YEAR 2000 NOTICE

Juniper Networks hardware and software products are Year 2000 compliant. Junos OS has no known time-related limitations through the year 2038. However, the NTP application is known to have some difficulty in the year 2036.

END USER LICENSE AGREEMENT

The Juniper Networks product that is the subject of this technical documentation consists of (or is intended for use with) Juniper Networks software. Use of such software is subject to the terms and conditions of the End User License Agreement ("EULA") posted at <http://www.juniper.net/support/eula/>. By downloading, installing or using such software, you agree to the terms and conditions of that EULA.

Documentation and Release Notes

To obtain the most current version of all Juniper Networks® technical documentation, see the product documentation page on the Juniper Networks website at <http://www.juniper.net/techpubs/>.

If the information in the latest release notes differs from the information in the documentation, follow the product Release Notes.

Juniper Networks Books publishes books by Juniper Networks engineers and subject matter experts. These books go beyond the technical documentation to explore the nuances of network architecture, deployment, and administration. The current list can be viewed at <http://www.juniper.net/books>.

Supported Platforms

For the features described in this document, the following platforms are supported:

- MX Series

Using the Examples in This Manual

If you want to use the examples in this manual, you can use the **load merge** or the **load merge relative** command. These commands cause the software to merge the incoming configuration into the current candidate configuration. The example does not become active until you commit the candidate configuration.

If the example configuration contains the top level of the hierarchy (or multiple hierarchies), the example is a *full example*. In this case, use the **load merge** command.

If the example configuration does not start at the top level of the hierarchy, the example is a *snippet*. In this case, use the **load merge relative** command. These procedures are described in the following sections.

Merging a Full Example

To merge a full example, follow these steps:

1. From the HTML or PDF version of the manual, copy a configuration example into a text file, save the file with a name, and copy the file to a directory on your routing platform.

For example, copy the following configuration to a file and name the file **ex-script.conf**. Copy the **ex-script.conf** file to the **/var/tmp** directory on your routing platform.

```
system {
  scripts {
    commit {
      file ex-script.xml;
    }
  }
}
interfaces {
  fxp0 {
    disable;
    unit 0 {
      family inet {
        address 10.0.0.1/24;
      }
    }
  }
}
```

2. Merge the contents of the file into your routing platform configuration by issuing the **load merge** configuration mode command:

```
[edit]
user@host# load merge /var/tmp/ex-script.conf
load complete
```

Merging a Snippet

To merge a snippet, follow these steps:

1. From the HTML or PDF version of the manual, copy a configuration snippet into a text file, save the file with a name, and copy the file to a directory on your routing platform.

For example, copy the following snippet to a file and name the file **ex-script-snippet.conf**. Copy the **ex-script-snippet.conf** file to the **/var/tmp** directory on your routing platform.

```
commit {
  file ex-script-snippet.xml; }
```

2. Move to the hierarchy level that is relevant for this snippet by issuing the following configuration mode command:

```
[edit]
user@host# edit system scripts
[edit system scripts]
```

3. Merge the contents of the file into your routing platform configuration by issuing the **load merge relative** configuration mode command:

```
[edit system scripts]
user@host# load merge relative /var/tmp/ex-script-snippet.conf
load complete
```

For more information about the **load** command, see [CLI Explorer](#).

Documentation Conventions

Table 1 on page xiii defines notice icons used in this guide.

Table 1: Notice Icons

Icon	Meaning	Description
	Informational note	Indicates important features or instructions.
	Caution	Indicates a situation that might result in loss of data or hardware damage.
	Warning	Alerts you to the risk of personal injury or death.
	Laser warning	Alerts you to the risk of personal injury from a laser.
	Tip	Indicates helpful information.
	Best practice	Alerts you to a recommended use or implementation.

Table 2 on page xiv defines the text and syntax conventions used in this guide.

Table 2: Text and Syntax Conventions

Convention	Description	Examples
Bold text like this	Represents text that you type.	To enter configuration mode, type the configure command: user@host> configure
Fixed-width text like this	Represents output that appears on the terminal screen.	user@host> show chassis alarms No alarms currently active
<i>Italic text like this</i>	<ul style="list-style-type: none"> Introduces or emphasizes important new terms. Identifies guide names. Identifies RFC and Internet draft titles. 	<ul style="list-style-type: none"> A policy <i>term</i> is a named structure that defines match conditions and actions. <i>Junos OS CLI User Guide</i> RFC 1997, <i>BGP Communities Attribute</i>
<i>Italic text like this</i>	Represents variables (options for which you substitute a value) in commands or configuration statements.	Configure the machine's domain name: [edit] root@# set system domain-name <i>domain-name</i>
Text like this	Represents names of configuration statements, commands, files, and directories; configuration hierarchy levels; or labels on routing platform components.	<ul style="list-style-type: none"> To configure a stub area, include the stub statement at the [edit protocols ospf area area-id] hierarchy level. The console port is labeled CONSOLE.
< > (angle brackets)	Encloses optional keywords or variables.	stub <default-metric <i>metric</i> >;
(pipe symbol)	Indicates a choice between the mutually exclusive keywords or variables on either side of the symbol. The set of choices is often enclosed in parentheses for clarity.	broadcast multicast (<i>string1</i> <i>string2</i> <i>string3</i>)
# (pound sign)	Indicates a comment specified on the same line as the configuration statement to which it applies.	rsvp { # Required for dynamic MPLS only
[] (square brackets)	Encloses a variable for which you can substitute one or more values.	community name members [<i>community-ids</i>]
Indentation and braces ({ })	Identifies a level in the configuration hierarchy.	[edit] routing-options { static { route default { nexthop <i>address</i> ; retain; } } }
;(semicolon)	Identifies a leaf statement at a configuration hierarchy level.	

GUI Conventions

Table 2: Text and Syntax Conventions (*continued*)

Convention	Description	Examples
Bold text like this	Represents graphical user interface (GUI) items you click or select.	<ul style="list-style-type: none"> In the Logical Interfaces box, select All Interfaces. To cancel the configuration, click Cancel.
> (bold right angle bracket)	Separates levels in a hierarchy of menu selections.	In the configuration editor hierarchy, select Protocols>Ospf .

Documentation Feedback

We encourage you to provide feedback, comments, and suggestions so that we can improve the documentation. You can provide feedback by using either of the following methods:

- Online feedback rating system—On any page of the Juniper Networks TechLibrary site at <http://www.juniper.net/techpubs/index.html>, simply click the stars to rate the content, and use the pop-up form to provide us with information about your experience. Alternately, you can use the online feedback form at <http://www.juniper.net/techpubs/feedback/>.
- E-mail—Send your comments to techpubs-comments@juniper.net. Include the document or topic name, URL or page number, and software version (if applicable).

Requesting Technical Support

Technical product support is available through the Juniper Networks Technical Assistance Center (JTAC). If you are a customer with an active J-Care or Partner Support Service support contract, or are covered under warranty, and need post-sales technical support, you can access our tools and resources online or open a case with JTAC.

- JTAC policies—For a complete understanding of our JTAC procedures and policies, review the *JTAC User Guide* located at <http://www.juniper.net/us/en/local/pdf/resource-guides/7100059-en.pdf>.
- Product warranties—For product warranty information, visit <http://www.juniper.net/support/warranty/>.
- JTAC hours of operation—The JTAC centers have resources available 24 hours a day, 7 days a week, 365 days a year.

Self-Help Online Tools and Resources

For quick and easy problem resolution, Juniper Networks has designed an online self-service portal called the Customer Support Center (CSC) that provides you with the following features:

- Find CSC offerings: <http://www.juniper.net/customers/support/>
- Search for known bugs: <https://prsearch.juniper.net/>
- Find product documentation: <http://www.juniper.net/documentation/>
- Find solutions and answer questions using our Knowledge Base: <http://kb.juniper.net/>
- Download the latest versions of software and review release notes:
<http://www.juniper.net/customers/csc/software/>
- Search technical bulletins for relevant hardware and software notifications:
<http://kb.juniper.net/InfoCenter/>
- Join and participate in the Juniper Networks Community Forum:
<http://www.juniper.net/company/communities/>
- Open a case online in the CSC Case Management tool: <http://www.juniper.net/cm/>

To verify service entitlement by product serial number, use our Serial Number Entitlement (SNE) Tool: <https://entitlementsearch.juniper.net/entitlementsearch/>

Opening a Case with JTAC

You can open a case with JTAC on the Web or by telephone.

- Use the Case Management tool in the CSC at <http://www.juniper.net/cm/>.
- Call 1-888-314-JTAC (1-888-314-5822 toll-free in the USA, Canada, and Mexico).

For international or direct-dial options in countries without toll-free numbers, see <http://www.juniper.net/support/requesting-support.html>.

PART 1

Understanding Layer 2 Port Mirroring

- [Introduction to Layer 2 Port Mirroring on page 3](#)

CHAPTER 1

Introduction to Layer 2 Port Mirroring

- [Understanding Layer 2 Port Mirroring on page 3](#)
- [Understanding Layer 2 Port Mirroring Properties on page 4](#)
- [Restrictions on Layer 2 Port Mirroring on page 5](#)

Understanding Layer 2 Port Mirroring

On routing platforms and switches that contain an Internet Processor II ASIC, you can send a copy of any incoming packet from the routing platform or switch to an external host address or a packet analyzer for analysis. This is known as *port mirroring*. In Junos OS Release 9.3 and later, Juniper Networks MX Series 3D Universal Edge Routers in a Layer 2 environment support port mirroring for Layer 2 bridging traffic and virtual private LAN service (VPLS) traffic. In Junos OS Release 9.4 and later, MX Series routers in a Layer 2 environment also support port mirroring for Layer 2 VPN traffic over a circuit cross-connect (CCC) that transparently connects logical interfaces of the same type. In Junos OS Release 12.3R2, Juniper Networks EX Series switches support port mirroring for Layer 2 bridging traffic.

Layer 2 port mirroring enables you to specify the manner in which incoming and outgoing packets at specified ports are monitored and the manner in which copies of selected packets are forwarded to another destination, where the packets can be analyzed. MX Series routers and EX Series switches support Layer 2 port mirroring by performing flow monitoring functions using a class-of-service (CoS) architecture that is in concept similar to, but in particulars different from, other routing platforms and switches.

Like the M120 Multiservice Edge Router and M320 Multiservice Edge Routers, MX Series routers and EX Series switches support port mirroring of IPv4, IPv6, and VPLS packets simultaneously. However, the *Junos OS Layer 2 Switching and Bridging Library* describes port mirroring only for Layer 2 bridging traffic (**family ethernet-switching**), Layer 2 VPLS traffic (**family vpls**) through an MX Series router, and Layer 2 VPN traffic that passes through a CCC (**family ccc**).

For general information about packet flow within MX Series routers and other routers, see the *Class of Service Feature Guide for Routing Devices and EX9200 Switches*.

In a Layer 3 environment, MX Series routers and EX Series switches support port mirroring of IPv4 (**family inet**) and IPv6 (**family inet6**) traffic. For information about Layer 3 port mirroring, see the *Routing Policies, Firewall Filters, and Traffic Policers Feature Guide*.

- Related Documentation**
- [Understanding Layer 2 Port Mirroring Properties on page 4](#)
 - [Restrictions on Layer 2 Port Mirroring on page 5](#)
 - [Application of Layer 2 Port Mirroring Types on page 14](#)
 - [Application of Layer 2 Port Mirroring Types on page 14](#)

Understanding Layer 2 Port Mirroring Properties

Port mirroring specifies the following types of properties:

- [Packet-Selection Properties on page 4](#)
- [Packet Address Family on page 4](#)
- [Mirror Destination Properties on page 5](#)
- [Mirror-Once Option on page 5](#)

Packet-Selection Properties

The packet-selection properties of Layer 2 port-mirroring specify how the sampled packets are to be selected for mirroring:

- The number of packets in each sample.
- The number of packets to mirror from each sample.
- The length to which mirrored packets are to be truncated.

Packet Address Family

The packet address family type specifies the type of traffic to be mirrored. In a Layer 2 environment, MX Series routers and EX Series switches support port mirroring for the following packet address families:

- Family type **ethernet-switching**—For mirroring VPLS traffic when the physical interface is configured with encapsulation type **ethernet-bridge**.
- Family type **ccc**—For mirroring Layer 2 VPN traffic.
- Family type **vpls**—For mirroring VPLS traffic.

NOTE: In typical applications, you send mirrored packets directly to an analyzer or a workstation for analysis, not to another router or switch. If you must send mirrored packets over a network, you should use tunnels. For Layer 2 VPN implementations, you can use the Layer 2 VPN routing instance type **l2vpn** to tunnel the packets to a remote destination.

For information about configuring a routing instance for Layer 2 VPN, see the *Junos OS VPNs Library for Routing Devices*. For a detailed Layer 2 VPN example configuration, see

Junos OS. For information about tunnel interfaces, see the *Junos OS Network Interfaces Library for Routing Devices*.

Mirror Destination Properties

For a given packet address family, the mirror destination properties of a Layer 2 port-mirroring instance specify how the selected packets are to be sent on a particular physical interface:

- The physical interface on which to send the selected packets.
- Whether filter checking is to be disabled for the mirror destination interface. By default, filter checking is enabled on all interfaces.

NOTE: If you apply a filter to an interface that is also a Layer 2 port-mirroring destination, a commit failure occurs unless you have disabled filter checking for that mirror destination interface.

Mirror-Once Option

If port mirroring is enabled at both ingress and egress interfaces, you can prevent the MX Series router and an EX Series switch from sending duplicate packets to the same destination (which would complicate the analysis of the mirrored traffic).

NOTE: The mirror-once port-mirroring option is a global setting. The option is independent of the packet selection properties and the packet family type-specific mirror destination properties.

Related Documentation

- [Understanding Layer 2 Port Mirroring on page 3](#)
- [Restrictions on Layer 2 Port Mirroring on page 5](#)
- [Application of Layer 2 Port Mirroring Types on page 14](#)

Restrictions on Layer 2 Port Mirroring

The following restrictions apply to Layer 2 port mirroring:

- Only Layer 2 transit data (packets that contain chunks of data transiting the routing platform as they are forwarded from a source to a destination) can be mirrored. Layer 2 local data (packets that contain chunks of data that are destined for or sent by the Routing Engine, such as Layer 2 control packets) can be mirrored by configuring **set chassis host-outbound media-interface**.
- If you apply a port-mirroring filter to the output of a logical interface, only unicast packets are mirrored. To mirror broadcast packets, multicast packets, unicast packets with an unknown destination media access control (MAC) address, or packets with

MAC entry in the destination MAC (DMAC) routing table, apply a filter to the input to the flood table of a bridge domain or virtual private LAN service (VPLS) routing instance.

NOTE: Starting with Junos OS Release 13.2R1, this is restricted only for DPCs. For MX series routers with MPCs and MICs, both unicast, and multicast packets can be mirrored.

- Starting with Junos OS Release 13.2R1, the **family** any mirroring is supported in logical systems.
- Starting with Junos OS Release 13.2R1, the **family** any mirroring can be achieved by creating **port-mirroring** instance under the **[edit forwarding-options]** and applying **family** any filter on an interface belonging to logical systems.
- The mirror destination device should be on a dedicated bridge domain and should not participate in any bridging activity: The mirror destination device should not have a bridge to the ultimate traffic destination, and the mirror destination device should not send the mirrored packets back to the source address.
- For either the global port-mirroring instance or a named port-mirroring instance, you can configure only one mirror output interface per port-mirroring instance and packet address family. If you include more than one **interface** statement under the **family (bridge | ccc | vpls) output** statement, the previous **interface** statement is overridden.

- Layer 2 port-mirroring firewall filtering is supported for logical systems.

In a Layer 2 port-mirroring firewall filter definition, the filter **action-modifier (port-mirror)** relies on port-mirroring properties defined in the global instance or named instances of Layer 2 port mirroring, which are configured under the **[edit forwarding-options port-mirroring]** hierarchy. Therefore, in Layer 2 port mirroring, the filter **term** is supported for logical systems.

- For a Layer 2 port mirroring firewall filter in which you implicitly reference Layer 2 port mirroring properties by including the **port-mirror** statement, if multiple named instances of Layer 2 port mirroring are bound to the underlying physical interface, then only the first binding in the stanza (or the only binding) is used at the logical interface. This is done mainly for backward compatibility.
- Layer 2 port-mirroring firewall filters support the use of next-hop subgroups for load-balancing mirrored traffic.
- If a **family ccc** mirror destination is a Logical Tunnel (**lt-**) interface hosted on a DPC and that **lt-** interface also has a **firewall filter** with action **next-hop-group** applied that redirects packets to MPC interfaces, then port-mirror instances must be created at the **[edit forwarding options port-mirroring instance]** with **family ccc output interface** destination of a **next-hop-group** member interface. One port-mirroring instance will be needed for each member interface in the **next-hop-group**. These port-mirroring instances do not need to be used anywhere in the configuration.

Release History Table

Release	Description
13.2R1	Starting with Junos OS Release 13.2R1, this is restricted only for DPCs.
13.2R1	Starting with Junos OS Release 13.2R1, the family any mirroring is supported in logical systems.
13.2R1	Starting with Junos OS Release 13.2R1, the family any mirroring can be achieved by creating port-mirroring instance under the [edit forwarding-options] and applying family any filter on an interface belonging to logical systems.

CHAPTER 2

Understanding Port Mirroring Types

- [Layer 2 Port Mirroring Global Instance on page 9](#)
- [Layer 2 Port Mirroring Named Instances on page 9](#)
- [Layer 2 Port Mirroring Firewall Filters on page 11](#)
- [Application of Layer 2 Port Mirroring Types on page 14](#)

Layer 2 Port Mirroring Global Instance

On an MX Series router and on an EX Series switch, you can configure a set of port-mirroring properties that implicitly apply to packets received on all ports in the router (or switch) chassis. This set of port-mirroring properties is the *global instance* of Layer 2 port mirroring for the router or switch.

Within the global instance configuration, you can specify a set of mirror destination properties for each packet address family supported by Layer 2 port mirroring.

For a general description of Layer 2 port-mirroring properties, see “[Understanding Layer 2 Port Mirroring Properties](#)” on page 4. For a comparison of the types of Layer 2 port mirroring available on an MX Series router and on an EX Series switch, see “[Application of Layer 2 Port Mirroring Types](#)” on page 14.

Layer 2 Port Mirroring Named Instances

This topic describes the following information:

- [Layer 2 Port Mirroring Named Instances Overview on page 10](#)
- [Mirroring at Ports Grouped at the FPC Level on page 10](#)

- [Mirroring at Ports Grouped at the PIC Level on page 11](#)
- [Mirroring at a Group of Ports Bound to Multiple Named Instances on page 11](#)

Layer 2 Port Mirroring Named Instances Overview

On an MX Series router, you can define a set of port-mirroring properties that you can explicitly bind to physical ports on the router. This set of port-mirroring properties is known as a *named instance* of Layer 2 port mirroring.

You can bind a named instance of Layer 2 port mirroring to physical ports associated with MX Series router Packet Forwarding Engine components at different levels of the router chassis:

- At the FPC level—You can bind a named instance to the physical ports associated with a specific Dense Port Concentrator (DPC) or to the physical ports associated with a specific Flexible Port Concentrator (FPC).
- At the PIC level—You can bind a named instance of port mirroring to a specific Packet Forwarding Engine (on a specific DPC) or to a specific PIC.

NOTE: MX Series routers support DPCs as well as FPCs and PICs. Unlike FPCs, DPCs do not support PICs. In the Junos OS CLI, however, you use FPC and PIC syntax to configure or display information about DPCs and the Packet Forwarding Engines on the DPCs.

The following points summarize the behavior of Layer 2 port mirroring based on named instances:

- The scope of packet selection is determined by the target of the binding—At the ports (or port) bound to a named instance of Layer 2 port mirroring, the router selects input packets according to the packet-selection properties in the named instance.
- The destination of a selected packet is determined by the packet address family—Of the packets selected, the router mirrors only the packets belonging to an address family for which the named instance of Layer 2 port mirroring specifies a set of mirror destination properties. In a Layer 2 environment, MX Series routers support port mirroring of VPLS (**family bridge** or **family vpls**) traffic and Layer 2 VPN traffic with **family ccc**.

For a general description of Layer 2 port-mirroring properties, see “[Understanding Layer 2 Port Mirroring Properties](#)” on page 4. For a comparison of the types of Layer 2 port mirroring available on an MX Series router, see “[Application of Layer 2 Port Mirroring Types](#)” on page 14.

Mirroring at Ports Grouped at the FPC Level

On an MX Series router, you can bind a named instance of Layer 2 port mirroring to a specific DPC or FPC installed in the router chassis. The port-mirroring properties in the instance are applied to all Packet Forwarding Engines (and their associated ports) on the specified DPC or to all PICs (and their associated ports) installed in the specified

FPC. Port-mirroring properties that are bound to a DPC or FPC override any port-mirroring properties bound at the global level or the MX Series router chassis.

Mirroring at Ports Grouped at the PIC Level

On an MX Series router, you can bind a named instance of Layer 2 port mirroring to a specific Packet Forwarding Engine or PIC. The port-mirroring properties in that instance are applied to all ports associated with the specified Packet Forwarding Engine or PIC. Port-mirroring properties that are bound to a Packet Forwarding Engine or PIC override any port-mirroring properties bound at the DPC or FPC that contains them.

NOTE: For MX960 routers, there is a one-to-one mapping of Packet Forwarding Engines to Ethernet ports. Therefore, on MX960 routers only, you can configure port-specific bindings of port-mirroring instances.

Mirroring at a Group of Ports Bound to Multiple Named Instances

On an MX Series router, you can apply up to two named instances of Layer 2 port mirroring to the same group of ports within the router chassis. By applying two different port-mirroring instances to the same DPC, FPC, Packet Forwarding Engine, or PIC, you can bind two distinct Layer 2 port mirroring specifications to a single group of ports.

NOTE: You can configure only one global instance of Layer 2 port mirroring on an MX Series router.

Layer 2 Port Mirroring Firewall Filters

This topic describes the following information:

- [Layer 2 Port Mirroring Firewall Filters Overview on page 12](#)
- [Mirroring of Packets Received or Sent on a Logical Interface on page 13](#)
- [Mirroring of Packets Forwarded or Flooded to a Bridge Domain on page 13](#)
- [Mirroring of Packets Forwarded or Flooded to a VPLS Routing Instance on page 13](#)

Layer 2 Port Mirroring Firewall Filters Overview

On an MX Series router, you can configure a firewall filter *term* to specify that Layer 2 port mirroring is to be applied to all packets at the interface to which the firewall filter is applied.

You can apply a Layer 2 port-mirroring firewall filter to the input or output logical interfaces (including aggregated Ethernet logical interfaces), to traffic forwarded or flooded to a bridge domain, or traffic forwarded or flooded to a VPLS routing instance.

MX Series routers support Layer 2 port mirroring of VPLS (**family bridge** or **family vpls**) traffic and Layer 2 VPN traffic with **family ccc n** in a Layer 2 environment.

Within a firewall filter **term**, you can specify the Layer 2 port-mirroring properties under the **then** statement in either of the following ways:

- Implicitly reference the Layer 2 port-mirroring properties in effect on the port.
- Explicitly reference a particular named instance of Layer 2 port mirroring.

NOTE: When configuring a Layer 2 port-mirroring firewall filter, do not include the optional **from** statement that specifies match conditions based on the route source address. Omit this statement so that all packets are considered to match and all *actions* and *action-modifiers* specified in the **then** statement are taken.

If you want to mirror all incoming packets, then you must not use the **from** statement; one configure filter terms with **from** if they are interested in mirroring only a subset of packet.

For a general description of Layer 2 port-mirroring properties, see [“Understanding Layer 2 Port Mirroring Properties” on page 4](#). For a comparison of the types of Layer 2 port mirroring available on an MX Series router, see [“Application of Layer 2 Port Mirroring Types” on page 14](#).

NOTE: If you associate integrated routing and bridging (IRB) with the bridge domain (or VPLS routing instance), and also configure within the bridge domain (or VPLS routing instance) a forwarding table filter with the **port-mirror** or **port-mirror-instance** action, then the IRB packet is mirrored as a Layer 2 packet. You can disable this behavior by configuring the *no-irb-layer-2-copy* statement in the bridge-domain (or VPLS routing instance).

For a detailed description of how to configure a Layer 2 port-mirroring firewall filter, see [“Defining a Layer 2 Port-Mirroring Firewall Filter” on page 48](#).

For detailed information about how you can use Layer 2 port-mirroring firewall filters with MX Routers configured as provider edge (PE) routers, see [“Understanding Layer 2 Port Mirroring of PE Router Logical Interfaces” on page 45](#). For detailed information about

configuring firewall filters in general (including in a Layer 3 environment), see the *Routing Policies, Firewall Filters, and Traffic Policers Feature Guide*.

Mirroring of Packets Received or Sent on a Logical Interface

To mirror Layer 2 traffic received or sent on a logical interface, apply a port-mirroring firewall filter to the input or output of the interface.

A port-mirroring firewall filter can also be applied to an aggregated-Ethernet logical interface. For details, see “[Understanding Layer 2 Port Mirroring of PE Router Aggregated Ethernet Interfaces](#)” on page 47.

NOTE: If port-mirroring firewall filters are applied at both the input and output of a logical interface, two copies of each packet are mirrored. To prevent the router from forwarding duplicate packets to the same destination, you can enable the “mirror-once” option for Layer 2 port mirroring in the global instance for the Layer 2 packet address family.

Mirroring of Packets Forwarded or Flooded to a Bridge Domain

To mirror Layer 2 traffic forwarded to or flooded to a bridge domain, apply a port-mirroring firewall filter to the input to the forwarding table or flood table. Any packet received for the bridge domain forwarding or flood table and that matches the filter conditions is mirrored.

For more information about bridge domains, see *Understanding Layer 2 Bridge Domains*. For information about flooding behavior in a bridge domain, see *Understanding Layer 2 Learning and Forwarding for Bridge Domains*.

NOTE: When you configure port mirroring on any interface under one bridge domain, the mirrored packet can move to an external analyzer located under different bridge domains.

Mirroring of Packets Forwarded or Flooded to a VPLS Routing Instance

To mirror Layer 2 traffic forwarded to or flooded to a VPLS routing instance, apply a port-mirroring firewall filter to the input to the forwarding table or flood table. Any packet received for the VPLS routing instance forwarding or flood table and that matches the filter condition is mirrored.

For more information about VPLS routing instances, see *Configuring a VPLS Routing Instance* and *Configuring VLAN Identifiers for Bridge Domains and VPLS Routing Instances*. For information about flooding behavior in VPLS, see the *Junos OS VPNs Library for Routing Devices*.

Application of Layer 2 Port Mirroring Types

You can apply different sets of Layer 2 port-mirroring properties to the VPLS packets at different ingress or egress points of an MX Series router.

