EX4200 switches in a Virtual Chassis configuration—Refers to the member of a Virtual Chassis; FPC *number* equals the member ID, from 0 through 9.
- On EX8208 and EX8216 switches—Refers to a line card; FPC *number* equals the slot number for the line card.

On QFX3500, QFX5100, and OCX Series standalone switches, and PTX1000 routers both the FPC and FPC *number* are always 0.

On T4000 Type 5 FPCs, there are no **top temperature sensor** or **bottom temperature sensor** parameters. Instead, **fan intake temperature sensor** and **fan exhaust temperature sensors** parameters are displayed.

Starting from Junos OS Release 11.4, the output of the **show chassis hardware models** operational mode command displays the enhanced midplanes FRU model numbers (CHAS-BP3-MX240-S, CHAS-BP3-MX480-S or CHAS-BP3-MX960-S) based on the router. Prior to release 11.4, the FRU model numbers are left blank when the router has enhanced midplanes. Note that the enhanced midplanes are introduced through the Junos OS Release 13.3, but can be supported on all Junos OS releases.

Starting with Junos OS Release 14.1, the output of the **show chassis hardware detail | extensive | clei-models | models** operational mode command displays the new DC power supply module (PSM) and power distribution unit (PDU) that are added to provide power to the high-density FPC (FPC2-PTX-P1A) and other components in a PTX5000 Packet Transport Router.

**Options** **none**—Display information about hardware. For a TX Matrix router, display information about the TX Matrix router and its attached T640 routers. For a TX Matrix Plus router, display information about the TX Matrix Plus router and its attached routers.

**clei-models**—(Optional) Display Common Language Equipment Identifier (CLEI) barcode and model number for orderable field-replaceable units (FRUs).

**detail**—(Optional) Include RAM and disk information in output.

**extensive**—(Optional) Display ID EEPROM information.

**all-members**—(MX Series routers only) (Optional) Display hardware-specific information for all the members of the Virtual Chassis configuration.

**interconnect-device *name***—(QFabric systems only) (Optional) Display hardware-specific information for the Interconnect device.

**lcc *number***—(TX Matrix routers and TX Matrix Plus router only) (Optional) On a TX Matrix router, display hardware information for a specified T640 router (line-card chassis) that is connected to the TX Matrix router. On a TX Matrix Plus router, display hardware information for a specified router (line-card chassis) that is connected to the TX Matrix Plus router.

Replace *number* with the following values depending on the LCC configuration:

- 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.
- 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.
- 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.
- 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.

**local**—(MX Series routers only) (Optional) Display hardware-specific information for the local Virtual Chassis members.

**member *member-id***—(MX Series routers and EX Series switches) (Optional) Display hardware-specific information for the specified member of the Virtual Chassis configuration. Replace *member-id* variable with a value 0 or 1.

**models**—(Optional) Display model numbers and part numbers for orderable FRUs and, for components that use ID EEPROM format v2, the CLEI code.

**node-device *name***—(QFabric systems only) (Optional) Display hardware-specific information for the Node device.

**satellite [*slot-id slot-id* | *device-alias alias-name*]**—(Junos Fusion only) (Optional) Display hardware information for the specified satellite device in a Junos Fusion, or for all satellite devices in the Junos Fusion if no satellite devices are specified.

**scc**—(TX Matrix router only) (Optional) Display hardware information for the TX Matrix router (switch-card chassis).

**sfc *number***—(TX Matrix Plus router only) (Optional) Display hardware information for the TX Matrix Plus router (switch-fabric chassis). Replace *number* variable with 0.

**Additional Information** The **show chassis hardware detail** command now displays DIMM information for the following Routing Engines, as shown in [Table 93 on page 1460](#).

**Table 93: Routing Engines Displaying DIMM Information**

| Routing Engines             | Routers                         |
|-----------------------------|---------------------------------|
| RE-S-1800x2 and RE-S-1800x4 | MX240, MX480, and MX960 routers |
| RE-A-1800x2                 | M120 and M320 routers           |

In Junos OS Release 11.4 and later, the output for the **show chassis hardware models** operational mode command for MX Series routers display the enhanced midplanes FRU model numbers—CHAS-BP3-MX240-S, CHAS-BP3-MX480-S, or CHAS-BP3-MX960-S—based on the router. In releases before Junos OS Release 11.4, the FRU model numbers are left blank when the router has enhanced midplanes. Note that the enhanced midplanes are introduced through Junos OS Release 13.3, but can be supported on all Junos OS releases.

Starting with Junos OS Release 17.3R1, the output of the **show chassis hardware** command displays the mode in which vMX is running (performance mode or lite mode) in the part number field for the FPC. **RIOT-PERF** indicates performance mode and **RIOT-LITE** indicates lite mode.

**Output Fields** [Table 94 on page 1465](#) lists the output fields for the **show chassis hardware** command. Output fields are listed in the approximate order in which they appear.

Table 94: show chassis hardware Output Fields

| Field Name         | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Level of Output |
|--------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| <b>Item</b>        | <p>Chassis component:</p> <ul style="list-style-type: none"> <li>(EX Series switches)—Information about the chassis, Routing Engine (SRE and Routing Engine modules in EX8200 switches), power supplies, fan trays, and LCD panel. Also displays information about Flexible PIC Concentrators (FPCs) and associated Physical Interface Cards (PICs). Information about the backplane, midplane, and SIBs (SF modules) is displayed for EX8200 switches.</li> <li>(MX Series routers and EX Series switches)—Information about the backplane, Routing Engine, Power Entry Modules (PEMs), and fan trays. Also displays information about Flexible PIC Concentrators (FPCs) and associated Physical Interface Cards (PICs), Modular Port Concentrators (MPCs) and associated Modular Interface Cards (MICs), or Dense Port Concentrators (DPCs). MX80 routers have a single Routing Engine and a built-in Packet Forwarding Engine that attaches directly to MICs. The Packet Forwarding Engine has two “pseudo” FPCs (FPC 0 and FPC1). MX80 routers also have a Forwarding Engine Board (FEB). MX104 routers have a built-in Packet forwarding Engine and a Forwarding Engine Board (FEB). The Packet Forwarding Engine of the MX104 router has three “pseudo” FPCs (FPC0, FPC1, and FPC2).</li> <li>(M Series routers, except for the M320 router)—Information about the backplane; power supplies; fan trays; Routing Engine; maxicab (the connection between the Routing Engine and the backplane, for the M40 router only); SCB, SSB, SFM, or FEB; MCS and PCG (for the M160 router only); each FPC and PIC; and each fan, blower, and impeller.</li> <li>(M120, M320, and T Series routers)—Information about the backplane, power supplies, fan trays, midplane, FPM (craft interface), CIP, PEM, SCG, CB, FPC, PIC, SFP, SPMB, and SIB.</li> <li>(QFX Series)—Information about the chassis, Pseudo CB, Routing Engine, power supplies, fan trays, Interconnect devices, and Node devices. Also displays information about Flexible PIC Concentrators (FPCs) and associated Physical Interface Cards (PICs).</li> <li>(PTX Series)—Information about the chassis, midplane, craft interface (FPM), power distribution units (PDUs) and Power Supply Modules (PSMs), Centralized Clock Generators (CCGs), Routing Engines, Control Boards (CBs) and Switch Processor Mezzanine Boards (SPMBs), Flexible PIC Concentrators (FPCs), PICs, Switch Interface Boards (SIBs), and fan trays (vertical and horizontal).</li> <li>(MX2010, MX2020, and MX2008 routers)—Information about the chassis, midplane, craft interface (FPM), power midplane (PMP), Power Supply Modules (PSMs), Power Distribution Modules (PDMs), Routing Engines, Control Boards (CBs) and Switch Processor Mezzanine Boards (SPMBs), Switch Fabric Boards (SFBs), Flexible PIC Concentrators (FPCs), PICs, adapter cards (ADCs) and fan trays.</li> <li>(vMX routers)—Information about the chassis, midplane, Routing Engines, and Control Boards (CBs). Also displays information about Flexible PIC Concentrators (FPCs) and associated Modular Interface Cards (MICs) and Physical Interface Cards (PICs).</li> </ul> | All levels      |
| <b>Version</b>     | Revision level of the chassis component.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | All levels      |
| <b>Part number</b> | Part number of the chassis component.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | All levels      |

Table 94: show chassis hardware Output Fields (*continued*)

| Field Name                    | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Level of Output  |

| <b>Serial number</b>          | Serial number of the chassis component. The serial number of the backplane is also the serial number of the router chassis. Use this serial number when you need to contact Juniper Networks Customer Support about the router or switch chassis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | All levels       |
| <b>Assb ID or Assembly ID</b> | ( <b>extensive</b> keyword only) Identification number that describes the FRU hardware.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>extensive</b> |

| <b>Description</b>                                  | Display status information about the PIC installed in the specified Flexible PIC Concentrator (FPC) and PIC slot.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Options</b>                                      | <p><b>fpc-slot <i>slot-number</i></b>—Display information about the PIC in this particular FPC slot:</p> <ul style="list-style-type: none"><li>On a TX Matrix router, if you specify the number of the T640 router by using the <b>lcc <i>number</i></b> option (the recommended method), replace <b><i>slot-number</i></b> with a value from 0 through 7. Otherwise, replace <b><i>slot-number</i></b> with a value from 0 through 31.</li></ul> <p>Likewise, on a TX Matrix Plus router, if you specify the number of the T1600 router by using the <b>lcc <i>number</i></b> option (the recommended method), replace <b><i>slot-number</i></b> with a value from 0 through 7. Otherwise, replace <b><i>slot-number</i></b> with a value from 0 through 31. For example, the following commands have the same result:</p> <pre>user@host&gt; show chassis pic fpc-slot 1 lcc 1 pic-slot 1 user@host&gt; show chassis pic fpc-slot 9 pic-slot 1</pre> <ul style="list-style-type: none"><li>M120 routers only—Replace <b><i>slot-number</i></b> with a value from 0 through 5.</li><li>MX80 routers only—Replace <b><i>slot-number</i></b> with a value from 0 through 1.</li><li>MX104 routers only—Replace <b><i>slot-number</i></b> with a value from 0 through 2.</li><li>MX240 routers only—Replace <b><i>slot-number</i></b> with a value from 0 through 2.</li><li>MX480 routers only—Replace <b><i>slot-number</i></b> with a value from 0 through 5.</li></ul> |

- MX960 routers only—Replace **slot-number** with a value from 0 through 11.
- MX2010 routers only—Replace **slot-number** with a value from 0 through 9.
- MX2020 routers only—Replace **slot-number** with a value from 0 through 19.
- MX2008 routers only—Replace **slot-number** with a value from 0 through 9.
- MX10003 routers only—Replace **slot-number** with a value from 0 through 1.
- Other routers—Replace **slot-number** with a value from 0 through 7.
- EX Series switches:
  - EX3200 switches and EX4200 standalone switches—Replace **slot-number** with 0.
  - EX4200 switches in a Virtual Chassis configuration—Replace **slot-number** with a value from 0 through 9 (switch's member ID).
  - EX8208 switches—Replace **slot-number** with a value from 0 through 7 (line card).
  - EX8216 switches—Replace **slot-number** with a value from 0 through 15 (line card).
- QFX Series:
  - QFX3500, QFX3600, QFX5100, and OCX Series standalone switches—Replace **slot-number** with 0. In the command output, FPC refers to a line card. The FPC number equals the slot number for the line card.
  - QFabric systems—Replace **slot-number** with any number between 0 and 15. In the command output, FPC refers to a line card. The FPC number equals the slot number for the line card.

**all-members**—(MX Series routers and EX Series switches only) (Optional) Display PIC information for all member routers in the Virtual Chassis configuration.

**interconnect-device name**—(QFabric systems only) (Optional) Display PIC information for a specified Interconnect device.

**lcc number**—(TX Matrix and TX Matrix Plus routers only) (Optional) On a TX Matrix router, display PIC information for a specified T640 router (or line-card chassis) that is connected to the TX Matrix router. On a TX Matrix Plus router, display PIC information for a specified router (line-card chassis) that is connected to the TX Matrix Plus router.

Replace *number* with the following values depending on the LCC configuration:

- 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.
- 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.

- 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.
- 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.

**local**—(MX Series routers and EX Series switches only) (Optional) Display PIC information for the local Virtual Chassis member.

**member *member-id***—(MX Series routers and EX Series switches only) (Optional) Display PIC information for the specified member of the Virtual Chassis configuration. Replace *member-id* with a value of 0 or 1.

**node-device *name***—(QFabric systems only) (Optional) Display PIC information for a specified Node device.

**pic-slot *slot-number***—Display information about the PIC in this particular PIC slot. For routers, replace *slot-number* with a value from 0 through 3. For EX3200 and EX4200 switches, replace *slot-number* with 0 for built-in network interfaces and 1 for interfaces on uplink modules. For EX8208 and EX8216 switches, replace *slot-number* with 0. For the QFX3500 standalone switch and the QFabric system, replace *slot-number* with 0 or 1.

**transport**—Display PIC information for optical transport network.

**Output Fields** [Table 95 on page 1684](#) lists the output fields for the **show chassis pic** command. Output fields are listed in the approximate order in which they appear.

**Table 95: show chassis pic Output Fields**

| Field Name              | Field Description                                                                                                                                                                                                                                                                                                      |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Type                    | PIC type.<br><br><b>NOTE:</b> On the 1-port OC192/STM64 MICs with the SDH framing mode, the type is displayed as <b>MIC-3D-1STM64-XFP</b> and with the SONET framing mode, the type is displayed as <b>MIC-3D-1OC192-XFP</b> . By default, the 1-port OC192/STM64 MICs displays the type as <b>MIC-3D-1OC192-XFP</b> . |
| Account Layer2 Overhead | (MX Series routers) Indicates whether functionality to count the Layer 2 overhead bytes in the interface statistics at the PIC level is enabled or disabled.                                                                                                                                                           |
| ASIC type               | Type of ASIC on the PIC.                                                                                                                                                                                                                                                                                               |
| State                   | Status of the PIC. State is displayed only when a PIC is in the slot. <ul style="list-style-type: none"> <li>• <b>Online</b>— PIC is online and running.</li> <li>• <b>Offline</b>—PIC is powered down.</li> </ul>                                                                                                     |
| PIC version             | PIC hardware version.                                                                                                                                                                                                                                                                                                  |
| Uptime                  | How long the PIC has been online.                                                                                                                                                                                                                                                                                      |
| Package                 | (Multiservices PICs only) Services package supported: <b>Layer-2</b> or <b>Layer-3</b> .                                                                                                                                                                                                                               |
| Port Number             | Port number for the PIC.                                                                                                                                                                                                                                                                                               |
| Cable Type              | Type of cable connected to the port: <b>LH</b> , <b>LX</b> , or <b>SX</b> .                                                                                                                                                                                                                                            |

Table 95: show chassis pic Output Fields (*continued*)

Table 95: show chassis pic Output Fields (*continued*)

| Field Name             | Field Description                                                                                                                                                                                                            |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Port speed information | Information pertaining to port speed: <ul style="list-style-type: none"> <li>• Port—Port number.</li> <li>• PFE—Packet Forwarding Engine slot number.</li> <li>• Capable Port Speed—Speed supported by each port.</li> </ul> |
| Multirate Mode         | Rate-selectability status for the MIC: <b>Enabled</b> or <b>Disabled</b> .                                                                                                                                                   |
| Channelization         | Indicates whether channelization is enabled or disabled on the DS3/E3 MIC.                                                                                                                                                   |
| Administrative State   | Indicates the administrative state of the PIC. Possible values are: In Service (Default) and Out of Service.                                                                                                                 |
| Operational State      | Indicates the operational state of the PIC. Possible values are: Normal and Fault.                                                                                                                                           |

## Sample Output

### show chassis pic fpc-slot pic-slot

```

user@host> show chassis pic fpc-slot 2 pic-slot 0
PIC fpc slot 2 pic slot 0 information:
 Type 10x 1GE(LAN), 1000 BASE
 ASIC type H chip
 State Online
 PIC version 1.1
 Uptime 1 day, 50 minutes, 58 seconds
PIC Port Information:
 Port Cable Xcvr Xcvr Vendor
 Number Type Vendor Name Part Number
 0 GIGE 1000EX FINISAR CORP. FTRJ8519P1BNL-J3
 1 GIGE 1000EX FINISAR CORP. FTRJ-8519-7D-JUN

```

### show chassis pic fpc-slot pic-slot (PIC Offline)

```

user@host> show chassis pic fpc-slot 1 pic-slot 0
PIC fpc slot 1 pic slot 0 information:
 State Offline

```

### show chassis pic fpc-slot pic-slot (FPC Offline)

```

user@host> show chassis pic fpc-slot 1 pic-slot 0
FPC 1 is not online

```

### show chassis pic fpc-slot pic-slot (FPC Not Present)

```

user@host> show chassis pic fpc-slot 4 pic-slot 0
FPC slot 4 is empty

```

**show chassis pic fpc-slot pic-slot (PIC Not Present)**

```
user@host> show chassis pic fpc-slot 5 pic-slot 2
FPC 5, PIC 2 is empty
```

**show chassis pic fpc-slot 3 pic-slot 0 (M120 Router)**

## FPC slot 9, PIC slot 3 information:

```

Type 1X100GE CFP
Account Layer2 Overhead Enabled
State Online
PIC version 0.0
Uptime 14 hours, 51 seconds

```

## show chassis pic fpc-slot pic-slot (T1600 Router with 100-Gigabit Ethernet PIC)

```
user@host> run show chassis pic fpc-slot 3 pic-slot 1
```

## FPC slot 3, PIC slot 1 information:

```

Type 100GE SLOT1
ASIC type Brooklyn 100GE FPGA
State Online
PIC version 1.3
Uptime 10 minutes, 44 seconds

```

## PIC port information:

| Port | Cable type   | Fiber type | Xcvr vendor | part number      | Wavelength |
|------|--------------|------------|-------------|------------------|------------|
| 0    | 100GBASE LR4 | SM         | Opnext Inc. | TRC5E20ENFSF000F | 1310 nm    |

## show chassis pic fpc-slot pic-slot lcc (TX Matrix Router)

```
user@host> show chassis pic fpc-slot 1 pic-slot 1 lcc 0
```

```
lcc0-re0:
```

## PIC fpc slot 1 pic slot 1 information:

```

Type 4x OC-3 SONET, SMIR
ASIC type D chip
State Online
PIC version 1.2
Uptime 5 days, 2 hours, 12 minutes, 8 seconds

```

## show chassis pic fpc-slot pic-slot lcc (TX Matrix Plus Router)

```
user@host> show chassis pic pic-slot 0 fpc-slot 8
```

```
lcc0-re0:
```

FPC slot 8, PIC slot 0 information:

```
Type 1x 10GE(LAN/WAN)
State Online
Uptime 2 hours, 46 minutes, 23 seconds
```

PIC port information:

| Port | Cable type | Fiber type | Xcvr vendor   | part number     | Wavelength |
|------|------------|------------|---------------|-----------------|------------|
| 0    | 10GBASE ZR | SM         | Opnext Inc.   | TRF7061BN-LF150 | 1550 nm    |
| 0    | 10GBASE ZR | SM         | FINISAR CORP. | FTRX-1811-3-J2  | 1550 nm    |

### show chassis pic fpc-slot pic-slot (Next-Generation SONET/SDH SFP)

user@host> show chassis pic fpc-slot 4 pic-slot 0

FPC slot 4, PIC slot 0 information:

```
Type 4x OC-3 1x OC-12 SFP
ASIC type D FPGA
State Online
PIC version 1.3
Uptime 1 day, 50 minutes, 4 seconds
```

PIC port information:

| Port | Cable type       | Fiber type | Xcvr vendor   | part number      | Wavelength |
|------|------------------|------------|---------------|------------------|------------|
| 0    | OC48 short reach | SM         | FINISAR CORP. | FTRJ1321P1BTL-J2 | 1310 nm    |
| 1    | OC3 short reach  | MM         | OCF           | TRPA03MM3BAS-JE  | 1310 nm    |
| 2    | OC3 short reach  | MM         | OCF           | TRXA03MM3BAS-JW  | 1310 nm    |
| 3    | OC12 inter reach | SM         | FINISAR CORP. | FTLF1322P1BTR    | 1310 nm    |

### show chassis pic fpc-slot pic-slot (12-Port T1/E1)

user@host> show chassis pic fpc-slot 0 pic-slot 3

FPC slot 0, PIC slot 3 information:

```
Type 12x T1/E1 CE
State Online
PIC version 1.1
CPU load average 1 percent
Interrupt load average 0 percent
Total DRAM size 128 MB
Memory buffer utilization 100 percent
Memory heap utilization 4 percent
Uptime 1 day, 22 hours, 28 minutes, 12 seconds
Internal Clock Synchronization Normal
```

### show chassis pic fpc-slot 0 pic-slot 1 (4x CHOC3 SONET CE SFP)

user@host> show chassis pic fpc-slot 0 pic-slot 1

FPC slot 0, PIC slot 1 information:

```
Type 4x CHOC3 SONET CE SFP
State Online
PIC version 1.3
CPU load average 1 percent
Interrupt load average 0 percent
Total DRAM size 128 MB
Memory buffer utilization 99 percent
Memory heap utilization 4 percent
Uptime 1 day, 22 hours, 55 minutes, 37 seconds
Internal Clock Synchronization Normal
```

## PIC port information:

| Port | Cable type      | Fiber type | Xcvr vendor | Xcvr vendor part number | Wavelength |
|------|-----------------|------------|-------------|-------------------------|------------|
| 0    | OC3 short reach | MM         | AVAGO       | HFBR-57E0P-JU2          | n/a        |
| 1    | OC3 short reach | MM         | AVAGO       | HFBR-57E0P-JU2          | n/a        |
| 3    | OC3 long reach  | SM         | OPNEXT INC  | TRF5456AVLB314          | 1310 nm    |

**show chassis pic fpc-slot 0 pic-slot 0 (SONET/SDH OC3/STM1 [Multi-Rate] MIC with SFP)**

```
user@host> show chassis pic fpc-slot 0 pic-slot 0

| <b>Description</b>              | <p>Display ARP statistics, Neighbor Discovery statistics, or remote MAC addresses for the Multi-Chassis Aggregated Ethernet (MC-AE) nodes for all or specified redundancy groups on a router or switch. Note that the Redundancy Group ID is inherited by the bridging domain or VLAN from member AE interfaces.</p>                                                                                                                                                                                                                                                                                           |
| <b>Options</b>                  | <p><b>redundancy-group-id</b>—(Optional) The redundancy group identification number. The Inter-Chassis Control Protocol (ICCP) uses the redundancy group ID to associate the routing or switching devices contained in a redundancy group.</p> <p><b>arp-statistics</b>—(Optional) Count of ARP packets sent and received by the two MC-AE nodes.</p> <p><b>nd-statistics</b>—(Optional) Count of Neighbor Discovery packets sent and received by the two MC-AE nodes.</p> <p><b>remote-macs</b> —(Optional) List of remote MAC addresses in the "Installed" state, as learned from the remote MC-AE node.</p> |
| <b>Required Privilege Level</b> | view                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| MCLAG ND Statistics Group ID     | Neighbor Discovery statistics for this Multichassis Link Aggregation Group (MC-LAG) instance. |
| ND Rx Count From Line            | Total number of Neighbor Discovery packets received from the Line.                            |
| ND Tx Count To Peer              | Total number of Neighbor Discovery packets sent to the peer.                                  |
| ND Rx Count From Peer            | Total number of Neighbor Discovery packets received from the peer.                            |
| ND Drop Count received from line | Total number of Neighbor Discovery packets sent by the peer that were received.               |
| ND Drop Count received from peer | Total number of Neighbor Discovery packets sent by the peer that were dropped                 |
| ND Install Count                 | ND Install Count                                                                              |

**Table 98: show ethernet-switching redundancy-groups remote-macs Output Fields**

| Field Name          | Field Description                                      |
|---------------------|--------------------------------------------------------|
| Redundancy Group ID | Redundancy Group to which the following details apply. |

Table 98: show ethernet-switching redundancy-groups remote-macs Output Fields (*continued*)

| Field Name | Field Description                                                                                                  |
|------------|--------------------------------------------------------------------------------------------------------------------|
| Service ID | Service ID (configured at the routing instance level).                                                             |
| Peer-Addr  | IP address of the remote peer.                                                                                     |
| VLAN       | Virtual LAN identifier associated with the redundancy group.                                                       |
| MAC        | Hardware media access control address associated with the redundancy group.                                        |
| MCAE-ID    | ID number of the MC-AE used by the redundancy group.                                                               |
| Flags      | Connection state: local connect or Remote connect. If no flag is shown, the redundancy group may not be connected. |
| Status     | Installation state: Installed or Not Installed.                                                                    |

## Sample Output

### show ethernet-switching redundancy-groups arp-statistics

```

user@host> show ethernet-switching redundancy-groups arp-statistics

Redundancy Group ID : 1 Flags : Local Connect, Remote Connect

MCLAG ARP Statistics
Group ID : 1
ARP Rx Count From Line : 3493
ARP Tx Count To Peer : 647
ARP Rx Count From Peer : 0
ARP Install Count : 0
ARP Drop Count received from line : 2846
ARP Drop Count received from peer : 0

```

### show ethernet-switching redundancy-groups nd-statistics

```

user@host> show ethernet-switching redundancy-groups nd-statistics

Redundancy Group ID : 1 Flags : Local Connect, Remote Connect

MCLAG ND Statistics
Group ID : 1
ND Rx Count From Line : 52
ND Tx Count To Peer : 15
ND Rx Count From Peer : 39
ND Install Count : 34
ND Drop Count received from line : 37
ND Drop Count received from peer : 5

```

### show ethernet-switching redundancy-groups remote-macs

```

user@host> show ethernet-switching redundancy-groups <redundancy-group-id> remote-macs

```

Redundancy Group ID : 1            Flags : Local Connect,Remote Connect

| Service-id | Peer-Addr | VLAN | MAC               | MCAE-ID | Subunit | Opcode |
|------------|-----------|------|-------------------|---------|---------|--------|
| Flags      | Status    |      |                   |         |         |        |
| 10         | 10.3.3.2  | 100  | 80:ac:ac:1f:10:a1 | 1       | 0       | 1      |
| 0          | Installed |      |                   |         |         |        |

#### `show ethernet-switching redundancy-groups group-id`

user@host> `show ethernet-switching redundancy-groups 1`

Redundancy Group ID : 1            Flags : Local Connect,Remote Connect

## show interfaces (Adaptive Services)

**Syntax** `show interfaces interface-type`  
`<brief | detail | extensive | terse>`  
`<descriptions>`  
`<media>`  
`<snmp-index snmp-index>`  
`<statistics>`

**Release Information** Command introduced before Junos OS Release 7.4.

**Description** Display status information about the specified adaptive services interface.

**Options** *interface-type*—On M Series and T Series routers, the interface type is *sp-fpc/pic/port*.

**brief | detail | extensive | terse**—(Optional) Display the specified level of output.

**descriptions**—(Optional) Display interface description strings.

**media**—(Optional) Display media-specific information about network interfaces.

**snmp-index *snmp-index***—(Optional) Display information for the specified SNMP index of the interface.

**statistics**—(Optional) Display static interface statistics.

**Required Privilege Level** view

**List of Sample Output** [show interfaces \(Adaptive Services\) on page 1714](#)  
[show interfaces brief \(Adaptive Services\) on page 1714](#)  
[show interfaces detail \(Adaptive Services\) on page 1714](#)  
[show interfaces extensive \(Adaptive Services\) on page 1715](#)

**Output Fields** [Table 99 on page 1709](#) lists the output fields for the **show interfaces** (adaptive services and redundant adaptive services) command. Output fields are listed in the approximate order in which they appear.

**Table 99: Adaptive Services and Redundant Adaptive Services show interfaces Output Fields**

| Field Name                | Field Description                                                                                                                    | Level of Output              |
|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Physical Interface</b> |                                                                                                                                      |                              |
| <b>Physical interface</b> | Name of the physical interface.                                                                                                      | All levels                   |
| <b>Enabled</b>            | State of the interface. Possible values are described in the “Enabled Field” section under <i>Common Output Fields Description</i> . | All levels                   |
| <b>Interface index</b>    | Physical interface's index number, which reflects its initialization sequence.                                                       | <b>detail extensive none</b> |

Table 99: Adaptive Services and Redundant Adaptive Services show interfaces Output Fields (continued)

| Field Name                     | Field Description                                                                                                                                                                                                                                    | Level of Output              |
|--------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>SNMP ifIndex</b>            | SNMP index number for the physical interface.                                                                                                                                                                                                        | <b>detail extensive none</b> |
| <b>Generation</b>              | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                    | <b>detail extensive</b>      |
| <b>Type</b>                    | Encapsulation being used on the interface.                                                                                                                                                                                                           | All levels                   |
| <b>Link-level type</b>         | Encapsulation being used on the physical interface.                                                                                                                                                                                                  | All levels                   |
| <b>MTU</b>                     | MTU size on the physical interface.                                                                                                                                                                                                                  | All levels                   |
| <b>Clocking</b>                | Reference clock source: can be <b>Internal</b> or <b>External</b> .                                                                                                                                                                                  | All levels                   |
| <b>Speed</b>                   | Speed at which the interface is running.                                                                                                                                                                                                             | All levels                   |
| <b>Device flags</b>            | Information about the physical device. Possible values are described in the "Device Flags" section under <i>Common Output Fields Description</i> .                                                                                                   | All levels                   |
| <b>Interface flags</b>         | Information about the interface. Possible values are described in the "Interface Flags" section under <i>Common Output Fields Description</i> .                                                                                                      | All levels                   |
| <b>Link type</b>               | Physical interface link type: <b>Full-Duplex</b> or <b>Half-Duplex</b> .                                                                                                                                                                             | <b>detail extensive none</b> |
| <b>Link flags</b>              | Information about the link. Possible values are described in the "Link Flags" section under <i>Common Output Fields Description</i> .                                                                                                                | <b>detail extensive none</b> |
| <b>Physical info</b>           | Information about the physical interface.                                                                                                                                                                                                            | <b>detail extensive</b>      |
| <b>Hold-times</b>              | Current interface hold-time up and hold-time down, in milliseconds.                                                                                                                                                                                  | <b>detail extensive</b>      |
| <b>Current address</b>         | Configured MAC address.                                                                                                                                                                                                                              | <b>detail extensive none</b> |
| <b>Hardware address</b>        | MAC address of the hardware.                                                                                                                                                                                                                         | <b>detail extensive none</b> |
| <b>Alternate link address</b>  | Backup address of the link.                                                                                                                                                                                                                          | <b>detail extensive none</b> |
| <b>Last flapped</b>            | Date, time, and how long ago the interface went from down to up. The format is <b>Last flapped: year-month-day hour:minute:second timezone (hour:minute:second ago)</b> . For example, <b>Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> . | <b>detail extensive none</b> |
| <b>Input Rate</b>              | Input rate in bits per second (bps) and packets per second (pps).                                                                                                                                                                                    | None specified               |
| <b>Output Rate</b>             | Output rate in bps and pps.                                                                                                                                                                                                                          | None specified               |
| <b>Statistics last cleared</b> | Time when the statistics for the interface were last set to zero.                                                                                                                                                                                    | <b>detail extensive</b>      |

Table 99: Adaptive Services and Redundant Adaptive Services show interfaces Output Fields (continued)

| Field Name                | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Level of Output              |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Traffic statistics</b> | <p>Number and rate of bytes and packets received and transmitted on the physical interface.</p> <p><b>NOTE:</b> With static NAT configured as basic NAT44 or destination NAT44 on MX Series routers with MS-MICs and MS-MPCs, the Input bytes field might show 16 more bytes than the Output bytes field. This is caused by the accounting of 16 bytes of the Juniper Forwarding Module cookie.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>                                                                                                                                                                                                                                                                                      | <b>detail extensive</b>      |
| <b>Input errors</b>       | <p>Input errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of the incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Runts</b>—Frames received smaller than the runt threshold.</li> <li>• <b>Giants</b>—Frames received larger than the giant threshold.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that the Junos OS does not handle.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>                                       | <b>extensive</b>             |
| <b>Output errors</b>      | <p>Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and then up, or another problem occurs. If the number of carrier transitions increments quickly (perhaps once every 10 seconds), the cable, the far-end system, or the PIC is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>MTU errors</b>—Number of packets larger than the MTU threshold.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul> | <b>extensive</b>             |
| <b>Logical Interface</b>  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                              |
| <b>Logical interface</b>  | Name of the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | All levels                   |
| <b>Index</b>              | Logical interface index number, which reflects its initialization sequence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>detail extensive none</b> |

Table 99: Adaptive Services and Redundant Adaptive Services show interfaces Output Fields (continued)

| Field Name                    | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                    | Level of Output              |
|-------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>SNMP ifIndex</b>           | SNMP interface index number.                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>detail extensive none</b> |
| <b>Generation</b>             | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                                                                                                                                                                    | <b>detail extensive</b>      |
| <b>Flags</b>                  | Information about the logical interface. Possible values are described in the “Logical Interface Flags” section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                      | All levels                   |
| <b>Encapsulation</b>          | Encapsulation on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                              | All levels                   |
| <b>Input packets</b>          | Number of packets received on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                 | None specified               |
| <b>Output packets</b>         | Number of packets transmitted on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                              | None specified               |
| <b>Traffic statistics</b>     | Number and rate of bytes and packets received and transmitted on the logical interface. <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul> | <b>detail extensive</b>      |
| <b>Local statistics</b>       | Statistics for traffic received from and transmitted to the Routing Engine. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. It takes awhile (generally, less than 1 second) for this counter to stabilize.                                                                                                                                                                   | <b>detail extensive</b>      |
| <b>Transit statistics</b>     | Statistics for traffic transiting the router. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. It takes generally less than 1 second for the counter to stabilize.                                                                                                                                                                                                            | <b>detail extensive</b>      |
| <b><i>protocol-family</i></b> | Protocol family configured on the logical interface. If the protocol is <b>inet</b> , the IP address of the interface is also displayed.                                                                                                                                                                                                                                                                                                             | <b>brief</b>                 |
| <b>Protocol</b>               | Protocol family configured on the logical interface, such as <b>iso</b> , <b>inet6</b> , <b>mpls</b> .                                                                                                                                                                                                                                                                                                                                               | <b>detail extensive none</b> |
| <b>MTU</b>                    | MTU size on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>detail extensive none</b> |
| <b>Generation</b>             | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                                                                                                                                                                    | <b>detail extensive</b>      |
| <b>Route table</b>            | Routing table in which the logical interface address is located. For example, <b>0</b> refers to the routing table <b>inet.0</b> .                                                                                                                                                                                                                                                                                                                   | <b>detail extensive</b>      |
| <b>Flags</b>                  | Information about the protocol family flags. Possible values are described in the “Family Flags” section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                             | <b>detail extensive none</b> |
| <b>Addresses, Flags</b>       | Information about the address flags. Possible values are described in the “Addresses Flags” section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                  | <b>detail extensive none</b> |

**Table 99: Adaptive Services and Redundant Adaptive Services show interfaces Output Fields**  
(continued)

| Field Name         | Field Description                                                 | Level of Output              |
|--------------------|-------------------------------------------------------------------|------------------------------|
| <b>Destination</b> | IP address of the remote side of the connection.                  | <b>detail extensive none</b> |
| <b>Local</b>       | IP address of the logical interface.                              | <b>detail extensive none</b> |
| <b>Broadcast</b>   | Broadcast address.                                                | <b>detail extensive none</b> |
| <b>Generation</b>  | Unique number for use by Juniper Networks technical support only. | <b>detail extensive</b>      |

## Sample Output

### show interfaces (Adaptive Services)

```
user@host> show interfaces sp-1/2/0
Physical interface: sp-1/2/0, Enabled, Physical link is Up
 Interface index: 147, SNMP ifIndex: 72
 Type: Adaptive-Services, Link-level type: Adaptive-Services, MTU: 9192,
 Speed: 800mbps
 Device flags : Present Running
 Interface flags: Point-To-Point SNMP-Traps Internal: 0x4000
 Link type : Full-Duplex
 Link flags : None
 Last flapped : 2006-03-06 11:37:18 PST (00:57:29 ago)
 Input rate : 0 bps (0 pps)
 Output rate : 0 bps (0 pps)

Logical interface sp-1/2/0.16383 (Index 68) (SNMP ifIndex 73)
 Flags: Point-To-Point SNMP-Traps Encapsulation: Adaptive-Services
 Input packets : 3057
 Output packets: 3044
 Protocol inet, MTU: 9192
 Flags: Receive-options, Receive-TTL-Exceeded
 Addresses, Flags: Is-Preferred Is-Primary
 Destination: 10.0.0.34, Local: 10.0.0.1
```

### show interfaces brief (Adaptive Services)

```
user@host> show interfaces sp-1/2/0 brief
Physical interface: sp-1/2/0, Enabled, Physical link is Up
 Type: Adaptive-Services, Link-level type: Adaptive-Services, MTU: 9192,
 Clocking: Unspecified, Speed: 800mbps
 Device flags : Present Running
 Interface flags: Point-To-Point SNMP-Traps Internal: 0x4000

Logical interface sp-1/2/0.16383
 Flags: Point-To-Point SNMP-Traps Encapsulation: Adaptive-Services
 inet 10.0.0.1 --> 10.0.0.34
```

### show interfaces detail (Adaptive Services)

```
user@host> show interfaces sp-1/2/0 detail
Physical interface: sp-1/2/0, Enabled, Physical link is Up
 Interface index: 147, SNMP ifIndex: 72, Generation: 30
 Type: Adaptive-Services, Link-level type: Adaptive-Services, MTU: 9192,
 Clocking: Unspecified, Speed: 800mbps
 Device flags : Present Running
 Interface flags: Point-To-Point SNMP-Traps Internal: 0x4000
 Link type : Full-Duplex
 Link flags : None
 Physical info : Unspecified
 Hold-times : Up 0 ms, Down 0 ms
 Current address: Unspecified, Hardware address: Unspecified
 Alternate link address: Unspecified
 Last flapped : 2006-03-06 11:37:18 PST (00:57:56 ago)
 Statistics last cleared: Never
 Traffic statistics:
 Input bytes : 125147 0 bps
 Output bytes : 1483113 0 bps
```

```

Input packets: 3061 0 pps
Output packets: 3048 0 pps

Logical interface sp-1/2/0.16383 (Index 68) (SNMP ifIndex 73) (Generation 7)
Flags: Point-To-Point SNMP-Traps Encapsulation: Adaptive-Services
Traffic statistics:
 Input bytes : 125147
 Output bytes : 1483113
 Input packets: 3061
 Output packets: 3048
Local statistics:
 Input bytes : 125147
 Output bytes : 1483113
 Input packets: 3061
 Output packets: 3048
Transit statistics:
 Input bytes : 0 0 bps
 Output bytes : 0 0 bps
 Input packets: 0 0 pps
 Output packets: 0 0 pps
Protocol inet, MTU: 9192, Generation: 20, Route table: 1
Flags: Receive-options, Receive-TTL-Exceeded
Addresses, Flags: Is-Preferred Is-Primary
Destination: 10.0.0.34, Local: 10.0.0.1, Broadcast: Unspecified,
Generation: 22

```

### show interfaces extensive (Adaptive Services)

```

user@host> show interfaces sp-1/2/0 extensive
Physical interface: sp-1/2/0, Enabled, Physical link is Up
Interface index: 147, SNMP ifIndex: 72, Generation: 30
Type: Adaptive-Services, Link-level type: Adaptive-Services, MTU: 9192,
Clocking: Unspecified, Speed: 800mbps
Device flags : Present Running
Interface flags: Point-To-Point SNMP-Traps Internal: 0x4000
Link type : Full-Duplex
Link flags : None
Physical info : Unspecified
Hold-times : Up 0 ms, Down 0 ms
Current address: Unspecified, Hardware address: Unspecified
Alternate link address: Unspecified
Last flapped : 2006-03-06 11:37:18 PST (00:58:40 ago)
Statistics last cleared: Never
Traffic statistics:
 Input bytes : 125547 0 bps
 Output bytes : 1483353 0 bps
 Input packets: 3065 0 pps
 Output packets: 3052 0 pps
Input errors:
 Errors: 0, Drops: 0, Framing errors: 0, Runts: 0, Giants: 0,
 Policed discards: 0, Resource errors: 0
Output errors:
 Carrier transitions: 2, Errors: 0, Drops: 0, MTU errors: 0,
 Resource errors: 0

Logical interface sp-1/2/0.16383 (Index 68) (SNMP ifIndex 73) (Generation 7)
Flags: Point-To-Point SNMP-Traps Encapsulation: Adaptive-Services
Traffic statistics:
 Input bytes : 125547
 Output bytes : 1483353
 Input packets: 3065

```

```
Output packets: 3052
Local statistics:
Input bytes : 125547
Output bytes : 1483353
Input packets: 3065
Output packets: 3052
Transit statistics:
Input bytes : 0 0 bps
Output bytes : 0 0 bps
Input packets: 0 0 pps
Output packets: 0 0 pps
Protocol inet, MTU: 9192, Generation: 20, Route table: 1
Flags: Receive-options, Receive-TTL-Exceeded
Addresses, Flags: Is-Preferred Is-Primary
Destination: 10.0.0.34, Local: 10.0.0.1, Broadcast: Unspecified,
Generation: 22
```

## show interfaces (Aggregated Ethernet)

|                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|---------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>                   | <pre>show interfaces <i>aenumber</i> &lt;brief   detail   extensive   terse&gt; &lt;descriptions&gt; &lt;media&gt; &lt;snmp-index <i>snmp-index</i>&gt; &lt;statistics&gt;</pre>                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Release Information</b>      | Command introduced before Junos OS Release 7.4.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Description</b>              | (M Series, T Series, and MX Series routers only) Display status information about the specified aggregated Fast Ethernet or Gigabit Ethernet interface.                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Options</b>                  | <p><b><i>aenumber</i></b>—Display standard information about the specified aggregated Fast Ethernet or Gigabit Ethernet interface.</p> <p><b>brief   detail   extensive   terse</b>—(Optional) Display the specified level of output.</p> <p><b>descriptions</b>—(Optional) Display interface description strings.</p> <p><b>media</b>—(Optional) Display media-specific information.</p> <p><b>snmp-index <i>snmp-index</i></b>—(Optional) Display information for the specified SNMP index of the interface.</p> <p><b>statistics</b>—(Optional) Display static interface statistics.</p> |

| <b>Output Fields</b>            | Table 100 on page 1717 lists the output fields for the <b>show interfaces</b> (Aggregated Ethernet) command. Output fields are listed in the approximate order in which they appear.                                                                                                                                                                                                                                                                                                                                                                                                        |

**Table 100: Aggregated Ethernet show interfaces Output Fields**

| Field Name                | Field Description                                          | Level of Output |
|---------------------------|------------------------------------------------------------|-----------------|
| <b>Physical Interface</b> |                                                            |                 |
| <b>Physical interface</b> | Name of the physical interface and state of the interface. | All levels      |

Table 100: Aggregated Ethernet show interfaces Output Fields (*continued*)

| Field Name                     | Field Description                                                                                                                                                                                                                                                             | Level of Output              |
|--------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Enabled</b>                 | State of the physical interface. Possible values are described in the “Enabled Field” section under <i>Common Output Fields Description</i> .                                                                                                                                 | All levels                   |
| <b>Interface index</b>         | Index number of the physical interface, which reflects its initialization sequence.                                                                                                                                                                                           | All levels                   |
| <b>SNMP ifIndex</b>            | SNMP index number for the physical interface.                                                                                                                                                                                                                                 | <b>detail extensive</b> none |
| <b>Generation</b>              | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                             | <b>detail extensive</b>      |
| <b>Link-level type</b>         | Encapsulation being used on the physical interface.                                                                                                                                                                                                                           | All levels                   |
| <b>MTU</b>                     | Maximum transmission unit size on the physical interface.                                                                                                                                                                                                                     | All levels                   |
| <b>Speed</b>                   | Speed at which the interface is running.                                                                                                                                                                                                                                      | All levels                   |
| <b>Loopback</b>                | Loopback status: <b>Enabled</b> or <b>Disabled</b> . If loopback is enabled, type of loopback: <b>Local</b> or <b>Remote</b> .                                                                                                                                                | All levels                   |
| <b>Source filtering</b>        | Source filtering status: <b>Enabled</b> or <b>Disabled</b> .                                                                                                                                                                                                                  | All levels                   |
| <b>Flow control</b>            | Flow control status: <b>Enabled</b> or <b>Disabled</b> .                                                                                                                                                                                                                      | All levels                   |
| <b>Minimum links needed</b>    | Number of child links that must be operational for the aggregate interface to be operational.                                                                                                                                                                                 | All levels                   |
| <b>Device flags</b>            | Information about the physical device. Possible values are described in the “Device Flags” section under <i>Common Output Fields Description</i> .                                                                                                                            | All levels                   |
| <b>Interface flags</b>         | Information about the interface. Possible values are described in the “Interfaces Flags” section under <i>Common Output Fields Description</i> .                                                                                                                              | All levels                   |
| <b>Current address</b>         | Configured MAC address.                                                                                                                                                                                                                                                       | <b>detail extensive</b>      |
| <b>Hardware address</b>        | Hardware MAC address.                                                                                                                                                                                                                                                         | <b>detail extensive</b>      |
| <b>Last flapped</b>            | Date, time, and how long ago the interface went from down to up or from up to down. The format is <b>Last flapped: year-month-day hours:minutes:seconds timezone (hours:minutes:seconds ago)</b> . For example, <b>Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> . | <b>detail extensive</b>      |
| <b>Input Rate</b>              | Input rate in bits per second (bps) and packets per second (pps).                                                                                                                                                                                                             | None specified               |
| <b>Output Rate</b>             | Output rate in bps and pps.                                                                                                                                                                                                                                                   | None specified               |
| <b>Statistics last cleared</b> | Time when the statistics for the interface were last set to zero.                                                                                                                                                                                                             | <b>detail extensive</b>      |

Table 100: Aggregated Ethernet show interfaces Output Fields (*continued*)

| Field Name                | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Level of Output         |

| <b>Traffic statistics</b> | <p>Number and rate of bytes and packets received and transmitted on the physical interface.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes and rate, in bps, at which bytes are received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes and rate, in bps, at which bytes are transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets and rate, in pps, at which packets are received on the interface.</li> <li>• <b>Output packets</b>—Number of packets and rate, in pps, at which packets are transmitted on the interface.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>detail extensive</b> |
| <b>Input errors</b>       | <p>Input errors on the interface:</p> <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of incoming frame aborts and frame check sequence (FCS) errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's random early detection (RED) mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Runts</b>—Number of frames received that are smaller than the runt threshold.</li> <li>• <b>Giants</b>—Number of frames received that are larger than the giant threshold.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or were not of interest. Usually, this field reports protocols that Junos OS does not handle.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>                                                           | <b>detail extensive</b> |
| <b>Output errors</b>      | <p>Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b> —Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and then up, or another problem occurs. If the number of carrier transitions increments quickly (perhaps once every 10 seconds), then the cable, the far-end system, or the PIC is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>MTU errors</b>—Number of packets whose size exceeded the MTU of the interface.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul> | <b>detail extensive</b> |

Table 100: Aggregated Ethernet show interfaces Output Fields (*continued*)

| Field Name               | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Level of Output       |

| IPv6 transit statistics  | <p>Number of IPv6 transit bytes and packets received and transmitted on the physical interface if IPv6 statistics tracking is enabled.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | detail extensive      |
| Queue counters           | <p>CoS queue number and its associated user-configured forwarding class name.</p> <ul style="list-style-type: none"> <li>• <b>Queued packets</b>—Number of queued packets.</li> <li>• <b>Transmitted packets</b>—Number of transmitted packets.</li> <li>• <b>Dropped packets</b>—Number of packets dropped by the ASIC's RED mechanism.</li> </ul> <p><b>NOTE:</b> In DPCs that are not of the enhanced type, such as DPC 40x 1GE R, DPCE 20x 1GE + 2x 10GE R, or DPCE 40x 1GE R, you might notice a discrepancy in the output of the <b>show interfaces</b> command because incoming packets might be counted in the Egress queues section of the output. This problem occurs on non-enhanced DPCs because the egress queue statistics are polled from IMQ (Inbound Message Queuing) block of the I-chip. The IMQ block does not differentiate between ingress and egress WAN traffic; as a result, the combined statistics are displayed in the egress queue counters on the Routing Engine. In a simple VPLS scenario, if there is no MAC entry in DMAC table (by sending unidirectional traffic), traffic is flooded and the input traffic is accounted in IMQ. For bidirectional traffic (MAC entry in DMAC table), if the outgoing interface is on the same I-chip then both ingress and egress statistics are counted in a combined way. If the outgoing interface is on a different I-chip or FPC, then only egress statistics are accounted in IMQ. This behavior is expected with non-enhanced DPCs</p> | detail extensive      |
| <b>Logical Interface</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                       |

| <i>protocol-family</i> | Protocol family configured on the logical interface. Possible values are described in the "Protocol Field" section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                                                                               | brief                 |
| Protocol               | Protocol family configured on the logical interface. Possible values are described in the "Protocol Field" section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                                                                               | detail extensive none |
| MTU                    | Maximum transmission unit size on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | detail extensive none |
| Maximum labels         | Maximum number of MPLS labels configured for the MPLS protocol family on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                  | detail extensive none |
| Generation             | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                | detail extensive      |
| Route Table            | Routing table in which the logical interface address is located. For example, 0 refers to the routing table inet.0.                                                                                                                                                                                                                                                                                                                                                                                                              | detail extensive      |
| Flags                  | Information about protocol family flags. Possible values are described in the "Family Flags Field" section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                                                                                       | detail extensive none |
| Mac-Validate Failures  | Number of MAC address validation failures for packets and bytes. This field is displayed when MAC address validation is enabled for the logical interface.                                                                                                                                                                                                                                                                                                                                                                       | detail extensive none |
| Addresses, Flags       | Information about address flags. Possible values are described in the "Addresses Flags" section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                                                                                                  | detail extensive none |
| Destination            | IP address of the remote side of the connection.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | detail extensive none |
| Local                  | IP address of the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | detail extensive none |
| Broadcast              | Broadcast address of the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | detail extensive none |
| Generation             | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                | detail extensive      |

## Sample Output

### show interfaces (Aggregated Ethernet)

```
user@host> show interfaces ae0
```

```

Physical interface: ae0, Enabled, Physical link is Up
Interface index: 153, SNMP ifIndex: 59
Link-level type: Ethernet, MTU: 1514, Speed: 300mbps, Loopback: Disabled,
Source filtering: Disabled, Flow control: Disabled, Minimum links needed: 1
Device flags : Present Running
Interface flags: SNMP-Traps 16384
Current address: 00:00:5e:00:53:f0, Hardware address: 00:00:5e:00:53:f0
Last flapped : Never
Input rate : 0 bps (0 pps)
Output rate : 0 bps (0 pps)

Logical interface ae0.0 (Index 72) (SNMP ifIndex 60)
Flags: SNMP-Traps 16384 Encapsulation: ENET2
Statistics Packets pps Bytes bps
Bundle:
 Input : 0 0 0 0
 Output: 0 0 0 0
Protocol inet, MTU: 1500
Flags: None
Addresses, Flags: Is-Preferred Is-Primary
Destination: 203.0.113/24, Local: 203.0.113.2, Broadcast: 10.100.1.255

```

#### show interfaces brief (Aggregated Ethernet)

