<b>Flags</b>	Information about protocol family flags. Possible values are described in the “Family Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	<b>detail extensive</b>
<b>Donor interface</b>	(Unnumbered Ethernet) Interface from which an unnumbered Ethernet interface borrows an IPv4 address.	<b>detail extensive</b> <b>none</b>
<b>Preferred source address</b>	(Unnumbered Ethernet) Secondary IPv4 address of the donor loopback interface that acts as the preferred source address for the unnumbered Ethernet interface.	<b>detail extensive</b> <b>none</b>
<b>Input Filters</b>	Names of any input filters applied to this interface. If you specify a precedence value for any filter in a dynamic profile, filter precedence values appear in parenthesis next to all interfaces.	<b>detail extensive</b>
<b>Output Filters</b>	Names of any output filters applied to this interface. If you specify a precedence value for any filter in a dynamic profile, filter precedence values appear in parenthesis next to all interfaces.	<b>detail extensive</b>
<b>Mac-Validate Failures</b>	Number of MAC address validation failures for packets and bytes. This field is displayed when MAC address validation is enabled for the logical interface.	<b>detail extensive</b> <b>none</b>
<b>Addresses, Flags</b>	Information about the address flags. Possible values are described in the “Addresses Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	<b>detail extensive</b> <b>none</b>
<b><i>protocol-family</i></b>	Protocol family configured on the logical interface. If the protocol is <b>inet</b> , the IP address of the interface is also displayed.	<b>brief</b>
<b>Flags</b>	Information about address flag (possible values are described in the “Addresses Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	<b>detail extensive</b> <b>none</b>
<b>Destination</b>	IP address of the remote side of the connection.	<b>detail extensive</b> <b>none</b>
<b>Local</b>	IP address of the logical interface.	<b>detail extensive</b> <b>none</b>
<b>Broadcast</b>	Broadcast address of the logical interlace.	<b>detail extensive</b> <b>none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>

For Gigabit Ethernet IQ PICs, traffic and MAC statistics output varies. The following table describes the traffic and MAC statistics for two sample interfaces, each of which is sending traffic in packets of 500 bytes (including 478 bytes for the Layer 3 packet, 18 bytes for the Layer 2 VLAN traffic header, and 4 bytes for cyclic redundancy check [CRC] information). The **ge-0/3/0** interface is the inbound physical interface, and the **ge-0/0/0** interface is the outbound physical interface. On both interfaces, traffic is carried on logical unit **.50** (VLAN 50).

**Table 57: Gigabit and 10 Gigabit Ethernet IQ PIC Traffic and MAC Statistics by Interface Type**

Interface Type	Sample Command	Byte and Octet Counts Include	Comments
Inbound physical interface	<b>show interfaces ge-0/3/0 extensive</b>	Traffic statistics:  Input bytes: 496 bytes per packet, representing the Layer 2 packet  MAC statistics:  Received octets: 500 bytes per packet, representing the Layer 2 packet + 4 bytes	The additional 4 bytes are for the CRC.
Inbound logical interface	<b>show interfaces ge-0/3/0.50 extensive</b>	Traffic statistics:  Input bytes: 478 bytes per packet, representing the Layer 3 packet	
Outbound physical interface	<b>show interfaces ge-0/0/0 extensive</b>	Traffic statistics:  Input bytes: 490 bytes per packet, representing the Layer 3 packet + 12 bytes  MAC statistics:  Received octets: 478 bytes per packet, representing the Layer 3 packet	For input bytes, the additional 12 bytes include 6 bytes for the destination MAC address plus 4 bytes for VLAN plus 2 bytes for the Ethernet type.
Outbound logical interface	<b>show interfaces ge-0/0/0.50 extensive</b>	Traffic statistics:  Input bytes: 478 bytes per packet, representing the Layer 3 packet	

[Table 58 on page 1157](#) lists the output fields for the **show interfaces** command. Output fields are listed in the approximate order in which they appear.

Table 58: show interfaces Output Fields

Field Name	Field Description	Level of Output
<b>Physical Interface</b>		
<b>Physical interface</b>	Name of the physical interface.	All levels
<b>Enabled</b>	State of the interface.	All levels
<b>Interface index</b>	Index number of the physical interface, which reflects its initialization sequence.	<b>detail extensive none</b>
<b>SNMP ifIndex</b>	SNMP index number for the physical interface.	<b>detail extensive none</b>
<b>Link-level type</b>	Encapsulation being used on the physical interface.	All levels
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>MTU</b>	Maximum transmission unit size on the physical interface.	All levels
<b>Link mode</b>	Link mode: Full-duplex or Half-duplex.	
<b>Speed</b>	Speed at which the interface is running.	All levels
<b>BPDU error</b>	Bridge protocol data unit (BPDU) error: Detected or None	
<b>Loopback</b>	Loopback status: <b>Enabled</b> or <b>Disabled</b> . If loopback is enabled, type of loopback: <b>Local</b> or <b>Remote</b> .	All levels
<b>Source filtering</b>	Source filtering status: <b>Enabled</b> or <b>Disabled</b> .	All levels
<b>Flow control</b>	Flow control status: <b>Enabled</b> or <b>Disabled</b> .	All levels
<b>Auto-negotiation</b>	(Gigabit Ethernet interfaces) Autonegotiation status: <b>Enabled</b> or <b>Disabled</b> .	All levels
<b>Remote-fault</b>	(Gigabit Ethernet interfaces) Remote fault status: <ul style="list-style-type: none"> <li>• <b>Online</b>—Autonegotiation is manually configured as online.</li> <li>• <b>Offline</b>—Autonegotiation is manually configured as offline.</li> </ul>	All levels
<b>Device flags</b>	Information about the physical device.	All levels
<b>Interface flags</b>	Information about the interface.	All levels
<b>Link flags</b>	Information about the physical link.	All levels
<b>CoS queues</b>	Number of CoS queues configured.	<b>detail extensive none</b>
<b>Current address</b>	Configured MAC address.	<b>detail extensive none</b>

Table 58: show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Last flapped</b>	Date, time, and how long ago the interface went from down to up. The format is <b>Last flapped: year-month-day hour:minute:second:timezone (hour:minute:second ago)</b> . For example, <b>Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> .	<b>detail extensive none</b>
<b>Input Rate</b>	Input rate in bits per second (bps) and packets per second (pps).	None
<b>Output Rate</b>	Output rate in bps and pps.	None
<b>Active alarms and Active defects</b>	<p>Ethernet-specific defects that can prevent the interface from passing packets. When a defect persists for a certain amount of time, it is promoted to an alarm. These fields can contain the value <b>None</b> or <b>Link</b>.</p> <ul style="list-style-type: none"> <li>• <b>None</b>—There are no active defects or alarms.</li> <li>• <b>Link</b>—Interface has lost its link state, which usually means that the cable is unplugged, the far-end system has been turned off, or the PIC is malfunctioning.</li> </ul>	<b>detail extensive none</b>
<b>Statistics last cleared</b>	Time when the statistics for the interface were last set to zero.	<b>detail extensive</b>
<b>Traffic statistics</b>	<p>Number and rate of bytes and packets received and transmitted on the physical interface.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>	<b>detail extensive</b>

Table 58: show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Input errors</b>	<p>Input errors on the interface.</p> <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of the incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Runts</b>—Number of frames received that are smaller than the runt threshold.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that Junos OS does not handle.</li> <li>• <b>L3 incompletes</b>—Number of incoming packets discarded because they failed Layer 3 (usually IPv4) sanity checks of the header. For example, a frame with less than 20 bytes of available IP header is discarded. L3 incomplete errors can be ignored by configuring the <code>ignore-l3-incompletes</code>.</li> <li>• <b>L2 channel errors</b>—Number of times the software did not find a valid logical interface for an incoming frame.</li> <li>• <b>L2 mismatch timeouts</b>—Number of malformed or short packets that caused the incoming packet handler to discard the frame as unreadable.</li> <li>• <b>FIFO errors</b>—Number of FIFO errors in the receive direction that are reported by the ASIC on the PIC. If this value is ever nonzero, the PIC is probably malfunctioning.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>	<b>extensive</b>
<b>Output errors</b>	<p>Output errors on the interface.</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and then up, or another problem occurs. If the number of carrier transitions increments quickly (perhaps once every 10 seconds), the cable, the far-end system, or the PIC or PIM is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Collisions</b>—Number of Ethernet collisions. The Gigabit Ethernet PIC supports only full-duplex operation; therefore, for Gigabit Ethernet PICs, this number must always remain 0. If it is nonzero, there is a software bug.</li> <li>• <b>Aged packets</b>—Number of packets that remained in shared packet SDRAM so long that the system automatically purged them. The value in this field must never increment. If it does, it is most likely a software bug or possibly malfunctioning hardware.</li> <li>• <b>FIFO errors</b>—Number of FIFO errors in the send direction as reported by the ASIC on the PIC. If this value is ever nonzero, the PIC is probably malfunctioning.</li> <li>• <b>HS link CRC errors</b>—Number of errors on the high-speed links between the ASICs responsible for handling the interfaces.</li> <li>• <b>MTU errors</b>—Number of packets whose size exceeded the MTU of the interface.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>	<b>extensive</b>

Table 58: show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Ingress queues</b>	Total number of ingress queues supported on the specified interface.	<b>extensive</b>
<b>Queue counters and queue number</b>	<p>CoS queue number and its associated user-configured forwarding class name.</p> <ul style="list-style-type: none"> <li>• <b>Queued packets</b>—Number of queued packets.</li> <li>• <b>Transmitted packets</b>—Number of transmitted packets.</li> <li>• <b>Dropped packets</b>—Number of packets dropped by the ASIC's RED mechanism.</li> </ul>	<b>detail extensive</b>
<b>MAC statistics</b>	<p>Receive and Transmit statistics reported by the PIC's MAC subsystem, including the following:</p> <ul style="list-style-type: none"> <li>• <b>Total octets and total packets</b>—Total number of octets and packets.</li> <li>• <b>Unicast packets, Broadcast packets, and Multicast packets</b>—Number of unicast, broadcast, and multicast packets.</li> <li>• <b>CRC/Align errors</b>—Total number of packets received that had a length (excluding framing bits, but including FCS octets) of between 64 and 1518 octets, inclusive, and had either a bad FCS with an integral number of octets (FCS Error) or a bad FCS with a nonintegral number of octets (Alignment Error).</li> <li>• <b>FIFO error</b>—Number of FIFO errors that are reported by the ASIC on the PIC. If this value is ever nonzero, the PIC or a cable is probably malfunctioning.</li> <li>• <b>MAC control frames</b>—Number of MAC control frames.</li> <li>• <b>MAC pause frames</b>—Number of MAC control frames with <b>pause</b> operational code.</li> <li>• <b>Oversized frames</b>—There are two possible conditions regarding the number of oversized frames: <ul style="list-style-type: none"> <li>• Packet length exceeds 1518 octets, or</li> <li>• Packet length exceeds MRU</li> </ul> </li> <li>• <b>Jabber frames</b>—Number of frames that were longer than 1518 octets (excluding framing bits, but including FCS octets), and had either an FCS error or an alignment error. This definition of jabber is different from the definition in IEEE-802.3 section 8.2.1.5 (10BASE5) and section 10.3.1.4 (10BASE2). These documents define jabber as the condition in which any packet exceeds 20 ms. The allowed range to detect jabber is from 20 ms to 150 ms.</li> <li>• <b>Fragment frames</b>—Total number of packets that were less than 64 octets in length (excluding framing bits, but including FCS octets) and had either an FCS error or an alignment error. Fragment frames normally increment because both runts (which are normal occurrences caused by collisions) and noise hits are counted.</li> <li>• <b>VLAN tagged frames</b>—Number of frames that are VLAN tagged. The system uses the TPID of 0x8100 in the frame to determine whether a frame is tagged or not.</li> <li>• <b>Code violations</b>—Number of times an event caused the PHY to indicate "Data reception error" or "invalid data symbol error."</li> </ul>	<b>extensive</b>

Table 58: show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
Filter statistics	<p>Receive and Transmit statistics reported by the PIC's MAC address filter subsystem. The filtering is done by the content-addressable memory (CAM) on the PIC. The filter examines a packet's source and destination MAC addresses to determine whether the packet should enter the system or be rejected.</p> <ul style="list-style-type: none"> <li>• <b>Input packet count</b>—Number of packets received from the MAC hardware that the filter processed.</li> <li>• <b>Input packet rejects</b>—Number of packets that the filter rejected because of either the source MAC address or the destination MAC address.</li> <li>• <b>Input DA rejects</b>—Number of packets that the filter rejected because the destination MAC address of the packet is not on the accept list. It is normal for this value to increment. When it increments very quickly and no traffic is entering the device from the far-end system, either there is a bad ARP entry on the far-end system, or multicast routing is not on and the far-end system is sending many multicast packets to the local device (which the router is rejecting).</li> <li>• <b>Input SA rejects</b>—Number of packets that the filter rejected because the source MAC address of the packet is not on the accept list. The value in this field should increment only if source MAC address filtering has been enabled. If filtering is enabled, if the value increments quickly, and if the system is not receiving traffic that it should from the far-end system, it means that the user-configured source MAC addresses for this interface are incorrect.</li> <li>• <b>Output packet count</b>—Number of packets that the filter has given to the MAC hardware.</li> <li>• <b>Output packet pad count</b>—Number of packets the filter padded to the minimum Ethernet size (60 bytes) before giving the packet to the MAC hardware. Usually, padding is done only on small ARP packets, but some very small IP packets can also require padding. If this value increments rapidly, either the system is trying to find an ARP entry for a far-end system that does not exist or it is misconfigured.</li> <li>• <b>Output packet error count</b>—Number of packets with an indicated error that the filter was given to transmit. These packets are usually aged packets or are the result of a bandwidth problem on the FPC hardware. On a normal system, the value of this field should not increment.</li> <li>• <b>CAM destination filters, CAM source filters</b>—Number of entries in the CAM dedicated to destination and source MAC address filters. There can only be up to 64 source entries. If source filtering is disabled, which is the default, the values for these fields must be 0.</li> </ul>	extensive
Autonegotiation information	<p>Information about link autonegotiation.</p> <ul style="list-style-type: none"> <li>• <b>Negotiation status:</b> <ul style="list-style-type: none"> <li>• <b>Incomplete</b>—Ethernet interface has the speed or link mode configured.</li> <li>• <b>No autonegotiation</b>—Remote Ethernet interface has the speed or link mode configured, or does not perform autonegotiation.</li> <li>• <b>Complete</b>—Ethernet interface is connected to a device that performs autonegotiation and the autonegotiation process is successful.</li> </ul> </li> </ul>	extensive
Packet Forwarding Engine configuration	<p>Information about the configuration of the Packet Forwarding Engine:</p> <ul style="list-style-type: none"> <li>• <b>Destination slot</b>—FPC slot number.</li> </ul>	extensive