[Table 3 on page 14](#) describes the three types of Layer 2 port mirroring you can configure on an MX Series router: the global instance, named instances, and firewall filters.

Table 3: Application of Layer 2 Port Mirroring Types

Type of Layer2PortMirroring Definition	Point of Application	Scope of Mirroring	Description	Configuration Details
Global Instance of Layer2PortMirroring	All ports in the MX Series router chassis	VPLS packets received on all ports in the MX Series router chassis	If configured, the global port-mirroring properties implicitly apply to all VPLS packets received on all ports in the router chassis.	See “Configuring the Global Instance of Layer 2 Port Mirroring” on page 20 .
Named Instance of Layer2PortMirroring	Ports grouped at the FPC level See “Binding Layer 2 Port Mirroring to Ports Grouped at the FPC Level” on page 27 .	VPLS packets received on ports associated with a specific DPC or FPC and its Packet Forwarding Engines.	Overrides any port-mirroring properties configured by the global port-mirroring instance.	See “Defining a Named Instance of Layer 2 Port Mirroring” on page 23 . NOTE: The number of port-mirroring destinations supported for an MX Series router is limited to the number of Packet Forwarding Engines contained on the DPCs installed in the router chassis.
	Ports grouped at the PIC level See “Binding Layer 2 Port Mirroring to Ports Grouped at the PIC Level” on page 29 .	VPLS packets received on ports associated with a specific Packet Forwarding Engine.	Overrides any port-mirroring properties configured at the FPC level or in the global port-mirroring instance.	

Table 3: Application of Layer 2 Port Mirroring Types (*continued*)

Type of Layer2PortMirroring Definition	Point of Application	Scope of Mirroring	Description	Configuration Details
Layer2PortMirroring Firewall Filter	Logical interface (including an aggregated Ethernet interface)	VPLS packets received or sent on a logical interface.	In the firewall filter configuration, include <i>action</i> and <i>action-modifier</i> terms to apply to the packets selected for mirroring:	See “Defining a Layer 2 Port-Mirroring Firewall Filter” on page 48.
	See “Applying Layer 2 Port Mirroring to a Logical Interface” on page 51.		1. The accept action is recommended.	
	Bridge domain forwarding table or flood table	Layer 2 traffic forwarded or flooded to a bridge domain	2. Specify port mirroring by including one of the following modifiers: <ul style="list-style-type: none"> The port-mirror modifier implicitly references the port-mirroring properties currently bound to the underlying physical interfaces. The port-mirror-instance <i>pm-instance-name</i> modifier explicitly references a named instance of port mirroring. 3. (Optional) For tunnel interface input packets only, to mirror the packets to additional destinations, include the next-hop-group <i>next-hop-group-name</i> modifier. This modifier references a next-hop-group that specifies the next-hop addresses (for sending additional copies of packets to an analyzer).	<p>NOTE: Layer 2 port-mirroring firewall filters are not supported for logical systems.</p> <p>For mirroring tunnel interface input packets to multiple destinations, also see “Defining a Next-Hop Group for Layer 2 Port Mirroring” on page 70.</p>
	VPLS routing instance forwarding table or flood table	Layer 2 traffic forwarded or flooded to a VPLS routing instance

Precedence of Multiple Levels of Layer 2 Port Mirroring on a Physical Interface

You can bind different sets of Layer 2 port mirroring properties (the global instance and one or more named instances) at various levels of an MX Series router or of an EX Series switch chassis (at the chassis level, at the FPC level, or at the PIC level). Therefore, it is possible for a single group of physical interfaces to be bound to multiple Layer 2 port mirroring definitions.

If a group of ports (or, in the case of a PIC-level binding in an MX960 router, a single port) is bound to multiple Layer 2 port mirroring definitions, the router (or switch) applies the Layer 2 port-mirroring properties to those ports as follows:

1. **Chassis-level port-mirroring properties implicitly apply to all ports in the chassis.** If an MX Series router or an EX Series switch is configured with the global port-mirroring instance, those port mirroring properties apply to all ports. See [“Configuring the Global Instance of Layer 2 Port Mirroring” on page 20](#).
2. **FPC-level port-mirroring properties override chassis-level properties.** If a DPC or FPC is bound to a named instance of port mirroring, those port mirroring properties apply to all ports associated with that DPC or FPC, overriding any port mirroring

properties bound at the chassis level. See [“Binding Layer 2 Port Mirroring to Ports Grouped at the FPC Level” on page 27](#).

3. **PIC-level port-mirroring properties override FPC-level properties.** If a Packet Forwarding Engine or PIC is bound to a named instance of port-mirroring, those port mirroring properties apply to all ports associated with the Packet Forwarding Engine or PIC, overriding any port-mirroring properties bound to those ports at the FPC level. See [“Binding Layer 2 Port Mirroring to Ports Grouped at the PIC Level” on page 29](#).

Configuring the Global Instance of Layer 2 Port Mirroring

On an MX Series router, you can configure a set of Layer 2 port-mirroring properties that implicitly apply to packets received on all ports in the router chassis.

To configure the global instance of Layer 2 port mirroring on an MX Series router:

1. Enable configuration of the Layer 2 port mirroring:

```
[edit]  
user@host# edit forwarding-options port-mirroring
```

2. Enable configuration of the packet-selection properties:

```
[edit forwarding-options port-mirroring]  
user@host# edit input
```

3. Specify global-level packet-selection properties.

a. Specify the number of packets to select:

```
[edit forwarding-options port-mirroring input]
user@host# set rate number
```

The valid range is 1 through 65535.

b. Specify the number of packets to mirror from each selection:

```
[edit forwarding-options port-mirroring input]
user@host# set run-length number
```

The valid range is 0 through 20. The default value is 0.

c. Specify the length to which mirrored packets are to be truncated:

```
[edit forwarding-options port-mirroring input]
user@host# set maximum-packet-length number
```

For MX-Series devices with Modular Port Concentrators (MPCs), port-mirrored or sampled packets can be truncated (or clipped) to any length in the range of 1 to 255 bytes. Only 1 to 255 are valid values for packet truncation on these devices.

For other devices, the range is from 0 to 9216. A maximum-packet-length value of zero represents that truncation is disabled, and the entire packet is mirrored or sampled.

4. Specify the global-level Layer 2 address-type family from which traffic is to be selected for mirroring:

```
[edit forwarding-options port-mirroring input]
user@host# up
[edit forwarding-options port-mirroring]
user@host# edit family family
```

The value of the *family* option can be **bridge**, **ccc**, or **vpls**.

NOTE: Under the [edit forwarding-options port-mirroring] hierarchy level, the protocol family statement **family bridge** is an alias for **family vpls**. The command-line interface (CLI) displays Layer 2 port-mirroring configurations as **family vpls**, even for Layer 2 port-mirroring configured as **family bridge**. Use **family bridge** when the physical interface is configured with **encapsulation ethernet-bridge**.

5. Enable configuration of global-level mirror destination properties for this address family:

```
[edit forwarding-options port-mirroring family family]
user@host# edit output
```

6. Specify global-level mirror destination properties for this address family.

- a. Specify the physical interface on which to send the mirrored packets:

```
[edit forwarding-options port-mirroring family family output]
user@host# set interface interface-name
```

You can also specify an integrated routing and bridging (IRB) interface as the output interface.

- b. (Optional) Allow configuration of filters on the destination interface for the named port-mirroring instance:

```
[edit forwarding-options port-mirroring family family output]
user@host# set no-filter-check
```

7. (Optional) Specify that any packets selected for mirroring are to be mirrored only once to any mirroring destination:

```
[edit forwarding-options port-mirroring family family output]
user@host# up 2
[edit forwarding-options port-mirroring]
user@host# set mirror-once
```

TIP: Enable the mirror-once option when an MX Series router is configured to perform Layer 2 port mirroring at both ingress and egress interfaces, which could result in sending duplicate packets to the same destination (which would complicate the analysis of the mirrored traffic).

8. Verify the minimum configuration of the global instance of Layer 2 port mirroring:

```
[edit forwarding-options ... ]
user@host# top
[edit]
user@host# show forwarding-options
```

```
forwarding-options {
  port-mirroring {
    input { # Global packet-selection properties.
      maximum-packet-length number; # Default is 0.
      rate number;
      run-length number;
    }
    family (ccc | vpls) { # Address- type 'bridge' displays as 'vpls'.
      output { # Global mirror destination properties.
        interface interface-name;
        no-filter-check; # Optional. Allow filters on interface.
      }
    }
    mirror-once; # Optional. Mirror destinations do not receive duplicate packets.
  }
}
```

- Related Documentation**
- [Understanding Layer 2 Port Mirroring on page 3](#)
 - [Layer 2 Port Mirroring Global Instance on page 9](#)
 - [Examples: Layer 2 Port Mirroring at Multiple Levels of the Chassis on page 31](#)
 - [Example: Layer 2 Port Mirroring with Multiple Instances on page 33](#)

Defining a Named Instance of Layer 2 Port Mirroring

On an MX Series router, you can define a set of Layer 2 port-mirroring properties that you can bind to a particular Packet Forwarding Engine (at the PIC level of the router chassis) or to group of Packet Forwarding Engines (at the DPC or FPC level of the route chassis).

To define a named instance of Layer 2 port mirroring on an MX Series router:

1. Enable configuration of a named instance of Layer 2 port mirroring :

```
[edit]
user@host# edit forwarding-options port-mirroring instance pm-instance-name
```

2. Enable configuration of the packet-sampling properties:

```
[edit forwarding-options port-mirroring instance pm-instance-name]
user@host# edit input
```

3. Specify packet-selection properties:

a. Specify the number of packets to select:

```
[edit forwarding-options port-mirroring instance pm-instance-name input]
user@host# set rate number
```

The valid range is 1 through 65535.

b. Specify the number of packets to mirror from each selection:

```
[edit forwarding-options port-mirroring instance pm-named-instance input]
user@host# set run-length number
```

The valid range is 0 through 20. The default value is 0.

NOTE: The `run-length` statement is not supported on MX80 routers.

c. Specify the length to which mirrored packets are to be truncated:

```
[edit forwarding-options port-mirroring instance pm-instance-name input]
user@host# set maximum-packet-length number
```

For MX-Series devices with Modular Port Concentrators (MPCs), port-mirrored or sampled packets can be truncated (or clipped) to any length in the range of 1 to 255 bytes. Only 1 to 255 are valid values for packet truncation on these devices. For other devices, the range is from 0 to 9216. A maximum-packet-length value of zero represents that truncation is disabled, and the entire packet is mirrored or sampled.

NOTE: The `maximum-packet-length` statement is not supported on MX80 routers.

4. Enable configuration of the mirror destination properties for Layer 2 packets that are part of bridging domain, Layer 2 switching cross-connects, or virtual private LAN service (VPLS):

a. Specify the Layer 2 address family type of traffic to be mirrored:

```
[edit forwarding-options port-mirroring instance pm-instance-name input]
user@host# up
[edit forwarding-options port-mirroring instance pm-instance-name]
user@host# edit family family
```

The value of the *family* option can be **bridge**, **ccc**, or **vpls**.

NOTE: Under the [edit forwarding-options port-mirroring] hierarchy level, the protocol family statement family bridge is an alias for family vpls. The command-line interface (CLI) displays Layer 2 port-mirroring configurations as family vpls, even for Layer 2 port-mirroring configured as family bridge. Use family bridge when the physical interface is configured with encapsulation ethernet-bridge.

- b. Enable configuration of the mirror destination properties:

```
[edit forwarding-options port-mirroring instance pm-instance-name family family]
user@host# edit output
```

5. Specify mirror destination properties.

- a. Specify the physical interface on which to send the mirrored packets:

```
[edit forwarding-options port-mirroring instance pm-instance-name family family
output]
user@host# set interface interface-name
```

- b. (Optional) Allow configuration of filters on the destination interface for the global port-mirroring instance:

```
[edit forwarding-options port-mirroring instance pm-instance-name family family
output]
user@host# set no-filter-check
```

NOTE: You cannot configure port-mirroring instances on MX80 routers. You can only configure port mirroring at the global level on MX80 routers.

6. (Optional) Specify that any packets selected for mirroring are to be mirrored only once to any mirroring destination:

```
[edit forwarding-options port-mirroring instance pm-instance-name family family
output]
user@host# up 3
[edit forwarding-options port-mirroring]
user@host# set mirror-once
```

TIP: Enable the global mirror-once option when an MX Series router is configured to perform Layer 2 port mirroring at both ingress and egress interfaces, which could result in sending duplicate packets to the same destination (which in turn would complicate the analysis of the mirrored traffic).

7. To configure a mirroring destination for a different packet family type, repeat steps 4 through 6.
8. Verify the minimum configuration of the named instances of Layer 2 port mirroring:

```
[edit forwarding-options ... ]
user@host# top
[edit]
user@host# show forwarding-options

forwarding-options {
  port-mirroring {
    ... optional-global-port-mirroring-configuration ...
    instance {
      pm-instance-name ( # A named instance of port mirroring
        input { # Packet-selection properties
          maximum-packet-length number; # Default is 0.
          rate number;
          run-length number;
        }
        family (ccc | vpls) { # Address- type 'bridge' displays as 'vpls'.
          output { # Mirror destination properties
            interface interface-name;
            no-filter-check; # Optional. Allow filters on interface.
          }
        }
      }
    }
  }
  mirror-once; # Optional. Mirror destinations do not receive duplicate packets.
}
```

- [Example: Layer 2 Port Mirroring with Multiple Instances on page 33](#)

Binding Layer 2 Port Mirroring to Ports Grouped at the FPC Level

On an MX Series router and on an EX Series switch, you can bind a named instance of Layer 2 port mirroring to a specific DPC or to a specific FPC in the router (or switch) chassis. This is known as binding a named instance of Layer 2 port mirroring *at the FPC level* of the router (or switch) chassis. The port mirroring properties specified in the named instance are applied to all physical ports associated with all Packet Forwarding Engines on the specified DPC or FPC.

NOTE: You can also bind a named instance of Layer 2 port mirroring to a specific Packet Forwarding Engine on a DPC or FPC in the router (or switch) chassis.

For any packet-type family supported by Layer 2 port mirroring

- Port-mirroring properties bound to a specific DPC or FPC override any port-mirroring properties configured at the global level.
- Port-mirroring properties bound to a specific Packet Forwarding Engine override any port-mirroring properties configured at the DPC or FPC level.

You can apply up to two named instances of Layer 2 port mirroring to the same group of ports within the router (or switch) chassis. By applying two different port-mirroring instances to the same DPC or FPC, you can bind two distinct Layer 2 port-mirroring specifications to a single group of ports.

Before you begin, complete the following tasks:

- Define a named instance of Layer 2 port mirroring. See [“Defining a Named Instance of Layer 2 Port Mirroring” on page 23](#).
- Display information about the number and types of DPCs or FPCs in the MX Series router and in the EX Series switch, the number of Packet Forwarding Engines on each, and the number and types of ports per Packet Forwarding Engine.

To bind a named instance of Layer 2 port mirroring to a DPC or FPC and its Packet Forwarding Engines:

1. Enable configuration of the router (or switch) chassis properties:

```
[edit]
user@host# edit chassis
```

2. Enable configuration of a DPC (and its corresponding Packet Forwarding Engines) or an FPC (and its installed PICs):

```
[edit chassis]
user@host# edit fpc slot-number
```

3. Bind a named instance of Layer 2 port mirroring (*pm-instance-name*) to the DPC or FPC:

```
[edit chassis fpc slot-number]
user@host# set port-mirror-instance pm-instance-name
```

4. (Optional) To bind a second named instance of Layer 2 port mirroring to the same DPC or FPC, repeat step 3 and specify a different named instance of Layer 2 port mirroring.
5. Verify the minimum configuration of the binding:

```
[edit chassis fpc slot-number port-mirror-instance pm-instance-name]
user@host# top
[edit]
user@host# show chassis

chassis {
  fpc slot-number { # Bind two port mirroring named instances at the FPC level.
    port-mirror-instance pm-instance-name-1;
    port-mirror-instance pm-instance-name-2;
  }
}
```

Binding Layer 2 Port Mirroring to Ports Grouped at the PIC Level

On an MX Series router and on an EX Series switch, you can bind a named instance of Layer 2 port mirroring to the ports associated with a specific Packet Forwarding Engine (on a DPC) or to the ports associated with a specific PIC (installed in an FPC). This is known as binding a named instance of Layer 2 port mirroring *at the PIC level* of the router (or switch) chassis. The port-mirroring properties specified in the named instance are applied to all physical ports associated with the specified Packet Forwarding Engine.

NOTE: You can also bind a named instance of Layer 2 port mirroring to a specific DPC or FPC in the router (or switch) chassis.

For any packet-type family supported by Layer 2 port mirroring:

- Port-mirroring properties bound to a specific Packet Forwarding Engine override any port-mirroring properties configured at the DPC or FPC level.
- Port-mirroring properties bound to a specific DPC or FPC override any port-mirroring properties configured at the global level.

You can apply up to two named instances of Layer 2 port-mirroring to the same group of ports within the router (or switch) chassis. By applying two different port-mirroring instances to the same Packet Forwarding Engine or PIC, you can bind two distinct Layer 2 port mirroring specifications to a single group of ports.

For MX960 routers, there is a one-to-one mapping of Packet Forwarding Engines to Ethernet ports. Therefore, on MX960 routers only, you can bind a named instance of Layer 2 port mirroring to a *specific port* by binding the instance to the Packet Forwarding Engine associated with the port.

Before you begin, complete the following tasks:

- Define a named instance of Layer 2 port mirroring. See [“Defining a Named Instance of Layer 2 Port Mirroring” on page 23](#).
- Display information about the number and types of DPCs in the MX Series router or in the EX Series switch, the number of Packet Forwarding Engines on each DPC, and the number and types of ports per Packet Forwarding Engine.

To bind a named instance of Layer 2 port mirroring to a Packet Forwarding Engine:

1. Enable configuration of the router (or switch) chassis properties:

```
[edit]
user@host# edit chassis
```

2. Enable configuration of a Packet Forwarding Engine or PIC:

```
[edit chassis]
user@host# edit fpc slot-number
```

```
user@host# edit pic slot-number
```

3. Bind a named instance of Layer 2 port mirroring (*pm-instance-name*) to the Packet Forwarding Engine or PIC:

```
[edit chassis fpc slot-number pic slot-number]
user@host# set port-mirror-instance pm-instance-name
```

4. (Optional) To bind a second named instance of Layer 2 port mirroring to the same Packet Forwarding Engine or PIC, repeat step 3 and specify a different named instance of Layer 2 port mirroring.
5. Verify the minimum configuration of the binding:

```
[edit forwarding-options ... ]
user@host# top
[edit]
user@host# show chassis
chassis {
  fpc slot-number {
    ... optional-binding-of-a-port-mirroring-instance-at-the-dpc-level ...
    pic slot-number { # Bind two port-mirroring named instances at the PIC level.
      port-mirror-instance pm-instance-name-1;
      port-mirror-instance pm-instance-name-2;
    }
  }
}
```

Disabling Layer 2 Port Mirroring Instances

You can disable the global instance of Layer 2 port mirroring, a particular named instance, or all instances of port mirroring:

- To disable the global instance of Layer 2 port mirroring, include the **disable** statement at the `[edit forwarding-options port-mirroring]` hierarchy level:

```
[edit]
forwarding-options {
  port-mirroring {
    disable; Disables the global instance of Layer 2 port mirroring.
    ...global-instance-of-layer-2-port-mirroring-configuration...
```

```

    }
  }

```

- To disable the definition of a particular named instance of Layer 2 port mirroring, include the **disable** statement at the **[edit forwarding-options port-mirroring instance instance-name]** hierarchy level:

```

[edit]
forwarding-options {
  port-mirroring {
    ...optional-configuration-of-the-global-instance-of-layer-2-port-mirroring...
    instance {
      port-mirroring-instance-name {
        disable; Disables this named instance of Layer 2 port mirroring.
        ...definition-of-a-named-instance-of-layer-2-port-mirroring...
      }
    }
  }
}

```

- To disable the global instance and all named instances of Layer 2 port mirroring, include the **disable-all-instances** statement at the **[edit forwarding-options port-mirroring]** hierarchy level:

```

[edit]
forwarding-options {
  port-mirroring {
    disable-all-instances; Disables all instances of Layer 2 port mirroring.
    ...optional-configuration-of-the-global-instance-of-layer-2-port-mirroring...
    instance {
      port-mirroring-instance-name {
        ...definition-of-a-named-instance-of-layer-2-port-mirroring...
      }
    }
  }
}

```

- [Displaying Layer 2 Port-Mirroring Instance Settings and Status](#)

Examples: Layer 2 Port Mirroring at Multiple Levels of the Chassis

On an MX Series router or on an EX Series switch, you can apply named instances of Layer 2 port mirroring at the FPC or DPC level of the chassis or at the PIC level of the

chassis. However, you can configure (and implicitly apply) only one global instance of Layer 2 port mirroring to the entire chassis.

- [Layer 2 Port Mirroring at the FPC Level on page 32](#)
- [Layer 2 Port Mirroring at the PIC Level on page 32](#)
- [Layer 2 Port Mirroring at the FPC and PIC Levels on page 32](#)

Layer 2 Port Mirroring at the FPC Level

In this example configuration of an MX Series router or of an EX Series switch chassis, a named instance of Layer 2 port mirroring (**pm1**) is bound to physical ports grouped at the FPC level:

```
[edit]
chassis {
  fpc 2 {
    port-mirror-instance pm1;
  }
}
```

This is not a complete configuration. The physical interfaces associated with the FPC or DPC in slot 2 must be configured at the **[edit interfaces]** hierarchy level. The Layer 2 port mirroring named instance **pm1** must be configured at the **[edit forwarding-options port-mirroring instance]** hierarchy level.

Layer 2 Port Mirroring at the PIC Level

In this example configuration of an MX Series router or of an EX Series switch chassis, a named instance of Layer 2 port mirroring (**pm2**) is bound to the physical ports grouped at the PIC level:

```
[edit]
chassis {
  fpc 2 {
    pic 0 {
      port-mirror-instance pm2;
    }
  }
}
```

This is not a complete configuration. The physical interfaces associated with the FPC or DPC in slot 2 must be configured at the **[edit interfaces]** hierarchy level. The Layer 2 port mirroring named instance **pm2** must be configured at the **[edit forwarding-options port-mirroring instance]** hierarchy level.

Layer 2 Port Mirroring at the FPC and PIC Levels

In this example configuration of an MX Series router chassis or an EX Series switch, one named instance of Layer 2 port mirroring (**pm1**) is applied at the FPC level of the router (or switch) chassis. A second named instance (**pm2**) is applied at the PIC level:

```
[edit]
chassis {
  fpc 2 {
    port-mirror-instance pm1;
```

```
pic 0 {  
    port-mirror-instance pm2;  
}  
}
```

This is not a complete configuration. Physical interfaces associated with the FPC or DPC in slot 2, including physical interfaces associated with **pic 0**, must be configured at the **[edit interfaces]** hierarchy level. The Layer 2 port mirroring named instances **pm1** and **pm2** must be configured at the **[edit forwarding-options port-mirroring instance]** hierarchy level.

- [Configuring the Global Instance of Layer 2 Port Mirroring on page 20](#)
- [Defining a Named Instance of Layer 2 Port Mirroring on page 23](#)

Example: Layer 2 Port Mirroring with Multiple Instances

Because you can configure more than one port-mirroring instance, care is required when specifying which instance is meant. This topic contains the following information:

- [Example: Configuring Multiple Instances of Layer 2 Port Mirroring on page 34](#)
- [Explicit Reference of a Port Mirroring Instance on page 36](#)
- [Implicit Reference of Port Mirroring on the Underlying Physical Interface on page 36](#)

Example: Configuring Multiple Instances of Layer 2 Port Mirroring

This configuration example illustrates the configuration of Layer 2 port mirroring at the physical interfaces associated with FPC 2, PIC 0 and at two logical interfaces on one of those ports.

At the physical interface levels of the router chassis, two named instances of port mirroring are configured and then bound to the group of physical ports associated with FPC 2, PIC 0.

At two of the logical interfaces on physical interface **ge-2/0/1**, two Layer 2 port-mirroring firewall filters are applied to the input traffic. One filter *explicitly* references the port-mirroring properties specified in one of the named instances of port mirroring. The other filter *implicitly* references the port mirroring properties in effect on the underlying physical interface **ge-2/0/1**.

The resulting configuration is an example of the relationships that can exist between multiple instances of Layer 2 port mirroring applied to an MX Series router.

1. Configure two named instances of Layer 2 port mirroring (**pm_instance_1** and **pm_instance_2**), and include mirror destination properties for bridge domain traffic (**family bridge**):

```
[edit]
forwarding-options {
  port-mirroring {
    instance {
      pm_instance_1 {
        input {
          ... packet-selection-properties-configuration ...
        }
        family bridge {
          ... mirror-destination-properties-configuration ...
        }
      }
      pm_instance_2 {
        input {
          ... packet-selection-properties-configuration ...
        }
        family bridge {
          ... mirror-destination-properties-configuration ...
        }
      }
    }
  }
}
```

NOTE: In this example, no global port-mirroring properties are configured on the router.

2. Apply the Layer 2 port-mirroring instances to the same group of ports in the router chassis. In this example, the named instances of Layer 2 port mirroring are applied to the same group of physical interfaces specified at the PIC level of the chassis:

```
[edit]
chassis {
  fpc 2 {
    pic 0 {
      port-mirror-instance pm_instance_1;
      port-mirror-instance pm_instance_2;
    }
  }
}
```

Note that, in this example, two named instances of Layer 2 port mirroring are bound to the PIC level of the chassis at the same group of ports.

3. Configure two Layer 2 port-mirroring firewall filters, both for bridge-domain traffic and with one of the filters explicitly referencing one of the named instances of Layer 2 port mirroring:
 - Configure the filter **pm_filter_1** to use the Layer 2 port-mirroring properties configured in the named port-mirroring instance **pm_instance_1**. To refer to the Layer 2 port-mirroring properties configured in a particular named instance of port mirroring, use the **port-mirror-instance** *port-mirroring-instance-name* statement.
 - Configure the filter **pm_filter_2** to use the Layer 2 port-mirroring properties in effect on the underlying physical interface of the logical interface to which the filter is applied. To refer to the Layer 2 port-mirroring properties in effect on the underlying physical interface, use the **port-mirror** statement. If two instances of port mirroring are bound to that port, then the firewall filter uses the first instance bound within the **[edit chassis fpc slot-number]** or **[edit chassis fpc slot-number pic slot-number]** hierarchy level.

```
[edit]
firewall {
  family bridge {
    filter pm_filter_1 {
      term pm {
        then port-mirror-instance pm_instance_1;
      }
    }
    filter pm_filter_2 {
      term pm {
        then port-mirror;
      }
    }
  }
}
```

NOTE: Because the **port-mirror** filter action modifier relies on the port-mirroring properties defined at the **[edit forwarding-options port-mirroring]** hierarchy level, the **port-mirror** filter action is not supported for logical systems.