```

user@host> show interfaces ae0 brief
Physical interface: ae0, Enabled, Physical link is Up
Link-level type: Ethernet, MTU: 1514, Speed: 300mbps, Loopback: Disabled,
Source filtering: Disabled, Flow control: Disabled
Device flags : Present Running
Interface flags: SNMP-Traps 16384

Logical interface ae0.0
Flags: SNMP-Traps 16384 Encapsulation: ENET2
inet 203.0.113.2/24

```

#### show interfaces detail (Aggregated Ethernet)

```

user@host> show interfaces ae0 detail
Physical interface: ae0, Enabled, Physical link is Up
Interface index: 153, SNMP ifIndex: 59, Generation: 36
Link-level type: Ethernet, MTU: 1514, Speed: 300mbps, Loopback: Disabled,
Source filtering: Disabled, Flow control: Disabled, Minimum links needed: 1
Device flags : Present Running
Interface flags: SNMP-Traps 16384
Current address: 00:00:5e:00:53:f0, Hardware address: 00:00:5e:00:53:f0

Table 101: show interfaces demux0 (Demux Interfaces) Output Fields (*continued*)

| Field Name               | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Level of Output                    |
|--------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------|
| <b>Input errors</b>      | Input errors on the interface whose definitions are as follows: <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of the incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Runts</b>—Number of frames received that are smaller than the runt threshold.</li> <li>• <b>Giants</b>—Number of frames received that are larger than the giant packet threshold.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that the Junos OS does not handle.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>                                                                 | <b>extensive</b>                   |
| <b>Input Rate</b>        | Input rate in bits per second (bps) and packets per second (pps).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>none</b>                        |
| <b>Output errors</b>     | Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious: <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and then up, or another problem occurs. If the number of carrier transitions increments quickly (perhaps once every 10 seconds), the cable, the far-end system, or the PIC or PIM is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>MTU errors</b>—Number of packets whose size exceeded the MTU of the interface.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul> | <b>extensive</b>                   |
| <b>Output Rate</b>       | Output rate in bps and pps.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>none</b>                        |

Possible values are described in the “Protocol Field” section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>detail extensive</b> none                      |
| <b>MTU</b>                     | Maximum transmission unit size on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>detail extensive</b> none                      |
| <b>Maximum labels</b>          | Maximum number of MPLS labels configured for the MPLS protocol family on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>detail extensive</b> none                      |
| <b>Generation</b>              | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>detail extensive</b>                           |
| <b>Route table</b>             | Route table in which the logical interface address is located. For example, 0 refers to the routing table inet.0.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>detail extensive</b>                           |
| <b>Flags</b>                   | Information about protocol family flags. Possible values are described in the “Family Flags” section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>detail extensive</b> none                      |
| <b>Mac-Validate Failures</b>   | Number of MAC address validation failures for packets and bytes. This field is displayed when MAC address validation is enabled for the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>detail extensive</b> none                      |
| <b>Addresses, Flags</b>        | Information about the address flags. Possible values are described in the “Addresses Flags” section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>detail extensive</b> none                      |
| <b>Destination</b>             | IP address of the remote side of the connection.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>detail extensive</b><br><b>statistics</b> none |

Table 101: show interfaces demux0 (Demux Interfaces) Output Fields (*continued*)

| Field Name                  | Field Description                                                                                                                                                                                                                                                                                    | Level of Output                       |
|-----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------|
| <b>Local</b>                | IP address of the logical interface.                                                                                                                                                                                                                                                                 | <b>detail extensive terse</b><br>none |
| <b>Remote</b>               | IP address of the remote interface.                                                                                                                                                                                                                                                                  | <b>terse</b>                          |
| <b>Broadcast</b>            | Broadcast address of the logical interlace.                                                                                                                                                                                                                                                          | <b>detail extensive none</b>          |
| <b>Generation</b>           | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                    | <b>detail extensive</b>               |
| <b>Link</b>                 | Name of the physical interfaces for member links in an aggregated Ethernet bundle for a PPPoE over aggregated Ethernet configuration. PPPoE traffic goes out on these interfaces.                                                                                                                    | <b>detail extensive none</b>          |
| <b>Dynamic-profile</b>      | Name of the PPPoE dynamic profile assigned to the underlying interface.                                                                                                                                                                                                                              | <b>detail extensive none</b>          |
| <b>Service Name Table</b>   | Name of the PPPoE service name table assigned to the PPPoE underlying interface.                                                                                                                                                                                                                     | <b>detail extensive none</b>          |
| <b>Max Sessions</b>         | Maximum number of dynamic PPPoE logical interfaces that the router can activate on the underlying interface.                                                                                                                                                                                         | <b>detail extensive none</b>          |
| <b>Duplicate Protection</b> | State of duplicate protection: <b>On</b> or <b>Off</b> . Duplicate protection prevents the activation of another dynamic PPPoE logical interface on the same underlying interface when a dynamic PPPoE logical interface for a client with the same MAC address is already active on that interface. | <b>detail extensive none</b>          |
| <b>Direct Connect</b>       | State of the configuration to ignore DSL Forum VSAs: <b>On</b> or <b>Off</b> . When configured, the router ignores any of these VSAs received from a directly connected CPE device on the interface.                                                                                                 | <b>detail extensive none</b>          |
| <b>AC Name</b>              | Name of the access concentrator.                                                                                                                                                                                                                                                                     | <b>detail extensive none</b>          |

## Sample Output

### show interfaces demux0 (Demux)

```

user@host> show interfaces demux0
Physical interface: demux0, Enabled, Physical link is Up
 Interface index: 128, SNMP ifIndex: 79, Generation: 129
 Type: Software-Pseudo, Link-level type: Unspecified, MTU: 9192, Clocking: 1,
 Speed: Unspecified
 Device flags : Present Running
 Interface flags: Point-To-Point SNMP-Traps
 Link type : Full-Duplex
 Link flags : None
 Physical info : Unspecified
 Hold-times : Up 0 ms, Down 0 ms
 Current address: Unspecified, Hardware address: Unspecified
 Alternate link address: Unspecified
 Last flapped : Never
 Statistics last cleared: Never

```

```

Addresses, Flags: Is-Preferred Is-Primary
Destination: 203.0.113/24, Local: 203.0.113.13, Broadcast: 203.0.113.255,

Generation: 434

```

#### show interfaces demux0 (PPPoE over Aggregated Ethernet)

```

user@host> show interfaces demux0.100
Logical interface demux0.100 (Index 76) (SNMP ifIndex 61160)
Flags: SNMP-Traps 0x4000 VLAN-Tag [0x8100.100]

```

```

Encapsulation: ENET2
Demux:
 Underlying interface: ae0 (Index 199)
Link:
 ge-1/0/0
 ge-1/1/0
Input packets : 0
Output packets: 0
Protocol pppoe
 Dynamic Profile: pppoe-profile,
 Service Name Table: service-table1,
 Max Sessions: 100, Duplicate Protection: On,
 Direct Connect: Off,
 AC Name: pppoe-server-1

```

### show interfaces demux0 extensive (Targeted Distribution for Aggregated Ethernet Links)

```
user@host> show interfaces demux0.1073741824 extensive
```

```

Logical interface demux0.1073741824 (Index 75) (SNMP ifIndex 558) (Generation 346)
Flags: SNMP-Traps 0x4000 VLAN-Tag [0x8100.1] Encapsulation: ENET2
Demux:
 Underlying interface: ae0 (Index 201)
Link:
 ge-1/0/0
 ge-1/1/0
 ge-2/0/7
 ge-2/0/8
Targeting summary:
 ge-1/1/0, primary, Physical link is Up
 ge-2/0/8, backup, Physical link is Up
Bandwidth: 1000mbps

```

### show interfaces demux0 (ACI Interface Set Configured)

```

user@host> show interfaces demux0.1073741827
Logical interface demux0.1073741827 (Index 346) (SNMP ifIndex 527)
Flags: SNMP-Traps 0x4000 VLAN-Tag [0x8100.1802 0x8100.302] Encapsulation: ENET2
Demux: Source Family Inet
ACI VLAN:
 Dynamic Profile: aci-vlan-set-profile
Demux:
 Underlying interface: ge-1/0/0 (Index 138)
Input packets : 18
Output packets: 16
Protocol inet, MTU: 1500
 Flags: Sendbcst-pkt-to-re, Unnumbered
 Donor interface: lo0.0 (Index 322)
 Preferred source address: 203.0.113.202
 Addresses, Flags: Primary Is-Default Is-Primary
 Local: 203.0.113.119
Protocol pppoe
 Dynamic Profile: aci-vlan-pppoe-profile,
 Service Name Table: None,
 Max Sessions: 32000, Max Sessions VSA Ignore: Off,
 Duplicate Protection: On, Short Cycle Protection: Off,
 Direct Connect: Off,
 AC Name: nbc

```

## show interfaces diagnostics optics (Gigabit Ethernet, 10-Gigabit Ethernet, 40-Gigabit Ethernet, 100-Gigabit Ethernet, and Virtual Chassis Port)

---

**Syntax**    `show interfaces diagnostics optics interface-name`

**Release Information**    Command introduced before Junos OS Release 7.4.  
Command introduced in Junos OS Release 12.1 for PTX Series routers.

**Description**    Display diagnostics data, warnings, and alarms for Gigabit Ethernet, 10-Gigabit Ethernet, 40-Gigabit Ethernet, 100-Gigabit Ethernet, or Virtual Chassis port interfaces.

**Options**    *interface-name*—Interface name. For example:

*ge-fpc/pic/port*

*et-fpc/pic/port*

*et-fpc/pic/port:channel*

*xe-fpc/pic/port*

*vcp-fpc/pic/port*

**Additional Information**    The transceivers are polled in 1-second intervals for diagnostics data, warnings, and alarms. The alarms do not cause the links to go down or the LEDs to change color, nor generate SNMP traps. Changes in alarm and warning status generate system log messages.

Thresholds that trigger a high alarm, low alarm, high warning, or low warning are set by the transceiver vendors. Generally, a high alarm or low alarm indicates that the optics module is not operating properly. This information can be used to diagnose why a device is not working.

**NOTE:** Some transceivers do not support all optical diagnostics features described in the output fields.

If optics measures transmit or receive power as zero, then, the measured power is displayed as 0.000 mW / - Inf dBm

---

You can configure the P2-10G-40G-QSFPP PIC to operate either in 10-Gigabit Ethernet mode or in 40-Gigabit Ethernet mode. When the PIC is in 40-Gigabit Ethernet mode, you must execute the **show interfaces diagnostics optics et-fpc/pic/port** command. The output of this command displays the diagnostic optics information about the corresponding 40-Gigabit Ethernet port of the PIC. However, when the PIC is in 10-Gigabit Ethernet mode, you must execute the **show interfaces diagnostics optics et-fpc/pic/port:channel** command. The output of this command displays the diagnostic optics information about

the corresponding 10-Gigabit Ethernet port of the PIC. For information about the P2-10G-40G-QSFPP PIC, see “P2-10G-40G-QSFPP PIC Overview” on page 415.

**Output Fields** Table 102 on page 1739 lists the output fields for the **show interfaces diagnostics optics** command for DWDM and DWDM OTN PICs. Output fields are listed in the approximate order in which they appear.

**Table 102: show interfaces diagnostics optics Output Fields for 10-Gigabit Ethernet DWDM and DWDM OTN PICs**

| Field Name                            | Field Description                                                                                                                                                        |
|---------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Physical interface                    | Name of the physical interface.                                                                                                                                          |
| Laser bias current                    | Magnitude of the laser bias power setting current, in milliamperes (mA). The laser bias provides direct modulation of laser diodes and modulates currents.               |
| Laser output power                    | Laser output power, in milliwatts (mW) and decibels, referenced to 1.0 mW (dBm). This is a software equivalent to the <b>LsPOWMON</b> pin in hardware.                   |
| Receiver signal average optical power | Average received optical power, in mW and dBm. This indicator is a software equivalent to the <b>RxPOWMON</b> pin in hardware. Average optical power is vendor-specific. |

Table 102: show interfaces diagnostics optics Output Fields for 10-Gigabit Ethernet DWDM and DWDM OTN PICs (*continued*)

| Field Name                             | Field Description                                                                                                      |
|----------------------------------------|------------------------------------------------------------------------------------------------------------------------|
| Laser end-of-life alarm                | Laser end-of-life alarm: <b>On</b> or <b>Off</b> .                                                                     |
| Laser wavelength alarm                 | Laser wavelength alarm: <b>On</b> or <b>Off</b> .                                                                      |
| Laser bias current alarm               | Laser bias current alarm: <b>On</b> or <b>Off</b> .                                                                    |
| Laser temperature alarm                | Laser temperature alarm: <b>On</b> or <b>Off</b> .                                                                     |
| Laser power alarm                      | Laser power alarm: <b>On</b> or <b>Off</b> .                                                                           |
| Modulator temperature alarm            | Modulator temperature alarm: <b>On</b> or <b>Off</b> .<br>Transceivers from some vendors do not support this field.    |
| Modulator bias alarm                   | Modulator bias alarm: <b>On</b> or <b>Off</b> .                                                                        |
| Tx multiplexer FIFO error alarm        | Transmit multiplexer first in, first out (FIFO) error alarm: <b>On</b> or <b>Off</b> .                                 |
| Tx loss of PLL lock alarm              | Transmit loss of phase-locked loop (PLL) lock alarm: <b>On</b> or <b>Off</b> .                                         |
| Rx loss of average optical power alarm | Receive loss of average optical power alarm: <b>On</b> or <b>Off</b> .                                                 |
| Rx loss of AC power alarm              | Receive loss of AC power alarm: <b>On</b> or <b>Off</b> .<br>Transceivers from some vendors do not support this field. |
| Rx loss of PLL lock alarm              | Receive loss of phase-locked loop (PLL) lock alarm: <b>On</b> or <b>Off</b> .                                          |

[Table 103 on page 1740](#) lists the output fields for the **show interfaces diagnostics optics** command when the router is operating with bidirectional SFP optics. Output fields are listed in the approximate order in which they appear.

Table 103: show interfaces diagnostics optics Output Fields for Gigabit Ethernet Bidirectional SFP Optics

| Field Name         | Field Description                                                                                                                                          |
|--------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Physical interface | Name of the physical interface.                                                                                                                            |
| Laser bias current | Magnitude of the laser bias power setting current, in milliamperes (mA). The laser bias provides direct modulation of laser diodes and modulates currents. |
| Laser output power | Laser output power, in milliwatts (mW) and decibels, referenced to 1.0 mW (dBm).                                                                           |

Table 103: show interfaces diagnostics optics Output Fields for Gigabit Ethernet Bidirectional SFP Optics (*continued*)

| Field Name                            | Field Description                                                                |
|---------------------------------------|----------------------------------------------------------------------------------|
| Module temperature                    | Temperature of the optics module, in Celsius and Fahrenheit.                     |
| Module voltage                        | Internally measured module voltage.                                              |
| Receiver signal average optical power | Average received optical power, in mW and dBm.                                   |
| Wavelength Channel number             | Wavelength channel number set in the optics module.                              |
| Wavelength setpoint                   | Wavelength set in the optics module.                                             |
| Tx Dither                             | Transmit dither status. Displays whether transmit dither is enabled or disabled. |
| Frequency Error                       | Frequency error reported from optics module.                                     |
| Wavelength Error                      | Wavelength error reported from optics module.                                    |
| Laser bias current high alarm         | Laser bias power setting high alarm. Displays <b>on</b> or <b>off</b> .          |
| Laser bias current low alarm          | Laser bias power setting low alarm. Displays <b>on</b> or <b>off</b> .           |
| Laser bias current high warning       | Laser bias power setting high warning. Displays <b>on</b> or <b>off</b> .        |
| Laser bias current low warning        | Laser bias power setting low warning. Displays <b>on</b> or <b>off</b> .         |
| Laser output power high alarm         | Laser output power high alarm. Displays <b>on</b> or <b>off</b> .                |
| Laser output power low alarm          | Laser output power low alarm. Displays <b>on</b> or <b>off</b> .                 |
| Laser output power high warning       | Laser output power high warning. Displays <b>on</b> or <b>off</b> .              |
| Laser output power low warning        | Laser output power low warning. Displays <b>on</b> or <b>off</b> .               |
| Module temperature high alarm         | Module temperature high alarm. Displays <b>on</b> or <b>off</b> .                |
| Module temperature low alarm          | Module temperature low alarm. Displays <b>on</b> or <b>off</b> .                 |

Table 103: show interfaces diagnostics optics Output Fields for Gigabit Ethernet Bidirectional SFP Optics *(continued)*

| Field Name                                | Field Description                                                                                |
|-------------------------------------------|--------------------------------------------------------------------------------------------------|
| Module temperature high warning           | Module temperature high warning. Displays <b>on</b> or <b>off</b> .                              |
| Module temperature low warning            | Module temperature low warning. Displays <b>on</b> or <b>off</b> .                               |
| Module voltage high alarm                 | Module voltage high alarm. Displays <b>on</b> or <b>off</b> .                                    |
| Module voltage low alarm                  | Module voltage low alarm. Displays <b>on</b> or <b>off</b> .                                     |
| Module voltage high warning               | Module voltage high warning. Displays <b>on</b> or <b>off</b> .                                  |
| Module voltage low warning                | Module voltage high warning. Displays <b>on</b> or <b>off</b> .                                  |
| Laser rx power high alarm                 | Receive laser power high alarm. Displays <b>on</b> or <b>off</b> .                               |
| Laser rx power low alarm                  | Receive laser power low alarm. Displays <b>on</b> or <b>off</b> .                                |
| Laser rx power high warning               | Receive laser power high warning. Displays <b>on</b> or <b>off</b> .                             |
| Laser rx power low warning                | Receive laser power low warning. Displays <b>on</b> or <b>off</b> .                              |
| TEC fault alarm                           | TEC fault alarm. Displays <b>on</b> or <b>off</b> .                                              |
| Wavelength unlocked alarm                 | Wavelength unlocked alarm. Displays <b>on</b> or <b>off</b> .                                    |
| TxTune                                    | Optical transmit side status. Displays whether optical transmit side is not ready due to tuning. |
| Laser bias current high alarm threshold   | Vendor-specified threshold for the laser bias current high alarm: <b>70.000 mA</b> .             |
| Laser bias current low alarm threshold    | Vendor-specified threshold for the laser bias current low alarm: <b>0.0002 mA</b> .              |
| Laser bias current high warning threshold | Vendor-specified threshold for the laser bias current high warning: <b>65.000 mA</b> .           |
| Laser bias current low warning threshold  | Vendor-specified threshold for the laser bias current low warning: <b>0.0002 mA</b> .            |

Table 103: show interfaces diagnostics optics Output Fields for Gigabit Ethernet Bidirectional SFP Optics *(continued)*

| Field Name                                | Field Description                                                                                          |
|-------------------------------------------|------------------------------------------------------------------------------------------------------------|
| Laser output power high alarm threshold   | Vendor-specified threshold for the laser output power high alarm: <b>1.0000 mW</b> or <b>0.00 dBm</b> .    |
| Laser output power low alarm threshold    | Vendor-specified threshold for the laser output power low alarm: <b>0.0560 mW</b> or <b>-12.52 dBm</b> .   |
| Laser output power high warning threshold | Vendor-specified threshold for the laser output power high warning: <b>0.6300 mW</b> or <b>-2.01 dBm</b> . |
| Laser output power low warning threshold  | Vendor-specified threshold for the laser output power low warning: <b>0.0890 mW</b> or <b>-10.51 dBm</b> . |
| Module temperature high alarm threshold   | Vendor-specified threshold for the module temperature high alarm: <b>100° C</b> or <b>212° F</b> .         |
| Module temperature low alarm threshold    | Vendor-specified threshold for the module temperature low alarm: <b>-50° C</b> or <b>-58° F</b> .          |
| Module temperature high warning threshold | Vendor-specified threshold for the module temperature high warning: <b>95 ° C</b> or <b>203 ° F</b> .      |
| Module temperature low warning threshold  | Vendor-specified threshold for the module temperature low warning: <b>-48° C</b> or <b>-54° F</b> .        |
| Module voltage high alarm threshold       | Module voltage high alarm threshold: <b>3.700 v</b> .                                                      |
| Module voltage low alarm threshold        | Module voltage low alarm threshold: <b>2.900 v</b> .                                                       |
| Module voltage high warning threshold     | Module voltage high warning threshold: <b>3.7600 v</b> .                                                   |
| Module voltage low warning threshold      | Module voltage low warning threshold: <b>3.000 v</b> .                                                     |
| Laser rx power high alarm threshold       | Vendor-specified threshold for the laser Rx power high alarm: <b>1.9953 mW</b> or <b>3.00 dBm</b> .        |
| Laser rx power low alarm threshold        | Vendor-specified threshold for the laser Rx power low alarm: <b>0.0001 mW</b> or <b>-40.00 dBm</b> .       |
| Laser rx power high warning threshold     | Vendor-specified threshold for the laser Rx power high warning: <b>1.0000 mW</b> or <b>0.00 dBm</b> .      |
| Laser rx power low warning threshold      | Vendor-specified threshold for the laser Rx power low warning: <b>0.0010 mW</b> or <b>-30.00 dBm</b> .     |

Table 104 on page 1744 lists the output fields for the **show interfaces diagnostics optics** command for SFP transceivers. Output fields are listed in the approximate order in which they appear.

**Table 104: show interfaces diagnostics Output Fields for Gigabit Ethernet SFP Transceivers**

| Field Name                      | Field Description                                                                              |
|---------------------------------|------------------------------------------------------------------------------------------------|
| Physical interface              | Name of the physical interface.                                                                |
| Laser bias current              | Measured laser bias current in uA.                                                             |
| Laser output power              | Measured laser output power in mW.                                                             |
| Module temperature              | Internally measured module temperature.                                                        |
| Module voltage                  | Internally measured module voltage.                                                            |
| Laser rx power                  | Measured receive optical power in mW.                                                          |
| Laser bias current high alarm   | Laser bias current high alarm: <b>On</b> or <b>Off</b> . Alarm ranges are vendor-specific.     |
| Laser bias current low alarm    | Laser bias current low alarm: <b>On</b> or <b>Off</b> . Alarm ranges are vendor-specific.      |
| Laser output power high alarm   | Laser output power high alarm: <b>On</b> or <b>Off</b> . Alarm ranges are vendor-specific.     |
| Laser output power low alarm    | Laser output power low alarm: <b>On</b> or <b>Off</b> . Alarm ranges are vendor-specific.      |
| Module temp high alarm          | Module temperature high alarm: <b>On</b> or <b>Off</b> . Alarm ranges are vendor-specific.     |
| Module temp low alarm           | Module temperature low alarm: <b>On</b> or <b>Off</b> . Alarm ranges are vendor-specific.      |
| Laser rx power high alarm       | Laser receive power high alarm: <b>On</b> or <b>Off</b> . Alarm ranges are vendor-specific.    |
| Laser rx power low alarm        | Laser receive power low alarm: <b>On</b> or <b>Off</b> . Alarm ranges are vendor-specific.     |
| Laser bias current high warning | Laser bias current high warning: <b>On</b> or <b>Off</b> . Warning ranges are vendor-specific. |
| Laser bias current low warning  | Laser bias current low warning: <b>On</b> or <b>Off</b> . Warning ranges are vendor-specific.  |
| Laser output power high warning | Laser output power high warning: <b>On</b> or <b>Off</b> . Warning ranges are vendor-specific. |

Table 104: show interfaces diagnostics Output Fields for Gigabit Ethernet SFP Transceivers (*continued*)

| Field Name                                | Field Description                                                                               |
|-------------------------------------------|-------------------------------------------------------------------------------------------------|
| Laser output power low warning            | Laser output power low warning: <b>On</b> or <b>Off</b> . Warning ranges are vendor-specific.   |
| Module temperature high warning           | Module temperature high warning: <b>On</b> or <b>Off</b> . Warning ranges are vendor-specific.  |
| Module temperature low warning            | Module temperature low warning: <b>On</b> or <b>Off</b> . Warning ranges are vendor-specific.   |
| Laser rx power high warning               | Laser receive power high warning: <b>On</b> or <b>Off</b> . Warning ranges are vendor-specific. |
| Laser rx power low warning                | Laser receive power low warning: <b>On</b> or <b>Off</b> . Warning ranges are vendor-specific.  |
| Laser bias current high alarm threshold   | Laser bias current high alarm threshold. Alarm threshold ranges are vendor-specific.            |
| Laser bias current low alarm threshold    | Laser bias current low alarm threshold. Alarm threshold ranges are vendor-specific.             |
| Laser bias current high warning threshold | Laser bias current high warning threshold. Warning ranges are vendor-specific.                  |
| Laser bias current low warning threshold  | Laser bias current low warning threshold. Warning ranges are vendor-specific.                   |
| Laser output power high alarm threshold   | Laser output power high alarm threshold. Alarm threshold ranges are vendor-specific.            |
| Laser output power low alarm threshold    | Laser output power low alarm threshold. Alarm threshold ranges are vendor-specific.             |
| Laser output power high warning threshold | Laser output power high warning threshold. Warning ranges are vendor-specific.                  |
| Laser output power low warning threshold  | Laser output power low warning threshold. Warning ranges are vendor-specific.                   |
| Module temperature high alarm threshold   | Module temperature high alarm threshold. Alarm threshold ranges are vendor-specific.            |
| Module temperature low alarm threshold    | Module temperature low alarm threshold. Alarm threshold ranges are vendor-specific.             |
| Module temperature high warning threshold | Module temperature high warning threshold. Warning ranges are vendor-specific.                  |

| Laser rx power low warning threshold      | Laser receive power low warning threshold. Warning threshold ranges are vendor-specific.  |

Table 106 on page 1749 lists the output fields for the **show interfaces diagnostics optics** command for XFP transceivers. Output fields are listed in the approximate order in which they appear.

Table 106: show interfaces diagnostics optics Output Fields for 10-Gigabit Ethernet XFP Transceivers

| Field Name                      | Field Description                                                                                                                                          |
|---------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Physical interface              | Name of the physical interface.                                                                                                                            |
| Laser bias current              | Magnitude of the laser bias power setting current, in milliamperes (mA). The laser bias provides direct modulation of laser diodes and modulates currents. |
| Laser output power              | Laser output power, in milliwatts (mW) and decibels, referenced to 1.0 mW (dBm). This is a software equivalent to the <b>LsPOWMON</b> pin in hardware.     |
| Module temperature              | Temperature of the XFP optics module, in Celsius and Fahrenheit.                                                                                           |
| Laser rx power                  | Laser received optical power, in mW and dBm.                                                                                                               |
| Laser bias current high alarm   | Laser bias power setting high alarm. Displays <b>on</b> or <b>off</b> .                                                                                    |
| Laser bias current low alarm    | Laser bias power setting low alarm. Displays <b>on</b> or <b>off</b> .                                                                                     |
| Laser bias current high warning | Laser bias power setting high warning. Displays <b>on</b> or <b>off</b> .                                                                                  |
| Laser bias current low warning  | Laser bias power setting low warning. Displays <b>on</b> or <b>off</b> .                                                                                   |
| Laser output power high alarm   | Laser output power high alarm. Displays <b>on</b> or <b>off</b> .                                                                                          |
| Laser output power low alarm    | Laser output power low alarm. Displays <b>on</b> or <b>off</b> .                                                                                           |
| Laser output power high warning | Laser output power high warning. Displays <b>on</b> or <b>off</b> .                                                                                        |
| Laser output power low warning  | Laser output power low warning. Displays <b>on</b> or <b>off</b> .                                                                                         |
| Module temperature high alarm   | Module temperature high alarm. Displays <b>on</b> or <b>off</b> .                                                                                          |
| Module temperature low alarm    | Module temperature low alarm. Displays <b>on</b> or <b>off</b> .                                                                                           |
| Module temperature high warning | Module temperature high warning. Displays <b>on</b> or <b>off</b> .                                                                                        |
| Module temperature low warning  | Module temperature low warning. Displays <b>on</b> or <b>off</b> .                                                                                         |

Table 106: show interfaces diagnostics optics Output Fields for 10-Gigabit Ethernet XFP Transceivers (*continued*)

| Field Name                                | Field Description                                                                                                                           |
|-------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|
| Laser rx power high alarm                 | Receive laser power high alarm. Displays <b>on</b> or <b>off</b> .                                                                          |
| Laser rx power low alarm                  | Receive laser power low alarm. Displays <b>on</b> or <b>off</b> .                                                                           |
| Laser rx power high warning               | Receive laser power high warning. Displays <b>on</b> or <b>off</b> .                                                                        |
| Laser rx power low warning                | Receive laser power low warning. Displays <b>on</b> or <b>off</b> .                                                                         |
| Module not ready alarm                    | Module not ready alarm. When <b>on</b> , indicates the module has an operational fault. Displays <b>on</b> or <b>off</b> .                  |
| Module power down alarm                   | Module power down alarm. When <b>on</b> , module is in a limited power mode, low for normal operation. Displays <b>on</b> or <b>off</b> .   |
| Tx data not ready alarm                   | Any condition leading to invalid data on the transmit path. Displays <b>on</b> or <b>off</b> .                                              |
| Tx not ready alarm                        | Any condition leading to invalid data on the transmit path. Displays <b>on</b> or <b>off</b> .                                              |
| Tx laser fault alarm                      | Laser fault condition. Displays <b>on</b> or <b>off</b> .                                                                                   |
| Tx CDR loss of lock alarm                 | Transmit clock and data recovery (CDR) loss of lock. Loss of lock on the transmit side of the CDR. Displays <b>on</b> or <b>off</b> .       |
| Rx not ready alarm                        | Any condition leading to invalid data on the receive path. Displays <b>on</b> or <b>off</b> .                                               |
| Rx loss of signal alarm                   | Receive Loss of Signal alarm. When <b>on</b> , indicates insufficient optical input power to the module. Displays <b>on</b> or <b>off</b> . |
| Rx CDR loss of lock alarm                 | Receive CDR loss of lock. Loss of lock on the receive side of the CDR. Displays <b>on</b> or <b>off</b> .                                   |
| Laser bias current high alarm threshold   | Vendor-specified threshold for the laser bias current high alarm: <b>130.000 mA</b> .                                                       |
| Laser bias current low alarm threshold    | Vendor-specified threshold for the laser bias current low alarm: <b>10.000 mA</b> .                                                         |
| Laser bias current high warning threshold | Vendor-specified threshold for the laser bias current high warning: <b>120.000 mA</b> .                                                     |
| Laser bias current low warning threshold  | Vendor-specified threshold for the laser bias current low warning: <b>12.000 mA</b> .                                                       |
| Laser output power high alarm threshold   | Vendor-specified threshold for the laser output power high alarm: <b>0.8910 mW</b> or <b>-0.50 dBm</b> .                                    |

Table 106: show interfaces diagnostics optics Output Fields for 10-Gigabit Ethernet XFP Transceivers (*continued*)

| Field Name                                | Field Description                                                                          |
|-------------------------------------------|--------------------------------------------------------------------------------------------|
| Laser output power low alarm threshold    | Vendor-specified threshold for the laser output power low alarm: 0.2230 mW or -6.52 dBm.   |
| Laser output power high warning threshold | Vendor-specified threshold for the laser output power high warning: 0.7940 mW or -100 dBm. |
| Laser output power low warning threshold  | Vendor-specified threshold for the laser output power low warning: 0.2510 mW or -600 dBm.  |
| Module temperature high alarm threshold   | Vendor-specified threshold for the module temperature high alarm: 90° C or 194° F.         |
| Module temperature low alarm threshold    | Vendor-specified threshold for the module temperature low alarm: -5° C or 23° F.           |
| Module temperature high warning threshold | Vendor-specified threshold for the module temperature high warning: 85 ° C or 185 ° F.     |
| Module temperature low warning threshold  | Vendor-specified threshold for the module temperature low warning: 0° C or 32° F.          |
| Laser rx power high alarm threshold       | Vendor-specified threshold for the laser Rx power high alarm: 1.2589 mW or 1.00 dBm.       |
| Laser rx power low alarm threshold        | Vendor-specified threshold for the laser Rx power low alarm: 0.0323 mW or -14.91 dBm.      |
| Laser rx power high warning threshold     | Vendor-specified threshold for the laser Rx power high warning: 1.1220 mW or 0.50 dBm.     |
| Laser rx power low warning threshold      | Vendor-specified threshold for the laser Rx power low warning: 0.0363 mW or -14.40 dBm.    |

Table 107 on page 1751 lists the output fields for the **show interfaces diagnostics optics** command for VCP. Output fields are listed in the approximate order in which they appear.

Table 107: show interfaces diagnostics optics Output for Virtual Chassis Ports

| Field Name         | Field Description                                                                                                                                          |
|--------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Physical interface | Name of the physical interface.                                                                                                                            |
| Laser bias current | Magnitude of the laser bias power setting current, in milliamperes (mA). The laser bias provides direct modulation of laser diodes and modulates currents. |
| Laser output power | Laser output power, in milliwatts (mW) and decibels, referenced to 1.0 mW (dBm).                                                                           |
| Module temperature | Temperature of the optics module, in Celsius and Fahrenheit.                                                                                               |

Table 107: show interfaces diagnostics optics Output for Virtual Chassis Ports (*continued*)

| Field Name                            | Field Description                                                         |
|---------------------------------------|---------------------------------------------------------------------------|
| Module voltage                        | Internally measured module voltage.                                       |
| Receiver signal average optical power | Average received optical power, in mW and dBm.                            |
| Laser bias current high alarm         | Laser bias power setting high alarm. Displays <b>on</b> or <b>off</b> .   |
| Laser bias current low alarm          | Laser bias power setting low alarm. Displays <b>on</b> or <b>off</b> .    |
| Laser bias current high warning       | Laser bias power setting high warning. Displays <b>on</b> or <b>off</b> . |
| Laser bias current low warning        | Laser bias power setting low warning. Displays <b>on</b> or <b>off</b> .  |
| Laser output power high alarm         | Laser output power high alarm. Displays <b>on</b> or <b>off</b> .         |
| Laser output power low alarm          | Laser output power low alarm. Displays <b>on</b> or <b>off</b> .          |
| Laser output power high warning       | Laser output power high warning. Displays <b>on</b> or <b>off</b> .       |
| Laser output power low warning        | Laser output power low warning. Displays <b>on</b> or <b>off</b> .        |
| Module temperature high alarm         | Module temperature high alarm. Displays <b>on</b> or <b>off</b> .         |
| Module temperature low alarm          | Module temperature low alarm. Displays <b>on</b> or <b>off</b> .          |
| Module temperature high warning       | Module temperature high warning. Displays <b>on</b> or <b>off</b> .       |
| Module temperature low warning        | Module temperature low warning. Displays <b>on</b> or <b>off</b> .        |
| Module voltage high alarm             | Module voltage high alarm. Displays <b>on</b> or <b>off</b> .             |
| Module voltage low alarm              | Module voltage low alarm. Displays <b>on</b> or <b>off</b> .              |
| Module voltage high warning           | Module voltage high warning. Displays <b>on</b> or <b>off</b> .           |

Table 107: show interfaces diagnostics optics Output for Virtual Chassis Ports (*continued*)

| Field Name                                | Field Description                                                    |
|-------------------------------------------|----------------------------------------------------------------------|
| Module voltage low warning                | Module voltage high warning. Displays <b>on</b> or <b>off</b> .      |

## Sample Output

### show interfaces diagnostics optics (DWDM and DWDM OTN)

```

user@host> show interfaces diagnostics optics ge-5/0/0
Physical interface: ge-5/0/0
 Laser bias current : 79.938 mA
 Laser output power : 1.592 mW / 2.02 dBm
 Receiver signal average optical power : 1.3854 mW / 1.42 dBm
 Laser end-of-life alarm : Off
 Laser wavelength alarm : Off
 Laser bias current alarm : Off
 Laser temperature alarm : Off
 Laser power alarm : Off
 Modulator temperature alarm : Off
 Modulator bias alarm : Off
 Tx multiplexer FIFO error alarm : Off
 Tx loss of PLL lock alarm : Off
 Rx loss of average optical power alarm: Off
 Rx loss of AC power alarm : Off
 Rx loss of PLL lock alarm : Off

```

**show interfaces diagnostics optics (MPC6E with OTN MIC)**

```
user@host> show interfaces diagnostics optics xe-3/0/0
```

```
Physical interface: xe-3/0/0
```

```

Laser bias current : 7.806 mA
Laser output power : 0.5660 mW / -2.47 dBm
Module temperature : 32 degrees C / 89 degrees F
Module voltage : 3.3560 V
Receiver signal average optical power : 0.5501 mW / -2.60 dBm
Laser bias current high alarm : Off
Laser bias current low alarm : Off
Laser bias current high warning : Off
Laser bias current low warning : Off
Laser output power high alarm : Off
Laser output power low alarm : Off
Laser output power high warning : Off
Laser output power low warning : Off
Module temperature high alarm : Off
Module temperature low alarm : Off

Laser rx power low warning : Off
Laser bias current high alarm threshold : 11.800 mA
Laser bias current low alarm threshold : 4.000 mA
Laser bias current high warning threshold : 10.800 mA
Laser bias current low warning threshold : 5.000 mA
Laser output power high alarm threshold : 0.8310 mW / -0.80 dBm
Laser output power low alarm threshold : 0.2510 mW / -6.00 dBm
Laser output power high warning threshold : 0.6600 mW / -1.80 dBm
Laser output power low warning threshold : 0.3160 mW / -5.00 dBm
Module temperature high alarm threshold : 78 degrees C / 172 degrees F
Module temperature low alarm threshold : -13 degrees C / 9 degrees F
Module temperature high warning threshold : 73 degrees C / 163 degrees F
Module temperature low warning threshold : -8 degrees C / 18 degrees F
Module voltage high alarm threshold : 3.700 V
Module voltage low alarm threshold : 2.900 V
Module voltage high warning threshold : 3.600 V
Module voltage low warning threshold : 3.000 V
Laser rx power high alarm threshold : 1.0000 mW / 0.00 dBm
Laser rx power low alarm threshold : 0.0100 mW / -20.00 dBm
Laser rx power high warning threshold : 0.7943 mW / -1.00 dBm
Laser rx power low warning threshold : 0.0158 mW / -18.01 dBm

```

**show interfaces diagnostics optics (Bidirectional SFP)**

```
user@host> show interfaces diagnostics optics ge-3/0/6
```

```
Physical interface: ge-3/0/6
```

```

Laser bias current : 13.356 mA
Laser output power : 0.2210 mW / -6.56 dBm
Module temperature : 36 degrees C / 96 degrees F
Module voltage : 3.2180 V
Receiver signal average optical power : 0.2429 mW / -6.15 dBm

```

## show interfaces (Fast Ethernet)

**Syntax** `show interfaces interface-type`  
`<brief | detail | extensive | terse>`  
`<descriptions>`  
`<media>`  
`<snmp-index snmp-index>`  
`<statistics>`

**Release Information** Command introduced before Junos OS Release 7.4.

**Description** Display status information about the specified Fast Ethernet interface.

**Options** *interface-type*—On M Series and T Series routers, the interface type is **fe-fpc/pic/port**.

**brief | detail | extensive | terse**—(Optional) Display the specified level of output.

**descriptions**—(Optional) Display interface description strings.

**media**—(Optional) Display media-specific information about network interfaces.

**snmp-index *snmp-index***—(Optional) Display information for the specified SNMP index of the interface.

**statistics**—(Optional) Display static interface statistics.

**Required Privilege Level** view

**List of Sample Output** [show interfaces \(Fast Ethernet\) on page 1788](#)  
[show interfaces brief \(Fast Ethernet\) on page 1789](#)  
[show interfaces detail \(Fast Ethernet\) on page 1789](#)  
[show interfaces extensive \(Fast Ethernet\) on page 1789](#)

**Output Fields** [Table 109 on page 1775](#) lists the output fields for the **show interfaces (Fast Ethernet)** command. Output fields are listed in the approximate order in which they appear.

**Table 109: show interfaces Fast Ethernet Output Fields**

| Field Name                | Field Description                                                                                                                    | Level of Output              |
|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Physical Interface</b> |                                                                                                                                      |                              |
| <b>Physical interface</b> | Name of the physical interface.                                                                                                      | All levels                   |
| <b>Enabled</b>            | State of the interface. Possible values are described in the “Enabled Field” section under <i>Common Output Fields Description</i> . | All levels                   |
| <b>Interface index</b>    | Index number of the physical interface, which reflects its initialization sequence.                                                  | <b>detail extensive none</b> |
| <b>SNMP ifIndex</b>       | SNMP index number for the physical interface.                                                                                        | <b>detail extensive none</b> |

Table 109: show interfaces Fast Ethernet Output Fields (*continued*)

| Field Name              | Field Description                                                                                                                                                                                                                                   | Level of Output         |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
| <b>Generation</b>       | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                   | <b>detail extensive</b> |
| <b>Link-level type</b>  | Encapsulation being used on the physical interface.                                                                                                                                                                                                 | All levels              |
| <b>MTU</b>              | Maximum transmission unit size on the physical interface.                                                                                                                                                                                           | All levels              |
| <b>Link-mode</b>        | Type of link connection configured for the physical interface: <b>Full-duplex</b> or <b>Half-duplex</b>                                                                                                                                             | <b>extensive</b>        |
| <b>Speed</b>            | Speed at which the interface is running.                                                                                                                                                                                                            | All levels              |
| <b>Loopback</b>         | Loopback status: <b>Enabled</b> or <b>Disabled</b> . If loopback is enabled, type of loopback: <b>Local</b> or <b>Remote</b> .                                                                                                                      | All levels              |
| <b>Source filtering</b> | Source filtering status: <b>Enabled</b> or <b>Disabled</b> .                                                                                                                                                                                        | All levels              |
| <b>LAN-PHY mode</b>     | 10-Gigabit Ethernet interface operating in Local Area Network Physical Layer Device (LAN PHY) mode. LAN PHY allows 10-Gigabit Ethernet wide area links to use existing Ethernet applications.                                                       | All levels              |
| <b>WAN-PHY mode</b>     | 10-Gigabit Ethernet interface operating in Wide Area Network Physical Layer Device (WAN PHY) mode. WAN PHY allows 10-Gigabit Ethernet wide area links to use fiber-optic cables and other devices intended for SONET/SDH.                           | All levels              |
| <b>Unidirectional</b>   | Unidirectional link mode status for 10-Gigabit Ethernet interface: <b>Enabled</b> or <b>Disabled</b> for parent interface; <b>Rx-only</b> or <b>Tx-only</b> for child interfaces.                                                                   | All levels              |
| <b>Flow control</b>     | Flow control status: <b>Enabled</b> or <b>Disabled</b> .                                                                                                                                                                                            | All levels              |
| <b>Auto-negotiation</b> | (Gigabit Ethernet interfaces) Autonegotiation status: <b>Enabled</b> or <b>Disabled</b> .                                                                                                                                                           | All levels              |
| <b>Remote-fault</b>     | (Gigabit Ethernet interfaces) Remote fault status: <ul style="list-style-type: none"> <li>• <b>Online</b>—Autonegotiation is manually configured as online.</li> <li>• <b>Offline</b>—Autonegotiation is manually configured as offline.</li> </ul> | All levels              |
| <b>Device flags</b>     | Information about the physical device. Possible values are described in the "Device Flags" section under <i>Common Output Fields Description</i> .                                                                                                  | All levels              |
| <b>Interface flags</b>  | Information about the interface. Possible values are described in the "Interface Flags" section under <i>Common Output Fields Description</i> .                                                                                                     | All levels              |
| <b>Link flags</b>       | Information about the link. Possible values are described in the "Links Flags" section under <i>Common Output Fields Description</i> .                                                                                                              | All levels              |
| <b>Wavelength</b>       | (10-Gigabit Ethernet dense wavelength-division multiplexing [DWDM] interfaces) Displays the configured wavelength, in nanometers (nm).                                                                                                              | All levels              |

Table 109: show interfaces Fast Ethernet Output Fields (*continued*)

| Field Name                     | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Level of Output       |
|--------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------|
| <b>Frequency</b>               | (10-Gigabit Ethernet DWDM interfaces only) Displays the frequency associated with the configured wavelength, in terahertz (THz).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | All levels            |
| <b>CoS queues</b>              | Number of CoS queues configured.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | detail extensive none |
| <b>Schedulers</b>              | (GigabitEthernet intelligent queuing 2 (IQ2) interfaces only) Number of CoS schedulers configured.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | extensive             |
| <b>Hold-times</b>              | Current interface hold-time up and hold-time down, in milliseconds.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | detail extensive      |
| <b>Current address</b>         | Configured MAC address.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | detail extensive none |
| <b>Hardware address</b>        | Hardware MAC address.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | detail extensive none |
| <b>Last flapped</b>            | Date, time, and how long ago the interface went from down to up. The format is <b>Last flapped: year-month-day hour:minute:second:timezone (hour:minute:second ago)</b> . For example, <b>Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | detail extensive none |
| <b>Input Rate</b>              | Input rate in bits per second (bps) and packets per second (pps).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | None specified        |
| <b>Output Rate</b>             | Output rate in bps and pps.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | None specified        |
| <b>Statistics last cleared</b> | Time when the statistics for the interface were last set to zero.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | detail extensive      |

| Field Name          | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Level of Output  |
|---------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| <b>Input errors</b> | <p>Input errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of the incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Runts</b>—Number of frames received that are smaller than the runt threshold.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that the Junos OS does not handle.</li> <li>• <b>L3 incompletes</b>—Number of incoming packets discarded because they failed Layer 3 (usually IPv4) sanity checks of the header. For example, a frame with less than 20 bytes of available IP header is discarded. L3 incomplete errors can be ignored by configuring the <b>ignore-l3-incompletes</b> statement.</li> <li>• <b>L2 channel errors</b>—Number of times the software did not find a valid logical interface for an incoming frame.</li> <li>• <b>L2 mismatch timeouts</b>—Number of malformed or short packets that caused the incoming packet handler to discard the frame as unreadable.</li> <li>• <b>FIFO errors</b>—Number of FIFO errors in the receive direction that are reported by the ASIC on the PIC. If this value is ever nonzero, the PIC is probably malfunctioning.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul> | <b>extensive</b> |

Table 109: show interfaces Fast Ethernet Output Fields (*continued*)

| Field Name                     | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Level of Output         |
|--------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
| <b>Output errors</b>           | <p>Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and then up, or another problem occurs. If the number of carrier transitions increments quickly (perhaps once every 10 seconds), the cable, the far-end system, or the PIC or PIM is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Collisions</b>—Number of Ethernet collisions. The Gigabit Ethernet PIC supports only full-duplex operation, so for Gigabit Ethernet PICs, this number should always remain 0. If it is nonzero, there is a software bug.</li> <li>• <b>Aged packets</b>—Number of packets that remained in shared packet SDRAM so long that the system automatically purged them. The value in this field should never increment. If it does, it is most likely a software bug or possibly malfunctioning hardware.</li> <li>• <b>FIFO errors</b>—Number of FIFO errors in the send direction as reported by the ASIC on the PIC. If this value is ever nonzero, the PIC is probably malfunctioning.</li> <li>• <b>HS link CRC errors</b>—Number of errors on the high-speed links between the ASICs responsible for handling the router interfaces.</li> <li>• <b>MTU errors</b>—Number of packets whose size exceeded the MTU of the interface.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul> | <b>extensive</b>        |
| <b>Egress queues</b>           | <p>Total number of egress queues supported on the specified interface.</p> <p><b>NOTE:</b> In DPCs that are not of the enhanced type, such as DPC 40x1GE R, DPCE 20x1GE + 2x10GE R, or DPCE 40x1GE R, you might notice a discrepancy in the output of the <b>show interfaces</b> command because incoming packets might be counted in the Egress queues section of the output. This problem occurs on non-enhanced DPCs because the egress queue statistics are polled from IMQ (Inbound Message Queuing) block of the I-chip. The IMQ block does not differentiate between ingress and egress WAN traffic; as a result, the combined statistics are displayed in the egress queue counters on the Routing Engine. In a simple VPLS scenario, if there is no MAC entry in DMAC table (by sending unidirectional traffic), traffic is flooded and the input traffic is accounted in IMQ. For bidirectional traffic (MAC entry in DMAC table), if the outgoing interface is on the same I-chip then both ingress and egress statistics are counted in a combined way. If the outgoing interface is on a different I-chip or FPC, then only egress statistics are accounted in IMQ. This behavior is expected with non-enhanced DPCs</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>detail extensive</b> |

| MAC statistics                 | <p>Receive and Transmit statistics reported by the PIC's MAC subsystem, including the following:</p> <ul style="list-style-type: none"> <li>• <b>Total octets</b> and <b>total packets</b>—Total number of octets and packets. For Gigabit Ethernet IQ PICs, the received octets count varies by interface type. For more information, see Table 31 under the <a href="#">show interfaces (10-Gigabit Ethernet)</a> command.</li> <li>• <b>Unicast packets</b>, <b>Broadcast packets</b>, and <b>Multicast packets</b>—Number of unicast, broadcast, and multicast packets.</li> <li>• <b>CRC/Align errors</b>—Total number of packets received that had a length (excluding framing bits, but including FCS octets) of between 64 and 1518 octets, inclusive, and had either a bad FCS with an integral number of octets (FCS Error) or a bad FCS with a nonintegral number of octets (Alignment Error).</li> <li>• <b>FIFO error</b>—Number of FIFO errors that are reported by the ASIC on the PIC. If this value is ever nonzero, the PIC or a cable is probably malfunctioning.</li> <li>• <b>MAC control frames</b>—Number of MAC control frames.</li> <li>• <b>MAC pause frames</b>—Number of MAC control frames with <b>pause</b> operational code.</li> <li>• <b>Oversized frames</b>—Number of frames that exceed 1518 octets.</li> <li>• <b>Jabber frames</b>—Number of frames that were longer than 1518 octets (excluding framing bits, but including FCS octets), and had either an FCS error or an alignment error. This definition of jabber is different from the definition in IEEE-802.3 section 8.2.1.5 (10BASE5) and section 10.3.1.4 (10BASE2). These documents define jabber as the condition in which any packet exceeds 20 ms. The allowed range to detect jabber is from 20 ms to 150 ms.</li> <li>• <b>Fragment frames</b>—Total number of packets that were less than 64 octets in length (excluding framing bits, but including FCS octets), and had either an FCS error or an alignment error. Fragment frames normally increment because both runts (which are normal occurrences caused by collisions) and noise hits are counted.</li> <li>• <b>VLAN tagged frames</b>—Number of frames that are VLAN tagged. The system uses the TPID of 0x8100 in the frame to determine whether a frame is tagged or not.</li> <li>• <b>Code violations</b>—Number of times an event caused the PHY to indicate "Data reception error" or "invalid data symbol error."</li> </ul> | extensive       |