Table 58: show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>CoS information</b>	Information about the CoS queue for the physical interface. <ul style="list-style-type: none"> <li>• <b>CoS transmit queue</b>—Queue number and its associated user-configured forwarding class name.</li> <li>• <b>Bandwidth %</b>—Percentage of bandwidth allocated to the queue.</li> <li>• <b>Bandwidth bps</b>—Bandwidth allocated to the queue (in bps).</li> <li>• <b>Buffer %</b>—Percentage of buffer space allocated to the queue.</li> <li>• <b>Buffer usec</b>—Amount of buffer space allocated to the queue, in microseconds. This value is nonzero only if the buffer size is configured in terms of time.</li> <li>• <b>Priority</b>—Queue priority: <b>low</b> or <b>high</b>.</li> <li>• <b>Limit</b>—Displayed if rate limiting is configured for the queue. Possible values are <b>none</b> and <b>exact</b>. If <b>exact</b> is configured, the queue transmits only up to the configured bandwidth, even if excess bandwidth is available. If <b>none</b> is configured, the queue transmits beyond the configured bandwidth if bandwidth is available.</li> </ul>	<b>extensive</b>
<b>Interface transmit statistics</b>	Status of the <b>interface-transmit-statistics</b> configuration: Enabled or Disabled.	<b>detail extensive</b>
<b>Queue counters (Egress)</b>	CoS queue number and its associated user-configured forwarding class name. <ul style="list-style-type: none"> <li>• <b>Queued packets</b>—Number of queued packets.</li> <li>• <b>Transmitted packets</b>—Number of transmitted packets.</li> <li>• <b>Dropped packets</b>—Number of packets dropped by the ASIC's RED mechanism.</li> </ul>	<b>detail extensive</b>
<b>Logical Interface</b>		
<b>Logical interface</b>	Name of the logical interface.	All levels
<b>Index</b>	Index number of the logical interface, which reflects its initialization sequence.	<b>detail extensive none</b>
<b>SNMP ifIndex</b>	SNMP interface index number for the logical interface.	<b>detail extensive none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Flags</b>	Information about the logical interface.	All levels
<b>Encapsulation</b>	Encapsulation on the logical interface.	All levels
<b>Traffic statistics</b>	Number and rate of bytes and packets received and transmitted on the specified interface set. <ul style="list-style-type: none"> <li>• <b>Input bytes, Output bytes</b>—Number of bytes received and transmitted on the interface set. The value in this field also includes the Layer 2 overhead bytes for ingress or egress traffic on Ethernet interfaces if you enable accounting of Layer 2 overhead at the PIC level or the logical interface level.</li> <li>• <b>Input packets, Output packets</b>—Number of packets received and transmitted on the interface set.</li> </ul>	<b>detail extensive</b>

Table 58: show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Local statistics</b>	Number and rate of bytes and packets destined to the device.	<b>extensive</b>
<b>Transit statistics</b>	Number and rate of bytes and packets transiting the switch.  <b>NOTE:</b> For Gigabit Ethernet intelligent queuing 2 (IQ2) interfaces, the logical interface egress statistics might not accurately reflect the traffic on the wire when output shaping is applied. Traffic management output shaping might drop packets after they are tallied by the <b>Output bytes</b> and <b>Output packets</b> interface counters. However, correct values display for both of these egress statistics when per-unit scheduling is enabled for the Gigabit Ethernet IQ2 physical interface, or when a single logical interface is actively using a shared scheduler.	<b>extensive</b>
<b>Security</b>	Security zones that interface belongs to.	<b>extensive</b>
<b>Flow Input statistics</b>	Statistics on packets received by flow module.	<b>extensive</b>
<b>Flow Output statistics</b>	Statistics on packets sent by flow module.	<b>extensive</b>
<b>Flow error statistics (Packets dropped due to)</b>	Statistics on errors in the flow module.	<b>extensive</b>
<b>Protocol</b>	Protocol family.	<b>detail extensive none</b>
<b>MTU</b>	Maximum transmission unit size on the logical interface.	<b>detail extensive none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Route Table</b>	Route table in which the logical interface address is located. For example, 0 refers to the routing table inet.0.	<b>detail extensive none</b>
<b>Flags</b>	Information about protocol family flags. .	<b>detail extensive</b>
<b>Addresses, Flags</b>	Information about the address flags..	<b>detail extensive none</b>
<b>Destination</b>	IP address of the remote side of the connection.	<b>detail extensive none</b>
<b>Local</b>	IP address of the logical interface.	<b>detail extensive none</b>
<b>Broadcast</b>	Broadcast address of the logical interface.	<b>detail extensive none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>