4. Apply the two Layer 2 port-mirroring firewall filters to logical interfaces on interface **ge-2/0/1**:

```
[edit]
interfaces {
  ge-2/0/1 {
    flexible-vlan-tagging;
    encapsulation ethernet-bridge;
    unit 0 {
      vlan-id 201;
      family bridge {
        filter { # Explicitly references a named instance of port mirroring.
          input pm_filter_1;
        }
      }
    }
    unit 1 {
      vlan-id 202;
      family bridge {
        filter { # Implicitly references the underlying port mirroring.
          input pm_filter_2;
        }
      }
    }
  }
}
```

Explicit Reference of a Port Mirroring Instance

On logical interface **ge-2/0/1.0**, the **port-mirror-instance** statement explicitly references the Layer 2 port-mirroring properties in the named instance **pm_instance_1**. In this example, the port-mirroring properties specified in **pm_instance_1** remain in effect at logical interface **ge-2/0/1.0** under the following conditions:

- The firewall filter **pm_filter_1** remains configured (as shown in step 3).
- The named instance **pm_instance_1** remains configured (as shown in step 1).

Even if the named instance **pm_instance_1** is no longer configured or no longer bound to the router chassis at FPC 2, PIC 0, the port-mirroring properties specified in **pm_instance_1** remain in effect at logical interface **fe-2/0/1.0** through firewall filter **pm_filter_1**.

Implicit Reference of Port Mirroring on the Underlying Physical Interface

On logical interface **ge-2/0/1.1**, the **port-mirror** statement implicitly references the Layer 2 port-mirroring properties in effect at the underlying physical interface **ge-2/0/1**. In this example, the port-mirroring properties specified in **pm_instance_2** remain in effect at the ports associated with FPC 2, PIC 0 under the following conditions:

- The firewall filter **pm_filter_2** remains configured (as shown in step 3).
- The named instance **pm_instance_2** remains configured (as shown in step 1).
- The named instance **pm_instance_2** remains bound to the router chassis at FPC 2, PIC 0 (as shown in step 2).

If you disable the named instance **pm_instance_2** or delete its binding to the physical ports associated with FPC 2, PIC 0, then—if global Layer 2 port-mirroring properties had been configured—the global port-mirroring properties would be used at logical interface **ge-2/0/1.1** through firewall filter **pm_filter_2**.

NOTE: There is a limitation to a Layer 2 port mirroring firewall filter in which you implicitly reference Layer 2 port-mirroring properties by including the **port-mirror** statement. If multiple named instances of Layer 2 port mirroring are bound to the underlying physical interface, then only the first binding in the stanza (or the only binding) is used at the logical interface. This is done mainly for backward compatibility.

In the example above, filter **pmff_bd_filter_2** uses the **port-mirror** statement, and so the filter action uses the mirroring properties of the first port-mirroring instance applied to the router chassis at the **[edit chassis fpc 2 pic 0]** hierarchy level, which is the instance **pm_instance_1**.

Configuring Layer 2 Port Mirroring Over GRE Interface

Port mirroring is the ability of a router to send a copy of a packet to an external host address or a packet analyzer for analysis. One application for port mirroring sends a duplicate packet to a virtual tunnel. A next-hop group can then be configured to forward copies of this duplicate packet to several interfaces. Junos OS supports Layer 2 port mirroring to a remote collector over a GRE interface.

To configure layer 2 port-mirroring over GRE interface, do the following:

1. Configure GRE interface with the source and destination address.

```
[edit interfaces interface-name unit unit-number tunnel]
set source ip-address
set destination ip-address
```

2. Configure family bridge parameters on the GRE interface

```
[edit interfaces interface-name unit unit-number family bridge]
set interface-mode trunk
set vlan-id valn-id
```

3. Configure the rate at which the input packets are port mirrored.

```
[edit forwarding-options port-mirroring]
set f input rate rate
```

4. Configure the output interface for family vpls for the GRE interface.

```
[edit forwarding-options family vpls]
set output interface gre-interface-name
```

5. Configure firewall filter term for family bridge to count packets arriving at the interface.

```
[edit firewall family bridge]
set filter f1 term term then count count
```

6. Configure firewall filter term for family bridge to port mirror the packets.

```
[edit firewall family bridge]
set filter filter-name term term then port-mirror
```

Example: Configuring Layer 2 Port Mirroring Over a GRE Interface

This example shows how to configure Layer 2 port mirroring over a GRE interface for analysis.

- [Requirements on page 38](#)
- [Overview on page 38](#)
- [Configuration on page 39](#)
- [Verification on page 43](#)

Requirements

This example uses the following hardware and software components:

- One MX Series router
- Junos OS Release 16.1 or later running on all devices

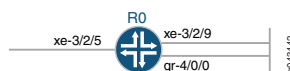

Overview

Port mirroring is the ability of a router to send a copy of a packet to an external host address or a packet analyzer for analysis. One application for port mirroring sends a duplicate packet to a virtual tunnel. A next-hop group can then be configured to forward copies of this duplicate packet to several interfaces. Starting with Junos OS Release 16.1, Layer 2 port mirroring to a remote collector over a GRE interface is supported.

Topology

Figure 1 on page 39 shows port mirroring configured over a GRE interface. The interface gr-4/0/0 is configured as family bridge. Firewall family bridge filter f1 is configured as port-mirror. Mirror destination is configured as gr-4/0/0. Firewall family bridge filter f1 is applied at the ingress and egress of the xe-3/2/5.0 interface, which mirrors packets to mirror destination gr-4/0/0.

Figure 1: Example Layer 2 Port Mirroring over GRE Interface

Configuration

CLI Quick Configuration To quickly configure this example, copy the following commands, paste them into a text file, remove any line breaks, change any details necessary to match your network configuration, copy and paste the commands into the CLI at the **[edit]** hierarchy level, and then enter **commit** from configuration mode.

```
R0
set chassis fpc4 pic0 tunnel-services bandwidth 10g
set chassis network-services enhanced-ip
set interfaces ge-1/0/3 unit 0 family inet address 10.1.1.24 arp 10.1.1.2 mac
  00:11:22:33:44:55
set interfaces xe-3/2/5 flexible-vlan-tagging
set interfaces xe-3/2/5 encapsulation flexible-ethernet-services
set interfaces xe-3/2/5 unit 0 encapsulation vlan-bridge
set interfaces xe-3/2/5 unit 0 vlan-id 100
set interfaces xe-3/2/5 unit 0 family bridge filter input f1
set interfaces xe-3/2/5 unit 0 family bridge filter output f1
set interfaces xe-3/2/9 flexible-vlan-tagging
set interfaces xe-3/2/9 encapsulation flexible-ethernet-services
set interfaces xe-3/2/9 unit 0 encapsulation vlan-bridge
set interfaces xe-3/2/9 unit 0 vlan-id 100
set interfaces gr-4/0/0 unit 0 tunnel source 10.1.1.1
set interfaces gr-4/0/0 unit 0 tunnel destination 10.1.1.2
set interfaces gr-4/0/0 unit 0 family bridge interface-mode trunk
set interfaces gr-4/0/0 unit 0 family bridge vlan-id 100
set forwarding-options port-mirroring input rate 1
set forwarding-options family vpls output interface gr-4/0/0.0
set firewall family bridge filter f1 term t then count c
set firewall family bridge filter f1 term t then port-mirror
set bridge-domains b vlan-id 100
set bridge-domains b interface xe-3/2/5.0
set bridge-domains b interface xe-3/2/9.0
```

Configuring R0

Step-by-Step Procedure

The following example requires that you navigate various levels in the configuration hierarchy. For information about navigating the CLI, see "Using the CLI Editor in Configuration Mode" in the *CLI User Guide*.

To configure Device R0:

1. Configure flexible PIC concentrator parameters of the chassis.

```
[edit chassis]
user@R0# set fpc4 pic0 tunnel-services bandwidth 10g
user@R0# set network-services enhanced-ip
```

2. Configure enhanced-ip network services of the chassis.

```
[edit chassis]
user@R0# set network-services enhanced-ip
```

3. Configure the interfaces.

```
[edit interfaces]
user@R0# set ge-1/0/3 unit 0 family inet address 10.1.1.1/24 arp 10.1.1.2 mac
00:11:22:33:44:55
```

```
user@R0# set xe-3/2/5 flexible-vlan-tagging
user@R0# set xe-3/2/5 encapsulation flexible-ethernet-services
user@R0# set xe-3/2/5 unit 0 encapsulation vlan-bridge
user@R0# set xe-3/2/5 unit 0 vlan-id 100
user@R0# set xe-3/2/5 unit 0 family bridge filter input f1
user@R0# set xe-3/2/5 unit 0 family bridge filter output f1
```

```
user@R0# set xe-3/2/9 flexible-vlan-tagging
user@R0# set xe-3/2/9 encapsulation flexible-ethernet-services
user@R0# set xe-3/2/9 unit 0 encapsulation vlan-bridge
user@R0# set xe-3/2/9 unit 0 vlan-id 100
```

```
user@R0# set gr-4/0/0 unit 0 tunnel source 10.1.1.1
user@R0# set gr-4/0/0 unit 0 tunnel destination 10.1.1.2
user@R0# set gr-4/0/0 unit 0 family bridge interface-mode trunk
user@R0# set gr-4/0/0 unit 0 family bridge vlan-id 100
```

4. Configure the rate of input packets to be sampled for port mirroring of traffic.

```
[edit forwarding-options]
user@R0# set port-mirroring input rate 1
```

5. Configure the output interface for the VPLS address family of packets to mirror.

```
[edit forwarding-options]
user@R0# set family vpls output interface gr-4/0/0.0
```

6. Configure protocol family BRIDGE for the firewall filter.

```
[edit firewall]
user@R0# set family bridge filter f1 term t then count c
user@R0# set family bridge filter f1 term t then port-mirror
```

7. Configure the VLAN ID for the bridge domain.

```
[edit bridge-domains]
user@R0# set b vlan-id 100
user@R0# set b interface xe-3/2/5.0
user@R0# set b interface xe-3/2/9.0
```

8. Configure the interface for the bridge domain.

```
[edit bridge-domains]
user@R0# set b interface xe-3/2/5.0
user@R0# set b interface xe-3/2/9.0
```

Results

From configuration mode, confirm your configuration by entering the **show bridge-domains**, **show chassis**, **show forwarding-options**, **show firewall**, and **show interfaces** commands. If the output does not display the intended configuration, repeat the instructions in this example to correct the configuration.

```
user@R0# show chassis
fpc 4 {
  pic 0 {
    tunnel-services {
      bandwidth 10g;
    }
  }
}
network-services enhanced-ip;

user@R0# show interfaces
ge-1/0/3 {
  unit 0 {
    family inet {
      address 10.1.1.1/24 {
        arp 10.1.1.2 mac 00:11:22:33:44:55;
      }
    }
  }
}
xe-3/2/5 {
  flexible-vlan-tagging;
  encapsulation flexible-ethernet-services;
  unit 0 {
    encapsulation vlan-bridge;
    vlan-id 100;
    family bridge {
      filter {
```

```
        input f1;
        output f1;
    }
}
}
xe-3/2/9 {
    flexible-vlan-tagging;
    encapsulation flexible-ethernet-services;
    unit 0 {
        encapsulation vlan-bridge;
        vlan-id 100;
    }
}
gr-4/0/0 {
    unit 0 {
        tunnel {
            source 10.1.1.1;
            destination 10.1.1.2;
        }
        family bridge {
            interface-mode trunk;
            vlan-id 100;
        }
    }
}

user@R0# show forwarding-options
port-mirroring {
    input {
        rate 1;
    }
    family vpls {
        output {
            interface gr-4/0/0.0;
        }
    }
}

user@R0# show firewall
family bridge {
    filter f1 {
        term t {
            then {
                count c;
                port-mirror;
            }
        }
    }
}

user@R0# show bridge-domains
b {
    vlan-id 100;
    interface xe-3/2/5.0;
    interface xe-3/2/9.0;
}
```

Verification

Confirm that the configuration is working properly.

- [Verifying Port Mirroring of Traffic on page 43](#)

Verifying Port Mirroring of Traffic

Purpose Display port mirroring of traffic information.

Action On Device R0, from operational mode, run the **show forwarding-options port-mirroring** command to display port mirroring of traffic information.

```
user@R0> show forwarding-options port-mirroring
Instance Name: & globalinstance
Instance Id: 1
Input parameters:
  Rate           : 1
  Run-length     : 0
  Maximum-packet-length : 0
Output parameters:
  Family      State      Destination      Next-hop
  vpls        up         gr-4/0/0.0
Instance Name: pm_instance
Instance Id: 2
Input parameters:
  Rate           : 10
  Run-length     : 0
  Maximum-packet-length : 0
Output parameters:
  Family      State      Destination      Next-hop
  vpls        up         gr-4/0/0.0
```

Meaning The output shows the port mirroring of traffic information.

Understanding Layer 2 Port Mirroring of PE Router Logical Interfaces

For an MX Series router or an EX Series switch configured as a provider edge (PE) router or PE switch on the customer-facing edge of a service provider network, you can apply a Layer 2 port-mirroring firewall filter at the following ingress and egress points to mirror the traffic between the MX Series router (or an EX Series switch) and customer edge (CE) devices, such as routers and Ethernet switches.

[Table 4 on page 46](#) describes the ways in which you can apply Layer 2 port-mirroring firewall filters to an MX Series router or an EX Series switch configured as a PE router or PE switch.

Table 4: Application of Layer 2 Port Mirroring Firewall Filters on PE Routers and PE Switches

Point of Application	Scope of Mirroring	Notes	Configuration Details
Ingress Customer-Facing Logical Interface	Packets originating within a service provider customer's network, sent first to a CE device, and sent next to an MX Series router or an EX Series switch acting as a PE router or PE switch.	<p>You can also configure aggregated Ethernet interfaces between CE devices and PE routers or PE switches for VPLS routing instances. Traffic is load-balanced across all of the links in the aggregated interface.</p> <p>Traffic received on an aggregated Ethernet interface is forwarded over a different interface based on a lookup of the destination MAC (DMAC) address:</p> <ul style="list-style-type: none"> • Packets destined for a local site are sent out of the load-balanced child interface. • Packets destined for the remote site are encapsulated and forwarded over a label-switched path (LSP). 	<p>See “Applying Layer 2 Port Mirroring to a Logical Interface” on page 51.</p> <p>For more information about VPLS routing instances, see <i>Configuring a VPLS Routing Instance</i> and <i>Configuring VLAN Identifiers for Bridge Domains and VPLS Routing Instances</i>.</p>
Egress Customer-Facing Logical Interface	<p>Unicast packets being forwarded by the MX Series router or the EX Series switch to another PE router or PE switch.</p> <p>NOTE: If you apply a port-mirroring filter to the output for a logical interface, only unicast packets are mirrored. To mirror multicast, unknown unicast, and broadcast packets, apply a filter to the input to the flood table of a bridge domain or VPLS routing instance.</p>	<p>Traffic received on an aggregated Ethernet interface is forwarded over a different interface based on a lookup of the destination MAC (DMAC) address:</p> <ul style="list-style-type: none"> • Packets destined for a local site are sent out of the load-balanced child interface. • Packets destined for the remote site are encapsulated and forwarded over a label-switched path (LSP). 	See “Applying Layer 2 Port Mirroring to a Logical Interface” on page 51.
Input to a Bridge Domain Forwarding Table or Flood Table	Forwarding traffic or flood traffic sent to the bridge domain from a CE device.	Forwarding and flood traffic typically consists of broadcast packets, multicast packets, unicast packets with an unknown destination MAC address, or packets with a MAC entry in the DMAC routing table.	See “Applying Layer 2 Port Mirroring to Traffic Forwarded or Flooded to a Bridge Domain” on page 54. For information about flooding behavior in VPLS, see the <i>Junos OS VPNs Library for Routing Devices</i> .
Input to a VPLS Routing Instance Forwarding Table or Flood Table	Forwarding traffic or flood traffic sent to the VPLS routing instance from a CE device.		See “Applying Layer 2 Port Mirroring to Traffic Forwarded or Flooded to a VPLS Routing Instance” on page 56. For information about flooding behavior in VPLS, see the <i>Junos OS VPNs Library for Routing Devices</i> .

Understanding Layer 2 Port Mirroring of PE Router Aggregated Ethernet Interfaces

An aggregated Ethernet interface is a virtual aggregated link that consists of a set of physical interfaces of the same speed and operating in full-duplex link connection mode. You can configure aggregated Ethernet interfaces between CE devices and PE routers for VPLS routing instances. Traffic is load-balanced across all of the links in the aggregated interface. If one or more links in the aggregated interface fails, the traffic is switched to the remaining links.

You can apply a Layer 2 port-mirroring firewall filter to an aggregated Ethernet interface to configure port-mirroring at the parent interface. However, if any child interfaces are bound to different Layer 2 port-mirroring instances, packets received at the child interfaces will be mirrored to the destinations specified by their respective port-mirroring instances. Thus, multiple child interfaces can mirror packets to multiple destinations.

For example, suppose the parent aggregated Ethernet interface instance **ae0** has two child interfaces:

- **xe-2/0/0**
- **xe-3/1/2**

Suppose that these child interfaces on **ae0** are bound to two different Layer 2 port-mirroring instances:

- **pm_instance_A**—A named instance of Layer 2 port-mirroring, bound to child interface **xe-2/0/0**.
- **pm_instance_B**—A named instance of Layer 2 port-mirroring, bound to child interface **xe-3/1/2**.

Now suppose you apply a Layer 2 port-mirroring firewall filter to the Layer 2 traffic sent on **ae0.0** (logical unit **0** on the aggregated Ethernet interface instance **0**). This enables port mirroring on **ae0.0**, which has the following effect on the processing of traffic received on the child interfaces for which Layer 2 port-mirroring properties are specified:

- The packets received on **xe-2/0/0.0** are mirrored to the output interfaces configured in port-mirroring instance **pm_instance_A**.
- The packets received on **xe-3/1/2.0** are mirrored to the output interfaces configured in port-mirroring instance **pm_instance_B**.

Because **pm_instance_A** and **pm_instance_B** can specify different packet-selection properties or mirror destination properties, the packets received on **xe-2/0/0.0** and **xe-3/1/2.0** can mirror different packets to different destinations.

Related Documentation

- [Understanding Layer 2 Port Mirroring on page 3](#)
- [Layer 2 Port Mirroring Firewall Filters on page 11](#)
- [Defining a Layer 2 Port-Mirroring Firewall Filter on page 48](#)
- [Example: Layer 2 Port Mirroring for a Layer 2 VPN on page 62](#)

Defining a Layer 2 Port-Mirroring Firewall Filter

For virtual private LAN service (VPLS) traffic (**family bridge** or **family vpls**) and for Layer 2 VPNs with family **cccon** MX Series routers and on EX Series switches only, you can define a firewall filter that specifies Layer 2 port mirroring as the action to be performed if a packet matches the conditions configured in the firewall filter term

You can use a Layer 2 port-mirroring firewall filter in the following ways:

- To mirror packets received or sent on a logical interface.
- To mirror packets forwarded or flooded to a bridge domain.
- To mirror packets forwarded or flooded to a VPLS routing instance.
- To mirror tunnel interface input packets only to multiple destinations.

For a summary of the three types of Layer 2 port-mirroring you can configure on an MX Series router, see [“Application of Layer 2 Port Mirroring Types” on page 14](#).

For information about configuring firewall filters in general (including in a Layer 3 environment), see *Stateless Firewall Filter Overview* and *How Standard Firewall Filters Evaluate Packets* in the *Routing Policies, Firewall Filters, and Traffic Policers Feature Guide*.

To define a firewall filter with a Layer 2 port-mirroring action:

1. Enable configuration of firewall filters for Layer 2 packets that are part of a bridge domain, a Layer 2 switching cross-connect, or a virtual private LAN service (VPLS):

```
[edit]
user@host# edit firewall family family
```

The value of the **family** option can be **bridge**, **ccc**, or **vpls**.

2. Enable configuration of a firewall filter **pm-filter-name**:

```
[edit firewall family family]
user@host# edit filter pm-filter-name
```

3. Enable configuration of a firewall filter term **pm-filter-term-name**:

```
[edit firewall family family filter pm-filter-name]
user@host# edit term pm-filter-term-name
```

For more information about firewall filter terms in general (including in a Layer 3 environment), see *Guidelines for Configuring Firewall Filters* in the *Routing Policies, Firewall Filters, and Traffic Policers Feature Guide*.

4. (Optional) Specify the firewall filter match conditions based on the route source address *only if* you want to mirror a subset of the sampled packets.

For information about configuring firewall filter match conditions in general (including in a Layer 3 environment), see *Firewall Filter Match Conditions Based on Numbers or Text Aliases*, *Firewall Filter Match Conditions Based on Bit-Field Values*, *Firewall Filter Match Conditions Based on Address Fields*, and *Firewall Filter Match Conditions Based on Address Classes*, in the *Routing Policies, Firewall Filters, and Traffic Policers Feature Guide*.

- For detailed information about Layer 2 bridging firewall filter match conditions (which are supported on MX Series routers only), see *Firewall Filter Match Conditions for Layer 2 Bridging Traffic*.
- For detailed information about VPLS firewall filter match conditions, see *Firewall Filter Match Conditions for VPLS Traffic*.
- For detailed information about Layer 2 circuit cross-connect (CCC) firewall filter match conditions, see *Firewall Filter Match Conditions for Layer 2 CCC Traffic*.

NOTE: If you want all sampled packets to be considered to match (and be subjected to the actions specified in the **then** statement), then omit the **from** statement altogether.

5. Enable configuration of the **action** and **action-modifier** to apply to matching packets:

```
[edit firewall family family filter pm-filter-name term pm-filter-term-name]
user@host# edit then
```

6. Specify the actions to be taken on matching packets:

```
[edit firewall family family filter pm-filter-name term pm-filter-term-name then]
user@host# set action
```

The recommended value for the **action** is **accept**. If you do not specify an action, or if you omit the **then** statement entirely, all packets that match the conditions in the **from** statement are accepted.

7. Specify Layer 2 port mirroring or a next-hop group as the **action-modifier**:

- To reference the Layer 2 port mirroring properties currently in effect for the Packet Forwarding Engine or PIC associated with the underlying physical interface, use the **port-mirror** statement:

```
[edit firewall family family filter pm-filter-name term pm-filter-term-name then]
user@host# set port-mirror
```

- To reference the Layer 2 port mirroring properties configured in a specific named instance, use the **port-mirror-instance** *pm-instance-name* action modifier:

```
[edit firewall family family filter pm-filter-name term pm-filter-term-name then]
user@host# set port-mirror-instance pm-instance-name
```

If the underlying physical interface is not bound to a named instance of Layer 2 port mirroring but instead is implicitly bound to the global instance of Layer 2 port

mirroring, then traffic at the logical interface is mirrored according to the properties specified in the named instance referenced by the **port-mirror-instance** action modifier.

- To reference a next-hop group that specifies the next-hop addresses (for sending additional copies of packets to an analyzer), use the **next-hop-group** *pm-next-hop-group-name* action modifier:

```
[edit firewall family family filter pm-filter-name term pm-filter-term-name then]
user@host# set next-hop-group pm-next-hop-group-name
```

For configuration information about next-hop groups, see [“Defining a Next-Hop Group for Layer 2 Port Mirroring” on page 70](#). If you specify a next-hop group for Layer 2 port mirroring, the firewall filter term applies to the tunnel interface input only.

8. Verify the minimum configuration of the Layer 2 port-mirroring firewall filter:

```
[edit firewall ... ]
user@host# top
[edit]
user@host# show firewall

family (bridge | ccc | mpls | vpls) { # Type of packets to mirror
  filter pm-filter-name { # Firewall filter name
    term pm-filter-term-name {
      from { # Do not specify match conditions based on route source address
      }
      then {
        action; # Recommended action is 'accept'
        action-modifier; # Three options for Layer 2 port mirroring
      }
    }
  }
}
```

In the firewall filter term **then** statement, the *action-modifier* can be **port-mirror**, **port-mirror-instance** *pm-instance-name*, or **next-hop-group** *pm-next-hop-group-name*.

Applying Layer 2 Port Mirroring to a Logical Interface

You can apply a Layer 2 port-mirroring firewall filter to the input or to the output of a logical interface, including an aggregated Ethernet logical interface. Only packets of the address-type family specified by the filter action are mirrored.

Before you begin, complete the following task:

- Define a Layer 2 port-mirroring firewall filter to be applied to the input to a logical interface or output to a logical interface. For details, see [“Defining a Layer 2 Port-Mirroring Firewall Filter”](#) on page 48.

NOTE: This configuration task shows two Layer 2 port-mirroring firewall filters: one filter applied to the logical interface ingress traffic, and one filter applied to the logical interface egress traffic.

To apply a Layer 2 port-mirroring firewall filter to an input or output logical interface:

1. Configure the underlying physical interface for the logical interface.
 - a. Enable configuration of the underlying physical interface:

```
[edit]
user@host# edit interfaces interface-name
```

NOTE: A port-mirroring firewall filter can also be applied to an aggregated-Ethernet logical interface.

- b. For Fast Ethernet and Gigabit Ethernet interfaces and aggregated Ethernet interfaces configured for VPLS, enable the reception and transmission of 802.1Q VLAN-tagged frames on the interface:

```
[edit interfaces interface-name]
user@host# set vlan-tagging
```

- c. For Ethernet interfaces that have IEEE 802.1Q VLAN tagging and bridging enabled and that must accept packets carrying TPID 0x8100 or a user-defined TPID, set the logical link-layer encapsulation type:

```
[edit interfaces interface-name]
user@host# set encapsulation extended-vlan-bridge
```

2. Configure the logical interface to which you want to apply a Layer 2 port-mirroring firewall filter.
 - a. Specify the logical unit number:

```
[edit interfaces interface-name]
```

```
user@host# edit unit logical-unit-number
```

- b. For a Fast Ethernet, Gigabit Ethernet, or Aggregated Ethernet interface, bind an 802.1Q VLAN tag ID to the logical interface:

```
[edit interfaces interface-name unit logical-unit-number]
user@host# set vlan-id number
```

3. Enable specification of an input or output filter to be applied to Layer 2 packets that are part of bridging domain, Layer 2 switching cross-connects, or virtual private LAN service (VPLS).

- If the filter is to be evaluated when packets are received on the interface:

```
[edit interfaces interface-name unit logical-unit-number]
user@host# set family family filter input pm-filter-name-a
```

- If the filter is to be evaluated when packets are sent on the interface:

```
[edit interfaces interface-name unit logical-unit-number]
user@host# set family family filter output pm-filter-name-b
```

The value of the *family* option can be **bridge**, **ccc**, or **vpls**.