Table 109: show interfaces Fast Ethernet Output Fields (*continued*)

| Field Name               | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Level of Output  |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| <b>Filter statistics</b> | <p><b>Receive</b> and <b>Transmit</b> statistics reported by the PIC's MAC address filter subsystem. The filtering is done by the content-addressable memory (CAM) on the PIC. The filter examines a packet's source and destination MAC addresses to determine whether the packet should enter the system or be rejected.</p> <ul style="list-style-type: none"> <li>• <b>Input packet count</b>—Number of packets received from the MAC hardware that the filter processed.</li> <li>• <b>Input packet rejects</b>—Number of packets that the filter rejected because of either the source MAC address or the destination MAC address.</li> <li>• <b>Input DA rejects</b>—Number of packets that the filter rejected because the destination MAC address of the packet is not on the accept list. It is normal for this value to increment. When it increments very quickly and no traffic is entering the routing device from the far-end system, either there is a bad ARP entry on the far-end system, or multicast routing is not on and the far-end system is sending many multicast packets to the local routing device (which the routing device is rejecting).</li> <li>• <b>Input SA rejects</b>—Number of packets that the filter rejected because the source MAC address of the packet is not on the accept list. The value in this field should increment only if source MAC address filtering has been enabled. If filtering is enabled, if the value increments quickly, and if the system is not receiving traffic that it should from the far-end system, it means that the user-configured source MAC addresses for this interface are incorrect.</li> <li>• <b>Output packet count</b>—Number of packets that the filter has given to the MAC hardware.</li> <li>• <b>Output packet pad count</b>—Number of packets the filter padded to the minimum Ethernet size (60 bytes) before giving the packet to the MAC hardware. Usually, padding is done only on small ARP packets, but some very small IP packets can also require padding. If this value increments rapidly, either the system is trying to find an ARP entry for a far-end system that does not exist or it is misconfigured.</li> <li>• <b>Output packet error count</b>—Number of packets with an indicated error that the filter was given to transmit. These packets are usually aged packets or are the result of a bandwidth problem on the FPC hardware. On a normal system, the value of this field should not increment.</li> <li>• <b>CAM destination filters, CAM source filters</b>—Number of entries in the CAM dedicated to destination and source MAC address filters. There can only be up to 64 source entries. If source filtering is disabled, which is the default, the values for these fields should be 0.</li> </ul> | <b>extensive</b> |
| <b>PMA PHY</b>           | <p>(10-Gigabit Ethernet interfaces, WAN PHY mode) SONET error information:</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. Any state other than <b>OK</b> indicates a problem.</li> </ul> <p>Subfields are:</p> <ul style="list-style-type: none"> <li>• <b>PHY Lock</b>—Phase-locked loop</li> <li>• <b>PHY Light</b>—Loss of optical signal</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>extensive</b> |

| Received path trace, Transmitted path trace | <p>(10-Gigabit Ethernet interfaces, WAN PHY mode) SONET/SDH interfaces allow path trace bytes to be sent inband across the SONET/SDH link. Juniper Networks and other routing device manufacturers use these bytes to help diagnose misconfigurations and network errors by setting the transmitted path trace message so that it contains the system hostname and name of the physical interface. The received path trace value is the message received from the routing device at the other end of the fiber. The transmitted path trace value is the message that this routing device transmits.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | extensive       |

| <b>Generation</b>        | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>detail extensive</b>            |
| <b>Flags</b>             | Information about the logical interface. Possible values are described in the “Logical Interface Flags” section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | All levels                         |
| <b>VLAN-Tag</b>          | Rewrite profile applied to incoming or outgoing frames on the outer ( <b>Out</b> ) VLAN tag or for both the outer and inner ( <b>In</b> ) VLAN tags. <ul style="list-style-type: none"> <li>• <b>push</b>—An outer VLAN tag is pushed in front of the existing VLAN tag.</li> <li>• <b>pop</b>—The outer VLAN tag of the incoming frame is removed.</li> <li>• <b>swap</b>—The outer VLAN tag of the incoming frame is overwritten with the user specified VLAN tag information.</li> <li>• <b>push-pop</b>—An outer VLAN tag is pushed in front of the existing VLAN tag, and then removed.</li> <li>• <b>push-push</b>—Two VLAN tags are pushed in from the incoming frame.</li> <li>• <b>swap-push</b>—The outer VLAN tag of the incoming frame is replaced by a user-specified VLAN tag value. A user-specified outer VLAN tag is pushed in front. The outer tag becomes an inner tag in the final frame.</li> <li>• <b>swap-swap</b>—Both the inner and the outer VLAN tags of the incoming frame are replaced by the user specified VLAN tag value.</li> <li>• <b>pop-swap</b>—The outer VLAN tag of the incoming frame is removed, and the inner VLAN tag of the incoming frame is replaced by the user-specified VLAN tag value. The inner tag becomes the outer tag in the final frame.</li> <li>• <b>pop-pop</b>—Both the outer and inner VLAN tags of the incoming frame are removed.</li> </ul> | <b>brief detail extensive none</b> |

Table 109: show interfaces Fast Ethernet Output Fields (*continued*)

| Field Name                     | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Level of Output              |
|--------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Demux:</b>                  | IP demultiplexing (demux) value that appears if this interface is used as the demux underlying interface. The output is one of the following: <ul style="list-style-type: none"> <li>Source Family Inet</li> <li>Destination Family Inet</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                              | <b>detail extensive none</b> |
| <b>Encapsulation</b>           | Encapsulation on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | All levels                   |
| <b>Protocol</b>                | Protocol family. Possible values are described in the "Protocol Field" section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>detail extensive none</b> |
| <b>MTU</b>                     | Maximum transmission unit size on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>detail extensive none</b> |
| <b>Maximum labels</b>          | Maximum number of MPLS labels configured for the MPLS protocol family on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>detail extensive none</b> |
| <b>Traffic statistics</b>      | Number and rate of bytes and packets received and transmitted on the specified interface set. <ul style="list-style-type: none"> <li><b>Input bytes, Output bytes</b>—Number of bytes received and transmitted on the interface set</li> <li><b>Input packets, Output packets</b>—Number of packets received and transmitted on the interface set.</li> </ul>                                                                                                                                                                                                                                                                                                    | <b>detail extensive</b>      |
| <b>IPv6 transit statistics</b> | Number of IPv6 transit bytes and packets received and transmitted on the logical interface if IPv6 statistics tracking is enabled.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>extensive</b>             |
| <b>Local statistics</b>        | Number and rate of bytes and packets destined to the routing device.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>extensive</b>             |
| <b>Transit statistics</b>      | Number and rate of bytes and packets transiting the switch. <p><b>NOTE:</b> For Gigabit Ethernet intelligent queuing 2 (IQ2) interfaces, the logical interface egress statistics might not accurately reflect the traffic on the wire when output shaping is applied. Traffic management output shaping might drop packets after they are tallied by the <b>Output bytes</b> and <b>Output packets</b> interface counters. However, correct values display for both of these egress statistics when per-unit scheduling is enabled for the Gigabit Ethernet IQ2 physical interface, or when a single logical interface is actively using a shared scheduler.</p> | <b>extensive</b>             |
| <b>Generation</b>              | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>detail extensive</b>      |
| <b>Route Table</b>             | Route table in which the logical interface address is located. For example, 0 refers to the routing table inet.0.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>detail extensive none</b> |
| <b>Flags</b>                   | Information about protocol family flags. Possible values are described in the "Family Flags" section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>detail extensive</b>      |
| <b>Donor interface</b>         | (Unnumbered Ethernet) Interface from which an unnumbered Ethernet interface borrows an IPv4 address.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>detail extensive none</b> |

Table 109: show interfaces Fast Ethernet Output Fields (*continued*)

| Field Name                      | Field Description                                                                                                                                                                                    | Level of Output              |
|---------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Preferred source address</b> | (Unnumbered Ethernet) Secondary IPv4 address of the donor loopback interface that acts as the preferred source address for the unnumbered Ethernet interface.                                        | <b>detail extensive none</b> |
| <b>Input Filters</b>            | Names of any input filters applied to this interface. If you specify a precedence value for any filter in a dynamic profile, filter precedence values appear in parenthesis next to all interfaces.  | <b>detail extensive</b>      |
| <b>Output Filters</b>           | Names of any output filters applied to this interface. If you specify a precedence value for any filter in a dynamic profile, filter precedence values appear in parenthesis next to all interfaces. | <b>detail extensive</b>      |
| <b>Mac-Validate Failures</b>    | Number of MAC address validation failures for packets and bytes. This field is displayed when MAC address validation is enabled for the logical interface.                                           | <b>detail extensive none</b> |
| <b>Addresses, Flags</b>         | Information about the address flags. Possible values are described in the “Addresses Flags” section under <i>Common Output Fields Description</i> .                                                  | <b>detail extensive none</b> |
| <b><i>protocol-family</i></b>   | Protocol family configured on the logical interface. If the protocol is <b>inet</b> , the IP address of the interface is also displayed.                                                             | <b>brief</b>                 |
| <b>Flags</b>                    | Information about address flag (possible values are described in the “Addresses Flags” section under <i>Common Output Fields Description</i> ).                                                      | <b>detail extensive none</b> |
| <b>Destination</b>              | IP address of the remote side of the connection.                                                                                                                                                     | <b>detail extensive none</b> |
| <b>Local</b>                    | IP address of the logical interface.                                                                                                                                                                 | <b>detail extensive none</b> |
| <b>Broadcast</b>                | Broadcast address of the logical interface.                                                                                                                                                          | <b>detail extensive none</b> |
| <b>Generation</b>               | Unique number for use by Juniper Networks technical support only.                                                                                                                                    | <b>detail extensive</b>      |

## Sample Output

### show interfaces (Fast Ethernet)

```

user@host> show interfaces fe-0/0/0
Physical interface: fe-0/0/0, Enabled, Physical link is Up
 Interface index: 128, SNMP ifIndex: 22
 Link-level type: Ethernet, MTU: 1514, Speed: 100mbps, Loopback: Disabled,
 Source filtering: Disabled, Flow control: Enabled
 Device flags : Present Running
 Interface flags: SNMP-Traps Internal: 0x4000
 CoS queues : 4 supported, 4 maximum usable queues
 Current address: 00:00:5e:00:53:38, Hardware address: 00:00:5e:00:53:38
 Last flapped : 2006-01-20 14:50:58 PST (2w4d 00:44 ago)
 Input rate : 0 bps (0 pps)
 Output rate : 0 bps (0 pps)
 Active alarms : None
 Active defects: None
 Logical interface fe-0/0/0.0 (Index 66) (SNMP ifIndex 198)
 Flags: SNMP-Traps Encapsulation: ENET2

```

```

Protocol inet, MTU: 1500
Flags: None
Addresses, Flags: Is-Preferred Is-Primary
Destination: 203.0.113/24, Local: 203.0.113.1, Broadcast: 203.0.113.255

```

### show interfaces brief (Fast Ethernet)

```

user@host> show interfaces fe-0/0/0 brief
Physical interface: fe-0/0/0, Enabled, Physical link is Up
Link-level type: Ethernet, MTU: 1514, Speed: 100mbps, Loopback: Disabled,
Source filtering: Disabled, Flow control: Enabled
Device flags : Present Running
Interface flags: SNMP-Traps Internal: 0x4000
Logical interface fe-0/0/0.0
Flags: SNMP-Traps Encapsulation: ENET2
inet 203.0.113.1/24

```

### show interfaces detail (Fast Ethernet)

```

user@host> show interfaces fe-0/0/0 detail
Physical interface: fe-0/0/0, Enabled, Physical link is Up
Interface index: 128, SNMP ifIndex: 22, Generation: 5391
Link-level type: Ethernet, MTU: 1514, Speed: 100mbps, Loopback: Disabled,
Source filtering: Disabled, Flow control: Enabled
Device flags : Present Running
Interface flags: SNMP-Traps Internal: 0x4000
CoS queues : 4 supported, 4 maximum usable queues
Hold-times : Up 0 ms, Down 0 ms
Current address: 00:00:5e:00:53:38, Hardware address: 00:00:5e:00:53:3f:38
Last flapped : 2006-01-20 14:50:58 PST (2w4d 00:45 ago)
Statistics last cleared: Never
Traffic statistics:
Input bytes : 0 0 bps
Output bytes : 42 0 bps
Input packets : 0 0 pps
Output packets: 1 0 pps
Active alarms : None
Active defects: None
Logical interface fe-0/0/0.0 (Index 66) (SNMP ifIndex 198) (Generation 67)
Flags: SNMP-Traps Encapsulation: ENET2
Protocol inet, MTU: 1500, Generation: 105, Route table: 0
Flags: Is-Primary, Mac-Validate-Strict
Mac-Validate Failures: Packets: 0, Bytes: 0
Addresses, Flags: Is-Preferred Is-Primary
Destination: 203.0.113/24, Local: 203.0.113.1, Broadcast: 203.0.113.255,
Generation: 136

```

### show interfaces extensive (Fast Ethernet)

```

user@host> show interfaces fe-0/0/0 extensive
Physical interface: fe-0/0/0, Enabled, Physical link is Up
Interface index: 128, SNMP ifIndex: 22, Generation: 5391
Link-level type: Ethernet, MTU: 1514, Link-mode: Full-duplex, Speed:
100mbps, Loopback: Disabled,
Source filtering: Disabled, Flow control: Enabled
Device flags : Present Running
Interface flags: SNMP-Traps Internal: 0x4000
CoS queues : 4 supported, 4 maximum usable queues
Hold-times : Up 0 ms, Down 0 ms
Current address: 00:00:5e:00:53:38, Hardware address: 00:00:5e:00:53:38

```

```

Last flapped : 2006-01-20 14:50:58 PST (2w4d 00:46 ago)
Statistics last cleared: Never
Traffic statistics:
 Input bytes : 0 0 bps
 Output bytes : 42 0 bps
 Input packets : 0 0 pps
 Output packets: 1 0 pps
Input errors:
 Errors: 0, Drops: 0, Framing errors: 0, Runt: 0, Policed discards: 0,
 L3 incompletes: 0, L2 channel errors: 0, L2 mismatch timeouts: 0,
 FIFO errors: 0, Resource errors: 0
Output errors:

[show interfaces \(ALI Interface Set\) on page 1815](#)

**Output Fields** [Table 110 on page 1793](#) describes the output fields for the **show interfaces** (Gigabit Ethernet) command. Output fields are listed in the approximate order in which they appear. For Gigabit Ethernet IQ and IQE PICs, the traffic and MAC statistics vary by interface type. For more information, see [Table 111 on page 1807](#).

**Table 110: show interfaces (Gigabit Ethernet) Output Fields**

| Field Name                | Field Description                                                                                                                                                                                                         | Level of Output              |
|---------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Physical Interface</b> |                                                                                                                                                                                                                           |                              |
| <b>Physical interface</b> | Name of the physical interface.                                                                                                                                                                                           | All levels                   |
| <b>Enabled</b>            | State of the interface. Possible values are described in the “Enabled Field” section under <i>Common Output Fields Description</i> .                                                                                      | All levels                   |
| <b>Interface index</b>    | Index number of the physical interface, which reflects its initialization sequence.                                                                                                                                       | <b>detail extensive none</b> |
| <b>SNMP ifIndex</b>       | SNMP index number for the physical interface.                                                                                                                                                                             | <b>detail extensive none</b> |
| <b>Generation</b>         | Unique number for use by Juniper Networks technical support only.                                                                                                                                                         | <b>detail extensive</b>      |
| <b>Link-level type</b>    | Encapsulation being used on the physical interface.                                                                                                                                                                       | All levels                   |
| <b>MTU</b>                | Maximum transmission unit size on the physical interface.                                                                                                                                                                 | All levels                   |
| <b>Speed</b>              | Speed at which the interface is running.                                                                                                                                                                                  | All levels                   |
| <b>Loopback</b>           | Loopback status: <b>Enabled</b> or <b>Disabled</b> . If loopback is enabled, type of loopback: <b>Local</b> or <b>Remote</b> .                                                                                            | All levels                   |
| <b>Source filtering</b>   | Source filtering status: <b>Enabled</b> or <b>Disabled</b> .                                                                                                                                                              | All levels                   |
| <b>LAN-PHY mode</b>       | 10-Gigabit Ethernet interface operating in Local Area Network Physical Layer Device (LAN PHY) mode. LAN PHY allows 10-Gigabit Ethernet wide area links to use existing Ethernet applications.                             | All levels                   |
| <b>WAN-PHY mode</b>       | 10-Gigabit Ethernet interface operating in Wide Area Network Physical Layer Device (WAN PHY) mode. WAN PHY allows 10-Gigabit Ethernet wide area links to use fiber-optic cables and other devices intended for SONET/SDH. | All levels                   |
| <b>Unidirectional</b>     | Unidirectional link mode status for 10-Gigabit Ethernet interface: <b>Enabled</b> or <b>Disabled</b> for parent interface; <b>Rx-only</b> or <b>Tx-only</b> for child interfaces.                                         | All levels                   |
| <b>Flow control</b>       | Flow control status: <b>Enabled</b> or <b>Disabled</b> .                                                                                                                                                                  | All levels                   |
| <b>Auto-negotiation</b>   | (Gigabit Ethernet interfaces) Autonegotiation status: <b>Enabled</b> or <b>Disabled</b> .                                                                                                                                 | All levels                   |

Table 110: show interfaces (Gigabit Ethernet) Output Fields (*continued*)

| Field Name                     | Field Description                                                                                                                                                                                                                                                           | Level of Output              |
|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Remote-fault</b>            | (Gigabit Ethernet interfaces) Remote fault status: <ul style="list-style-type: none"> <li>• <b>Online</b>—Autonegotiation is manually configured as online.</li> <li>• <b>Offline</b>—Autonegotiation is manually configured as offline.</li> </ul>                         | All levels                   |
| <b>Device flags</b>            | Information about the physical device. Possible values are described in the “Device Flags” section under <i>Common Output Fields Description</i> .                                                                                                                          | All levels                   |
| <b>Interface flags</b>         | Information about the interface. Possible values are described in the “Interface Flags” section under <i>Common Output Fields Description</i> .                                                                                                                             | All levels                   |
| <b>Link flags</b>              | Information about the link. Possible values are described in the “Links Flags” section under <i>Common Output Fields Description</i> .                                                                                                                                      | All levels                   |
| <b>Wavelength</b>              | (10-Gigabit Ethernet dense wavelength-division multiplexing [DWDM] interfaces) Displays the configured wavelength, in nanometers (nm).                                                                                                                                      | All levels                   |
| <b>Frequency</b>               | (10-Gigabit Ethernet DWDM interfaces only) Displays the frequency associated with the configured wavelength, in terahertz (THz).                                                                                                                                            | All levels                   |
| <b>CoS queues</b>              | Number of CoS queues configured.                                                                                                                                                                                                                                            | <b>detail extensive</b> none |
| <b>Schedulers</b>              | (Gigabit Ethernet intelligent queuing 2 [IQ2] interfaces only) Number of CoS schedulers configured.                                                                                                                                                                         | <b>extensive</b>             |
| <b>Hold-times</b>              | Current interface hold-time up and hold-time down, in milliseconds (ms).                                                                                                                                                                                                    | <b>detail extensive</b>      |
| <b>Current address</b>         | Configured MAC address.                                                                                                                                                                                                                                                     | <b>detail extensive</b> none |
| <b>Hardware address</b>        | Hardware MAC address.                                                                                                                                                                                                                                                       | <b>detail extensive</b> none |
| <b>Last flapped</b>            | Date, time, and how long ago the interface went from down to up. The format is <b>Last flapped: year-month-day hour:minute:second:timezone (hour:minute:second ago)</b> . For example, <b>Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> .                        | <b>detail extensive</b> none |
| <b>Input Rate</b>              | Input rate in bits per second (bps) and packets per second (pps). The value in this field also includes the Layer 2 overhead bytes for ingress traffic on Ethernet interfaces if you enable accounting of Layer 2 overhead at the PIC level or the logical interface level. | None                         |
| <b>Output Rate</b>             | Output rate in bps and pps. The value in this field also includes the Layer 2 overhead bytes for egress traffic on Ethernet interfaces if you enable accounting of Layer 2 overhead at the PIC level or the logical interface level.                                        | None                         |
| <b>Statistics last cleared</b> | Time when the statistics for the interface were last set to zero.                                                                                                                                                                                                           | <b>detail extensive</b>      |
| <b>Egress account overhead</b> | Layer 2 overhead in bytes that is accounted in the interface statistics for egress traffic.                                                                                                                                                                                 | <b>detail extensive</b>      |

Table 110: show interfaces (Gigabit Ethernet) Output Fields (*continued*)

| Field Name               | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Level of Output  |
|--------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| Ingress account overhead | Layer 2 overhead in bytes that is accounted in the interface statistics for ingress traffic.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | detail extensive |
| Traffic statistics       | <p>Number and rate of bytes and packets received and transmitted on the physical interface.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface. The value in this field also includes the Layer 2 overhead bytes for ingress traffic on Ethernet interfaces if you enable accounting of Layer 2 overhead at the PIC level or the logical interface level.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface. The value in this field also includes the Layer 2 overhead bytes for egress traffic on Ethernet interfaces if you enable accounting of Layer 2 overhead at the PIC level or the logical interface level.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul> <p>Gigabit Ethernet and 10-Gigabit Ethernet IQ PICs count the overhead and CRC bytes.</p> <p>For Gigabit Ethernet IQ PICs, the input byte counts vary by interface type. For more information, see Table 31 under the <a href="#">show interfaces (10-Gigabit Ethernet)</a> command.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | detail extensive |
| Input errors             | <p>Input errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of the incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Runts</b>—Number of frames received that are smaller than the runt threshold.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that Junos OS does not handle.</li> <li>• <b>L3 incompletes</b>—Number of incoming packets discarded because they failed Layer 3 (usually IPv4) sanity checks of the header. For example, a frame with less than 20 bytes of available IP header is discarded. L3 incomplete errors can be ignored by configuring the <b>ignore-l3-incompletes</b> statement.</li> <li>• <b>L2 channel errors</b>—Number of times the software did not find a valid logical interface for an incoming frame.</li> <li>• <b>L2 mismatch timeouts</b>—Number of malformed or short packets that caused the incoming packet handler to discard the frame as unreadable.</li> <li>• <b>FIFO errors</b>—Number of FIFO errors in the receive direction that are reported by the ASIC on the PIC. If this value is ever nonzero, the PIC is probably malfunctioning.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul> | extensive        |

Table 110: show interfaces (Gigabit Ethernet) Output Fields (*continued*)

| Field Name           | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Level of Output         |
|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
| <b>Output errors</b> | <p>Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and then up, or another problem occurs. If the number of carrier transitions increments quickly (perhaps once every 10 seconds), the cable, the far-end system, or the PIC or PIM is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> </ul> <p><b>NOTE:</b> Due to accounting space limitations on certain Type 3 FPCs (which are supported in M320 and T640 routers), the <b>Drops</b> field does not always use the correct value for queue 6 or queue 7 for interfaces on 10-port 1-Gigabit Ethernet PICs.</p> <ul style="list-style-type: none"> <li>• <b>Collisions</b>—Number of Ethernet collisions. The Gigabit Ethernet PIC supports only full-duplex operation, so for Gigabit Ethernet PICs, this number must always be 0. If it is nonzero, there is a software bug.</li> <li>• <b>Aged packets</b>—Number of packets that remained in shared packet SDRAM so long that the system automatically purged them. The value in this field must never increment. If it does, it is most likely a software bug or possibly malfunctioning hardware.</li> <li>• <b>FIFO errors</b>—Number of FIFO errors in the send direction as reported by the ASIC on the PIC. If this value is ever nonzero, the PIC is probably malfunctioning.</li> <li>• <b>HS link CRC errors</b>—Number of errors on the high-speed links between the ASICs responsible for handling the router interfaces.</li> <li>• <b>MTU errors</b>—Number of packets whose size exceeded the MTU of the interface.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul> | <b>extensive</b>        |
| <b>Egress queues</b> | <p>Total number of egress queues supported on the specified interface.</p> <p><b>NOTE:</b> In DPCs that are not of the enhanced type, such as DPC 40x 1GER, DPCE 20x 1GE + 2x 10GE R, or DPCE 40x 1GE R, you might notice a discrepancy in the output of the <b>show interfaces</b> command because incoming packets might be counted in the Egress queues section of the output. This problem occurs on non-enhanced DPCs because the egress queue statistics are polled from IMQ (Inbound Message Queuing) block of the I-chip. The IMQ block does not differentiate between ingress and egress WAN traffic; as a result, the combined statistics are displayed in the egress queue counters on the Routing Engine. In a simple VPLS scenario, if there is no MAC entry in DMAC table (by sending unidirectional traffic), traffic is flooded and the input traffic is accounted in IMQ. For bidirectional traffic (MAC entry in DMAC table), if the outgoing interface is on the same I-chip then both ingress and egress statistics are counted in a combined way. If the outgoing interface is on a different I-chip or FPC, then only egress statistics are accounted in IMQ. This behavior is expected with non-enhanced DPCs</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>detail extensive</b> |

| <b>PCS statistics</b> | <p>(10-Gigabit Ethernet interfaces) Displays Physical Coding Sublayer (PCS) fault conditions from the WAN PHY or the LAN PHY device.</p> <ul style="list-style-type: none"> <li>• <b>Bit errors</b>—Number of seconds during which at least one bit error rate (BER) occurred while the PCS receiver is operating in normal mode.</li> <li>• <b>Errored blocks</b>—Number of seconds when at least one errored block occurred while the PCS receiver is operating in normal mode.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>detail extensive</b> |
| <b>Link Degrad</b>    | <p>Shows the link degrade status of the physical link and the estimated bit error rates (BERs). This field is available only for the PICs supporting the physical link monitoring feature.</p> <ul style="list-style-type: none"> <li>• <b>Link Monitoring</b>—Indicates if physical link degrade monitoring is enabled on the interface. <ul style="list-style-type: none"> <li>• <b>Enable</b>—Indicates that link degrade monitoring has been enabled (using the <b>link-degrade-monitor</b> statement) on the interface.</li> <li>• <b>Disable</b>—Indicates that link degrade monitoring has not been enabled on the interface. If link degrade monitoring has not been enabled, the output does not show any related information, such as BER values and thresholds.</li> </ul> </li> <li>• <b>Link Degrad Set Threshold</b>—The BER threshold value at which the link is considered degraded and a corrective action is triggered.</li> <li>• <b>Link Degrad Clear Threshold</b>—The BER threshold value at which the degraded link is considered recovered and the corrective action applied to the interface is reverted.</li> <li>• <b>Estimated BER</b>—The estimated bit error rate.</li> <li>• <b>Link-degrade event</b>—Shows link degrade event information. <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Time (in seconds) elapsed after a link degrade event occurred.</li> <li>• <b>Count</b>—The number of link degrade events recorded.</li> <li>• <b>State</b>—Shows the link degrade status (example: <b>Defect Active</b>).</li> </ul> </li> </ul> | <b>detail extensive</b> |

Table 110: show interfaces (Gigabit Ethernet) Output Fields (*continued*)

| Field Name                     | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Level of Output |
|--------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| MAC statistics                 | <p>Receive and Transmit statistics reported by the PIC's MAC subsystem, including the following:</p> <ul style="list-style-type: none"> <li>• <b>Total octets</b> and <b>total packets</b>—Total number of octets and packets. For Gigabit Ethernet IQ PICs, the received octets count varies by interface type. For more information, see Table 31 under the <a href="#">show interfaces (10-Gigabit Ethernet)</a> command.</li> <li>• <b>Unicast packets</b>, <b>Broadcast packets</b>, and <b>Multicast packets</b>—Number of unicast, broadcast, and multicast packets.</li> <li>• <b>CRC/Align errors</b>—Total number of packets received that had a length (excluding framing bits, but including FCS octets) of between 64 and 1518 octets, inclusive, and had either a bad FCS with an integral number of octets (FCS Error) or a bad FCS with a nonintegral number of octets (Alignment Error).</li> <li>• <b>FIFO error</b>—Number of FIFO errors that are reported by the ASIC on the PIC. If this value is ever nonzero, the PIC or a cable is probably malfunctioning.</li> <li>• <b>MAC control frames</b>—Number of MAC control frames.</li> <li>• <b>MAC pause frames</b>—Number of MAC control frames with <b>pause</b> operational code.</li> <li>• <b>Oversized frames</b>—There are two possible conditions regarding the number of oversized frames: <ul style="list-style-type: none"> <li>• Packet length exceeds 1518 octets, or</li> <li>• Packet length exceeds MRU</li> </ul> </li> <li>• <b>Jabber frames</b>—Number of frames that were longer than 1518 octets (excluding framing bits, but including FCS octets), and had either an FCS error or an alignment error. This definition of jabber is different from the definition in IEEE-802.3 section 8.2.1.5 (10BASE5) and section 10.3.1.4 (10BASE2). These documents define jabber as the condition in which any packet exceeds 20 ms. The allowed range to detect jabber is from 20 ms to 150 ms.</li> <li>• <b>Fragment frames</b>—Total number of packets that were less than 64 octets in length (excluding framing bits, but including FCS octets) and had either an FCS error or an alignment error. Fragment frames normally increment because both runts (which are normal occurrences caused by collisions) and noise hits are counted.</li> <li>• <b>VLAN tagged frames</b>—Number of frames that are VLAN tagged. The system uses the TPID of 0x8100 in the frame to determine whether a frame is tagged or not. <p><b>NOTE:</b> The 20-port Gigabit Ethernet MIC (MIC-3D-20GE-SFP) does not have hardware counters for VLAN frames. Therefore, the <b>VLAN tagged frames</b> field displays 0 when the <b>show interfaces</b> command is executed on a 20-port Gigabit Ethernet MIC. In other words, the number of VLAN tagged frames cannot be determined for the 20-port Gigabit Ethernet MIC.</p> </li> <li>• <b>Code violations</b>—Number of times an event caused the PHY to indicate "Data reception error" or "invalid data symbol error."</li> </ul> | extensive       |
| OTN Received Overhead Bytes    | APS/PCC0: 0x02, APS/PCC1: 0x11, APS/PCC2: 0x47, APS/PCC3: 0x58 Payload Type: 0x08                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | extensive       |
| OTN Transmitted Overhead Bytes | APS/PCC0: 0x00, APS/PCC1: 0x00, APS/PCC2: 0x00, APS/PCC3: 0x00 Payload Type: 0x08                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | extensive       |

Table 110: show interfaces (Gigabit Ethernet) Output Fields (*continued*)

| Field Name               | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Level of Output  |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| <b>Filter statistics</b> | <p><b>Receive</b> and <b>Transmit</b> statistics reported by the PIC's MAC address filter subsystem. The filtering is done by the content-addressable memory (CAM) on the PIC. The filter examines a packet's source and destination MAC addresses to determine whether the packet may enter the system or be rejected.</p> <ul style="list-style-type: none"> <li>• <b>Input packet count</b>—Number of packets received from the MAC hardware that the filter processed.</li> <li>• <b>Input packet rejects</b>—Number of packets that the filter rejected because of either the source MAC address or the destination MAC address.</li> <li>• <b>Input DA rejects</b>—Number of packets that the filter rejected because the destination MAC address of the packet is not on the accept list. It is normal for this value to increment. When it increments very quickly and no traffic is entering the router from the far-end system, either there is a bad ARP entry on the far-end system, or multicast routing is not on and the far-end system is sending many multicast packets to the local router (which the router is rejecting).</li> <li>• <b>Input SA rejects</b>—Number of packets that the filter rejected because the source MAC address of the packet is not on the accept list. The value in this field must increment only if source MAC address filtering has been enabled. If filtering is enabled, if the value increments quickly, and if the system is not receiving traffic that it should from the far-end system, it means that the user-configured source MAC addresses for this interface are incorrect.</li> <li>• <b>Output packet count</b>—Number of packets that the filter has given to the MAC hardware.</li> <li>• <b>Output packet pad count</b>—Number of packets the filter padded to the minimum Ethernet size (60 bytes) before giving the packet to the MAC hardware. Usually, padding is done only on small ARP packets, but some very small IP packets can also require padding. If this value increments rapidly, either the system is trying to find an ARP entry for a far-end system that does not exist or it is misconfigured.</li> <li>• <b>Output packet error count</b>—Number of packets with an indicated error that the filter was given to transmit. These packets are usually aged packets or are the result of a bandwidth problem on the FPC hardware. On a normal system, the value of this field must not increment.</li> <li>• <b>CAM destination filters, CAM source filters</b>—Number of entries in the CAM dedicated to destination and source MAC address filters. There can only be up to 64 source entries. If source filtering is disabled, which is the default, the values for these fields must be 0.</li> </ul> | <b>extensive</b> |
| <b>PMA PHY</b>           | <p>(10-Gigabit Ethernet interfaces, WAN PHY mode) SONET error information:</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. For Gigabit Ethernet interfaces, types are <b>Symmetric</b> (link partner supports <b>PAUSE</b> on receive and transmit), <b>Asymmetric</b> (link partner supports <b>PAUSE</b> on transmit), <b>Symmetric/Asymmetric</b> (link partner supports <b>PAUSE</b> on receive and transmit or only <b>PAUSE</b> on transmit), and <b>None</b> (link partner does not support flow control).</li> <li>• <b>Remote fault</b>—Remote fault information from the link partner—<b>Failure</b> indicates a receive link error. <b>OK</b> indicates that the link partner is receiving. <b>Negotiation error</b> indicates a negotiation error. <b>Offline</b> indicates that the link partner is going offline.</li> </ul> </li> <li>• <b>Local resolution</b>—Information from the local Ethernet device: <ul style="list-style-type: none"> <li>• <b>Flow control</b>—Types of flow control supported by the local device. For Gigabit Ethernet interfaces, advertised capabilities are <b>Symmetric/Asymmetric</b> (local device supports <b>PAUSE</b> on receive and transmit or only <b>PAUSE</b> on receive) and <b>None</b> (local device does not support flow control). Depending on the result of the negotiation with the link partner, local resolution flow control type will display <b>Symmetric</b> (local device supports <b>PAUSE</b> on receive and transmit), <b>Asymmetric</b> (local device supports <b>PAUSE</b> on receive), and <b>None</b> (local device does not support flow control).</li> <li>• <b>Remote fault</b>—Remote fault information. <b>Link OK</b> (no error detected on receive), <b>Offline</b> (local interface is offline), and <b>Link Failure</b> (link error detected on receive).</li> </ul> </li> </ul> | extensive       |
| Received path trace, Transmitted path trace | <p>(10-Gigabit Ethernet interfaces, WAN PHY mode) SONET/SDH interfaces allow path trace bytes to be sent inband across the SONET/SDH link. Juniper Networks and other router manufacturers use these bytes to help diagnose misconfigurations and network errors by setting the transmitted path trace message so that it contains the system hostname and name of the physical interface. The received path trace value is the message received from the router at the other end of the fiber. The transmitted path trace value is the message that this router transmits.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | extensive       |

| <b>Dynamic Profile</b>                                    | Name of the dynamic profile that was used to create this interface configured with a Point-to-Point Protocol over Ethernet (PPPoE) family.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>detail extensive none</b>       |
| <b>Service Name Table</b>                                 | Name of the service name table for the interface configured with a PPPoE family.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>detail extensive none</b>       |

Table 110: show interfaces (Gigabit Ethernet) Output Fields (*continued*)

| Field Name                     | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Level of Output              |
|--------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Max Sessions</b>            | Maximum number of PPPoE logical interfaces that can be activated on the underlying interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>detail extensive none</b> |
| <b>Duplicate Protection</b>    | State of PPPoE duplicate protection: <b>On</b> or <b>Off</b> . When duplicate protection is configured for the underlying interface, a dynamic PPPoE logical interface cannot be activated when an existing active logical interface is present for the same PPPoE client.                                                                                                                                                                                                                                                                                                                                                                                              | <b>detail extensive none</b> |
| <b>Direct Connect</b>          | State of the configuration to ignore DSL Forum VSAs: <b>On</b> or <b>Off</b> . When configured, the router ignores any of these VSAs received from a directly connected CPE device on the interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>detail extensive none</b> |
| <b>AC Name</b>                 | Name of the access concentrator.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>detail extensive none</b> |
| <b>Maximum labels</b>          | Maximum number of MPLS labels configured for the MPLS protocol family on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>detail extensive none</b> |
| <b>Traffic statistics</b>      | <p>Number and rate of bytes and packets received and transmitted on the specified interface set.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes, Output bytes</b>—Number of bytes received and transmitted on the interface set. The value in this field also includes the Layer 2 overhead bytes for ingress or egress traffic on Ethernet interfaces if you enable accounting of Layer 2 overhead at the PIC level or the logical interface level.</li> <li>• <b>Input packets, Output packets</b>—Number of packets received and transmitted on the interface set.</li> </ul>                                                                           | <b>detail extensive</b>      |
| <b>IPv6 transit statistics</b> | Number of IPv6 transit bytes and packets received and transmitted on the logical interface if IPv6 statistics tracking is enabled.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>extensive</b>             |
| <b>Local statistics</b>        | Number and rate of bytes and packets destined to the router.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>extensive</b>             |
| <b>Transit statistics</b>      | <p>Number and rate of bytes and packets transiting the switch.</p> <p><b>NOTE:</b> For Gigabit Ethernet intelligent queuing 2 (IQ2) interfaces, the logical interface egress statistics might not accurately reflect the traffic on the wire when output shaping is applied. Traffic management output shaping might drop packets after they are tallied by the <b>Output bytes</b> and <b>Output packets</b> interface counters. However, correct values display for both of these egress statistics when per-unit scheduling is enabled for the Gigabit Ethernet IQ2 physical interface, or when a single logical interface is actively using a shared scheduler.</p> | <b>extensive</b>             |
| <b>Generation</b>              | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>detail extensive</b>      |
| <b>Route Table</b>             | Route table in which the logical interface address is located. For example, <b>0</b> refers to the routing table inet.0.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>detail extensive none</b> |
| <b>Flags</b>                   | Information about protocol family flags. Possible values are described in the “Family Flags” section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>detail extensive</b>      |

Table 110: show interfaces (Gigabit Ethernet) Output Fields (*continued*)

| Field Name                      | Field Description                                                                                                                                                                                    | Level of Output              |
|---------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Donor interface</b>          | (Unnumbered Ethernet) Interface from which an unnumbered Ethernet interface borrows an IPv4 address.                                                                                                 | <b>detail extensive none</b> |
| <b>Preferred source address</b> | (Unnumbered Ethernet) Secondary IPv4 address of the donor loopback interface that acts as the preferred source address for the unnumbered Ethernet interface.                                        | <b>detail extensive none</b> |
| <b>Input Filters</b>            | Names of any input filters applied to this interface. If you specify a precedence value for any filter in a dynamic profile, filter precedence values appear in parentheses next to all interfaces.  | <b>detail extensive</b>      |
| <b>Output Filters</b>           | Names of any output filters applied to this interface. If you specify a precedence value for any filter in a dynamic profile, filter precedence values appear in parentheses next to all interfaces. | <b>detail extensive</b>      |
| <b>Mac-Validate Failures</b>    | Number of MAC address validation failures for packets and bytes. This field is displayed when MAC address validation is enabled for the logical interface.                                           | <b>detail extensive none</b> |
| <b>Addresses, Flags</b>         | Information about the address flags. Possible values are described in the "Addresses Flags" section under <i>Common Output Fields Description</i> .                                                  | <b>detail extensive none</b> |
| <b><i>protocol-family</i></b>   | Protocol family configured on the logical interface. If the protocol is <b>inet</b> , the IP address of the interface is also displayed.                                                             | <b>brief</b>                 |
| <b>Flags</b>                    | Information about the address flag. Possible values are described in the "Addresses Flags" section under <i>Common Output Fields Description</i> .                                                   | <b>detail extensive none</b> |
| <b>Destination</b>              | IP address of the remote side of the connection.                                                                                                                                                     | <b>detail extensive none</b> |
| <b>Local</b>                    | IP address of the logical interface.                                                                                                                                                                 | <b>detail extensive none</b> |
| <b>Broadcast</b>                | Broadcast address of the logical interface.                                                                                                                                                          | <b>detail extensive none</b> |
| <b>Generation</b>               | Unique number for use by Juniper Networks technical support only.                                                                                                                                    | <b>detail extensive</b>      |

## Sample Output

### show interfaces (Gigabit Ethernet)

```

user@host> show interfaces ge-3/0/2
Physical interface: ge-3/0/2, Enabled, Physical link is Up
 Interface index: 167, SNMP ifIndex: 35
 Link-level type: 52, MTU: 1522, Speed: 1000mbps, Loopback: Disabled,
 Source filtering: Disabled, Flow control: Enabled, Auto-negotiation: Enabled
 Remote fault: Online
 Device flags : Present Running
 Interface flags: SNMP-Traps Internal: 0x4000
 CoS queues : 4 supported, 4 maximum usable queues
 Current address: 00:00:5e:00:53:7c, Hardware address: 00:00:5e:00:53:7c
 Last flapped : 2006-08-10 17:25:10 PDT (00:01:08 ago)
 Input rate : 0 bps (0 pps)
 Output rate : 0 bps (0 pps)
 Ingress rate at Packet Forwarding Engine : 0 bps (0 pps)
 Ingress drop rate at Packet Forwarding Engine : 0 bps (0 pps)
 Active alarms : None
 Active defects: None

Logical interface ge-3/0/2.0 (Index 72) (SNMP ifIndex 69)
 Flags: SNMP-Traps 0x4000
 VLAN-Tag [0x8100.512 0x8100.513] In(pop-swap 0x8100.530) Out(swap-push
0x8100.512 0x8100.513)
 Encapsulation: VLAN-CCC
 Egress account overhead: 100
 Ingress account overhead: 90
 Input packets : 0
 Output packets: 0
 Protocol ccc, MTU: 1522
 Flags: Is-Primary

```

### show interfaces (Gigabit Ethernet on MX Series Routers)

```

user@host> show interfaces ge-2/2/2
Physical interface: ge-2/2/2, Enabled, Physical link is Up
 Interface index: 156, SNMP ifIndex: 188
 Link-level type: Ethernet, MTU: 1514, Speed: 1000mbps, MAC-REWRITE Error: None,
 Loopback: Disabled,
 Source filtering: Disabled, Flow control: Enabled, Auto-negotiation: Enabled,
 Remote fault: Online
 Device flags : Present Running
 Interface flags: SNMP-Traps Internal: 0x4000
 Link flags : None
 CoS queues : 8 supported, 4 maximum usable queues
 Schedulers : 0
 Current address: 00:00:5e:00:53:c0, Hardware address: 00:00:5e:00:53:76
 Last flapped : 2008-09-05 16:44:30 PDT (3d 01:04 ago)
 Input rate : 0 bps (0 pps)
 Output rate : 0 bps (0 pps)
 Active alarms : None
 Active defects : None
 Logical interface ge-2/2/2.0 (Index 82) (SNMP ifIndex 219)
 Flags: Up SNMP-Traps 0x4004000 Encapsulation: ENET2
 Input packets : 10232
 Output packets: 10294
 Protocol inet, MTU: 1500
 Flags: Sendbroadcast-pkt-to-re
 Addresses, Flags: Is-Preferred Is-Primary
 Destination: 203.0.113/24, Local: 203.0.113.1, Broadcast: 203.0.113.255
 Protocol inet6, MTU: 1500
 Max nh cache: 4, New hold nh limit: 100000, Curr nh cnt: 4, Curr new hold
 cnt: 4, NH drop cnt: 0
 Flags: Is-Primary
 Addresses, Flags: Is-Default Is-Preferred Is-Primary
 Destination: 2001:db8:/32, Local: 2001:db8::5
 Addresses, Flags: Is-Preferred
 Destination: 2001:db8:1::/32, Local: 2001:db8:223:9cff:fe9f:3e78
 Protocol multiservice, MTU: Unlimited
 Flags: Is-Primary

```

### show interfaces (link degrade status)

```

user@host> show interfaces et-3/0/0
Physical interface: et-3/0/0, Enabled, Physical link is Down
 Interface index: 157, SNMP ifIndex: 537
 Link-level type: Ethernet, MTU: 1514, MRU: 0, Speed: 100Gbps, BPDU Error: None,
 Loopback: Disabled, Source filtering: Disabled, Flow control: Enabled
 Device flags : Present Running Down
 Interface flags: Hardware-Down SNMP-Traps Internal: 0x4000
 Link flags : None
 CoS queues : 8 supported, 8 maximum usable queues
 Current address: 54:e0:32:23:9d:38, Hardware address: 54:e0:32:23:9d:38
 Last flapped : 2014-06-18 02:36:38 PDT (02:50:50 ago)
 Input rate : 0 bps (0 pps)
 Output rate : 0 bps (0 pps)
 Active alarms : LINK
 Active defects : LINK
 PCS statistics
 Bit errors Seconds
 Errored blocks 0

```

```

Link Degrade* :
Link Monitoring : Enable
Link Degrade Set Threshold: : 1E-7
Link Degrade Clear Threshold: : 1E-12
Estimated BER : 1E-7
Link-degrade event : Seconds Count State
 782 1 Defect Active

```

### show interfaces extensive (Gigabit Ethernet on MX Series Routers showing interface transmit statistics configuration)

```

user@host> show interfaces ge-2/1/2 extensive | match "output|interface"
Physical interface: ge-2/1/2, Enabled, Physical link is Up
Interface index: 151, SNMP ifIndex: 530, Generation: 154
Interface flags: SNMP-Traps Internal: 0x4000
Output bytes : 240614363944 772721536 bps
Output packets: 3538446506 1420444 pps
Direction : Output
Interface transmit statistics: Enabled

Logical interface ge-2/1/2.0 (Index 331) (SNMP ifIndex 955) (Generation 146)
Output bytes : 195560312716 522726272 bps
Output packets: 4251311146 1420451 pps

```

### show interfaces brief (Gigabit Ethernet)

```

user@host> show interfaces ge-3/0/2 brief
Physical interface: ge-3/0/2, Enabled, Physical link is Up
Link-level type: 52, MTU: 1522, Speed: 1000mbps, Loopback: Disabled,
Source filtering: Disabled, Flow control: Enabled, Auto-negotiation: Enabled,
Remote fault: Online
Device flags : Present Running
Interface flags: SNMP-Traps Internal: 0x4000
Link flags : None

Logical interface ge-3/0/2.0
Flags: SNMP-Traps 0x4000
VLAN-Tag [0x8100.512 0x8100.513] In(pop-swap 0x8100.530) Out(swap-push
0x8100.512 0x8100.513)
Encapsulation: VLAN-CCC
ccc

Logical interface ge-3/0/2.32767
Flags: SNMP-Traps 0x4000 VLAN-Tag [0x0000.0] Encapsulation: ENET2

```

### show interfaces detail (Gigabit Ethernet)

```

user@host> show interfaces ge-3/0/2 detail
Physical interface: ge-3/0/2, Enabled, Physical link is Up
Interface index: 167, SNMP ifIndex: 35, Generation: 177
Link-level type: 52, MTU: 1522, Speed: 1000mbps, Loopback: Disabled,
Source filtering: Disabled, Flow control: Enabled, Auto-negotiation: Enabled,
Remote fault: Online
Device flags : Present Running
Interface flags: SNMP-Traps Internal: 0x4000
Link flags : None
CoS queues : 4 supported, 4 maximum usable queues

Protocol multiservice, MTU: Unlimited, Generation: 170, Route table: 0

Flags: Is-Primary

Policer: Input: \_\_default\_arp\_policer\_\_

**NOTE:** For Gigabit Ethernet intelligent queuing 2 (IQ2) interfaces, the logical interface egress statistics displayed in the **show interfaces** command output might not accurately reflect the traffic on the wire when output shaping is applied. Traffic management output shaping might drop packets after they are tallied by the interface counters. For detailed information, see the description of the logical interface **Transit statistics** fields in [Table 110 on page 1793](#).

| <b>Output Fields</b>            | See <a href="#">Table 112 on page 1818</a> for the output fields for the <b>show interfaces</b> (10-Gigabit Ethernet) command.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

Table 112: show interfaces Gigabit Ethernet Output Fields

| Field Name                | Field Description                                                                                                                                                                                                                               | Level of Output              |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Physical Interface</b> |                                                                                                                                                                                                                                                 |                              |
| <b>Physical interface</b> | Name of the physical interface.                                                                                                                                                                                                                 | All levels                   |
| <b>Enabled</b>            | State of the interface. Possible values are described in the “Enabled Field” section under <i>Common Output Fields Description</i> .                                                                                                            | All levels                   |
| <b>Interface index</b>    | Index number of the physical interface, which reflects its initialization sequence.                                                                                                                                                             | <b>detail extensive none</b> |
| <b>SNMP ifIndex</b>       | SNMP index number for the physical interface.                                                                                                                                                                                                   | <b>detail extensive none</b> |
| <b>Generation</b>         | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                               | <b>detail extensive</b>      |
| <b>Link-level type</b>    | Encapsulation being used on the physical interface.                                                                                                                                                                                             | All levels                   |
| <b>MTU</b>                | Maximum transmission unit size on the physical interface.                                                                                                                                                                                       | All levels                   |
| <b>Speed</b>              | Speed at which the interface is running.                                                                                                                                                                                                        | All levels                   |
| <b>Loopback</b>           | Loopback status: <b>Enabled</b> or <b>Disabled</b> . If loopback is enabled, type of loopback: <b>Local</b> or <b>Remote</b> .                                                                                                                  | All levels                   |
| <b>Source filtering</b>   | Source filtering status: <b>Enabled</b> or <b>Disabled</b> .                                                                                                                                                                                    | All levels                   |
| <b>LAN-PHY mode</b>       | 10-Gigabit Ethernet interface operating in Local Area Network Physical Layer Device (LAN PHY) mode. LAN PHY allows 10-Gigabit Ethernet wide area links to use existing Ethernet applications.                                                   | All levels                   |
| <b>WAN-PHY mode</b>       | 10-Gigabit Ethernet interface operating in Wide Area Network Physical Layer Device (WAN PHY) mode. WAN PHY allows 10-Gigabit Ethernet wide area links to use fiber-optic cables and other devices intended for SONET/SDH.                       | All levels                   |
| <b>Unidirectional</b>     | Unidirectional link mode status for 10-Gigabit Ethernet interface: <b>Enabled</b> or <b>Disabled</b> for parent interface; <b>Rx-only</b> or <b>Tx-only</b> for child interfaces.                                                               | All levels                   |
| <b>Flow control</b>       | Flow control status: <b>Enabled</b> or <b>Disabled</b> .                                                                                                                                                                                        | All levels                   |
| <b>Auto-negotiation</b>   | (Gigabit Ethernet interfaces) Autonegotiation status: <b>Enabled</b> or <b>Disabled</b> .                                                                                                                                                       | All levels                   |
| <b>Remote-fault</b>       | (Gigabit Ethernet interfaces) Remote fault status: <ul style="list-style-type: none"> <li><b>Online</b>—Autonegotiation is manually configured as online.</li> <li><b>Offline</b>—Autonegotiation is manually configured as offline.</li> </ul> | All levels                   |
| <b>Device flags</b>       | Information about the physical device. Possible values are described in the “Device Flags” section under <i>Common Output Fields Description</i> .                                                                                              | All levels                   |
| <b>Interface flags</b>    | Information about the interface. Possible values are described in the “Interface Flags” section under <i>Common Output Fields Description</i> .                                                                                                 | All levels                   |