## Sample Output Gigabit Ethernet

### show interfaces (Gigabit Ethernet)

```
user@host> show interfaces ge-3/0/2
Physical interface: ge-3/0/2, Enabled, Physical link is Up
  Interface index: 167, SNMP ifIndex: 35
  Link-level type: 52, MTU: 1522, Speed: 1000mbps, Loopback: Disabled,
  Source filtering: Disabled, Flow control: Enabled, Auto-negotiation: Enabled
  Remote fault: Online

**NOTE:** For Gigabit Ethernet intelligent queuing 2 (IQ2) interfaces, the logical interface egress statistics displayed in the **show interfaces** command output might not accurately reflect the traffic on the wire when output shaping is applied. Traffic management output

shaping might drop packets after they are tallied by the interface counters. For detailed information, see the description of the logical interface **Transit statistics** fields in [Table 56 on page 1127](#).

## show interfaces (ATM)

---

<b>Syntax</b>	<code>show interfaces at-<i>fpc/pic/port</i></code> <code>&lt;brief   detail   extensive   terse&gt;</code> <code>&lt;descriptions&gt;</code> <code>&lt;media&gt;</code> <code>&lt;snmp-index <i>snmp-index</i>&gt;</code> <code>&lt;statistics&gt;</code>
<b>Release Information</b>	Command introduced before Junos OS Release 7.4.
<b>Description</b>	(M Series and T Series routers only) Display status information about the specified ATM interface.
<b>Options</b>	<b>at-<i>fpc/pic/port</i></b> —Display standard information about the specified ATM interface. <b>brief   detail   extensive   terse</b> —(Optional) Display the specified level of output. <b>descriptions</b> —(Optional) Display interface description strings. <b>media</b> —(Optional) Display media-specific information about network interfaces. <b>snmp-index <i>snmp-index</i></b> —(Optional) Display the SNMP index of the interface. <b>statistics</b> —(Optional) Display static interface statistics.
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">show interfaces (ATM, IMA Group) on page 1217</a> <a href="#">show interfaces extensive (ATM IMA Group) on page 1218</a> <a href="#">show interfaces (ATM1, SONET Mode) on page 1219</a> <a href="#">show interfaces brief (ATM1, SONET Mode) on page 1220</a> <a href="#">show interfaces detail (ATM1, SONET Mode) on page 1220</a> <a href="#">show interfaces extensive (ATM1, SONET Mode) on page 1221</a> <a href="#">show interfaces (ATM2, SDH Mode) on page 1223</a> <a href="#">show interfaces brief (ATM2, SDH Mode) on page 1224</a> <a href="#">show interfaces detail (ATM2, SDH Mode) on page 1225</a> <a href="#">show interfaces extensive (ATM2, SDH Mode) on page 1226</a> <a href="#">show interfaces (ATM2, SONET Mode) on page 1229</a> <a href="#">show interfaces brief (ATM2, SONET Mode) on page 1230</a> <a href="#">show interfaces detail (ATM2, SONET Mode) on page 1231</a> <a href="#">show interfaces extensive (ATM2, SONET Mode) on page 1233</a>
<b>Output Fields</b>	<a href="#">Table 59 on page 1203</a> lists the output fields for the <b>show interfaces (ATM)</b> command. Output fields are listed in the approximate order in which they appear.

Table 59: ATM show interfaces Output Fields

Field Name	Field Description	Level of Output
<b>Physical Interface</b>		
<b>Physical interface</b>	Name of the physical interface.	All levels
<b>Enabled</b>	State of the interface. Possible values are described in the “Enabled Field” section under “ <a href="#">Common Output Fields Description</a> ” on page 1114.	All levels
<b>Description</b>	Configured interface description.	All levels
<b>Interface index</b>	Physical interface's index number, which reflects its initialization sequence.	<b>detail extensive</b> none
<b>SNMP ifIndex</b>	SNMP index number for the physical interface.	<b>detail extensive</b> none
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Link-level type</b>	Encapsulation being used on the physical interface: <ul style="list-style-type: none"> <li>• <b>ATM-CCC-CELL-RELAY</b>—ATM cell relay for CCC.</li> <li>• <b>ATM-CCC-VC-MUX</b>—ATM virtual circuit (VC) for CCC.</li> <li>• <b>ATM-CISCO-NLPID</b>—Cisco-compatible ATM NLPID encapsulation.</li> <li>• <b>ATM-MIPP-LLC</b>—ATM MLPPP over ATM Adaptation Layer 5 (AAL5)/logical link control (LLC).</li> <li>• <b>ATM-NLPID</b>—ATM NLPID encapsulation.</li> <li>• <b>ATM-PPP-LLC</b>—ATM PPP over AAL5/LLC.</li> <li>• <b>ATM-PPP-VC-MUX</b>—ATM PPP over raw AAL5.</li> <li>• <b>ATM-PVC</b>—ATM permanent virtual circuits.</li> <li>• <b>ATM-SNAP</b>—ATM LLC/SNAP encapsulation.</li> <li>• <b>ATM-TCC-SNAP</b>—ATM LLC/SNAP for translational cross-connection.</li> <li>• <b>ATM-TCC-VC-MUX</b>—ATM VC for translational cross-connection.</li> <li>• <b>ATM-VC-MUX</b>—ATM VC multiplexing.</li> <li>• <b>ETHER-OVER-ATM-LLC</b>—Ethernet over ATM (LLC/SNAP) encapsulation.</li> <li>• <b>ETHER-VPLS-OVER-ATM-LLC</b>—Ethernet VPLS over ATM (bridging) encapsulation.</li> </ul>	All levels
<b>MTU</b>	MTU size on the physical interface.	All levels
<b>Clocking</b>	Reference clock source: <b>Internal</b> or <b>External</b> .	All levels
<b>framing Mode</b>	Framing mode: <b>SONET</b> or <b>SDH</b> .	All levels
<b>Speed</b>	Speed at which the interface is running as represented by the interface type (for example, <b>OC3</b> , <b>ADSL2+</b> , and <b>SHDSL(2-wire)</b> ).	All levels
<b>Loopback</b>	Whether loopback is enabled and the type of loopback ( <b>local</b> or <b>remote</b> ).	All levels
<b>Payload scrambler</b>	Whether payload scrambling is enabled.	All levels

Table 59: ATM show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Device flags</b>	Information about the physical device. Possible values are described in the “Device Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels
<b>Link flags</b>	Information about the link. Possible values are described in the “Link Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels
<b>CoS queues</b>	Number of CoS queues configured.	<b>detail extensive none</b>
<b>Hold-times</b>	Current interface hold-time up and hold-time down, in milliseconds.	<b>detail extensive</b>
<b>Current address</b>	Ethernet MAC address for this interface for Ethernet over ATM encapsulation.	<b>detail extensive none</b>
<b>Last flapped</b>	Date, time, and how long ago the interface went from down to up. The format is <b>Last flapped: year-month-day hour:minute:second timezone (hour:minute:second ago)</b> . For example, <b>Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> .	<b>detail extensive none</b>
<b>Input Rate</b>	Input rate in bits per second (bps) and packets per second (pps).	None specified
<b>Output Rate</b>	Output rate in bps and pps.	None specified
<b>Statistics last cleared</b>	Time when the statistics for the interface were last set to zero.	<b>detail extensive</b>
<b>Traffic statistics</b>	Statistics for traffic on the interface. <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>	<b>detail extensive</b>

Table 59: ATM show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Input errors</b>	<p>Input errors on the interface whose definitions are as follows:</p> <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of the incoming frame aborts and frame check sequence (FCS) errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's random early detection (RED) mechanism.</li> <li>• <b>Invalid VCs</b>—Number of cells that arrived for a nonexistent VC.</li> <li>• <b>Framing errors</b>—Sum of AAL5 packets that have FCS errors, reassembly timeout errors, and length errors.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that the Junos OS does not handle.</li> <li>• <b>L3 incompletes</b>—Number of incoming packets discarded because they failed Layer 3 (usually IPv4) sanity checks of the header. For example, a frame with less than 20 bytes of available IP header is discarded.</li> <li>• <b>L2 channel errors</b>—Number of times the software did not find a valid logical interface for an incoming frame.</li> <li>• <b>L2 mismatch timeouts</b>—Number of malformed or short packets that caused the incoming packet handler to discard the frame as unreadable.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>	<b>extensive</b>
<b>Output errors</b>	<p>Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and up, or another problem occurs. If the number of carrier transitions increments quickly, increasing only when the cable is unplugged, the far-end system is powered down and then up, or another problem occurs. If it increments quickly (perhaps once every 10 seconds), the cable, the far-end system, or the PIC or PIM is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Aged packets</b>—Number of packets that remained so long in shared packet SDRAM that the system automatically purged them. The value in this field should never increment. If it does, it is most likely a software bug or possibly malfunctioning hardware.</li> <li>• <b>MTU errors</b>—Number of packets larger than the MTU threshold.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>	<b>extensive</b>
<b>Egress queues</b>	Total number of egress queues supported on the specified interface.	<b>detail extensive</b>

Table 59: ATM show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
Queue counters	<p>CoS queue number and its associated user-configured forwarding class name.</p> <ul style="list-style-type: none"> <li>• <b>Queued packets</b>—Number of queued packets.</li> <li>• <b>Transmitted packets</b>—Number of transmitted packets.</li> <li>• <b>Dropped packets</b>—Number of packets dropped by the ASIC's RED mechanism.</li> </ul> <p><b>NOTE:</b> Physical interface queue counters of ATM2 PICs displayed by the <b>show interfaces at-fpc/pic/port detail</b> command show the packet forwarding stream statistics associated with the ATM2 ports. Since multiple ports of the ATM2 PICs (except for the ATM2 dual-port OC12) share one packet forwarding stream, the physical interface queue counters reflect the aggregate of ATM2 port statistics.</p>	detail extensive
SONET alarms	SONET media-specific defects that prevent the interface from passing packets. When a defect persists for a certain period, it is promoted to an alarm. Based on the router configuration, an alarm can ring the red or yellow alarm bell on the router or light the red or yellow alarm LED on the craft interface. See these fields for possible alarms and defects: <b>SONET PHY</b> , <b>SONET section</b> , <b>SONET line</b> , and <b>SONET path</b> .	detail extensive none
SONET defects		
SONET PHY	<p>Counts of specific SONET errors with detailed information.</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. State other than <b>OK</b> indicates a problem.</li> </ul> <p>Subfields are:</p> <ul style="list-style-type: none"> <li>• <b>PLL Lock</b>—Phase-locked loop</li> <li>• <b>PHY Light</b>—Loss of optical signal</li> </ul>	extensive
SONET section	<p>Counts of specific SONET errors with detailed information.</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. State other than <b>OK</b> indicates a problem.</li> </ul> <p>Subfields are:</p> <ul style="list-style-type: none"> <li>• <b>BIP-B1</b>—Bit interleaved parity for SONET section overhead</li> <li>• <b>SEF</b>—Severely errored framing</li> <li>• <b>LOL</b>—Loss of light</li> <li>• <b>LOF</b>—Loss of frame</li> <li>• <b>ES-S</b>—Errored seconds (section)</li> <li>• <b>SES-S</b>—Severely errored seconds (section)</li> <li>• <b>SEFS-S</b>—Severely errored framing seconds (section)</li> </ul>	extensive

Table 59: ATM show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>SONET line</b>	<p>Active alarms and defects, plus counts of specific SONET errors with detailed information.</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. The S1 byte is located in the first STS-1 of an STS-<i>N</i>.</li> <li>• <b>Z3</b> and <b>Z4</b>—These bytes are allocated for future use.</li> </ul>	
Received path trace	SONET/SDH interfaces allow path trace bytes to be sent inband across the SONET/SDH link. Juniper Networks and other router manufacturers use these bytes to help diagnose misconfigurations and network errors by setting the transmitted path trace message so that it contains the system hostname and name of the physical interface. The received path trace value is the message received from the router at the other end of the fiber. The transmitted path trace value is the message that this router transmits.	extensive
Transmitted path trace		
ATM Status	ATM state information: <ul style="list-style-type: none"> <li>• <b>HCS State</b>—Status of the header check sequence. ATM uses the HCS field in the cell header in the cell delineation process to frame ATM cell boundaries. The HCS is an FCS-8 calculation over the first four octets of the ATM cell header.</li> <li>• <b>LOC</b>—Current loss of cell (LOC) delineation state. <b>OK</b> means that no LOC is currently asserted.</li> </ul>	extensive

Table 59: ATM show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
ATM Statistics	<p>ATM statistics for the interface:</p> <ul style="list-style-type: none"> <li>• <b>Uncorrectable HCS errors</b>—Number of cells dropped because the cell delineation failed. These errors most likely indicate that a SONET/SDH layer problem has occurred.</li> <li>• <b>Correctable HCS errors</b>—Number of correctable HCS errors that occurred. The cell delineation process can recover from these errors and locate the ATM cell boundary, although the framing process is not quite stable. The ATM cell is not dropped. This counter increases when the cell delineation process changes its state from <b>present</b> to <b>sync</b> (for example, when a cable is plugged into the interface).</li> </ul> <p>The following error statistics are from the framer:</p> <ul style="list-style-type: none"> <li>• <b>Tx cell FIFO overruns</b>—Number of overruns in the transmit FIFO.</li> <li>• <b>Rx cell FIFO overruns</b>—Number of overruns in the receive FIFO.</li> <li>• <b>Rx cell FIFO underruns</b>—Number of underruns in the receive FIFO.</li> <li>• <b>Input cell count</b>—Number of ATM cells received by the interface (not including idle cells).</li> <li>• <b>Output cell count</b>—Number of ATM cells transmitted by the interface (including idle cells).</li> <li>• <b>Output idle cell count</b>—Number of idle cells sent by the port. When ATM has nothing to send, it sends idle cells to fill the time slot.</li> <li>• <b>Output VC queue drops</b>—Number of packets dropped by a port on the PIC. Packets are dropped because of queue limits on the VCs.</li> </ul> <p>The following error statistics are from the SAR:</p> <ul style="list-style-type: none"> <li>• <b>Input no buffers</b>—Number of AAL5 packets dropped because no channel blocks or buffers were available to handle them.</li> <li>• <b>Input length errors</b>—Number of AAL5 packets dropped because their length was incorrect. Usually, these errors occur because a cell has been corrupted or lost, or because the length field was corrupted. They can also mean the AAL5 length field was zero.</li> <li>• <b>Input timeouts</b>—Number of AAL5 packets dropped because of a reassembly timeout.</li> <li>• <b>Input invalid VCs</b>—Number of AAL5 packets dropped because the header was unrecognized (because the VC was not correct or not configured).</li> <li>• <b>Input bad CRCs</b>—Number of AAL5 packets dropped because of frame check sequence errors.</li> <li>• <b>Input OAM cell no buffers</b>—Number of received OAM cells or raw cells dropped because no buffers were available to handle them.</li> <li>• <b>L2 circuit out-of-sequence packets</b>—(Layer 2 AAL5 mode) Number of AAL5 packets that are out of sequential order.</li> <li>• <b>Denied packets count</b>—The number of packets dropped due to VLAN priority deny packets or due to an error forwarding configuration that might cause a negative frame length, that is, the stripping size is larger than the packet size.</li> </ul>	extensive
Packet Forwarding Engine configuration	<p>Information about the configuration of the Packet Forwarding Engine:</p> <ul style="list-style-type: none"> <li>• <b>Destination slot</b>—FPC slot number.</li> </ul>	extensive

Table 59: ATM show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
CoS information	<p>Information about the CoS queue for the physical interface.</p> <ul style="list-style-type: none"><li>• <b>CoS transmit queue</b>—Queue number and its associated user-configured forwarding class name.</li><li>• <b>Bandwidth %</b>—Percentage of bandwidth allocated to the queue.</li><li>• <b>Bandwidth bps</b>—Bandwidth allocated to the queue (in bps).</li><li>• <b>Buffer %</b>—Percentage of buffer space allocated to the queue.</li><li>• <b>Buffer usec</b>—Amount of buffer space allocated to the queue, in microseconds. This value is nonzero only if the buffer size is configured in terms of time.</li><li>• <b>Priority</b>—Queue priority: <b>low</b> or <b>high</b>.</li><li>• <b>Limit</b>—Displayed if rate limiting is configured for the queue. Possible values are <b>none</b> and <b>exact</b>. If <b>exact</b> is configured, the queue transmits only up to the configured bandwidth, even if excess bandwidth is available. If <b>none</b> is configured, the queue transmits beyond the configured bandwidth if bandwidth is available.</li></ul>	extensive

Table 59: ATM show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
VPI	<p>(ATM2) Virtual path identifier information:</p> <ul style="list-style-type: none"> <li>• <b>Flags</b>—VPI flags can be one or more of the following: <ul style="list-style-type: none"> <li>• <b>Active</b> (virtual path is up)</li> <li>• <b>OAM</b> (operation and maintenance is enabled)</li> <li>• <b>Shaping</b> (shaping is configured)</li> </ul> </li> <li>• <b>CBR, Peak</b></li> <li>• <b>OAM, Period</b>—Interval at which OAM F4 loopback cells are sent.</li> <li>• <b>Up count</b>—Number of F4 OAM cells required to consider the virtual path up; the range is 1 through 255.</li> <li>• <b>Down count</b>—Number of F4 OAM cells required to consider the virtual path down; the range is 1 through 255.</li> <li>• <b>Total down time</b>—Total number of seconds the VPI has been down since it was opened, using the format <b>Total down time: hh:mm:ss</b> or <b>Never</b>.</li> <li>• <b>Last down</b>—Time of last <b>Down</b> transition, using the format <b>Last down: hh:mm:ss ago</b> or <b>Never</b>.</li> <li>• <b>OAM F4 cell statistics</b>—(Nonpromiscuous mode) OAM F4 statistics: <ul style="list-style-type: none"> <li>• <b>Total received</b>—Number of OAM F4 cells received.</li> <li>• <b>Total sent</b>—Number of OAM F4 cells sent.</li> <li>• <b>Loopback received</b>—Number of OAM F4 loopback cells received.</li> <li>• <b>Loopback sent</b>—Number of OAM F4 loopback cells sent.</li> <li>• <b>Last received</b>—Time at which the last OAM F4 cell was received.</li> <li>• <b>Last sent</b>—Time at which the last OAM F4 cell was sent.</li> <li>• <b>RDI received</b>—Number of OAM F4 cells received with the remote defect indication bit set.</li> <li>• <b>RDI sent</b>—Number of OAM F4 cells sent with the RDI bit set.</li> <li>• <b>AIS received</b>—Number of OAM F4 cells received with the alarm indication signal bit set.</li> <li>• <b>AIS sent</b>—Number of OAM F4 cells sent with the AIS bit set.</li> </ul> </li> </ul> <p><b>Traffic statistics:</b></p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the VPI.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the VPI.</li> <li>• <b>Input packets</b>—Number of packets received on the VPI.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the VPI.</li> </ul>	detail extensive none
<b>Logical Interface</b>		
Logical interface	Name of the logical interface.	All levels
Index	Logical interface index number, which reflects its initialization sequence.	detail extensive none
SNMP ifIndex	Logical interface SNMP interface index number.	detail extensive none
Generation	Unique number for use by Juniper Networks technical support only.	detail extensive

Table 59: ATM show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Flags</b>	Information about the logical interface. Possible values are described in the “Logical Interface Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels
<b>Input packets</b>	Number of packets received on the logical interface.	None specified
<b>Output packets</b>	Number of packets transmitted on the logical interface.	None specified
<b>Encapsulation</b>	Encapsulation on the logical interface.	All levels
<b>Traffic statistics</b>	Total number of bytes and packets received and transmitted on the logical interface. These statistics are the sum of the local and transit statistics. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. It takes a while (generally, less than 1 second) for this counter to stabilize.	<b>detail extensive</b>
<b>Local statistics</b>	Statistics for traffic received from and transmitted to the Routing Engine. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. It takes a while (generally, less than 1 second) for this counter to stabilize.	<b>detail extensive</b>
<b>Transit statistics</b>	Statistics for traffic transiting the router. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. It takes a while (generally, less than 1 second) for this counter to stabilize.	<b>detail extensive</b>
<b>Input packets</b>	Number of packets received on the logical interface.	None specified
<b>Output packets</b>	Number of packets transmitted on the logical interface.	None specified
<b>protocol-family</b>	Protocol family configured on the logical interface. If the protocol is <b>inet</b> , the IP address of the interface is also displayed.	<b>brief</b>
<b>Protocol</b>	Protocol family configured on the logical interface.	<b>detail extensive none</b>
<b>MTU</b>	MTU size on the logical interface.	<b>detail extensive none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Route table</b>	Routing table in which the logical interface address is located. For example, 0 refers to the routing table inet.0.	<b>detail extensive</b>
<b>Flags</b>	Information about the protocol family flags. Possible values are described in the “Family Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	<b>detail extensive none</b>
<b>Addresses, Flags</b>	Information about the address flags. Possible values are described in the “Addresses Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	<b>detail extensive none</b>
<b>Destination</b>	IP address of the remote side of the connection.	<b>detail extensive none</b>

Table 59: ATM show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Local</b>	IP address of the logical interface.	<b>detail extensive none</b>