NOTE: If port-mirroring firewall filters are applied at both the input and output of a logical interface, two copies of each packet are mirrored. To prevent the router from forwarding duplicate packets to the same destination, include the optional mirror-once statement at the [edit forwarding-options] hierarchy level.

4. Verify the minimum configuration for applying a named Layer 2 port-mirroring firewall filter to a logical interface:

```
[edit interfaces interface-name unit logical-unit-number family family filter ... ]
user@host# top
[edit]
user@host# show interfaces
```

```
interfaces {
  interface-name {
    vlan-tagging;
    encapsulation extended-vlan-bridge;
    unit number { # Apply a filter to the input of this interface
      vlan-id number;
      family (bridge | ccc | vpls) {
        filter {
          input pm-filter-for-logical-interface-input;
        }
      }
    }
  }
  unit number { # Apply a filter to the output of this interface
    vlan-id number;
  }
}
```

```
family (bridge | ccc | vpls) {  
    filter {  
        output pm-filter-for-logical-interface-output;  
    }  
}  
}
```

Applying Layer 2 Port Mirroring to Traffic Forwarded or Flooded to a Bridge Domain

You can apply a Layer 2 port-mirroring firewall filter to traffic being forwarded or flooded to a bridge domain. Only packets of the specified family type and forwarded or flooded to that bridge domain are mirrored.

Before you begin, complete the following task:

- Define a Layer 2 port-mirroring firewall filter to be applied to the traffic being forwarded to a bridge domain or flooded to a bridge domain. For details, see “[Defining a Layer 2 Port-Mirroring Firewall Filter](#)” on page 48.

NOTE: This configuration task shows two Layer_2 port-mirroring firewall filters: one filter applied to the bridge domain forwarding table ingress traffic, and one filter applied to the bridge domain flood table ingress traffic.

To apply a Layer 2 port-mirroring firewall filter to the forwarding table or flood table of a bridge domain:

1. Enable configuration of the bridge domain **bridge-domain-name** to which you want to apply a Layer 2 port-mirroring firewall filter for forwarded or flooded traffic:

- For a bridge domain:

```
[edit]
user@host# edit bridge-domains bridge-domain-name
```

- For a bridge domain under a routing instance:

```
[edit]
user@host# edit routing-instances routing-instance-name bridge-domains
bridge-domain-name
user@host# set instance-type virtual-switch
```

For more detailed configuration information, see *Configuring a VPLS Routing Instance*.

2. Configure the bridge domain:

```
[edit]
user@host# set domain-type bridge
user@host# set interface interface-name
user@host# set routing-interface routing-interface-name
```

For more detailed configuration information, see *Configuring a Bridge Domain* and *Configuring VLAN Identifiers for Bridge Domains and VPLS Routing Instances*.

3. Enable configuration of traffic forwarding on the bridge domain:

```
[edit ... bridge-domains bridge-domain-name]
user@host# edit forwarding-options
```

4. Apply a Layer 2 port-mirroring firewall filter to the bridge domain forwarding table or flood table.

- To mirror packets being forwarded to the bridge domain:

```
[edit ... bridge-domains bridge-domain-name forwarding-options]
user@host# set filter input pm-filter-for-bd-ingress-forwarded
```

- To mirror packets being flooded to the bridge domain:

```
[edit ... bridge-domains bridge-domain-name forwarding-options]
user@host# set flood input pm-filter-for-bd-ingress-flooded
```

5. Verify the minimum configuration for applying a Layer 2 port-mirroring firewall filter to the forwarding table or flood table of the bridge domain.

- a. Navigate to the hierarchy level at which the bridge domain is configured:

- **[edit]**
- **[edit routing-instances *routing-instance-name*]**

- b. Display the bridge domain configurations:

```
user@host# show bridge domains
```

```
bridge-domains {
  bridge-domain-name {
    instance-type virtual-switch; # For a bridge domain under a routing instance.
    domain-type bridge;
    interface interface-name;
    forwarding-options {
      filter { # Mirror ingress forwarded traffic
        input pm-filter-for-bd-ingress-forwarded;
      }
      flood { # Mirror ingress flooded traffic
        input pm-filter-for-bd-ingress-flooded;
      }
    }
  }
}
```

Applying Layer 2 Port Mirroring to Traffic Forwarded or Flooded to a VPLS Routing Instance

You can apply a Layer 2 port-mirroring firewall filter to traffic being forwarded or flooded to a VPLS routing instance. Only packets of the specified family type and forwarded or flooded to that VPLS routing instance are mirrored.

Before you begin, complete the following task:

- Define a Layer 2 port-mirroring firewall filter to be applied to the traffic being forwarded to a VPLS routing instance or flooded to a bridge domain. For details, see [“Defining a Layer 2 Port-Mirroring Firewall Filter” on page 48](#).

NOTE: This configuration task shows two Layer_2 port-mirroring firewall filters: one filter applied to the VPLS routing instance forwarding table ingress traffic, and one filter applied to the VPLS routing instance flood table ingress traffic.

To apply a Layer 2 port-mirroring firewall filter to the forwarding table or flood table of a VPLS routing instance:

1. Enable configuration of the VPLS routing instance to which you want to apply a Layer 2 port-mirroring firewall filter for forwarded or flooded traffic:

```
[edit]
user@host# edit routing-instances routing-instance-name
user@host# set instance-type vpls
user@host# set interface interface-name
user@host# set route-distinguisher (as-number:number | ip-address:number)
user@host# set vrf-import [policy-names]
user@host# set vrf-export [policy-names]
user@host# edit protocols vpls
user@host@ ... vpls-configuration ...
```

For more detailed configuration information, see *Configuring a VPLS Routing Instance*.

2. Enable configuration of traffic forwarding on the VPLS routing instance:

```
[edit routing-instances routing-instance-name protocols vpls]
user@host# up 2
[edit routing-instances routing-instance-name]
user@host# edit forwarding-options
```

3. Apply a Layer 2 port-mirroring firewall filter to the VPLS routing instance forwarding table or flood table.

- To mirror packets being forwarded to the VPLS routing instance:

```
[edit routing-instances routing-instance-name forwarding-options]
user@host# set filter input pm-filter-for-vpls-ri-forwarded
```

- To mirror packets being flooded to the VPLS routing instance:

```
[edit routing-instances routing-instance-name forwarding-options]
user@host# set flood input pm-filter-for-vpls-ri-flooded
```

4. Verify the minimum configuration for applying a Layer 2 port-mirroring firewall filter to the forwarding table or flood table of the VPLS routing instance:

```
[edit routing-instances routing-instance-name forwarding-options]
user@host# top
[edit]
user@host# show routing-instances
```

```
routing-instances {
  routing-instance-name {
    instance-type vpls;
    interface interface-name;
    route-distinguisher (as-number:number | ip-address:number);
    vrf-import [policy-names];
    vrf-export [policy-names];
    protocols {
      vpls {
        ...vpls-configuration...
      }
    }
    forwarding-options {
      family vpls {
        filter { # Mirror ingress forwarded traffic
          input pm-filter-for-vpls-ri-forwarded;
        }
        flood { # Mirror ingress flooded traffic
          input pm-filter-for-vpls-ri-flooded;
        }
      }
    }
  }
}
```

Configuring Protocol-Independent Firewall Filter for Port Mirroring

On MX Series routers with MPCs, you can configure a firewall filter to mirror Layer 2 and Layer 3 packets at a global level and at an instance level. When port mirror is configured at ingress or egress, the packet entering or exiting an interface is copied and the copies are sent to the local interface for local monitoring.

NOTE: Starting with Junos OS Release 13.3R6, only MPC interfaces support family **any** to do port mirroring. DPC interfaces do not support family **any**.

Typically, the firewall filter is configured such that it mirrors either Layer 2 or Layer 3 packets based on the family configured at the interface. However, in case of an integrated routing and bridging (IRB) interface, Layer 2 packets are not completely mirrored because IRB interfaces are configured to mirror only Layer 3 packets. On such an interface, you can configure a firewall filter and port mirroring parameters in the family **any** to ensure that a packet is completely mirrored irrespective of whether it is a Layer 2 or a Layer 3 packet.

NOTE:

- For port mirroring at an instance, you can configure one or more families such as **inet**, **inet6**, **ccc**, and **vpls** simultaneously for the same instance.
- In case of Layer 2 port mirroring, VLAN tags, MPLS headers are retained and can be seen in the mirrored copy at egress.
- For VLAN normalization, the information before normalization is seen for a mirrored packet at ingress. Similarly, at egress, the information after normalization is seen for the mirrored packet.

Before you begin configuring port mirroring, you must configure valid physical interfaces.

To configure a protocol-independent firewall filter for port mirroring:

1. Configure a global firewall filter for port-mirroring egress or ingress traffic.

```
[edit firewall family any]
user@host# set filter filter-name {
  term term-name {
    then {
      port-mirror;
      accept;
    }
  }
}
```

2. Configure a firewall filter to port-mirror traffic for an instance.

```
[edit firewall family any]
user@host# set filter filter-name {
```

```

term term-name {
  then {
    port-mirror-instance instance-name;
    accept;
  }
}

```

3. Configure port-mirroring parameters for egress and ingress traffic.

```

[edit forwarding-options port-mirroring]
user@host# input {
  maximum-packet-length bytes
  rate rate;
}
family any {
  output {
    (next-hop-group group-name | interface interface-name);
  }
}

```

4. Configure port-mirroring parameters for an instance. In this configuration, you can specify the output or destination for the Layer 2 packets to be either a valid next-hop group or a Layer 2 interface.

```

[edit forwarding-options port-mirroring]
user@host# instance instance-name {
  family any {
    output {
      (next-hop-group group-name | interface interface-name);
    }
  }
}

```

5. Configure the firewall filter at the ingress or egress interface on which the packets are transmitted.

```

[edit interface interface-name unit]
user@host# filter {
  output filter-name;
  input filter-name;
}

```

Release History Table

Release	Description
13.3R6	Starting with Junos OS Release 13.3R6, only MPC interfaces support family any to do port mirroring.

Example: Layer 2 Port Mirroring at a Logical Interface

The following steps describe an example in which the global port-mirroring instance and a port-mirroring firewall filter are used to configure Layer 2 port mirroring for the input to a logical interface.

1. Configure the bridge domain **example-bd-with-analyzer**, which contains the external packet analyzer, and the bridge domain **example-bd-with-traffic**, which contains the source and destination of the Layer 2 traffic being mirrored:

```
[edit]
bridge-domains {
  example-bd-with-analyzer { # Contains an external traffic analyzer
    vlan-id 1000;
    interface ge-2/0/0.0; # External analyzer
  }
  example-bd-with-traffic { # Contains traffic input and output interfaces
    vlan-id 1000;
    interface ge-2/0/6.0; # Traffic input port
    interface ge-3/0/1.2; # Traffic output port
  }
}
```

Assume that logical interface **ge-2/0/0.0** is associated with an external traffic analyzer that is to receive port-mirrored packets. Assume that logical interfaces **ge-2/0/6.0** and **ge-3/0/1.2** will be traffic input and output ports, respectively.

2. Configure Layer 2 port mirroring for the global instance, with the port-mirroring destination being the bridge domain interface associated with the external analyzer (logical interface **ge-2/0/0.0** on bridge domain **example-bd-with-analyzer**). Be sure to enable the option that allows filters to be applied to this port-mirroring destination:

```
[edit]
forwarding-options {
  port-mirroring {
    input {
      rate 10;
      run-length 5;
    }
    family bridge {
      output {
        interface ge-2/0/0.0; # Mirror packets to the external analyzer
        no-filter-check; # Allow filters on the mirror destination interface
      }
    }
  }
}
```

The **input** statement at the **[edit forwarding-options port-mirroring]** hierarchy level specifies that sampling begins every tenth packet and that each of the first five packets selected are to be mirrored.

The **output** statement at the **[edit forwarding-options port-mirroring family bridge]** hierarchy level specifies the output mirror interface for Layer 2 packets in a bridging environment:

- Logical interface **ge-2/0/0.0**, which is associated with the external packet analyzer, is configured as the port-mirroring destination.
- The optional **no-filter-check** statement allows filters to be configured on this destination interface.

3. Configure the Layer 2 port-mirroring firewall filter **example-bridge-pm-filter**:

```
[edit]
firewall {
  family bridge {
    filter example-bridge-pm-filter {
      term example-filter-terms {
        then {
          accept;
          port-mirror;
        }
      }
    }
  }
}
```

When this firewall filter is applied to the input or output of a logical interface for traffic in a bridging environment, Layer 2 port mirroring is performed according to the input packet-sampling properties and mirror destination properties configured for the Layer 2 port mirroring global instance. Because this firewall filter is configured with the single, default filter action **accept**, all packets selected by the **input** properties (**rate = 10** and **run-length = 5**) match this filter.

4. Configure the logical interfaces:

```
[edit]
interfaces {
  ge-2/0/0 { # Define the interface to the external analyzer
    encapsulation ethernet-bridge;
    unit 0 {
      family bridge;
    }
  }
  ge-2/0/6 { # Define the traffic input port
    flexible-vlan-tagging;
    encapsulation extended-vlan-bridge;
    unit 0 {
      vlan-id 100;
      family bridge {
        filter {
          input example-bridge-pm-filter; # Apply the port-mirroring firewall filter
        }
      }
    }
  }
}
```

```
ge-3/0/1 { # Define the traffic output port
  flexible-vlan-tagging;
  encapsulation extended-vlan-bridge;
  unit 2 {
    vlan-tags outer 10 inner 20;
    family bridge;
  }
}
```

Packets received at logical interface **ge-2/0/6.0** on bridge domain **example-bd-with-traffic** are evaluated by the port-mirroring firewall filter **example-bridge-pm-filter**. The firewall filter acts on the input traffic according to the filter actions configured in the firewall filter itself plus the input packet-sampling properties and mirror destination properties configured in the global port-mirroring instance:

- All packets received at **ge-2/0/6.0** are forwarded to their (assumed) normal destination at logical interface **ge-3/0/1.2**.
- For every ten input packets, copies of the first five packets in that selection are forwarded to the external analyzer at logical interface **ge-0/0/0.0** in the other bridge domain, **example-bd-with-analyzer**.

If you configure the port-mirroring firewall filter **example-bridge-pm-filter** to take the **discard** action instead of the **accept** action, all original packets are discarded while copies of the packets selected using the global port-mirroring **input** properties are sent to the external analyzer.

Example: Layer 2 Port Mirroring for a Layer 2 VPN

The following example is not a complete configuration, but shows all the steps needed to configure port mirroring on an L2VPN using **family ccc**.

1. Configure the bridge domain **port-mirror-bd**, which contains the external packet analyzer:

```
[edit]
bridge-domains {
  port-mirror-bd { # Contains an external traffic analyzer
    interface ge-2/2/9.0; # External analyzer
  }
}
```

2. Configure the Layer 2 VPN CCC to connect logical interface **ge-2/0/1.0** and logical interface **ge-2/0/1.1**:

```
[edit]
protocols {
  mpls {
    interface all;
  }
  connections {
    interface-switch if_switch {
      interface ge-2/0/1.0;
      interface ge-2/0/1.1;
    }
  }
}
```

3. Configure Layer 2 port mirroring for the global instance, with the port-mirroring destination being the bridge domain interface associated with the external analyzer (logical interface **ge-2/2/9.0** on bridge domain **example-bd-with-analyzer**):

```
[edit]
forwarding-options {
  port-mirroring {
    input {
      rate 1;
      maximum-packet-length 200;
    }
    family ccc {
      output {
        interface ge-2/2/9.0; # Mirror packets to the external analyzer
      }
    }
  }
  instance {
    inst1 {
      input {
        rate 1;
        maximum-packet-length 300;
      }
      family ccc {
        output {
          interface ge-2/2/9.0;
        }
      }
    }
  }
}
```

4. Define the Layer 2 port-mirroring firewall filter **pm_filter_ccc** for **family ccc**:

```
[edit]
firewall {
  family ccc {
    filter pm_filter_ccc {
      term pm {
```

```
        then port-mirror;
    }
}
}
```

5. Apply the port mirror instance to the chassis:

```
[edit]
chassis {
  fpc 2 {
    port-mirror-instance inst1;
  }
}
```

6. Configure interface **ge-2/2/9** for the VLANs, and configure interface **ge-2/0/1** for port mirroring with the **pm_filter_ccc** firewall filter:

```
[edit]
interfaces {
  ge-2/2/9 {
    encapsulation ethernet-bridge;
    unit 0 {
      family bridge;
    }
  }
  ge-2/0/1 {
    vlan-tagging;
    encapsulation extended-vlan-ccc;
    unit 0 {
      vlan-id 10;
      family ccc {
        filter {
          input pm_filter_ccc;
        }
      }
    }
    unit 1 {
      vlan-id 20;
      family ccc {
        filter {
          output pm_filter_ccc;
        }
      }
    }
  }
}
```

Example: Layer 2 Port Mirroring for a Layer 2 VPN with LAG Links

The following example is not a complete configuration, but shows all the steps needed to configure port mirroring on an L2VPN using **family ccc** and aggregated Ethernet links.

1. Configure the bridge domain **port_mirror_bd**, which contains the external packet analyzer:

```
[edit]
bridge-domains {
  port_mirror_bd { # Contains an external traffic analyzer
    interface ge-2/2/8.0; # External analyzer
  }
}
```

2. Configure the Layer 2 VPN CCC to connect interface **ae0.0** and interface **ae0.1**:

```
[edit]
protocols {
  mpls {
    interface all;
  }
}
connections {
  interface-switch if_switch {
    interface ae0.0;
    interface ae0.1;
  }
}
```

3. Configure Layer 2 port mirroring for the global instance, with the port-mirroring destination being the bridge domain interface associated with the external analyzer (logical interface **ge-2/2/9.0** on bridge domain **example_bd_with_analyzer**):

```
[edit]
forwarding-options {
  port-mirroring {
    input {
      rate 1;
      maximum-packet-length 200;
    }
    family ccc {
      output {
        interface ge-2/2/8.0; # Mirror packets to the external analyzer
      }
    }
    instance {
      pm_instance_1 {
        input {
          rate 1;
          maximum-packet-length 300;
        }
        family ccc {
          output {
```

```
        interface ge-2/2/8.0;
      }
    }
  }
}
```

4. Configure the firewall filter **pm_ccc** for **family ccc**:

```
[edit]
firewall {
  family ccc {
    filter pm_ccc {
      term pm {
        then port-mirror;
      }
    }
  }
}
```

5. Apply the aggregated Ethernet interfaces and port mirror instance to the chassis:

```
[edit]
chassis {
  aggregated-devices {
    ethernet {
      device-count 10;
    }
  }
  fpc 2 {
    port-mirror-instance pm_instance_1;
  }
}
```

6. Configure interfaces **ae0** and **ge-2/0/2** (for aggregated Ethernet) and **ge-2/2/8** (for port mirroring) with the **pm_ccc** filter:

```
[edit]
interfaces {
  ae0 {
    vlan-tagging;
    encapsulation extended-vlan-ccc;
    unit 0 {
      vlan-id 10;
      family ccc {
        filter {
          input pm_ccc;
        }
      }
    }
  }
  unit 1 {
    vlan-id 20;
    family ccc {
```

```
        filter {
            output pm_ccc;
        }
    }
}
ge-2/0/2 {
    gigether-options {
        802.3ad ae0;
    }
}
ge-2/2/8 {
    encapsulation ethernet-bridge;
    unit 0 {
        family bridge;
    }
}
```

Configuring Layer 2 Port Mirroring for Multiple Destinations

- [Understanding Layer 2 Port Mirroring to Multiple Destinations Using Next-Hop Groups on page 69](#)
- [Defining a Next-Hop Group for Layer 2 Port Mirroring on page 70](#)
- [Example: Layer 2 Port Mirroring to Multiple Destinations on page 71](#)

Understanding Layer 2 Port Mirroring to Multiple Destinations Using Next-Hop Groups

On an MX Series router and on an EX Series switch, you can mirror traffic to multiple destinations by configuring next-hop groups in Layer 2 port-mirroring firewall filters applied to tunnel interfaces. The mirroring of packets to multiple destinations is also known as *multipacket port mirroring*,

NOTE: Junos OS Release 9.5 introduced support for Layer 2 port mirroring using next-hop groups on MX Series routers, but required installation of a Tunnel PIC. Beginning in Junos OS Release 9.6, Layer 2 port mirroring using next-hop groups on MX Series routers does not require Tunnel PICs.

On MX Series routers and on EX Series switches, you can define a firewall filter for mirroring packets to a next-hop group. The next-hop group can contain Layer 2 members, Layer 3 members, and subgroups that are either unit list (mirroring packets to each interface) or load-balanced (mirroring packets to one of several interfaces). The MX Series router and the EX Series switch supports up to 30 next-hop groups. Each next-hop group supports up to 16 next-hop addresses. Each next-hop group must specify at least two addresses.

To enable port mirroring to the members of a next-hop group, you specify the next-hop group as the filter action of a firewall filter, and then you apply the firewall filter to logical tunnel interfaces (**lt-**) or virtual tunnel interfaces (**vt-**) on the MX Series router or on the EX Series switch.

NOTE: The use of subgroups for load-balancing mirrored traffic is not supported.

- [Defining a Layer 2 Port-Mirroring Firewall Filter on page 48](#)
- [Defining a Next-Hop Group for Layer 2 Port Mirroring on page 70](#)
- [Example: Layer 2 Port Mirroring to Multiple Destinations on page 71](#)

Defining a Next-Hop Group for Layer 2 Port Mirroring

On MX Series routers and EX Series switches, you can mirror tunnel interface input traffic to multiple destinations. To this form of *multipacket port mirroring*, you specify two or more additional destinations in a next-hop group, define a firewall filter that references the next-hop group as the filter action, and then apply the filter to a logical tunnel interface (**lt-**) or virtual tunnel interface (**vt-**) on the MX Series router and on an EX Series switch.

NOTE: This topic describes how to define a next-hop group for Layer 2 port mirroring to multiple destinations. For detailed information about defining a firewall filter for Layer 2 port mirroring to multiple destinations, see [“Defining a Layer 2 Port-Mirroring Firewall Filter” on page 48](#).

To define a next-hop group for a Layer 2 port-mirroring firewall filter action:

1. Enable configuration of Layer 2 forwarding options.

- To enable Layer 2 forwarding options at the top level:

```
[edit]
user@host edit forwarding-options port-mirroring family (ccc | vpls) output
```

- To enable Layer 2 forwarding options for a routing instance:

```
[edit]
user@host edit forwarding-options port-mirroring instance instance-name
family (ccc | vpls) output
```

2. Enable configuration of a next-hop-group for Layer 2 port mirroring:

```
[edit forwarding-options port-mirroring ... family (ccc | vpls) output]
user@host# edit next-hop-group pm-next-hop-group-name
```

3. Specify the type of addresses to be used in the next-hop group configuration. By default, the next-hop group is specified using Layer 3 addresses (**group-type inet**). To specify the next-hop group using Layer 2 addresses instead, you must include the **group-type layer-2** statement:

```
[edit forwarding-options port-mirroring ... family (ccc | vpls) output next-hop-group
pm-next-hop-group-name]
user@host# set group-type layer-2
```

- Specify the logical interfaces of the next-hop route (or switch):

```
[edit forwarding-options port-mirroring ... family (ccc | vpls) output next-hop-group
  pm-next-hop-group-name]
user@host# set interface logical-interface-name-1
user@host# set interface logical-interface-name-2
```

The MX Series router and the EX Series switch supports up to 30 next-hop groups. Each next-hop group supports up to 16 next-hop addresses. Each next-hop group must specify at least two addresses.

- Verify the configuration of the next-hop group:

```
[edit forwarding-options port-mirroring ... family (ccc | vpls) output next-hop-group
  pm-next-hop-group-name]
user@host# top
[edit]
user@host# show forwarding-options

...
next-hop-group pm-next-hop-group-name { # Next-hop group on a bridge domain.
  group-type layer-2;
  interface logical-interface-name-1;
  interface logical-interface-name-2;
}
...
```

Related Documentation

- [Displaying Next-Hop Group Settings and Status](#)
- [Example: Layer 2 Port Mirroring to Multiple Destinations on page 71](#)

Example: Layer 2 Port Mirroring to Multiple Destinations

On MX Series routers, you can mirror traffic to multiple destinations by configuring next-hop groups in Layer 2 port-mirroring firewall filters applied to tunnel interfaces.

- Configure the chassis to support tunnel services at PIC 0 on FPC 2. This configuration includes two logical tunnel interfaces on FPC 2, PIC 0, port 10.

```
[edit]
chassis {
  fpc 2 {
    pic 0 {
      tunnel-services {
        bandwidth 1g;
      }
    }
  }
}
```

```
}  
}
```

2. Configure the physical and logical interfaces for three bridge domains and one Layer 2 VPN CCC:

- Bridge domain **bd** will span logical interfaces **ge-2/0/1.0** and **ge-2/0/1.1**.
- Bridge domain **bd_next_hop_group** will span logical interfaces **ge-2/2/9.0** and **ge-2/0/2.0**.
- Bridge domain **bd_port_mirror** will use the logical tunnel interface **lt-2/0/10.2**.
- Layer 2 VPN CCC **if_switch** will connect logical interfaces **ge-2/0/1.2** and **lt-2/0/10.1**.

```
[edit]  
interfaces {  
  ge-2/0/1 {  
    flexible-vlan-tagging;  
    encapsulation flexible-ethernet-services;  
    unit 0 { # An interface on bridge domain 'bd'.  
      encapsulation vlan-bridge;  
      vlan-id 200;  
      family bridge {  
        filter {  
          input pm_bridge;  
        }  
      }  
    }  
    unit 1 { # An interface on bridge domain 'bd'.  
      encapsulation vlan-bridge;  
      vlan-id 201;  
      family bridge {  
        filter {  
          input pm_bridge;  
        }  
      }  
    }  
    unit 2 {  
      encapsulation vlan-ccc;  
      vlan-id 1000;  
    }  
  }  
  ge-2/0/2 { # For 'bd_next_hop_group'  
    encapsulation ethernet-bridge;  
    unit 0 {  
      family bridge;  
    }  
  }  
  lt-2/0/10 {  
    unit 1 {  
      encapsulation ethernet-ccc;  
      peer-unit 2;  
    }  
    unit 2 {  
      encapsulation ethernet-bridge;  
      peer-unit 1;  
    }  
  }  
}
```

```

        family bridge {
            filter {
                output redirect_to_nhg;
            }
        }
    }
}
ge-2/2/9 {
    encapsulation ethernet-bridge;
    unit 0 { # For 'bd_next_hop_group'
        family bridge;
    }
}
}
}

```

3. Configure the three bridge domains and the Layer 2 VPN switching CCC:

- Bridge domain **bd** spans logical interfaces **ge-2/0/1.0** and **ge-2/0/1.1**.
- Bridge domain **bd_next_hop_group** spans logical interfaces **ge-2/2/9.0** and **ge-2/0/2.0**.
- Bridge domain **bd_port_mirror** uses the logical tunnel interface **lt-2/0/10.2**.
- Layer 2 VPN CCC **if_switch** connects interfaces **ge-2/0/1.2** and **lt-2/0/10.1**.

```

[edit]
bridge-domains {
    bd {
        interface ge-2/0/1.0;
        interface ge-2/0/1.1;
    }
    bd_next_hop_group {
        interface ge-2/2/9.0;
        interface ge-2/0/2.0;
    }
    bd_port_mirror {
        interface lt-2/0/10.2;
    }
}
protocols {
    mpls {
        interface all;
    }
    connections {
        interface-switch if_switch {
            interface ge-2/0/1.2;
            interface lt-2/0/10.1;
        }
    }
}
}

```

For detailed information about configuring the CCC connection for Layer 2 switching cross-connects, see the *Junos OS MPLS Applications Library for Routing Devices*.