Table 112: show interfaces Gigabit Ethernet Output Fields (*continued*)

| Field Name                      | Field Description                                                                                                                                                                                                                                                           | Level of Output              |                         |
|---------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|-------------------------|
| <b>Link flags</b>               | Information about the link. Possible values are described in the “Links Flags” section under <i>Common Output Fields Description</i> .                                                                                                                                      | All levels                   |                         |
| <b>Wavelength</b>               | (10-Gigabit Ethernet dense wavelength-division multiplexing [DWDM] interfaces) Displays the configured wavelength, in nanometers (nm).                                                                                                                                      | All levels                   |                         |
| <b>Frequency</b>                | (10-Gigabit Ethernet DWDM interfaces only) Displays the frequency associated with the configured wavelength, in terahertz (THz).                                                                                                                                            | All levels                   |                         |
| <b>CoS queues</b>               | Number of CoS queues configured.                                                                                                                                                                                                                                            | <b>detail extensive</b> none |                         |
| <b>Schedulers</b>               | (Gigabit Ethernet intelligent queuing 2 (IQ2) interfaces only) Number of CoS schedulers configured.                                                                                                                                                                         | <b>extensive</b>             |                         |
| <b>Hold-times</b>               | Current interface hold-time up and hold-time down, in milliseconds.                                                                                                                                                                                                         | <b>detail extensive</b>      |                         |
| <b>Current address</b>          | Configured MAC address.                                                                                                                                                                                                                                                     | <b>detail extensive</b> none |                         |
| <b>Hardware address</b>         | Hardware MAC address.                                                                                                                                                                                                                                                       | <b>detail extensive</b> none |                         |
| <b>Last flapped</b>             | Date, time, and how long ago the interface went from down to up. The format is <b>Last flapped: year-month-day hour:minute:second:timezone (hour:minute:second ago)</b> . For example, <b>Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> .                        | <b>detail extensive</b> none |                         |
| <b>Input Rate</b>               | Input rate in bits per second (bps) and packets per second (pps). The value in this field also includes the Layer 2 overhead bytes for ingress traffic on Ethernet interfaces if you enable accounting of Layer 2 overhead at the PIC level or the logical interface level. | None specified               |                         |
| <b>Output Rate</b>              | Output rate in bps and pps. The value in this field also includes the Layer 2 overhead bytes for egress traffic on Ethernet interfaces if you enable accounting of Layer 2 overhead at the PIC level or the logical interface level.                                        | None specified               |                         |
| <b>Statistics last cleared</b>  | Time when the statistics for the interface were last set to zero.                                                                                                                                                                                                           | <b>detail extensive</b>      |                         |
| <b>Egress account overhead</b>  | Layer 2 overhead in bytes that is accounted in the interface statistics for egress traffic.                                                                                                                                                                                 | <b>detail extensive</b>      |                         |
| <b>Ingress account overhead</b> | Layer 2 overhead in bytes that is accounted in the interface statistics for ingress traffic.                                                                                                                                                                                | <b>detail extensive</b>      | <b>detail extensive</b> |

Table 112: show interfaces Gigabit Ethernet Output Fields (*continued*)

| Field Name                | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Level of Output         |
|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
| <b>Traffic statistics</b> | <p>Number and rate of bytes and packets received and transmitted on the physical interface.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface. The value in this field also includes the Layer 2 overhead bytes for ingress traffic on Ethernet interfaces if you enable accounting of Layer 2 overhead at the PIC level or the logical interface level.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface. The value in this field also includes the Layer 2 overhead bytes for egress traffic on Ethernet interfaces if you enable accounting of Layer 2 overhead at the PIC level or the logical interface level.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul> <p>Gigabit Ethernet and 10-Gigabit Ethernet IQ PICs count the overhead and CRC bytes.</p> <p>For Gigabit Ethernet IQ PICs, the input byte counts vary by interface type. For more information, see <a href="#">Table 112 on page 1818</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>detail extensive</b> |
| <b>Input errors</b>       | <p>Input errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of the incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Runts</b>—Number of frames received that are smaller than the runt threshold.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that the Junos OS does not handle.</li> <li>• <b>L3 incompletes</b>—Number of incoming packets discarded because they failed Layer 3 (usually IPv4) sanity checks of the header. For example, a frame with less than 20 bytes of available IP header is discarded. L3 incomplete errors can be ignored by configuring the <code>ignore-l3-incompletes</code> statement.</li> <li>• <b>L2 channel errors</b>—Number of times the software did not find a valid logical interface for an incoming frame.</li> <li>• <b>L2 mismatch timeouts</b>—Number of malformed or short packets that caused the incoming packet handler to discard the frame as unreadable.</li> <li>• <b>FIFO errors</b>—Number of FIFO errors in the receive direction that are reported by the ASIC on the PIC. If this value is ever nonzero, the PIC is probably malfunctioning.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul> | <b>extensive</b>        |

Table 112: show interfaces Gigabit Ethernet Output Fields (*continued*)

| Field Name                     | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Level of Output         |
|--------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
| <b>Output errors</b>           | <p>Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and then up, or another problem occurs. If the number of carrier transitions increments quickly (perhaps once every 10 seconds), the cable, the far-end system, or the PIC or PIM is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Collisions</b>—Number of Ethernet collisions. The Gigabit Ethernet PIC supports only full-duplex operation, so for Gigabit Ethernet PICs, this number should always remain 0. If it is nonzero, there is a software bug.</li> <li>• <b>Aged packets</b>—Number of packets that remained in shared packet SDRAM so long that the system automatically purged them. The value in this field should never increment. If it does, it is most likely a software bug or possibly malfunctioning hardware.</li> <li>• <b>FIFO errors</b>—Number of FIFO errors in the send direction as reported by the ASIC on the PIC. If this value is ever nonzero, the PIC is probably malfunctioning.</li> <li>• <b>HS link CRC errors</b>—Number of errors on the high-speed links between the ASICs responsible for handling the router interfaces.</li> <li>• <b>MTU errors</b>—Number of packets whose size exceeded the MTU of the interface.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul> | <b>extensive</b>        |
| <b>Egress queues</b>           | <p>Total number of egress queues supported on the specified interface.</p> <p><b>NOTE:</b> In DPCs that are not of the enhanced type, such as DPC 40x1GE R, DPCE 20x1GE + 2x10GE R, or DPCE 40x1GE R, you might notice a discrepancy in the output of the <b>show interfaces</b> command because incoming packets might be counted in the Egress queues section of the output. This problem occurs on non-enhanced DPCs because the egress queue statistics are polled from IMQ (Inbound Message Queuing) block of the I-chip. The IMQ block does not differentiate between ingress and egress WAN traffic; as a result, the combined statistics are displayed in the egress queue counters on the Routing Engine. In a simple VPLS scenario, if there is no MAC entry in DMAC table (by sending unidirectional traffic), traffic is flooded and the input traffic is accounted in IMQ. For bidirectional traffic (MAC entry in DMAC table), if the outgoing interface is on the same I-chip then both ingress and egress statistics are counted in a combined way. If the outgoing interface is on a different I-chip or FPC, then only egress statistics are accounted in IMQ. This behavior is expected with non-enhanced DPCs</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>detail extensive</b> |

Table 112: show interfaces Gigabit Ethernet Output Fields (*continued*)

| Field Name                              | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Level of Output              |
|-----------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Ingress queues</b>                   | Total number of ingress queues supported on the specified interface. Displayed on IQ2 interfaces.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>extensive</b>             |
| <b>Queue counters (Ingress)</b>         | CoS queue number and its associated user-configured forwarding class name. Displayed on IQ2 interfaces. <ul style="list-style-type: none"> <li>• <b>Queued packets</b>—Number of queued packets.</li> <li>• <b>Transmitted packets</b>—Number of transmitted packets.</li> <li>• <b>Dropped packets</b>—Number of packets dropped by the ASIC's RED mechanism.</li> </ul>                                                                                                                                                                                                                                                                                                                               | <b>extensive</b>             |
| <b>Active alarms and Active defects</b> | Ethernet-specific defects that can prevent the interface from passing packets. When a defect persists for a certain amount of time, it is promoted to an alarm. Based on the routing device configuration, an alarm can ring the red or yellow alarm bell on the routing device, or turn on the red or yellow alarm LED on the craft interface. These fields can contain the value <b>None</b> or <b>Link</b> . <ul style="list-style-type: none"> <li>• <b>None</b>—There are no active defects or alarms.</li> <li>• <b>Link</b>—Interface has lost its link state, which usually means that the cable is unplugged, the far-end system has been turned off, or the PIC is malfunctioning.</li> </ul> | <b>detail extensive none</b> |
| <b>OTN alarms</b>                       | Active OTN alarms identified on the interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>detail extensive</b>      |
| <b>OTN defects</b>                      | OTN defects received on the interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>detail extensive</b>      |
| <b>OTN FEC Mode</b>                     | The FECmode configured on the interface. <ul style="list-style-type: none"> <li>• <b>efec</b>—Enhanced forward error correction (EFEC) is configured to detect and correct bit errors.</li> <li>• <b>gfec</b>—G.709 Forward error correction (GFEC) mode is configured to detect and correct bit errors.</li> <li>• <b>none</b>—FEC mode is not configured.</li> </ul>                                                                                                                                                                                                                                                                                                                                  | <b>detail extensive</b>      |
| <b>OTN Rate</b>                         | OTN mode. <ul style="list-style-type: none"> <li>• <b>fixed-stuff-bytes</b>—Fixed stuff bytes 11.0957 Gbps.</li> <li>• <b>no-fixed-stuff-bytes</b>—No fixed stuff bytes 11.0491 Gbps.</li> <li>• <b>pass-through</b>—Enable OTN passthrough mode.</li> <li>• <b>no-pass-through</b>—Do not enable OTN passthrough mode.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                      | <b>detail extensive</b>      |
| <b>OTN Line Loopback</b>                | Status of the line loopback, if configured for the DWDM OTN PIC. Its value can be: <b>enabled</b> or <b>disabled</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>detail extensive</b>      |
| <b>OTN FEC statistics</b>               | The forward error correction (FEC) counters for the DWDM OTN PIC. <ul style="list-style-type: none"> <li>• <b>Corrected Errors</b>—The count of corrected errors in the last second.</li> <li>• <b>Corrected Error Ratio</b>—The corrected error ratio in the last 25 seconds. For example, 1e-7 is 1 error per 10 million bits.</li> </ul>                                                                                                                                                                                                                                                                                                                                                             | <b>detail extensive</b>      |

| <b>PCS statistics</b>   | (10-Gigabit Ethernet interfaces) Displays Physical Coding Sublayer (PCS) fault conditions from the WAN PHY or the LAN PHY device. <ul style="list-style-type: none"> <li><b>Bit errors</b>—The number of seconds during which at least one bit error rate (BER) occurred while the PCS receiver is operating in normal mode.</li> <li><b>Errored blocks</b>—The number of seconds when at least one errored block occurred while the PCS receiver is operating in normal mode.</li> </ul>                                                                                                                                                                                                                                                                                                                                        | <b>detail extensive</b> |

Table 112: show interfaces Gigabit Ethernet Output Fields (*continued*)

| Field Name                            | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Level of Output  |
|---------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| <b>MAC statistics</b>                 | <p>Receive and Transmit statistics reported by the PIC's MAC subsystem, including the following:</p> <ul style="list-style-type: none"> <li>• <b>Total octets</b> and <b>total packets</b>—Total number of octets and packets. For Gigabit Ethernet IQ PICs, the received octets count varies by interface type. For more information, see <a href="#">Table 113 on page 1832</a></li> <li>• <b>Unicast packets</b>, <b>Broadcast packets</b>, and <b>Multicast packets</b>—Number of unicast, broadcast, and multicast packets.</li> <li>• <b>CRC/Align errors</b>—Total number of packets received that had a length (excluding framing bits, but including FCS octets) of between 64 and 1518 octets, inclusive, and had either a bad FCS with an integral number of octets (FCS Error) or a bad FCS with a nonintegral number of octets (Alignment Error).</li> <li>• <b>FIFO error</b>—Number of FIFO errors that are reported by the ASIC on the PIC. If this value is ever nonzero, the PIC or a cable is probably malfunctioning.</li> <li>• <b>MAC control frames</b>—Number of MAC control frames.</li> <li>• <b>MAC pause frames</b>—Number of MAC control frames with <b>pause</b> operational code.</li> <li>• <b>Oversized frames</b>—Number of frames that exceed 1518 octets.</li> <li>• <b>Jabber frames</b>—Number of frames that were longer than 1518 octets (excluding framing bits, but including FCS octets), and had either an FCS error or an alignment error. This definition of jabber is different from the definition in IEEE-802.3 section 8.2.1.5 (10BASE5) and section 10.3.1.4 (10BASE2). These documents define jabber as the condition in which any packet exceeds 20 ms. The allowed range to detect jabber is from 20 ms to 150 ms.</li> <li>• <b>Fragment frames</b>—Total number of packets that were less than 64 octets in length (excluding framing bits, but including FCS octets), and had either an FCS error or an alignment error. Fragment frames normally increment because both runts (which are normal occurrences caused by collisions) and noise hits are counted.</li> <li>• <b>VLAN tagged frames</b>—Number of frames that are VLAN tagged. The system uses the TPID of 0x8100 in the frame to determine whether a frame is tagged or not.</li> <li>• <b>Code violations</b>—Number of times an event caused the PHY to indicate "Data reception error" or "invalid data symbol error."</li> </ul> | <b>extensive</b> |
| <b>OTN Received Overhead Bytes</b>    | APS/PCC0: 0x02, APS/PCC1: 0x11, APS/PCC2: 0x47, APS/PCC3: 0x58 Payload Type: 0x08                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>extensive</b> |

Table 112: show interfaces Gigabit Ethernet Output Fields (*continued*)

| Field Name        | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Level of Output |
|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| Filter statistics | <p>Receive and Transmit statistics reported by the PIC's MAC address filter subsystem. The filtering is done by the content-addressable memory (CAM) on the PIC. The filter examines a packet's source and destination MAC addresses to determine whether the packet should enter the system or be rejected.</p> <ul style="list-style-type: none"> <li>• <b>Input packet count</b>—Number of packets received from the MAC hardware that the filter processed.</li> <li>• <b>Input packet rejects</b>—Number of packets that the filter rejected because of either the source MAC address or the destination MAC address.</li> <li>• <b>Input DA rejects</b>—Number of packets that the filter rejected because the destination MAC address of the packet is not on the accept list. It is normal for this value to increment. When it increments very quickly and no traffic is entering the routing device from the far-end system, either there is a bad ARP entry on the far-end system, or multicast routing is not on and the far-end system is sending many multicast packets to the local routing device (which the routing device is rejecting).</li> <li>• <b>Input SA rejects</b>—Number of packets that the filter rejected because the source MAC address of the packet is not on the accept list. The value in this field should increment only if source MAC address filtering has been enabled. If filtering is enabled, if the value increments quickly, and if the system is not receiving traffic that it should from the far-end system, it means that the user-configured source MAC addresses for this interface are incorrect.</li> <li>• <b>Output packet count</b>—Number of packets that the filter has given to the MAC hardware.</li> <li>• <b>Output packet pad count</b>—Number of packets the filter padded to the minimum Ethernet size (60 bytes) before giving the packet to the MAC hardware. Usually, padding is done only on small ARP packets, but some very small IP packets can also require padding. If this value increments rapidly, either the system is trying to find an ARP entry for a far-end system that does not exist or it is misconfigured.</li> <li>• <b>Output packet error count</b>—Number of packets with an indicated error that the filter was given to transmit. These packets are usually aged packets or are the result of a bandwidth problem on the FPC hardware. On a normal system, the value of this field should not increment.</li> <li>• <b>CAM destination filters, CAM source filters</b>—Number of entries in the CAM dedicated to destination and source MAC address filters. There can only be up to 64 source entries. If source filtering is disabled, which is the default, the values for these fields should be 0.</li> </ul> | extensive       |

| Received path trace, Transmitted path trace | <p>(10-Gigabit Ethernet interfaces, WAN PHY mode) SONET/SDH interfaces allow path trace bytes to be sent inband across the SONET/SDH link. Juniper Networks and other router manufacturers use these bytes to help diagnose misconfigurations and network errors by setting the transmitted path trace message so that it contains the system hostname and name of the physical interface. The received path trace value is the message received from the routing device at the other end of the fiber. The transmitted path trace value is the message that this routing device transmits.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | extensive       |
| Packet Forwarding Engine configuration      | <p>Information about the configuration of the Packet Forwarding Engine:</p> <ul style="list-style-type: none"> <li>• <b>Destination slot</b>—FPC slot number.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | extensive       |

Table 112: show interfaces Gigabit Ethernet Output Fields (*continued*)

| Field Name               | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Level of Output              |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CoS information</b>   | Information about the CoS queue for the physical interface. <ul style="list-style-type: none"> <li>• <b>CoS transmit queue</b>—Queue number and its associated user-configured forwarding class name.</li> <li>• <b>Bandwidth %</b>—Percentage of bandwidth allocated to the queue.</li> <li>• <b>Bandwidth bps</b>—Bandwidth allocated to the queue (in bps).</li> <li>• <b>Buffer %</b>—Percentage of buffer space allocated to the queue.</li> <li>• <b>Buffer usec</b>—Amount of buffer space allocated to the queue, in microseconds. This value is nonzero only if the buffer size is configured in terms of time.</li> <li>• <b>Priority</b>—Queue priority: <b>low</b> or <b>high</b>.</li> <li>• <b>Limit</b>—Displayed if rate limiting is configured for the queue. Possible values are <b>none</b> and <b>exact</b>. If <b>exact</b> is configured, the queue transmits only up to the configured bandwidth, even if excess bandwidth is available. If <b>none</b> is configured, the queue transmits beyond the configured bandwidth if bandwidth is available.</li> </ul> | <b>extensive</b>             |
| <b>Logical Interface</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                              |
| <b>Logical interface</b> | Name of the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | All levels                   |
| <b>Index</b>             | Index number of the logical interface, which reflects its initialization sequence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>detail extensive</b> none |
| <b>SNMP ifIndex</b>      | SNMP interface index number for the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>detail extensive</b> none |
| <b>Generation</b>        | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>detail extensive</b>      |
| <b>Flags</b>             | Information about the logical interface. Possible values are described in the "Logical Interface Flags" section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | All levels                   |

| Field Name                      | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Level of Output              |
|---------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Transit statistics</b>       | Number and rate of bytes and packets transiting the switch.<br><br><b>NOTE:</b> For Gigabit Ethernet intelligent queuing 2 (IQ2) interfaces, the logical interface egress statistics might not accurately reflect the traffic on the wire when output shaping is applied. Traffic management output shaping might drop packets after they are tallied by the <b>Output bytes</b> and <b>Output packets</b> interface counters. However, correct values display for both of these egress statistics when per-unit scheduling is enabled for the Gigabit Ethernet IQ2 physical interface, or when a single logical interface is actively using a shared scheduler. | <b>extensive</b>             |
| <b>Generation</b>               | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | <b>detail extensive</b>      |
| <b>Route Table</b>              | Route table in which the logical interface address is located. For example, <b>0</b> refers to the routing table inet.0.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>detail extensive none</b> |
| <b>Flags</b>                    | Information about protocol family flags. Possible values are described in the “Family Flags” section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>detail extensive</b>      |
| <b>Donor interface</b>          | (Unnumbered Ethernet) Interface from which an unnumbered Ethernet interface borrows an IPv4 address.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>detail extensive none</b> |
| <b>Preferred source address</b> | (Unnumbered Ethernet) Secondary IPv4 address of the donor loopback interface that acts as the preferred source address for the unnumbered Ethernet interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>detail extensive none</b> |
| <b>Input Filters</b>            | Names of any input filters applied to this interface. If you specify a precedence value for any filter in a dynamic profile, filter precedence values appear in parenthesis next to all interfaces.                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>detail extensive</b>      |
| <b>Output Filters</b>           | Names of any output filters applied to this interface. If you specify a precedence value for any filter in a dynamic profile, filter precedence values appear in parenthesis next to all interfaces.                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>detail extensive</b>      |
| <b>Mac-Validate Failures</b>    | Number of MAC address validation failures for packets and bytes. This field is displayed when MAC address validation is enabled for the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>detail extensive none</b> |
| <b>Addresses, Flags</b>         | Information about the address flags. Possible values are described in the “Addresses Flags” section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>detail extensive none</b> |
| <b><i>protocol-family</i></b>   | Protocol family configured on the logical interface. If the protocol is <b>inet</b> , the IP address of the interface is also displayed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>brief</b>                 |
| <b>Flags</b>                    | Information about address flag (possible values are described in the “Addresses Flags” section under <i>Common Output Fields Description</i> ).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | <b>detail extensive none</b> |
| <b>Destination</b>              | IP address of the remote side of the connection.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>detail extensive none</b> |
| <b>Local</b>                    | IP address of the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <b>detail extensive none</b> |
| <b>Broadcast</b>                | Broadcast address of the logical interlace.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | <b>detail extensive none</b> |

Table 112: show interfaces Gigabit Ethernet Output Fields (*continued*)

| Field Name | Field Description                                                 | Level of Output  |
|------------|-------------------------------------------------------------------|------------------|
| Generation | Unique number for use by Juniper Networks technical support only. | detail extensive |

For Gigabit Ethernet IQ PICs, traffic and MAC statistics output varies. [Table 113 on page 1832](#) describes the traffic and MAC statistics for two sample interfaces, each of which is sending traffic in packets of 500 bytes (including 478 bytes for the Layer 3 packet, 18 bytes for the Layer 2 VLAN traffic header, and 4 bytes for cyclic redundancy check [CRC] information). In [Table 113 on page 1832](#), the **ge-0/3/0** interface is the inbound physical interface, and the **ge-0/0/0** interface is the outbound physical interface. On both interfaces, traffic is carried on logical unit .50 (VLAN 50).

Table 113: Gigabit Ethernet IQ PIC Traffic and MAC Statistics by Interface Type

| Interface Type              | Sample Command                               | Byte and Octet Counts Include                                                                                                                                                                                 | Comments                                                                                                                                      |
|-----------------------------|----------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|

**Output Fields** Table 114 on page 1843 lists the output fields for the **show interfaces** (management) command on the M Series routers, T Series routers, TX Matrix Plus routers, and PTX Series. Output fields are listed in the approximate order in which they appear.

**Table 114: show interfaces Output Fields for M Series, MX Series, T Series, and PTX Series Routers Management Ethernet Interface**

| Field Name                | Field Description                                                                                                                    | Level of Output              |
|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Physical Interface</b> |                                                                                                                                      |                              |
| <b>Physical interface</b> | Name of the physical interface.                                                                                                      | All levels                   |
| <b>Enabled</b>            | State of the interface. Possible values are described in the “Enabled Field” section under <i>Common Output Fields Description</i> . | All levels                   |
| <b>Interface index</b>    | Physical interface index number, which reflects its initialization sequence.                                                         | <b>detail extensive none</b> |
| <b>SNMP ifIndex</b>       | SNMP index number for the physical interface.                                                                                        | <b>detail extensive none</b> |
| <b>Generation</b>         | Unique number for use by Juniper Networks technical support only.                                                                    | <b>detail extensive</b>      |
| <b>Type</b>               | Type of interface.                                                                                                                   | All levels                   |

Table 114: show interfaces Output Fields for M Series, MX Series, T Series, and PTX Series Routers Management Ethernet Interface (*continued*)

| Field Name                     | Field Description                                                                                                                                                                                                                                                                                                                                                        | Level of Output              |
|--------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Link-level type</b>         | Encapsulation type used on the physical interface.                                                                                                                                                                                                                                                                                                                       | All levels                   |
| <b>MTU</b>                     | Maximum transmission unit (MTU)—Size of the largest packet to be transmitted.                                                                                                                                                                                                                                                                                            | All levels                   |
| <b>Clocking</b>                | Reference clock source of the interface.                                                                                                                                                                                                                                                                                                                                 | All levels                   |
| <b>Speed</b>                   | Network speed on the interface.                                                                                                                                                                                                                                                                                                                                          | All levels                   |
| <b>Device flags</b>            | Information about the physical device. Possible values are described in the “Device Flags” section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                       | All levels                   |
| <b>Interface flags</b>         | Information about the interface. Possible values are described in the “Interface Flags” section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                          | All levels                   |
| <b>Link type</b>               | Data transmission type.                                                                                                                                                                                                                                                                                                                                                  | <b>detail extensive none</b> |
| <b>Link flags</b>              | Information about the link. Possible values are described in the “Link Flags” section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                    | <b>detail extensive</b>      |
| <b>Physical info</b>           | Information about the physical interface.                                                                                                                                                                                                                                                                                                                                | <b>detail extensive</b>      |
| <b>Hold-times</b>              | Current interface hold-time up and hold-time down. Value is in milliseconds.                                                                                                                                                                                                                                                                                             | <b>detail extensive</b>      |
| <b>Current address</b>         | Configured MAC address.                                                                                                                                                                                                                                                                                                                                                  | <b>detail extensive none</b> |
| <b>Hardware address</b>        | Media access control (MAC) address of the interface.                                                                                                                                                                                                                                                                                                                     | <b>detail extensive none</b> |
| <b>Alternate link address</b>  | Backup link address.                                                                                                                                                                                                                                                                                                                                                     | <b>detail extensive</b>      |
| <b>Last flapped</b>            | Date, time, and how long ago the interface went from down to up. The format is <b>Last flapped: year-month-day hour:minute:second timezone (hour:minute:second ago)</b> . For example, <b>Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> .                                                                                                                     | <b>detail extensive none</b> |
| <b>Input packets</b>           | Number of packets received on the physical interface.                                                                                                                                                                                                                                                                                                                    | None specified               |
| <b>Output packets</b>          | Number of packets transmitted on the physical interface.                                                                                                                                                                                                                                                                                                                 | None specified               |
| <b>Statistics last cleared</b> | Time when the statistics for the interface were last set to zero.                                                                                                                                                                                                                                                                                                        | <b>detail extensive</b>      |
| <b>Traffic statistics</b>      | <p>Number and rate of bytes and packets received and transmitted on the logical and physical interface.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes, Output bytes</b>—Number of bytes received and transmitted on the interface.</li> <li>• <b>Input packets, Output packets</b>—Number of packets received and transmitted on the interface.</li> </ul> | <b>detail extensive</b>      |

Table 114: show interfaces Output Fields for M Series, MX Series, T Series, and PTX Series Routers Management Ethernet Interface (*continued*)

| Field Name               | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Level of Output              |
|--------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Input errors</b>      | <ul style="list-style-type: none"> <li>• <b>Errors</b>—Input errors on the interface.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Runts</b>—Frames received smaller than the runt threshold.</li> <li>• <b>Giants</b>—Frames received larger than the giant threshold.</li> <li>• <b>Policed Discards</b>—Frames that the incoming packet match code discarded because they were not recognized or were not of interest. Usually, this field reports protocols that Junos does not support.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>                                                                                                    | <b>extensive</b>             |
| <b>Output errors</b>     | <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and then up, or another problem occurs. If the number of carrier transitions increments quickly, possibly once every 10 seconds, the cable, the remote system, or the interface is malfunctioning.</li> <li>• <b>Errors</b>—Sum of outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet dropped by the ASIC RED mechanism.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul> | <b>extensive</b>             |
| <b>Logical Interface</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                              |

| <b>Generation</b>        | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>detail extensive</b>      |

Table 114: show interfaces Output Fields for M Series, MX Series, T Series, and PTX Series Routers Management Ethernet Interface (*continued*)

| Field Name              | Field Description                                                                                                                                        | Level of Output       |
|-------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------|
| <b>Route table</b>      | Route table in which this address exists. For example, <b>Route table:0</b> refers to inet.0.                                                            | detail extensive      |
| <b>Flags</b>            | Information about the protocol family flags. Possible values are described in the “Family Flags” section under <i>Common Output Fields Description</i> . | detail extensive none |
| <b>Addresses, Flags</b> | Information about address flags. Possible values are described in the “Addresses Flags” section under <i>Common Output Fields Description</i> .          | detail extensive none |
| <b>Destination</b>      | IP address of the remote side of the connection.                                                                                                         | detail extensive none |
| <b>Local</b>            | IP address of the logical interface.                                                                                                                     | detail extensive none |
| <b>Broadcast</b>        | Broadcast address.                                                                                                                                       | detail extensive none |
| <b>Generation</b>       | Unique number for use by Juniper Networks technical support only.                                                                                        | detail extensive      |

## Sample Output

### show interfaces brief (Management Ethernet)

```

user@host> show interfaces fxp0 brief
Physical interface: fxp0, Enabled, Physical link is Up
 Type: Ethernet, Link-level type: Ethernet, MTU: 1514, Clocking: Unspecified,
 Speed: 100mbps
 Device flags : Present Running
 Interface flags: SNMP-Traps

Logical interface fxp0.0
 Flags: SNMP-Traps Encapsulation: ENET2
 inet 192.168.70.143/21

```

### show interfaces (Management Ethernet)

```

user@host> show interfaces fxp0
Physical interface: fxp0, Enabled, Physical link is Up
 Interface index: 1, SNMP ifIndex: 1
 Type: Ethernet, Link-level type: Ethernet, MTU: 1514, Speed: 100mbps
 Device flags : Present Running
 Interface flags: SNMP-Traps
 Link type : Half-Duplex
 Current address: 00:00:5E:00:53:89, Hardware address: 00:00:5E:00:53:89
 Last flapped : Never
 Input packets : 80804
 Output packets: 1105

Logical interface fxp0.0 (Index 2) (SNMP ifIndex 13)
 Flags: SNMP-Traps Encapsulation: ENET2
 Protocol inet, MTU: 1500
 Flags: Is-Primary
 Addresses, Flags: Is-Preferred Is-Primary

```

Destination: 192.168.64/21, Local: 192.168.70.143,  
Broadcast: 192.168.71.255

### show interfaces (Management Ethernet [TX Matrix Plus Router])

```
user@host> show interfaces em0
Physical interface: em0, Enabled, Physical link is Up
 Interface index: 8, SNMP ifIndex: 17
 Type: Ethernet, Link-level type: Ethernet, MTU: 1514, Speed: 100mbps
 Device flags : Present Running
 Interface flags: SNMP-Traps
 Link type : Full-Duplex
 Current address: 00:00:5E:00:53:c0, Hardware address: 00:00:5E:00:53:c0
 Last flapped : Never
 Input packets : 1424
 Output packets: 5282

 Logical interface em0.0 (Index 3) (SNMP ifIndex 18)
 Flags: SNMP-Traps Encapsulation: ENET2
 Input packets : 1424
 Output packets: 5282
 Protocol inet, MTU: 1500
 Flags: Is-Primary
 Addresses, Flags: Is-Preferred Is-Primary
 Destination: 192.168.178.0/25, Local: 192.168.178.11, Broadcast:
 192.168.178.127
```

### show interfaces (Management Ethernet [PTX Series Packet Transport Routers])

```
user@host> show interfaces em0
Physical interface: em0, Enabled, Physical link is Up
 Interface index: 8, SNMP ifIndex: 0
 Type: Ethernet, Link-level type: Ethernet, MTU: 1514, Speed: 1000mbps
 Device flags : Present Running
 Interface flags: SNMP-Traps
 Link type : Full-Duplex
 Current address: 00:00:5E:00:53:1b, Hardware address: 00:00:5E:00:53:1b
 Last flapped : Never
 Input packets : 212581
 Output packets: 71

 Logical interface em0.0 (Index 3) (SNMP ifIndex 0)
 Flags: SNMP-Traps Encapsulation: ENET2
 Input packets : 212551
 Output packets: 71
 Protocol inet, MTU: 1500
 Flags: Is-Primary
 Addresses, Flags: Is-Default Is-Preferred Is-Primary
 Destination: 192.168.3/24, Local: 192.168.3.30,
 Broadcast: 192.168.3.255
```

### show interfaces detail (Management Ethernet)

```
user@host> show interfaces fxp0 detail
Physical interface: fxp0, Enabled, Physical link is Up
 Interface index: 1, SNMP ifIndex: 1, Generation: 0
 Type: Ethernet, Link-level type: Ethernet, MTU: 1514, Clocking: Unspecified,
 Speed: 100mbps
 Device flags : Present Running
 Interface flags: SNMP-Traps
```

```

Link type : Half-Duplex
Physical info : Unspecified
Hold-times : Up 0 ms, Down 0 ms
Current address: 00:00:5E:00:53:89, Hardware address: 00:00:5E:00:53:89
Alternate link address: Unspecified
Last flapped : Never
Statistics last cleared: Never
Traffic statistics:
Input bytes : 6484031
Output bytes : 167503
Input packets : 81008
Output packets: 1110

Logical interface fxp0.0 (Index 2) (SNMP ifIndex 13) (Generation 1)
Flags: SNMP-Traps Encapsulation: ENET2
Protocol inet, MTU: 1500, Generation: 6, Route table: 0
Flags: Is-Primary
Addresses, Flags: Is-Preferred Is-Primary
Destination: 192.168.64/21, Local: 192.168.70.143,
Broadcast: 192.168.71.255, Generation: 1

```

#### show interfaces detail (Management Ethernet [TX Matrix Plus Router])

```

user@host> show interfaces em0 detail
Physical interface: em0, Enabled, Physical link is Up
Interface index: 8, SNMP ifIndex: 17, Generation: 2
Type: Ethernet, Link-level type: Ethernet, MTU: 1514, Clocking: Unspecified,
Speed: 100mbps
Device flags : Present Running
Interface flags: SNMP-Traps
Link type : Full-Duplex
Physical info : Unspecified
Hold-times : Up 0 ms, Down 0 ms
Current address: 00:00:5E:00:53:c0, Hardware address: 00:00:5E:00:53:c0
Alternate link address: Unspecified
Last flapped : Never
Statistics last cleared: Never
Traffic statistics:
Input bytes : 124351
Output bytes : 1353212
Input packets : 1804
Output packets: 5344
IPv6 transit statistics:
Input bytes : 0
Output bytes : 0
Input packets : 0
Output packets: 0

Logical interface em0.0 (Index 3) (SNMP ifIndex 18) (Generation 1)
Flags: SNMP-Traps Encapsulation: ENET2
Traffic statistics:
Input bytes : 117135
Output bytes : 1331647
Input packets : 1804
Output packets: 5344
Local statistics:
Input bytes : 117135
Output bytes : 1331647
Input packets : 1804
Output packets: 5344
Protocol inet, MTU: 1500, Generation: 1, Route table: 0

```

```

Flags: Is-Primary
Addresses, Flags: Is-Preferred Is-Primary
Destination: 192.168.178.0/25, Local: 192.168.178.11, Broadcast:
192.168.178.127, Generation: 1

```

### show interfaces detail (Management Ethernet [PTX Packet Transport Routers])

```

user@host> show interfaces detail em0
Physical interface: em0, Enabled, Physical link is Up
 Interface index: 8, SNMP ifIndex: 0, Generation: 3
 Type: Ethernet, Link-level type: Ethernet, MTU: 1514, Clocking: Unspecified,

 Speed: 1000mbps
 Device flags : Present Running
 Interface flags: SNMP-Traps
 Link type : Full-Duplex
 Physical info : Unspecified
 Hold-times : Up 0 ms, Down 0 ms
 Current address: 00:00:5E:00:53:1b, Hardware address: 00:00:5E:00:53:1b

## show interfaces (PPPoE)

**Syntax** `show interfaces pp0.logical`  
`<brief | detail | extensive | terse>`  
`<descriptions>`  
`<media>`  
`<snmp-index snmp-index>`  
`<statistics>`

**Release Information** Command introduced before Junos OS Release 7.4.

**Description** (M120 routers, M320 routers, and MX Series routers only). Display status information about the PPPoE interface.

**Options** `pp0.logical`—Display standard status information about the PPPoE interface.

`brief | detail | extensive | terse`—(Optional) Display the specified level of output.

`descriptions`—(Optional) Display interface description strings.

`media`—(Optional) Display media-specific information about PPPoE interfaces.

`snmp-index snmp-index`—(Optional) Display information for the specified SNMP index of the interface.

`statistics`—(Optional) Display PPPoE interface statistics.

**Required Privilege Level** view

**List of Sample Output** [show interfaces \(PPPoE\) on page 1864](#)  
[show interfaces \(PPPoE over Aggregated Ethernet\) on page 1864](#)  
[show interfaces brief \(PPPoE\) on page 1865](#)  
[show interfaces detail \(PPPoE\) on page 1865](#)  
[show interfaces extensive \(PPPoE on M120 and M320 Routers\) on page 1866](#)

**Output Fields** [Table 115 on page 1858](#) lists the output fields for the **show interfaces (PPPoE)** command. Output fields are listed in the approximate order in which they appear.

**Table 115: show interfaces (PPPoE) Output Fields**

| Field Name                | Field Description                                                                                                                    | Level of Output              |
|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Physical Interface</b> |                                                                                                                                      |                              |
| <b>Physical interface</b> | Name of the physical interface.                                                                                                      | All levels                   |
| <b>Enabled</b>            | State of the interface. Possible values are described in the “Enabled Field” section under <i>Common Output Fields Description</i> . | All levels                   |
| <b>Interface index</b>    | Physical interface index number, which reflects its initialization sequence.                                                         | <b>detail extensive none</b> |

Table 115: show interfaces (PPPoE) Output Fields (*continued*)

| Field Name                     | Field Description                                                                                                                                  | Level of Output              |
|--------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>SNMP ifIndex</b>            | SNMP index number for the physical interface.                                                                                                      | <b>detail extensive none</b> |
| <b>Generation</b>              | Unique number for use by Juniper Networks technical support only.                                                                                  | <b>detail extensive</b>      |
| <b>Type</b>                    | Physical interface type (PPPoE).                                                                                                                   | All levels                   |
| <b>Link-level type</b>         | Encapsulation on the physical interface (PPPoE).                                                                                                   | All levels                   |
| <b>MTU</b>                     | MTU size on the physical interface.                                                                                                                | All levels                   |
| <b>Clocking</b>                | Reference clock source. It can be <b>Internal</b> or <b>External</b> .                                                                             | All levels                   |
| <b>Speed</b>                   | Speed at which the interface is running.                                                                                                           | All levels                   |
| <b>Device flags</b>            | Information about the physical device. Possible values are described in the "Device Flags" section under <i>Common Output Fields Description</i> . | All levels                   |
| <b>Interface flags</b>         | Information about the interface. Possible values are described in the "Interface Flags" section under <i>Common Output Fields Description</i> .    | All levels                   |
| <b>Link type</b>               | Physical interface link type: <b>full duplex</b> or <b>half duplex</b> .                                                                           | All levels                   |
| <b>Link flags</b>              | Information about the interface. Possible values are described in the "Link Flags" section under <i>Common Output Fields Description</i> .         | All levels                   |
| <b>Input rate</b>              | Input rate in bits per second (bps) and packets per second (pps).                                                                                  | None specified               |
| <b>Output rate</b>             | Output rate in bps and pps.                                                                                                                        | None specified               |
| <b>Physical Info</b>           | Physical interface information.                                                                                                                    | All levels                   |
| <b>Hold-times</b>              | Current interface hold-time up and hold-time down, in milliseconds.                                                                                | <b>detail extensive</b>      |
| <b>Current address</b>         | Configured MAC address.                                                                                                                            | <b>detail extensive</b>      |
| <b>Hardware address</b>        | MAC address of the hardware.                                                                                                                       | <b>detail extensive</b>      |
| <b>Alternate link address</b>  | Backup address of the link.                                                                                                                        | <b>detail extensive</b>      |
| <b>Statistics last cleared</b> | Time when the statistics for the interface were last set to zero.                                                                                  | <b>detail extensive</b>      |

Table 115: show interfaces (PPPoE) Output Fields (*continued*)

| Field Name                     | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Level of Output         |
|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
| <b>Traffic statistics</b>      | <p>Number and rate of bytes and packets received and transmitted on the physical interface.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>detail extensive</b> |
| <b>IPv6 transit statistics</b> | <p>Number of IPv6 transit bytes and packets received and transmitted on the physical interface if IPv6 statistics tracking is enabled.</p> <p><b>NOTE:</b> These fields include dropped traffic and exception traffic, as those fields are not separately defined.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>detail extensive</b> |
| <b>Input errors</b>            | <p>Input errors on the interface:</p> <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Runts</b>—Number of frames received that are smaller than the runt threshold.</li> <li>• <b>Giants</b>—Number of frames received that are larger than the giant threshold.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that the Junos OS does not handle.</li> <li>• <b>Resource errors</b>—Sum of B chip Tx drops and IXP Tx net transmit drops.</li> </ul>                                                                                                            | <b>extensive</b>        |
| <b>Output errors</b>           | <p>Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b> —Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and then up, or another problem occurs. If the number of carrier transitions increments quickly (perhaps once every 10 seconds), then the cable, the far-end system, or the PIM is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>MTU errors</b>—Number of packets whose size exceeded the MTU of the interface.</li> <li>• <b>Resource errors</b>—Sum of B chip Tx drops and IXP Tx net transmit drops.</li> </ul> | <b>extensive</b>        |

| <b>Logical interface</b>  | Name of the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | All levels                   |
| <b>Index</b>              | Logical interface index number (which reflects its initialization sequence).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>detail extensive none</b> |
| <b>SNMP ifIndex</b>       | Logical interface SNMP interface index number.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>detail extensive none</b> |
| <b>Generation</b>         | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>detail extensive</b>      |
| <b>Flags</b>              | Information about the logical interface. Possible values are described in the “Logical Interface Flags” section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | All levels                   |
| <b>Encapsulation</b>      | Type of encapsulation configured on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | All levels                   |
| <b>PPP parameters</b>     | PPP status: <ul style="list-style-type: none"> <li>• LCP restart timer—Length of time (in milliseconds) between successive Link Control Protocol (LCP) configuration requests.</li> <li>• NCP restart timer—Length of time (in milliseconds) between successive Network Control Protocol (NCP) configuration requests.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>detail</b>                |
| <b>PPPoE</b>              | PPPoE status: <ul style="list-style-type: none"> <li>• <b>State</b>—State of the logical interface (<b>up</b> or <b>down</b>).</li> <li>• <b>Session ID</b>—PPPoE session ID.</li> <li>• <b>Service name</b>—Type of service required. Can be used to indicate an Internet service provider (ISP) name or a class or quality of service.</li> <li>• <b>Configured AC name</b>—Configured access concentrator name.</li> <li>• <b>Auto-reconnect timeout</b>—Time after which to try to reconnect after a PPPoE session is terminated, in seconds.</li> <li>• <b>Idle Timeout</b>—Length of time (in seconds) that a connection can be idle before disconnecting.</li> <li>• <b>Underlying interface</b>—Interface on which PPPoE is running.</li> </ul> | All levels                   |
| <b>Link</b>               | Name of the physical interfaces for member links in an aggregated Ethernet bundle for a PPPoE over aggregated Ethernet configuration. PPPoE traffic goes out on these interfaces.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | All levels                   |
| <b>Traffic statistics</b> | Total number of bytes and packets received and transmitted on the logical interface. These statistics are the sum of the local and transit statistics. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. This counter usually takes less than 1 second to stabilize.                                                                                                                                                                                                                                                                                                                                                                                                              | <b>detail extensive</b>      |

Table 115: show interfaces (PPPoE) Output Fields (*continued*)

| Field Name              | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Level of Output  |
|-------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| IPv6 transit statistics | <p>Number of IPv6 transit bytes and packets received and transmitted on the logical interface if IPv6 statistics tracking is enabled.</p> <p><b>NOTE:</b> The packet and byte counts in these fields include traffic that is dropped and does not leave the router.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>                                                                                                                                                                                                                                                                                                        | detail extensive |
| Local statistics        | <p>Statistics for traffic received from and transmitted to the Routing Engine. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. This counter usually takes less than 1 second to stabilize.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | detail extensive |
| Transit statistics      | <p>Statistics for traffic transiting the router. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. This counter usually takes less than 1 second to stabilize.</p> <p><b>NOTE:</b> The packet and byte counts in these fields include traffic that is dropped and does not leave the router.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | detail extensive |
| Keepalive settings      | <p>(PPP and HDLC) Configured settings for keepalives.</p> <ul style="list-style-type: none"> <li>• <b>interval seconds</b>—The time in seconds between successive keepalive requests. The range is 10 seconds through 32,767 seconds, with a default of 10 seconds.</li> <li>• <b>down-count number</b>—The number of keepalive packets a destination must fail to receive before the network takes a link down. The range is 1 through 255, with a default of 3.</li> <li>• <b>up-count number</b>—The number of keepalive packets a destination must receive to change a link's status from down to up. The range is 1 through 255, with a default of 1.</li> </ul>                                                                                                                                                                                                                                                                       | detail extensive |
| Keepalive statistics    | <p>(PPP and HDLC) Information about keepalive packets.</p> <ul style="list-style-type: none"> <li>• <b>Input</b>—Number of keepalive packets received by PPP. <ul style="list-style-type: none"> <li>• <b>(last seen 00:00:00 ago)</b>—Time the last keepalive packet was received, in the format <i>hh:mm:ss</i>.</li> </ul> </li> <li>• <b>Output</b>—Number of keepalive packets sent by PPP and how long ago the last keepalive packets were sent and received. <ul style="list-style-type: none"> <li>• <b>(last seen 00:00:00 ago)</b>—Time the last keepalive packet was sent, in the format <i>hh:mm:ss</i>.</li> </ul> </li> </ul> <p>(MX Series routers with MPCs/MICs) When an MX Series router with MPCs/MICs is using PPP fast keepalive for a PPP link, the display does not include the number of keepalive packets received or sent, or the amount of time since the router received or sent the last keepalive packet.</p> | detail extensive |
| Input packets           | Number of packets received on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | None specified   |

| <b>Route table</b>            | Routing table in which the logical interface address is located. For example, <b>0</b> refers to the routing table <b>inet.0</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <b>detail extensive</b> none |
| <b>Flags</b>                  | Information about the protocol family flags. Possible values are described in the “Family Flags” section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>detail extensive</b> none |

Table 115: show interfaces (PPPoE) Output Fields (*continued*)

| Field Name              | Field Description                                                                                                                                                                  | Level of Output              |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Addresses, Flags</b> | Information about the addresses configured for the protocol family. Possible values are described in the "Addresses Flags" section under <i>Common Output Fields Description</i> . | <b>detail extensive none</b> |
| <b>Destination</b>      | IP address of the remote side of the connection.                                                                                                                                   | <b>detail extensive none</b> |
| <b>Local</b>            | IP address of the logical interface.                                                                                                                                               | <b>detail extensive none</b> |
| <b>Broadcast</b>        | Broadcast address.                                                                                                                                                                 | <b>detail extensive none</b> |

## Sample Output

### show interfaces (PPPoE)

```

user@host> show interfaces pp0
Physical interface: pp0, Enabled, Physical link is Up
 Interface index: 128, SNMP ifIndex: 24
 Type: PPPoE, Link-level type: PPPoE, MTU: 1532
 Device flags : Present Running
 Interface flags: Point-To-Point SNMP-Traps
 Link type : Full-Duplex
 Link flags : None
 Input rate : 0 bps (0 pps)
 Output rate : 0 bps (0 pps)

Logical interface pp0.0 (Index 72) (SNMP ifIndex 72)
 Flags: Hardware-Down Point-To-Point SNMP-Traps 0x4000 Encapsulation: PPPoE
 PPPoE:
 State: SessionDown, Session ID: None,
 Service name: None, Configured AC name: sapphire,
 Auto-reconnect timeout: 100 seconds, Idle timeout: Never,
 Underlying interface: at-5/0/0.0 (Index 70)
 Input packets : 0
 Output packets: 0
 LCP state: Not-configured
 NCP state: inet: Not-configured, inet6: Not-configured, iso: Not-configured,
 mp1s: Not-configured
 CHAP state: Closed
 Protocol inet, MTU: 100
 Flags: User-MTU, Negotiate-Address

```

### show interfaces (PPPoE over Aggregated Ethernet)

```

user@host> show interfaces pp0.1073773821
Logical interface pp0.1073773821 (Index 80) (SNMP ifIndex 32584)
 Flags: Point-To-Point SNMP-Traps 0x4000 Encapsulation: PPPoE
 PPPoE:
 State: SessionUp, Session ID: 1,
 Session AC name: alcor, Remote MAC address: 00:00:5e:00:53:01,
 Underlying interface: demux0.100 (Index 88)
 Link:
 ge-1/0/0.32767
 ge-1/0/1.32767

```

```

 Input packets : 6
 Output packets: 6
 LCP state: Opened
 NCP state: inet: Opened, inet6: Not-configured, iso: Not-configured, mp1s:
Not-configured
 CHAP state: Closed
 PAP state: Success
 Protocol inet, MTU: 1500
 Flags: Sendbroadcast-pkt-to-re
 Addresses, Flags: Is-Primary
 Local: 203.0.113.1

```

### show interfaces brief (PPPoE)

```

user@host> show interfaces pp0 brief
Physical interface: pp0, Enabled, Physical link is Up
Type: PPPoE, Link-level type: PPPoE, MTU: 1532, Speed: Unspecified
Device flags : Present Running
Interface flags: Point-To-Point SNMP-Traps

Logical interface pp0.0
Flags: Hardware-Down Point-To-Point SNMP-Traps 0x4000 Encapsulation: PPPoE
PPPoE:
 State: SessionDown, Session ID: None,
 Service name: None, Configured AC name: sapphire,
 Auto-reconnect timeout: 100 seconds, Idle timeout: Never,
 Underlying interface: at-5/0/0.0 (Index 70)
inet

```

### show interfaces detail (PPPoE)

```

user@host> show interfaces pp0 detail
Physical interface: pp0, Enabled, Physical link is Up
Interface index: 128, SNMP ifIndex: 24, Generation: 9
Type: PPPoE, Link-level type: PPPoE, MTU: 1532, Speed: Unspecified
Device flags : Present Running
Interface flags: Point-To-Point SNMP-Traps
Link type : Full-Duplex
Link flags : None
Physical info : Unspecified
Hold-times : Up 0 ms, Down 0 ms
Current address: Unspecified, Hardware address: Unspecified
Alternate link address: Unspecified
Statistics last cleared: Never
Traffic statistics:
Input bytes : 0 0 bps
Output bytes : 0 0 bps
Input packets : 0 0 pps
Output packets: 0 0 pps
Logical interface pp0.0 (Index 72) (SNMP ifIndex 72) (Generation 14)
Flags: Hardware-Down Point-To-Point SNMP-Traps 0x4000 Encapsulation: PPPoE
PPPoE:
 State: SessionDown, Session ID: None,
 Service name: None, Configured AC name: sapphire,
 Auto-reconnect timeout: 100 seconds, Idle timeout: Never,
 Underlying interface: at-5/0/0.0 (Index 70)
Traffic statistics:
Input bytes : 0
Output bytes : 0
Input packets : 0

```

```

Output packets: 0
Local statistics:
Input bytes : 0
Output bytes : 0
Input packets: 0
Output packets: 0
Transit statistics:
Input bytes : 0 0 bps
Output bytes : 0 0 bps
Input packets: 0 0 pps
Output packets: 0 0 pps
LCP state: Not-configured
NCP state: inet: Not-configured, inet6: Not-configured, iso: Not-configured,
mpls: Not-configured
CHAP state: Closed
Protocol inet, MTU: 100, Generation: 14, Route table: 0
Flags: User-MTU, Negotiate-Address

```

### show interfaces extensive (PPPoE on M120 and M320 Routers)