<b>Broadcast</b>	Broadcast address.	<b>detail extensive none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>VCI</b>	Virtual circuit identifier number and information: <ul style="list-style-type: none"> <li>• <b>Flags</b>—VCI flags:               <ul style="list-style-type: none"> <li>• <b>Active</b>—VCI is up and in working condition.</li> <li>• <b>CCC down</b>—VCI CCC is not in working condition.</li> <li>• <b>Closed</b>—VCI is closed because the user disabled the logical or physical interface from the CLI.</li> <li>• <b>Configured</b>—VCI is configured.</li> <li>• <b>Down</b>—VCI is not in working condition. The VCI might have alarms, defects, F5 AIS/RDI, or no response to OAM loopback cells.</li> <li>• <b>ILMI</b>—VCI is up and in working condition.</li> <li>• <b>OAM</b>—OAM loopback is enabled.</li> <li>• <b>Multicast</b>—VCI is a multicast VCI or DLCI.</li> <li>• <b>Multipoint destination</b>—VCI is configured as a multipoint destination.</li> <li>• <b>None</b>—No VCI flags.</li> <li>• <b>Passive-OAM</b>—Passive OAM is enabled.</li> <li>• <b>Shaping</b>—Shaping is enabled.</li> <li>• <b>Sustained</b>—Shaping rate is set to <b>Sustained</b>.</li> <li>• <b>Unconfigured</b>—VCI is not configured.</li> </ul> </li> <li>• <b>Total down time</b>—Total number of seconds the VCI has been down, using the format <b>Total down time: hh:mm:ss</b> or <b>Never</b>.</li> <li>• <b>Last down</b>—Time of last <b>Down</b> transition, using the format <b>Last down: hh:mm:ss</b>.</li> <li>• <b>EPD threshold</b>—(ATM2 only) Threshold at which a packet is dropped when the queue size (in number of cells) exceeds the early packet-discard (EPD) value.</li> </ul>	All levels

Table 59: ATM show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
VCI (continued)	<ul style="list-style-type: none"> <li>• <b>Transmit weight cells</b>—(ATM2 only) Amount of bandwidth assigned to this queue.</li> <li>• <b>ATM per-VC transmit statistics:</b> <ul style="list-style-type: none"> <li>• <b>Tail queue packet drops</b>—Number of packets dropped because of bandwidth constraints. This value indicates that packets are queued to send out at a rate faster than allowed.</li> </ul> </li> <li>• <b>OAM F4 cell statistics</b>—(Nonpromiscuous mode) OAM F4 statistics: <ul style="list-style-type: none"> <li>• <b>Total received</b>—Number of OAM F4 cells received.</li> <li>• <b>Total sent</b>—Number of OAM F4 cells sent.</li> <li>• <b>Loopback received</b>—Number of OAM F4 loopback cells received.</li> <li>• <b>Loopback sent</b>—Number of OAM F4 loopback cells sent.</li> <li>• <b>Last received</b>—Time at which the last OAM F4 cell was received.</li> <li>• <b>Last sent</b>—Time at which the last OAM F4 cell was sent.</li> <li>• <b>RDI received</b>—Number of OAM F4 cells received with the remote defect indication bit set.</li> <li>• <b>RDI sent</b>—Number of OAM F4 cells sent with the RDI bit set.</li> <li>• <b>AIS received</b>—Number of OAM F4 cells received with the alarm indication signal bit set.</li> <li>• <b>AIS sent</b>—Number of OAM F4 cells sent with the AIS bit set.</li> </ul> </li> <li>• <b>Traffic statistics</b>—Number and rate of bytes and packets received and transmitted on the physical interface. <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul> </li> </ul>	All levels
IMA group properties	<ul style="list-style-type: none"> <li>• <b>Version</b>—The specified IMA specification version, either IMA 1.0 or IMA 1.1.</li> <li>• <b>Frame length</b>—The specified frame size, which can be 32, 64, 128, or 256.</li> <li>• <b>Differential delay</b>—Maximum differential delay among links in milliseconds.</li> <li>• <b>Symmetry</b>—Either Common Transmit Clock or Independent Transmit Clock timing mode.</li> <li>• <b>Transmit clock</b>—The specified IMA clock mode, either common or independent.</li> <li>• <b>Minimum links</b>—The number of minimum active links specified in both transmit and receive directions. <ul style="list-style-type: none"> <li>• <b>Transmit</b>—The per-PIC limit on the number of minimum active links in the transmit direction.</li> <li>• <b>Receive</b>—The per-PIC limit on the number of minimum active links in the receive direction.</li> </ul> </li> <li>• <b>Frame synchronization</b>—The specified IMA frame synchronization state transition variables (Alpha, Beta, and Gamma) and their specified values. <ul style="list-style-type: none"> <li>• <b>Alpha</b>—The number of consecutive invalid ICP cells for IFSM.</li> <li>• <b>Beta</b>—The number of consecutive errored ICP cells for IFSM.</li> <li>• <b>Gamma</b>—The number of consecutive valid ICP cells for IFSM.</li> </ul> </li> <li>• <b>Links</b>—The number of IMA links assigned to the IMA group.</li> </ul>	detail extensive none

## show interfaces (Channelized DS3-to-DS0)

**Syntax** `show interfaces ds-fpc/pic/port:t1channel:ds0channel`  
`<brief | detail | extensive>`  
`<descriptions>`  
`<media>`  
`<snmp-index snmp-index>`  
`<statistics>`

**Release Information** Command introduced before Junos OS Release 7.4.

**Description** (M Series and T Series routers only) Display status information about the specified channelized DS3-to-DS0 interface.

**Options** `ds-fpc/pic/port:t1channel:ds0channel`—Display standard information about the specified channelized DS3-to-DS0 interface.

**brief | detail | extensive**—(Optional) Display the specified level of output interface.

**descriptions**—(Optional) Display interface description strings.

**media**—(Optional) Display media-specific information about network interfaces.

**snmp-index snmp-index**—(Optional) Display information for the specified SNMP index of the interface.

**statistics**—(Optional) Display static interface statistics.

**Required Privilege Level** view

**List of Sample Output** [show interfaces extensive \(Channelized DS3-to-DS0\) on page 1245](#)

**Output Fields** [Table 60 on page 1237](#) lists the output fields for the **show interfaces** (all Channelized DS3 interfaces) command. Output fields are listed in the approximate order in which they appear.

*Table 60: Channelized DS3 show interfaces Output Fields*

Field Name	Field Description	Level of Output
<b>Physical Interface</b>		
<b>Physical interface</b>	Name of the physical interface.	All levels
<b>Enabled</b>	State of the interface. Possible values are described in the “Enabled Field” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels
<b>Interface index</b>	Physical interface's index number, which reflects its initialization sequence.	<b>detail extensive</b> none
<b>SNMP ifIndex</b>	SNMP index number for the physical interface.	<b>detail extensive</b> none

Table 60: Channelized DS3 show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Link-level type</b>	Encapsulation being used on the physical interface.	All levels
<b>MTU</b>	MTU size on the physical interface.	All levels
<b>Clocking</b>	Reference clock source. It can be <b>Internal</b> or <b>External</b> .	All levels
<b>Speed</b>	Speed at which the interface is running.	All levels
<b>Loopback</b>	Whether loopback is enabled and the type of loopback ( <b>local</b> or <b>remote</b> ).	All levels
<b>FCS</b>	Frame check sequence on the interface (either <b>16</b> or <b>32</b> ). The default is <b>16</b> bits.	All levels
<b>Mode</b>	Whether C-bit parity mode or M13 mode is enabled.	All levels
<b>Framing</b>	Physical layer framing format used on the link. It can be <b>ESF</b> or <b>SF</b> . The default is <b>ESF</b> .	All levels
<b>Parent</b>	(Channelized IQ interfaces only) Name and interface index of the interface to which a particular child interface belongs. <b>None</b> indicates that this interface is the top level.	All levels
<b>Device flags</b>	Information about the physical device. Possible values are described in the "Device Flags" section under " <a href="#">Common Output Fields Description</a> " on page 1114.	All levels
<b>Interface flags</b>	Information about the interface. Possible values are described in the "Interface Flags" section under " <a href="#">Common Output Fields Description</a> " on page 1114.	All levels
<b>Link flags</b>	Information about the link. Possible values are described in the "Link Flags" section under " <a href="#">Common Output Fields Description</a> " on page 1114.	All levels
<b>Hold-times</b>	Current interface hold-time up and hold-time down, in milliseconds.	<b>detail extensive</b>
<b>Keepalive settings</b>	(PPP and HDLC) Configured settings for keepalives. <ul style="list-style-type: none"> <li><b>interval seconds</b>—The time in seconds between successive keepalive requests. The range is <b>10</b> seconds through <b>32,767</b> seconds, with a default of <b>10</b> seconds.</li> <li><b>down-count number</b>—The number of keepalive packets that a destination must fail to receive before the network takes a link down. The range is <b>1</b> through <b>255</b>, with a default of <b>3</b>.</li> <li><b>up-count number</b>—The number of keepalive packets a destination must receive to change a link's status from down to up. The range is <b>1</b> through <b>255</b>, with a default of <b>1</b>.</li> </ul>	<b>detail extensive none</b>

Table 60: Channelized DS3 show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
Keepalive statistics	<p>(PPP and HDLC) Information about keepalive packets.</p> <ul style="list-style-type: none"> <li><b>Input</b>—Number of keepalive packets received by PPP. <ul style="list-style-type: none"> <li><b>(last seen 00:00:00 ago)</b>—Time since the last keepalive packet was received, in the format <i>hh:mm:ss</i>.</li> </ul> </li> <li><b>Output</b>—Number of keepalive packets sent by PPP and how long ago the last keepalive packets were sent and received. <ul style="list-style-type: none"> <li><b>(last seen 00:00:00 ago)</b>—Time since the last keepalive packet was sent, in the format <i>hh:mm:ss</i>.</li> </ul> </li> </ul>	detail extensive none
LMI settings	<p>(Frame Relay) Settings for Local Management Interface (LMI) can be either <b>ANSI LMI settings</b> or <b>ITU LMI settings</b>. ANSI LMI settings is the default. The format is (ANSI or ITU) <b>LMI settings: value, value, value...xx</b> seconds, where <i>value</i> can be:</p> <ul style="list-style-type: none"> <li><b>n391dte</b>—DTE full status polling interval (1–255)</li> <li><b>n392dce</b>—DCE error threshold (1–10)</li> <li><b>n392dte</b>—DTE error threshold (1–10)</li> <li><b>n393dce</b>—DCE monitored event count (1–10)</li> <li><b>n393dte</b>—DTE monitored event count (1–10)</li> <li><b>t391dte</b>—DTE polling timer (5–30 seconds)</li> <li><b>t392dce</b>—DCE polling verification timer (5–30 seconds)</li> </ul>	detail extensive none
LMI	<p>(Frame Relay) LMI packet statistics:</p> <ul style="list-style-type: none"> <li><b>Input</b>—Number of packets coming in on the interface (<i>nn</i>) and how much time has passed since the last packet arrived. The format is <b>Input: nn (last seen hh:mm:ss ago)</b>.</li> <li><b>Output</b>—Number of packets sent out on the interface (<i>nn</i>) and how much time has passed since the last packet was sent. The format is <b>Output: nn (last seen hh:mm:ss ago)</b>.</li> </ul>	detail extensive none
LCP state	<p>(PPP) Link Control Protocol state.</p> <ul style="list-style-type: none"> <li><b>Conf-ack-received</b>—Acknowledgement was received.</li> <li><b>Conf-ack-sent</b>—Acknowledgement was sent.</li> <li><b>Conf-req-sent</b>—Request was sent.</li> <li><b>Down</b>—LCP negotiation is incomplete (not yet completed or has failed).</li> <li><b>Not-configured</b>—LCP is not configured on the interface.</li> <li><b>Opened</b>—LCP negotiation is successful.</li> </ul>	detail extensive none
NCP state	<p>(PPP) Network Control Protocol state.</p> <ul style="list-style-type: none"> <li><b>Conf-ack-received</b>—Acknowledgement was received.</li> <li><b>Conf-ack-sent</b>—Acknowledgement was sent.</li> <li><b>Conf-req-sent</b>—Request was sent.</li> <li><b>Down</b>—NCP negotiation is incomplete (not yet completed or has failed).</li> <li><b>Not-configured</b>—NCP is not configured on the interface.</li> <li><b>Opened</b>—NCP negotiation is successful.</li> </ul>	detail extensive none

Table 60: Channelized DS3 show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>CHAP state</b>	<p>(PPP) Displays the state of the Challenge Handshake Authentication Protocol (CHAP) during its transaction.</p> <ul style="list-style-type: none"> <li>• <b>Chap-Chal-received</b>—Challenge was received but response not yet sent.</li> <li>• <b>Chap-Chal-sent</b>—Challenge was sent.</li> <li>• <b>Chap-Resp-received</b>—Response was received for the challenge sent, but CHAP has not yet moved into the <b>Success</b> state. (Most likely with RADIUS authentication).</li> <li>• <b>Chap-Resp-sent</b>—Response was sent for the challenge received.</li> <li>• <b>Closed</b>—CHAP authentication is incomplete.</li> <li>• <b>Failure</b>—CHAP authentication failed.</li> <li>• <b>Not-configured</b>—CHAP is not configured on the interface.</li> <li>• <b>Success</b>—CHAP authentication was successful.</li> </ul>	<b>detail extensive none</b>
<b>Last flapped</b>	Date, time, and how long ago the interface went from down to up. The format is <b>Last flapped: year-month-day hour:minute:second timezone hh:mm:ss ago</b> ). For example, <b>Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> .	<b>detail extensive none</b>
<b>Statistics last cleared</b>	Time when the statistics for the interface were last set to zero.	<b>detail extensive</b>
<b>Traffic statistics</b>	<p>Number and rate of bytes and packets received and transmitted on the physical interface.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes, Output bytes</b>—Number of bytes received and transmitted on the interface.</li> <li>• <b>Input packets, Output packets</b>—Number of packets received and transmitted on the interface.</li> </ul>	<b>detail extensive</b>

Table 60: Channelized DS3 show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Input errors</b>	<p>Input errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of the incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Giants</b>—Number of frames received that are larger than the giant threshold.</li> <li>• <b>Runts</b>—Number of frames received that are smaller than the runt threshold.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that the Junos OS does not handle.</li> <li>• <b>L3 incompletes</b>—Number of incoming packets discarded because they failed Layer 3 (usually IPv4) sanity checks of the header. For example, a frame with less than 20 bytes of available IP header is discarded.</li> <li>• <b>L2 channel errors</b>—Counter increments when the software could not find a valid logical interface for an incoming frame.</li> <li>• <b>L2 mismatch timeouts</b>—Count of malformed or short packets that caused the incoming packet handler to discard the frame as unreadable.</li> <li>• <b>SRAM errors</b>—Number of hardware errors that occurred in the static RAM (SRAM) on the PIC. If the value in this field increments, the PIC is malfunctioning.</li> <li>• <b>HS link CRC errors</b>—Count of errors on the high-speed links between the ASICs responsible for handling the router interfaces.</li> </ul>	<b>extensive</b>
<b>Output errors</b>	<p>Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and up, or another problem occurs. If the number of carrier transitions increments quickly, (perhaps once every 10 seconds), the cable, the far-end system, or the PIC is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Aged packets</b>—Number of packets that remained in shared packet SDRAM so long that the system automatically purged them. The value in this field should never increment. If it does, it is most likely a software bug or possibly malfunctioning hardware.</li> </ul>	<b>extensive</b>

Table 60: Channelized DS3 show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>DS1 alarms</b>	Media-specific defects that can render the interface unable to pass packets. When a defect persists for a certain amount of time, it is promoted to an alarm.	<b>detail extensive none</b>
<b>DS1 defects</b>	Based on the router configuration, an alarm can ring the red or yellow alarm bell on the router, or turn on the red or yellow alarm LED on the craft interface. <ul style="list-style-type: none"> <li>• <b>LOS</b>—Loss of signal.</li> <li>• <b>LOF</b>—Loss of frame.</li> <li>• <b>AIS</b>—Alarm indication signal.</li> <li>• <b>YLW</b>—Yellow alarm. Indicates errors at the remote site receiver.</li> </ul>	
<b>T1 media</b>	Counts of T1 media-specific errors. <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. State other than <b>OK</b> indicates a problem.</li> </ul> <p>The T1 media-specific error types can be:</p> <ul style="list-style-type: none"> <li>• <b>SEF</b>—Severely errored framing</li> <li>• <b>BEE</b>—Bit error event</li> <li>• <b>AIS</b>—Alarm indication signal</li> <li>• <b>LOF</b>—Loss of frame</li> <li>• <b>LOS</b>—Loss of signal</li> <li>• <b>YELLOW</b>—Errors at the remote site receiver</li> <li>• <b>BPV</b>—Bipolar violation</li> <li>• <b>EXZ</b>—Excessive zeros</li> <li>• <b>LCV</b>—Line code violation</li> <li>• <b>PCV</b>—Pulse code violation</li> <li>• <b>CS</b>—Carrier state</li> <li>• <b>LES</b>—Line error seconds</li> <li>• <b>ES</b>—Errored seconds</li> <li>• <b>SEFS</b>—Severely errored framing seconds (section)</li> <li>• <b>SES</b>—Severely errored seconds</li> <li>• <b>BES</b>—Bit error seconds</li> <li>• <b>UAS</b>—Unavailable seconds</li> </ul>	<b>extensive</b>

Table 60: Channelized DS3 show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>DS3 media</b>	<p>Counts of T3 media-specific errors. For detailed definitions of the T3 (DS-3) error events (BPV, EXZ, LCV, PCV, and CCV) and performance parameters (LES, PES, PSES, CES, CSES, SEFS, and UAS), see RFC 2496.</p> <ul style="list-style-type: none"> <li>• <b>PLL Lock</b>—Phase-locked loop out of lock</li> <li>• <b>Reframing</b>—Frame alignment recovery time</li> <li>• <b>AIS</b>—Alarm indication signal</li> <li>• <b>LOF</b>—Loss of frame</li> <li>• <b>LOS</b>—Loss of signal</li> <li>• <b>IDLE</b>—Idle code detected</li> <li>• <b>YELLOW</b>—Remote defect indication</li> <li>• <b>BPV</b>—Bipolar violation</li> <li>• <b>EXZ</b>—Excessive zeros</li> <li>• <b>LCV</b>—Line code violation</li> <li>• <b>PCV</b>—Pulse code violation</li> <li>• <b>CCV</b>—C-bit coding violation</li> <li>• <b>LES</b>—Line error seconds</li> <li>• <b>PES</b>—P-bit errored seconds</li> <li>• <b>PSES</b>—P-bit errored seconds (section)</li> <li>• <b>CES</b>—C-bit errored seconds</li> <li>• <b>CSES</b>—C-bit severely errored seconds</li> <li>• <b>SEFS</b>—Severely errored framing seconds</li> <li>• <b>UAS</b>—Unavailable seconds</li> </ul>	<b>extensive</b>
<b>HDLC configuration</b>	<p>Information about the HDLC configuration.</p> <ul style="list-style-type: none"> <li>• <b>Giant threshold</b>—Giant threshold programmed into the hardware.</li> <li>• <b>Runt threshold</b>—Runt threshold programmed into the hardware.</li> <li>• <b>Timeslots</b>—Configured time slots for the interface.</li> <li>• <b>Byte encoding</b>—Byte encoding used: <b>Nx64K</b> or <b>Nx56K</b>.</li> <li>• <b>Data inversion</b>—HDLC data inversion setting: <b>Enabled</b> or <b>Disabled</b></li> </ul>	<b>extensive</b>
<b>Interface transmit queues</b>	<p>Name of the transmit queues and their associated statistics for each DS1 channel on the Channelized DS3-to-DS1 PIC.</p> <ul style="list-style-type: none"> <li>• <b>B/W</b>—Queue bandwidth as a percentage of the total interface bandwidth.</li> <li>• <b>WRR</b>—Weighted round-robin (in percent).</li> <li>• <b>Packets</b>—Number of packets transmitted.</li> <li>• <b>Bytes</b>—Number of bytes transmitted.</li> <li>• <b>Drops</b>—Number of packets dropped.</li> <li>• <b>Errors</b>—Number of packet errors.</li> </ul>	<b>extensive</b>

Table 60: Channelized DS3 show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>DS1 or DS3 BERT configuration</b>	<p>BERT (bit error rate test) checks the quality of the line. This output appears only when a BERT is run on the interface.</p> <ul style="list-style-type: none"> <li>• <b>BERT time period</b>—Configured total time period that the BERT is to run.</li> <li>• <b>Elapsed</b>—Actual time elapsed since the start of the BERT (in seconds).</li> <li>• <b>Induced error rate</b>—Configured rate at which the bit errors are induced in the BERT pattern.</li> <li>• <b>Algorithm</b>—Type of algorithm selected for the BERT.</li> </ul>	<b>detail extensive none</b>
<b>Packet Forwarding Engine configuration</b>	<p>Information about the configuration of the Packet Forwarding Engine:</p> <ul style="list-style-type: none"> <li>• <b>Destination slot</b>—FPC slot number.</li> <li>• <b>PLP byte</b>—Packet Level Protocol byte.</li> </ul>	<b>extensive</b>
<b>CoS information</b>	<p>Information about the CoS queue for the physical interface.</p> <ul style="list-style-type: none"> <li>• <b>CoS transmit queue</b>—Queue number and its associated user-configured forwarding class name.</li> <li>• <b>Bandwidth %</b>—Percentage of bandwidth allocated to the queue.</li> <li>• <b>Bandwidth bps</b>—Bandwidth allocated to the queue (in bps).</li> <li>• <b>Buffer %</b>—Percentage of buffer space allocated to the queue.</li> <li>• <b>Buffer usec</b>—Amount of buffer space allocated to the queue, in microseconds. This value is nonzero only if the buffer size is configured in terms of time.</li> <li>• <b>Priority</b>—Queue priority: <b>low</b> or <b>high</b>.</li> <li>• <b>Limit</b>—Displayed if rate limiting is configured for the queue. Possible values are <b>none</b> and <b>exact</b>. If <b>exact</b> is configured, the queue transmits only up to the configured bandwidth, even if excess bandwidth is available. If <b>none</b> is configured, the queue transmits beyond the configured bandwidth if bandwidth is available.</li> </ul>	<b>extensive</b>
<b>Logical Interface</b>		
<b>Logical interface</b>	Name of the logical interface.	All levels
<b>Index</b>	Logical interface index number, which reflects its initialization sequence.	<b>detail extensive none</b>
<b>SNMP ifIndex</b>	Logical interface SNMP interface index number.	<b>detail extensive none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Flags</b>	Information about the logical interface; values are described in the “Logical Interface Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels
<b>Encapsulation</b>	Encapsulation on the logical interface.	All levels
<b>Bandwidth</b>	Bandwidth configured on the interface.	All levels
<b>Protocol</b>	Protocol family configured on the logical interface, such as <b>iso</b> , <b>inet6</b> , <b>mpls</b> .	<b>detail extensive none</b>

Table 60: Channelized DS3 show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
MTU	MTU size on the logical interface.	detail extensive none
Generation	Unique number for use by Juniper Networks technical support only.	detail extensive
Route table	Routing table in which the logical interface address is located. For example, 0 refers to the routing table inet.0.	detail extensive
Flags	Information about the protocol family flags. Possible values are described in the “Family Flags” section under “Common Output Fields Description” on page 1114.	detail extensive none
Addresses, Flags	Information about the address flags. Possible values are described in the “Addresses Flags” section under “Common Output Fields Description” on page 1114.	detail extensive none
Destination	IP address of the remote side of the connection.	detail extensive none
Local	IP address of the logical interface.	detail extensive none
Broadcast	Broadcast address.	detail extensive none
Generation	Unique number for use by Juniper Networks technical support only.	detail extensive none
Redundant Link	(LSQ redundancy) Backup link for Link Services IQ redundancy.	detail extensive none

## Sample Output

<b>Output Fields</b>	For information about output fields, see the output field table for the <a href="#">show interfaces (Channelized E1)</a> command. Output fields are listed in the approximate order in which they appear.

## Sample Output

### show interfaces (Channelized E1 IQ) (Physical)