4. Configure forwarding options:

- Configure global port-mirroring properties to mirror **family vpls** traffic to an interface on the bridge domain **bd_port_mirror**.
- Configure the next-hop group **nhg_mirror_to_bd** to forward Layer 2 traffic to the bridge domain **bd_next_hop_group**.

Both of these forwarding options will be referenced by the port-mirroring firewall filter:

```
[edit]
forwarding-options {
  port-mirroring { # Global port mirroring properties.
    input {
      rate 1;
    }
    family vpls {
      output {
        interface lt-2/0/10.2; # Interface on 'bd_port_mirror' bridge domain.
        no-filter-check;
      }
    }
  }
  next-hop-group nhg_mirror_to_bd { # Configure a next-hop group.
    group-type layer-2; # Specify 'layer-2' for Layer 2; default 'inet' is for Layer 3.
    interface ge-2/0/2.0; # Interface on 'bd_next_hop_group' bridge domain.
    interface ge-2/2/9.0; # Interface on 'bd_next_hop_group' bridge domain.
  }
}
```

5. Configure two Layer 2 port-mirroring firewall filters for **family bridge** traffic:

- **filter_pm_bridge**—Sends all **family bridge** traffic to the global port mirroring destination.
- **filter_redirect_to_nhg**—Sends all **family bridge** traffic to the final next-hop group **nhg_mirror_to_bd**.

Layer 2 port-mirroring firewall filters for **family bridge** traffic applies to traffic on a physical interface configured with encapsulation **ethernet-bridge**.

```
[edit]
firewall {
  family bridge {
    filter filter_pm_bridge {
      term term_port_mirror {
        then port-mirror;
      }
    }
    filter filter_redirect_to_nhg {
      term term_nhg {
        then next-hop-group nhg_mirror_to_bd;
      }
    }
  }
}
```

CHAPTER 6

Configuring Layer 2 Port Mirroring Analyzers

- [Understanding Port Mirroring Analyzers on page 78](#)
- [Example: Configuring Port Mirroring Analyzers for Local Monitoring of Employee Resource Use on page 83](#)
- [Example: Configuring Port Mirroring for Remote Monitoring of Employee Resource Use on page 87](#)

Understanding Port Mirroring Analyzers

Port mirroring can be used for traffic analysis on routers and switches that, unlike hubs, do not broadcast packets to every port on the destination device. Port mirroring sends copies of all packets or policy-based sample packets to local or remote analyzers where you can monitor and analyze the data.

In the context of port mirroring analyzers, we use the term *switching device*. The term indicates that the device (including routers) is performing a switching function.

You can use analyzers on a packet level to help you:

- Monitor network traffic
- Enforce network usage policies
- Enforce file sharing policies
- Identify causes of problems
- Identify stations or applications with heavy or abnormal bandwidth usage

You can configure an analyzer to mirror:

- Bridged packets (Layer 2 packets)
- Routed packets (Layer 3 packets)

Mirrored packets can be copied to either a local interface for local monitoring or a VLAN or bridge domain for remote monitoring.

The following packets can be copied:

- **Packets entering or exiting a port**—You can mirror packets entering or exiting ports, in any combination, for up to 256 ports. For example, you can send copies of the packets entering some ports and the packets exiting other ports to the same local analyzer port or analyzer VLAN.
- **Packets entering or exiting a VLAN or bridge domain**—You can mirror the packets entering or exiting a VLAN or bridge domain to either a local analyzer port or to an analyzer VLAN or bridge domain. You can configure multiple VLANs (up to 256 VLANs) or bridge domains as ingress inputs to an analyzer, including a VLAN range and private VLANs (PVLANS).
- **Policy-based sample packets**—You can mirror a policy-based sample of packets that are entering a port, VLAN, or bridge domain. You configure a firewall filter with a policy to select the packets to be mirrored. You can send the sample to a port-mirroring instance or to an analyzer VLAN or bridge domain.

This topic describes:

- [Analyzer Overview on page 79](#)
- [Statistical Analyzer Overview on page 79](#)

- [Default Analyzer Overview on page 79](#)

- [Port Mirroring Analyzer Terminology on page 79](#)
- [Configuration Guidelines for Port Mirroring Analyzers on page 81](#)

Analyzer Overview

You can configure an analyzer to define both the input traffic and the output traffic in the same analyzer configuration. The input traffic to be analyzed can be either traffic that enters or traffic that exits an interface or VLAN. The analyzer configuration enables you to send this traffic to an output interface, instance, next-hop group, VLAN, or bridge domain. You can configure an analyzer at the **[edit forwarding-options analyzer]** hierarchy level.

Statistical Analyzer Overview

You can define a set of mirroring properties, such as mirroring rate and maximum packet length for traffic, that you can explicitly bind to physical ports on the router or switch. This set of mirroring properties constitutes a statistical analyzer (also called a nondefault analyzer). At this level, you can bind a named instance to the physical ports associated with a specific FPC.

Default Analyzer Overview

You can configure an analyzer without configuring any mirroring properties (such as mirroring rate or maximum packet length). By default, the mirroring rate is set to 1 and the maximum packet length is set to the complete length of the packet. These properties are applied at the global level and need not be bound to a specific FPC.

Port Mirroring at a Group of Ports Bound to Multiple Statistical Analyzers

You can apply up to two statistical analyzers to the same port groups on the switching device. By applying two different statistical analyzer instances to the same FPC or Packet Forwarding Engine, you can bind two distinct Layer 2 mirroring specifications to a single port group. Mirroring properties that are bound to an FPC override any analyzer (default analyzer) properties bound at the global level on the switching device. Default analyzer properties are overridden by binding a second analyzer instance on the same port group.

Port Mirroring Analyzer Terminology

[Table 5 on page 79](#) lists some port mirroring analyzer terms and their descriptions.

Table 5: Analyzer Terminology

Term	Description
Analyzer	<p>In a mirroring configuration, the analyzer includes:</p> <ul style="list-style-type: none"> • The name of the analyzer • Source (input) ports, VLANs, or bridge domains

Table 5: Analyzer Terminology (*continued*)

Term	Description
	<ul style="list-style-type: none"> A destination for mirrored packets (either a monitor port, VLAN, or bridge domain)
Analyzer output interface (Also known as a monitor port)	<p>Interface to which mirrored traffic is sent and to which a protocol analyzer application is connected.</p> <p>NOTE: Interfaces used as output for an analyzer must be configured under the forwarding-options hierarchy level.</p> <p>Analyzer output interfaces have the following limitations:</p> <ul style="list-style-type: none"> They cannot also be a source port. They do not participate in Layer 2 protocols, such as the Spanning Tree Protocol (STP), when part of a port-mirroring configuration. If the bandwidth of the analyzer output interface is not sufficient to handle the traffic from the source ports, overflow packets are dropped.
Analyzer VLAN or bridge domain (Also known as a monitor VLAN or bridge domain)	VLAN or bridge domain to which mirrored traffic is sent. The mirrored traffic can be used by a protocol analyzer application. The member interfaces in the monitor VLAN or bridge domain are spread across the switching devices in your network.
Bridge-domain-based analyzer	An analyzer session whose configuration uses bridge domains for both input and output or for either input or output.
Default analyzer	An analyzer with default mirroring parameters. By default, the mirroring rate is 1 and the maximum packet length is the length of the complete packet.
Input interface (Also known as mirrored ports or monitored interfaces)	An interface on the switching device that is being mirrored. Traffic that is either entering or exiting this interface is mirrored.
LAG-based analyzer	An analyzer that has a link aggregation group (LAG) specified as the input (ingress) interface in the analyzer configuration.
Local mirroring	An analyzer configuration in which packets are mirrored to a local analyzer port.
Monitoring station	A computer running a protocol analyzer application.
Analyzer based on next-hop group	An analyzer session configuration that uses the next-hop group as the analyzer output.
Port-based analyzer	An analyzer session configuration that defines interfaces for both input and output.
Protocol analyzer application	An application used to examine packets transmitted across a network segment. Also commonly called a network analyzer, packet sniffer, or probe.
Remote mirroring	Functions the same way as local mirroring, except that the mirrored traffic is not copied to a local analyzer port but is flooded to an analyzer VLAN or bridge domain that you create specifically for the purpose of receiving mirrored traffic. Mirrored packets have an additional outer tag of the analyzer VLAN or bridge domain.

Table 5: Analyzer Terminology (*continued*)

Term	Description
Statistical analyzer (Also known as a nondefault analyzer)	You can define a set of mirroring properties that you can explicitly bind to physical ports on the switch. This set of analyzer properties is known as a statistical analyzer.
VLAN-based analyzer	An analyzer session whose configuration uses VLANs for both input and output or for either input or output.

Configuration Guidelines for Port Mirroring Analyzers

When you configure port mirroring analyzers, we recommend that you follow these guidelines to ensure optimum benefit. We recommend that you disable mirroring when you are not using it, and that you select specific interfaces as input to the analyzer rather than using the **all** keyword option, which enables mirroring on all interfaces. Mirroring only necessary packets reduces any potential performance impact.

You can also limit the amount of mirrored traffic by:

- Using statistical sampling
- Using a firewall filter
- Setting a ratio to select a statistical sample

With local mirroring, traffic from multiple ports is replicated to the analyzer output interface. If the output interface for an analyzer reaches capacity, packets are dropped. You must consider whether the traffic being mirrored exceeds the capacity of the analyzer output interface.

[Table 6 on page 81](#) summarizes further configuration guidelines for analyzers.

Table 6: Configuration Guidelines for Port Mirroring Analyzers

Guideline	Value or Support Information	Comment
Number of analyzers that you can enable concurrently.	64—Default analyzers 2 per FPC—Statistical analyzer	<ul style="list-style-type: none"> • Statistical analyzers must be bound to an FPC for mirroring traffic on ports belonging to that FPC. <p>NOTE: Default analyzer properties are implicitly bound on the last (or second to last) instance on all FPCs in the system. Therefore, when you explicitly bind a second statistical analyzer on the FPC, the default analyzer properties are overridden.</p>
Number of interfaces, VLANs, or bridge domains that you can use as ingress input to an analyzer.	256	—

Table 6: Configuration Guidelines for Port Mirroring Analyzers (*continued*)

Guideline	Value or Support Information	Comment
Types of ports on which you cannot mirror traffic.	<ul style="list-style-type: none"> Virtual Chassis ports (VCPs) Management Ethernet ports (me0 or vme0) Integrated routing and bridging (IRB) interfaces VLAN-tagged Layer 3 interfaces 	
Protocol families that you can include in an analyzer.	ethernet-switching for EX Series switches and bridge for MX Series routers.	Analyzer mirrors only bridged traffic. For mirroring routed traffic, use the port mirroring configuration with family as inet or inet6 .
Packets with physical layer errors are not sent to the local or remote analyzer.	Applicable	Packets with these errors are filtered out and thus are not sent to the analyzer.
Analyzer does not support line-rate traffic.	Applicable	Mirroring for line-rate traffic is done on a best-effort basis.
Analyzer output on a LAG interface.	Supported	
Analyzer output interface mode as trunk mode.	Supported	<ul style="list-style-type: none"> The trunk interface has to be a member of all VLANs or bridge domains that are related to the input configuration of analyzer. You must use the mirror-once option if the input has been configured as VLAN or bridge domain and the output is a trunk interface. <p>NOTE: With the mirror-once option, if the input is for both ingress and egress mirroring, only ingress traffic is mirrored. If both ingress and egress mirroring are required, the output interface cannot be a trunk. In such cases, configure the interface as an access interface.</p>
Egress mirroring of host-generated control packets.	Not supported	
Configuring Layer 3 logical interfaces in the input stanza of an analyzer.	Not supported	
The analyzer input and output stanzas containing members of the same VLAN or the VLAN itself must be avoided.	Applicable	
Support for VLAN and its member interfaces in different analyzer sessions	Not supported	If mirroring is configured, either of the analyzers is active.

 - [Configuring Mirroring on EX9200 Switches to Analyze Traffic \(CLI Procedure\)](#)

Example: Configuring Port Mirroring Analyzers for Local Monitoring of Employee Resource Use

Juniper Networks devices allow you to configure port mirroring to send copies of packets to either a local interface for local monitoring or to a VLAN or bridge domain for remote monitoring. You can use mirroring to copy these packets:

- Packets entering or exiting a port
- Packets entering or exiting a VLAN or bridge domain

You can then analyze the mirrored traffic locally or remotely using a protocol analyzer application. You can install analyzers on a system connected to the local destination interface, or running on a remote monitoring station if you are sending mirrored traffic to an analyzer VLAN or bridge domain.

This topic describes how to configure local mirroring on a switching device. The examples in this topic describe how to configure a switching device to mirror traffic entering interfaces connected to employee computers to an analyzer output interface on that same device.

- [Requirements on page 83](#)
- [Overview and Topology on page 84](#)
- [Mirroring All Employee Traffic for Local Analysis on page 85](#)
- [Verification on page 86](#)

Requirements

Use either one of the following hardware and software components:

- One EX9200 switch with Junos OS Release 13.2 or later
- One MX Series router with Junos OS Release 14.1 or later

Before you configure port mirroring, be sure you have an understanding of mirroring concepts. For information about analyzers, see [“Understanding Port Mirroring Analyzers” on page 78](#). For information about port mirroring, see [“Understanding Layer 2 Port Mirroring” on page 3](#).

Overview and Topology

This topic describes how to mirror all traffic entering ports on the switching device to a destination interface on the same device (local mirroring). In this case, the traffic is entering ports connected to employee computers.

NOTE: Mirroring all traffic requires significant bandwidth and should only be done during an active investigation.

The interfaces ge-0/0/0 and ge-0/0/1 serve as connections for employee computers.

The interface ge-0/0/10 is reserved for analysis of mirrored traffic. Connect a PC running a protocol analyzer application to the analyzer output interface to analyze the mirrored traffic.

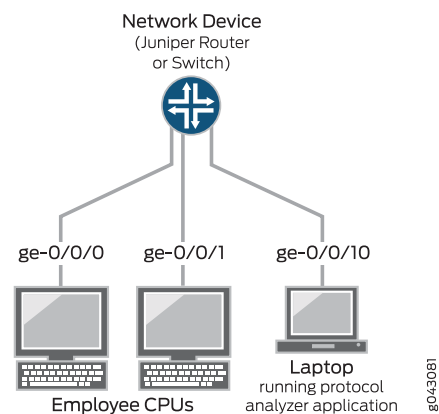

Connect a PC running a protocol analyzer application to the analyzer output interface to analyze the mirrored traffic.

NOTE: Multiple ports mirrored to one interface can cause buffer overflow and dropped packets.

Figure 2 on page 84 shows the network topology for this example.

Figure 2: Network Topology for Local Port Mirroring Example

Mirroring All Employee Traffic for Local Analysis

CLI Quick Configuration To quickly configure local mirroring for ingress traffic sent to the two ports connected to employee computers, copy either the following commands for EX Series switches or for MX Series routers and paste them into the switching device's terminal window:

EX Series

```
[edit]
set interfaces ge-0/0/0 unit 0 family ethernet-switching
set interfaces ge-0/0/1 unit 0 family ethernet-switching
set forwarding-options analyzer employee-monitor input ingress interface ge-0/0/0.0
set forwarding-options analyzer employee-monitor input ingress interface ge-0/0/1.0
set forwarding-options analyzer employee-monitor output interface ge-0/0/10.0
```

MX Series

```
[edit]
set interfaces ge-0/0/0 unit 0 family bridge interface-mode access vlan-id 99
set interfaces ge-0/0/1 unit 0 family bridge interface-mode access vlan-id 98
set forwarding-options analyzer employee-monitor input ingress interface ge-0/0/0.0
set forwarding-options analyzer employee-monitor input ingress interface ge-0/0/1.0
set forwarding-options analyzer employee-monitor output interface ge-0/0/10.0
```

Step-by-Step Procedure To configure an analyzer called **employee-monitor** and specify both the input (source) interfaces and the analyzer output interface:

1. Configure each interface you are to use in the analyzer configuration. Use the family protocol that is correct for your platform.

EX Series

```
[edit]
set interfaces ge-0/0/0 unit 0 family ethernet-switching
set interfaces ge-0/0/1 unit 0 family ethernet-switching
```

MX Series

To configure **family bridge** on an interface, you need to configure **interface-mode access** or **interface-mode trunk** as well. You also must configure **vlan-id**.

```
[edit]
set interfaces ge-0/0/0 unit 0 family bridge interface-mode access vlan-id 99
set interfaces ge-0/0/1 unit 0 family bridge interface-mode access vlan-id 98
```

2. Configure each interface connected to employee computers as an input interface for the analyzer **employee-monitor**.

```
[edit forwarding-options]
set analyzer employee-monitor input ingress interface ge-0/0/0.0
set analyzer employee-monitor input ingress interface ge-0/0/1.0
```

3. Configure the output analyzer interface for the **employee-monitor** analyzer.
This will be the destination interface for the mirrored packets.

```
[edit forwarding-options]
```

```
set analyzer employee-monitor output interface ge-0/0/10.0
```

Results Check the results of the configuration.

```
[edit]
user@device# show forwarding-options
analyzer {
  employee-monitor {
    input {
      ingress {
        interface ge-0/0/0.0;
        interface ge-0/0/1.0;
      }
    }
    output {
      interface ge-0/0/10.0;
    }
  }
}
```

Verification

Verifying That the Analyzer Has Been Correctly Created

Purpose Verify that the analyzer **employee-monitor** has been created on the switching device with the appropriate input interfaces and the appropriate output interface.

Action Use the **show forwarding-options analyzer** operational command to verify whether an analyzer is configured as expected.

```
user@device> show forwarding-options analyzer
Analyzer name           : employee-monitor
Mirror rate             : 1
Maximum packet length   : 0
State                   : up
Ingress monitored interfaces : ge-0/0/0.0
Output interface        : ge-0/0/10.0
```

Meaning The output shows that the **employee-monitor** analyzer has a ratio of 1 (that is, mirroring every packet, the default setting), the maximum size of the original packet mirrored is 0 (which indicates that the entire packet is mirrored), the state of the configuration is **up**, and the analyzer is mirroring the traffic entering the ge-0/0/0 interface, and sending the mirrored traffic to the ge-0/0/10 interface.

If the state of the output interface is **down** or if the output interface is not configured, the value of **State** will be **down** and the analyzer will not be programmed for mirroring.

- Related Documentation**
- [Example: Configuring Port Mirroring for Remote Monitoring of Employee Resource Use on page 87](#)
 - *Configuring Mirroring on EX9200 Switches to Analyze Traffic (CLI Procedure)*
 - [Understanding Port Mirroring Analyzers on page 78](#)

Example: Configuring Port Mirroring for Remote Monitoring of Employee Resource Use

Juniper Networks devices allow you to configure port mirroring to send copies of packets to either a local interface for local monitoring or to a VLAN or bridge domain for remote monitoring. You can use mirroring to copy these packets:

- Packets entering or exiting a port
- Packets entering or exiting a VLAN
- Packets entering or exiting a bridge domain

If you are sending mirrored traffic to an analyzer VLAN or bridge domain, you can analyze the mirrored traffic using a protocol analyzer application running on a remote monitoring station.

BEST PRACTICE: Mirror only necessary packets to reduce potential performance impact. We recommend that you do the following:

- Disable your configured mirroring sessions when you are not using them.
- Specify individual interfaces as input to analyzers rather than specifying all interfaces as input.
- Limit the amount of mirrored traffic by:
 - Using statistical sampling.
 - Setting ratios to select statistical samples.
 - Using firewall filters.

The examples in this topic describe how to configure remote port mirroring to analyze employee resource usage.

- [Requirements on page 88](#)
- [Overview and Topology on page 88](#)
- [Mirroring Employee Traffic for Remote Analysis Using a Statistical Analyzer on page 89](#)
- [Verification on page 96](#)

Requirements

This example uses one of the following pairs of hardware and software components:

- One EX9200 switch connected to another EX9200 switch, both running Junos OS Release 13.2 or later
- One MX Series router connected to another MX Series router, both running Junos OS Release 14.1 or later

Before you configure remote mirroring, be sure that:

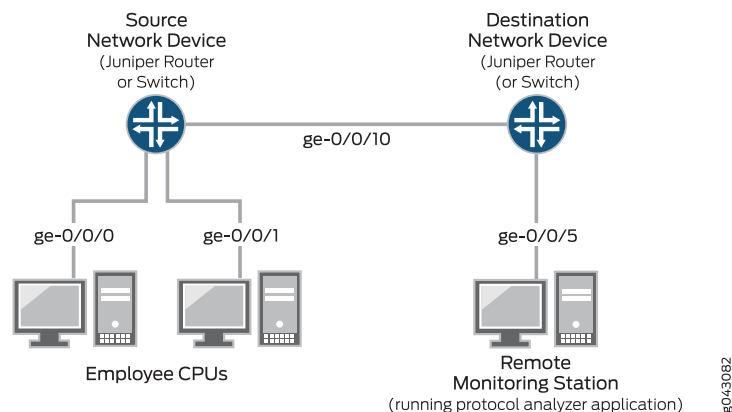

- You have an understanding of mirroring concepts. For information about analyzers, see [“Understanding Port Mirroring Analyzers” on page 78](#). For information about port mirroring, see [“Understanding Layer 2 Port Mirroring” on page 3](#).
- The interfaces that the analyzer will use as input interfaces have already been configured on the switching device.

Overview and Topology

This topic describes how to configure port mirroring to a remote analyzer VLAN or bridge domain so that analysis can be done from a remote monitoring station.

[Figure 3 on page 88](#) shows the network topology for both the EX Series example and the MX Series example scenarios.

Figure 3: Network Topology for Remote Port Mirroring and Analysis

In this example:

- Interface ge-0/0/0 is a Layer 2 interface, and interface ge-0/0/1 is a Layer 3 interface (both interfaces on the source device) that serve as connections for employee computers.
- Interface ge-0/0/10 is a Layer 2 interface that connects the source switching device to the destination switching device.

- Interface ge-0/0/5 is a Layer 2 interface that connects the destination switching device to the remote monitoring station.
- The analyzer **remote-analyzer** is configured on all switching devices in the topology to carry the mirrored traffic. The topology can use either a VLAN or a bridge domain.

Mirroring Employee Traffic for Remote Analysis Using a Statistical Analyzer

To configure a statistical analyzer for remote traffic analysis for all incoming and outgoing employee traffic, select one of the following examples:

- [Mirroring Employee Traffic for Remote Analysis for EX Series Switches on page 89](#)
- [Mirroring Employee Traffic for Remote Analysis for MX Series Routers on page 92](#)

Mirroring Employee Traffic for Remote Analysis for EX Series Switches

CLI Quick Configuration

To quickly configure a statistical analyzer for remote traffic analysis of incoming and outgoing employee traffic, copy the following commands for EX Series switches and paste them into the correct switching device's terminal window.

- Copy and paste the following commands in the *source* switching device's terminal window:

EX Series

```
[edit]
set vlans remote-analyzer vlan-id 999
set interfaces ge-0/0/10 unit 0 family ethernet-switching interface-mode access
set interfaces ge-0/0/10 unit 0 family ethernet-switching vlan members 999
set forwarding-options analyzer employee-monitor input ingress interface ge-0/0/0.0
set forwarding-options analyzer employee-monitor input ingress interface ge-0/0/1.0
set forwarding-options analyzer employee-monitor input egress interface ge-0/0/0.0
set forwarding-options analyzer employee-monitor input egress interface ge-0/0/1.0
set forwarding-options analyzer employee-monitor output vlan remote-analyzer
set forwarding-options analyzer employee-monitor input rate 2
set forwarding-options analyzer employee-monitor input maximum-packet-length 128
set chassis fpc 0 port-mirror-instance employee-monitor
```

- Copy and paste the following commands in the *destination* switching device's terminal window:

EX Series

```
[edit]
set vlans remote-analyzer vlan-id 999
set interfaces ge-0/0/10 unit 0 family ethernet-switching interface-mode access
set interfaces ge-0/0/10 unit 0 family ethernet-switching vlan members 999
set interfaces ge-0/0/5 unit 0 family ethernet-switching interface-mode access
set forwarding-options analyzer employee-monitor input ingress vlan remote-analyzer
set forwarding-options analyzer employee-monitor output interface ge-0/0/5.0
```

Step-by-Step Procedure

To configure basic remote mirroring:

1. On the source switching device, do the following:

- Configure the VLAN ID for the **remote-analyzer** VLAN.

```
[edit]
user@device# set vlans remote-analyzer vlan-id 999
```

- Configure the interface on the network port connected to the destination switching device for access mode and associate it with the **remote-analyzer** VLAN.

```
[edit]
user@device# set interfaces ge-0/0/10 unit 0 family ethernet-switching
interface-mode access
user@device# set interfaces ge-0/0/10 unit 0 family ethernet-switching vlan
members 999
```

- Configure the statistical analyzer **employee-monitor**.

```
[edit forwarding-options]
user@device# set analyzer employee-monitor input ingress interface ge-0/0/0.0
user@device# set analyzer employee-monitor input ingress interface ge-0/0/1.0
user@device# set analyzer employee-monitor input egress interface ge-0/0/0.0
user@device# set analyzer employee-monitor input egress interface ge-0/0/1.0
user@device# set analyzer employee-monitor output vlan remote-analyzer
user@device# set analyzer employee-monitor input rate 2
user@device# set analyzer employee-monitor input maximum-packet-length 128
```

- Bind the statistical analyzer to the FPC that contains the input interface.

```
[edit]
user@device# set chassis fpc 0 port-mirror-instance employee-monitor
```

2. On the destination network device, do the following:

- Configure the VLAN ID for the **remote-analyzer** VLAN.

```
[edit]
user@device# set vlans remote-analyzer vlan-id 999
```

- Configure the interface on the destination switching device for access mode and associate it with the **remote-analyzer** VLAN.

```
[edit interfaces]
user@device# set ge-0/0/10 unit 0 family ethernet-switching interface-mode
access
user@device# set ge-0/0/10 unit 0 family ethernet-switching vlan members 999
```

- Configure the interface connected to the destination switching device for access mode.

```
[edit interfaces]
user@device# set ge-0/0/5 unit 0 family ethernet-switching interface-mode
access
```

- Configure the **employee-monitor** analyzer.

```
[edit forwarding-options]
user@device# set analyzer employee-monitor input ingress vlan remote-analyzer
user@device# set analyzer employee-monitor output interface ge-0/0/5.0
```

- Specify mirroring parameters such as rate and the maximum packet length for the **employee-monitor** analyzer.

```
[edit]
```

```

user@device# set forwarding-options analyzer employee-monitor input rate 2
user@device# set forwarding-options analyzer employee-monitor input
maximum-packet-length 128

```

- Bind the **employee-monitor** analyzer to the FPC containing the input ports.

```

[edit]
user@device# set chassis fpc 0 port-mirror-instance employee-monitor

```

Results Check the results of the configuration on the source switching device:

```

[edit]
user@device# show
forwarding-options {
  analyzer employee-monitor {
    input {
      ingress {
        interface ge-0/0/0.0;
        interface ge-0/0/1.0;
      }
      egress {
        interface ge-0/0/0.0;
        interface ge-0/0/1.0;
      }
      maximum-packet-length 128;
      rate 2;
    }
    output {
      vlan {
        remote-analyzer;
      }
    }
  }
}

```

Mirroring Employee Traffic for Remote Analysis for MX Series Routers

CLI Quick Configuration To quickly configure a statistical analyzer for remote traffic analysis of incoming and outgoing employee traffic, copy the following commands for MX Series routers and paste them into the correct switching device's terminal window.