```

user@host> show interfaces pp0 extensive
Physical interface: pp0, Enabled, Physical link is Up
Interface index: 128, SNMP ifIndex: 93, Generation: 129
Type: PPPoE, Link-level type: PPPoE, MTU: 1532, Speed: Unspecified
Device flags : Present Running
Interface flags: Point-To-Point SNMP-Traps
Link type : Full-Duplex
Link flags : None
Physical info : Unspecified
Hold-times : Up 0 ms, Down 0 ms
Current address: Unspecified, Hardware address: Unspecified
Alternate link address: Unspecified
Statistics last cleared: Never
Traffic statistics:
Input bytes : 972192 0 bps
Output bytes : 975010 0 bps
Input packets: 1338 0 pps
Output packets: 1473 0 pps
IPv6 transit statistics:
Input bytes : 0
Output bytes : 0
Input packets: 0
Output packets: 0
Input errors:
Errors: 0, Drops: 0, Framing errors: 0, Runts: 0, Giants: 0, Policed discards:
0,
Resource errors: 0
Output errors:
Carrier transitions: 0, Errors: 0, Drops: 0, MTU errors: 0, Resource errors:
0

Logical interface pp0.0 (Index 69) (SNMP ifIndex 96) (Generation 194)
Flags: Point-To-Point SNMP-Traps 0x4000 Encapsulation: PPPoE
PPPoE:
State: SessionUp, Session ID: 26,
Session AC name: None, AC MAC address: 00:00:5e:00:53:12,
Service name: None, Configured AC name: None,
Auto-reconnect timeout: Never, Idle timeout: Never,
Underlying interface: ge-3/0/1.0 (Index 67)
Traffic statistics:
Input bytes : 252

```

```

Output bytes : 296
Input packets: 7
Output packets: 8
IPv6 transit statistics:
 Input bytes : 0
 Output bytes : 0
 Input packets: 0
 Output packets: 0
Local statistics:
 Input bytes : 252
 Output bytes : 296
 Input packets: 7
 Output packets: 8
Transit statistics:
 Input bytes : 0 0 bps
 Output bytes : 0 0 bps
 Input packets: 0 0 pps
 Output packets: 0 0 pps
IPv6 transit statistics:
 Input bytes : 0
 Output bytes : 0
 Input packets: 0
 Output packets: 0
Keepalive settings: Interval 10 seconds, Up-count 1, Down-count 3
Keepalive statistics:
 Input : 1 (last seen 00:00:00 ago)
 Output: 1 (last sent 00:00:03 ago)
LCP state: Opened
NCP state: inet: Opened, inet6: Not-configured, iso: Not-configured, mpls:
Not-configured
CHAP state: Closed
PAP state: Closed
Protocol inet, MTU: 1492, Generation: 171, Route table: 0
Flags: None
Addresses, Flags: Is-Preferred Is-Primary
Destination: 203.0.113.2, Local: 203.0.113.1, Broadcast: Unspecified,
Generation: 206

| Field Name                     | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Level of Output    |
|--------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|
| <b>Interface set</b>           | <p>Name of the interface set or sets.</p> <p>For ACI interface sets, the set name is prefixed with <b>aci-</b>.</p> <p>For ALI interface sets, the set name is prefixed with the trusted option that the interface set is based on:</p> <ul style="list-style-type: none"> <li>• <b>aci</b>— The ACI is configured as the trusted option.</li> <li>• <b>ari</b>— The ARI is configured as the trusted option.</li> <li>• <b>aci+ari</b>— Both ACI and ARI are configured as the trusted option.</li> <li>• <b>noids</b>— Neither the ACI nor the ARI is configured as the trusted option and neither ACI nor ARI is received.</li> </ul>                                                             | All levels         |
| <b>Interface set index</b>     | Index number of the interface set.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>detail none</b> |
| <b>ACI VLAN</b>                | <p>For ACI interface sets, the string received in DHCP or PPPoE control packets that uniquely identifies the subscriber's access node and the DSL line on the access node. Only the <b>Agent Circuit ID</b> can be used to create the interface set.</p> <p><b>NOTE:</b> The ACI VLAN field is replaced with the Line Identity field when an ALI interface set is configured with the <b>line-identity</b> autoconfiguration stanza.</p>                                                                                                                                                                                                                                                             | <b>detail none</b> |
| <b>Line Identity</b>           | <p>For ALI interface sets, the trusted option received in DHCP or PPPoE control packets that uniquely identifies the subscriber's access node and the DSL line on the access node. The trusted option can be either or both of the following:</p> <ul style="list-style-type: none"> <li>• <b>Agent Circuit ID</b>—The ACI value</li> <li>• <b>Agent Remote ID</b>—The ARI value.</li> </ul> <p><b>NOTE:</b> When only <b>accept-no-ids</b> is configured as the trusted option, this field is not displayed.</p> <p><b>NOTE:</b> The Line Identity field is replaced with the ACI VLAN field when an ACI interface set is configured with the <b>agent-circuit-id</b> autoconfiguration stanza.</p> | <b>detail none</b> |
| <b>PPPoE</b>                   | Dynamic PPPoE subscriber interface that the router creates using the ACI or ALI interface set.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>detail none</b> |
| <b>Max Sessions</b>            | For dynamic PPPoE subscriber interfaces, maximum number of PPPoE logical interfaces that that can be activated on the underlying interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>detail none</b> |
| <b>Max Sessions VSA Ignore</b> | For dynamic PPPoE subscriber interfaces, whether the router is configured to ignore (clear) the PPPoE maximum session value returned by RADIUS in the Max-Clients-Per-Interface Juniper Networks VSA [26-143] and restore the PPPoE maximum session value on the underlying interface to the value configured with the <b>max-sessions</b> statement: <b>Off</b> (default) or <b>On</b> .                                                                                                                                                                                                                                                                                                            | <b>detail none</b> |

Table 116: Ethernet show interfaces interface-set Output Fields (*continued*)

| Field Name                     | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                    | Level of Output    |
|--------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|
| <b>Traffic statistics</b>      | Number and rate of bytes and packets received and transmitted on the specified interface set.<br><br><ul style="list-style-type: none"> <li><b>Input bytes, Output bytes</b>—Number of bytes and number of bytes per second received and transmitted on the interface set</li> <li><b>Input packets, Output packets</b>—Number of packets and number of packets per second received and transmitted on the interface set.</li> </ul> | <b>detail</b>      |
| <b>Egress queues supported</b> | Total number of egress queues supported on the specified interface set.                                                                                                                                                                                                                                                                                                                                                              | <b>detail</b>      |
| <b>Egress queues in use</b>    | Total number of egress queues used on the specified interface set.                                                                                                                                                                                                                                                                                                                                                                   | <b>detail</b>      |
| <b>Queue counters</b>          | <b>Queued packets, Transmitted packets, and Dropped packets</b> statistics for the four forwarding classes.                                                                                                                                                                                                                                                                                                                          | <b>detail</b>      |
| <b>Members</b>                 | List of all interface sets or, for ACI interface sets, list of all subscriber interfaces belonging to the specified ACI interface set.                                                                                                                                                                                                                                                                                               | <b>detail none</b> |

## Sample Output

### show interfaces interface-set terse

```

user@host> show interfaces interface-set terse

| <b>Release Information</b>      | Command introduced in Junos OS Release 8.5.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Description</b>              | Display information about the gigabit or 10-Gigabit Ethernet interface set queue. Supported in MX Series routers with enhanced queuing DPCs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Options</b>                  | <p><b><i>interface-set-name</i></b>—(Optional) Display information about the specified gigabit or 10-Gigabit Ethernet interface set. Wildcard values can be used in the interface set name.</p> <p><b>aggregate</b>—(Optional) Display the aggregated queuing statistics of all member logical interfaces for interface sets that have traffic-control profiles configured.</p> <p><b>both-ingress-egress</b>—(Optional) On Gigabit Ethernet Intelligent Queuing 2 (IQ2) PICs, display both ingress and egress queue statistics.</p> <p><b>egress</b>—(Optional) Display egress queue statistics.</p> <p><b>forwarding-class <i>class-name</i></b>—(Optional) Display queuing statistics for the specified forwarding class.</p> <p><b>ingress</b>—(Optional) On Gigabit Ethernet IQ2 PICs, display ingress queue statistics.</p> <p><b>remaining-traffic</b>—(Optional) Display the queuing statistics of all member logical interfaces for interface sets that do not have traffic-control profiles configured.</p> |
| <b>Required Privilege Level</b> | view                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

**Table 118: show interfaces interval Output Fields**

| Field Name         | Field Description                                                                                                                                                                                                                                                                                                                                             |
|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Physical interface | Name of the interface.                                                                                                                                                                                                                                                                                                                                        |
| SNMP ifIndex       | SNMP index number for the physical interface.                                                                                                                                                                                                                                                                                                                 |
| hh:mm-current      | Time of day (in hours and minutes) at the beginning of the latest counter interval. The value of the latest counter interval is always less than 15 minutes.                                                                                                                                                                                                  |
| hh:mm-hh:mm        | Time of day (in hours and minutes) at the beginning and end of each 15-minute interval.                                                                                                                                                                                                                                                                       |
| alarm or event: n  | Count of alarms and events within each 15-minute interval. The specific alarm or event depends on the interface media type. For a description of the alarm or event listed, see the <i>interface-type media</i> field (for example, <b>T1 media</b> ) under the <b>show interfaces</b> command for the particular interface type in which you are interested. |
| Interval Total     | Sum of all the alarm and defect counters for the last 24-hour period.                                                                                                                                                                                                                                                                                         |

Table 118: show interfaces interval Output Fields (*continued*)

| Field Name                         | Field Description                                                                                                                                      |

| <b>Release Information</b>      | Command introduced in Junos OS Release 8.4.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Description</b>              | Display integrated routing and bridging interfaces information.                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Options</b>                  | <p><b>brief   detail   extensive   terse</b>—(Optional) Display the specified level of output.</p> <p><b>descriptions</b>—(Optional) Display interface description strings.</p> <p><b>mac</b>—Display hardware MAC address</p> <p><b>media</b>—(Optional) Display media-specific information about network interfaces.</p> <p><b>snmp-index <i>snmp-index</i></b>—(Optional) Display information for the interface with the specified SNMP index.</p> <p><b>statistics</b>—(Optional) Display static interface statistics.</p> |
| <b>Additional Information</b>   | Integrated routing and bridging (IRB) provides simultaneous support for Layer 2 bridging and Layer 3 IP routing on the same interface. IRB enables you to route local packets to another routed interface or to another bridging domain that has a Layer 3 protocol configured.                                                                                                                                                                                                                                                |
| <b>Required Privilege Level</b> | view                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| <b>Output Fields</b>            | <a href="#">Table 119 on page 1885</a> lists the output fields for the <b>show interfaces irb</b> command. Output fields are listed in the approximate order in which they appear.                                                                                                                                                                                                                                                                                                                                             |

Table 119: show interfaces irb Output Fields

| Field Name         | Field Description                                                                                                                             | Level of Output |
|--------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| Physical Interface |                                                                                                                                               |                 |
| Physical interface | Name of the physical interface.                                                                                                               | All levels      |
| Enabled            | State of the physical interface. Possible values are described in the “Enabled Field” section under <i>Common Output Fields Description</i> . | All levels      |

Table 119: show interfaces irb Output Fields (*continued*)

| Field Name                     | Field Description                                                                                                                                                                                                                                          | Level of Output                    |
|--------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------|
| <b>Proto</b>                   | Protocol configured on the interface.                                                                                                                                                                                                                      | <b>terse</b>                       |
| <b>Interface index</b>         | Physical interface index number, which reflects its initialization sequence.                                                                                                                                                                               | <b>detail extensive none</b>       |
| <b>SNMP ifIndex</b>            | SNMP index number for the physical interface.                                                                                                                                                                                                              | <b>detail extensive none</b>       |
| <b>Type</b>                    | Physical interface type.                                                                                                                                                                                                                                   | <b>detail extensive none</b>       |
| <b>Link-level type</b>         | Encapsulation being used on the physical interface.                                                                                                                                                                                                        | <b>detail extensive brief none</b> |
| <b>MTU</b>                     | MTU size on the physical interface.                                                                                                                                                                                                                        | <b>detail extensive brief none</b> |
| <b>Clocking</b>                | Reference clock source: <b>Internal</b> or <b>External</b> . Always unspecified on IRB interfaces.                                                                                                                                                         | <b>detail extensive brief</b>      |
| <b>Speed</b>                   | Speed at which the interface is running. Always unspecified on IRB interfaces.                                                                                                                                                                             | <b>detail extensive brief</b>      |
| <b>Device flags</b>            | Information about the physical device. Possible values are described in the "Device Flags" section under <i>Common Output Fields Description</i> .                                                                                                         | <b>detail extensive brief none</b> |
| <b>Interface flags</b>         | Information about the interface. Possible values are described in the "Interface Flags" section under <i>Common Output Fields Description</i> .                                                                                                            | <b>detail extensive brief none</b> |
| <b>Link type</b>               | Physical interface link type: <b>full duplex</b> or <b>half duplex</b> .                                                                                                                                                                                   | <b>detail extensive none</b>       |
| <b>Link flags</b>              | Information about the link. Possible values are described in the "Links Flags" section under <i>Common Output Fields Description</i> .                                                                                                                     | <b>detail extensive none</b>       |
| <b>Physical Info</b>           | Physical interface information.                                                                                                                                                                                                                            | All levels                         |
| <b>Hold-times</b>              | Current interface hold-time up and hold-time down, in milliseconds.                                                                                                                                                                                        | <b>detail extensive</b>            |
| <b>Current address</b>         | Configured MAC address.                                                                                                                                                                                                                                    | <b>detail extensive none</b>       |
| <b>Hardware address</b>        | MAC address of the hardware.                                                                                                                                                                                                                               | <b>detail extensive none</b>       |
| <b>Alternate link address</b>  | Backup address of the link.                                                                                                                                                                                                                                | <b>detail extensive</b>            |
| <b>Last flapped</b>            | Date, time, and how long ago the interface went from down to up. The format is <b>Last flapped: year-month-day hours:minutes:seconds timezone (hours:minutes:seconds ago)</b> . For example, <b>Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> . | <b>detail extensive none</b>       |
| <b>Statistics last cleared</b> | Time when the statistics for the interface were last set to zero.                                                                                                                                                                                          | <b>detail extensive</b>            |

Table 119: show interfaces irb Output Fields (*continued*)

| Field Name                     | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Level of Output         |
|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
| <b>Traffic statistics</b>      | <p>Number and rate of bytes and packets received and transmitted on the physical interface.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>detail extensive</b> |
| <b>IPv6 transit statistics</b> | <p>Number of IPv6 transit bytes and packets received and transmitted on the physical interface if IPv6 statistics tracking is enabled.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>detail extensive</b> |
| <b>Input errors</b>            | <p>Input errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of the incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Runts</b>—Number of frames received that are smaller than the runt threshold.</li> <li>• <b>Giants</b>—Number of frames received that are larger than the giant threshold.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that the Junos OS does not handle.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>           | <b>detail extensive</b> |
| <b>Output errors</b>           | <p>Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and up, or another problem occurs. If the number of carrier transitions increments quickly (perhaps once every 10 seconds), the cable, the far-end system, or the DPC is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>MTU errors</b>—Number of packets whose size exceeded the MTU of the interface.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul> | <b>detail extensive</b> |

| Field Name                     | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Level of Output                 |
|--------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------|
| <b>Logical interface</b>       | Name of the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | All levels                      |
| <b>Index</b>                   | Index number of the logical interface (which reflects its initialization sequence).                                                                                                                                                                                                                                                                                                                                                                                                             | <b>detail extensive</b><br>none |
| <b>SNMP ifIndex</b>            | SNMP interface index number of the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>detail extensive</b><br>none |
| <b>Generation</b>              | Unique number for use by Juniper Networks technical support only.                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>detail extensive</b>         |
| <b>Flags</b>                   | Information about the logical interface. Possible values are described in the "Logical Interface Flags" section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                                                 | <b>detail extensive</b>         |
| <b>Encapsulation</b>           | Encapsulation on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                         | <b>detail extensive</b>         |
| <b>Bandwidth</b>               | Dummy value that is ignored by an IRB interface. IRB interfaces are pseudo interfaces and do not have physical bandwidth associated with them.                                                                                                                                                                                                                                                                                                                                                  | <b>detail extensive</b>         |
| <b>Routing Instance</b>        | Routing instance IRB is configured under.                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>detail extensive</b>         |
| <b>Bridging Domain</b>         | Bridging domain IRB is participating in.                                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>detail extensive</b>         |
| <b>Traffic statistics</b>      | Number and rate of bytes and packets received and transmitted on the logical interface. <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>                                             | <b>detail extensive</b>         |
| <b>IPv6 transit statistics</b> | Number of IPv6 transit bytes and packets received and transmitted on the logical interface if IPv6 statistics tracking is enabled. <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul> | <b>detail extensive</b>         |
| <b>Local statistics</b>        | Statistics for traffic received from and transmitted to the Routing Engine.                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>detail extensive</b>         |
| <b>Transit statistics</b>      | Statistics for traffic transiting the router.                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <b>detail extensive</b>         |
| <b>Protocol</b>                | Protocol family configured on the local interface. Possible values are described in the "Protocol Field" section under <i>Common Output Fields Description</i> .                                                                                                                                                                                                                                                                                                                                | <b>detail extensive</b>         |
| <b>MTU</b>                     | Maximum transmission unit size on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                        | <b>detail extensive</b>         |
| <b>Maximum labels</b>          | Maximum number of MPLS labels configured for the MPLS protocol family on the logical interface.                                                                                                                                                                                                                                                                                                                                                                                                 | <b>detail extensive</b><br>none |

Table 119: show interfaces irb Output Fields (*continued*)

| Field Name              | Field Description                                                                                                                                               | Level of Output         |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
| <b>Generation</b>       | Unique number for use by Juniper Networks technical support only.                                                                                               | <b>detail extensive</b> |
| <b>Route table</b>      | Routing table in which the logical interface address is located. For example, 0 refers to the routing table inet.0.                                             | <b>detail extensive</b> |
| <b>Addresses, Flags</b> | Information about address flags. Possible values are described in the “Addresses Flags” section under <i>Common Output Fields Description</i> .                 | <b>detail extensive</b> |
| <b>Policer</b>          | The policer that is to be evaluated when packets are received or transmitted on the interface.                                                                  | <b>detail extensive</b> |
| <b>Flags</b>            | Information about the logical interface. Possible values are described in the “Logical Interface Flags” section under <i>Common Output Fields Description</i> . | <b>detail extensive</b> |

## Sample Output

### show interfaces irb extensive

```

user@host> show interfaces irb extensive
Physical interface: irb, Enabled, Physical link is Up
 Interface index: 129, SNMP ifIndex: 23, Generation: 130
 Type: Ethernet, Link-level type: Ethernet, MTU: 1514, Clocking: Unspecified,
 Speed: Unspecified
 Device flags : Present Running
 Interface flags: SNMP-Traps
 Link type : Full-Duplex
 Link flags : None
 Physical info : Unspecified
 Hold-times : Up 0 ms, Down 0 ms
 Current address: 02:00:00:00:00:30, Hardware address: 02:00:00:00:00:30
 Alternate link address: Unspecified
 Last flapped : Never
 Statistics last cleared: Never
 Traffic statistics:
 Input bytes : 0
 Output bytes : 0
 Input packets : 0
 Output packets: 0
 IPv6 transit statistics:
 Input bytes : 0
 Output bytes : 0
 Input packets : 0
 Output packets: 0
 Input errors:
 Errors: 0, Drops: 0, Framing errors: 0, Runts: 0, Giants: 0, Policed discards:
0, Resource errors: 0
 Output errors:
 Carrier transitions: 0, Errors: 0, Drops: 0, MTU errors: 0, Resource errors:
0

 Logical interface irb.0 (Index 68) (SNMP ifIndex 70) (Generation 143)
 Flags: Hardware-Down SNMP-Traps 0x4000 Encapsulation: ENET2
 Bandwidth: 1000mbps

```

```

Routing Instance: customer_0 Bridging Domain: bd0
Traffic statistics:
 Input bytes : 0
 Output bytes : 0
 Input packets: 0
 Output packets: 0
IPv6 transit statistics:
 Input bytes : 0
 Output bytes : 0
 Input packets: 0
 Output packets: 0
Local statistics:
 Input bytes : 0
 Output bytes : 0
 Input packets: 0
 Output packets: 0
Transit statistics:
 Input bytes : 0 0 bps
 Output bytes : 0 0 bps
 Input packets: 0 0 pps
 Output packets: 0 0 pps
IPv6 transit statistics:
 Input bytes : 0
 Output bytes : 0
 Input packets: 0
 Output packets: 0
Protocol inet, MTU: 1500, Generation: 154, Route table: 0
 Addresses, Flags: Dest-route-down Is-Preferred Is-Primary
 Destination: 10.51.1/24, Local: 10.51.1.2, Broadcast: 10.51.1.255,
 Generation: 155
Protocol multiservice, MTU: 1500, Generation: 155, Route table: 0
 Flags: Is-Primary
 Policer: Input: __default_arp_policer

```

### show interfaces irb snmp-index

```

user@host> show interfaces snmp-index 25
Physical interface: irb, Enabled, Physical link is Up
Interface index: 128, SNMP ifIndex: 25
Type: Ethernet, Link-level type: Ethernet, MTU: 1514
Device flags : Present Running
Interface flags: SNMP-Traps
Link type : Full-Duplex
Link flags : None
Current address: 02:00:00:00:00:30, Hardware address: 02:00:00:00:00:30
Last flapped : Never
 Input packets : 0
 Output packets: 0

Logical interface irb.0 (Index 68) (SNMP ifIndex 70)
Flags: Hardware-Down SNMP-Traps 0x4000 Encapsulation: ENET2
Bandwidth: 1000mbps
Routing Instance: customer_0 Bridging Domain: bd0
Input packets : 0
Output packets: 0
Protocol inet, MTU: 1500
 Addresses, Flags: Dest-route-down Is-Preferred Is-Primary
 Destination: 10.51.1/24, Local: 10.51.1.2, Broadcast: 10.51.1.255
Protocol multiservice, MTU: 1500
 Flags: Is-Primary

```

## show interfaces mac-database

|                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| <b>Description</b>              | (M Series, T Series, MX Series routers, and PTX Series Packet Transport Routers only)<br>Display media access control (MAC) address information for the specified interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Options</b>                  | <p><b>ge-fpc/pic/port</b>—Display MAC addresses that have been learned on all logical interfaces on a particular physical interface.</p> <p><b>ge-fpc/pic/port.n</b>—Display MAC addresses that have been learned on a particular logical interface.</p> <p><b>aex</b>—Display MAC addresses that have been learned on a particular aggregated Ethernet interface.</p> <p><b>xe-fpc/pic/port</b>—Display MAC addresses that have been learned on all logical interfaces on a particular physical interface.</p> <p><b>xe-fpc/pic/port.n</b>—Display MAC addresses that have been learned on a particular logical interface.</p> <p><b>et-fpc/pic/port</b>—Display MAC addresses that have been learned on all logical interfaces on a particular physical interface.</p> <p><b>et-fpc/pic/port.n</b>—Display MAC addresses that have been learned on a particular logical interface.</p> <p><b>mac-address mac-address</b>—(Optional) Display detailed MAC address statistics, including policer information for <b>ge</b>, <b>xe</b>, and <b>et</b> interfaces.</p> |
| <b>Additional Information</b>   | On IQ2 PIC interfaces, the default value for maximum retention of entries in the MAC address table has changed, for cases in which the table is not full. The new holding time is 12 hours. The previous retention time of 3 minutes is still in effect when the table is full.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| <b>Physical Interface</b>       |                                                                                                                                                                                                                                                                                                                         |
| <b>Physical interface</b>       | Name of the physical interface.                                                                                                                                                                                                                                                                                         |
| <b>Enabled</b>                  | State of the physical interface. Possible values are described in the “Enabled Field” section under <i>Common Output Fields Description</i> .                                                                                                                                                                           |
| <b>Interface index</b>          | Physical interface index number, which reflects its initialization sequence.                                                                                                                                                                                                                                            |
| <b>SNMP ifIndex</b>             | SNMP index number for the physical interface.                                                                                                                                                                                                                                                                           |
| <b>Description</b>              | Description and name of the interface.                                                                                                                                                                                                                                                                                  |
| <b>Link-level type</b>          | Encapsulation being used on the physical interface.                                                                                                                                                                                                                                                                     |
| <b>MTU</b>                      | MTU size on the physical interface.                                                                                                                                                                                                                                                                                     |
| <b>Speed</b>                    | Speed at which the interface is running.                                                                                                                                                                                                                                                                                |
| <b>Loopback</b>                 | Whether loopback is enabled and the type of loopback: <b>local</b> or <b>remote</b> .                                                                                                                                                                                                                                   |
| <b>Source filtering</b>         | Whether source filtering is configured.                                                                                                                                                                                                                                                                                 |
| <b>Flow control</b>             | Whether flow control is enabled or disabled.                                                                                                                                                                                                                                                                            |
| <b>Minimum links needed</b>     | (Aggregated Ethernet interfaces only) Number of child links that must be operational for the aggregated interface to be operational.                                                                                                                                                                                    |
| <b>Minimum bandwidth needed</b> | (Aggregated Ethernet interfaces only) Minimum amount of bandwidth of child links that must be operational for the aggregated interface to be operational.                                                                                                                                                               |
| <b>Device flags</b>             | Information about the physical device. Possible values are described in the “Device Flags” section under <i>Common Output Fields Description</i> .                                                                                                                                                                      |
| <b>Current address</b>          | (Aggregated Ethernet interfaces only) Configured MAC address.                                                                                                                                                                                                                                                           |
| <b>Hardware address</b>         | (Aggregated Ethernet interfaces only) Hardware MAC address.                                                                                                                                                                                                                                                             |
| <b>Last flapped</b>             | (Aggregated Ethernet interfaces only) Date, time, and how long ago the interface went from down to up or from up to down. The format is <b>Last flapped: year-month-day hours:minutes:seconds timezone (wwksddays hours:minutes ago)</b> . For example, <b>Last flapped: 2013-12-18 04:33:22 PST (1w5d 22:23 ago)</b> . |

Table 120: show interfaces mac-database Output Fields (*continued*)

| Field Name                                                                 | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

## Sample Output

### show interfaces mac-database (All MAC Addresses on a Port)

```
user@host> show interfaces mac-database xe-0/3/3
```

Physical interface: xe-0/3/3, Enabled, Physical link is Up  
 Interface index: 372, SNMP ifIndex: 788  
 Link-level type: Ethernet, MTU: 1514, LAN-PHY mode, Speed: 10Gbps, Loopback: None, Source filtering: Disabled, Flow control: Enabled  
 Device flags : Present Running  
 Interface flags: SNMP-Traps Internal: 0x4000  
 Link flags : None

Logical interface xe-0/3/3.0 (Index 364) (SNMP ifIndex 829)

Flags: SNMP-Traps 0x4004000 Encapsulation: ENET2

#### show interfaces mac-database (All MAC Addresses on an Aggregated Ethernet Interface)

user@host> show interfaces mac-database ae4

Physical interface: ae4, Enabled, Physical link is Up  
 Interface index: 132, SNMP ifIndex: 588  
 Description: Member links xe-0/2/0  
 Link-level type: Ethernet, MTU: 9188, Speed: Unspecified, BPDU Error: None, MAC-REWRITE Error: None, Loopback: Disabled,  
 Source filtering: Disabled, Flow control: Disabled, Minimum links needed: 1, Minimum bandwidth needed: 0  
 Device flags : Present Running  
 Interface flags: Interface flags: SNMP-Traps Internal: 0x4000  
 Current address: 00:22:83:76:ff:c4, Hardware address: 00:22:83:76:ff:c4  
 Last flapped : 2013-12-18 04:33:22 PST (1w5d 22:23 ago)  
 Input rate : 62756384 bps (85266 pps)  
 Output rate : 62759472 bps (85272 pps)

Logical interface ae4.0 (Index 334) (SNMP ifIndex 647)

Flags: SNMP-Traps 0x4004000 Encapsulation: ENET2

| MAC address       | Input frames | Input bytes | Output frames | Output bytes |

| switchover mode            | The configured switchover mode for the multichassis aggregated Ethernet interface: <b>revertive</b> or <b>non-revertive</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| switchover status          | Status of the switchover if the <b>revert-time</b> statement is configured at the <b>[edit interfaces aex mc-ae]</b> hierarchy level.                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| revert time                | Revert time configured for the multichassis aggregated Ethernet interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| switchover time remaining  | Seconds left to trigger the switchover if the switchover is in progress.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Configuration Error Status | Reason for the configuration error.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

## Sample Output

### show interfaces mc-ae

```

user@host> show interfaces mc-ae ae0 unit 512
Member Links : ae0
Local Status : active
Peer Status : active

```

```

Logical Interface : ae0.512
Core Facing Interface : Label Ethernet Interface
ICL-PL : Label Ethernet Interface

```

### show interfaces mc-ae (Active/Active Bridging and VRRP over IRB on MX Series Routers)

```

user@host# show interfaces mc-ae ge-0/0/0.0
Member Link : ae0
Current State Machine's State: active
Local Status : active
Local State : up
Peer Status : active
Peer State : up
 Logical Interface : ae0.0
 Topology Type : bridge
 Local State : up
 Peer State : up
 Peer Ip/ICL-PL/State : 192.168.100.10 ge-0/0/0.0 up

```

### show interfaces mc-ae revertive-info

```

user@host> show interfaces mc-ae revertive-info id 2
Member Link : ae1
Current State Machine's State: mcae active state
Local Status : active
Local State : up
Peer Status : standby
Peer State : up
Switchover Mode : Non Revertive
Switchover Status : N/A
Revert Time : 1 Minutes
Switchover Remaining Time : N/A
 Logical Interface : ae1.1024
 Topology Type : bridge
 Local State : up
 Peer State : up
 Peer Ip/MCP/State : N/A

```

### show interfaces mc-ae extensive

```

user@host> show interfaces mc-ae extensive
Member Link : ae2
Current State Machine's State: mcae active state
Local Status : active
Local State : up
Peer Status : active
Peer State : up

Fields are listed in the approximate order in which they appear.                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

Table 122: show interfaces transport pm Output Fields

| Field Name                    | Field Description                                                                                  |
|-------------------------------|----------------------------------------------------------------------------------------------------|
| Physical interface            | Name of the physical interface.                                                                    |
| Interval                      | The 15 minute interval for performance monitoring.                                                 |
| Suspect Flag                  | TRUE if the performance monitoring data for the interval appears to                                |
| Reason                        | Reason for setting the suspect flag.                                                               |
| COUNT                         | Measured value.                                                                                    |
| THRESHOLD                     | Threshold value set.                                                                               |
| TCA-ENABLED                   | Threshold crossing alert. Set to TRUE if enabled.                                                  |
| TCA-RAISED                    | TRUE if enabled and the value crosses the threshold.                                               |
| Near End PM                   | Near end threshold crossing defect trigger. For more information abo                               |
| Far End PM                    | Far end threshold crossing defect trigger. For more information abou                               |
| FEC PM                        | Forwarding equivalence class threshold crossing defect trigger. For m<br>see <a href="#">tca</a> . |
| BER PM                        | Bit error rate threshold crossing defect trigger. For more information                             |
| CURRENT                       | Current value measured.                                                                            |
| PM                            | Performance monitor.                                                                               |
| MIN                           | Minimum value measured.                                                                            |
| MAX                           | Maximum value measured.                                                                            |
| AVG                           | Average value.                                                                                     |
| Lane Chromatic dispersion     | Residual chromatic dispersion measured.                                                            |
| Lane differential group delay | Measured differential group delay.                                                                 |
|                               |                                                                                                    |
| q Value                       | Measured Quality factor value.                                                                     |
| SNR                           | Signal to noise ratio.                                                                             |
| Tx output power               | The transmit laser output power.                                                                   |

Table 122: show interfaces transport pm Output Fields (*continued*)

| Field Name                     | Field Description                                                                                  |
|--------------------------------|----------------------------------------------------------------------------------------------------|
| Rx input power                 | The laser's received optical power.                                                                |
| Module temperature (Celsius)   | The laser's temperature.                                                                           |
| Tx Laser bias current (0.1mA)  | Magnitude of the laser bias power setting current. The laser bias provides and modulates currents. |
| Rx Laser bias current (0.1mA)  | Magnitude of the laser bias power setting current.                                                 |
| Carrier frequency offset (MHz) | Measured carrier frequency offset.                                                                 |

## show l2-learning instance

**Syntax** `show l2-learning instance`

**Release Information** (MX Series routers only) Command introduced in Junos OS Release 8.4.

**Description** Display Layer 2 learning properties for all the configured routing instances.

**Options** This command has no options.

**Required Privilege Level** view

**List of Sample Output** [show l2-learning instance on page 1908](#)

**Output Fields** [Table 123 on page 1907](#) describes the output fields for the `show l2-learning instance` command. Output fields are listed in the approximate order in which they appear.

**Table 123: show l2-learning instance Output Fields**

| Field Name             | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Routing Instance       | Name of routing instance.                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Bridging Domain        | Name of bridging domain.<br><br>On MX Series routers you can use the <code>show l2-learning instance &lt;extensive&gt;</code> command option to display the Bridge Service-id information which includes the Config Service ID and the Active Service ID.                                                                                                                                                                                                |
| Index                  | Number associated with the routing instance or bridging domain.                                                                                                                                                                                                                                                                                                                                                                                          |
| Logical System         | Name of logical system or <b>Default</b> if no logical system is configured.                                                                                                                                                                                                                                                                                                                                                                             |
| Routing instance flags | Status of Layer 2 learning properties for each routing instance: <ul style="list-style-type: none"> <li><b>DL</b>—MAC learning is disabled.</li> <li><b>SE</b>—MAC accounting is enabled.</li> <li><b>AD</b>—Packets are dropped after MAC address limit is reached.</li> <li><b>LH</b>—The maximum number of MAC addresses has been learned on the routing instance. The routing instance is not able to learn any additional MAC addresses.</li> </ul> |
| MAC limit              | Maximum number of MAC addresses that can be learned from each interface in the routing instance or bridging domain.                                                                                                                                                                                                                                                                                                                                      |

## Sample Output

### show l2-learning instance

```
user@host> show l2-learning instance
Information for routing instance:
```

```
Routing Instance flags (DL -disable learning, SE -stats enabled,
 AD -packet action drop, LH -mac limit hit)
```

| Routing<br>Instance  | Bridging<br>Domain | Index | Logical<br>System | Routing<br>flags | MAC<br>limit |

| <b>Description</b>              | <p>(MX Series routers only) Display ARP statistics, Neighbor Discovery statistics, or remote MAC addresses for the Multi-Chassis Aggregated Ethernet (MC-AE) nodes for all or specified redundancy groups on a router or switch or logical systems on a router or switch. Note that the Redundancy Group ID is inherited by the bridging domain or VLAN from member AE interfaces.</p>                                                                                                                                                                                                                                                                                                                                                               |
| <b>Options</b>                  | <p><b>logical-system [<i>system-name</i>   all]</b>—(Optional) Display information for a specified logical system or all systems.</p> <p><b>redundancy-group-id</b>—(Optional) The redundancy group identification number. The Inter-Chassis Control Protocol (ICCP) uses the redundancy group ID to associate the routing or switching devices contained in a redundancy group.</p> <p><b>arp-statistics</b>—(Optional) Count of ARP packets sent and received by the two MC-AE nodes.</p> <p><b>nd-statistics</b>—(Optional) Count of Neighbor Discovery packets sent and received by the two MC-AE nodes.</p> <p><b>remote-macs</b> —(Optional) List of remote MAC addresses in the “Installed” state, as learned from the remote MC-AE node.</p> |
| <b>Required Privilege Level</b> | view                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| Field Name                       | Field Description                                                                             |
|----------------------------------|-----------------------------------------------------------------------------------------------|
| Redundancy Group ID              | Redundancy Group to which the following details apply.                                        |
| MCLAG ND Statistics Group ID     | Neighbor Discovery statistics for this Multichassis Link Aggregation Group (MC-LAG) instance. |
| ND Rx Count From Line            | Total number of Neighbor Discovery packets received from the Line.                            |
| ND Tx Count To Peer              | Total number of Neighbor Discovery packets sent to the peer.                                  |
| NDRx Count From Peer             | Total number of Neighbor Discovery packets received from the peer.                            |
| ND Drop Count received from line | Total number of Neighbor Discovery packets sent by the peer that were received.               |

Table 125: show l2-learning redundancy-groups nd-statistics Output Fields (*continued*)

| Field Name                       | Field Description                                                             |
|----------------------------------|-------------------------------------------------------------------------------|
| ND Drop Count received from peer | Total number of Neighbor Discovery packets sent by the peer that were dropped |
| Service-id                       | Service ID (configured at the routing instance level).                        |

Table 126: show l2-learning redundancy-groups remote-macs Output Fields

| Field Name          | Field Description                                                                                                  |
|---------------------|--------------------------------------------------------------------------------------------------------------------|
| Redundancy Group ID | Redundancy Group to which the following details apply.                                                             |
| Peer-Addr           | IP address of the remote peer.                                                                                     |
| VLAN                | Virtual LAN identifier associated with the redundancy group.                                                       |
| MAC                 | Hardware media access control address associated with the redundancy group.                                        |
| MCAE-ID             | ID number of the MC-AE used by the redundancy group.                                                               |
| Flags               | Connection state: local connect or Remote connect. If no flag is shown, the redundancy group may not be connected. |
| Status              | Installation state: Installed or Not Installed.                                                                    |

## Sample Output

### show l2-learning redundancy-groups arp-statistics

```

user@host> show l2-learning redundancy-groups arp-statistics
Logical System : default
Redundancy Group ID : 1 Flags : Local Connect, Remote Connect

MCLAG ARP Statistics
Group ID : 1
ARP Rx Count From Line : 52
ARP Tx Count To Peer : 15
ARP Rx Count From Peer : 39
ARP Install Count : 34
ARP Drop Count received from line : 37
ARP Drop Count received from peer : 5

```

### show l2-learning redundancy-groups nd-statistics

```

user@host> show l2-learning redundancy-groups nd-statistics
Logical System : default
Redundancy Group ID : 1 Flags : Local Connect, Remote Connect

MCLAG ND Statistics
Group ID : 1
ND Rx Count From Line : 52

```

```
ND Tx Count To Peer : 15
ND Rx Count From Peer : 39
ND Install Count : 34
ND Drop Count received from line : 37
ND Drop Count received from peer : 5
```

#### show l2-learning redundancy-groups remote-macs

```
user@host> show l2-learning redundancy-groups <redundancy-group-id> remote-macs
Redundancy Group ID : 1 Flags : Local Connect, Remote Connect

Service-id Peer-Addr VLAN MAC MCAE-ID Subunit Opcode
Flags Status
10 10.1.1.2 100 64:87:88:6a:df:f0 1 0 1
0 Installed
```

#### show l2-learning redundancy-groups logical-system arp-statistics (for Logical Systems)

```
user@host> show l2-learning redundancy-groups logical-system LS1 arp-statistics

Redundancy Group ID : 1 Flags : Local Connect, Remote Connect

MCLAG ARP Statistics
Group ID : 1
ARP Rx Count From Line : 52
ARP Tx Count To Peer : 15
ARP Rx Count From Peer : 39
ARP Install Count : 34
ARP Drop Count received from line : 37
ARP Drop Count received from peer : 5
```

#### show l2-learning redundancy-groups logical-system nd-statistics (for Logical Systems)

```
user@host> show l2-learning redundancy-groups logical-system LS1 nd-statistics

Redundancy Group ID : 1 Flags : Local Connect, Remote Connect

MCLAG ND Statistics
Group ID : 1
ND Rx Count From Line : 52
ND Tx Count To Peer : 15
ND Rx Count From Peer : 39
ND Install Count : 34
ND Drop Count received from line : 37
ND Drop Count received from peer : 5
```

#### show l2-learning redundancy-groups group-id

```
user@host> show l2-learning redundancy-groups 1

Redundancy Group ID : 1 Flags : Local Connect, Remote Connect
```

#### show l2-learning redundancy-groups logical-system

```
user@host> show l2-learning redundancy-groups logical-system ls1

Redundancy Group ID : 2 Flags : Local Connect, Remote Connect
```

## show lacp interfaces

**Syntax** `show lacp interfaces`  
`<interface-name>`  
**extensive**

**Release Information** Command introduced in Junos OS Release 7.6.  
**extensive** statement introduced in Junos OS Release 16.1R1

**Description** Display Link Aggregation Control Protocol (LACP) information about the specified aggregated Ethernet, Fast Ethernet, or Gigabit Ethernet interface.

**Options** **none**—Display LACP information for all interfaces.

**interface-name**—(Optional) Display LACP information for the specified interface:

- Aggregated Ethernet—**aenumber**
- Fast Ethernet—**fe-fpc/pic/port**
- Gigabit Ethernet—**ge-fpc/pic/port**
- 10 Gigabit Ethernet—**xe-fpc/pic/port**

**extensive**—Display LACP information for the interface in detail.

**NOTE:** The `show lacp interfaces` command returns the following error message if your system is not configured in either active or passive LACP mode:

“Warning: lacp subsystem not running – not needed by configuration”

**Required Privilege Level** view

**List of Sample Output** [show lacp interfaces \(Aggregated Ethernet\) on page 1917](#)  
[show lacp interfaces \(Gigabit Ethernet\) on page 1917](#)  
[show lacp interfaces \(10 Gigabit Ethernet\) on page 1918](#)

**Output Fields** [Table 127 on page 1914](#) lists the output fields for the `show lacp interfaces` command. Output fields are listed in the approximate order in which they appear.

**Table 127: show lacp interfaces Output Fields**

| Field Name           | Field Description           |
|----------------------|-----------------------------|
| Aggregated interface | Aggregated interface value. |

Table 127: show lacp interfaces Output Fields (*continued*)

| Field Name | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| LACP State | <p>LACP state information for each aggregated interface:</p> <ul style="list-style-type: none"> <li>• <b>Role</b>—Role played by the interface. It can be one of the following: <ul style="list-style-type: none"> <li>• <b>Actor</b>—Local device participating in LACP negotiation.</li> <li>• <b>Partner</b>—Remote device participating in LACP negotiation.</li> </ul> </li> <li>• <b>Exp</b>—Expired state. <b>Yes</b> indicates the actor or partner is in an expired state. <b>No</b> indicates the actor or partner is not in an expired state.</li> <li>• <b>Def</b>—Default. <b>Yes</b> indicates that the actor's receive machine is using the default operational partner information, administratively configured for the partner. <b>No</b> indicates the operational partner information in use has been received in an LACP PDU.</li> <li>• <b>Dist</b>—Distribution of outgoing frames. <b>No</b> indicates distribution of outgoing frames on the link is currently disabled and is not expected to be enabled. Otherwise, the value is <b>Yes</b>.</li> <li>• <b>Col</b>—Collection of incoming frames. <b>Yes</b> indicates collection of incoming frames on the link is currently enabled and is not expected to be disabled. Otherwise, the value is <b>No</b>.</li> <li>• <b>Syn</b>—Synchronization. If the value is <b>Yes</b>, the link is considered synchronized. It has been allocated to the correct link aggregation group, the group has been associated with a compatible aggregator, and the identity of the link aggregation group is consistent with the system ID and operational key information transmitted. If the value is <b>No</b>, the link is not synchronized. It is currently not in the right aggregation.</li> <li>• <b>Aggr</b>—Ability of aggregation port to aggregate (<b>Yes</b>) or to operate only as an individual link (<b>No</b>).</li> <li>• <b>Timeout</b>—LACP timeout preference. Periodic transmissions of LACP PDUs occur at either a slow or fast transmission rate, depending upon the expressed LACP timeout preference (<b>Long Timeout</b> or <b>Short Timeout</b>).</li> <li>• <b>Activity</b>—Actor or partner's port activity. <b>Passive</b> indicates the port's preference for not transmitting LAC PDUs unless its partner's control value is <b>Active</b>. <b>Active</b> indicates the port's preference to participate in the protocol regardless of the partner's control value.</li> </ul> |

| Field Name    | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|---------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| LACP Protocol | <p>LACP protocol information for each aggregated interface:</p> <ul style="list-style-type: none"> <li>• Link state (active or standby) indicated in parentheses next to the interface when link protection is configured.</li> <li>• <b>Receive State</b>—One of the following values: <ul style="list-style-type: none"> <li>• <b>Current</b>—The state machine receives an LACP PDU and enters the <b>Current</b> state.</li> <li>• <b>Defaulted</b>—If no LACP PDU is received before the timer for the <b>Current</b> state expires a second time, the state machine enters the <b>Defaulted</b> state.</li> <li>• <b>Expired</b>—If no LACP PDU is received before the timer for the <b>Current</b> state expires once, the state machine enters the <b>Expired</b> state.</li> <li>• <b>Initialize</b>—When the physical connectivity of a link changes or a Begin event occurs, the state machine enters the <b>Initialize</b> state.</li> <li>• <b>LACP Disabled</b>—If the port is operating in half duplex, the operation of LACP is disabled on the port, forcing the state to <b>LACP Disabled</b>. This state is similar to the <b>Defaulted</b> state, except that the port is forced to operate as an individual port.</li> <li>• <b>Port Disabled</b>—If the port becomes inoperable and a Begin event has not occurred, the state machine enters the <b>Port Disabled</b> state.</li> </ul> </li> <li>• <b>Transmit State</b>—Transmit state of state machine. One of the following values: <ul style="list-style-type: none"> <li>• <b>Fast Periodic</b>—Periodic transmissions are enabled at a fast transmission rate.</li> <li>• <b>No Periodic</b>—Periodic transmissions are disabled.</li> <li>• <b>Periodic Timer</b>—Transitory state entered when the periodic timer expires.</li> <li>• <b>Slow Periodic</b>—Periodic transmissions are enabled at a slow transmission rate.</li> </ul> </li> <li>• <b>Mux State</b>—State of the multiplexer state machine for the aggregation port. The state is one of the following values: <ul style="list-style-type: none"> <li>• <b>Attached</b>—Multiplexer state machine initiates the process of attaching the port to the selected aggregator.</li> <li>• <b>Collecting</b>—<b>Yes</b> indicates that the receive function of this link is enabled with respect to its participation in an aggregation. Received frames are passed to the aggregator for collection. <b>No</b> indicates the receive function of this link is not enabled.</li> <li>• <b>Collecting Distributing</b>—Collecting and distributing states are merged together to form a combined state (coupled control). Because independent control is not possible, the coupled control state machine does not wait for the partner to signal that collection has started before enabling both collection and distribution.</li> <li>• <b>Detached</b>—Process of detaching the port from the aggregator is in progress.</li> <li>• <b>Distributing</b>—<b>Yes</b> indicates that the transmit function of this link is enabled with respect to its participation in an aggregation. Frames may be passed down from the aggregator's distribution function for transmission. <b>No</b> indicates the transmit function of this link is not enabled.</li> <li>• <b>Waiting</b>—Multiplexer state machine is in a holding process, awaiting an outcome.</li> </ul> </li> </ul> |

Table 127: show lacp interfaces Output Fields (*continued*)

| Field Name | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| LLDP 802 TLVs supported   | List of IEEE 802.1 LLDP TLVs supported by this device ( <b>detail</b> only).                                                                                                                                                                                                                                                                                                                                                                                                                       |

## Sample Output

### show lldp

```

user@host> show lldp
LLDP : Enabled
Advertisement interval : 30 seconds
Transmit delay : 2 seconds
Hold timer : 120 seconds
Notification interval : 0 Second(s)
Config Trap Interval : 0 seconds
Connection Hold timer : 300 seconds
Port ID TLV subtype : locally-assigned
Port Description TLV type : interface-description (ifDescr)

Interface Parent Interface LLDP LLDP-MED Power Negotiation
all - Enabled

```

## Sample Output

### show lldp detail

```

user@host> show lldp detail
LLDP : Enabled
Advertisement interval : 30 seconds
Transmit delay : 2 seconds
Hold timer : 120 seconds
Notification interval : 0 Second(s)
Config Trap Interval : 0 seconds
Connection Hold timer : 300 seconds
Port ID TLV subtype : locally-assigned
Port Description TLV type : interface-description (ifDescr)

Interface Parent Interface LLDP LLDP-MED Power Negotiation
Neighbor count
all - Enabled
2

Interface Parent Interface Vlan-id Vlan-name
xe-0/0/0 - 4080 vlan-4080
xe-0/0/1 - 4080 vlan-4080

Basic Management TLVs supported:
End Of LLDPDU, Chassis ID, Port ID, Time To Live, Port Description, System Name,
System Description, System Capabilities, Management Address

Organizationally Specific TLVs supported:
Port VLAN tag, VLAN Name, MAC/PHY Configuration/Status, Link Aggregation,Maximum
Frame Size

```

## show lldp local-information

## show lldp neighbors

**Syntax** `show lldp neighbors`  
`<interface interface-name>`

**Release Information** Command introduced in Junos OS Release 9.6.

**Description** Display information about LLDP neighbors.

For information about interface names, see *Interface Naming Overview*. For information about interface names for TX Matrix routers, see *TX Matrix Router Chassis and Interface Names*. For information about FPC numbering on TX Matrix routers, see *Routing Matrix with a TX Matrix Router FPC Numbering*.

For information about extended port names in the Junos Fusion technology, see *Understanding Junos Fusion Ports*.

**Options** `interface interface-name`—(Optional) Display the neighbor information about a particular physical interface.

**NOTE:** Starting with Junos OS Release 14.2, you can also display LLDP neighbor details for management interfaces, such as `fxp` or `me`, on MX Series routers.

**Required Privilege Level** view

**Output Fields** [Table 130 on page 1925](#) describes the output fields for the `show lldp neighbors` command. Output fields are listed in the approximate order in which they appear.