```
user@host> show interfaces ce1-1/2/3
Physical interface: ce1-1/2/3, Enabled, Physical link is Up
  Interface index: 18, SNMP ifIndex: 1128
  Link-level type: Frame-relay, Controller, MTU: 1504, Clocking: Internal,  Speed:
  E1, Loopback: None, FCS: 16, Framing: G704, Parent: None
```

```

Device flags      : Present Running
Interface flags: Point-To-Point SNMP-Traps
Link flags       : Keepalives DTE
ANSI LMI settings: n391dte 6, n392dte 3, n393dte 4, t391dte 10 seconds
LMI: Input: 51700 (00:00:02 ago), Output: 51701 (00:00:02 ago)
DTE statistics:
  Enquiries sent           : 43186
  Full enquiries sent      : 8515
  Enquiry responses received : 43185
  Full enquiry responses received : 8515
DCE statistics:
  Enquiries received       : 0
  Full enquiries received  : 0
  Enquiry responses sent   : 0
  Full enquiry responses sent : 0
Common statistics:
  Unknown messages received : 0
  Asynchronous updates received : 0
  Out-of-sequence packets received : 0
  Keepalive responses timedout : 0
Nonmatching DCE-end DLCIs:
  2
Last flapped      : 2002-10-04 17:52:51 PDT (00:32:57 ago)
Input rate        : 0 bps (0 pps)
Output rate       : 0 bps (0 pps)
DS1 alarms       : None
DS1 defects      : None

```

#### show interfaces extensive (Channelized E1 IQ Multilink PPP Encapsulation)

```

user@host> show interfaces ds-0/3/4:1 extensive
Physical interface: ds-0/3/4:1, Enabled, Physical link is Up
Interface index: 151, SNMP ifIndex: 63, Generation: 34
Link-level type: Multilink-PPP, MTU: 1518, Clocking: Internal, Speed: 64kbps,
Loopback: None, FCS: 16,
Parent: ce1-0/3/4 Interface index 150
Device flags      : Present Running
Interface flags: Point-To-Point SNMP-Traps Internal: 0x4000
Link flags       : None
Hold-times        : Up 0 ms, Down 0 ms
Keepalive settings: Interval 10 seconds, Up-count 1, Down-count 3
Keepalive statistics:
  Input : 0 (last seen: never)
  Output: 0 (last sent: never)
LCP state: Down
CHAP state: Closed
CoS queues       : 4 supported, 4 maximum usable queues
Last flapped     : Never
Statistics last cleared: 2005-12-21 10:32:15 PST (1w0d 03:10 ago)
Traffic statistics:
  Input bytes      : 0                      0 bps
  Output bytes     : 6070570                224 bps
  Input packets    : 0                      0 pps
  Output packets   : 209330                 0 pps
Input errors:
  Errors: 3, Drops: 0, Framing errors: 0, Runts: 0, Giants: 0,
  Policed discards: 0, L3 incompletes: 0, L2 channel errors: 0,
  L2 mismatch timeouts: 0, HS link CRC errors: 0, Resource errors: 0
Output errors:
  Carrier transitions: 0, Errors: 0, Drops: 0, Aged packets: 0, MTU errors: 0,
  Resource errors: 0

```

```

HDLC configuration:
  Giant threshold: 1528, Runt threshold: 2
  Timeslots      : 1
  Data inversion: Disabled, Idle cycle flag: flags, Start end flag: shared
DSO BERT configuration:
  BERT time period: 10 seconds, Elapsed: 0 seconds
  Induced Error rate: 10e-0, Algorithm: 2^15 - 1, 0.151, Pseudorandom (9)
Packet Forwarding Engine configuration:
  Destination slot: 0, PLP byte: 4 (0x00)

Logical interface ds-0/3/4:1.0 (Index 74) (SNMP ifIndex 64) (Generation 13)
  Flags: Hardware-Down Point-To-Point SNMP-Traps Encapsulation: PPP
  Protocol mlppp, Multilink bundle: ls-0/1/0.0, MTU: 1514, Generation: 24,
  Route table: 0

```

### show interfaces extensive (Channelized E1 IQ MLFR Encapsulation)

```

user@host> show interfaces ds-0/3/4:5 extensive
Physical interface: ds-0/3/4:5, Enabled, Physical link is Up
  Interface index: 155, SNMP ifIndex: 72, Generation: 38
  Link-level type: Multilink-FR, MTU: 1518, Clocking: Internal, Speed: 64kbps,
  Loopback: None, FCS: 16,
  Parent: ce1-0/3/4 Interface index 150
  Device flags   : Present Running
  Interface flags: Link-Layer-Down Point-To-Point SNMP-Traps Internal: 0x4000
  Link flags     : No-Keepalives DCE
  Hold-times    : Up 0 ms, Down 0 ms
  ANSI LMI settings: n392dce 3, n393dce 4, t392dce 15 seconds

#### show interfaces detail (Clear Channel E1)

```

user@host> show interfaces e1-1/2/6 detail
Physical interface: e1-1/2/6, Enabled, Physical link is Up
  Interface index: 89, SNMP ifIndex: 1278, Generation: 341
  Link-level type: PPP, MTU: 1504, Clocking: Internal, Speed: E1, Loopback:None,
...
  Logical interface e1-1/2/6.0 (Index 52) (SNMP ifIndex 1279) (Generation 169)
    Flags: Point-To-Point SNMP-Traps Encapsulation: PPP
    Bandwidth: 0
...

```

## show interfaces (Channelized E1)

**Syntax** `show interfaces ds-fpc/pic/port:ds0channel`  
`<brief | detail | extensive | terse>`  
`<descriptions>`  
`<media>`  
`<snmp-index snmp-index>`  
`<statistics>`

**Release Information** Command introduced before Junos OS Release 7.4.

**Description** (M Series and T Series routers only) Display status information the specified channelized E1 interface.

**Options** `ds-fpc/pic/port:ds0channel`—Display standard information about the specified channelized E1 interface.

`brief | detail | extensive | terse`—(Optional) Display the specified level of output.

`descriptions`—(Optional) Display interface description strings.

`media`—(Optional) Display media-specific information about network interfaces.

`snmp-index snmp-index`—(Optional) Display information for the specified SNMP index of the interface.

`statistics`—(Optional) Display static interface statistics.

**Required Privilege Level** view

**List of Sample Output** [show interfaces extensive \(Channelized E1\) on page 1264](#)

**Output Fields** [Table 61 on page 1255](#) lists the output fields for the **show interfaces** (Channelized E1 and Channelized E1 IQ) command. Output fields are listed in the approximate order in which they appear.

*Table 61: Channelized E1 and Channelized E1 IQ show interfaces Output Fields*

Field Name	Field Description	Level of Output
<b>Physical Interface</b>		
<b>Physical interface</b>	Name of the physical interface.	All levels
<b>Enabled</b>	State of the interface. Possible values are described in the “Enabled Field” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels
<b>Interface index</b>	Physical interface's index number, which reflects its initialization sequence.	detail extensive none
<b>SNMP ifIndex</b>	SNMP index number for the physical interface.	detail extensive none

Table 61: Channelized E1 and Channelized E1 IQ show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Link-level type</b>	Encapsulation being used on the physical interface.	All levels
<b>MTU</b>	MTU size on the physical interface.	All levels
<b>Clocking</b>	Reference clock source: <b>Internal</b> or <b>External</b> .	All levels
<b>Speed</b>	Speed at which the interface is running.	All levels
<b>Loopback</b>	Whether loopback is enabled and the type of loopback ( <b>local</b> or <b>remote</b> ).	All levels
<b>FCS</b>	Frame check sequence on the interface (either <b>16</b> or <b>32</b> ). The default is <b>16</b> bits.	All levels
<b>Framing</b>	Physical layer framing format used on the link. It can be <b>G704</b> , <b>G704-NO-CRC4</b> , or <b>Unframed</b> . The default is <b>G704</b> .	All levels
<b>Parent</b>	(Channelized E1 IQ interfaces only) Name and interface index of the interface to which a particular child interface belongs. <b>None</b> indicates that this interface is the top level.	All levels
<b>Device flags</b>	Information about the physical device. Possible values are described in the "Device Flags" section under " <a href="#">Common Output Fields Description</a> " on page 1114.	All levels
<b>Interface flags</b>	Information about the interface. Possible values are described in the "Interface Flags" section under " <a href="#">Common Output Fields Description</a> " on page 1114.	All levels
<b>Link flags</b>	Information about the link. Possible values are described in the "Link Flags" section under " <a href="#">Common Output Fields Description</a> " on page 1114.	All levels
<b>Hold-times</b>	Current interface hold-time up and hold-time down, in milliseconds.	<b>detail extensive</b>
<b>Keepalive settings</b>	(PPP and HDLC) Configured settings for keepalives. <ul style="list-style-type: none"> <li><b>Interval <i>seconds</i></b>—Time in seconds between successive keepalive requests. The range is <b>10</b> seconds through <b>32,767</b> seconds, with a default of <b>10</b> seconds.</li> <li><b>Down-count <i>number</i></b>—Number of keepalive packets a destination must fail to receive before the network takes a link down. The range is <b>1</b> through <b>255</b>, with a default of <b>3</b>.</li> <li><b>Up-count <i>number</i></b>—Number of keepalive packets a destination must receive to change a link's status from down to up. The range is <b>1</b> through <b>255</b>, with a default of <b>1</b>.</li> </ul>	<b>detail extensive none</b>