- Copy and paste the following commands in the *source* switching device's terminal window:

MX Series

```
[edit]
set bridge-domains remote-analyzer vlan-id 999
```

```

set interfaces ge-0/0/10 unit 0 family bridge interface-mode access
set interfaces ge-0/0/10 unit 0 family bridge vlan-id 999
set forwarding-options analyzer employee-monitor input ingress interface ge-0/0/0.0
set forwarding-options analyzer employee-monitor input ingress interface ge-0/0/1.0
set forwarding-options analyzer employee-monitor input egress interface ge-0/0/0.0
set forwarding-options analyzer employee-monitor input egress interface ge-0/0/1.0
set forwarding-options analyzer employee-monitor output bridge-domain
    remote-analyzer
set forwarding-options analyzer employee-monitor input rate 2
set forwarding-options analyzer employee-monitor input maximum-packet-length 128
set chassis fpc 0 port-mirror-instance employee-monitor

```

- Copy and paste the following commands in the *destination* switching device's terminal window:

MX Series

```

[edit]
set bridge-domains remote-analyzer vlan-id 999
set interfaces ge-0/0/10 unit 0 family bridge interface-mode access
set interfaces ge-0/0/10 unit 0 family bridge vlan-id 999
set interfaces ge-0/0/5 unit 0 family bridge interface-mode access
set forwarding-options analyzer employee-monitor input ingress bridge-domain
    remote-analyzer
set forwarding-options analyzer employee-monitor output interface ge-0/0/5.0

```

Step-by-Step Procedure

To configure basic remote mirroring using MX Series routers:

1. On the source switching device, do the following:

- Configure the VLAN ID for the **remote-analyzer** bridge domain.

```

[edit]
user@device# set bridge-domains remote-analyzer vlan-id 999

```

- Configure the interface on the network port connected to the destination switching device for access mode and associate it with the **remote-analyzer** bridge domain.

```

[edit]
user@device# set interfaces ge-0/0/10 unit 0 family bridge interface-mode access
user@device# set interfaces ge-0/0/10 unit 0 family bridge vlan members 999

```

- Configure the statistical analyzer **employee-monitor**.

```

[edit forwarding-options]
user@device# set analyzer employee-monitor input ingress interface ge-0/0/0.0
user@device# set analyzer employee-monitor input ingress interface ge-0/0/1.0
user@device# set analyzer employee-monitor input egress interface ge-0/0/0.0
user@device# set analyzer employee-monitor input egress interface ge-0/0/1.0
user@device# set analyzer employee-monitor output bridge-domain
    remote-analyzer
user@device# set analyzer employee-monitor input rate 2
user@device# set analyzer employee-monitor input maximum-packet-length 128

```

- Bind the statistical analyzer to the FPC that contains the input interface.

```

[edit]
user@device# set chassis fpc 0 port-mirror-instance employee-monitor

```

2. On the destination switching device, do the following:

- Configure the VLAN ID for the **remote-analyzer** bridge domain.

```
[edit bridge-domains]
user@device# set remote-analyzer vlan-id 999
```

- Configure the interface on the destination switching device for access mode and associate it with the **remote-analyzer** bridge domain.

```
[edit interfaces]
user@device# set ge-0/0/10 unit 0 family bridge interface-mode access
user@device# set ge-0/0/10 unit 0 family bridge vlan members 999
```

- Configure the interface connected to the destination switching device for access mode.

```
[edit interfaces]
user@device# set ge-0/0/5 unit 0 family bridge interface-mode access
```

- Configure the **employee-monitor** analyzer.

```
[edit forwarding-options]
user@device# set analyzer employee-monitor input ingress bridge-domain
remote-analyzer
user@device# set analyzer employee-monitor output interface ge-0/0/5.0
```

- Specify mirroring parameters such as rate and the maximum packet length for the **employee-monitor** analyzer.

```
[edit]
user@device# set forwarding-options analyzer employee-monitor input rate 2
user@device# set forwarding-options analyzer employee-monitor input
maximum-packet-length 128
```

- Bind the **employee-monitor** analyzer to the FPC containing the input ports.

```
[edit]
user@device# set chassis fpc 0 port-mirror-instance employee-monitor
```

Results Check the results of the configuration on the source switching device:

```
[edit]
user@device# show
bridge-domains {
  remote-analyzer {
    vlan-id 999;
  }
}
forwarding-options {
  analyzer {
    employee-monitor {
      input {
        ingress {
          interface ge-0/0/0.0;
          interface ge-0/0/1.0;
        }
        egress {
          interface ge-0/0/0.0;
```

Check the results of the configuration on the destination switching device.

Copyright © 2017, Juniper Networks, Inc.

```
        bridge-domain remote-analyzer;
    }
}
output {
    interface ge-0/0/5.0;
}
}
}
}
interfaces {
    ge-0/0/5 {
        unit 0 {
            family bridge {
                interface-mode access;
            }
        }
    }
}
}
```

Verification

Verifying That the Analyzer Has Been Correctly Created

Purpose	Verify that the analyzer named employee-monitor has been created on the device with the appropriate input interfaces and appropriate output interface.
----------------	---

Action To verify that the analyzer is configured as expected while monitoring all employee traffic on the source switching device, run the **show forwarding-options analyzer** command on the source switching device. The following output is displayed for this configuration example.

```
user@device> show forwarding-options analyzer
```

```
Analyzer name           : employee-monitor
Mirror rate             : 2
Maximum packet length   : 128
State                   : up
Ingress monitored interfaces : ge-0/0/0.0
Ingress monitored interfaces : ge-0/0/1.0
Egress monitored interfaces : ge-0/0/0.0
Egress monitored interfaces : ge-0/0/1.0
Output VLAN             : default-switch/remote-analyzer
```

Meaning This output shows that the **employee-monitor** instance has a ratio of 2, the maximum size of the original packet that were mirrored is 128, the state of the configuration is **up**, which indicates proper state and that the analyzer is programmed, and the analyzer is mirroring the traffic entering ge-0/0/0.0 and ge-0/0/1.0, and is sending the mirrored traffic to the VLAN called remote-analyzer.

If the state of the output interface is **down** or if the output interface is not configured, the value of **State** will be down and the analyzer will not be able to mirror traffic.

Hierarchy Level [edit forwarding-options [port-mirroring](#)],
[edit forwarding-options [port-mirroring](#) instance *instance-name*]

Release Information Statement introduced before Junos OS Release 7.4.
vpls and **ccc** options introduced in Junos OS Release 9.3 for MX Series routers only.
vpls support extended to M7i, M10i, M120, and M320 routers in Junos OS Release 9.5.
ccc option introduced in Junos OS Release 9.6 for M120 and M320 routers only.
Statement introduced in Junos OS Release 12.1 for PTX Series Packet Transport Switches.
ccc option introduced in Junos OS Release 12.3R2 for EX Series switches.
next-hop-group option for **family inet6** introduced in Junos OS Release 14.2 for MX Series routers only.

Description Configure the address type family to sample for port mirroring.

Options **ccc**—Sample Layer 2 VPN traffic.

inet—Sample IPv4 traffic.

inet6—Sample IPv6 traffic.

vpls—Sample VPLS traffic.

The remaining statements are explained separately. See [CLI Explorer](#).

Required Privilege Level interface—To view this statement in the configuration.
interface-control—To add this statement to the configuration.

interface (Port Mirroring)

Syntax	<pre>interface <i>interface-name</i> { next-hop <i>address</i>; }</pre>
Hierarchy Level	[edit forwarding-options port-mirroring output], [edit forwarding-options port-mirroring family (inet inet6) output]
Release Information	Statement introduced before Junos OS Release 7.4.
Description	Specify the output interface for sending copies of packets elsewhere to be analyzed.
Options	<p><i>interface-name</i>—Name of the interface.</p> <p>The remaining statements are explained separately. See CLI Explorer.</p>
Required Privilege Level	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
Related Documentation	<ul style="list-style-type: none"> • <i>Configuring Port Mirroring</i>

input (Port Mirroring)

Syntax	<pre>input { maximum-packet-length <i>bytes</i>; rate <i>number</i>; run-length <i>number</i>; }</pre>
Hierarchy Level	[edit forwarding-options port-mirroring], [edit forwarding-options port-mirroring instance <i>instance-name</i>]
Release Information	Statement introduced before Junos OS Release 7.4. maximum-packet-length option introduced in Junos OS Release 9.6 for M120 and M320 routers only. Statement introduced in Junos OS Release 12.1X48 for PTX Series Packet Transport Routers.
Description	Configure input packet properties for port mirroring. The remaining statements are explained separately. See CLI Explorer .
Required Privilege Level	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
Related Documentation	<ul style="list-style-type: none">• <i>Configuring Port Mirroring</i>

maximum-packet-length

Syntax	<code>maximum-packet-length bytes;</code>
Hierarchy Level	[edit forwarding-options analyzer analyzer-name input], [edit forwarding-options port-mirroring input], [edit forwarding-options port-mirroring instance <i>instance-name</i> input], [edit forwarding-options sampling input], [edit forwarding-options sampling instance <i>instance-name</i> input]
Release Information	Statement introduced in Junos OS Release 9.6. Statement introduced in Junos OS Release 12.1X48 for PTX Series Packet Transport routers. Support at the [edit forwarding-options analyzer analyzer-name input] hierarchy level introduced in Junos OS Release 14.1 for MX Series routers. Statement introduced in Junos OS Release 17.2R1 for QFX10002 switches. Statement introduced in Junos OS Release 17.4R1 for QFX10008 and QFX10016 switches.
Description	Set the maximum length of the packet used for port mirroring or traffic sampling. Packets with lengths greater than the specified maximum are truncated.

NOTE: The `maximum-packet-length` statement is not supported when you configure inline flow monitoring (by including the `inline-jflow` statement at the [edit forwarding-options sampling instance *instance-name* family (inet | inet6) output] hierarchy level).

NOTE: The `maximum-packet-length` statement is not supported on MX80 Series routers.

NOTE: For MX Series routers with Modular Port Interface Concentrators (MPCs), when `maximum-packet-length` (clip length) is configured for port-mirrored packets and the mirror-destination interface is a next-hop-group, the clip length is effective only for the first member interface of the next-hop-group. The mirrored packet copy sent to the rest of the interfaces is not clipped.

Native analyzer sessions (that is, the [edit forwarding-options analyzer analyzer-name input] hierarchy level for MX Series routers) can be configured without specifying input parameters, which means that the instance uses default input values: rate = 1 and maximum-packet-length = 0.

NOTE: For PTX Series routers with third-generation FPCs installed, the `maximum-packet-length` statement at the [edit forwarding-options sampling input] and [edit forwarding-options sampling instance *instance-name* input] hierarchy levels is not supported.

Options *bytes*—Maximum length (in bytes) of the mirrored packet or the sampled packet.

BEST PRACTICE: Juniper Networks recommends that you configure the packet length equal to or greater than the IP header. For IPv4, set the maximum length to at least 20, and for IPv6, set the maximum length to at least 40.

Range: 0 through 9216

Default: 0

For MX Series routers with Modular Port Concentrators (MPCs) and EX9200 switches, port-mirrored or sampled packets can be truncated (or clipped) to any length in the range of 1 through 255 bytes.

For other devices, the range is from 0 through 9216. A maximum-packet-length value of zero represents that truncation is disabled, and the entire packet is mirrored or sampled.

Required Privilege Level interface—To view this statement in the configuration.
interface-control—To add this statement to the configuration.

```

Hierarchy Level [edit forwarding-options port-mirroring]

Release Information Statement introduced in Junos OS Release 9.6.

Description Configure a port-mirroring instance.

The remaining statements are explained separately. See [CLI Explorer](#).

Usage Guidelines See *Sampling Instance Configuration*.

Required Privilege Level interface—To view this statement in the configuration.
interface-control—To add this statement to the configuration.

input (Analyzer)

```
Syntax  input {
        egress {
            bridge-domain bridge-domain-name;
            interface (all | interface-name);
            routing-instance {
                instance-name {
                    bridge-domain bridge-domain-name;
                }
            }
        }
        ingress {
            bridge-domain bridge-domain-name;
            interface (all | interface-name);
            routing-instance {
                instance-name {
                    bridge-domain bridge-domain-name;
                }
            }
            vlan (vlan-id | vlan-name);
        }
        vlan (vlan-id | vlan-name);
    }
    maximum-packet-length bytes;
    rate number;
}
```

Hierarchy Level [edit forwarding-options analyzer *analyzer-name*]

Release Information Statement introduced in Junos OS Release 13.2X50-D10 for EX Series switches.
Statement introduced in Junos OS Release 14.1 for MX Series routers.

Description Define the traffic to be mirrored in a mirroring configuration—the definition can be a combination of:

- Packets entering or exiting a port
- Packets entering or exiting a VLAN
- Packets entering or exiting a bridge domain

The remaining statements are explained separately. See [CLI Explorer](#).

Native analyzer sessions (that is, the [edit forwarding-options analyzer *analyzer-name* **input**] hierarchy level for MX Series routers) can be configured without specifying input parameters, which would mean that the instance uses default input values: rate = 1 and maximum-packet-length = 0.

Default No default.

Required Privilege Level interface—To view this statement in the configuration.
interface-control—To add this statement to the configuration.

interface (Analyzer)

Syntax interface (all | *interface-name*);

Hierarchy Level [edit forwarding-options analyzer *analyzer-name* input egress],
[edit forwarding-options analyzer *analyzer-name* input ingress],
[edit forwarding-options analyzer *analyzer-name* output]

Release Information Statement introduced in Junos OS Release 13.2X50-D10 for EX Series switches.
Statement introduced in Junos OS Release 14.1 for MX Series routers.

Description Configure the interfaces for which traffic is mirrored.

Options **all**—Apply mirroring to all interfaces on the network device. Mirroring a high volume of traffic can be performance intensive for the device. Therefore, you should generally select specific input interfaces in preference to using the **all** keyword, or use the **all** keyword in combination with setting a ratio for statistical sampling. The **all** keyword is not available for the [edit forwarding-options analyzer *analyzer-name* output] hierarchy level.

interface-name—Apply mirroring to the specified interface only.

Required Privilege Level interface—To view this statement in the configuration.
interface-control—To add this statement to the configuration.

next-hop-group (Analyzer)

Syntax	<code>next-hop-group <i>next-hop-group-name</i>;</code>
Hierarchy Level	[edit forwarding-options analyzer <i>analyzer-name</i> output]
Release Information	Statement introduced in Junos OS Release 14.1 for MX Series routers.
Description	Configure next-hop group through which the port-mirrored traffic is sent.
Options	<i>next-hop-group-name</i> —Name of the next-hop group through which the port-mirrored traffic is sent.
Required Privilege Level	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
Related Documentation	<ul style="list-style-type: none">• <i>Example: Configuring Mirroring to Multiple Interfaces for Remote Monitoring of Employee Resource Use on EX9200 Switches</i>

output (Mirroring)

Syntax	<pre> output { bridge-domain <i>bridge-domain-name</i>; interface <i>interface-name</i>; next-hop-group <i>next-hop-group-name</i>; routing-instance { instance-name { bridge-domain { bridge-domain-name; } } vlan (<i>vlan-id</i> <i>vlan-name</i>); } vlan (<i>vlan-id</i> <i>vlan-name</i>); } </pre>
Hierarchy Level	[edit forwarding-options analyzer <i>analyzer-name</i>]
Release Information	Statement introduced in Junos OS Release 13.2X50-D10 for EX Series switches. Statement introduced in Junos OS Release 14.1 for MX Series routers.
Description	<p>Configure the destination for mirrored traffic, either an interface on the network device for local monitoring, or a VLAN or bridge domain, for remote monitoring.</p> <p>The remaining statements are explained separately. See CLI Explorer.</p>
Required Privilege Level	<p>interface—To view this statement in the configuration.</p> <p>interface-control—To add this statement to the configuration.</p>
Related Documentation	<ul style="list-style-type: none"> • Example: Configuring Port Mirroring Analyzers for Local Monitoring of Employee Resource Use on page 83 • Example: Configuring Port Mirroring for Remote Monitoring of Employee Resource Use on page 87

maximum-packet-length

Syntax	<code>maximum-packet-length bytes;</code>
Hierarchy Level	[edit forwarding-options analyzer analyzer-name input], [edit forwarding-options port-mirroring input], [edit forwarding-options port-mirroring instance instance-name input], [edit forwarding-options sampling input], [edit forwarding-options sampling instance <i>instance-name</i> input]
Release Information	Statement introduced in Junos OS Release 9.6. Statement introduced in Junos OS Release 12.1X48 for PTX Series Packet Transport routers. Support at the [edit forwarding-options analyzer analyzer-name input] hierarchy level introduced in Junos OS Release 14.1 for MX Series routers. Statement introduced in Junos OS Release 17.2R1 for QFX10002 switches. Statement introduced in Junos OS Release 17.4R1 for QFX10008 and QFX10016 switches.
Description	Set the maximum length of the packet used for port mirroring or traffic sampling. Packets with lengths greater than the specified maximum are truncated.

NOTE: The `maximum-packet-length` statement is not supported when you configure inline flow monitoring (by including the `inline-jflow` statement at the [edit forwarding-options sampling instance *instance-name* family (inet | inet6) output] hierarchy level).

NOTE: The `maximum-packet-length` statement is not supported on MX80 Series routers.

NOTE: For MX Series routers with Modular Port Interface Concentrators (MPCs), when `maximum-packet-length` (clip length) is configured for port-mirrored packets and the mirror-destination interface is a next-hop-group, the clip length is effective only for the first member interface of the next-hop-group. The mirrored packet copy sent to the rest of the interfaces is not clipped.

Native analyzer sessions (that is, the [edit forwarding-options analyzer analyzer-name input] hierarchy level for MX Series routers) can be configured without specifying input parameters, which means that the instance uses default input values: rate = 1 and maximum-packet-length = 0.

NOTE: For PTX Series routers with third-generation FPCs installed, the `maximum-packet-length` statement at the `[edit forwarding-options sampling input]` and `[edit forwarding-options sampling instance instance-name input]` hierarchy levels is not supported.

Options *bytes*—Maximum length (in bytes) of the mirrored packet or the sampled packet.

BEST PRACTICE: Juniper Networks recommends that you configure the packet length equal to or greater than the IP header. For IPv4, set the maximum length to at least 20, and for IPv6, set the maximum length to at least 40.

Range: 0 through 9216

Default: 0

For MX Series routers with Modular Port Concentrators (MPCs) and EX9200 switches, port-mirrored or sampled packets can be truncated (or clipped) to any length in the range of 1 through 255 bytes.

For other devices, the range is from 0 through 9216. A maximum-packet-length value of zero represents that truncation is disabled, and the entire packet is mirrored or sampled.

Required Privilege Level *interface*—To view this statement in the configuration.
interface-control—To add this statement to the configuration.

rate (Forwarding Options)

Syntax	<code>rate number;</code>
Hierarchy Level	[edit forwarding-options analyzer <i>analyzer-name</i> input], [edit forwarding-options port-mirroring family (inet inet6) input], [edit forwarding-options port-mirroring input], [edit forwarding-options sampling input], [edit forwarding-options sampling instance <i>instance-name</i> input]
Release Information	Statement introduced before Junos OS Release 7.4. Statement introduced in Junos OS Release 12.1X48 for PTX Series Packet Transport routers. Support at the [edit forwarding-options analyzer <i>analyzer-name</i> input] hierarchy level for MX Series routers introduced in Junos OS Release 14.1. Statement introduced in Junos OS Release 17.2R1 for QFX10002 switches. Statement introduced in Junos OS Release 17.4R1 for QFX10008 and QFX10016 switches.
Description	<p>Set the ratio of the number of packets to be sampled. For example, if you specify a rate of 10, every tenth packet (1 packet out of 10) is sampled.</p> <p>Native analyzer sessions (that is, the [edit forwarding-options analyzer <i>analyzer-name</i> input] hierarchy level for MX Series routers) can be configured without specifying input parameters, which means that the instance uses default input values: rate = 1 and maximum-packet-length = 0.</p>
Options	<i>number</i> —Denominator of the ratio. Range: 1 through 16000000(16M)
Required Privilege Level	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.
Related Documentation	<ul style="list-style-type: none">• <i>Configuring Port Mirroring</i>• <i>Configuring Traffic Sampling</i>

routing-instance

Syntax	<pre>routing-instance { instance-name { bridge-domain bridge-domain-name; } vlan (vlan-id vlan-name); }</pre>
Hierarchy Level	[edit forwarding-options analyzer <i>analyzer-name</i> input egress], [edit forwarding-options analyzer <i>analyzer-name</i> input ingress], [edit forwarding-options analyzer <i>analyzer-name</i> output]
Release Information	Statement introduced in Junos OS Release 14.1.
Description	Configure routing instance.
Options	<i>instance-name</i> —Name of the routing instance.
Required Privilege Level	interface—To view this statement in the configuration. interface-control—To add this statement to the configuration.

Release Information	Command introduced before Junos OS Release 7.4. Command introduced in Junos OS Release 9.4 for EX Series switches. Command introduced in Junos OS Release 12.1x48 for PTX Series Packet Transport Routers. Command introduced in Junos OS Release 12.3 for MX2020 3D Universal Edge Routers. Command introduced in Junos OS Release 12.3 for MX2010 3D Universal Edge Routers. Command introduced in Junos OS Release 15.1X53-D30 for QFX Series switches. extended option introduced in JunosOS Release 16.1 for MX2020 and MX2010 Routers. Command introduced in Junos OS Release 17.2 for MX2008 3D Universal Edge Routers. Command introduced in Junos OS Release 17.2 for PTX10008 Routers.

Command introduced in Junos OS Release 17.3 for MX10003 3D Universal Edge Routers.

Description Display the state of the electrical switch fabric links between the Flexible PIC Concentrators (FPCs) and the Switch Interface Boards (SIBs).

Options **none**—Display the switch fabric link state. On a TX Matrix router, display the switching fabric link states for the FPCs in all T640 routers connected to the TX Matrix router. On a TX Matrix Plus router, display the switching fabric link states for the FPCs in all routers connected to the TX Matrix Plus router.

extended—(MX2020 and MX2010 Routers with SFB2) (Optional) Display the fabric link state for all 24 fabric planes.

all-members—(MX Series routers only) (Optional) Display the switching fabric link states for the FPCs in all members of the Virtual Chassis configuration.

lcc *number*—(TX Matrix router and TX Matrix Plus router only) (Optional) On a TX Matrix router, display the switch fabric link state for the FPCs in the specified T640 router (line-card chassis) that is connected to the TX Matrix router. On a TX Matrix Plus router, display the switch fabric link state for the FPCs in the specified router (line-card chassis) that is connected to the TX Matrix Plus router. Replace ***number*** with a following value depending on the LCC configurations:

- From **0** through **3** on a T640 router on the routing matrix with TX Matrix routers.
- From **0** through **3** on a T1600 router on the routing matrix with TX Matrix Plus routers.
- From **0** through **7** on a T1600 router in a routing matrix with TX Matrix Plus router with 3D SIBs.
- **0, 2, 4, 6** on a T4000 router in a routing matrix with TX Matrix Plus router with 3D SIBs.

local—(MX Series routers only) (Optional) Display the switching fabric link states for the FPCs in the local Virtual Chassis member.

member *member-id*—(MX Series routers only) (Optional) Display the switching fabric link states for the FPCs in the specified member of the Virtual Chassis configuration. Replace ***member-id*** with a value of 0 or 1.

slot *fpc-slot*—(PTX Series Packet Transport Routers and QFX Series switches only) (Optional) Display the fabric state of the specified FPC slot. If no value is provided, display the status of all FPCs.

Output Fields [Table 7 on page 131](#) lists the output fields for the **show chassis fabric fpcs** command. Output fields are listed in the approximate order in which they appear.

Table 7: show chassis fabric fpcs Output Fields

Field Name	Field Description
Fabric management FPC state	<p>Switching fabric link (link from SIB to FPC) state for each FPC:</p> <ul style="list-style-type: none"> • Unused—FPC is not present. (On MX240 and MX480 routers with AS- MLC modular carrier card or MPC4E only) the fabric plane from the pair that share physical links (1 and 5, and 3 and 7) is inactive. • Destination error on PFEs <i>list of PFE numbers</i>—Destination errors to the listed Packet Forwarding Engines. Indicates that the link is not carrying traffic to the listed Packet Forwarding Engines. NOTE: In Junos OS Release 9.6 and later, the list of Packet Forwarding Engines with destination errors is displayed in the output. In Junos OS Releases before 9.6, the output only indicates that there are destination errors. However, the list of Packet Forwarding Engines with destination errors is not displayed. • Links ok—Link between the spare SIB and FPC is eligible to carry traffic. • Link error—Link between the SIB and FPC has CRC errors. However, the link is still eligible to carry traffic. • Plane disabled—Fabric plane has been disabled for the following reasons: <ul style="list-style-type: none"> • Destination errors have exceeded the thresholds. • Run-time link errors have exceeded the thresholds. • Initialization time link errors detected, and link training was unsuccessful. • Plane Disabled, Links Error (PTX Series Packet Transport Routers and QFX Series switches only)—The plane is disabled because of link errors detected at the FPC RX. • Plane Disabled, Links Down (PTX Series Packet Transport Routers and QFX Series switches only)—The plane is disabled because of link errors detected at the SIB RX. • Plane enabled—Link between the active SIB and FPC is eligible to carry traffic. NOTE: On the Enhanced MX SCB with MPC, a maximum of 4 planes are operational and running. On all the other SCBs with MPC, all the planes are operational and running. • Plane Enabled, Links OK (PTX Series Packet Transport Routers and QFX Series switches only)—The FPC CCL RX link is eligible to carry traffic. • Plane Enabled, Links OK (TX Matrix and TX Matrix Plus routers only)—The FPC HSL RX link is eligible to carry traffic.

Release Information	<p>Command introduced before Junos OS Release 7.4.</p> <p>Command introduced in Junos OS Release 9.0 for EX Series switches.</p> <p>Command introduced in Junos OS Release 11.1 for QFX Series.</p> <p>Command introduced in Junos OS Release 12.1x48 for PTX Series Packet Transport Routers.</p> <p>Command introduced in Junos OS Release 12.2 for ACX Series Universal Access Routers.</p> <p>Command introduced in Junos OS Release 12.3 for MX2020 3D Universal Edge Routers.</p> <p>Command introduced in Junos OS Release 12.3 for MX2010 3D Universal Edge Routers.</p> <p>Command introduced in Junos OS Release 13.2 for MX104 3D Universal Edge Routers.</p> <p>Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.</p> <p>Command introduced in Junos OS Release 17.2 for MX2008 3D Universal Edge Routers.</p> <p>Command introduced in Junos OS Release 17.2 for PTX10008 Routers.</p> <p>Command introduced in Junos OS Release 17.3 for MX10003 3D Universal Edge Routers.</p> <p>Command introduced in Junos OS Release 17.3 for MX150 Router Appliance.</p> <p>Command introduced in Junos OS Release 17.4 for MX204 3D Universal Edge Routers.</p>
Description	Display status information about the installed Flexible PIC Concentrators (FPCs) and PICs.
Options	none —Display status information for all FPCs. On a TX Matrix router, display status information for all FPCs on the attached T640 routers in the routing matrix. On a TX Matrix Plus router, display status information for all FPCs on the attached routers in the routing matrix.

NOTE: In EX8200 switches, line cards initialize Packet Forwarding Engine during startup. If an error occurs during hardware initialization, the FPCs with bad hardware parts power down after transferring the debug information to the Routing Engine. The Routing Engine marks the FPC offline, logs the error in system log messages (/var/log/messages), and generates an alarm to inform the user.

See the following sample output:

```
user@host> show chassis fpc
```

	Temp	CPU Utilization (%)		Memory	
Utilization (%)					
Slot State	(C)	Total	Interrupt	DRAM (MB)	Heap
Buffer					
0 Empty					
1 Empty					
2 Empty					
3 Empty					
4 Empty					
5 Offline		---Hard FPC error---			
6 Empty					
7 Online	26	4	0	1024	0
32					

The following sample output shows the alarm raised for the failed FPCs:

```
user@host> show chassis alarms
4 alarms currently active
```

Alarm time	Class	Description
2011-03-24 00:52:51 UTC	Major	FPC 5 Hard errors
2011-03-24 00:52:31 UTC	Major	Fan Tray Failure
2011-03-24 00:52:31 UTC	Major	Fan Tray Failure
2011-03-24 00:51:26 UTC	Minor	Loss of communication with Backup RE

NOTE: On T4000 routers, when you include the `enhanced-mode` statement at the `[edit chassis network-services]` hierarchy level and reboot the system, only the T4000 Type 5 FPCs present on the router become online while the remaining FPCs are offline, and FPC misconfiguration alarms are generated. The `show chassis alarm` command output displays FPC misconfiguration (`FPC fpc-slot misconfig`) as the reason for the generation the alarms.

The following sample output shows the FPC status after the `enhanced-mode` statement is configured on the T4000 router. The T4000 Type 5 FPC present in slot 5 becomes online while the remaining FPCs are offline.

```
user@host> show chassis fpc
```

	Temp	CPU Utilization (%)	Memory
Utilization (%)			
Slot State	(C)	Total	Interrupt
Buffer			
0 offline			---FPC misconfiguration---
1 offline			---FPC misconfiguration---
2 offline			---FPC misconfiguration---
3 Empty			
4 Empty			
5 Online	66	50	0
27			2816 29

The following sample output shows FPC misconfiguration alarms:

```
user@host> show chassis alarms
3 alarms currently active
```

Alarm time	Class	Description
2011-03-24 00:52:51 PST	Major	FPC 1 misconfig
2011-03-24 00:52:31 PST	Major	FPC 2 misconfig
2011-03-24 00:52:31 PST	Major	FPC 3 misconfig

detail—(Optional) Display detailed status information for all FPCs or for the FPC in the specified slot (see `fpc-slot` or `slot`).

all-members—(MX Series routers and EX Series switches only) (Optional) Display status information for all FPCs on all members of the Virtual Chassis configuration.

interconnect-device *name*—(QFabric systems only) (Optional) Display status information for all FPCs on the Interconnect device.

fpc-slot—(Optional) FPC slot number:

- (TX Matrix and TX Matrix Plus routers only)—On a TX Matrix router, if you specify the number of the T640 router (line-card chassis) by using the `lcc number` option (the recommended method), replace `fpc-slot` with a value from 0 through 7. Otherwise, replace `fpc-slot` with a value from 0 through 31. Likewise, on a TX Matrix

Plus router, if you specify the number of the specified router (line-card chassis) by using the **lcc number** option (the recommended method), replace **fpc-slot** with a value from 0 through 7. Otherwise, replace **fpc-slot** with a value from 0 through 31. For example, the following commands have the same result:

```
user@host> show chassis fpc detail 1 lcc 1
user@host> show chassis fpc detail 9
```

- M120 router—Replace **fpc-slot** with a value from 0 through 5.
- MX80 router—Replace **fpc-slot** with a value from 0 through 1.
- MX104 and MX104-40G routers—Replace **fpc-slot** with a value from 0 through 2.
- MX240 router—Replace **fpc-slot** with a value from 0 through 2.
- MX480 router—Replace **fpc-slot** with a value from 0 through 5.
- MX-960 router—Replace **fpc-slot** with a value from 0 through 11.
- MX2010 router—Replace **fpc-slot-number** with a value from 0 through 9.
- MX2008 router—Replace **fpc-slot-number** with a value from 0 through 9.
- MX2020 router—Replace **fpc-slot-number** with a value from 0 through 19.
- Other routers—Replace **fpc-slot** with a value from 0 through 7.
- EX Series switches:
 - EX3200 switches and EX4200 standalone switches—Replace **fpc-slot** with 0.
 - EX4200 switches in a Virtual Chassis configuration—Replace **fpc-slot** with a value from 0 through 9.
 - EX6210 switches—Replace **fpc-slot** with a value from 0 through 9.
 - EX8208 switches—Replace **fpc-slot** with a value from 0 through 7.
 - EX8216 switches—Replace **fpc-slot** with a value from 0 through 15.
 - EX9204 switches—Replace **fpc-slot** with a value from 0 through 2.
 - EX9208 switches—Replace **fpc-slot** with a value from 0 through 5.
 - EX9214 switches—Replace **fpc-slot** with a value from 0 through 11.
- QFX Series:
 - QFXSeries and OCX Series switches—Replace **fpc-slot** with 0.
 - QFabric systems—Replace **fpc-slot** with 0 through 31 on the Interconnect device.
- PTX Series Packet Transport Routers:
 - PTX5000 Packet Transport Router—Replace **fpc-slot** with a value from 0 through 7.
- ACX Series Universal Access Routers:

- ACX1000 and ACX2000 Universal Access Routers—Replace *fpc-slot* with **0**.

local—(MX Series routers and EX Series switches only) (Optional) Display status information for all FPCs on the local Virtual Chassis member.

member *member-id*—(MX Series routers and EX Series switches only) (Optional) Display status information for all FPCs on the specified member of the Virtual Chassis configuration. Replace *member-id* with a value of 0 or 1.

node-device *name*—(QFabric systems only) (Optional) Display status information for each Node device. Each Node device is equivalent to an FPC.

pic-status—(Optional) Display status information for all PICs or for the PIC in the specified slot (see *fpc-slot*).

NOTE: On T1600 routers, Type 4 FPCs with ASICs based on the SL2.0 chipset do not support the 10-Gigabit Ethernet LAN/WAN PIC with SFP+ (10x10GE [LAN/WAN] SFPP). If you issue the `show chassis fpc` command with the `pic-status` option, the CLI displays the string “Not Supported” for 10x10GE (LAN/WAN) SFPP PICs installed on such FPCs. The following is a sample output:

```
user@host> show chassis fpc pic-status
Slot 0  Online      E2-FPC Type 1
        PIC 0  Online      1x G/E SFP, 1000 BASE
        PIC 1  Online      Adaptive Services-II
        PIC 2  Online      1x G/E IQ, 1000 BASE
        PIC 3  Online      1x G/E IQ, 1000 BASE
Slot 1  Online      FPC Type 3-ES
        PIC 0  Present     UNUSED- Not Supported
Slot 2  Online      FPC Type 4-ES
        PIC 0  Offline     4x OC-192 SONET XFP
        PIC 1  Present     10x10GE (LAN/WAN) SFPP- Not Supported
<<<<<<
Slot 4  Offline     FPC Type 1-ES
Slot 5  Offline     FPC Type 2-ES
Slot 6  Online      E2-FPC Type 3
        PIC 0  Online      1x OC-192 SONET XFP
        PIC 1  Online      4x OC-48 SONET
        PIC 2  Online      4x OC-48 SONET
        PIC 3  Online      MultiServices 500
Slot 7  Online      FPC Type 4-ES
        PIC 0  Online      4x 10GE (LAN/WAN) XFP
        PIC 1  Online      4x 10GE (LAN/WAN) XFP
```

In addition, an entry is logged in the system log messages (`/var/log/messages`) that the PIC is not supported. The following is a sample message logged in the system log:

```
Apr  5 08:47:36  router1 chassisd[2770]: CHASSISD_UNSUPPORTED_PIC:
PIC 1 in FPC 2 (type 763, version 257) is not supported
```

If you see this issue, contact Juniper Networks Technical Assistance Center (JTAC) for a possible fix. For more information about this issue and a possible solution, see [PSN-2010-03-696](https://www.juniper.net/psn/2010-03-696).

NOTE: When there is a double-bit ECC error in a network processor's memory, the Channelized OC3/STM1 (Multi-Rate) Circuit Emulation MIC with SFP or Channelized E1/T1 Circuit Emulation MIC is switched to the offline state.

```
user@host> show chassis fpc pic-status
Slot 1  Online      MPC Type 2 3D Q
PIC 0  Offline      1xCOC12/4xCOC3 CH-CE- ECC error detected
```

lcc number—(TX Matrix router and TX Matrix Plus router only) (Optional) Line-card chassis number.

Replace *number* with the following values depending on the LCC configuration:

- 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.
- 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.
- 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.
- 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.

Output Fields [Table 8 on page 187](#) lists the output fields for the **show chassis fpc** command. Output fields are listed in the approximate order in which they appear.

Table 8: show chassis fpc Output Fields

Field Name	Field Description	Level of Output
Slot or Slot State	Slot number and state. The state can be one of the following conditions: <ul style="list-style-type: none"> • Dead—Held in reset because of errors. • Diag—Slot is being ignored while the FPC is running diagnostics. • Dormant—Held in reset. • Empty—No FPC is present. • Offline—(PTX Series Packet Transport Routers only) One of the following two states is displayed: <ul style="list-style-type: none"> • FPC offlined due to unreachable destinations • FPC Offlined due to degraded FPC action • Online—FPC is online and running. • Present—FPC is detected by the chassis daemon but either is not supported by the current version of Junos OS or is inserted in the wrong slot. The output also states either Hardware Not Supported or Hardware Not In Right Slot. The FPC is coming up but not yet online. • Probed—Probe is complete; awaiting restart of the Packet Forwarding Engine. • Probe-wait—Waiting to be probed. 	all levels
Logical slot	Slot number.	all levels
Temp (C) or Temperature	Temperature of the air passing by the FPC, in degrees Celsius or in both Celsius and Fahrenheit.	all levels all levels
Temperature (PTX Series)	On PTX Series Packet Transport Routers, temperature details are provided in degrees Celsius and Fahrenheit. Output includes: <ul style="list-style-type: none"> • Temperature (PMB)—Temperature of the air passing by the Processor Mezzanine Board (PMB) at the bottom of the FPC. • Temperature (Intake)—Temperature of the air flowing into the chassis. • Temperature (Exhaust)—Exhaust temperatures for multiple zones (Exhaust A and Exhaust B). • Temperature (TLn)—Temperature of the specified Lookup ASIC (TL) of the packet forwarding engine on the FPC. • Temperature (TQn)—Temperature of the specified Queuing and Memory Interface ASIC (TQ) of the packet forwarding engine on the FPC. 	detail
Total CPU Utilization (%)	Total percentage of CPU being used by the FPC's processor.	all levels
Interrupt CPU Utilization (%)	Of the total CPU being used by the FPC's processor, the percentage being used for interrupts.	none specified

Table 8: show chassis fpc Output Fields (*continued*)

Field Name	Field Description	Level of Output
1 min CPU utilization (%) NOTE: Supported only on MX240, MX480, MX960, MX2010, MX2020, and MX2008.	Information about the Routing Engine's CPU utilization in the past 1 minute.	none specified
5 min CPU utilization (%) NOTE: Supported only on MX240, MX480, MX960, MX2010, MX2020, and MX2008.	Information about the Routing Engine's CPU utilization in the past 5 minutes.	none specified
15 min CPU utilization (%) NOTE: Supported only on MX240, MX480, MX960, MX2010, MX2020, and MX2008.	Information about the Routing Engine's CPU utilization in the past 15 minutes.	none specified
Memory DRAM (MB)	Total DRAM, in megabytes, available to the FPC's processor.	none specified
Heap Utilization (%)	Percentage of heap space (dynamic memory) being used by the FPC's processor. If this number exceeds 80 percent, there may be a software problem (memory leak). NOTE: On MX Series routers and EX Series switches in a broadband edge environment, heap utilization levels higher than 70 percent can affect unified ISSU, router stability, or scaling capability.	none specified
Buffer Utilization (%)	Percentage of buffer space being used by the FPC's processor for buffering internal messages.	none specified
Total CPU DRAM	Amount of DRAM available to the FPC's CPU.	detail
Total RLDRAM	Amount of reduced latency dynamic random access memory (RLDRAM) available to the FPC CPU.	detail
Total DDR DRAM	Amount of double data rate dynamic random access memory (DDR DRAM) available to the FPC CPU.	detail
Total SRAM	Amount of static RAM (SRAM) used by the FPC's CPU.	detail
Total SDRAM	Total amount of memory used for storing packets and notifications.	detail

Table 8: show chassis fpc Output Fields (*continued*)

Field Name	Field Description	Level of Output
I/O Manager ASICs information	I/O Manager version number, manufacturer, and part number.	detail
Start time	Time when the Routing Engine detected that the FPC was running.	detail
Uptime	How long the Routing Engine has been connected to the FPC and, therefore, how long the FPC has been up and running.	detail
PIC type	(pic-status output only) Type of PIC.	none specified
GNF (Node slicing)	GNF identifier associated with each line card. (pic-status output only) GNF identifier associated with each PIC.	all levels

show chassis fpc (MX2010 Router with Fabric Grant Bypass Disabled)

Following is the output of the **show chassis fpc** command on an MX2010 router with Switch Fabric Board (SFB), where fabric grant bypass has been disabled. MPC1 (MX-MPC1-3D), MPC2 (MX-MPC2-3D), and the 16-port 10-Gigabit Ethernet MPC (MPC-3D-16XGE-SFP) do not power on after you disable fabric grant bypass and reboot the router. Also, FPC misconfiguration alarms are generated.

```
user@host> show chassis fpc

Release Information	Command introduced before Junos OS Release 7.4. models option introduced in Junos OS Release 8.2. Command introduced in Junos OS Release 9.0 for EX Series switches. sfc option introduced in Junos OS Release 9.6 for the TX Matrix Plus router. Command introduced in Junos OS Release 11.1 for QFX Series.

Command introduced in Junos OS Release 12.1X48 for PTX Series Packet Transport Routers.

Command introduced in Junos OS Release 12.2 for ACX Series Universal Access Routers.

Command introduced in Junos OS Release 12.3 for MX2010 and MX2020 3D Universal Edge Routers.

Information for **disk** and **usb** introduced in Junos OS Release 15.1X53-D60 for QFX10002, QFX10008, and QFX10016 switches.

Command introduced in Junos OS Release 15.1X54-D20 for ACX5048 and ACX5096 Routers.

Command introduced in Junos OS Release 17.2 for MX2008 3D Universal Edge Routers.

Command introduced in Junos OS Release 17.2 for PTX10008 Routers.

Command introduced in Junos OS Release 17.3 for MX10003 3D Universal Edge Routers.

Command introduced in Junos OS Release 17.3 for MX150 Router Appliance.

Command introduced in Junos OS Release 17.4 for MX204 Routers.

Description Display a list of all Flexible PIC Concentrators (FPCs) and PICs installed in the router or switch chassis, including the hardware version level and serial number.

In the EX Series switch command output, FPC refers to the following:

- On EX2200 switches, EX3200 switches, EX4200 standalone switches, and EX4500 switches—Refers to the switch; FPC *number* is always 0.
- On EX4200 switches in a Virtual Chassis configuration—Refers to the member of a Virtual Chassis; FPC *number* equals the member ID, from 0 through 9.
- On EX8208 and EX8216 switches—Refers to a line card; FPC *number* equals the slot number for the line card.

On QFX3500, QFX5100, and OCX Series standalone switches, and PTX1000 routers both the FPC and FPC *number* are always 0.

On T4000 Type 5 FPCs, there are no **top temperature sensor** or **bottom temperature sensor** parameters. Instead, **fan intake temperature sensor** and **fan exhaust temperature sensors** parameters are displayed.

Starting from Junos OS Release 11.4, the output of the **show chassis hardware models** operational mode command displays the enhanced midplanes FRU model numbers (CHAS-BP3-MX240-S, CHAS-BP3-MX480-S or CHAS-BP3-MX960-S) based on the router. Prior to release 11.4, the FRU model numbers are left blank when the router has enhanced midplanes. Note that the enhanced midplanes are introduced through the Junos OS Release 13.3, but can be supported on all Junos OS releases.

Starting with Junos OS Release 14.1, the output of the **show chassis hardware detail | extensive | clei-models | models** operational mode command displays the new DC power supply module (PSM) and power distribution unit (PDU) that are added to provide power to the high-density FPC (FPC2-PTX-P1A) and other components in a PTX5000 Packet Transport Router.

- Options** **none**—Display information about hardware. For a TX Matrix router, display information about the TX Matrix router and its attached T640 routers. For a TX Matrix Plus router, display information about the TX Matrix Plus router and its attached routers.
- clei-models**—(Optional) Display Common Language Equipment Identifier (CLEI) barcode and model number for orderable field-replaceable units (FRUs).
- detail**—(Optional) Include RAM and disk information in output.
- extensive**—(Optional) Display ID EEPROM information.
- all-members**—(MX Series routers only) (Optional) Display hardware-specific information for all the members of the Virtual Chassis configuration.
- interconnect-device *name***—(QFabric systems only) (Optional) Display hardware-specific information for the Interconnect device.
- lcc *number***—(TX Matrix routers and TX Matrix Plus router only) (Optional) On a TX Matrix router, display hardware information for a specified T640 router (line-card chassis) that is connected to the TX Matrix router. On a TX Matrix Plus router, display hardware information for a specified router (line-card chassis) that is connected to the TX Matrix Plus router.
- Replace *number* with the following values depending on the LCC configuration:
- 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.
 - 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.
 - 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.
 - 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.
- local**—(MX Series routers only) (Optional) Display hardware-specific information for the local Virtual Chassis members.
- member *member-id***—(MX Series routers and EX Series switches) (Optional) Display hardware-specific information for the specified member of the Virtual Chassis configuration. Replace *member-id* variable with a value 0 or 1.
- models**—(Optional) Display model numbers and part numbers for orderable FRUs and, for components that use ID EEPROM format v2, the CLEI code.
- node-device *name***—(QFabric systems only) (Optional) Display hardware-specific information for the Node device.
- satellite [*slot-id slot-id* | *device-alias alias-name*]**—(Junos Fusion only) (Optional) Display hardware information for the specified satellite device in a Junos Fusion, or for all satellite devices in the Junos Fusion if no satellite devices are specified.

scc—(TX Matrix router only) (Optional) Display hardware information for the TX Matrix router (switch-card chassis).

sfc *number*—(TX Matrix Plus router only) (Optional) Display hardware information for the TX Matrix Plus router (switch-fabric chassis). Replace *number* variable with 0.

Additional Information The **show chassis hardware detail** command now displays DIMM information for the following Routing Engines, as shown in [Table 9 on page 228](#).

Table 9: Routing Engines Displaying DIMM Information

Routing Engines	Routers
RE-S-1800x2 and RE-S-1800x4	MX240, MX480, and MX960 routers
RE-A-1800x2	M120 and M320 routers

In Junos OS Release 11.4 and later, the output for the **show chassis hardware models** operational mode command for MX Series routers display the enhanced midplanes FRU model numbers—CHAS-BP3-MX240-S, CHAS-BP3-MX480-S, or CHAS-BP3-MX960-S—based on the router. In releases before Junos OS Release 11.4, the FRU model numbers are left blank when the router has enhanced midplanes. Note that the enhanced midplanes are introduced through Junos OS Release 13.3, but can be supported on all Junos OS releases.

Starting with Junos OS Release 17.3R1, the output of the **show chassis hardware** command displays the mode in which vMX is running (performance mode or lite mode) in the part number field for the FPC. **RIOT-PERF** indicates performance mode and **RIOT-LITE** indicates lite mode.

Output Fields [Table 10 on page 233](#) lists the output fields for the **show chassis hardware** command. Output fields are listed in the approximate order in which they appear.

Table 10: show chassis hardware Output Fields

Field Name	Field Description	Level of Output
Item	<p>Chassis component:</p> <ul style="list-style-type: none"> (EX Series switches)—Information about the chassis, Routing Engine (SRE and Routing Engine modules in EX8200 switches), power supplies, fan trays, and LCD panel. Also displays information about Flexible PIC Concentrators (FPCs) and associated Physical Interface Cards (PICs). Information about the backplane, midplane, and SIBs (SF modules) is displayed for EX8200 switches. (MX Series routers and EX Series switches)—Information about the backplane, Routing Engine, Power Entry Modules (PEMs), and fan trays. Also displays information about Flexible PIC Concentrators (FPCs) and associated Physical Interface Cards (PICs), Modular Port Concentrators (MPCs) and associated Modular Interface Cards (MICs), or Dense Port Concentrators (DPCs). MX80 routers have a single Routing Engine and a built-in Packet Forwarding Engine that attaches directly to MICs. The Packet Forwarding Engine has two “pseudo” FPCs (FPC 0 and FPC1). MX80 routers also have a Forwarding Engine Board (FEB). MX104 routers have a built-in Packet forwarding Engine and a Forwarding Engine Board (FEB). The Packet Forwarding Engine of the MX104 router has three “pseudo” FPCs (FPC0, FPC1, and FPC2). (M Series routers, except for the M320 router)—Information about the backplane; power supplies; fan trays; Routing Engine; maxicab (the connection between the Routing Engine and the backplane, for the M40 router only); SCB, SSB, SFM, or FEB; MCS and PCG (for the M160 router only); each FPC and PIC; and each fan, blower, and impeller. (M120, M320, and T Series routers)—Information about the backplane, power supplies, fan trays, midplane, FPM (craft interface), CIP, PEM, SCG, CB, FPC, PIC, SFP, SPMB, and SIB. (QFX Series)—Information about the chassis, Pseudo CB, Routing Engine, power supplies, fan trays, Interconnect devices, and Node devices. Also displays information about Flexible PIC Concentrators (FPCs) and associated Physical Interface Cards (PICs). (PTX Series)—Information about the chassis, midplane, craft interface (FPM), power distribution units (PDUs) and Power Supply Modules (PSMs), Centralized Clock Generators (CCGs), Routing Engines, Control Boards (CBs) and Switch Processor Mezzanine Boards (SPMBs), Flexible PIC Concentrators (FPCs), PICs, Switch Interface Boards (SIBs), and fan trays (vertical and horizontal). (MX2010, MX2020, and MX2008 routers)—Information about the chassis, midplane, craft interface (FPM), power midplane (PMP), Power Supply Modules (PSMs), Power Distribution Modules (PDMs), Routing Engines, Control Boards (CBs) and Switch Processor Mezzanine Boards (SPMBs), Switch Fabric Boards (SFBs), Flexible PIC Concentrators (FPCs), PICs, adapter cards (ADCs) and fan trays. (vMX routers)—Information about the chassis, midplane, Routing Engines, and Control Boards (CBs). Also displays information about Flexible PIC Concentrators (FPCs) and associated Modular Interface Cards (MICs) and Physical Interface Cards (PICs). 	All levels
Version	Revision level of the chassis component.	All levels
Part number	Part number of the chassis component.	All levels

Table 10: show chassis hardware Output Fields (*continued*)

Field Name	Field Description	Level of Output
Serial number	Serial number of the chassis component. The serial number of the backplane is also the serial number of the router chassis. Use this serial number when you need to contact Juniper Networks Customer Support about the router or switch chassis.	All levels
Assb ID or Assembly ID	(extensive keyword only) Identification number that describes the FRU hardware.	extensive
Assembly Version	(extensive keyword only) Version number of the FRU hardware.	extensive
Assembly Flags	(extensive keyword only) Flags.	extensive
FRU model number	(clei-models , extensive , and models keyword only) Model number of the FRU hardware component.	none specified
CLEI code	(clei-models and extensive keyword only) Common Language Equipment Identifier code. This value is displayed only for hardware components that use ID EEPROM format v2. This value is not displayed for components that use ID EEPROM format v1.	none specified
EEPROM Version	ID EEPROM version used by the hardware component: 0x00 (version 0), 0x01 (version 1), or 0x02 (version 2).	extensive
Description	<p>Brief description of the hardware item:</p> <ul style="list-style-type: none"> • Type of power supply. • Type of PIC. If the PIC type is not supported on the current software release, the output states Hardware Not Supported. • Type of FPC: FPC Type 1, FPC Type 2, FPC Type 3, FPC Type 4, or FPC TypeOC192. <p>On EX Series switches, a brief description of the FPC.</p> <p>The following list shows the PIM abbreviation in the output and the corresponding PIM name.</p> <ul style="list-style-type: none"> • 2x FE—Either two built-in Fast Ethernet interfaces (fixed PIM) or dual-port Fast Ethernet PIM • 4x FE—4-port Fast Ethernet ePIM • 1x GE Copper—Copper Gigabit Ethernet ePIM (one 10-Mbps, 100-Mbps, or 1000-Mbps port) • 1x GE SFP—SFP Gigabit Ethernet ePIM (one fiber port) • 2x Serial—Dual-port serial PIM • 2x T1—Dual-port T1 PIM • 2x E1—Dual-port E1 PIM • 2x CT1E1—Dual-port channelized T1/E1 PIM • 1x T3—T3 PIM (one port) • 1x E3—E3 PIM (one port) • 4x BRI S/T—4-port ISDN BRI S/T PIM • 4x BRI U—4-port ISDN BRI U PIM • 1x ADSL Annex A—ADSL 2/2+ Annex A PIM (one port, for POTS) 	All levels