**Table 130: show lldp neighbors Output Fields**

| Field Name                      | Field Description                 |
|---------------------------------|-----------------------------------|
| LLDP Remote Devices Information | Information about remote devices. |

Table 130: show lldp neighbors Output Fields (*continued*)

| Field Name                       | Field Description                                                                                                      |
|----------------------------------|------------------------------------------------------------------------------------------------------------------------|
| <b>LocalInterface</b>            | List of local interfaces for which neighbor information is available.                                                  |
| <b>ChassisId</b>                 | List of chassis identifiers for neighbors.                                                                             |
| <b>PortInfo</b>                  | List of port information gathered from neighbors. This could be the port identifier or port description.               |
| <b>SysName</b>                   | List of system names gathered from neighbors.                                                                          |
| <b>LLDP Neighbor Information</b> | Information about both local and neighbor systems on the interface (appears when the <b>interface</b> option is used). |
| <b>Local Information</b>         | Information about local systems on the interface (appears when the <b>interface</b> option is used).                   |
| <b>Neighbor Information</b>      | Information about both local and neighbor system on the interface (appears when the <b>interface</b> option is used).  |
| <b>Index</b>                     | Local interface index (appears when the <b>interface</b> option is used).                                              |
| <b>Time Mark</b>                 | Date and timestamp of information (appears when the <b>interface</b> option is used).                                  |
| <b>Time To Live</b>              | Number of seconds for which this information is valid (appears when the <b>interface</b> option is used).              |
| <b>Local Interface</b>           | Name of the local physical interface (appears when the <b>interface</b> option is used).                               |
| <b>Parent Interface</b>          | Name of the <b>ae</b> interface to which the interface belongs                                                         |
| <b>Local Port ID</b>             | Local port identifier (appears when the <b>interface</b> option is used).                                              |
| <b>Neighbor Information</b>      | Information about neighbor systems on the interface (appears when the <b>interface</b> option is used).                |
| <b>Chassis type</b>              | Type of chassis identifier supplied, such as <b>MAC address</b> (appears when the <b>interface</b> option is used).    |
| <b>Chassis ID</b>                | Chassis identifier of type listed (appears when the <b>interface</b> option is used).                                  |
| <b>Port type</b>                 | Type of port identifier supplied, such as <b>local</b> (appears when the <b>interface</b> option is used).             |
| <b>Port ID</b>                   | Port identifier of type listed (appears when the <b>interface</b> option is used).                                     |
| <b>Port description</b>          | Port description (appears when the <b>interface</b> option is used).                                                   |

Table 130: show lldp neighbors Output Fields (*continued*)

| Field Name                 | Field Description                                                                                                                                                                                                                                                                                                  |
|----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>System name</b>         | Name supplied by the system on the interface (appears when the <b>interface</b> option is used).                                                                                                                                                                                                                   |
| <b>System Description</b>  | Description supplied by the system on the interface (appears when the <b>interface</b> option is used).                                                                                                                                                                                                            |
| <b>System Capabilities</b> | Capabilities (such as <b>bridge</b> or <b>router</b> ) that are <b>Supported</b> or <b>Enabled</b> by the system on the interface (appears when the <b>interface</b> option is used).                                                                                                                              |
| <b>Management address</b>  | Details of the management address: <b>Address Type</b> (such as <b>ipv4</b> and <b>ipv6</b> ), <b>Address</b> (such as <b>10.204.34.35</b> , <b>1fd::1a10</b> ), <b>Interface Number</b> , <b>Interface Subtype</b> , and <b>Organization Identifier (OID)</b> (appears when the <b>interface</b> option is used). |
| <b>Organization Info</b>   | One or more entries listing remote information by Organizationally Unique Identifier (OUI), <b>Subtype</b> , <b>Index</b> , and <b>Info</b> (appears when the <b>interface</b> option is used).                                                                                                                    |

## Sample Output

### show lldp neighbors

```
user@host> show lldp neighbors
```

| Local Interface | Parent Interface | Chassis Id        | Port info | System Name |
|-----------------|------------------|-------------------|-----------|-------------|
| ge-2/0/0        | ae0              | ac:4b:c8:92:67:c0 | 528       | apg-hp      |
| ge-2/0/1        | ae0              | ac:4b:c8:92:67:c0 | 529       | apg-hp      |

## Sample Output

### show lldp neighbors interface ge-0/0/4 (Management Address is IPv4)

```
user@host> show lldp neighbors interface ge-0/0/4
```

**Table 131: show lldp remote-global-statistics Output Fields**

| Field Name                          | Field Description                                                                                     |
|-------------------------------------|-------------------------------------------------------------------------------------------------------|
| LLDP Remote Database Table Counters | Information about remote database table counters.                                                     |
| LastchangeTime                      | Time elapsed between LLDP agent startup and the last change to the remote database table information. |
| Inserts                             | Number of insertions made in the remote database table.                                               |
| Deletes                             | Number of deletions made in the remote database table.                                                |
| Drops                               | Number of LLDP frames dropped from the remote database table because of errors.                       |
| Ageouts                             | Number of remote database table entries that have aged out of the table.                              |

## Sample Output

### show lldp remote-global-statistics

```
user@host> show lldp remote-global-statistics
user@host> show lldp remote-global-statistics
LLDP Remote Database Table Counters
LastchangeTime Inserts Deletes Drops Ageouts
00:00:76 (76 sec) 192 0 0 0
```

## show lldp statistics

**Syntax** `show lldp statistics`  
`<interface interface-name>`

**Release Information** Command introduced in Junos OS Release 9.6.

**Description** Display information about Link Layer Discovery Protocol (LLDP) statistics.

**Options** `interface interface-name`—(Optional) Display the statistics about a particular physical interface.

**NOTE:** Starting with Junos OS Release 14.2, you can also display LLDP statistical details for management interfaces, such as `fxp` or `me`, on MX Series routers.

**Required Privilege Level** view

**Related Documentation** • [clear lldp statistics on page 1418](#)

[show lldp statistics interface ge-0/1/1 on page 1935](#)

**Output Fields** [Table 132 on page 1933](#) describes the output fields for the **show lldp statistics** command. Output fields are listed in the approximate order in which they appear.

**Table 132: show lldp statistics Output Fields**

| Field Name         | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|--------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Interface</b>   | Interface name.<br><br>For information about interface names, see <i>Interface Naming Overview</i> . For information about interface names for TX Matrix routers, see <i>TX Matrix Router Chassis and Interface Names</i> . For information about FPC numbering on TX Matrix routers, see <i>Routing Matrix with a TX Matrix Router FPC Numbering</i> .<br><br>For information about extended port names in the Junos Fusion technology, see <i>Understanding Junos Fusion Ports</i> . |
| <b>Received</b>    | Number of LLDP frames received on this interface.                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Transmitted</b> | Number of LLDP frames sent on this interface.                                                                                                                                                                                                                                                                                                                                                                                                                                          |

Table 132: show lldp statistics Output Fields (*continued*)

| Field Name           | Field Description                                                                         |
|----------------------|-------------------------------------------------------------------------------------------|
| <b>Unknown-TLVs</b>  | Number of LLDP frames with unsupported content received on this interface.                |
| <b>With-Errors</b>   | Number of LLDP frames with errors received on this interface.                             |
| <b>Discarded</b>     | Number of LLDP frames received on this interface that were discarded because of problems. |
| <b>Transmitted</b>   | Total number of LLDP frames that were transmitted on an interface.                        |
| <b>Untransmitted</b> | Total number of LLDP frames that were untransmitted on an interface.                      |

## Sample Output

### show lldp statistics

```
user@host> show lldp statistics
```

| Interface  | Parent Interface | Received | Unknown TLVs | With Errors |
|------------|------------------|----------|--------------|-------------|
| xe-3/0/0.0 | ae31.0           | 1564     | 0            | 0           |
| xe-3/0/1.0 | ae31.0           | 1564     | 0            | 0           |
| xe-3/0/2.0 | ae31.0           | 1565     | 0            | 0           |
| xe-3/0/3.0 | ae31.0           | 1566     | 0            | 0           |
| xe-3/0/4.0 | ae31.0           | 1598     | 0            | 0           |
| xe-3/0/5.0 | ae31.0           | 1598     | 0            | 0           |
| xe-3/0/6.0 | ae31.0           | 1596     | 0            | 0           |
| xe-3/0/7.0 | ae31.0           | 1597     | 0            | 0           |
| xe-5/0/6.0 | -                | 0        | 0            | 0           |
| xe-5/0/7.0 | -                | 0        | 0            | 0           |

| Discarded TLVs | Transmitted | Untransmitted |
|----------------|-------------|---------------|
| 0              | 3044        | 1             |
| 0              | 3044        | 1             |
| 0              | 3044        | 1             |
| 0              | 3044        | 1             |
| 0              | 3075        | 1             |
| 0              | 3075        | 1             |
| 0              | 3075        | 1             |
| 0              | 3075        | 1             |
| 0              | 17312       | 0             |
| 0              | 17312       | 0             |

## Sample Output

### show lldp statistics interface ge-0/1/1

```
user@host> show lldp statistics interface ge-0/1/1
```

| Interface | Received | Transmitted | Unknown-TLVs | With-Errors | Discarded |
|-----------|----------|-------------|--------------|-------------|-----------|
| ge-0/1/1  | 544      | 540         | 0            | 0           | 0         |

## show oam ethernet connectivity-fault-management delay-statistics

---

|                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

**Output Fields** Table 133 on page 1937 lists the output fields for the **show oam ethernet connectivity-fault-management delay-statistics** command and the **show oam ethernet connectivity-fault-management mep-statistics** command. Output fields are listed in the approximate order in which they appear.

**Table 133: show oam ethernet connectivity-fault-management delay-statistics and mep-statistics Output Fields**

| Output Field Name               | Field Description                                                                                                                                                                                                                                                                                                        |
|---------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MEP identifier                  | Maintenance association end point (MEP) numeric identifier.                                                                                                                                                                                                                                                              |
| MAC address                     | Unicast MAC address configured for the MEP.                                                                                                                                                                                                                                                                              |
| Remote MEP count                | Number of remote MEPs (unless you specify the <b>remote-mep</b> option).                                                                                                                                                                                                                                                 |
| Remote MEP identifier           | Numeric identifier of the remote MEP.                                                                                                                                                                                                                                                                                    |
| Remote MAC address              | Unicast MAC address of the remote MEP.                                                                                                                                                                                                                                                                                   |
| Index                           | Index number that corresponds to the ETH-DM entry in the CFM database.                                                                                                                                                                                                                                                   |
| One-way delay (usec)            | <p>For a one-way ETH-DM session, the frame delay time, in microseconds, measured at the receiver MEP.</p> <p>For a detailed description of one-way Ethernet frame delay measurement, see the <i>ITU-T Y.1731 Ethernet Service OAM</i> topics in the <i>Junos OS Network Interfaces Library for Routing Devices</i>.</p>  |
| Two-way delay (usec)            | <p>For a two-way ETH-DM session, the frame delay time, in microseconds, measured at the initiator MEP.</p> <p>For a detailed description of two-way Ethernet frame delay measurement, see the <i>ITU-T Y.1731 Ethernet Service OAM</i> topics in the <i>Junos OS Network Interfaces Library for Routing Devices</i>.</p> |
| Average one-way delay           | Average one-way frame delay for the statistics displayed.                                                                                                                                                                                                                                                                |
| Average one-way delay variation | Average one-way “frame jitter” for the statistics displayed.                                                                                                                                                                                                                                                             |
| Best-case one-way delay         | Lowest one-way frame delay for the statistics displayed.                                                                                                                                                                                                                                                                 |
| Worst-case one-way delay        | Highest one-way frame delay for the statistics displayed.                                                                                                                                                                                                                                                                |
| Average two-way delay           | Average two-way frame delay for the statistics displayed.                                                                                                                                                                                                                                                                |
| Average two-way delay variation | Average two-way “frame jitter” for the statistics displayed.                                                                                                                                                                                                                                                             |
| Best-case two-way delay         | Lowest two-way frame delay for the statistics displayed.                                                                                                                                                                                                                                                                 |
| Worst-case two-way delay        | Highest two-way frame delay calculated in this session.                                                                                                                                                                                                                                                                  |

**Output Fields** Table 135 on page 1945 lists the output fields for the **show oam ethernet connectivity-fault-management interfaces** command. Output fields are listed in the approximate order in which they appear.

**Table 135: show oam ethernet connectivity-fault-management interfaces Output Fields**

| Field Name                              | Field Description                                                                                                                                                                                            | Level of Output         |
|-----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
| <b>Interface</b>                        | Interface identifier.                                                                                                                                                                                        | All levels              |
| <b>Interface status</b>                 | Local interface status.                                                                                                                                                                                      | All levels              |
| <b>Link status</b>                      | Local link status. <b>Up</b> , <b>down</b> , or <b>oam-down</b> .                                                                                                                                            | All levels              |
| <b>Maintenance domain name</b>          | Maintenance domain name.                                                                                                                                                                                     | <b>detail extensive</b> |
| <b>Format (Maintenance domain)</b>      | Maintenance domain name format configured.                                                                                                                                                                   | <b>detail extensive</b> |
| <b>Level</b>                            | Maintenance domain level configured.                                                                                                                                                                         | All levels              |
| <b>Maintenance association name</b>     | Maintenance association name.                                                                                                                                                                                | <b>detail extensive</b> |
| <b>Format (Maintenance association)</b> | Maintenance association name format configured.                                                                                                                                                              | <b>detail extensive</b> |
| <b>Continuity-check status</b>          | Continuity-check status.                                                                                                                                                                                     | <b>detail extensive</b> |
| <b>Ethernet-ais status</b>              | Status of alarm indication signal (AIS). <b>active</b> or <b>in-active</b> .                                                                                                                                 | <b>detail extensive</b> |
| <b>Interval</b>                         | Continuity-check message interval.                                                                                                                                                                           | <b>detail extensive</b> |
| <b>Loss-threshold</b>                   | Lost continuity-check message threshold.                                                                                                                                                                     | <b>detail extensive</b> |
| <b>Interface status TLV</b>             | Status of the interface status TLV, if configured on the MEP interface: <b>none</b> , <b>up</b> , <b>down</b> , <b>testing</b> , <b>unknown</b> , <b>dormant</b> , <b>notPresent</b> , <b>lowerLayerDown</b> | <b>detail extensive</b> |
| <b>Port status TLV</b>                  | Status of the port status TLV, if configured on the MEP interface: <b>none</b> , <b>no</b> , <b>yes</b>                                                                                                      | <b>detail extensive</b> |

**Table 135: show oam ethernet connectivity-fault-management interfaces Output Fields (*continued*)**

| Field Name                                  | Field Description                                                                                                                                                                                                                                                                               | Level of Output         |
|---------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
| <b>Connection Protection TLV</b>            | Status of the connection protection TLV if configured on the MEP interface: <b>no</b> , <b>yes</b><br><br>If <b>yes</b> , then the transmitted connection protection TLV is decoded and the following three fields are displayed: <b>Prefer me</b> , <b>Protection in use</b> , <b>FRR Flag</b> | <b>detail extensive</b> |
| <b>Prefer me</b>                            | If set to <b>yes</b> , the path through which CCM was transmitted is preferred (unless the path fails). It is used for signaling a manual-switch command to the remote side.<br><br>Its value can be <b>yes</b> or <b>no</b> .                                                                  | <b>detail extensive</b> |
| <b>Protection in use</b>                    | Used for protection decision coordination. Its value is set to <b>yes</b> if the endpoint transmitting the CCM is currently transmitting the user traffic to protection path.<br><br>Its value can be <b>yes</b> or <b>no</b> .                                                                 | <b>detail extensive</b> |
| <b>FRR Flag</b>                             | LSR/LER forwarding the CCM Frame into a bypass tunnel is set.<br><br>Its value can be <b>yes</b> or <b>no</b> .                                                                                                                                                                                 | <b>detail extensive</b> |
| <b>MEP identifier</b>                       | Maintenance association end point (MEP) identifier.                                                                                                                                                                                                                                             | All levels              |
| <b>Neighbors</b>                            | Number of MEP neighbors.                                                                                                                                                                                                                                                                        | All levels              |
| <b>Direction</b>                            | MEP direction configured.                                                                                                                                                                                                                                                                       | <b>detail extensive</b> |
| <b>MAC address</b>                          | MAC address configured for the MEP.                                                                                                                                                                                                                                                             | <b>detail extensive</b> |
| <b>MEP status</b>                           | Indicates the status of the connectivity fault management (CFM) protocol running on the MEP: <b>Running</b> , <b>inactive</b> , <b>disabled</b> , or <b>unsupported</b> .                                                                                                                       | <b>detail extensive</b> |
| <b>Remote MEP not receiving CCM</b>         | Whether the remote MEP is not receiving connectivity check messages (CCMs).                                                                                                                                                                                                                     | <b>detail extensive</b> |
| <b>Erroneous CCM received</b>               | Whether erroneous CCMs have been received.                                                                                                                                                                                                                                                      | <b>detail extensive</b> |
| <b>Cross-connect CCM received</b>           | Whether cross-connect CCMs have been received.                                                                                                                                                                                                                                                  | <b>detail extensive</b> |
| <b>RDI sent by some MEP</b>                 | Whether the remote defect indication (RDI) bit is set in messages that have been received. The absence of the RDI bit in a CCM indicates that the transmitting MEP is receiving CCMs from all configured MEPs.                                                                                  | <b>detail extensive</b> |
| <b>Some remote MEP's MAC in error state</b> | Indicates whether the remote MEP's MAC is in error state.                                                                                                                                                                                                                                       | <b>detail extensive</b> |

**Table 135: show oam ethernet connectivity-fault-management interfaces Output Fields (*continued*)**

| Field Name                          | Field Description                                                                                                                                                                                                                   | Level of Output  |
|-------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| Alarm Indication Signal             | Indicates whether the AIS is triggered or is cleared.                                                                                                                                                                               | detail extensive |
| CCMs sent                           | Number of CCMs transmitted.                                                                                                                                                                                                         | detail extensive |
| CCMs received out of sequence       | Number of CCMs received out of sequence.                                                                                                                                                                                            | detail extensive |
| LBM sent                            | Number of loopback request messages (LBMs) sent.                                                                                                                                                                                    | detail extensive |
| Valid in-order LBRs received        | Number of loopback response messages (LBRs) received that were valid messages and in sequence.                                                                                                                                      | detail extensive |
| Valid out-of-order LBRs received    | Number of LBRs received that were valid messages and not in sequence.                                                                                                                                                               | detail extensive |
| LBRs received with corrupted data   | Number of LBRs received that were corrupted.                                                                                                                                                                                        | detail extensive |
| LBRs sent                           | Number of LBRs transmitted.                                                                                                                                                                                                         | detail extensive |
| LTMs sent                           | Linktrace messages (LTMs) transmitted.                                                                                                                                                                                              | detail extensive |
| LTMs received                       | Linktrace messages received.                                                                                                                                                                                                        | detail extensive |
| LTRs sent                           | Linktrace responses (LTRs) transmitted.                                                                                                                                                                                             | detail extensive |
| LTRs received                       | Linktrace responses received.                                                                                                                                                                                                       | detail extensive |
| Sequence number of next LTM request | Sequence number of next LTM request to be transmitted.                                                                                                                                                                              | detail extensive |
| 1DMs sent                           | <p>If the interface is attached to an initiator MEP for a one-way ETH-DM session: Number of one-way delay measurement (1DM) PDU frames sent to the peer MEP in this session.</p> <p>For all other cases, this field displays 0.</p> | detail extensive |
| Valid 1DMs received                 | <p>If the interface is attached to a receiver MEP for a one-way ETH-DM session: Number of valid 1DM frames received.</p> <p>For all other cases, this field displays 0.</p>                                                         | detail extensive |
| Invalid 1DMs received               | <p>If the interface is attached to a receiver MEP for a one-way ETH-DM session: Number of invalid 1DM frames received.</p> <p>For all other cases, this field displays 0.</p>                                                       | detail extensive |

**Table 135: show oam ethernet connectivity-fault-management interfaces Output Fields (*continued*)**

| Field Name                       | Field Description                                                                                                                                                                                                               | Level of Output         |
|----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
| <b>Out of sync 1DMs received</b> | If the interface is attached to a receiver MEP for a one-way ETH-DM session:<br>Number of out-of-sync one-way delay measurement request packets received.                                                                       | <b>detail extensive</b> |
| <b>DMMs sent</b>                 | If the interface is attached to an initiator MEP for a two-way ETH-DM session:<br>Number of Delay Measurement Message (DMM) PDU frames sent to the peer MEP in this session.<br><br>For all other cases, this field displays 0. | <b>detail extensive</b> |
| <b>Valid DMMs received</b>       | If the interface is attached to an initiator MEP for a two-way ETH-DM session:<br>Number of valid two-way delay measurement request packets received.                                                                           | <b>detail extensive</b> |
| <b>Invalid DMMs received</b>     | If the interface is attached to an initiator MEP for a two-way ETH-DM session:<br>Number of invalid two-way delay measurement request packets received.                                                                         | <b>detail extensive</b> |
| <b>DMRs sent</b>                 | If the interface is attached to a responder MEP for a two-way ETH-DM session:<br>Number of delay measurement reply (DMR) frames sent.<br><br>For all other cases, this field displays 0.                                        | <b>detail extensive</b> |
| <b>Valid DMRs received</b>       | If the interface is attached to an initiator MEP for a two-way ETH-DM session:<br>Number of valid DMRs received.<br><br>For all other cases, this field displays 0.                                                             | <b>detail extensive</b> |
| <b>Invalid DMRs received</b>     | If the interface is attached to an initiator MEP for a two-way ETH-DM session:<br>Number of invalid DMRs received.<br><br>For all other cases, this field displays 0.                                                           | <b>detail extensive</b> |
| <b>LMM sent</b>                  | If the interface is attached to an initiator MEP for a ETH-LM session: Number of loss measurement message (LMM) PDU frames sent to the peer MEP in this session.                                                                | <b>detail extensive</b> |
| <b>Valid LMM received</b>        | If the interface is attached to an initiator MEP for a ETH-LM session: Number of valid loss measurement request packets received.                                                                                               | <b>detail extensive</b> |
| <b>Invalid LMM received</b>      | If the interface is attached to an initiator MEP for a ETH-LM session: Number of invalid loss measurement request packets received.                                                                                             | <b>detail extensive</b> |
| <b>LMR sent</b>                  | If the interface is attached to a responder MEP for a ETH-LM session: Number of loss measurement reply (LMR) frames sent.                                                                                                       | <b>detail extensive</b> |
| <b>Valid LMR received</b>        | If the interface is attached to an initiator MEP for a ETH-LM session: Number of valid LMR frames received.                                                                                                                     | <b>detail extensive</b> |
| <b>Invalid LMR received</b>      | If the interface is attached to an initiator MEP for a ETH-LM session: Number of invalid LMR frames received.                                                                                                                   | <b>detail extensive</b> |

**Table 135: show oam ethernet connectivity-fault-management interfaces Output Fields (continued)**

| Field Name                      | Field Description                                                                                                                                                                                                    | Level of Output  |
|---------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| Valid AIS frames transmitted    | Number of valid AIS frames transmitted to the peer MEPs.                                                                                                                                                             | detail extensive |
| Valid AIS frames received       | Number of valid AIS frames received from the peer MEPs.                                                                                                                                                              | detail extensive |
| <b>SLM sent</b>                 | If the interface is attached to an initiator MEP for a ETH-SLM session: Number of synthetic loss measurement (SLM) request packets transmitted from the source MEP to the remote or destination MEP in this session. | detail extensive |
| <b>Valid SLM received</b>       | If the interface is attached to a responder MEP for a ETH-SLM session: Number of valid SLM PDUs transmitted from the source MEP to the remote or destination MEP.                                                    | detail extensive |
| <b>Invalid SLM received</b>     | If the interface is attached to a responder MEP for a ETH-SLM session: Number of invalid SLM PDUs transmitted from the source MEP to the remote or destination MEP.                                                  | detail extensive |
| <b>SLR sent</b>                 | If the interface is attached to a responder MEP for a ETH-SLM session: Number detail extensive of synthetic loss reply (SLR) frames sent.                                                                            | detail extensive |
| <b>Valid SLR received</b>       | If the interface is attached to an initiator MEP for a ETH-SLM session: Number of valid SLR PDUs that the source MEP received from the remote or destination MEP.                                                    | detail extensive |
| <b>Invalid SLR received</b>     | If the interface is attached to an initiator MEP for a ETH-SLM session: Number of invalid SLR PDUs that the source MEP received from the remote or destination MEP.                                                  | detail extensive |

| Field Name                    | Field Description                                                                                                                                                                                                                                                             |
|-------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Hop</b>                    | Sequential hop count of the linktrace path.                                                                                                                                                                                                                                   |
| <b>TTL</b>                    | Number of hops remaining in the linktrace message (LTM). The time to live (TTL) is decremented at each hop.                                                                                                                                                                   |
| <b>Source MAC address</b>     | MAC address of the 802.1ag node responding to the LTM or the source MAC address of the LTR.                                                                                                                                                                                   |
| <b>Next hop MAC address</b>   | MAC address of the egress interface of the node to which the LTM is forwarded or the next-hop MAC address derived from the next egress identifier in the Egress-ID TLV of the LTR PDU.                                                                                        |
| <b>Transaction Identifier</b> | 4-byte identifier maintained by the MEP. Each LTM uses a transaction identifier. The transaction identifier is maintained globally across all maintenance domains. Use the transaction identifier to match an incoming linktrace responses (LTR), with a previously sent LTM. |

## Sample Output

### show oam ethernet connectivity-fault-management linktrace path-database

```
user@host> show oam ethernet connectivity-fault-management linktrace path-database
maintenance-domain MD1 maintenance-association MA1 00:01:02:03:04:05
Linktrace to 00:01:02:03:04:05, Interface : ge-5/0/0.0
Maintenance Domain: MD1, Level: 7
Maintenance Association: MA1, Local Mep: 1
```

| <b>Output Fields</b>            | Table 137 on page 1958 lists the output fields for the <b>show oam ethernet connectivity-fault-management loss-statistics</b> command. Output fields are listed in the approximate order in which they appear.                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

Table 137: show oam ethernet connectivity-fault-management loss-statistics Output Fields

| Output Field Name     | Field Description                                                        |
|-----------------------|--------------------------------------------------------------------------|
| MEP identifier        | Maintenance association end point (MEP) numeric identifier.              |
| MAC address           | Unicast MAC address configured for the MEP.                              |
| Remote MEP count      | Number of remote MEPs (unless you specify the <b>remote-mep</b> option). |
| Remote MEP identifier | Numeric identifier of the remote MEP.                                    |

Table 137: show oam ethernet connectivity-fault-management loss-statistics Output Fields (*continued*)

| Output Field Name              | Field Description                                                                                                                                                              |
|--------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Remote MAC address             | Unicast MAC address of the remote MEP.                                                                                                                                         |
| Index                          | Index number that corresponds to the ETH-LM entry in the CFM database.                                                                                                         |
| Near-end frame loss            | Count of frame loss associated with ingress data frames.                                                                                                                       |
| Far-end frame loss             | Count of frame loss associated with egress data frames.                                                                                                                        |
| Near-end loss ratio            | Ratio, expressed as a percentage, of the number of service frames not delivered divided by the total number of service frames during time interval T at the ingress interface. |
| Far-end loss ratio             | Ratio, expressed as a percentage, of the number of service frames not delivered divided by the total number of service frames during time interval T at the egress interface.  |
| Average near-end frame loss    | Average frame loss measured in this session associated with ingress data frames.                                                                                               |
| Average near-end loss ratio    | Average frame loss ratio measured in this session associated with ingress data frames.                                                                                         |
| Average far-end frame loss     | Average frame loss measured in this session associated with egress data frames.                                                                                                |
| Average far-end loss ratio     | Average frame loss ratio measured in this session associated with egress data frames.                                                                                          |
| Near-end best case loss        | Lowest frame loss measured in this session associated with ingress data frames.                                                                                                |
| Near-end best case loss ratio  | Lowest frame loss ratio measured in this session associated with ingress data frames.                                                                                          |
| Near-end worst case loss       | Highest frame loss measured in this session associated with ingress data frames.                                                                                               |
| Near-end worst case loss ratio | Highest frame loss ratio measured in this session associated with ingress data frames.                                                                                         |
| Far-end best case frame loss   | Lowest frame loss measured in this session associated with egress data frames.                                                                                                 |
| Far-end best case loss ratio   | Lowest frame loss ratio measured in this session associated with egress data frames.                                                                                           |
| Far-end worst case loss        | Highest frame loss measured in this session associated with egress data frames.                                                                                                |
| Far-end worst case loss ratio  | Highest frame loss ratio measured in this session associated with egress data frames.                                                                                          |

**Output Fields** Table 138 on page 1963 lists the output fields for the **show oam ethernet connectivity-fault-management mep-database** command. Output fields are listed in the approximate order in which they appear.

**Table 138: show oam ethernet connectivity-fault-management mep-database Output Fields**

| Field Name                       | Field Description                                                                                                                                                                                                                                                                                   |
|----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Maintenance domain name          | Maintenance domain name.                                                                                                                                                                                                                                                                            |
| Format (Maintenance domain)      | Maintenance domain name format configured.                                                                                                                                                                                                                                                          |
| Level                            | Maintenance domain level configured.                                                                                                                                                                                                                                                                |
| Maintenance association name     | Maintenance association name.                                                                                                                                                                                                                                                                       |
| Format (Maintenance association) | Maintenance association name format configured.                                                                                                                                                                                                                                                     |
| Continuity-check status          | Continuity-check status.                                                                                                                                                                                                                                                                            |
| Interval                         | Continuity-check message interval.                                                                                                                                                                                                                                                                  |
| Loss-threshold                   | Lost continuity-check message threshold.                                                                                                                                                                                                                                                            |
| Connection Protection TLV        | <p>Status of the connection protection TLV, if configured on the MEP interface: <b>no</b>, <b>yes</b></p> <p>If <b>yes</b>, then the transmitted connection protection TLV is decoded and the following three fields are displayed: <b>Prefer me</b>, <b>Protection in use</b>, <b>FRR Flag</b></p> |
| Prefer me                        | <p>If set to <b>yes</b>, the path through which CCM was transmitted is preferred (unless the path fails). It is used for signaling a manual-switch command to remote side.</p> <p>Its value can be <b>yes</b> or <b>no</b>.</p>                                                                     |
| Protection in use                | <p>Used for protection decision coordination. Its value is set to <b>yes</b> if the endpoint transmitting the CCM is currently transmitting the user traffic to protection path.</p> <p>Its value can be <b>yes</b> or <b>no</b>.</p>                                                               |

Table 138: show oam ethernet connectivity-fault-management mep-database Output Fields (*continued*)

| Field Name                           | Field Description                                                                                                                                                                                              |
|--------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>FRR Flag</b>                      | LSR/LER forwarding the CCM Frame into a bypass tunnel is set.<br><br>Its value can be <b>yes</b> or <b>no</b> .                                                                                                |
| <b>MEP identifier</b>                | Maintenance association end point (MEP) identifier.                                                                                                                                                            |
| <b>Direction</b>                     | MEP direction configured.                                                                                                                                                                                      |
| <b>MAC address</b>                   | MAC address configured for the MEP.                                                                                                                                                                            |
| <b>Auto-discovery</b>                | Whether automatic discovery is enabled or disabled.                                                                                                                                                            |
| <b>Priority</b>                      | Priority used for CCMs and linktrace messages transmitted by the MEP.                                                                                                                                          |
| <b>Interface name</b>                | Interface identifier.                                                                                                                                                                                          |
| <b>Interface status</b>              | Local interface status.                                                                                                                                                                                        |
| <b>Link status</b>                   | Local link status.                                                                                                                                                                                             |
| <b>Remote MEP not receiving CCM</b>  | Whether the remote MEP is not receiving CCMs.                                                                                                                                                                  |
| <b>Erroneous CCM received</b>        | Whether erroneous CCMs have been received.                                                                                                                                                                     |
| <b>Cross-connect CCM received</b>    | Whether cross-connect CCMs have been received.                                                                                                                                                                 |
| <b>RDI sent by some MEP</b>          | Whether the remote defect indication (RDI) bit is set in messages that have been received. The absence of the RDI bit in a CCM indicates that the transmitting MEP is receiving CCMs from all configured MEPs. |
| <b>CCMs sent</b>                     | Number of CCMs transmitted.                                                                                                                                                                                    |
| <b>CCMs received out of sequence</b> | Number of CCMs received out of sequence.                                                                                                                                                                       |
| <b>LBMs sent</b>                     | Number of loopback messages (LBMs) sent.                                                                                                                                                                       |
| <b>Valid in-order LBRs received</b>  | Number of loopback response messages (LBRs) received that were valid messages and in sequence.                                                                                                                 |
| <b>IDMs sent</b>                     | If the MEP is an initiator for a one-way ETH-DM session: Number of one-way delay measurement (IDM) PDU frames sent to the peer MEP in this session.<br><br>For all other cases, this field displays <b>0</b> . |

**Table 138: show oam ethernet connectivity-fault-management mep-database Output Fields (*continued*)**

| Field Name                               | Field Description                                                                                                                                                                                  |
|------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Valid 1DMs received</b>               | If the MEP is a receiver for a one-way ETH-DM session: Number of valid 1DM frames received.<br>For all other cases, this field displays 0.                                                         |
| <b>Invalid 1DMs received</b>             | If the MEP is a receiver for a one-way ETH-DM session: Number of invalid 1DM frames received.<br>For all other cases, this field displays 0.                                                       |
| <b>Out of sync 1DMs received</b>         | If the MEP is a receiver for a one-way ETH-DM session: Number of out-of-sync one-way delay measurement request packets received.                                                                   |
| <b>DMMs sent</b>                         | If the MEP is an initiator for a two-way ETH-DM session: Number of Delay Measurement Message (DMM) PDU frames sent to the peer MEP in this session.<br>For all other cases, this field displays 0. |
| <b>Valid DMMs received</b>               | If the MEP is an initiator for a two-way ETH-DM session: Number of valid two-way delay measurement packets received.                                                                               |
| <b>Invalid DMMs received</b>             | If the MEP is an initiator for a two-way ETH-DM session: Number of invalid two-way delay measurement packets received.                                                                             |
| <b>DMRs sent</b>                         | If the MEP is a responder for a ETH-DM session: Number of Delay Measurement Reply (DMR) frames sent.<br>For all other cases, this field displays 0.                                                |
| <b>Valid DMRs received</b>               | If the MEP is an initiator for a two-way ETH-DM session: Number of valid DMRs received.<br>For all other cases, this field displays 0.                                                             |
| <b>Invalid DMRs received</b>             | If the MEP is an initiator for a two-way ETH-DM session: Number of invalid DMRs received.<br>For all other cases, this field displays 0.                                                           |
| <b>Valid out-of-order LBRs received</b>  | Number of LBRs received that were valid messages and not in sequence.                                                                                                                              |
| <b>LBRs received with corrupted data</b> | Number of LBRs received that were corrupted.                                                                                                                                                       |
| <b>LBRs sent</b>                         | Number of LBRs transmitted.                                                                                                                                                                        |
| <b>LTMs sent</b>                         | Linktrace messages (LTMs) transmitted.                                                                                                                                                             |
| <b>LTMs received</b>                     | Linktrace messages received.                                                                                                                                                                       |
| <b>LTRs sent</b>                         | Linktrace responses (LTRs) transmitted.                                                                                                                                                            |
| <b>LTRs received</b>                     | Linktrace responses received.                                                                                                                                                                      |

Table 138: show oam ethernet connectivity-fault-management mep-database Output Fields (*continued*)

| Field Name                                 | Field Description                                                                                                                                                                                                    |
|--------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Sequence number of next LTM request</b> | Sequence number of the next linktrace message request to be transmitted.                                                                                                                                             |
| <b>LMM sent</b>                            | If the interface is attached to an initiator MEP for a ETH-LM session: Number of loss measurement message (LMM) PDU frames sent to the peer MEP in this session.                                                     |
| <b>Valid LMM received</b>                  | If the interface is attached to an initiator MEP for a ETH-LM session: Number of valid loss measurement request packets received.                                                                                    |
| <b>Invalid LMM received</b>                | If the interface is attached to an initiator MEP for a ETH LM session: Number of invalid loss measurement request packets received.                                                                                  |
| <b>LMR sent</b>                            | If the interface is attached to a responder MEP for a ETH-LM session: Number of loss measurement reply (LMR) frames sent.                                                                                            |
| <b>Valid LMR received</b>                  | If the interface is attached to an initiator MEP for a ETH LM session: Number of valid LMR frames received.                                                                                                          |
| <b>Invalid LMR received</b>                | If the interface is attached to an initiator MEP for a ETH-LM session: Number of invalid LMR frames received.                                                                                                        |
| <b>SLM sent</b>                            | If the interface is attached to an initiator MEP for a ETH-SLM session: Number of synthetic loss measurement (SLM) request packets transmitted from the source MEP to the remote or destination MEP in this session. |
| <b>Valid SLM received</b>                  | If the interface is attached to a responder MEP for a ETH-SLM session: Number of valid SLM PDUs transmitted from the source MEP to the remote or destination MEP.                                                    |
| <b>Invalid SLM received</b>                | If the interface is attached to a responder MEP for a ETH-SLM session: Number of invalid SLM PDUs transmitted from the source MEP to the remote or destination MEP.                                                  |
| <b>SLR sent</b>                            | If the interface is attached to a responder MEP for a ETH-SLM session: Number detail extensive of synthetic loss reply (SLR) frames sent.                                                                            |
| <b>Valid SLR received</b>                  | If the interface is attached to an initiator MEP for a ETH-SLM session: Number of valid SLR PDUs that the source MEP received from the remote or destination MEP.                                                    |
| <b>Invalid SLR received</b>                | If the interface is attached to an initiator MEP for a ETH-SLM session: Number of invalid SLR PDUs that the source MEP received from the remote or destination MEP.                                                  |
| <b>Remote MEP identifier</b>               | MEP identifier of the remote MEP.                                                                                                                                                                                    |
| <b>State (remote MEP)</b>                  | State of the remote MEP: <b>idle</b> , <b>start</b> , <b>ok</b> , or <b>failed</b> .                                                                                                                                 |
| <b>MAC address</b>                         | MAC address of the remote MEP.                                                                                                                                                                                       |
| <b>Type</b>                                | Whether the remote MEP MAC address was learned using automatic discovery or configured.                                                                                                                              |

Table 138: show oam ethernet connectivity-fault-management mep-database Output Fields (*continued*)

| Field Name                      | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|---------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Interface</b>                | Interface of the remote MEP. A seven-digit number is appended if CFM is configured to run on a routing instance of type VPLS.                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Last flapped</b>             | Date, time, and how long ago the remote MEP interface went from down to up. The format is <b>Last flapped: year-month-day hours:minutes:seconds timezone (hours:minutes:seconds ago)</b> . For example, <b>Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> .                                                                                                                                                                                                                                                                               |
| <b>Remote defect indication</b> | Whether the remote defect indication (RDI) bit is set in messages that have been received or transmitted.                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Port status TLV</b>          | <ul style="list-style-type: none"> <li>In the Maintenance domain section, displays the last transmitted port status TLV value.</li> <li>In the Remote MEP section, displays the last value of port status TLV received from the remote MEP.</li> </ul> <p>In the Action profile section, displays, the last occurred event <b>port-status-tlv blocked</b> event. This event occurred due to the reception of <b>blocked</b> value in the port status TLV from remote MEP.</p>                                                                       |
| <b>Interface status TLV</b>     | <ul style="list-style-type: none"> <li>In the Maintenance domain section, displays the last transmitted interface status TLV value.</li> <li>In the Remote MEP section, displays the last value of interface status TLV received from the remote MEP.</li> </ul> <p>In the Action profile section, if displays, the last occurred event interface-status-tlv event ( either <b>lower-layer-down</b> or <b>down</b>). This event occurred due to the reception of either lower or <b>down</b> value in the interface status TLV from remote MEP.</p> |
| <b>Action profile</b>           | Name of the action profile occurrence associated with a remote MEP.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Last event</b>               | When an action profile occurs, displays the last event that triggered it.                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Last event cleared</b>       | When all the configured and occurred events (under action profile) are cleared, then the action taken gets reverted (such as down interface is made up) and the corresponding time is noted and displayed.                                                                                                                                                                                                                                                                                                                                          |
| <b>Action</b>                   | Action taken and the corresponding time of the action occurrence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

## Sample Output

### show oam ethernet connectivity-fault-management mep-database

#### show oam ethernet connectivity-fault-management mep-database (Connection Protection TLV Configured)

```

user@host> show oam ethernet connectivity-fault-management mep-database
maintenance-domain md5 maintenance-association ma5

```

If connection-protection is not enabled on down MEPs, but connection-protection TLV is used, MX always sets the protection-in-use flag in connection-protection tlv, while CCMs are sent out. During reversion, this is an indicator to the receiver that protect-path is in use, otherwise the peer (receiver) assumes working is active and reversion does not work as expected. Setting this bit does not affect protection-switching/traffic-loss.

**Output Fields** [Table 139 on page 1974](#) lists the output fields for the **show oam ethernet connectivity-fault-management mep-statistics** command. Output fields are listed in the approximate order in which they appear.

**Table 139: show oam ethernet connectivity-fault-management delay-statistics and mep-statistics Output Fields**

| Output Field Name             | Field Description                                                                                                                                                                                                                                                                                                        |
|-------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MEP identifier                | Maintenance association end point (MEP) numeric identifier.                                                                                                                                                                                                                                                              |
| MAC address                   | Unicast MAC address configured for the MEP.                                                                                                                                                                                                                                                                              |
| Remote MEP count              | Number of remote MEPs (unless you specify the <b>remote-mep</b> option).                                                                                                                                                                                                                                                 |
| CCMs sent                     | Number of continuity check messages (CCMs) sent.                                                                                                                                                                                                                                                                         |
| CCMs received                 | Number of continuity check messages (CCMs) received for a specific remote MEP and maintenance association.                                                                                                                                                                                                               |
| CCMs received out of sequence | Number of continuity check messages (CCMs) received that were not in sequence.                                                                                                                                                                                                                                           |
| Remote MEP identifier         | Numeric identifier of the remote MEP.                                                                                                                                                                                                                                                                                    |
| Remote MAC address            | Unicast MAC address of the remote MEP.                                                                                                                                                                                                                                                                                   |
| Index                         | Index number that corresponds to the ETH-DM entry in the CFM database.                                                                                                                                                                                                                                                   |
| One-way delay (usec)          | <p>For a one-way ETH-DM session, the frame delay time, in microseconds, measured at the receiver MEP.</p> <p>For a detailed description of one-way Ethernet frame delay measurement, see the <i>ITU-T Y.1731 Ethernet Service OAM</i> topics in the <i>Junos OS Network Interfaces Library for Routing Devices</i>.</p>  |
| Two-way delay (usec)          | <p>For a two-way ETH-DM session, the frame delay time, in microseconds, measured at the initiator MEP.</p> <p>For a detailed description of two-way Ethernet frame delay measurement, see the <i>ITU-T Y.1731 Ethernet Service OAM</i> topics in the <i>Junos OS Network Interfaces Library for Routing Devices</i>.</p> |

**Table 139: show oam ethernet connectivity-fault-management delay-statistics and mep-statistics Output Fields (*continued*)**

| Output Field Name                 | Field Description                                                                                                                                                                                                                                                                                                                 |
|-----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Average one-way delay             | Average one-way frame delay for the statistics displayed.                                                                                                                                                                                                                                                                         |

| Worst-case two-way delay          | Highest two-way frame delay calculated in this session.                                                                                                                                                                                                                                                                           |
| SLM packets sent                  | Total number of synthetic loss message (SLM) PDU frames sent from the source MEP to the remote MEP during this ETH-SLM session.                                                                                                                                                                                                   |
| SLM packets received              | Total number of synthetic loss message (SLM) PDU frames that the remote MEP received from the source MEP during this ETH-SLM session.                                                                                                                                                                                             |
| SLR packets sent                  | Total number of synthetic loss reply (SLR) PDU frames that the remote MEP sent to the source MEP during this measurement session.                                                                                                                                                                                                 |
| SLR packets received              | Total number of synthetic loss reply (SLR) PDU frames that the source MEP received from the remote MEP during this measurement session.                                                                                                                                                                                           |
| Local TXFC1 value                 | Number of synthetic frames transmitted to the peer MEP for a test ID. A test ID is used to distinguish each synthetic loss measurement because multiple measurements can be simultaneously activated also on a given CoS and MEP pair. It must be unique at least within the context of any SLM for the MEG and initiating MEP.   |
| Local RXFC1 value                 | Number of synthetic frames received from the peer MEP for a test ID. The MEP generates a unique Test ID for the session, adds the source MEP ID, and initializes the local counters for the session before SLM initiation. For each SLM PDU transmitted for the session (test ID), the local counter TXFC1 is sent in the packet. |
| Last Received SLR frame TXFCf(tc) | Value of the local counter TxFC1 at the time of SLM frame transmission.                                                                                                                                                                                                                                                           |
| Last Received SLR frame TXFCb(t   | Value of the local counter RxFC1 at the time of SLR frame transmission.                                                                                                                                                                                                                                                           |
| Frame loss (near-end)             | Count of frame loss associated with ingress data frames.                                                                                                                                                                                                                                                                          |
| Frame loss (far-end)              | Count of frame loss associated with egress data frames.                                                                                                                                                                                                                                                                           |

## Sample Output

## show oam ethernet connectivity-fault-management path-database

**Syntax** show oam ethernet connectivity-fault-management path-database  
 <host-mac-address>  
 <maintenance-association *ma-name*>  
 <maintenance-domain *domain-name*>

**Release Information** Command introduced in Junos OS Release 8.4.

**Description** On M7i and M10i with Enhanced CFEB (CFEB-E), M320, MX Series, ACX Series, T320, and T640 routers, display IEEE 802.lag Operation, Administration, and Management (OAM) connectivity fault management path database information for a host configured with an MEP.

**Options** **host-mac-address**—(Optional) Display connectivity fault management path database information for a specified Ethernet host.

**maintenance-association *ma-name***—(Optional) Display connectivity fault management path database information for the specified maintenance association.

**maintenance-domain *domain-name***—(Optional) Display connectivity fault management path database information for the specified maintenance domain.

**Required Privilege Level** view

**List of Sample Output** [show oam ethernet connectivity-fault-management path-database on page 1986](#)

**Output Fields** [Table 140 on page 1985](#) lists the output fields for the **show oam ethernet connectivity-fault-management path-database** command. Output fields are listed in the approximate order in which they appear.