Table 61: Channelized E1 and Channelized E1 IQ show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
Keepalive statistics	<p>(PPP and HDLC) Information about keepalive packets.</p> <ul style="list-style-type: none"> <li><b>Input</b>—Number of keepalive packets received by PPP. <ul style="list-style-type: none"> <li>(<b>last seen 00:00:00 ago</b>)—Time since the last keepalive packet was received, in the format <i>hh:mm:ss</i>.</li> </ul> </li> <li><b>Output</b>—Number of keepalive packets sent by PPP and how long ago the last keepalive packets were sent and received. <ul style="list-style-type: none"> <li>(<b>last seen 00:00:00 ago</b>)—Time since the last keepalive packet was sent, in the format <i>hh:mm:ss</i>.</li> </ul> </li> </ul>	detail extensive none
LMI settings	<p>(Frame Relay) Settings for link management can be either ANSI LMI settings or ITU LMI settings. ANSI LMI settings is the default. The format is (<b>ANSI or ITU</b>) <b>LMI settings: value, value...xx</b> seconds, where <i>value</i> can be:</p> <ul style="list-style-type: none"> <li><b>n391dte</b>—DTE full status polling interval (1–255)</li> <li><b>n392dce</b>—DCE error threshold (1–10)</li> <li><b>n392dte</b>—DTE error threshold (1–10)</li> <li><b>n393dce</b>—DCE monitored event count (1–10)</li> <li><b>n393dte</b>—DTE monitored event count (1–10)</li> <li><b>t391dte</b>—DTE polling timer (5–30 seconds)</li> <li><b>t392dce</b>—DCE polling verification timer (5–30 seconds)</li> </ul>	detail extensive none
LMI	<p>(Frame Relay) Statistics about the link management.</p> <ul style="list-style-type: none"> <li><b>Input</b>—Number of packets coming in on the interface (<i>nn</i>) and how much time has passed since the last packet arrived. The format is <b>Input: nn (last seen hh:mm:ss ago)</b></li> <li><b>Output</b>—Number of packets sent out on the interface (<i>nn</i>) and how much time has passed since the last packet was sent. The format is <b>Output: nn (last sent hh:mm:ss ago)</b>.</li> </ul>	detail extensive none
DTE statistics	<p>(Frame Relay) Statistics about messages transmitted from the data terminal equipment (DTE) to the data circuit-terminating equipment (DCE):</p> <ul style="list-style-type: none"> <li><b>Enquiries sent</b>—Number of link status enquiries sent from the DTE to the DCE.</li> <li><b>Full enquiries sent</b>—Number of full enquiries sent from the DTE to the DCE.</li> <li><b>Enquiry responses received</b>—Number of enquiry responses received by the DTE from the DCE.</li> <li><b>Full enquiry responses received</b>—Number of full enquiry responses sent from the DTE to the DCE.</li> </ul>	detail extensive none
DCE statistics	<p>(Frame Relay) Statistics about messages transmitted from the DCE to the DTE:</p> <ul style="list-style-type: none"> <li><b>Enquiries received</b>—Number of enquiries received by the DCE from the DTE.</li> <li><b>Full enquiries received</b>—Number of full enquiries received by the DCE from the DTE.</li> <li><b>Enquiry responses sent</b>—Number of enquiry responses sent from the DCE to the DTE.</li> <li><b>Full enquiry responses sent</b>—Number of full enquiry responses sent from the DCE to the DTE.</li> </ul>	detail extensive none

Table 61: Channelized E1 and Channelized E1 IQ show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Common statistics</b>	<p>(Frame Relay) Statistics about messages sent between the DTE and the DCE:</p> <ul style="list-style-type: none"> <li>• <b>Unknown messages received</b>—Number of received packets that do not fall into any category.</li> <li>• <b>Asynchronous updates received</b>—Number of link status peer changes received.</li> <li>• <b>Out-of-sequence packets received</b>—Number of packets for which the sequence of the packets received is different from the expected sequence.</li> <li>• <b>Keepalive responses timedout</b>—Number of keepalive responses that timed out when no LMI packet was reported for <code>n392dte</code> or <code>n393dce</code> intervals. (See <b>LMI settings</b>).</li> </ul>	<b>detail extensive none</b>
<b>Nonmatching DCE-end DLCIs</b>	(Frame Relay, displayed only from the DTE) Number of DLCIs configured from the DCE.	<b>detail extensive none</b>
<b>LCP state</b>	<p>(PPP) Link Control Protocol state.</p> <ul style="list-style-type: none"> <li>• <b>Conf-ack-received</b>—Acknowledgement was received.</li> <li>• <b>Conf-ack-sent</b>—Acknowledgement was sent.</li> <li>• <b>Conf-req-sent</b>—Request was sent.</li> <li>• <b>Down</b>—LCP negotiation is incomplete (not yet completed or has failed).</li> <li>• <b>Not-configured</b>—LCP is not configured on the interface.</li> <li>• <b>Opened</b>—LCP negotiation is successful.</li> </ul>	<b>detail extensive none</b>
<b>CHAP state</b>	<p>(PPP) Displays the state of the Challenge Handshake Authentication Protocol (CHAP) during its transaction.</p> <ul style="list-style-type: none"> <li>• <b>Chap-Chal-received</b>—Challenge was received but response not yet sent.</li> <li>• <b>Chap-Chal-sent</b>—Challenge was sent.</li> <li>• <b>Chap-Resp-received</b>—Response was received for the challenge sent, but CHAP has not yet moved into the Success state. (Most likely with RADIUS authentication.)</li> <li>• <b>Chap-Resp-sent</b>—Response was sent for the challenge received.</li> <li>• <b>Closed</b>—CHAP authentication is incomplete.</li> <li>• <b>Failure</b>—CHAP authentication failed.</li> <li>• <b>Not-configured</b>—CHAP is not configured on the interface.</li> <li>• <b>Success</b>—CHAP authentication was successful.</li> </ul>	<b>detail extensive none</b>
<b>Last flapped</b>	Date, time, and how long ago the interface went down to up. The format is <b>Last flapped: <i>year-month-day hour:minute:second timezone (hour:minute:second ago)</i></b> . For example, <b>Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> .	<b>detail extensive none</b>
<b>CoS Queues</b>	Number of CoS queues configured.	<b>detail extensive none</b>
<b>Input Rate</b>	Input rate in bits per second (bps) and packets per second (pps).	None specified
<b>Output Rate</b>	Output rate in bps and pps.	None specified
<b>Statistics last cleared</b>	Time when the statistics for the interface were last set to zero.	<b>detail extensive</b>

Table 61: Channelized E1 and Channelized E1 IQ show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Traffic statistics</b>	<p>Number of bytes and packets received and transmitted on the physical interface.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>	<b>detail extensive</b>
<b>Input errors</b>	<p>Input errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of the incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Giants</b>—Number of frames received that are larger than the giant threshold.</li> <li>• <b>Runts</b>—Number of frames received that are smaller than the runt threshold.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that the Junos OS does not handle.</li> <li>• <b>L3 incompletes</b>—Number of incoming packets discarded because they failed Layer 3 (usually IPv4) sanity checks of the header. For example, a frame with less than 20 bytes of available IP header is discarded.</li> <li>• <b>L2 channel errors</b>—Number of times the software did not find a valid logical interface for an incoming frame.</li> <li>• <b>L2 mismatch timeouts</b>—Number of malformed or short packets that caused the incoming packet handler to discard the frame as unreadable.</li> <li>• <b>HS link CRC errors</b>—Number of errors on the high-speed links between the ASICs responsible for handling the router interfaces.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>	<b>extensive</b>

Table 61: Channelized E1 and Channelized E1 IQ show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Output errors</b>	<p>Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and up, or another problem occurs. If the number of carrier transitions increments quickly (perhaps once every 10 seconds), then either the cable, the far-end system, or the PIC is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Aged packets</b>—Number of packets that remained in shared packet SDRAM so long that the system automatically purged them. The value in this field should never increment. If it does, it is most likely a software bug or possibly malfunctioning hardware.</li> <li>• <b>MTU errors</b>—Number of packets larger than the MTU threshold.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>	<b>extensive</b>
<b>DS1 alarms</b>	E1 media-specific defects that can render the interface unable to pass packets. When a defect persists for a certain amount of time, it is promoted to an alarm.	<b>detail extensive none</b>
<b>DS1 defects</b>	<p>Based on the router configuration, an alarm can ring the red or yellow alarm bell on the router, or turn on the red or yellow alarm LED on the craft interface. The following lists all possible alarms and defects. For complete explanations of most of these alarms and defects, see <i>Bellcore Telcordia GR-499-CORE</i>.</p> <ul style="list-style-type: none"> <li>• <b>LOS</b>—Loss of signal.</li> <li>• <b>LOF</b>—Loss of frame.</li> <li>• <b>AIS</b>—Alarm indication signal.</li> <li>• <b>YLW</b>—Yellow alarm. Indicates errors at the remote site receiver.</li> </ul>	

Table 61: Channelized E1 and Channelized E1 IQ show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>E1 media</b>	<p>Active alarms and defects, plus counts of specific E1 errors with detailed information.</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. State other than OK indicates a problem.</li> </ul> <p>The E1 media-specific error types can be:</p> <ul style="list-style-type: none"> <li>• <b>SEF</b>—Severely errored framing</li> <li>• <b>BEE</b>—Bit error</li> <li>• <b>AIS</b>—Alarm indication signal</li> <li>• <b>LOF</b>—Loss of frame</li> <li>• <b>LOS</b>—Loss of signal</li> <li>• <b>YELLOW</b>—Errors at the remote site receiver</li> <li>• <b>BPV</b>—Bipolar violation</li> <li>• <b>EXZ</b>—Excessive zeros</li> <li>• <b>LCV</b>—Line code violation</li> <li>• <b>PCV</b>—Pulse code violation</li> <li>• <b>CS</b>—Carrier state</li> <li>• <b>FEBS</b>—Far-end block error</li> <li>• <b>LES</b>—Line error seconds</li> <li>• <b>ES</b>—Errored seconds</li> <li>• <b>BES</b>—Bursty errored seconds</li> <li>• <b>SES</b>—Severely errored seconds</li> <li>• <b>SEFS</b>—Severely errored framing seconds</li> <li>• <b>UAS</b>—Unavailable seconds</li> </ul>	<b>extensive</b>
<b>HDLC configuration</b>	<p>Information about the HDLC configuration.</p> <ul style="list-style-type: none"> <li>• <b>Giant threshold</b>—Giant threshold programmed into the hardware.</li> <li>• <b>Runt threshold</b>—Runt threshold programmed into the hardware.</li> <li>• <b>Timeslots</b>—Configured time slots for the interface.</li> <li>• <b>Line encodingHDB3</b>—Line encoding used.</li> </ul>	<b>extensive</b>
<b>Interface transmit queues</b>	<p>Names of the transmit queues and their associated statistics for each DSO channel on the Channelized E1 to DSO PIC.</p> <ul style="list-style-type: none"> <li>• <b>B/W</b>—Queue bandwidth as a percentage of the total interface bandwidth.</li> <li>• <b>WRR</b>—Weighted round robin (in percent).</li> <li>• <b>Packets</b>—Number of packets transmitted.</li> <li>• <b>Bytes</b>—Number of bytes transmitted.</li> <li>• <b>Drops</b>—Number of packets dropped.</li> <li>• <b>Errors</b>—Number of packet errors.</li> </ul>	<b>extensive</b>

Table 61: Channelized E1 and Channelized E1 IQ show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>DSx BERT configuration</b>	<p>BERT (bit error rate test) checks the quality of the line. This output appears only when a BERT is run on the interface.</p> <ul style="list-style-type: none"> <li>• <b>BERT time period</b>—Configured total time period that the BERT is to run.</li> <li>• <b>Elapsed</b>—Actual time elapsed since the start of the BERT (in seconds).</li> <li>• <b>Induced error rate</b>—Configured rate at which the bit errors are induced in the BERT pattern.</li> <li>• <b>Algorithm</b>—Type of algorithm selected for the BERT.</li> </ul>	<b>detail extensive none</b>
<b>Packet Forwarding Engine configuration</b>	<p>Information about the configuration of the Packet Forwarding Engine:</p> <ul style="list-style-type: none"> <li>• <b>Destination slot</b>—FPC slot number.</li> <li>• <b>PLP byte</b>—Packet Level Protocol byte.</li> </ul>	<b>extensive</b>
<b>CoS information</b>	<p>Information about the CoS queue for the physical interface.</p> <ul style="list-style-type: none"> <li>• <b>CoS transmit queue</b>—Queue number and its associated user-configured forwarding class name.</li> <li>• <b>Bandwidth %</b>—Percentage of bandwidth allocated to the queue.</li> <li>• <b>Bandwidth bps</b>—Bandwidth allocated to the queue (in bps).</li> <li>• <b>Buffer %</b>—Percentage of buffer space allocated to the queue.</li> <li>• <b>Buffer usec</b>—Amount of buffer space allocated to the queue, in microseconds. This value is nonzero only if the buffer size is configured in terms of time.</li> <li>• <b>Priority</b>—Queue priority: <b>low</b> or <b>high</b>.</li> <li>• <b>Limit</b>—Displayed if rate limiting is configured for the queue. Possible values are <b>none</b> and <b>exact</b>. If <b>exact</b> is configured, the queue transmits only up to the configured bandwidth, even if excess bandwidth is available. If <b>none</b> is configured, the queue transmits beyond the configured bandwidth if bandwidth is available.</li> </ul>	<b>extensive</b>
<b>Logical Interface</b>		
<b>Logical interface</b>	Name of the logical interface.	All levels
<b>Index</b>	Logical interface index number, which reflects its initialization sequence.	<b>detail extensive none</b>
<b>SNMP ifIndex</b>	Logical interface SNMP interface index number.	<b>detail extensive none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Flags</b>	Information about the logical interface. Possible values are described in the “Logical Interface Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels
<b>Encapsulation</b>	Encapsulation on the logical interface.	All levels
<b>Input packets</b>	Number of packets received on the logical interface.	None specified

Table 61: Channelized E1 and Channelized E1 IQ show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Output packets</b>	Number of packets transmitted on the logical interface.	None specified
<b>Traffic statistics</b>	<p>Number and rate of bytes and packets received and transmitted on the logical interface.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>	<b>detail extensive</b>
<b>Local statistics</b>	(Frame Relay) Statistics for traffic received from and transmitted to the Routing Engine. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. It takes awhile (generally, less than one second) for this counter to stabilize.	<b>detail extensive</b>
<b>Transit statistics</b>	(Frame Relay) Statistics for traffic transiting the router. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. It takes awhile (generally, less than 1 second) for this counter to stabilize.	<b>detail extensive</b>
<b>Protocol</b>	Protocol family configured on the logical interface, such as <b>iso</b> , <b>inet6</b> , <b>mpls</b> .	<b>detail extensive none</b>
<b>Multilink bundle</b>	(Multilink) Interface name for the multilink bundle, if configured.	<b>detail extensive none</b>
<b>MTU</b>	MTU size on the logical interface.	<b>detail extensive none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Route table</b>	Routing table in which the logical interface address is located. For example, <b>0</b> refers to the routing table <b>inet.0</b> .	<b>detail extensive</b>
<b>DLCI</b>	<p>(Frame Relay) DLCI number of the logical interface. The following DLCI information is displayed: <b>Flags</b>, <b>Total down time</b>, <b>Last down</b>, and <b>Traffic statistics</b>. <b>Flags</b> is one or more of the following:</p> <ul style="list-style-type: none"> <li>• <b>Active</b>—Set when the link is active and the DTE and DCE are exchanging information.</li> <li>• <b>Down</b>—Set when link is active, but no information is received from the DCE.</li> <li>• <b>Unconfigured</b>—Set when the corresponding DLCI in the DCE is not configured.</li> <li>• <b>Configured</b>—Set when the corresponding DLCI in the DCE is configured.</li> <li>• <b>Dce-configured</b>—Displayed when the command is issued from the DTE.</li> </ul>	<b>detail extensive none</b>
<b>DLCI statistics</b>	<p>(Frame Relay) Data-link connection identifier (DLCI) statistics.</p> <ul style="list-style-type: none"> <li>• <b>Active DLCI</b>—Number of active DLCIs.</li> <li>• <b>Inactive DLCI</b>—Number of inactive DLCIs.</li> </ul>	<b>detail extensive none</b>

## show interfaces (Channelized OC12 IQ and IQE)

---

**Syntax** `show interfaces (type-fpc/pic/port<:channel><:channel><:channel>)  
<brief | detail | extensive | terse>  
<descriptions>  
<media>  
<snmp-index snmp-index>  
<statistics>`

**Release Information** Command introduced before Junos OS Release 7.4.

**Description** Display status information about the specified channelized OC12 IQ and IQE interface.

**Options** **type-fpc/pic/port:channel:channel:channel**—Interface type with optional corresponding channel levels.

For SONET mode, the interface type can be one of the following:

- **type-fpc/pic/port**—For the physical channelized OC12 IQ or IQE interface, **type** is **coc12**. For the clear channel, **type** is **so** (for OC12).
- **type-fpc/pic/port:channel**—At the first level of channelization, **type** can be **coc1** (channelized OC1), **ct3** (from **coc1**), **so** (for OC3), or **t3**.
- **type-fpc/pic/port:channel:channel**—At the second level of channelization, **type** can be **ct1** (from **ct3** or **coc1**) or **t1** (from **ct3** or **coc1**).
- **type-fpc/pic/port:channel:channel:channel**—At the third level of channelization, **type** is **ds** (from **ct1**).