Table 10: show chassis hardware Output Fields (*continued*)

Field Name	Field Description	Level of Output
	<ul style="list-style-type: none"> • 1x ADSL Annex B—ADSL 2/2+ Annex B PIM (one port, for ISDN) • 2x SHDSL (ATM)—G SHDSL PIM (2-port two-wire module or 1-port four-wire module) • 1x TGM550—TGM550 Telephony Gateway Module (Avaya VoIP gateway module with one console port, two analog LINE ports, and two analog TRUNK ports) • 1x DS1 TIM510—TIM510 E1/T1 Telephony Interface Module (Avaya VoIP media module with one E1 or T1 trunk termination port and ISDN PRI backup) • 4x FXS, 4x FXO, TIM514—TIM514 Analog Telephony Interface Module (Avaya VoIP media module with four analog LINE ports and four analog TRUNK ports) • 4x BRI TIM521—TIM521 BRI Telephony Interface Module (Avaya VoIP media module with four ISDN BRI ports) • Crypto Accelerator Module—For enhanced performance of cryptographic algorithms used in IP Security (IPsec) services • MPC M16x10GE—16-port 10-Gigabit Module Port Concentrator that supports SFP+ optical transceivers. (Not on EX Series switches.) • For hosts, the Routing Engine type. • For small form-factor pluggable transceiver (SFP) modules, the type of fiber: LX, SX, LH, or T. • LCD description for EX Series switches (except EX2200 switches). • MPC2—1-port MPC2 that supports two separate slots for MICs. • MPC3E—1-port MPC3E that supports two separate slots for MICs (MIC-3D-1X100GE-CFP and MIC-3D-20GE-SFP) on MX960, MX480, and MX240 routers. The MPC3E maps one MIC to one PIC (1 MIC, 1 PIC), which differs from the mapping of legacy MPCs. • 100GBASE-LR4, pluggable CFP optics • Supports the Enhanced MX Switch Control Board with fabric redundancy and existing SCBs without fabric redundancy. • Interoperates with existing MX Series line cards, including Flexible Port Concentrators (FPC), Dense Port Concentrators (DPCs), and Modular Port Concentrators (MPCs). • MPC4E—Fixed configuration MPC4E that is available in two flavors: MPC4E-3D-32XGE-SFP and MPC4E-3D-2CGE-8XGE on MX2020, MX960, MX480, and MX240 routers. • LCD description for MX Series routers

Description	Display status information about the PIC installed in the specified Flexible PIC Concentrator (FPC) and PIC slot.
Options	<p>fpc-slot <i>slot-number</i>—Display information about the PIC in this particular FPC slot:</p> <ul style="list-style-type: none">On a TX Matrix router, if you specify the number of the T640 router by using the lcc <i>number</i> option (the recommended method), replace <i>slot-number</i> with a value from 0 through 7. Otherwise, replace <i>slot-number</i> with a value from 0 through 31. <p>Likewise, on a TX Matrix Plus router, if you specify the number of the T1600 router by using the lcc <i>number</i> option (the recommended method), replace <i>slot-number</i> with a value from 0 through 7. Otherwise, replace <i>slot-number</i> with a value from 0 through 31. For example, the following commands have the same result:</p> <pre>user@host> show chassis pic fpc-slot 1 lcc 1 pic-slot 1 user@host> show chassis pic fpc-slot 9 pic-slot 1</pre> <ul style="list-style-type: none">M120 routers only—Replace <i>slot-number</i> with a value from 0 through 5.MX80 routers only—Replace <i>slot-number</i> with a value from 0 through 1.MX104 routers only—Replace <i>slot-number</i> with a value from 0 through 2.MX240 routers only—Replace <i>slot-number</i> with a value from 0 through 2.MX480 routers only—Replace <i>slot-number</i> with a value from 0 through 5.

- MX960 routers only—Replace **slot-number** with a value from 0 through 11.
- MX2010 routers only—Replace **slot-number** with a value from 0 through 9.
- MX2020 routers only—Replace **slot-number** with a value from 0 through 19.
- MX2008 routers only—Replace **slot-number** with a value from 0 through 9.
- MX10003 routers only—Replace **slot-number** with a value from 0 through 1.
- Other routers—Replace **slot-number** with a value from 0 through 7.
- EX Series switches:
 - EX3200 switches and EX4200 standalone switches—Replace **slot-number** with 0.
 - EX4200 switches in a Virtual Chassis configuration—Replace **slot-number** with a value from 0 through 9 (switch's member ID).
 - EX8208 switches—Replace **slot-number** with a value from 0 through 7 (line card).
 - EX8216 switches—Replace **slot-number** with a value from 0 through 15 (line card).
- QFX Series:
 - QFX3500, QFX3600, QFX5100, and OCX Series standalone switches—Replace **slot-number** with 0. In the command output, FPC refers to a line card. The FPC number equals the slot number for the line card.
 - QFabric systems—Replace **slot-number** with any number between 0 and 15. In the command output, FPC refers to a line card. The FPC number equals the slot number for the line card.

all-members—(MX Series routers and EX Series switches only) (Optional) Display PIC information for all member routers in the Virtual Chassis configuration.

interconnect-device name—(QFabric systems only) (Optional) Display PIC information for a specified Interconnect device.

lcc number—(TX Matrix and TX Matrix Plus routers only) (Optional) On a TX Matrix router, display PIC information for a specified T640 router (or line-card chassis) that is connected to the TX Matrix router. On a TX Matrix Plus router, display PIC information for a specified router (line-card chassis) that is connected to the TX Matrix Plus router.

Replace *number* with the following values depending on the LCC configuration:

- 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.
- 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.

- 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.
- 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.

local—(MX Series routers and EX Series switches only) (Optional) Display PIC information for the local Virtual Chassis member.

member *member-id*—(MX Series routers and EX Series switches only) (Optional) Display PIC information for the specified member of the Virtual Chassis configuration. Replace *member-id* with a value of 0 or 1.

node-device *name*—(QFabric systems only) (Optional) Display PIC information for a specified Node device.

pic-slot *slot-number*—Display information about the PIC in this particular PIC slot. For routers, replace *slot-number* with a value from 0 through 3. For EX3200 and EX4200 switches, replace *slot-number* with 0 for built-in network interfaces and 1 for interfaces on uplink modules. For EX8208 and EX8216 switches, replace *slot-number* with 0. For the QFX3500 standalone switch and the QFabric system, replace *slot-number* with 0 or 1.

transport—Display PIC information for optical transport network.

Output Fields [Table 11 on page 468](#) lists the output fields for the **show chassis pic** command. Output fields are listed in the approximate order in which they appear.

Table 11: show chassis pic Output Fields

Field Name	Field Description
Type	<p>PIC type.</p> <p>NOTE: On the 1-port OC192/STM64 MICs with the SDH framing mode, the type is displayed as MIC-3D-1STM64-XFP and with the SONET framing mode, the type is displayed as MIC-3D-1OC192-XFP. By default, the 1-port OC192/STM64 MICs displays the type as MIC-3D-1OC192-XFP.</p>
Account Layer2 Overhead	(MX Series routers) Indicates whether functionality to count the Layer 2 overhead bytes in the interface statistics at the PIC level is enabled or disabled.
ASIC type	Type of ASIC on the PIC.
State	<p>Status of the PIC. State is displayed only when a PIC is in the slot.</p> <ul style="list-style-type: none"> • Online— PIC is online and running. • Offline—PIC is powered down.
PIC version	PIC hardware version.
Uptime	How long the PIC has been online.
Package	(Multiservices PICs only) Services package supported: Layer-2 or Layer-3 .
Port Number	Port number for the PIC.
Cable Type	Type of cable connected to the port: LH , LX , or SX .

Table 11: show chassis pic Output Fields (*continued*)

Field Name	Field Description
PIC Port Information (MX480 Router 100-Gigabit Ethernet CFP)	<p>Port-level information for the PIC.</p> <ul style="list-style-type: none"> • Port—Port number • Cable type—Type of optical transceiver installed. • Fiber type—Type of fiber. SM is single-mode. • Xcvr vendor—Transceiver vendor name. • Xcvr vendor part number—Transceiver vendor part number. • Wavelength—Wavelength of the transmitted signal. Uplinks and downlinks are always 1550 nm. There is a separate fiber for each direction • Xcvr Firmware—Transceiver firmware version.
PIC Port Information (MX960 Router Bidirectional Optics)	<p>Port-level information for the PIC.</p> <ul style="list-style-type: none"> • Port—Port number • Cable type—Type of small form-factor pluggable (SFP) optical transceiver installed. Uplink interfaces display -U. Down link interfaces display -D. • Fiber type—Type of fiber. SM is single-mode. • Xcvr vendor—Transceiver vendor name. • Xcvr vendor part number—Transceiver vendor part number. <ul style="list-style-type: none"> • BX10-10-km bidirectional optics. • BX40-40-km bidirectional optics. • SFP-LX-40-km SFP optics. • Wavelength—Wavelength of the transmitted signal. Uplinks are always 1310 nm. Downlinks are either 1490 nm or 1550 nm.
PIC Port Information (Next-Generation SONET/SDH SFP)	<p>Port-level information for the next-generation SONET/SDH SFP PIC.</p> <ul style="list-style-type: none"> • Port—Port number. • Cable type—Type of small form-factor pluggable (SFP) optical transceiver installed. • Fiber type—Type of fiber: SM (single-mode) or MM (multimode). • Xcvr vendor—Transceiver vendor name. • Xcvr vendor part number—Transceiver vendor part number. • Wavelength—Wavelength of the transmitted signal. Next-generation SONET/SDH SFPs use 1310 nm.
PIC port information (MX104 router)	<p>Port-level information for the PIC.</p> <ul style="list-style-type: none"> • Port—Port number • Cable type—Type of optical transceiver installed. • Fiber type—Type of fiber. SM is single-mode. • Xcvr vendor—Transceiver vendor name. • Xcvr vendor part number—Transceiver vendor part number. • Wavelength—Wavelength of the transmitted signal. • Xcvr Firmware—Firmware version of the transceiver.

Table 11: show chassis pic Output Fields (*continued*)

Field Name	Field Description
Port speed information	Information pertaining to port speed: <ul style="list-style-type: none"> • Port—Port number. • PFE—Packet Forwarding Engine slot number. • Capable Port Speed—Speed supported by each port.
Multirate Mode	Rate-selectability status for the MIC: Enabled or Disabled .
Channelization	Indicates whether channelization is enabled or disabled on the DS3/E3 MIC.
Administrative State	Indicates the administrative state of the PIC. Possible values are: In Service (Default) and Out of Service.
Operational State	Indicates the operational state of the PIC. Possible values are: Normal and Fault.

show forwarding-options port-mirroring

Syntax	show forwarding-options port-mirroring <terse detail> <instance-name>
Release Information	Command introduced in Junos OS Release 9.6. Command introduced in Junos OS Release 12.3R2 for EX Series switches.
Description	Display current state of port-mirroring instances.
Options	terse detail —(Optional) Display the specified level of output. instance-name —(Optional) Display a single port-mirroring instance.
Required Privilege Level	view
Related Documentation	
List of Sample Output	show forwarding-options port-mirroring terse on page 490 show forwarding-options port-mirroring detail on page 490
Output Fields	Table 12 on page 489 lists the output fields for the show forwarding-options port-mirroring command. Output fields are listed in the approximate order in which they appear.

Table 12: show forwarding-options port-mirroring Output Fields

Field Name	Field Description	Level of Output
Instance Name	Name of port-mirroring instance.	All levels
Instance Id	Instance identification number.	All levels
State	Instance state, either up or down .	All levels
Input parameters		
Rate	Rate (ratio of packets sampled).	detail
Run-length	Run length (number of consecutive packets sampled).	detail
Maximum-packet-length	Maximum packet length.	detail
Output parameters		
Family	Protocol family.	detail
State	Instance state, either up or down .	detail

clear firewall

List of Syntax [Syntax on page 491](#)
 [Syntax \(EX Series Switches\) on page 491](#)

Syntax clear firewall (all | counter *counter-name* | filter *filter-name* | log (all | *logical-system-name*) | logical-system *logical-system-name*)

Syntax (EX Series Switches) clear firewall (all | counter *counter-name* | filter *filter-name* | log (all | *logical-system-name*) | policer counter (all | counter-id *counter-index*))

Release Information Command introduced before Junos OS Release 7.4.
 Command introduced in Junos OS Release 9.0 for EX Series switches.
 logical-system option introduced in Junos OS Release 9.3.
 log option introduced before Junos OS Release 11.4.

Description Clear statistics about configured firewall filters.

When you clear the counters of a filter, this impacts not only the counters shown by the CLI, but also the ones tracked by SNMP2.

Subscriber management uses firewall filters to capture and report the volume-based service accounting counters that are used for subscriber billing. The **clear firewall** command also clears the service accounting counters that are reported to the RADIUS accounting server. For this reason, you must be cautious in specifying which firewall statistics you want to clear.

NOTE: The **clear firewall** command cannot be used to clear the Routing Engine filter counters on a backup Routing Engine that is enabled for graceful Routing Engine switchover (GRES).

If you clear statistics for firewall filters that are applied to Trio-based DPCs and that also use the **prefix-action** action on matched packets, wait at least 5 seconds before you enter the **show firewall prefix-action-stats** command. A 5-second pause between issuing the **clear firewall** and **show firewall prefix-action-stats** commands avoids a possible timeout of the **show firewall prefix-action-stats** command.

Options **all**—Clear the packet and byte counts for all filters. On EX Series switches, this option also clears the packet counts for all policer counters.

counter *counter-name*—Clear the packet and byte counts for a filter counter that has been configured with the counter firewall filter action.

filter *filter-name*—Clear the packet and byte counts for the specified firewall filter.

log (all | *logical-system-name*)—Clear log entries for IPv4 firewall filters that have **then log** as an action. Use **log all** to clear all log entries or **log *logical-system-name*** to clear log entries for the specified logical system.

logical-system *logical-system-name*—Clear the packet and byte counts for the specified logical system.

policer counter (all | counter-id *counter-index*)—(EX8200 switches only) Clear all policer counters using the **policer counter all** command, or clear a specific policer counter using the **policer counter counter-id *counter-index*** command. The value of *counter-index* can be 0, 1, or 2.

Required Privilege Level

Release Information Command introduced before Junos OS Release 7.4.
 Command introduced in Junos OS Release 9.0 for EX Series switches.
 Option **logical-system** introduced in Junos OS Release 9.3.
 Option **terse** introduced in Junos OS Release 9.4.
 Option **policer counters** introduced in Junos OS Release 12.2 for EX Series switches.
 Option **detail** introduced in Junos OS Release 12.3 for EX Series switches.
 Option **detail** introduced in Junos OS Release 14.1 for MX Series routers.
 Option **regex *regular-expression*** introduced in Junos OS Release 14.2.

Description Display enhanced statistics and counters for all configured firewall filters.

Options **none**—(Optional) Display statistics and counters for all configured firewall filters and counters. For EX Series switches, this command also displays statistics about all configured policers.

application (CFM | eswd | RMPS)—(Optional) Show firewall elements owned by the selected software component:

- Connectivity Fault Management (CFM)
- Ethernet switching daemon (eswd)—Shows only on devices that support it.
- Resource Management and Packet Steering (RMPS)

counter *counter-name*—(Optional) Name of a filter counter.

detail—(EX Series switches and MX Series routers only) (Optional) Display firewall filter statistics and enhanced policer statistics and counters.

filter *filter-name*—(Optional) Name of a configured filter.

filter regex *regular-expression*—(Optional) Regular expression that matches the names of a subset of filters.

logical-system (all | *logical-system-name*)—(Optional) Perform this operation on all logical systems or on a particular logical system.

log—(Optional) Display log entries for firewall filters.

log <(detail | interface *interface-name*)>—(EX Series switches only) (Optional) Display detailed log entries of firewall activity or log information about a specific interface.

policer counters <(detail | counter-id *counter-index* <detail>)>—(EX8200 switches only) (Optional) Display enhanced policer counter statistics in brief or in detail.

terse—(Optional) Display firewall filter names only.

Output Fields

[Table 13 on page 495](#) lists the output fields for the **show firewall** command. Output fields are listed in the approximate order in which they appear.

Table 13: show firewall Output Fields

Field Name	Field Description
Filter	<p>Name of a filter that has been configured with the filter statement at the [edit firewall] hierarchy level.</p> <p>Except on EX Series switches:</p> <ul style="list-style-type: none"> When an interface-specific filter is displayed, the name of the filter is followed by the full interface name and by either -i for an input filter or -o for an output filter. When dynamic filters are displayed, the name of the filter is followed by the full interface name and by either -in for an input filter or -out for an output filter. When a logical system-specific filter is displayed, the name of the filter is prefixed with two underscore (__) characters and the name of the logical system (for example, __ls1/filter1). When a service filter is displayed that uses a service set, the separator between the service-set name and the service-filter name is a semicolon (:). <p>NOTE: For bridge family filter, the ip-protocol match criteria is supported only for IPv4 and not for IPv6. This is applicable for line cards that support the Junos Trio chipset, such as the MX 3D MPC line cards.</p>
Counters	<p>Display filter counter information:</p> <ul style="list-style-type: none"> Name—Name of a filter counter that has been configured with the counter firewall filter action. Bytes—Number of bytes that match the filter term under which the counter action is specified. Packets—Number of packets that matched the filter term under which the counter action is specified. <p>NOTE: On M and T Series routers, firewall filters cannot count ip-options packets on a per option type and per interface basis. A limited work around is to use the show pfe statistics ip options command to see ip-options statistics on a per Packet Forwarding Engine (PFE) basis. See <i>show pfe statistics ip</i> for sample output.</p>
Policers	<p>Display policer information:</p> <ul style="list-style-type: none"> Name—Name of policer. Bytes—(For two-color policers on MX Series routers and EX Series switches, and for hierarchical policers on interfaces hosted on MICs and MPCs in MX Series routers) Number of bytes that match the filter term under which the policer action is specified. This is only the number out-of-specification (out-of-spec) byte counts, not all the bytes in all packets policed by the policer. For other combinations of policer type, device, and line card type, this field is blank. Packets—Number of packets that matched the filter term under which the policer action is specified. This is only the number of out-of-specification (out-of-spec) packet counts, not all packets policed by the policer.
Policer Counter Index	(EX8200 switch only) Global management counter ID. The counter ID value (<i>counter-index</i>) can be 0, 1, or 2.
Green	(EX8200 switch only) Number of packets within the limits. The number of packets is smaller than the committed information rate (CIR).
Yellow	(EX8200 switch only) Number of packets partially within the limits. The number of packets is greater than the CIR, but the burst size is within the excess burst size (EBS) limit.

Table 13: show firewall Output Fields (*continued*)

Field Name	Field Description
Discard	(EX8200 switch only) Number of discarded packets.
Bytes	(EX8200 switch only) Number of green, yellow, red, or discarded packets in bytes.
Packets	(EX8200 switch only) Number of green, yellow, red, or discarded packets.
Filter name	(EX8200 switch only) Name of the filter with a term associated to a policer.
Term name	(EX8200 switch only) Name of the term associated with a policer.
Policer name	(EX8200 switch only) Name of the policer that is associated with a global management counter.
P1-t1	<ul style="list-style-type: none"> • OOS packet statistics for packets that are marked out-of-specification (out-of-spec) by the policer. Changes to all packets that have out-of-spec actions, such as discard, color marking, or forwarding-class, are included in this counter. • Offered packet statistics for traffic subjected to policing. • Transmitted packet statistics for traffic that is not discarded by the policer. When the policer action is discard, the statistics are the same as the in-spec statistics; when the policer action is non-discard (loss-priority or forwarding-class), the statistics are included in this counter.

show firewall log

List of Syntax [Syntax on page 501](#)
[Syntax \(EX Series Switches\) on page 501](#)

Syntax show firewall log
 <detail>
 <extensive>
 <interface *interface-name*>
 <logical-system (*logical-system-name* | all)>

Syntax (EX Series Switches) show firewall log
 <detail>
 <interface *interface-name*>

Release Information Command introduced before Junos OS Release 7.4.
 Command introduced in Junos OS Release 9.0 for EX Series switches.
extensive option introduced in Junos OS Release 16.1.
logical-system option introduced in Junos OS Release 9.3.

Description Display log information about firewall filters.

Options **none**—Display log information about firewall filters.
detail—(Optional) Display detailed information.
extensive—(Optional) Display hex dump of packet captured by log action.
interface *interface-name*—(Optional) Display log information about a specific interface.
logical-system (*logical-system-name* | all)—(Optional) Perform this operation on all logical systems or on a particular system.

Required Privilege Level view

List of Sample Output [show firewall log on page 502](#)
[show firewall log detail on page 502](#)
[show firewall log extensive on page 503](#)

Output Fields [Table 14 on page 501](#) lists the output fields for the **show firewall log** command. Output fields are listed in the approximate order in which they appear.

Table 14: show firewall log Output Fields

Field Name	Field Description
Time of Log	Time that the event occurred.

Table 14: show firewall log Output Fields (*continued*)

Field Name	Field Description
Filter	<ul style="list-style-type: none"> Displays the name of a configured firewall filter or service filter only if the packet hit the filter's log action in a kernel filter (in the control plane). For any traffic that reaches the Routing Engine, the packets hit the log action in the kernel. For all other logged packets (packet hit the filter's log action in the Packet Forwarding Engine), this field displays pfe instead of a configured filter name.
Filter Action	Filter action: <ul style="list-style-type: none"> A—Accept D—Discard R—Reject
Name of Interface	<ul style="list-style-type: none"> Displays a physical interface name if the packet arrived at a port on a line card. Displays local if the packet was generated by the device's internal Ethernet interface, em1 or fxp1, which connects the Routing Engine with the router's packet-forwarding components.
Name of protocol	Packet's protocol name: egp , gre , icmp , ipip , ospf , pim , rsvp , tcp , or udp .
Packet length	Length of the packet.
Source address	Packet's source address.
Destination address	Packet's destination address and port.

Sample Output

show firewall log

```

user@host>show firewall log
Time      Filter  Action Interface  Protocol  Src Addr  Dest Addr
13:10:12  pfe      D      rlsq0.902    ICMP      192.0.2.2  192.0.2.1
13:10:11  pfe      D      rlsq0.902    ICMP      192.0.2.2  192.0.2.1

show forwarding-options next-hop-group

Syntax	show forwarding-options next-hop-group <terse brief detail> <group-name>
Release Information	Command introduced in Junos OS Release 9.6. Command introduced in Junos OS Release 12.3R2 for EX Series switches. Support for IPv6 introduced in Junos OS Release 14.2 for the MX Series routers.
Description	Display current state of next-hop groups.
Options	terse brief detail —(Optional) Display the specified level of output. group-name —(Optional) Display a single next-hop group.
Required Privilege Level	view
Related Documentation	<ul style="list-style-type: none"> • show forwarding-options port-mirroring on page 489
List of Sample Output	show forwarding-options next-hop-group terse on page 505 show forwarding-options next-hop-group brief on page 505 show forwarding-options next-hop-group detail on page 505
Output Fields	Table 15 on page 504 lists the output fields for the show forwarding-options next-hop-group command. Output fields are listed in the approximate order in which they appear.

Table 15: show forwarding-options next-hop-group Output Fields

Field Name	Field Description	Level of Output
Next-hop-group	Name of next-hop group.	All levels
Type	Next-hop group type, such as inet , inet6 or layer-2 .	All levels
State	Next-hop group state, either up or down .	All levels
Members Interfaces	Names of interfaces to which next-hop group members belong.	brief detail
Member Subgroup	Names of subgroups to which next-hop group members belong.	brief detail
Number of members configured	Number of next-hop group members configured.	detail

Table 15: show forwarding-options next-hop-group Output Fields (*continued*)

Field Name	Field Description	Level of Output
Number of members that are up	Number of next-hop group members that are up.	detail
Number of subgroups configured	Number of subgroups configured.	detail
Number of subgroups that are up	Number of subgroups that are up.	detail

show forwarding-options analyzer

Syntax	show forwarding-options analyzer <i>analyzer-name</i>
Release Information	Hierarchy level [edit forwarding-options] introduced in Junos OS Release 13.2X50-D10 (ELS).
Description	Display information about analyzers configured for mirroring.
Options	<i>analyzer-name</i> —(Optional) Displays the status of a specific analyzer on the switch.
Required Privilege Level	view
Related Documentation	<ul style="list-style-type: none"> <i>Understanding Port Mirroring and Analyzers on EX2300, EX3400, and EX4300 Switches</i>
List of Sample Output	show forwarding-options analyzer on page 507
Output Fields	Table 16 on page 507 lists the output fields for the show forwarding-options analyzer command. Output fields are listed in the approximate order in which they appear.

Table 16: show forwarding-options analyzer Output Fields

Field Name	Field Description
Analyzer name	Displays the name of the analyzer.
Output interface	Specifies a local interface to which mirrored packets are sent. An analyzer can have output to either an interface or a VLAN, not both.
Output VLAN	Specifies a VLAN to which mirrored packets are sent. An analyzer can have output to either an interface or a VLAN, not both.
Mirror ratio	Displays the ratio of packets to be mirrored.
Egress monitored interfaces	Displays interfaces for which traffic exiting the interfaces is mirrored.
Ingress monitored interfaces	Displays interfaces for which traffic entering the interfaces is mirrored.
Ingress monitored VLANs	Displays VLANs for which traffic entering the VLAN is mirrored.

Sample Output

show forwarding-options analyzer

```
user@switch> show forwarding-options analyzer
```

```
Analyzer name           : employee-monitor
Mirror rate             : 1
Maximum packet length   : 0
State                   : up
Ingress monitored interfaces : ge-0/0/0.0
Ingress monitored interfaces : ge-0/0/1.0
Output VLAN             : default-switch/remote-analyzer
```