**Table 140: show oam ethernet connectivity-fault-management path-database Output Fields**

| Field Name                  | Field Description                           |
|-----------------------------|---------------------------------------------|
| Linktrace to                | MAC address of the remote MEPs in the path. |
| Interface                   | Interface identifier.                       |
| Maintenance domain name     | Maintenance domain name.                    |
| Format (Maintenance domain) | Maintenance domain name format configured.  |
| Level                       | Maintenance domain level configured.        |

Table 140: show oam ethernet connectivity-fault-management path-database Output Fields (*continued*)

| Field Name                   | Field Description             |
|------------------------------|-------------------------------|
| Maintenance association name | Maintenance association name. |
| Local Mep                    | Local MEP identifier.         |

### Sample Output

```
show oam ethernet
connectivity-fault
-management
path-database
```

```
user@host> show oam ethernet connectivity-fault-management path-database
maintenance-domain md1 maintenance-association ma1 00:05:85:79:39:ef
Linktrace to 00:05:85:79:39:ef, Interface : ge-3/0/0
 Maintenance Domain: md1, Level: 7
 Maintenance Association: ma1, Local Mep: 201
```

| <b>Description</b>              | On M120, M320, MX Series, T320, and T640 routers displays connectivity-fault-management policer statistics.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Options</b>                  | <p>This command has the following options:</p> <p><b>maintenance-domain <i>md-name</i></b>—Name of an existing CFM maintenance domain. If this option is not specified, policer statistics are displayed for all maintenance associations for all maintenance domains.</p> <p><b>maintenance-association <i>ma-name</i></b>—Name of an existing CFM maintenance association. If this option is not specified, policer statistics are displayed for all maintenance associations for given maintenance domain. This option cannot be specified without specifying maintenance-domain name.</p> |
| <b>Required Privilege Level</b> | view                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| Field Name                     | Field Description                                                                                                                                                                                                                                                              |
|--------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Level</b>                   | Displays the maintenance domain level configured.                                                                                                                                                                                                                              |
| <b>Maintenance association</b> | Displays the maintenance association name.                                                                                                                                                                                                                                     |
| <b>Policer</b>                 | Displays the policer name.                                                                                                                                                                                                                                                     |
| <b>Type</b>                    | Policer type. Value <b>cc</b> means this policer is used only to police continuity check CFM messages. Value <b>other</b> means this policer is used only to police non-continuity check CFM messages. Value <b>all</b> means this policer is used to police all CFM messages. |
| <b>Scope</b>                   | Policer scope. Displays whether the <i>global</i> (G) policer configuration is applicable or the session (S) specific policer config is applicable.                                                                                                                            |
| <b>Drop count</b>              | Displays the number of packets dropped by the indicated policer.                                                                                                                                                                                                               |

## Sample Output

```
show oam ethernet
connectivity-fault
-management
policer
```

Displays the policer information for all maintenance associations and their maintenance domains.

```
show oam ethernet connectivity-fault-management policer

| <b>Output Fields</b>            | <a href="#">Table 142 on page 1991</a> lists the output fields for the <b>show oam ethernet connectivity-fault-management sla-iterator-statistics</b> command. Output fields are listed in the approximate order in which they appear.                                                                                                                                                                                                                                                                                                                                                 |

Table 142: show oam ethernet connectivity-fault-management sla-iterator-statistics Output Fields

| Output Field Name                    | Output Field Description                                                                                     |
|--------------------------------------|--------------------------------------------------------------------------------------------------------------|
| Maintenance domain                   | Name of the maintenance domain.                                                                              |
| Level                                | Level of the maintenance domain level configured.                                                            |
| Maintenance association              | Name of the maintenance association.                                                                         |
| Local MEP id                         | Numeric identifier of the local MEP.                                                                         |
| Remote MEP id                        | Numeric identifier of the remote MEP.                                                                        |
| Remote MAC address                   | Unicast MAC address of the remote MEP.                                                                       |
| Iterator name                        | Name of iterator.                                                                                            |
| Iterator Id                          | Numeric identifier of the iterator.                                                                          |
| Iterator cycle time                  | Number of cycles (in milliseconds) taken between back-to-back transmission of SLA frames for this connection |
| Iteration period                     | Maximum number of cycles per iteration                                                                       |
| Iterator status                      | Current status of iterator whether running or stopped.                                                       |
| Infinite iterations                  | Status of iteration as infinite or finite.                                                                   |
| Counter reset time                   | Date and time when the counter was reset.                                                                    |
| Reset reason                         | Reason to reset counter.                                                                                     |
| Delay weight                         | Calculation weight of delay.                                                                                 |
| Delay variation weight               | Calculation weight of delay variation.                                                                       |
| DMM sent                             | Delay measurement message (DMM) PDU frames sent to the peer MEP in this session.                             |
| DMM skipped for threshold hit        | Number of DMM frames sent to the peer MEP in this session skipped during threshold hit.                      |
| DMM skipped for threshold hit window | Number of DMM frames sent to the peer MEP in this session skipped during the last threshold hit window.      |
| DMR received                         | Number of delay measurement reply (DMR) frames received.                                                     |
| DMR out of sequence                  | Total number of DMR out of sequence packets received.                                                        |

Table 142: show oam ethernet connectivity-fault-management sla-iterator-statistics Output Fields (*continued*)

| Output Field Name                                        | Output Field Description                                                                                                                                                                                                                                                                                                          |
|----------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>DMR received with invalid time stamps</b>             | Total number of DMR frames received with invalid timestamps.                                                                                                                                                                                                                                                                      |
| <b>Average two-way delay</b>                             | Average two-way frame delay for the statistics displayed.                                                                                                                                                                                                                                                                         |
| <b>Average two-way delay variation</b>                   | Average two-way "frame jitter" for the statistics displayed.                                                                                                                                                                                                                                                                      |
| <b>Average one-way forward delay variation</b>           | Average one-way forward delay variation for the statistics displayed in microseconds.                                                                                                                                                                                                                                             |
| <b>Average one-way backward delay variation</b>          | Average one-way backward delay variation for the statistics displayed in microseconds.                                                                                                                                                                                                                                            |
| <b>Weighted average two-way delay</b>                    | Weighted average two-way delay for the statistics displayed in microseconds.                                                                                                                                                                                                                                                      |
| <b>Weighted average two-way delay variation</b>          | Weighted average two-way delay variation for the statistics displayed in microseconds.                                                                                                                                                                                                                                            |
| <b>Weighted average one-way backward delay variation</b> | Weighted average one-way backward delay variation for the statistics displayed in microseconds.                                                                                                                                                                                                                                   |
| <b>Weighted average one-way forward delay variation</b>  | Weighted average one-way forward delay variation for the statistics displayed in microseconds.                                                                                                                                                                                                                                    |
| <b>SLM packets sent</b>                                  | Total number of synthetic loss message (SLM) PDU frames sent from the source MEP to the remote MEP during this ETH-SLM session.                                                                                                                                                                                                   |
| <b>SLM packets received</b>                              | Total number of synthetic loss message (SLM) PDU frames that the remote MEP received from the source MEP during this ETH-SLM session.                                                                                                                                                                                             |
| <b>SLR packets sent</b>                                  | Total number of synthetic loss reply (SLR) PDU frames that the remote MEP sent to the source MEP during this measurement session.                                                                                                                                                                                                 |
| <b>SLR packets received</b>                              | Total number of synthetic loss reply (SLR) PDU frames that the source MEP received from the remote MEP during this measurement session.                                                                                                                                                                                           |
| <b>Local TXFC1 value</b>                                 | Number of synthetic frames transmitted to the peer MEP for a test ID. A test ID is used to distinguish each synthetic loss measurement because multiple measurements can be simultaneously activated also on a given CoS and MEP pair. It must be unique at least within the context of any SLM for the MEG and initiating MEP.   |
| <b>Local RXFC1 value</b>                                 | Number of synthetic frames received from the peer MEP for a test ID. The MEP generates a unique Test ID for the session, adds the source MEP ID, and initializes the local counters for the session before SLM initiation. For each SLM PDU transmitted for the session (test ID), the local counter TXFC1 is sent in the packet. |

Table 142: show oam ethernet connectivity-fault-management sla-iterator-statistics Output Fields (*continued*)

| Output Field Name                 | Output Field Description                                                |
|-----------------------------------|-------------------------------------------------------------------------|
| Last Received SLR frame TXFCf(tc) | Value of the local counter TxFCI at the time of SLM frame transmission. |
| Last Received SLR frame TXFCb(t)  | Value of the local counter RxFCI at the time of SLR frame transmission. |
| Frame loss (near-end)             | Count of frame loss associated with ingress data frames.                |
| Frame loss (far-end)              | Count of frame loss associated with egress data frames.                 |

## Sample Output

### show oam ethernet connectivity-fault-management sla-iterator-statistics

```

user@switch> show oam ethernet connectivity-fault-management sla-iterator-statistics

Output fields are listed in the approximate order in which they appear.                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

Table 143: show oam ethernet connectivity-fault-management synthetic-loss-statistics Output Fields

| Output Field Name                 | Field Description                                                                                                                                                                                                                                                                                                                 |
|-----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MEP identifier                    | Maintenance association end point (MEP) numeric identifier.                                                                                                                                                                                                                                                                       |
| MAC address                       | Unicast MAC address configured for the MEP.                                                                                                                                                                                                                                                                                       |
| Remote MEP count                  | Number of remote MEPs (unless you specify the <b>remote-mep</b> option).                                                                                                                                                                                                                                                          |
| Remote MEP identifier             | Numeric identifier of the remote MEP.                                                                                                                                                                                                                                                                                             |
| Remote MAC address                | Unicast MAC address of the remote MEP.                                                                                                                                                                                                                                                                                            |
| SLM packets sent                  | Total number of synthetic loss message (SLM) PDU frames sent from the source MEP to the remote MEP during this ETH-SLM session.                                                                                                                                                                                                   |
| SLM packets received              | Total number of synthetic loss message (SLM) PDU frames that the remote MEP received from the source MEP during this ETH-SLM session.                                                                                                                                                                                             |
| SLR packets sent                  | Total number of synthetic loss reply (SLR) PDU frames that the remote MEP sent to the source MEP during this measurement session.                                                                                                                                                                                                 |
| SLR packets received              | Total number of synthetic loss reply (SLR) PDU frames that the source MEP received from the remote MEP during this measurement session.                                                                                                                                                                                           |
| Local TXFCI value                 | Number of synthetic frames transmitted to the peer MEP for a test ID. A test ID is used to distinguish each synthetic loss measurement because multiple measurements can be simultaneously activated also on a given CoS and MEP pair. It must be unique at least within the context of any SLM for the MEG and initiating MEP.   |
| Local RXFCI value                 | Number of synthetic frames received from the peer MEP for a test ID. The MEP generates a unique Test ID for the session, adds the source MEP ID, and initializes the local counters for the session before SLM initiation. For each SLM PDU transmitted for the session (test ID), the local counter TxFCI is sent in the packet. |
| Last Received SLR frame TXFCf(tc) | Value of the local counter TxFCI at the time of SLM frame transmission.                                                                                                                                                                                                                                                           |
| Last Received SLR frame TXFCb(t)  | Value of the local counter RxFCI at the time of SLR frame transmission.                                                                                                                                                                                                                                                           |
| Frame loss (near-end)             | Count of frame loss associated with ingress data frames.                                                                                                                                                                                                                                                                          |
| Frame loss (far-end)              | Count of frame loss associated with egress data frames.                                                                                                                                                                                                                                                                           |

## Sample Output

```
show oam ethernet connectivity-fault-
management
```

### synthetic-loss-statistics

```

```

## show oam ethernet evc

**Syntax** `show oam ethernet evc <evc-id>`

**Release Information** Command introduced in Junos OS Release 9.5.

**Description** On MX Series routers with OAM Ethernet Virtual Connection (EVC) configurations, displays the EVC configuration and status information.

**Options** This command has no options.

**Required Privilege Level** View

**Output Fields** [Table 144 on page 1998](#) lists the output fields for the `show oam ethernet evc` command. Output fields are listed in the approximate order in which they appear.

**Table 144: show oam ethernet evc Output Fields**

| Field Name     | Field Description                                                                               |
|----------------|-------------------------------------------------------------------------------------------------|
| EVC identifier | Header for the EVC information showing the EVC name, configuration, and active/inactive status. |
| UNI count      | Number of configured and active UNIs.                                                           |
| Protocol       | Protocol configured between the UNIs.                                                           |
| Local UNIs     | Heading for the list of local UNIs                                                              |
| UNI Identifier | Name of the UNI.                                                                                |
| Interface      | Interface type-dpc/pic/port.unit-number.                                                        |
| Status         | Status operational or not operational.                                                          |

## Sample Output

### show oam ethernet evc

```

user@host> show oam ethernet evc
EVC identifier: evc1, Point-to-Point, Active
UNI count: Configured(2), Active(2)
Protocol: cfm, Management domain: md, Management association: ma
Local UNIs:
 UNI Identifier Interface Status
 uni1 ge-1/1/1 Operational
 uni2 ge-1/1/1 Not Operational

```

## show oam ethernet fnp interface

|                                 |                                                                                                                                                                                                               |

| <b>Output Fields</b>            | <a href="#">Table 146 on page 2001</a> lists the output fields for the <code>show oam ethernet fnp messages</code> command. Output fields are listed in the approximate order in which they appear.                 |

**Table 146: show oam ethernet fnp messages Output Fields**

| Field Name                      | Field Description                                                                |
|---------------------------------|----------------------------------------------------------------------------------|
| Message from source MAC address | The source MAC address of the message.                                           |
| Originating port number         | Port number of the original message.                                             |
| Time since last message         | Elapsed time in hours, minutes, and seconds since the last message was received. |
| Time since last message update  | Elapsed time in hours, minutes, and seconds since the last message was updated.  |
| Total messages received         | Number of messages received.                                                     |
| Domain ID                       | Domain ID of the message.                                                        |
| STP Root ID                     | The spanning tree Root ID of the message.                                        |
| Trigger Reason                  | The reason why the message was triggered.                                        |
| Effectuated VLANs               | Number of VLANs that are affected.                                               |

Table 146: show oam ethernet fnp messages Output Fields (*continued*)

| Field Name          | Field Description                         |
|---------------------|-------------------------------------------|
| Disabled interfaces | Name of the interfaces that are disabled. |

## Sample Output

### show oam ethernet fnp messages

```
user@host> show oam ethernet fnp messages
Active FNP messages on interface lsi.1054465
Message source MAC: a0:aa:aa:aa:aa:aa
 Originating port number: 141077
 Time since last message: 00:00:00
 Time since last message update: 00:00:00
 Total messages received: 1
 Domain ID: 0
 STP Root ID: 0.f0:ff:ff:ff:ff:ff

```

## show oam ethernet link-fault-management

**Syntax** show oam ethernet link-fault-management  
<brief | detail>  
<interface-name>

**Release Information** Command introduced in Junos OS Release 8.2.

**Description** On EX Series switches and M320, M120, MX Series, T320, and T640 routers, display Operation, Administration, and Management (OAM) link fault management information for Ethernet interfaces.

**Options** **brief | detail**—(Optional) Display the specified level of output.

**interface-name**—(Optional) Display link fault management information for the specified Ethernet interface only.

**Required Privilege Level** view

**List of Sample Output** [show oam ethernet link-fault-management brief on page 2010](#)  
[show oam ethernet link-fault-management brief \(Loopback tracking\) on page 2010](#)  
[show oam ethernet link-fault-management detail on page 2010](#)  
[show oam ethernet link-fault-management detail \(backup Routing Engine\) on page 2011](#)

**Output Fields** [Table 148 on page 2005](#) lists the output fields for the **show oam ethernet link-fault-management** command. Output fields are listed in the approximate order in which they appear.

**Table 148: show oam ethernet link-fault-management Output Fields**

| Field Name             | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Level of Output |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| <b>Status</b>          | Indicates the status of the OAM discovery state mechanism . <ul style="list-style-type: none"> <li><b>Down</b>—Discovery mechanism is not running..</li> <li><b>Running</b>—Discovery mechanism is running.</li> </ul>                                                                                                                                                                                                                                                        | All levels      |
| <b>Discovery state</b> | State of the discovery mechanism. If the status of the discovery mechanism is Down then the state of discovery mechanism is Fault. However, if the status of the discovery mechanism is Running then the state can be any one of the following: <ul style="list-style-type: none"> <li><b>Passive Wait</b></li> <li><b>Active Send Local</b></li> <li><b>Send Any</b></li> <li><b>Send Local Remote</b></li> <li><b>Send Local Remote Ok</b></li> <li><b>Fault</b></li> </ul> | All levels      |

| ISSU                      | Specifies that the local end is undergoing a unified in-service software upgrade (ISSU).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | All levels      |
| Peer address              | Address of the OAM peer.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | All levels      |
| Flags                     | <p>Information about the interface. Possible values are described in the “Link Flags” section under <i>Common Output Fields Description</i>.</p> <ul style="list-style-type: none"> <li>• <b>Remote-Stable</b>—Indicates remote OAM client acknowledgment of and satisfaction with local OAM state information. <b>False</b> indicates that remote DTE either has not seen or is unsatisfied with local state information. <b>True</b> indicates that remote DTE has seen and is satisfied with local state information.</li> <li>• <b>Local-Stable</b>—Indicates local OAM client acknowledgment of and satisfaction with remote OAM state information. <b>False</b> indicates that local DTE either has not seen or is unsatisfied with remote state information. <b>True</b> indicates that local DTE has seen and is satisfied with remote state information.</li> <li>• <b>Remote-State-Valid</b>—Indicates the OAM client has received remote state information found within Local Information TLVs of received Information OAM PDUs. <b>False</b> indicates that OAM client has not seen remote state information. <b>True</b> indicates that the OAM client has seen remote state information.</li> </ul>                                                                             | All levels      |
| Remote loopback status    | Indicates the remote loopback status. An OAM entity can put its remote peer into loopback mode using the Loopback control OAM PDU. In loopback mode, every frame received is transmitted back on the same port (except for OAM PDUs, which are needed to maintain the OAM session).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | All levels      |
| Remote entity information | <p>Remote entity information.</p> <ul style="list-style-type: none"> <li>• <b>Remote MUX action</b>—Indicates the state of the multiplexer functions of the OAM sublayer. Device is forwarding non-OAM PDUs to the lower sublayer or discarding non-OAM PDUs.</li> <li>• <b>Remote parser action</b>—Indicates the state of the parser function of the OAM sublayer. Device is forwarding non-OAM PDUs to higher sublayer, looping back non-OAM PDUs to the lower sublayer, or discarding non-OAM PDUs.</li> <li>• <b>Discovery mode</b>—Indicates whether discovery mode is active or inactive.</li> <li>• <b>Unidirectional mode</b>—Indicates the ability to operate a link in a unidirectional mode for diagnostic purposes.</li> <li>• <b>Remote loopback mode</b>—Indicates whether remote loopback is supported or unsupported.</li> <li>• <b>Link events</b>—Indicates whether interpreting link events is supported or unsupported on the remote peer.</li> <li>• <b>Variable requests</b>—Indicates whether variable requests are supported. The Variable Request OAM PDU, is used to request one or more MIB variables from the remote peer.</li> <li>• <b>Remote in ISSU</b>—Indicates that the remote end is undergoing a unified in-service software upgrade (ISSU).</li> </ul> | All levels      |
| Loopback Tracking         | Indicates that loopback detection is enabled or disabled.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | All levels      |

Table 148: show oam ethernet link-fault-management Output Fields (*continued*)

| Field Name                                         | Field Description                                                                                                                                                                  | Level of Output |
|----------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| <b>Loop Status</b>                                 | Indicates that a loopback issue is either found, not found, or unknown when loopback tracking is enabled.                                                                          | All levels      |
| <b>Detect LOC</b>                                  | Indicates that loss-of-continuity (LOC) detection is enabled or disabled.                                                                                                          | All levels      |
| <b>LOC status</b>                                  | Indicates that a LOC issue is either found, not found, or unknown when Detect LOC is enabled. Status is unknown when LOC detection is disabled.                                    | All levels      |
| <b>OAM Receive Statistics</b>                      |                                                                                                                                                                                    |                 |
| <b>Information</b>                                 | The total number of information PDUs received.                                                                                                                                     | <b>detail</b>   |

## show oam ethernet lmi

**Syntax** `show oam ethernet lmi (interface <interface-name>)`

**Release Information** Command introduced in Junos OS Release 9.5.

**Description** On routers with Gigabit Ethernet, Fast Ethernet, or aggregated Ethernet, and OAM Ethernet Local Management Interface (E-LMI) configuration, display the LMI information for the configured interfaces or optionally for a specified interface.

**NOTE:** On MX Series routers, E-LMI is supported on Gigabit Ethernet (ge), 10-Gigabit Ethernet (xe), and Aggregated Ethernet (ae) interfaces configured on MX Series routers with DPC only.

**Options** **interface**—(Optional) Display LMI information for a specified interface.

**interface-name**—(Optional) Display Ethernet LMI information for the specified interface only.

**Required Privilege Level** View

**Output Fields** [Table 149 on page 2013](#) lists the output fields for the **show oam ethernet lmi** command. Output fields are listed in the approximate order in which they appear.

**Table 149: show oam ethernet lmi Output Fields**

| Field Name                 | Field Description                                                                                                          |
|----------------------------|----------------------------------------------------------------------------------------------------------------------------|
| Physical Interface         | Header for the EVC information showing the Ethernet virtual circuit (EVC) name, configuration, and active/inactive status. |
| UNI Identifier             | Name of the UNI.                                                                                                           |
| EVC map type               | EVC configuration.                                                                                                         |
| Polling verification timer | Polling verification timer status.                                                                                         |
| E-LMI state                | Operational status of the E-LMI configuration in the interfaces or specified interface.                                    |
| Priority/Untagged VLAN ID  | To be provided.                                                                                                            |
| Default EVC                | The EVC set as the default EVC.                                                                                            |
| Associated EVCs            | Heading for the list of configured EVCs.                                                                                   |

Table 149: show oam ethernet lmi Output Fields (*continued*)

| Field Name     | Field Description              |
|----------------|--------------------------------|
| EVC Identifier | EVC name.                      |
| Reference ID   | To be provided.                |
| Status         | Status active or not active.   |
| CE VLAN IDs    | Customer edge VLAN ID numbers. |

## Sample Output

### show oam ethernet lmi interface

```
user@host> show oam ethernet lmi interface ge-1/1/1
Physical interface: ge-1/1/1, Physical link is Up
UNI identifier: uni-ce1, EVC map type: Bundling
Polling verification timer: Enabled, E-LMI state: Operational
Priority/Untagged VLAN ID: 20, Default EVC: evc1
Associated EVCs:
 EVC Reference Status CE VLAN IDs
 Identifier ID
 evc1 1 Active (New) 1-2048
 evc2 2 Not Active 2049-4096
```

## show oam ethernet lmi statistics

**Syntax** `show oam ethernet lmi statistics <interface interface-name>`

**Release Information** Command introduced in Junos OS Release 9.5.

**Description** On MX Series routers with Gigabit Ethernet, Fast Ethernet, or aggregated Ethernet PICs, displays OAM Ethernet Local Management Interface (LMI) statistics.

**Options** **interface**—(Optional) Display LMI statistics for a specified interface.

**interface-name**—(Optional) Display Ethernet LMI information for the specified Ethernet interface only.

**Required Privilege Level** view

**List of Sample Output** [show oam ethernet lmi statistics on page 2016](#)

**Output Fields** [Table 150 on page 2015](#) lists the output fields for the **show oam ethernet lmi statistics** command. Output fields are listed in the approximate order in which they appear.

**Table 150: show oam ethernet lmi statistics Output Fields**

| Field Name                     | Field Description                                   |
|--------------------------------|-----------------------------------------------------|
| Physical interface             | Name of the interface for the displayed statistics. |
| Reliability errors             | Number of E-LMI reliability errors logged.          |
| Protocol errors                | Number of E-LMI protocol errors.                    |
| Status check received          | Number of E-LMI status check receive errors.        |
| Status check sent              | Number of E-LMI status check sent errors.           |
| Full status received           | Number of E-LMI full status receive errors.         |
| Full status sent               | Number of E-LMI full status sent errors.            |
| Full status continued received | Number of E-LMI status continued received errors.   |
| Full status continued sent     | Number of E-LMI full status continued sent errors.  |
| Asynchronous status sent       | Number of E-LMI asynchronous status sent errors.    |

## Sample Output

### show oam ethernet lmi statistics

```
user@host> show oam ethernet lmi statistics interface ge-1/1/1
Physical interface: ge-1/1/1
 Reliability errors 4 Protocol errors
 0
 Status check received 0 Status check sent
 0
 Full status received 694 Full status sent
694
 Full status continued received 0 Full status continued sent
 0
 Asynchronous status sent 0
```

## show pppoe interfaces

Output fields are listed in the approximate order in which they appear. Not all fields are displayed for PPPoE interfaces on M120 and M320 routers in server mode.</p>                                                                                                                                                                           |

**Table 151: show pppoe interfaces Output Fields**

| Field Name               | Field Description                                                                  | Level of Output              |
|--------------------------|------------------------------------------------------------------------------------|------------------------------|
| <b>Logical Interface</b> |                                                                                    |                              |
| <b>Logical interface</b> | Name of the logical interface.                                                     | All levels                   |
| <b>Index</b>             | Index number of the logical interface, which reflects its initialization sequence. | <b>detail extensive none</b> |
| <b>State</b>             | State of the logical interface: <b>up</b> or <b>down</b> .                         | All levels                   |
| <b>Session ID</b>        | Session ID.                                                                        | All levels                   |

Table 151: show pppoe interfaces Output Fields (*continued*)

| Field Name                              | Field Description                                                                                                                                                                                                                                                                                                                                      | Level of Output              |
|-----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Type</b>                             | Origin of the logical interface: <b>Static</b> or <b>Dynamic</b> . Indicates whether the interface was statically or dynamically created.                                                                                                                                                                                                              | <b>detail extensive none</b> |
| <b>Service name</b>                     | Type of service required (can be used to indicate an ISP name or a class or quality of service).                                                                                                                                                                                                                                                       | <b>detail extensive none</b> |
| <b>Configured AC name</b>               | Configured access concentrator name.                                                                                                                                                                                                                                                                                                                   | <b>detail extensive none</b> |
| <b>Session AC name</b>                  | Name of the access concentrator.                                                                                                                                                                                                                                                                                                                       | <b>detail extensive none</b> |
| <b>Remote MAC address or Remote MAC</b> | MAC address of the remote side of the connection, either the access concentrator or the PPPoE client.                                                                                                                                                                                                                                                  | All levels                   |
| <b>Session uptime</b>                   | Length of time the session has been up, in <i>hh:mm:ss</i> .                                                                                                                                                                                                                                                                                           | <b>detail extensive none</b> |
| <b>Dynamic Profile</b>                  | Name of the dynamic profile that was used to create this interface. If the interface was statically created, this field is not displayed.                                                                                                                                                                                                              | <b>detail extensive none</b> |
| <b>Underlying interface</b>             | Interface on which PPPoE is running.                                                                                                                                                                                                                                                                                                                   | All levels                   |
| <b>Agent Circuit ID</b>                 | Agent circuit identifier (ACI) that corresponds to the DSLAM interface that initiated the client service request. An asterisk is interpreted as a wildcard character and can appear at the beginning, the end, or both the beginning and end of the string. If the agent circuit ID is not configured, this field is not displayed.                    | <b>detail extensive none</b> |
| <b>Agent Remote ID</b>                  | Agent remote identifier that corresponds to the subscriber associated with the DSLAM interface that initiated the service request. An asterisk is interpreted as a wildcard character and can appear at the beginning, the end, or both at the beginning and end of the string. If the agent remote ID is not configured, this field is not displayed. | <b>detail extensive none</b> |
| <b>ACI Interface Set</b>                | Internally-generated name of the dynamic ACI interface set, if configured, and the set index number of the ACI entry in the session database.                                                                                                                                                                                                          | <b>detail extensive none</b> |

Table 151: show pppoe interfaces Output Fields (*continued*)

| Field Name         | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Level of Output  |
|--------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| <b>Packet Type</b> | <p>Number of packets sent and received during the PPPoE session, categorized by packet type and packet errors:</p> <ul style="list-style-type: none"> <li>• <b>PADI</b>—PPPoE Active Discovery Initiation packets.</li> <li>• <b>PADO</b>—PPPoE Active Discovery Offer packets.</li> <li>• <b>PADR</b>—PPPoE Active Discovery Request packets.</li> <li>• <b>PADS</b>—PPPoE Active Discovery Session-Confirmation packets.</li> <li>• <b>PADT</b>—PPPoE Active Discovery Termination packets.</li> <li>• <b>Service name error</b>—Packets for which the Service-Name request could not be honored.</li> <li>• <b>AC system error</b>—Packets for which the access concentrator experienced an error in performing the host request. For example, the host had insufficient resources to create a virtual circuit.</li> <li>• <b>Generic error</b>—Packets that indicate an unrecoverable error occurred.</li> <li>• <b>Malformed packets</b>—Malformed or short packets that caused the packet handler to discard the frame as unreadable.</li> <li>• <b>Unknown packets</b>—Unrecognized packets.</li> </ul> | <b>extensive</b> |

## Sample Output

### show pppoe interfaces

```
user@host> show pppoe interfaces
pp0.0 Index 66
 State: Down, Session ID: None,
 Service name: None, Configured AC name: sapphire,
 Session AC name: None, Remote MAC address: 00:00:5e:00:53:00,
 Auto-reconnect timeout: 100 seconds, Idle timeout: Never,
 Underlying interface: at-5/0/0.0 Index 71
```

### show pppoe interfaces (Status for the Specified Interface)

```
user@host> show pppoe interfaces pp0.1073741827
pp0.1073741827 Index 70
 State: Session Up, Session ID: 30, Type: Dynamic,
 Session AC name: velorum,
 Remote MAC address: 00:00:5e:00:53:c1,
 Session uptime: 16:45:46 ago,
 Underlying interface: ge-2/0/3.1 Index 73
 Service name: premium
 Dynamic Profile: PppoeProfile
 Agent Circuit ID: velorum-ge-2/0/3
 Agent Remote ID: westford
```

### show pppoe interfaces brief

```
user@host> show pppoe interfaces brief
```

| Interface      | Underlying interface | State      | Session ID | Remote MAC        |
|----------------|----------------------|------------|------------|-------------------|
| pp0.0          | ge-2/0/3.2           | Session Up | 27         | 00:00:5e:00:53:c1 |
| pp0.1          | ge-2/0/3.2           | Session Up | 28         | 00:00:5e:00:53:c1 |
| pp0.1073741824 | ge-2/0/3.1           | Session Up | 29         | 00:00:5e:00:53:c1 |

| <b>Output Fields</b>            | Table 152 on page 2021 lists the output fields for the <b>show pppoe service-name-tables</b> command. Output fields are listed in the approximate order in which they appear.                 |

Table 152: show pppoe service-name-tables Output Fields

| Field Name                | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Level of Output |
|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| <b>Service Name Table</b> | Name of the PPPoE service name table.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | none            |
| <b>Service Name</b>       | Name of a configured service in the PPPoE service name table: <ul style="list-style-type: none"> <li>• <b>&lt;empty&gt;</b>—Service of zero length that represents an unspecified service</li> <li>• <b>&lt;any&gt;</b>—Default service for non-empty service entries that do not match the configured empty or named service entries</li> <li>• <b>service-name</b>—Named service entry</li> </ul>                                                                                                                                                    | none            |
| <b>Action</b>             | Action taken when the PPPoE underlying interface interface receives a PPPoE Active Discovery Initiation (PADI) packet with the specified named service, <b>empty</b> service, <b>any</b> service, or ACI/ARI pair: <ul style="list-style-type: none"> <li>• <b>Delay seconds</b>—Number of seconds that the interface delays before responding with a PPPoE Active Discovery Offer (PADO) packet</li> <li>• <b>Drop</b>—Interface drops (ignores) the packet.</li> <li>• <b>Terminate</b>—Interface responds immediately with a PADO packet</li> </ul> | none            |

Table 152: show pppoe service-name-tables Output Fields (*continued*)

| Field Name              | Field Description                                                                                                                                                                                                                                                                                                                                                                                           | Level of Output |
|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| <b>Dynamic Profile</b>  | Name of the dynamic profile with which the router creates a dynamic PPPoE subscriber interface. A dynamic profile can be assigned to a named service, <b>empty</b> service, <b>any</b> service, or ACI/ARI pair.                                                                                                                                                                                            | none            |
| <b>Routing Instance</b> | Name of the routing instance in which to instantiate the dynamic PPPoE subscriber interface. A routing instance can be assigned to a named service, <b>empty</b> service, <b>any</b> service, or ACI/ARI pair.                                                                                                                                                                                              | none            |
| <b>Max Sessions</b>     | Maximum number of active PPPoE sessions that the router can establish with the specified named service, <b>empty</b> service, or <b>any</b> service.                                                                                                                                                                                                                                                        | none            |
| <b>Active Sessions</b>  | Current count of active PPPoE sessions created using the specified named service, <b>empty</b> service, or <b>any</b> service. The Active Sessions value cannot exceed the Max Sessions value.                                                                                                                                                                                                              | none            |
| <b>ACI</b>              | Agent circuit identifier (ACI) that corresponds to the DSLAM interface that initiated the client service request. An asterisk is interpreted as a wildcard character and can appear at the beginning, the end, or both the beginning and end of the string. An ACI can be configured as part of an ACI/ARI pair for a named service, <b>empty</b> service, or <b>any</b> service.                           | none            |
| <b>ARI</b>              | Agent remote identifier (ARI) that corresponds to the subscriber associated with the DSLAM interface that initiated the service request. An asterisk is interpreted as a wildcard character and can appear at the beginning, the end, or both at the beginning and end of the string. An ARI can be configured as part of an ACI/ARI pair for a named service, <b>empty</b> service, or <b>any</b> service. | none            |
| <b>Static Interface</b> | Name of the static PPPoE interface reserved for exclusive use by the PPPoE client with matching ACI/ARI information. A static interface can be configured only for an ACI/ARI pair.                                                                                                                                                                                                                         | none            |

## Sample Output

### show pppoe service-name-tables

```
user@host> show pppoe service-name-tables
Service Name Table: test1
Service Name Table: test2
Service Name Table: test3
```

### show pppoe service-name-tables (For the Specified Table Name)

```
user@host> show pppoe service-name-tables Table1
Service Name Table: Table1
Service Name: <empty>
Action: Terminate
Dynamic Profile: BasicPppoeProfile
Max Sessions: 100
Active Sessions: 3
Service Name: <any>
Action: Drop
ACI: velorum-ge-2/0/3
```

```
ARI: westford
 Action: Terminate
 Static Interface: pp0.100
ACI: volantis-ge-5/0/5
ARI: sunnyvale
 Action: Terminate
 Static Interface: pp0.101
Service Name: Wholesale
 Action: Terminate
 Dynamic Profile: WholesalePppoeProfile
 Routing Instance: WholesaleRI
 Max Sessions: 16000
 Active Sessions: 4
```

| Field Name                  | Field Description                                                                                     | Level of Output |
|-----------------------------|-------------------------------------------------------------------------------------------------------|-----------------|
| <b>Underlying interface</b> | Interface on which PPPoE is running.                                                                  | none            |
| <b>State</b>                | State of the PPPoE session; displays <b>Session Up</b> for active PPPoE sessions.                     | none            |
| <b>Session ID</b>           | PPPoE session identifier.                                                                             | none            |
| <b>Remote MAC</b>           | MAC address of the remote side of the connection, either the access concentrator or the PPPoE client. | none            |

## Sample Output

### show pppoe sessions (For All Active Sessions)

```

user@host> show pppoe sessions
Interface Underlying State Session Remote
 interface
pp0.0 ge-2/0/3.2 Session Up 27 00:00:5e:00:53:c1
pp0.1 ge-2/0/3.2 Session Up 28 00:00:5e:00:53:c1
pp0.1073741824 ge-2/0/3.1 Session Up 29 00:00:5e:00:53:c1
pp0.1073741825 ge-2/0/3.1 Session Up 30 00:00:5e:00:53:c1
pp0.1073741826 ge-2/0/3.1 Session Up 31 00:00:5e:00:53:c1

```

### show pppoe sessions (For All Active Sessions Matching the Agent Circuit Identifier)

```

user@host> show pppoe sessions aci "velorum-ge-2/0/3"
Interface Underlying State Session Remote
 interface
pp0.0 ge-2/0/3.2 Session Up 27 00:00:5e:00:53:c1
pp0.1 ge-2/0/3.2 Session Up 28 00:00:5e:00:53:c1

```

## show pppoe statistics

| <b>Output Fields</b>            | <a href="#">Table 154 on page 2026</a> lists the output fields for the <b>show pppoe statistics</b> command. Output fields are listed in the approximate order in which they appear. |

Table 154: show pppoe statistics Output Fields

| Field Name            | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Active PPPoE sessions | <p>Total number of active PPPoE sessions and the number of packets sent and received during the PPPoE session, categorized by packet type and packet errors:</p> <ul style="list-style-type: none"> <li><b>PADI</b>—PPPoE Active Discovery Initiation packets.</li> <li><b>PADO</b>—PPPoE Active Discovery Offer packets.</li> <li><b>PADR</b>—PPPoE Active Discovery Request packets.</li> <li><b>PADS</b>—PPPoE Active Discovery Session-Confirmation packets.</li> <li><b>PADT</b>—PPPoE Active Discovery Termination packets.</li> <li><b>Service name error</b>—Packets for which the Service-Name request could not be honored.</li> <li><b>AC system error</b>—Packets for which the access concentrator experienced an error in performing the host request. For example, the host had insufficient resources to create a virtual circuit.</li> <li><b>Generic error</b>—Packets that indicate an unrecoverable error occurred.</li> <li><b>Malformed packets</b>—Malformed or short packets that caused the packet handler to discard the frame as unreadable.</li> <li><b>Unknown packets</b>—Unrecognized packets.</li> </ul> |

Table 154: show pppoe statistics Output Fields (*continued*)

| Field Name      | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Timeouts</b> | <p>Information about timeouts that occurred during the PPPoE session (not displayed for M120, M320, and MX Series routers):</p> <ul style="list-style-type: none"> <li>• <b>PADI</b>—No PADR packet has been received within the timeout period. (This value is always zero and is not supported.)</li> <li>• <b>PADO</b>—No PPPoE Active Discovery Offer packet has been received within the timeout period.</li> <li>• <b>PADR</b>—No PADS packet has been received within the timeout period.</li> </ul> |

## Sample Output

### show pppoe statistics

```

user@host> show pppoe statistics
Active PPPoE sessions: 1
 PacketType Sent Received
 PADI 0 0
 PADO 0 0
 PADR 0 0
 PADS 0 0
 PADT 0 0
 Service name error 0 0
 AC system error 0 0
 Generic error 0 0
 Malformed packets 0 0
 Unknown packets 0 0
 Timeouts
 PADI 0
 PADO 0
 PADR 0

```

### show pppoe statistics (For the Specified Underlying Interface Only)

```

user@host> show pppoe statistics ge-4/0/3.2
Active PPPoE sessions: 4
 PacketType Sent Received
 PADI 0 5
 PADO 5 0
 PADR 0 5
 PADS 4 0
 PADT 0 1
 Service name error 0 0
 AC system error 0 0
 Generic error 0 0
 Malformed packets 0 0
 Unknown packets 0 0

```

## show pppoe underlying-interfaces

| Field Name                      | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Level of Output              |
|---------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Underlying Interface</b>     | Name of the PPPoE underlying logical interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | All levels                   |
| <b>Service Name Table</b>       | Name of the service name table.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | All levels                   |
| <b>Dynamic Profile</b>          | Name of the dynamic profile that was used to create this interface. If the interface was statically created, then the value is <b>none</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | All levels                   |
| <b>Index</b>                    | Index number of the logical interface, which reflects its initialization sequence.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>detail extensive</b>      |
| <b>State</b>                    | Origin of the logical interface: <b>Static</b> or <b>Dynamic</b> . Indicates whether the interface was statically or dynamically created.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>detail extensive</b>      |
| <b>Operational States</b>       | Fields in this block are actual operational values rather than simply the configured values. The operational values can be the result of RADIUS-initiated changes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | <b>detail extensive</b>      |
| <b>Max Sessions</b>             | Maximum number of PPPoE logical interfaces that can be activated on the underlying interface. When this number of logical interfaces has been established, all subsequent PPPoE Active Discovery Initiation (PADI) packets are dropped and all subsequent PPPoE Active Discovery Request (PADR) packets trigger PPPoE Active Discovery Session (PADS) error responses.                                                                                                                                                                                                                                                                                                             | <b>detail extensive</b>      |
| <b>Max Sessions VSA Ignore</b>  | Whether the router is configured to ignore (clear) the PPPoE maximum session value returned by RADIUS in the Max-Clients-Per-Interface Juniper Networks VSA [26-143] and restore the PPPoE maximum session value on the underlying interface to the value configure with the <b>max-sessions</b> statement: <b>Off</b> (default) or <b>On</b> .                                                                                                                                                                                                                                                                                                                                    | <b>detail extensive none</b> |
| <b>Active Sessions</b>          | Number of active PPPoE sessions on the underlying interface. If a dynamic profile is listed, then it is the number of active PPPoE sessions on the underlying interface that are using this profile. The Active Sessions value must not exceed the Max Sessions value.                                                                                                                                                                                                                                                                                                                                                                                                             | <b>detail extensive</b>      |
| <b>Agent Circuit Identifier</b> | <p>Whether the underlying interface is configured with the <b>agent-circuit-identifier</b> statement to enable creation of autosensed dynamic VLAN subscriber interfaces based on agent circuit identifier (ACI) information.</p> <p><b>Autosensing</b> indicates that creation of ACI-based dynamic VLAN interfaces is enabled on the underlying interface. If creation of ACI-based dynamic VLANs is not configured on the underlying interface, this field does not appear.</p> <p><b>NOTE:</b> The Agent Circuit Identifier field is replaced with the Line Identity field when an ALI interface set is configured with the <b>line-identity</b> autoconfiguration stanza.</p> | <b>detail extensive none</b> |

Table 155: show pppoe underlying-interfaces Output Fields (*continued*)

| Field Name                    | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Level of Output              |
|-------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>Line Identity</b>          | <p>Whether the underlying interface is configured with the <b>line-identity</b> statement to enable creation of autosensed dynamic VLAN subscriber interfaces based on the specified trusted option: ACI, ARI, both, or neither.</p> <p><b>Autosensing</b> indicates that creation of ALI-based dynamic VLAN interfaces is enabled on the underlying interface. If creation of ALI dynamic VLANs based on trusted options is not configured on the underlying interface, this field does not appear.</p> <p><b>NOTE:</b> The Line Identity field is replaced with the ACI VLAN field when an ACI interface set is configured with the <b>agent-circuit-id</b> autoconfiguration stanza.</p>                                                                                                                                                                                                                                                                                                                                                                                                                    | <b>detail extensive none</b> |
| <b>Duplicate Protection</b>   | State of PPPoE duplicate protection: <b>On</b> or <b>Off</b> . When duplicate protection is configured for the underlying interface, a dynamic PPPoE logical interface cannot be activated when an existing active logical interface is present for the same PPPoE client. The uniqueness of the PPPoE client is determined by the client's MAC address.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <b>detail extensive</b>      |
| <b>Short Cycle Protection</b> | State of PPPoE short cycle protection: <b>mac-address</b> , <b>circuit-id</b> , or <b>Off</b> . Enabling short cycle protection, also known as PPPoE lockout, on the PPPoE underlying interface temporarily prevents (locks out) a failed or short-lived (short-cycle) PPPoE subscriber session from reconnecting to the router for a default or configurable period of time. PPPoE client sessions are identified by their unique media access control (MAC) source address or agent circuit identifier (ACI) value.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | <b>detail extensive</b>      |
| <b>Direct Connect</b>         | State of the configuration to ignore DSL Forum VSAs: <b>On</b> or <b>Off</b> . When configured, the router ignores any of these VSAs received from a directly connected CPE device on the interface.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | <b>detail extensive none</b> |
| <b>AC Name</b>                | Name of the access concentrator.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <b>detail extensive</b>      |

## show pppoe version

**Syntax**    show pppoe version

**Release Information**    Command introduced before Junos OS Release 7.4.

**Description**    ( M120 routers and M320 routers only) Display version information about PPPoE.

**Options**    This command has no options.

**Required Privilege Level**    view

**List of Sample Output**    [show pppoe version on page 2035](#)

**Output Fields**    [Table 156 on page 2035](#) lists the output fields for the **show pppoe version** command. Output fields are listed in the approximate order in which they appear.

**Table 156: show pppoe version Output Fields**

| Field Name                | Field Description                                                                                                                                                                                                                                                                   |
|---------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| version <i>n</i>          | PPPoE version number and RFC. For example, <b>version 1, rfc 2516</b> .                                                                                                                                                                                                             |
| PPPoE protocol            | State of the PPPoE protocol: <b>enabled</b> or <b>disabled</b> .                                                                                                                                                                                                                    |
| Maximum Sessions          | Maximum active sessions supported per router. The default is 256 sessions.                                                                                                                                                                                                          |
| PADI resend timeout       | Initial time, in seconds, that the router waits to receive a PPoE Active Discovery Offer (PADO) packet for the PPoE Active Discovery Initiation (PADI) packet sent. This timeout doubles for each successive PADI packet sent. Not displayed for M120 and M320 routers.             |
| PADR resend timeout       | Initial time, in seconds, that the router waits to receive a PPoE Active Discovery Session Confirmation (PADS) packet for the PPoE Active Discovery Request (PADR) packet sent. This timeout doubles for each successive PADR packet sent. Not displayed for M120 and M320 routers. |
| Max resend timeout        | Maximum value, in seconds, that the PADI or PADR resend timer can accept. The maximum value is 64. Not displayed for M120 and M320 routers.                                                                                                                                         |
| Max Configured AC timeout | Time, in seconds, during which the configured access concentrator must respond. Not displayed for M120 and M320 routers.                                                                                                                                                            |

## Sample Output

### show pppoe version

```
user@host> show pppoe version
Point-to-Point Protocol Over Ethernet, version 1. rfc2516
 PPPoE protocol = Enabled
 Maximum Sessions = 256
```

|                           |              |
|---------------------------|--------------|
| PADI resend timeout       | = 2 seconds  |
| PADR resend timeout       | = 16 seconds |
| Max resend timeout        | = 64 seconds |
| Max Configured AC timeout | = 4 seconds  |

| Field Name                          | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Request/State</b>                | <p>Status of the Ethernet ring RAPS messages.</p> <ul style="list-style-type: none"> <li><b>NR</b>—Indicates that there is no request for APS on the ring.</li> <li><b>SF</b>—Indicates that there is a signal failure on the ring.</li> <li><b>FS</b>—Indicates that there are active forced-switch requests in the ring.</li> <li><b>MS</b>—Indicates that there are active manual-switch requests in the ring.</li> </ul> <p><b>NOTE:</b> Both <b>FS</b> and <b>MS</b> values are valid only when G.8032v2 is supported.</p> |
| <b>Ring Protection Link Blocked</b> | Blocking on the ring protection link: <b>Yes</b> or <b>No</b> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>No Flush</b>                     | Indicates the value of the Do Not Flush (DNF) flag in the received RAPS PDU. If the value is Yes, then FDB flush is not triggered as part of processing of the received RAPS PDU.                                                                                                                                                                                                                                                                                                                                               |
| <b>Blocked Port Reference</b>       | This parameter is the reference to the blocked ring port. If the east ring port is blocked, the Blocked Port Reference (BPR) value is 0. If the west ring port is blocked, the BPR value is 1. If both ring ports are blocked, this parameter can take any value. If both east and west ports are blocked or not blocked, the value would be 0. This field is valid only when G.8032v2 is supported.                                                                                                                            |
| <b>Blocked Port Reference</b>       | Reference of the ring port on which traffic is blocked.                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| <b>Originator</b>                   | Indicates whether the node is the originator of the RAPS messages.                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Remote Node ID</b>               | Identifier (in MAC address format) of the remote node.                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

## Sample Output

### show protection-group ethernet-ring aps (EX Switches)

```

user@switch>show protection-group ethernet-ring aps
Ring Name Request/state No Flush RPL Blocked Originator Remote Node ID
erp1 NR No Yes No 00:1F:12:30:B8:81

```

## Sample Output

### show protection-group ethernet-ring aps (Owner Node, Normal Operation on ACX and MX Routers)

```

user@host> show protection-group ethernet-ring aps
Ethernet Ring Request/state RPL Blocked No Flush BPR Originator Remote
Node ID
Erp_1 NR Yes No 1 No
00:00:00:02:00:01

```

## Sample Output

### show protection-group ethernet-ring aps detail (Owner Node, Normal Operation on ACX and MX Routers)

```

user@host> show protection-group ethernet-ring aps detail
Ethernet-Ring name : Erp_1
Request/State : NR
Ring Protection Link blocked : Yes
No Flush Flag : No
Blocked Port Reference : 1
Originator : No
Remote Node ID : 00:00:00:02:00:01

```

### show protection-group ethernet-ring aps (MX RPL Owner Ring Node, Failure condition on non-RPL link of the ring)

```

user@host> show protection-group ethernet-ring aps
Ethernet Ring Request/state RPL Blocked No Flush
pg101 SF No No

Originator Remote Node ID
No 00:01:02:00:00:01

```

### show protection-group ethernet-ring aps (MX Interconnection Ring Node, Failure condition in major ring on non-RPL link of the ring)

```

user@host> show protection-group ethernet-ring aps
Ethernet Ring Request/state RPL Blocked No Flush BPR
pg_major SF No No 0
pg_subring NR Yes Yes 0

Originator Remote Node ID
No 00:01:00:00:00:01
No 00:02:00:00:00:02

```

### show protection-group ethernet-ring aps (MX Series router)

```

user@host> show protection-group ethernet-ring aps

| Output Fields                      | Field Description                                                                                                                                                  |
|------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>G8032 Compatability Version</b> | This is the compatibility version mode of ERP. This parameter always takes the value 1 in the case of G8032v1. This parameter is valid only for MX Series routers. |
| <b>East Interface</b>              | One of the two switch interfaces that participates in a ring link. When Junos supports G8032v2, this interface is treated as interface 0.                          |
| <b>West Interface</b>              | One of the two interfaces in a switch that participates in a ring link. When Junos supports G8032v2, this interface is treated as interface 1.                     |

**Table 158: show protection-group ethernet-ring configuration Output Fields (continued)**

| Output Fields                      | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Restore Interval</b>            | Configured interval of wait time after a link is restored. When a link goes down, the RPL link is activated. When the down link becomes active again, the RPL owner receives a notification. The RPL owner waits for the restore interval before issuing a block on the RPL link. The configured restore interval can be 5 through 12 minutes for ERPV1 and 1 through 12 minutes for ERPV2. This configuration is a global configuration and applies to all Ethernet rings if the Ethernet ring does not have a more specific configuration for this value. If no parameter is configured at the protection group level, the global configuration of this parameter uses the default value. |
| <b>Wait to Block Interval</b>      | Configured interval of wait time for link restoration when a manual command (manual switch or force switch) is cleared. On clearing the manual command, the RPL owner receives NR messages, which starts a timer with interval 'Wait to Block' to restore the RPL link after its expiration. This delay timer is set to be 5 seconds longer than the guard timer. The configured number can be from 5 seconds through 10 seconds. The parameter is valid only for G.8032v2.                                                                                                                                                                                                                 |
| <b>Guard Interval</b>              | Configured number of milliseconds (in 10 millisecond intervals, 10 milliseconds through 2000 milliseconds) that the node does not process any Ethernet ring protection protocol data units (PDUs). This configuration is a global configuration and applies to all Ethernet rings if the Ethernet ring does not have a more specific configuration for this value. If no parameter is configured at the protection group level, the global configuration of this parameter uses the default value.                                                                                                                                                                                          |
| <b>Hold off interval</b>           | This is the interval at which the link is held down even before declaring that the link is down. Because the parameter is not supported at present, its value is always considered 0. This parameter is valid only for MX Series routers.                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Node ID</b>                     | Node ID for the switch or router. If the node ID is not configured, it is assigned by default. For EX Series switches, the Node ID value cannot be configured, whereas for MX Series routers, it can be configured..                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Ring ID</b>                     | In G8032v2, the ring ID can be within the range 1–239. All the nodes in a ring should have the same ring ID. In the case of G8032v1, the value of the ring ID is always 1. This parameter is valid only for MX Series routers.                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| <b>Node Role</b>                   | Indicates whether the ring node is operating as a normal ring-node or RPL-owner or RPL-neighbor. For G8032v1 RPL-neighbor role is not supported. This parameter is valid only for MX Series routers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <b>Revertive Mode of Operation</b> | This parameter indicates whether the ring is operating in revertive mode or nonrevertive mode. In nonrevertive mode of operation, when all links in the ring and Ethernet Ring Nodes have recovered and no external requests are active, the Ethernet Ring does not automatically revert. G8032v1 supports only revertive mode of operation. This parameter is valid only for MX Series routers.                                                                                                                                                                                                                                                                                            |
| <b>RAPS Tx Dot1p priority</b>      | The RAPS Tx Dot1p priority is a parameter with which the RAPS is transmitted from the ring node. For G8032v1, the value of this parameter is always 0. For G8032v2, the value of this parameter can be within the range 0–7. This parameter is valid only for MX Series routers.                                                                                                                                                                                                                                                                                                                                                                                                            |

**Table 158: show protection-group ethernet-ring configuration Output Fields (*continued*)**

| Output Fields                          | Field Description                                                                                                                                                                                                                                                                                                                                                                                                        |
|----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Node type</b>                       | Indicates whether ring node is a normal ring node having two ring-links or a open ring-node having only a single ring-link or a interconnection ring-node. An interconnection ring node can be connected to major ring in non virtual-channel mode or in virtual channel mode. Ring interconnection is not supported for G8032v1. This parameter is valid only for MX Series routers.                                    |
| <b>Major ring name</b>                 | If the node type is interconnection in the ring, this parameter takes the name of the major ring to which the sub-ring node is connected. This parameter is valid only for MX Series routers.                                                                                                                                                                                                                            |
| <b>Interconnection mode</b>            | Indicates the interconnection mode if the type of the node is interconnection. An interconnection ring node can be connected to major ring in non-virtual channel mode or in virtual channel mode. This parameter is valid only for MX Series routers.                                                                                                                                                                   |
| <b>Propagate Topology Change event</b> | When Propagate Topology Change event is set to 1, the change in the topology of sub-ring is propagated to the major ring, enabling the transmission of EVENT FLUSH RAPS PDU in the major ring. When the parameter is set to 0, the topology change in the sub-ring is not propagated to the major ring blocking EVENT FLUSH RAPS PDU transmission in the major ring. This parameter is valid only for MX Series routers. |
| <b>Control Vlan</b>                    | The VLAN that transfers ERP PDUs from one node to another.                                                                                                                                                                                                                                                                                                                                                               |
| <b>Physical Ring</b>                   | Physical ring if the east and west interfaces are nontrunk ports. For MX Series routers, the ring is termed a physical ring if no data channels are defined for the ring and the entire physical port forwarding is controlled by ERP.                                                                                                                                                                                   |
| <b>Data Channel VLAN(s)</b>            | Data VLANs for which forwarding behavior is controlled by the ring instance.                                                                                                                                                                                                                                                                                                                                             |

## Sample Output

### show protection-group ethernet-ring configuration (EX Switch)

```

user@switch>show protection-group ethernet-ring configuration
Ethernet ring configuration parameters for protection group erp1
East Interface : ge-0/0/3.0
West Interface : ge-0/0/9.0
Restore Interval : 5 minutes
Guard Interval : 500 ms
Node Id : 00:1F:12:30:B8:81
Control Vlan : 101
Physical Ring : yes

```

### show protection-group ethernet-ring configuration detail (MX Series Router)

```

user@switch>show protection-group ethernet-ring configuration detail
Ethernet Ring configuration information for protection group pg_101
G8032 Compatibility Version : 2
East interface (interface 0) : xe-2/3/0.1
West interface (interface 1) : xe-2/2/1.1

```

```
Restore interval : 5 minutes
Wait to Block interval : 5 seconds
Guard interval : 500 ms
Hold off interval : 0 ms
Node ID : 64:87:88:65:37:D0
Ring ID (1 ... 239) : 1
Node role (normal/rpl-owner/rpl-neighbour) : normal
Revertive mode of operation : 1
RAPS Tx Dot1p priority (0 .. 7) : 0
Node type (normal/open/interconnection) : Normal
Control Vlan : 100
Physical Ring : No
Data Channel Vlan(s) : 200,300
```

### show protection-group ethernet-ring configuration (MX Series Router)