For SDH mode, the interface type can be one of the following:

- **type-fpc/pic/port**—For the physical channelized OC12 IQ or IQE interface, **type** is **cstm4**. For the clear channel, **type** is **so** (for SONET/SDH (vc-4-4c)).
- **type-fpc/pic/port:channel**—At the first level of channelization, **type** can be **so** (from **cstm4**) or **cau4** (from **cstm4**).
- **type-fpc/pic/port:channel:channel**—At the second level of channelization, **type** can be **ct3** or **t3** (from or **cau4**).
- **type-fpc/pic/port:channel:channel:channel**—At the third level of channelization, **type** is **ct1** or **t1** (from **ct3**).
- **type-fpc/pic/port:channel:channel:channel:channel**—At the fourth level of channelization, **type** is **ds** (from **ct1**).

**brief | detail | extensive | terse**—(Optional) Display the specified level of output.

**descriptions**—(Optional) Display interface description strings.

**media**—(Optional) Display media-specific information about network interfaces.

**snmp-index** *snmp-index*—(Optional) Display information for the specified SNMP index of the interface.

**statistics**—(Optional) Display static interface statistics.

**Required Privilege Level** view

## show interfaces (Channelized OC3 IQ and IQE)

---

**Syntax** `show interfaces (type-fpc/pic/port <:channel><:channel><:channel>)  
<brief | detail | extensive | terse>  
<descriptions>  
<media>  
<snmp-index snmp-index>  
<statistics>`

**Release Information** Command introduced before Junos OS Release 7.4.

**Description** (M Series and T Series routers only) Display status information about the specified channelized OC3 IQ or IQE interface.

**Options** *type-fpc/pic/port:channel:channel:channel*—Interface type with optional corresponding channel levels. The interface type can be one of the following:

- *type-fpc/pic/port*—For the physical interface, *type* is **coc3**. For the clear channel, *type* is **so** (for OC3).
- *type-fpc/pic/port:channel*—At the first level of channelization, *type* can be **coc1** (channelized OC1), **ct3** (from **coc1**), or **t3** (from **coc1**).
- *type-fpc/pic/port:channel:channel*—At the second level of channelization, *type* can be **ct1** (from **coc1** or **ct3**) or **t1** (from **coc1** or **ct3**).
- *type-fpc/pic/port:channel:channel:channel*—At the third level of channelization, *type* can be **ds** (from **ct1**).

**brief | detail | extensive | terse**—(Optional) Display the specified level of output.

**descriptions**—(Optional) Display interface description strings.

**media**—(Optional) Display media-specific information about network interfaces.

**snmp-index *snmp-index***—(Optional) Display information for the specified SNMP index of the interface.

**statistics**—(Optional) Display static interface statistics.

**Required Privilege Level** view

**List of Sample Output** [show interfaces extensive \(Channelized OC3 IQ\) \(Physical\) on page 1288](#)  
[show interfaces extensive \(Channelized OC1 on Channelized OC3 IQ\) on page 1289](#)  
[show interfaces extensive \(Channelized T1 on Channelized OC3 IQ\) on page 1290](#)  
[show interfaces extensive \(DSO on Channelized OC3 IQ\) on page 1291](#)

**Output Fields** Table 62 on page 1275 lists the output fields for the **show interfaces** (all Channelized OC interfaces) command. Output fields are listed in the approximate order in which they appear.

*Table 62: Channelized OC show interfaces Output Fields*

Field Name	Field Description	Level of Output
<b>Physical Interface</b>		
<b>Physical interface</b>	Name of the physical interface.	All levels
<b>Enabled</b>	State of the interface. Possible values are described in the “Enabled Field” section under “ <a href="#">Common Output Fields Description</a> ” on page 1114.	All levels
<b>Interface index</b>	Physical interface's index number, which reflects its initialization sequence.	<b>detail extensive none</b>
<b>SNMP ifIndex</b>	SNMP index number for the physical interface.	<b>detail extensive none</b>
<b>Description</b>	Interface description.	All levels
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Link-level type</b>	Encapsulation being used on the physical interface.	All levels
<b>MTU</b>	MTU size on the physical interface.	All levels
<b>Clocking</b>	SONET/SDH reference clock source. It can be <b>Internal</b> or <b>External</b> . Clocking is configured and displayed only for channel 0.	All levels
<b>Framing mode</b>	Framing mode: <b>SONET</b> or <b>SDH</b> .	All levels
<b>Speed</b>	Speed at which the interface is running.	All levels
<b>Loopback</b>	Whether loopback is enabled and the type of loopback ( <b>local</b> or <b>remote</b> ).	All levels
<b>SONET loopback</b>	Whether loopback is enabled on a SONET/SDH interface, and the type of loopback ( <b>local</b> or <b>remote</b> ).	All levels
<b>FCS</b>	Frame check sequence on the interface (either <b>16</b> or <b>32</b> ). The default is <b>16-bit</b> .	All levels
<b>Payload scrambler</b>	Whether payload scrambling is enabled.	All levels
<b>Parent</b>	Name and interface index of the interface to which a particular child interface belongs. <b>None</b> indicates that this interface is the top level.	All levels
<b>Device flags</b>	Information about the physical device. Possible values are described in the “Device Flags” section under “ <a href="#">Common Output Fields Description</a> ” on page 1114.	All levels
<b>Interface flags</b>	Information about the interface. Possible values are described in the “Interface Flags” section under “ <a href="#">Common Output Fields Description</a> ” on page 1114.	All levels

Table 62: Channelized OC show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Link flags</b>	Information about the link. Possible values are described in the “Link Flags” section under “ <a href="#">Common Output Fields Description</a> ” on page 1114.	All levels
<b>Hold-times</b>	Current interface hold-time up and hold-time down, in milliseconds.	<b>detail extensive</b>
<b>ANSI or ITU LMI settings</b>	<p>(Frame Relay) Settings for Local Management Interface (LMI). The format is (ANSI or ITU) LMI settings: <i>value, value... nn</i> seconds, where <i>value</i> can be:</p> <ul style="list-style-type: none"> <li>• <b>n391dte</b>—DTE full status polling interval (1–255)</li> <li>• <b>n392dce</b>—DCE error threshold (1–10)</li> <li>• <b>n392dte</b>—DTE error threshold (1–10)</li> <li>• <b>n393dce</b>—DCE monitored event count (1–10)</li> <li>• <b>n393dte</b>—DTE monitored event count (1–10)</li> <li>• <b>t391dte</b>—DTE polling timer (5–30 seconds)</li> <li>• <b>t392dce</b>—DCE polling verification timer (5–30 seconds)</li> </ul>	All levels
<b>LMI statistics</b>	<p>(Frame Relay) Statistics about the link management.</p> <ul style="list-style-type: none"> <li>• <b>Input</b>—Number of packets coming in on the interface (<i>nn</i>) and how much time has passed since the last packet arrived. The format is <b>Input: <i>nn</i> (last sent <i>hh:mm:ss</i> ago)</b>.</li> <li>• <b>Output</b>—Number of packets sent out on the interface (<i>nn</i>) and how much time has passed since the last packet was sent. The format is <b>Output: <i>nn</i> (last sent <i>hh:mm:ss</i> ago)</b>.</li> </ul>	<b>detail extensive</b>
<b>DTE statistics</b>	<p>(Frame Relay) Statistics about messages transmitted from the data terminal equipment (DTE) to the data circuit-terminating equipment (DCE):</p> <ul style="list-style-type: none"> <li>• <b>Enquiries sent</b>—Number of link status enquiries sent from the DTE to the DCE.</li> <li>• <b>Full enquiries sent</b>—Number of full enquiries sent from the DTE to the DCE.</li> <li>• <b>Enquiry responses received</b>—Number of enquiry responses received by the DTE from the DCE.</li> <li>• <b>Full enquiry responses received</b>—Number of full enquiry responses sent from the DTE to the DCE.</li> </ul>	<b>detail extensive none</b>
<b>DCE statistics</b>	<p>(Frame Relay) Statistics about messages transmitted from the DCE to the DTE:</p> <ul style="list-style-type: none"> <li>• <b>Enquiries received</b>—Number of enquiries received by the DCE from the DTE.</li> <li>• <b>Full enquiries received</b>—Number of full enquiries received by the DCE from the DTE.</li> <li>• <b>Enquiry responses sent</b>—Number of enquiry responses sent from the DCE to the DTE.</li> <li>• <b>Full enquiry responses sent</b>—Number of full enquiry responses sent from the DCE to the DTE.</li> </ul>	<b>detail extensive none</b>

Table 62: Channelized OC show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Common statistics</b>	(Frame Relay) Statistics about messages sent between the DTE and the DCE: <ul style="list-style-type: none"> <li>• <b>Unknown messages received</b>—Number of received packets that do not fall into any category.</li> <li>• <b>Asynchronous updates received</b>—Number of link status peer changes received.</li> <li>• <b>Out-of-sequence packets received</b>—Number of packets for which the sequence of the packets received is different from the expected sequence.</li> <li>• <b>Keepalive responses timedout</b>—Number of keepalive responses that timed out when no LMI packet was reported for <b>n392dte</b> or <b>n393dce</b> intervals. (See <b>LMI settings</b>.)</li> </ul>	<b>detail extensive none</b>
<b>Nonmatching DCE-end DLCIs</b>	(Frame Relay) Number of DLCIs configured from the DCE, displayed only from the DTE.	<b>detail extensive none</b>
<b>Last flapped</b>	Date, time, and how long ago the interface went from down to up. The format is <b>Last flapped: year-month-day hh:mm:ss timezone year-month-day (hh:mm:ss ago)</b> . For example, <b>Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> .	<b>detail extensive none</b>
<b>CoS Queues</b>	Number of CoS queues configured.	<b>detail extensive none</b>
<b>Statistics last cleared</b>	Time when the statistics for the interface were last set to zero.	<b>detail extensive</b>
<b>DS1 alarms</b> <b>DS1 defects</b>	E1 or T1 media-specific defects that can prevent the interface from passing packets. When a defect persists for a certain period, it is promoted to an alarm. Based on the router configuration, an alarm can ring the red or yellow alarm bell on the router, or turn on the red or yellow alarm LED on the craft interface. See the following list for all possible alarms and defects. For complete explanations of most of these alarms and defects, see <i>Bellcore Telcordia GR-499-CORE</i> . <ul style="list-style-type: none"> <li>• <b>LOS</b>—Loss of signal.</li> <li>• <b>LOF</b>—Loss of frame.</li> <li>• <b>AIS</b>—Alarm indication signal.</li> <li>• <b>YLW</b>—Yellow alarm. Indicates errors at the remote site receiver.</li> </ul>	<b>detail extensive none</b>

Table 62: Channelized OC show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>T1 media</b>	<p>Counts of T1 or E1 media-specific errors.</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. State other than <b>OK</b> indicates a problem.</li> </ul> <p>The T1 or E1 media-specific error types are:</p> <ul style="list-style-type: none"> <li>• <b>SEF</b>—Severely errored framing</li> <li>• <b>BEE</b>—Bit error</li> <li>• <b>AIS</b>—Alarm indication signal</li> <li>• <b>LOF</b>—Loss of frame</li> <li>• <b>LOS</b>—Loss of signal</li> <li>• <b>YELLOW</b>—Errors at the remote site receiver</li> <li>• <b>BPV</b>—Bipolar violation</li> <li>• <b>EXZ</b>—Excessive zeros</li> <li>• <b>LCV</b>—Line code violation</li> <li>• <b>PCV</b>—Pulse code violation</li> <li>• <b>CS</b>—Carrier state</li> <li>• <b>FEBE</b>—Far-end block error (E1 only)</li> <li>• <b>LES</b>—Line error seconds</li> <li>• <b>ES</b>—Errored seconds</li> <li>• <b>BES</b>—Bit error seconds</li> <li>• <b>SES</b>—Severely errored seconds</li> <li>• <b>SEFS</b>—Severely errored framing seconds</li> <li>• <b>UAS</b>—Unavailable seconds</li> </ul>	<b>extensive</b>
<b>Traffic statistics</b>	<p>Number and rate of bytes and packets received and transmitted on the physical interface.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>	<b>detail extensive</b>

Table 62: Channelized OC show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Input errors</b>	<p>Input errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of the incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Runts</b>—Number of frames received that are smaller than the runt threshold.</li> <li>• <b>Giants</b>—Number of frames received that are larger than the giant threshold.</li> <li>• <b>Bucket Drops</b>—Drops caused by traffic load exceeding the interface transmit/receive leaky bucket configuration. The default is off.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that the Junos OS does not handle.</li> <li>• <b>L3 incompletes</b>—Number of incoming packets discarded because they failed Layer 3 (usually IPv4) sanity checks of the header. For example, a frame with less than 20 bytes of available IP header is discarded.</li> <li>• <b>L2 channel errors</b>—Number of times the software did not find a valid logical interface for an incoming frame.</li> <li>• <b>L2 mismatch timeouts</b>—Number of malformed or short packets that caused the incoming packet handler to discard the frame as unreadable.</li> <li>• <b>HS link CRC errors</b>—Number of errors on the high-speed links between the ASICs responsible for handling the router interfaces.</li> <li>• <b>SRAM errors</b>—Number of hardware errors that occurred in the static RAM (SRAM) on the PIC. If the value of this field increments, the PIC is malfunctioning.</li> <li>• <b>HS link FIFO overflows</b>—Number of FIFO overflows on the high-speed links between the ASICs responsible for handling the router interfaces.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>	<b>extensive</b>

Table 62: Channelized OC show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Output errors</b>	<p>Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and then up, or another problem occurs. If the number of carrier transitions increments quickly (perhaps once every 10 seconds), the cable, the far-end system, or the PIC is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Aged packets</b>—Number of packets that remained in shared packet SDRAM so long that the system automatically purged them. The value in this field should never increment. If it does, it is most likely a software bug or possibly malfunctioning hardware.</li> <li>• <b>HS link FIFO underflows</b>—Number of FIFO underflows on the high-speed links between the ASICs responsible for handling the router interfaces.</li> <li>• <b>MTU errors</b>—Number of packets whose size exceeds the MTU of the interface.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>	<b>extensive</b>
<b>Egress queues</b>	Total number of egress queues supported on the specified interface.	<b>detail extensive</b>
<b>Queue counters</b>	<p>CoS queue number and its associated user-configured forwarding class name.</p> <ul style="list-style-type: none"> <li>• <b>Queued packets</b>—Number of queued packets.</li> <li>• <b>Transmitted packets</b>—Number of transmitted packets.</li> <li>• <b>Dropped packets</b>—Number of packets dropped by the ASIC's RED mechanism.</li> </ul>	<b>detail extensive</b>
<b>Active alarms</b>	Defects that can prevent the interface from passing packets:	<b>detail extensive</b>
<b>Active defects</b>	<ul style="list-style-type: none"> <li>• <b>None</b>—There are no active defects or alarms.</li> <li>• <b>LOF</b>—Loss of frame.</li> </ul>	
<b>SONET alarms</b>	Media-specific defects that can prevent the interface from passing packets. When a defect persists for a certain amount of time, it is promoted to an alarm.	<b>All levels</b>
<b>SONET defects</b>	Based on the router configuration, an alarm can ring the red or yellow alarm bell on the router or light the red or yellow alarm LED on the craft interface. See these fields for possible alarms and defects: <b>SONET PHY</b> , <b>SONET section</b> , <b>SONET line</b> , and <b>SONET path</b> .	