```
user@switch>show protection-group ethernet-ring configuration
Ethernet Ring configuration information for protection group pg_101
G8032 Compatibility Version : 2
East interface (interface 0) : xe-2/3/0.1
West interface (interface 1) : xe-2/2/1.1
Restore interval : 5 minutes
Wait to Block interval : 5 seconds
Guard interval : 500 ms
Hold off interval : 0 ms
Node ID : 64:87:88:65:37:D0
Ring ID (1 ... 239) : 1
Node role (normal/rpl-owner/rpl-neighbour) : rpl-neighbour
Node RPL end : east-port
Revertive mode of operation : 1
RAPS Tx Dot1p priority (0 .. 7) : 0
Node type (normal/open/interconnection) : Normal
Control Vlan : 100
Physical Ring : No
Data Channel Vlan(s) : 200,300
```

### show protection-group ethernet-ring configuration detail (MX Series Router)

Output fields are listed in the approximate order in which they appear.                                                                                                                                                                                                                                                                               |

**Table 159: show protection-group ethernet-ring data-channel Output Fields**

| Field Name       | Field Description                                                                                                                                                                                                                                                                                                                                                                                                       |
|------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Interface</b> | Name of the interface configured for the Ethernet ring.                                                                                                                                                                                                                                                                                                                                                                 |
| <b>STP Index</b> | The Spanning Tree Protocol (STP) index number used by each interface in an Ethernet ring. The STP index controls the forwarding behavior for a set of VLANs on a data channel on an Ethernet ring port. For multiple Ethernet ring instances on an physical ring port, there are multiple STP index numbers. Different ring instances will have different STP index numbers and may have different forwarding behavior. |

| Field Name           | Field Description                                                                                                                                                                                                       |
|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Forward State</b> | Forwarding state on the Ethernet ring. <ul style="list-style-type: none"> <li>• <b>forwarding</b>—Indicates packets are being forwarded.</li> <li>• <b>discarding</b>—Indicates packets are being discarded.</li> </ul> |

## Sample Output

### show protection-group ethernet-ring data-channel

```

user@host> show protection-group ethernet-ring data-channel
Ethernet ring data channel information for protection group pg301

Interface STP index Forward State
xe-5/0/2 78 forwarding
xe-2/2/0 79 discarding

Ethernet ring data channel parameters for protection group pg302

Interface STP index Forward State
xe-5/0/2 80 forwarding
xe-2/2/0 81 forwarding

```

### show protection-group ethernet-ring data-channel detail

```

user@host> show protection-group ethernet-ring data-channel detail
Ethernet ring data channel parameters for protection group pg301

Interface name : xe-5/0/2
STP index : 78
Forward State : forwarding

Interface name : xe-2/2/0
STP index : 79
Forward State : discarding

Ethernet ring data channel parameters for protection group pg302

Interface name : xe-5/0/2
STP index : 80
Forward State : forwarding

Interface name : xe-2/2/0
STP index : 81
Forward State : forwarding

```

## show protection-group ethernet-ring flush-info

| <b>Output Fields</b>            | Table 160 on page 2049 lists the output fields for the <code>show protection-group ethernet-ring flush-info</code> command. Output fields are listed in the approximate order in which they appear.                                                                                                                                                                                                                                                                              |

Table 160: show protection-group ethernet-ring flush-info Output Fields

| Field Name                    | Field Description                                                                                  |
|-------------------------------|----------------------------------------------------------------------------------------------------|
| <b>Interface</b>              | Physical interface configured for the Ethernet ring. This can be an aggregated Ethernet link also. |
| <b>Originating Node</b>       | Node from which RAPS protocol data units originates on the Ethernet Ring.                          |
| <b>Blocked Port Reference</b> | Reference of the ring port on which traffic is blocked.                                            |

## Sample Output

### show protection-group ethernet-ring flush-info (ACX and MX Series Routers)

```
user@host> show protection-group ethernet-ring flush-info
```

Ethernet ring flush port information for protection group pg100

| Interface     | Originating Node  | Blocked Port Reference |
|---------------|-------------------|------------------------|
| xe-5/0/2.4001 | 00:00:00:00:00:00 | 0                      |
| xe-2/2/0.4001 | 00:00:00:00:00:00 | 0                      |

#### show protection-group ethernet-ring flush-info detail (ACX and MX Series Routers)

```
user@host> show protection-group ethernet-ring flush-info detail
Ethernet ring flush port information for protection group pg100
```

**Table 161: MX Series Routers show protection-group ethernet-ring interface Output Fields**

| Field Name                                                           | Field Description                                                                                   |
|----------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------|
| Ethernet ring port parameters for protection group <i>group-name</i> | Output is organized by configured protection group.                                                 |
| Interface                                                            | Physical interfaces configured for the Ethernet ring. This can be an aggregated Ethernet link also. |

Table 161: MX Series Routers show protection-group ethernet-ring interface Output Fields (*continued*)

| Field Name               | Field Description                                                                                                                                        |
|--------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| Control Channel          | (MX Series router only) Logical unit configured on the physical interface.                                                                               |
| Direction                | Direction of the traffic.                                                                                                                                |
| Forward State            | State of the ring forwarding on the interface: <b>discarding</b> or <b>forwarding</b> .                                                                  |
| Ring Protection Link End | Whether this interface is the end of the ring: <b>Yes</b> or <b>No</b> .                                                                                 |
| Signal Failure           | Whether there a signal failure exists on the link: <b>Clear</b> or <b>Set</b> .                                                                          |
| Admin State              | State of the interface: For EX switches, <b>ready</b> , <b>ifl ready</b> , or <b>waiting</b> . For MX routers, <b>IFF ready</b> or <b>IFF disabled</b> . |

## Sample Output

### show protection-group ethernet-ring interface (EX Series Switch Owner Node)

```
user@host> show protection-group ethernet-ring interface
Ethernet ring port parameters for protection group pg101
```

| Interface  | Forward State | RPL End | Signal Failure | Admin State |
|------------|---------------|---------|----------------|-------------|
| ge-0/0/3.0 | discarding    | Yes     | Clear          | ready       |
| ge-0/0/9.0 | forwarding    | No      | Clear          | ready       |

### show protection-group ethernet-ring interface (Owner Node MX Series Router )

```
user@host> show protection-group ethernet-ring interface
Ethernet ring port parameters for protection group pg101
```

| Interface | Control Channel | Direction | Forward State | RPL End | SF    | Admin State |
|-----------|-----------------|-----------|---------------|---------|-------|-------------|
| ge-1/2/0  | ge-1/2/0.100    | east      | forwarding    | No      | Clear | IFF ready   |
| ge-1/2/2  | ge-1/2/2.100    | west      | forwarding    | No      | Clear | IFF ready   |

### show protection-group ethernet-ring interface detail (Owner Node MX Series Router )

```
user@host> show protection-group ethernet-ring interface detail
Ethernet ring port parameters for protection group pg101
```

```
Interface name : ge-1/2/0
Control channel name : ge-1/2/0.100
Interface direction : east
Ring Protection Link End : No
Signal Failure : Clear
Forward State : forwarding
Interface Admin State : IFF ready

Interface name : ge-1/2/2
```

```

Control channel name : ge-1/2/2.100
Interface direction : west
Ring Protection Link End : No
Signal Failure : Clear
Forward State : forwarding
Interface Admin State : IFF ready

```

#### show protection-group ethernet-ring interface (EX Series Switch Ring Node)

```

user@host> show protection-group ethernet-ring interface
Ethernet ring port parameters for protection group pg102

Ethernet ring port parameters for protection group pg101

Interface Forward State RPL End Signal Failure Admin State

ge-0/0/3.0 discarding Yes Clear ready
ge-0/0/9.0 forwarding No Clear ready

```

#### show protection-group ethernet-ring interface detail (ACX Series and MX Series)

```

user@host> show protection-group ethernet-ring interface detail
Ethernet ring port parameters for protection group Erp_1

Interface name : xe-0/0/0
Control channel name : xe-0/0/0.1
Interface direction : east
Ring Protection Link End : No
Signal Failure : Clear
Forward State : forwarding
Interface Admin State : IFF ready

Interface name : et-0/0/48
Control channel name : et-0/0/48.1
Interface direction : west
Ring Protection Link End : No
Signal Failure : Clear
Forward State : forwarding
Interface Admin State : IFF ready

```

## show protection-group ethernet-ring node-state

|                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

**Table 162: show protection-group ethernet-ring node-state Output Fields (*continued*)**

| Field Name                   | Field Description                                                  |
|------------------------------|--------------------------------------------------------------------|
| Op State / Operational State | State of the node: <b>Operational</b> or any internal wait state.. |

## Sample Output

### show protection-group ethernet-ring node-state (MX Series Router - RPL Owner Node, Normal Operation)

```

user@host> show protection-group ethernet-ring node-state
Ethernet ring APS State Event RPL Owner WTR Timer WTB Timer Guard
Timer Operation state
pg101 idle NR-RB Yes disabled disabled disabled
operational
pg102 idle NR-RB No disabled disabled disabled
operational

```

### show protection-group ethernet-ring node-state (MX Series Router - Normal Ring Node, Normal Operation)

```

user@host> show protection-group ethernet-ring node-state
Ethernet ring APS State Event RPL Owner
pg102 idle NR-RB No

WTR Timer WTB Timer Guard Timer Operation state
disabled disabled disabled operational

```

### show protection-group ethernet-ring node-state (MX Series Router - RPL Owner Node, Remote Failure Condition)

```

user@host> show protection-group ethernet-ring node-state
Ethernet ring APS State Event RPL Owner
pg101 protected remote SF Yes

WTR Timer WTB Timer Guard Timer Operation state
disabled disabled disabled operational

```

### show protection-group ethernet-ring node-state detail (ACX Series and MX Series Router)

```

user@host> show protection-group ethernet-ring node-state detail
Ethernet-Ring name : Erp_1
APS State : idle
Event : NR-RB
Ring Protection Link Owner : No
Wait to Restore Timer : disabled
Wait to Block Timer : disabled
Guard Timer : disabled
Operation state : operational

```

### show protection-group ethernet-ring node-state detail (MX Series Router - RPL Owner Node, Normal Operation)

```

user@host> show protection-group ethernet-ring node-state detail
Ethernet-Ring name : pg101
APS State : idle
Event : NR-RB
Ring Protection Link Owner : Yes

```

```
Wait to Restore Timer : disabled
Wait to Block Timer : disabled
Guard Timer : disabled
Operation state : operational
```

```
Ethernet-Ring name : pg102
APS State : idle
Event : NR-RB
Ring Protection Link Owner : No
Wait to Restore Timer : disabled
Wait to Block Timer : disabled
Guard Timer : disabled
Operation state : operational
```

Table 163: show protection-group ethernet-ring statistics Output Fields

| Field Name                             | Field Description                                                                                                                                               |
|----------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Ethernet Ring Statistics for PG</b> | Name of the protection group for which statistics are displayed.                                                                                                |
| <b>RAPS event sent</b>                 | Number of times Ring Automatic Protection Switching (RAPS) message transmission event occurred locally. This field is applicable only to MX Series routers.     |
| <b>RAPS event received</b>             | Number of RAPS messages received and processed by ERP state-machine and which resulted in state transition. This field is applicable only to MX Series routers. |
| <b>Local SF</b>                        | Number of times a signal failure has occurred locally.                                                                                                          |
| <b>Remote SF</b>                       | Number of times a signal failure has occurred anywhere else on the ring.                                                                                        |
| <b>NR event</b>                        | Number of times a No Request event has occurred on the ring. This field is applicable only to EX Series switches.                                               |
| <b>NR event sent</b>                   | Number of times a No Request event has occurred locally. This field is applicable only to MX Series routers.                                                    |
| <b>NR event received</b>               | Number of times a No Request event has occurred anywhere else on the ring. This field is applicable only to MX Series routers.                                  |
| <b>NR-RB event</b>                     | Number of times a No Request, Ring Blocked event has occurred on the ring. This field is applicable only to EX Series switches.                                 |
| <b>NR-RB event sent</b>                | Number of times a No Request, Ring Blocked event has occurred locally. This field is applicable only to MX Series routers.                                      |
| <b>NR-RB event received</b>            | Number of times a No Request, Ring Blocked event has occurred anywhere else on the ring. This field is applicable only to MX Series routers.                    |
| <b>Flush event sent</b>                | Number of times flush-event RAPS message transmission event occurred locally. This field is applicable only to MX Series routers.                               |
| <b>Flush event received</b>            | Number of flush-event RAPS messages received and processed by the ring instance control process. This field is applicable only to MX Series routers.            |
| <b>Local FS event sent</b>             | Number of times a forced switch event has occurred locally. This field is applicable only to MX Series routers.                                                 |
| <b>Remote FS event received</b>        | Number of times a forced switch event has occurred anywhere else on the ring. This field is applicable only to MX Series routers.                               |
| <b>Local MS event sent</b>             | Number of times a manual switch event has occurred locally. This field is applicable only to MX Series routers.                                                 |

**Table 163: show protection-group ethernet-ring statistics Output Fields (continued)**

| Field Name               | Field Description                                                                                                                 |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| Remote MS event received | Number of times a manual switch event has occurred anywhere else on the ring. This field is applicable only to MX Series routers. |

Table 164 on page 2060 lists the output fields for the **show protection-group ethernet-ring statistics** command when the **detail** option is used. These fields are valid only for MX Series routers.

**Table 164: show protection-group ethernet-ring statistics detail Output Fields (for MX Series Routers)**

| Field Name                               | Field Description                                                                                                                |
|------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------|
| Total number of FDB flush                | Number of times forwarding database (FDB) flush has happened for the ring instance.                                              |
| Flush-logic triggered flush              | Number of times FDB flush has happened because of flush-logic based on node ID and Blocked Port Reference (BPR).                 |
| Remote RAPS PDU received                 | Number of valid RAPS PDU messages received. This counter counts only RAPS messages generated by other devices on the ring.       |
| Remote RAPS dropped due to guard-timer   | Number of RAPS messages dropped by the device because the guard timer is running.                                                |
| Invalid remote RAPS PDU dropped          | Number of RAPS messages dropped by the device because the messages are invalid.                                                  |
| RAPS dropped due to miscellaneous errors | Number of RAPS messages dropped because of any other reason. For example, messages dropped because of unsupported functionality. |
| Local received RAPS PDU dropped          | Number of self-generated RAPS messages received and dropped.                                                                     |

## Sample Output

### show protection-group ethernet-ring statistics (EX Series Switch)

```
user@switch> show protection-group ethernet-ring statistics
Ring Name Local SF Remote SF NR Event NR-RB Event
erp1 2 1 2 3
```

### show protection-group ethernet-ring statistics (MX Series Router)

```
user@host> show protection-group ethernet-ring statistics
Ethernet Ring statistics for PG Pg-1
RAPS event sent : 1
RAPS event received : 1152
Local SF happened: : 0
```

```

Remote SF happened: : 428
NR event sent: : 1
NR event received: : 133
NR-RB event sent: : 0
NR-RB event received: : 591
Flush event sent: : 0
Flush event received: : 0
Local FS event sent: : 0
Remote FS event received: : 0
Local MS event sent: : 0
Remote MS event received: : 0

```

#### show protection-group ethernet-ring statistics detail (Specific Group)(MX Series Router)

```

user@host> show protection-group ethernet-ring statistics detail
Ethernet Ring statistics for PG Pg-1
RAPS event sent : 1
RAPS event received : 0
Local SF happened : 0
Remote SF happened : 0
NR event sent : 1
NR event received : 0
NR-RB event sent : 0
NR-RB event received : 0
Flush event sent : 0
Flush event received : 0
Local FS event sent : 0
Remote FS event received : 0
Local MS event sent : 0
Remote MS event received : 0
Total number of FDB flush : 0
Flush-logic triggered flush : 0
Remote raps PDU received : 0
Remote raps dropped due to guard-timer : 0
Invalid remote raps PDU dropped : 0
Raps dropped due to miscellaneous errors : 0
Local received raps PDU dropped : 0

```

#### show protection-group ethernet-ring statistics (Owner Node, Failure Condition on ACX and MX Router)

```

user@host> show protection-group ethernet-ring statistics group-name pg101
Ethernet Ring statistics for PG pg101
RAPS sent : 1
RAPS received : 0
Local SF happened : 0
Remote SF happened : 0
NR event happened : 0
NR-RB event happened : 1
NR event sent : 0
NR event received : 0
NR-RB event sent : 1
NR-RB event received : 0
Flush event sent : 0
Flush event received : 0
Local FS event sent : 0
Remote FS event received : 0
Local MS event sent : 0
Remote MS event received : 0

```

**show protection-group ethernet-ring statistics (Ring Node, Failure Condition on ACX and MX Router)**

```
user@host> show protection-group ethernet-ring statistics group-name pg102
Ethernet Ring statistics for PG pg102
RAPS sent : 1
RAPS received : 0
Local SF happened: : 0
Remote SF happened: : 0
NR event happened: : 0
NR-RB event happened: : 1
NR event sent: : 0
NR event received: : 0
NR-RB event sent: : 1
NR-RB event received: : 0
Flush event sent : 0
Flush event received: : 0
Local FS event sent: : 0
Remote FS event received: : 0
Local MS event sent: : 0
Remote MS event received: : 0
```

## show protection-group ethernet-ring vlan

|                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

Output fields are listed in the approximate order in which they appear.                                                                                                                                                                                                                                                                                               |

**Table 165: show protection-group ethernet-ring vlan Output Fields**

| Field Name       | Field Description                                                                           |
|------------------|---------------------------------------------------------------------------------------------|
| <b>Interface</b> | Name of the interface configured for the Ethernet protection ring.                          |
| <b>Vlan</b>      | Name of the VLAN associated with the interface configured for the Ethernet protection ring. |

Table 165: show protection-group ethernet-ring vlan Output Fields (*continued*)

| Field Name    | Field Description                                                                                                                                                                                                                                                                                                                                                                                                       |
|---------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| STP Index     | The Spanning Tree Protocol (STP) index number used by each interface in an Ethernet ring. The STP index controls the forwarding behavior for a set of VLANs on a data channel on an Ethernet ring port. For multiple Ethernet ring instances on an physical ring port, there are multiple STP index numbers. Different ring instances will have different STP index numbers and may have different forwarding behavior. |
| Bridge Domain | Name of the bridge domain that is associated with the VLAN configured for the Ethernet protection ring.                                                                                                                                                                                                                                                                                                                 |

## Sample Output

### show protection-group ethernet-ring vlan

```
user@host> show protection-group ethernet-ring vlan
Ethernet ring IFBD parameters for protection group vkm01
```

| Interface | Vlan | STP Index | Bridge Domain       |
|-----------|------|-----------|---------------------|
| xe-5/0/2  | 1    | 78        | default-switch/bd1  |
| xe-2/2/0  | 1    | 79        | default-switch/bd1  |
| xe-5/0/2  | 2    | 78        | default-switch/bd2  |
| xe-2/2/0  | 2    | 79        | default-switch/bd2  |
| xe-5/0/2  | 3    | 78        | default-switch/bd3  |
| xe-2/2/0  | 3    | 79        | default-switch/bd3  |
| xe-5/0/2  | 4    | 78        | default-switch/bd4  |
| xe-2/2/0  | 4    | 79        | default-switch/bd4  |
| xe-5/0/2  | 5    | 78        | default-switch/bd5  |
| xe-2/2/0  | 5    | 79        | default-switch/bd5  |
| xe-5/0/2  | 6    | 78        | default-switch/bd6  |
| xe-2/2/0  | 6    | 79        | default-switch/bd6  |
| xe-5/0/2  | 7    | 78        | default-switch/bd7  |
| xe-2/2/0  | 7    | 79        | default-switch/bd7  |
| xe-5/0/2  | 8    | 78        | default-switch/bd8  |
| xe-2/2/0  | 8    | 79        | default-switch/bd8  |
| xe-5/0/2  | 9    | 78        | default-switch/bd9  |
| xe-2/2/0  | 9    | 79        | default-switch/bd9  |
| xe-5/0/2  | 10   | 78        | default-switch/bd10 |
| xe-2/2/0  | 10   | 79        | default-switch/bd10 |
| xe-5/0/2  | 11   | 78        | default-switch/bd11 |
| xe-2/2/0  | 11   | 79        | default-switch/bd11 |
| xe-5/0/2  | 12   | 78        | default-switch/bd12 |
| xe-2/2/0  | 12   | 79        | default-switch/bd12 |
| xe-5/0/2  | 13   | 78        | default-switch/bd13 |
| xe-2/2/0  | 13   | 79        | default-switch/bd13 |
| xe-5/0/2  | 14   | 78        | default-switch/bd14 |
| xe-2/2/0  | 14   | 79        | default-switch/bd14 |
| xe-5/0/2  | 15   | 78        | default-switch/bd15 |
| xe-2/2/0  | 15   | 79        | default-switch/bd15 |

### show protection-group ethernet-ring vlan brief

```
user@host> show protection-group ethernet-ring vlan brief
```

Ethernet ring IFBD parameters for protection group vkm01

| Interface | Vlan | STP Index | Bridge Domain       |
|-----------|------|-----------|---------------------|
| xe-5/0/2  | 1    | 78        | default-switch/bd1  |
| xe-2/2/0  | 1    | 79        | default-switch/bd1  |
| xe-5/0/2  | 2    | 78        | default-switch/bd2  |
| xe-2/2/0  | 2    | 79        | default-switch/bd2  |
| xe-5/0/2  | 3    | 78        | default-switch/bd3  |
| xe-2/2/0  | 3    | 79        | default-switch/bd3  |
| xe-5/0/2  | 4    | 78        | default-switch/bd4  |
| xe-2/2/0  | 4    | 79        | default-switch/bd4  |
| xe-5/0/2  | 5    | 78        | default-switch/bd5  |
| xe-2/2/0  | 5    | 79        | default-switch/bd5  |
| xe-5/0/2  | 6    | 78        | default-switch/bd6  |
| xe-2/2/0  | 6    | 79        | default-switch/bd6  |
| xe-5/0/2  | 7    | 78        | default-switch/bd7  |
| xe-2/2/0  | 7    | 79        | default-switch/bd7  |
| xe-5/0/2  | 8    | 78        | default-switch/bd8  |
| xe-2/2/0  | 8    | 79        | default-switch/bd8  |
| xe-5/0/2  | 9    | 78        | default-switch/bd9  |
| xe-2/2/0  | 9    | 79        | default-switch/bd9  |
| xe-5/0/2  | 10   | 78        | default-switch/bd10 |
| xe-2/2/0  | 10   | 79        | default-switch/bd10 |
| xe-5/0/2  | 11   | 78        | default-switch/bd11 |
| xe-2/2/0  | 11   | 79        | default-switch/bd11 |
| xe-5/0/2  | 12   | 78        | default-switch/bd12 |
| xe-2/2/0  | 12   | 79        | default-switch/bd12 |
| xe-5/0/2  | 13   | 78        | default-switch/bd13 |
| xe-2/2/0  | 13   | 79        | default-switch/bd13 |
| xe-5/0/2  | 14   | 78        | default-switch/bd14 |
| xe-2/2/0  | 14   | 79        | default-switch/bd14 |
| xe-5/0/2  | 15   | 78        | default-switch/bd15 |
| xe-2/2/0  | 15   | 79        | default-switch/bd15 |

| Interface name       | Name of the interface.                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| CA name              | <p>Name of the connectivity association.</p> <p>A connectivity association is named using the <b>connectivity-association</b> statement when you are enabling MACsec.</p>                                                                                                                                                                                                                                                                                    |
| Cipher suite         | Name of the cipher suite used for encryption.                                                                                                                                                                                                                                                                                                                                                                                                                |
| Encryption           | <p>Encryption setting. Encryption is enabled when this output is <b>on</b> and disabled when this output is <b>off</b>.</p> <p>The encryption setting is set using the <b>no-encryption</b> statement in the connectivity association when using static connectivity association key (CAK) security mode and is set using the <b>encryption</b> statement in the secure channel when using static secure association key (SAK) or dynamic security mode.</p> |

Table 166: show security macsec connections Output Fields (*continued*)

| Field Name               | Field Description                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Key server offset</b> | <p>The offset value in a packet from which encryption can be performed.</p> <p>The offset is set using the <b>offset</b> statement when configuring the connectivity association when using static connectivity association key (CAK) or dynamic security mode or the secure channel when using static secure association key (SAK) security mode.</p>                                                                |
| <b>Include SCI</b>       | <p>SCI tagging. The SCI tag is included on packets in a secure channel when this output is <b>yes</b>, and not included on packets in a secure channel when this output is <b>no</b>. SCI tagging is automatically enabled on MX Series routers.</p> <p>By default, include SCI tag is disabled. You can enable SCI tagging using the <b>include-sci</b> statement in the connectivity association configuration.</p> |
| <b>Replay protect</b>    | <p>By default, replay protection is disabled. Replay protection ensures that a snooped packet is not replayed or a packet number is reused. Replay protection is enabled when this output is <b>on</b> and disabled when this output is <b>off</b>.</p> <p>You can enable replay protection using the <b>replay-protect</b> statement in the connectivity association configuration.</p>                              |
| <b>Replay window</b>     | <p>Number of packets that can be replayed. Must be configured with replay protection. This output is set to <b>0</b> when replay protection is disabled, and is the size of the replay window, in number of packets, when replay protection is enabled.</p> <p>The size of the replay window is configured using the <b>replay-window-size</b> statement in the connectivity association configuration.</p>           |

## Sample Output

### show security macsec connections

```

user@host> show security macsec connections
Interface name: xe-0/1/0
 CA name: CA1
 Cipher suite: GCM-AES-128 Encryption: on
 Key server offset: 0 Include SCI: no
 Replay protect: off Replay window: 0

```

### show security macsec connections (MX480 routers with MPC7E-10G)

```

user@host> show security macsec connections
Interface name: xe-4/0/18
 CA name: ca1
 Cipher suite: GCM-AES-128 Encryption: on
 Key server offset: 30 Include SCI: no
 Replay protect: off Replay window: 0
 Outbound secure channels
 SC Id: 54:1E:56:B4:0D:3A/1
 Outgoing packet number: 11
 Secure associations
 AN: 1 Status: inuse Create time: 1d 17:31:10
 Inbound secure channels
 SC Id: 54:1E:56:B3:CA:A7/1

```

```
Secure associations
AN: 1 Status: inuse Create time: 1d 17:31:10
```

#### show security macsec connections (MX480 routers with MPC7E-10G)

```
user@host> show security macsec connections interface xe-1/0/7
CA name: caae1
Cipher suite: AES_GCM_128 Encryption: off
Key server offset: 0 Include SCI: no
Replay protect: off Replay window: 0
 Outbound secure channels
 SC Id: 54:1E:56:B3:CA:9C/1
 Outgoing packet number: 1
 Secure associations
 AN: 0 Status: inuse Create time: 4d 05:56:06
 Inbound secure channels
 SC Id: 54:1E:56:B4:0D:2F/1
 Secure associations
 AN: 0 Status: inuse Create time: 4d 05:56:06
```

## show security macsec statistics (MX Series)

**Syntax** show security macsec statistics  
<brief | detail>  
<interface *interface-name*>

**Release Information** Command introduced in Junos OS Release 15.1 for MX240, MX480, and MX960 routers. Support for MPC7E-10G introduced in Junos OS Release 16.1R1 for MX240, MX480, and MX960 routers.

**Description** Display Media Access Control Security (MACsec) statistics.

**Options** **none**—Display MACsec statistics in brief form for all interfaces on the router.

**brief | detail**—(Optional) Display the specified level of output. Using the **brief** option is equivalent to entering the command with no options (the default). The **detail** option displays additional fields that are not visible in the **brief** output.

**NOTE:** The field names that only appear in this command output when you enter the **detail** option are mostly useful for debugging purposes by Juniper Networks support personnel.

**interface *interface-name***—(Optional) Display MACsec statistics for the specified interface only.

**Required Privilege Level** view

**List of Sample Output** [show security macsec statistics interface detail on page 2072](#)  
[show security macsec statistics \(MX480 router with MPC7E-10G\) on page 2073](#)  
[show security macsec statistics \(MX480 router with MPC7E-10G\) on page 2073](#)  
[show security macsec statistics detail \(MX480 router with MPC7E-10G\) on page 2074](#)

**Output Fields** [Table 167 on page 2070](#) lists the output fields for the **show security macsec statistics** command. Output fields are listed in the approximate order in which they appear.

The field names that appear in this command's output only when you enter the **detail** option are mostly useful for debugging purposes by Juniper Networks support personnel. Those field names are, therefore, not included in this table.

**Table 167: show security macsec statistics Output Fields**

| Field Name     | Field Description      | Level of Output |
|----------------|------------------------|-----------------|
| Interface name | Name of the interface. | All levels      |

Table 167: show security macsec statistics Output Fields (*continued*)

| Field Name                                       | Field Description                                                                                                                                                                                                                                                                                                                                                                                                                 | Level of Output |
|--------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| <b>Fields for Secure Channel transmitted</b>     |                                                                                                                                                                                                                                                                                                                                                                                                                                   |                 |
| <b>Encrypted packets</b>                         | <p>Total number of packets transmitted out of the interface in the secure channel that were secured and encrypted using MACsec.</p> <p>Data packets are sent in the secure channel when MACsec is enabled, and are secured using a secure association key (SAK).</p>                                                                                                                                                              | All levels      |
| <b>Encrypted bytes</b>                           | <p>Total number of bytes transmitted out of the interface in the secure channel that were secured and encrypted using MACsec.</p> <p>Data packets are sent in the secure channel when MACsec is enabled, and are secured using a secure association key (SAK).</p>                                                                                                                                                                | All levels      |
| <b>Protected packets</b>                         | <p>Total number of packets transmitted out of the interface in the secure channel that were secured but not encrypted using MACsec.</p> <p>Data packets are sent in the secure channel when MACsec is enabled, and are secured using a secure association key (SAK).</p>                                                                                                                                                          | All levels      |
| <b>Protected bytes</b>                           | <p>Total number of bytes transmitted out of the interface in the secure channel that were secured but not encrypted using MACsec.</p> <p>Data packets are sent in the secure channel when MACsec is enabled, and are secured using a secure association key (SAK).</p>                                                                                                                                                            | All levels      |
| <b>Fields for Secure Association transmitted</b> |                                                                                                                                                                                                                                                                                                                                                                                                                                   |                 |
| <b>Encrypted packets</b>                         | <p>Total number of packets transmitted out of the interface in the connectivity association that were secured and encrypted using MACsec.</p> <p>The total includes the data packets transmitted in the secure channel and secured using a SAK and the control packets secured using a connectivity association key (CAK).</p>                                                                                                    | All levels      |
| <b>Protected packets</b>                         | <p>Total number of packets transmitted out of the interface in the connectivity association that were secured but not encrypted using MACsec.</p> <p>The total includes the data packets transmitted in the secure channel and secured using a SAK and the control packets secured using a connectivity association key (CAK).</p>                                                                                                | All levels      |
| <b>Fields for Secure Channel received</b>        |                                                                                                                                                                                                                                                                                                                                                                                                                                   |                 |
| <b>Accepted packets</b>                          | <p>The number of received packets that have been accepted by the secure channel on the interface. The secure channel is used to send all data plane traffic on a MACsec-enabled link.</p> <p>A packet is considered accepted for this counter when it has been received by this interface and it has passed the MACsec integrity check.</p> <p>This counter increments for traffic that is and is not encrypted using MACsec.</p> | All levels      |

Table 167: show security macsec statistics Output Fields (*continued*)

| Field Name                                    | Field Description                                                                                                                                                                                                                                                                                                                                                                                     | Level of Output |
|-----------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|
| <b>Validated bytes</b>                        | <p>The number of bytes that have been validated by the MACsec integrity check and received on the secure channel on the interface. The secure channel is used to send all data plane traffic on a MACsec-enabled link.</p> <p>This counter does not increment when MACsec encryption is disabled.</p>                                                                                                 | All levels      |
| <b>Decrypted bytes</b>                        | <p>The number of bytes received in the secure channel on the interface that have been decrypted. The secure channel is used to send all data plane traffic on a MACsec-enabled link.</p> <p>An encrypted byte has to be decrypted before it can be received on the receiving interface. The decrypted bytes counter is incremented for received traffic that was encrypted using MACsec.</p>          | All levels      |
| <b>Fields for Secure Association received</b> |                                                                                                                                                                                                                                                                                                                                                                                                       |                 |
| <b>Accepted packets</b>                       | <p>The number of received packets that have been accepted in the connectivity association on the interface. The counter includes all control and data plane traffic accepted on the interface.</p> <p>A packet is considered accepted for this counter when it has been received by this interface and it has passed the MACsec integrity check.</p>                                                  | All levels      |
| <b>Validated bytes</b>                        | <p>The number of bytes that have been validated by the MACsec integrity check and received on the connectivity association on the interface. The counter includes all control and data plane traffic accepted on the interface.</p> <p>This counter does not increment when MACsec encryption is disabled.</p>                                                                                        | All levels      |
| <b>Decrypted bytes</b>                        | <p>The number of bytes received in the connectivity association on the interface that have been decrypted. The counter includes all control and data plane traffic accepted on the interface.</p> <p>An encrypted byte has to be decrypted before it can be received on the receiving interface. The decrypted bytes counter is incremented for received traffic that was encrypted using MACsec.</p> | All levels      |

## Sample Output

### show security macsec statistics interface detail

```

user@host> show security macsec statistics interface xe-0/1/0 detail

## show security mka sessions (MX Series)

|                                 |                                                                                                                                                                                                                                                            |
|---------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Syntax</b>                   | show security mka sessions<br><interface <i>interface-name</i> >                                                                                                                                                                                           |
| <b>Release Information</b>      | Command introduced in Junos OS Release 15.1 for MX240, MX480, and MX960 routers. Support for MPC7E-10G introduced in Junos OS Release 16.1R1 for MX240, MX480, and MX960 routers.                                                                          |
| <b>Description</b>              | Display MACsec Key Agreement (MKA) session information for all interfaces. The MKA protocol is responsible for maintaining MACsec on the link, and decides which router on the point-to-point link becomes the key server.                                 |
| <b>Options</b>                  | <ul style="list-style-type: none"> <li>• <b>interface <i>interface-name</i></b>—(Optional) Display the MKA session information for the specified interface only.</li> <li>• <b>none</b>—Display the MKA session information for all interfaces.</li> </ul> |
| <b>Required Privilege Level</b> | view                                                                                                                                                                                                                                                       |
| <b>List of Sample Output</b>    | <a href="#">show security mka sessions on page 2076</a><br><a href="#">show security mka sessions (MX480 with MPC7E-10G) on page 2076</a><br><a href="#">show security mka sessions (MX480 with MPC7E-10G) on page 2077</a>                                |
| <b>Output Fields</b>            | Table 168 on page 2075 lists the output fields for the <b>show security mka sessions</b> command. Output fields are listed in the approximate order in which they appear.                                                                                  |

Table 168: show security mka sessions Output Fields

| Field Name        | Field Description                                                                                                                                                                    |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Interface name    | Name of the interface.                                                                                                                                                               |
| Member identifier | Name of the member identifier.                                                                                                                                                       |
| CAK name          | Name of the connectivity association key (CAK). The CAK is configured using the <b>cak</b> keyword when configuring the pre-shared key.                                              |
| Transmit interval | The transmit interval. Both ends of the point-to-point link should be configured to the same value. Default value is 2000 seconds. Possible values: 2000 through 10000 milliseconds. |
| Outbound SCI      | Name of the outbound secure channel identifier.                                                                                                                                      |
| Message number    | Number of the last data message.                                                                                                                                                     |
| Key number        | Key number.                                                                                                                                                                          |

Table 168: show security mka sessions Output Fields (*continued*)

| Field Name           | Field Description                                                                                                                                                                 |
|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Key server           | Key server status.<br><br>The router is the key server when this output is <b>yes</b> . The router is not the key server when this output is <b>no</b> .                          |
| Key server priority  | Displays the priority of the key server. Lower value indicates higher priority. Use the <b>key-server-priority</b> statement to set the priority. Possible values: 0 through 255. |
| Latest SAK AN        | Name of the latest secure association key (SAK) association number.                                                                                                               |
| Latest SAK KI        | Name of the latest secure association key (SAK) key identifier.                                                                                                                   |
| Fields for Peer list |                                                                                                                                                                                   |
| Member identifier    | Name of the member identifier.                                                                                                                                                    |
| Hold time            | Hold time, in seconds.                                                                                                                                                            |
| Message number       | Number of the last data message                                                                                                                                                   |
| SCI                  | Name of the secure channel identifier.                                                                                                                                            |
| Lowest acceptable PN | Number of the lowest acceptable packet number (PN).                                                                                                                               |

| <b>Output Fields</b>            | Table 169 on page 2078 lists the output fields for the <b>show security mka statistics</b> command. Output fields are listed in the approximate order in which they appear.                                                                       |

Table 169: show security mka statistics Output Fields

| Field Name                      | Field Description                                                                                                                                                                                                                                                                                           |
|---------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Received packets</b>         | <p>Number of received MKA control packets.</p> <p>This counter increments for received MKA control packets only. This counter does not increment when data packets are received.</p>                                                                                                                        |
| <b>Transmitted packets</b>      | <p>Number of transmitted MKA packets</p> <p>This counter increments for transmitted MKA control packets only. This counter does not increment when data packets are transmitted.</p>                                                                                                                        |
| <b>Version mismatch packets</b> | Number of version mismatch packets.                                                                                                                                                                                                                                                                         |
| <b>CAK mismatch packets</b>     | <p>Number of Connectivity Association Key (CAK) mismatch packets.</p> <p>This counter increments when the connectivity association key (CAK) and connectivity association key name (CKN), which are user-configured values that have to match to enable MACsec, do not match for an MKA control packet.</p> |

Table 169: show security mka statistics Output Fields (*continued*)

| Field Name                           | Field Description                                                                                                                                                                 |
|--------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ICV mismatch packets                 | Number of ICV mismatched packets.<br><br>This counter increments when the connectivity association key (CAK) value does not match on both ends of a MACsec-secured Ethernet link. |
| Duplicate message identifier packets | Number of duplicate message identifier packets.                                                                                                                                   |
| Duplicate message number packets     | Number of duplicate message number packets.                                                                                                                                       |
| Duplicate address packets            | Number of duplicate source MAC address packets.                                                                                                                                   |
| Invalid destination address packets  | Number of invalid destination MAC address packets.                                                                                                                                |
| Formatting error packets             | Number of formatting error packets.                                                                                                                                               |
| Old Replayed message number packets  | Number of old replayed message number packets.                                                                                                                                    |

## Sample Output

### show security mka statistics

```

user@host> show security mka statistics

Received packets: 1525844
Transmitted packets: 1525841
Version mismatch packets: 0
CAK mismatch packets: 0
ICV mismatch packets: 0
Duplicate message identifier packets: 0
Duplicate message number packets: 0
Duplicate address packets: 0
Invalid destination address packets: 0
Formatting error packets: 0
Old Replayed message number packets: 0

```

### show security mka statistics (MX480 routers with MPC7E-10G)

```

user@host> show security mka statistics
Interface name: xe-4/0/18
Received packets: 73009
Transmitted packets: 73011
Version mismatch packets: 0
CAK mismatch packets: 1
ICV mismatch packets: 0
Duplicate message identifier packets: 0
Duplicate message number packets: 0
Duplicate address packets: 0
Invalid destination address packets: 0
Formatting error packets: 0
Old Replayed message number packets: 0

```

**show security mka statistics (MX480 routers with MPC7E-10G)**

```
user@host> show security mka statistics interface xe-1/0/7
Received packets: 179211
 Transmitted packets: 179186
 Version mismatch packets: 0
 CAK mismatch packets: 0
 ICV mismatch packets: 0
 Duplicate message identifier packets: 0
 Duplicate message number packets: 0
 Duplicate address packets: 0
 Invalid destination address packets: 0
 Formatting error packets: 0
 Old Replayed message number packets: 0
```

## show vrrp

| <b>Advertisement timer</b>                   | How long, in seconds, until the advertisement timer expires.                                                                                                                                                                                                                                                                                      | <b>detail extensive</b> |
| <b>Master router</b>                         | IP address of the interface that is acting as the master. If the VRRP interface is down, the output is <b>N/A</b> .                                                                                                                                                                                                                               | <b>detail extensive</b> |
| <b>Virtual router uptime</b>                 | How long, in seconds, that the virtual router has been up.                                                                                                                                                                                                                                                                                        | <b>detail extensive</b> |
| <b>Master router uptime</b>                  | How long, in seconds, that the master route has been up.                                                                                                                                                                                                                                                                                          | <b>detail extensive</b> |
| <b>Virtual MAC</b>                           | MAC address associated with the virtual IP address.                                                                                                                                                                                                                                                                                               | <b>detail extensive</b> |
| <b>Tracking</b>                              | Whether tracking is <b>enabled</b> or <b>disabled</b> .                                                                                                                                                                                                                                                                                           | <b>detail extensive</b> |
| <b>Current priority</b>                      | Current operational priority for being the VRRP master.                                                                                                                                                                                                                                                                                           | <b>detail extensive</b> |
| <b>Configured priority</b>                   | Configured base priority for being the VRRP master.                                                                                                                                                                                                                                                                                               | <b>detail extensive</b> |
| <b>Priority hold-time</b>                    | Minimum time interval, in seconds, between successive changes to the current priority. <b>Disabled</b> indicates no minimum interval.                                                                                                                                                                                                             | <b>detail extensive</b> |
| <b>Remaining-time</b>                        | ( <b>track</b> option only) Displays the time remaining in the priority hold-time interval.                                                                                                                                                                                                                                                       | <b>detail</b>           |
| <b>Interface tracking</b>                    | Whether interface tracking is enabled or disabled. When enabled, the output also displays the number of tracked interfaces.                                                                                                                                                                                                                       | <b>detail extensive</b> |
| <b>Interface/Tracked interface/Track Int</b> | Name of the tracked interface.                                                                                                                                                                                                                                                                                                                    | <b>detail extensive</b> |

Table 170: show vrrp Output Fields (*continued*)

| Field Name                             | Field Description                                                                                                                                                                                                                                                                                              | Level of Output         |
|----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
| <b>Int state/Interface state/State</b> | Current operational state of the tracked interface: <b>up</b> or <b>down</b> .                                                                                                                                                                                                                                 | <b>detail extensive</b> |
| <b>Int speed/Speed</b>                 | Current operational speed, in bits per second, of the tracked interface.                                                                                                                                                                                                                                       | <b>detail extensive</b> |
| <b>Incurred priority cost</b>          | Operational priority cost incurred due to the state and speed of this tracked interface. This cost is applied to the configured priority to obtain the current priority.                                                                                                                                       | <b>detail extensive</b> |
| <b>Threshold</b>                       | Speed below which the corresponding priority cost is incurred. In other words, when the speed of the interface drops below the threshold speed, the corresponding priority cost is incurred.<br><br>An entry of <b>down</b> means that the corresponding priority cost is incurred when the interface is down. | <b>detail extensive</b> |
| <b>Route tracking</b>                  | Whether route tracking is enabled or disabled. When enabled, the output also displays the number of tracked routes.                                                                                                                                                                                            | <b>detail extensive</b> |
| <b>Route count</b>                     | The number of routes being tracked.                                                                                                                                                                                                                                                                            | <b>detail extensive</b> |
| <b>Route</b>                           | The IP address of the route being tracked.                                                                                                                                                                                                                                                                     | <b>detail extensive</b> |
| <b>VRF name</b>                        | The VPN routing and forwarding (VRF) routing instance that the tracked route is in.                                                                                                                                                                                                                            | <b>detail extensive</b> |
| <b>Route state</b>                     | The state of the route being tracked: <b>up</b> , <b>down</b> , or <b>unknown</b> .                                                                                                                                                                                                                            | <b>detail extensive</b> |
| <b>Priority cost</b>                   | Configured priority cost. This value is incurred when the interface speed drops below the corresponding threshold or when the tracked route goes down.                                                                                                                                                         | <b>detail extensive</b> |
| <b>Active</b>                          | Whether the threshold is active (*). If the threshold is active, the corresponding priority cost is incurred.                                                                                                                                                                                                  | <b>detail extensive</b> |
| <b>Group VRRP PDU statistics</b>       | Number of VRRP advertisements sent and received by the group.                                                                                                                                                                                                                                                  | <b>extensive</b>        |

### show vrrp nsr

This command is similar to **show vrrp**. Here, the **VR state** column displays the current VRRP state on the master Routing Engine, which is the future VRRP state for the backup Routing Engine. Do not use on the master Routing Engine.

NSR is yes if VRRP nonstop active routing is enabled for the configured VRRP group.

RPD-NSR is yes if the routing options have been set to nonstop active routing.

```

user@host>show vrrp nsr

```

| Interface  | State | Group | VR state | VR Mode | Type | NSR | RPD-NSR | Address  |
|------------|-------|-------|----------|---------|------|-----|---------|----------|

| Description              | <p>Triggers the linktrace protocol to trace the route between two maintenance points. The result of the traceroute protocol is stored in the path database. To display the path database, use the <b>show oam ethernet connectivity-fault-management path-database</b> command.</p> <p>Before using the traceroute command, you can verify the remote MEP's MAC address using the <b>show oam ethernet connectivity-fault-management path-database</b> command.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Options                  | <p><b>local-mep</b> <i>mep-id</i>—(Required when multiple MEPs are configured) Identifier for the local maintenance endpoint.</p> <p><b>detail</b>—(Optional) Provide detailed information of the responder hostname, ingress port name, egress port name, TTL, and relay action.</p> <p><b>mac-address</b>—Destination unicast MAC address of the remote maintenance point.</p> <p><b>mep-id</b>—MEP identifier of the remote maintenance point. The range of values is 1 through 8191.</p> <p><b>maintenance-association</b> <i>ma-name</i>—Specifies an existing maintenance association from the set of configured maintenance associations.</p> <p><b>maintenance-domain</b> <i>md-name</i>—Specifies an existing maintenance domain from the set of configured maintenance domains.</p> <p><b>ttl</b> <i>value</i>—Number of hops to use in the linktrace request. The range is 1 to 255 hops. The default is 4.</p> <p><b>wait</b> <i>seconds</i>—(Optional) Maximum time to wait for a response to the traceroute request. The range is 1 to 255 seconds. The default is 5.</p> |
| Required Privilege Level | network                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

[traceroute ethernet detail on page 2094](#)

**Output Fields** [Table 171 on page 2093](#) lists the output fields for the **traceroute ethernet** command. Output fields are listed in the approximate order in which they appear.

**Table 171: traceroute ethernet Output Fields**

| Field Name                     | Field Description                                                                                                                                                                                                                                                            |
|--------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Linktrace to</b>            | MAC address of the destination maintenance point.                                                                                                                                                                                                                            |
| <b>Interface</b>               | Local interface used to send the linktrace message (LTM).                                                                                                                                                                                                                    |
| <b>Maintenance Domain</b>      | Maintenance domain specified in the traceroute command.                                                                                                                                                                                                                      |
| <b>Level</b>                   | Maintenance domain level configured.                                                                                                                                                                                                                                         |
| <b>Maintenance Association</b> | Maintenance association specified in the traceroute command.                                                                                                                                                                                                                 |
| <b>Local Mep</b>               | The local maintenance end point identifier.                                                                                                                                                                                                                                  |
| <b>Transaction Identifier</b>  | 4-byte identifier maintained by the MEP. Each LTM uses a transaction identifier. The transaction identifier is maintained globally across all Maintenance Domains. Use the transaction identifier to match an incoming linktrace response (LTR), with a previously sent LTM. |
| <b>Hop</b>                     | Sequential hop count of the linktrace path.                                                                                                                                                                                                                                  |
| <b>TTL</b>                     | Number of hops remaining in the linktrace message. The time to live (TTL) is decremented at each hop.                                                                                                                                                                        |
| <b>Source MAC address</b>      | MAC address of the 802.1ag node responding to the LTM or the source MAC address of the LTR.                                                                                                                                                                                  |
| <b>Next-hop MAC address</b>    | MAC address of the egress interface of the node to which the LTM is forwarded or<br><br>the next-hop MAC address derived from the next egress identifier in the Egress-ID TLV of the LTR PDU.                                                                                |
| <b>Responder Hostname</b>      | The hostname of the responding router. A valid hostname is received only when the responding system is a Juniper Networks router.                                                                                                                                            |
| <b>Ingress port name</b>       | The port name for ingress connections.                                                                                                                                                                                                                                       |
| <b>Egress port name</b>        | The port name for egress connections.                                                                                                                                                                                                                                        |

Table 171: traceroute ethernet Output Fields (*continued*)

| Field Name          | Field Description                                                                                                                                                                                                                                                                                                                                                       |
|---------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Flags</b>        | <p>The configurable flags can include:</p> <ul style="list-style-type: none"> <li>• H— Hardware only, incoming LT frame has hardware bit set.</li> <li>• T— Terminal MEP, responder is a terminating MEP.</li> <li>• F— FWD yes, LTM frame is relayed further.</li> </ul>                                                                                               |
| <b>Relay Action</b> | <p>The associated relay action. Relay action can be one of the following:</p> <ul style="list-style-type: none"> <li>• RlyHit— Relay hit; target MAC address matches the MP mac address.</li> <li>• RlyFDB— Relay FDB; output port decided by consulting forwarding database.</li> <li>• RlyMPDB— Relay MIP; output port decided by consulting MIP database.</li> </ul> |

## Sample Output

### traceroute ethernet

```

user@host> traceroute ethernet maintenance-domain md1 maintenance-association ma1
00:01:02:03:04:05
Linktrace to 00:01:02:03:04:05, Interface : ge-5/0/0.0
Maintenance Domain: MD1, Level: 7
Maintenance Association: MA1, Local Mep: 1

Hop TTL Source MAC address Next hop MAC address
Transaction Identifier:100001
1 63 00:00:aa:aa:aa:aa 00:00:ab:ab:ab:ab
2 62 00:00:bb:bb:bb:bb 00:00:bc:bc:bc:bc
3 61 00:00:cc:cc:cc:cc 00:00:cd:cd:cd:cd
4 60 00:01:02:03:04:05 00:00:00:00:00:00

```

### traceroute ethernet detail

```

user@host> run traceroute ethernet maintenance-domain md6 maintenance-association ma6
mep 101 detail
Linktrace to 00:00:5E:00:53:CC, Interface : ge-1/0/0.1
Maintenance Domain: md6, Level: 6
Maintenance Association: ma6, Local Mep: 201
Transaction Identifier: 2077547465

Legend for RelayAction:
RlyHit -- Relay hit, Target MAC address matches the MP mac address
RlyFDB -- Relay FDB, output port decided by consulting FDB database
RlyMPDB -- Relay MIP, output port decided by consulting MIP database

Legend for Flags:
H -- Hardware only,incoming LT frame has hardware bit set
T -- Terminal MEP, responder is a terminating MEP
F -- FWD yes, LTM frame is relayed further

TTL Responder Hostname Ingress port name Egress port name
RelayAction

```

| Responder | Service | Ingress MAC address | Egress MAC address | Flags  |
|-----------|---------|---------------------|--------------------|--------|
| 62        | host1   | ge-1/0/0.1          | ge-2/3/0.1         | RlyFDB |
| br1       |         | 00:00:5E:00:53:00   | 00:00:5E:00:53:A0  | HF-    |
| 63        | host2   | ge-2/3/0.1          | ge-1/0/0.1         | RlyFDB |