Table 62: Channelized OC show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>SONET vt</b>	<p>SONET virtual-tributary (VT) alarms and defects:</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. State other than <b>OK</b> indicates a problem.</li> </ul> <p>Subfields are:</p> <ul style="list-style-type: none"> <li>• <b>BIP-B2</b>—Bit interleaved parity for SONET line overhead</li> <li>• <b>REI-V</b>—Remote error indication (near-end VT)</li> <li>• <b>LOP-V</b>—Loss of pointer (near-end VT)</li> <li>• <b>AIS-V</b>—Alarm indication signal (near-end VT)</li> <li>• <b>RDI-V</b>—Remote defect indication (near-end VT)</li> <li>• <b>UNEQ-V</b>—Unequipped (near-end VT)</li> <li>• <b>PLM-V</b>—Payload label mismatch (near-end VT)</li> <li>• <b>ES-V</b>—Errored seconds (near-end VT)</li> <li>• <b>SES-V</b>—Severely errored seconds (near-end VT)</li> <li>• <b>UAS-V</b>—Unavailable seconds (near-end VT)</li> <li>• <b>ES-VFE</b>—Errored seconds (far-end VT)</li> <li>• <b>SES-VFE</b>—Severely errored seconds (far-end VT)</li> <li>• <b>UAS-VFE</b>—Unavailable seconds (far-end VT)</li> </ul>	<b>extensive</b>
<b>SONET PHY</b>	<p>Counts of specific SONET errors with detailed information:</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. State other than <b>OK</b> indicates a problem.</li> </ul> <p>Subfields are:</p> <ul style="list-style-type: none"> <li>• <b>PLL Lock</b>—Phase-locked loop</li> <li>• <b>PHY Light</b>—Loss of optical signal</li> </ul>	<b>extensive</b>
<b>SONET section</b>	<p>Counts of specific SONET errors with detailed information:</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. State other than <b>OK</b> indicates a problem.</li> </ul> <p>Subfields are:</p> <ul style="list-style-type: none"> <li>• <b>BIP-B1</b>—Bit interleaved parity for SONET section overhead</li> <li>• <b>SEF</b>—Severely errored framing</li> <li>• <b>LOS</b>—Loss of signal</li> <li>• <b>LOL</b>—Loss of light</li> <li>• <b>LOF</b>—Loss of frame</li> <li>• <b>ES-S</b>—Errored seconds (section)</li> <li>• <b>SES-S</b>—Severely errored seconds (section)</li> <li>• <b>SEFS-S</b>—Severely errored framing seconds (section)</li> </ul>	<b>extensive</b>

Table 62: Channelized OC show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>SONET line</b>	<p>Active alarms and defects, plus counts of specific SONET errors with detailed information:</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. State other than <b>OK</b> indicates a problem.</li> </ul> <p>Subfields are:</p> <ul style="list-style-type: none"> <li>• <b>BIP-B2</b>—Bit interleaved parity for SONET line overhead</li> <li>• <b>REI-L</b>—Remote error indication (near-end line)</li> <li>• <b>RDI-L</b>—Remote defect indication (near-end line)</li> <li>• <b>AIS-L</b>—Alarm indication signal (near-end line)</li> <li>• <b>BERR-SF</b>—Bit error rate fault (signal failure)</li> <li>• <b>BERR-SD</b>—Bit error rate defect (signal degradation)</li> <li>• <b>ES-L</b>—Errored seconds (near-end line)</li> <li>• <b>SES-L</b>—Severely errored seconds (near-end line)</li> <li>• <b>UAS-L</b>—Unavailable seconds (near-end line)</li> <li>• <b>ES-LFE</b>—Errored seconds (far-end line)</li> <li>• <b>SES-LFE</b>—Severely errored seconds (far-end line)</li> <li>• <b>UAS-LFE</b>—Unavailable seconds (far-end line)</li> </ul>	<b>extensive</b>
<b>SONET path</b>	<p>Active alarms and defects, plus counts of specific SONET errors with detailed information:</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. State other than <b>OK</b> indicates a problem.</li> </ul> <p>Subfields are:</p> <ul style="list-style-type: none"> <li>• <b>BIP-B3</b>—Bit interleaved parity for SONET section overhead</li> <li>• <b>REI-P</b>—Remote error indication</li> <li>• <b>LOP-P</b>—Loss of pointer (path)</li> <li>• <b>AIS-P</b>—Path alarm indication signal</li> <li>• <b>RDI-P</b>—Path remote defect indication</li> <li>• <b>UNEQ-P</b>—Path unequipped</li> <li>• <b>PLM-P</b>—Path payload (signal) label mismatch</li> <li>• <b>ES-P</b>—Errored seconds (near-end STS path)</li> <li>• <b>SES-P</b>—Severely errored seconds (near-end STS path)</li> <li>• <b>UAS-P</b>—Unavailable seconds (near-end STS path)</li> <li>• <b>ES-PFE</b>—Errored seconds (far-end STS path)</li> <li>• <b>SES-PFE</b>—Severely errored seconds (far-end STS path)</li> <li>• <b>UAS-PFE</b>—Unavailable seconds (far-end STS path)</li> </ul>	<b>extensive</b>

Table 62: Channelized OC show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
Received SONET overhead	Values of the received and transmitted SONET/SDH overhead:	extensive
Transmitted SONET overhead	<p>F1—Section user channel byte. This byte is set aside for the purposes of users.</p> <p>S1—Synchronization Status (S1). The S1 byte is located in the first STS-1 of an STS-N. Bits 5 through 8 convey the synchronization status of the network element.</p> <p>Z3 and Z4—Path overhead.</p> <p>V5—Virtual Tributary (VT) path overhead byte.</p>	
SDH alarms SDH defects	<p>SDH media-specific defects that can prevent the interface from passing packets. When a defect persists for a certain period, it is promoted to an alarm. Based on the router configuration, an alarm can ring the red or yellow alarm bell on the router or light the red or yellow alarm LED on the craft interface. See these fields for possible alarms and defects: SDH PHY, SDH regenerator section, SDH multiplex section, and SDH path.</p> <p><b>NOTE:</b> For controller based SONET PICs, the SDH alarms and SDH defects output in the <b>show interface coc3 extensive</b> command output only shows the section and line level defects. The path level defects can be found under the SONET (so) interface output.</p>	All levels
SDH PHY	<p>Active alarms and defects, plus counts of specific SDH errors with detailed information.</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. State other than <b>OK</b> indicates a problem.</li> </ul> <p>Subfields are:</p> <ul style="list-style-type: none"> <li>• <b>PLL Lock</b>—Phase-locked loop</li> <li>• <b>PHY Light</b>—Loss of optical signal</li> </ul>	extensive
SDH regenerator section	<p>Active alarms and defects, plus counts of specific SDH errors with detailed information.</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. State other than <b>OK</b> indicates a problem.</li> </ul> <p>Subfields are:</p> <ul style="list-style-type: none"> <li>• <b>RS-BIP8</b>—24-bit BIP for multiplex section overhead (B2 bytes)</li> <li>• <b>OOF</b>—Out of frame</li> <li>• <b>LOS</b>—Loss of signal</li> <li>• <b>LOF</b>—Loss of frame</li> <li>• <b>RS-ES</b>—Errored seconds (near-end regenerator section)</li> <li>• <b>RS-SES</b>—Severely errored seconds (near-end regenerator section)</li> <li>• <b>RS-SEFS</b>—Severely errored framing seconds (regenerator section)</li> </ul>	extensive

Table 62: Channelized OC show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>SDH multiplex section</b>	<p>Active alarms and defects, plus counts of specific SDH errors with detailed information.</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. State other than <b>OK</b> indicates a problem.</li> </ul> <p>Subfields are:</p> <ul style="list-style-type: none"> <li>• <b>MS-BIP24</b>—8-bit BIP for high-order path overhead (B3 byte)</li> <li>• <b>MS-FEBE</b>—Far-end block error (multiplex section)</li> <li>• <b>MS-FERF</b>—Far-end remote fail (multiplex section)</li> <li>• <b>MS-AIS</b>—alarm indication signal (multiplex section)</li> <li>• <b>BERR-SF</b>—Bit error rate fault (signal failure)</li> <li>• <b>BERR-SD</b>—Bit error rate defect (signal degradation)</li> <li>• <b>MS-ES</b>—Errored seconds (near-end multiplex section)</li> <li>• <b>MS-SES</b>—Severely errored seconds (near-end multiplex section)</li> <li>• <b>MS-UAS</b>—Unavailable seconds (near-end multiplex section)</li> <li>• <b>MS-ES-FE</b>—Errored seconds (far-end multiplex section)</li> <li>• <b>MS-SES-FE</b>—Severely errored seconds (far-end multiplex section)</li> <li>• <b>MS-UAS-FE</b>—Unavailable seconds (far-end multiplex section)</li> </ul>	<b>extensive</b>
<b>SDH path</b>	<p>Active alarms and defects, plus counts of specific SDH errors with detailed information.</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. State other than <b>OK</b> indicates a problem.</li> </ul> <p>Subfields are:</p> <ul style="list-style-type: none"> <li>• <b>HP-BIP8</b>—8-bit BIP for regenerator section overhead (B1 byte)</li> <li>• <b>HP-FEBE</b>—Far-end block error (high-order path)</li> <li>• <b>HP-LOP</b>—Loss of pointer (high-order path)</li> <li>• <b>HP-AIS</b>—High-order-path alarm indication signal</li> <li>• <b>HP-FERF</b>—Far-end remote fail (high-order path)</li> <li>• <b>HP-UNEQ</b>—Unequipped (high-order path)</li> <li>• <b>HP-PLM</b>—Payload label mismatch (high-order path)</li> <li>• <b>HP-ES</b>—Errored seconds (near-end high-order path)</li> <li>• <b>HP-SES</b>—Severely errored seconds (near-end high-order path)</li> <li>• <b>HP-UAS</b>—Unavailable seconds (near-end high-order path)</li> <li>• <b>HP-ES-FE</b>—Errored seconds (far-end high-order path)</li> <li>• <b>HP-SES-FE</b>—Severely errored seconds (far-end high-order path)</li> <li>• <b>HP-UAS-FE</b>—Unavailable seconds (far-end high-order path)</li> </ul>	<b>extensive</b>

Table 62: Channelized OC show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
Received SDH overhead	Values of the received and transmitted SONET overhead:	extensive
Transmitted SDH overhead	<ul style="list-style-type: none"> <li>• <b>C2</b>—Signal label. Allocated to identify the construction and content of the STS-level SPE and for PDI-P.</li> <li>• <b>F1</b>—Section user channel byte. This byte is set aside for the purposes of users.</li> <li>• <b>K1</b> and <b>K2</b>—These bytes are allocated for APS signaling for the protection of the multiplex section.</li> <li>• <b>J0</b>—Section trace. This byte is defined for STS-1 number 1 of an STS-<i>N</i> signal. Used to transmit a 1-byte fixed-length string or a 16-byte message so that a receiving terminal in a section can verify its continued connection to the intended transmitter.</li> <li>• <b>S1</b>—Synchronization status. The S1 byte is located in the first STS-1 of an STS-<i>N</i>.</li> <li>• <b>Z3</b> and <b>Z4</b>—Allocated for future use.</li> </ul>	
Received path trace	Channelized OC12 interfaces allow path trace bytes to be sent inband across the SONET/SDH link. The received path trace value is the message received from the router at the other end of the fiber. The transmitted path trace value is the message that this router transmits. This information is specific to each of the 12 channelized OC12 interfaces.	extensive
Transmitted path trace		
DS3 media	<p>Counts of T3 media-specific errors. For detailed definitions of the T3 (DS-3) error events (BPV, EXZ, LCV, PCV, and CCV) and performance parameters (LES, PES, PSES, CES, CSES, SEFS, and UAS), see RFC 2496.</p> <p>The DS3 or E3 media-specific error types can be:</p> <ul style="list-style-type: none"> <li>• <b>PLL Lock</b>—Phase-locked loop out of lock</li> <li>• <b>Reframing</b>—Frame alignment recovery time</li> <li>• <b>AIS</b>—Alarm indication signal</li> <li>• <b>LOF</b>—Loss of frame</li> <li>• <b>LOS</b>—Loss of signal</li> <li>• <b>IDLE</b>—Idle code detected</li> <li>• <b>YELLOW</b>—Errors at the remote site receiver</li> <li>• <b>BPV</b>—Bipolar violation</li> <li>• <b>EXZ</b>—Excessive zeros</li> <li>• <b>LCV</b>—Line code violation</li> <li>• <b>PCV</b>—(DS3 only) Pulse code violation</li> <li>• <b>CCV</b>—(DS3 only) C-bit coding violation</li> <li>• <b>FEBE</b>—(DS3 only) Far-end block error</li> <li>• <b>LES</b>—Line error seconds</li> <li>• <b>PES</b>—(DS3 only) P-bit errored seconds</li> <li>• <b>PSES</b>—(DS3 only) P-bit errored seconds (section)</li> <li>• <b>CES</b>—(DS3 only) C-bit errored seconds</li> <li>• <b>CSES</b>—(DS3 only) C-bit severely errored seconds</li> <li>• <b>SEFS</b>—Severely errored framing seconds</li> <li>• <b>UAS</b>—Unavailable seconds</li> </ul>	extensive

Table 62: Channelized OC show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
HDLC configuration	<p>Information about the HDLC configuration.</p> <ul style="list-style-type: none"> <li>• <b>Policing bucket</b>—Configured state of the receiving policer.</li> <li>• <b>Shaping bucket</b>—Configured state of the transmitting shaper.</li> <li>• <b>Giant threshold</b>—Giant threshold programmed into the hardware.</li> <li>• <b>Runt threshold</b>—Runt threshold programmed into the hardware.</li> <li>• <b>Timeslots</b>—Configured time slots for the interface.</li> <li>• <b>Line encoding</b>—Line encoding used. It is always <b>HDB3</b>.</li> <li>• <b>Byte encoding</b>—(T1 only) Byte encoding used: <b>Nx64K</b> or <b>Nx56K</b>.</li> <li>• <b>Line encoding</b>—Line encoding used. For T1, the value can be <b>B8ZS</b> or <b>AMI</b>. For E1, the value is <b>HDB3</b>.</li> <li>• <b>Data inversion</b>—HDLC data inversion setting: <b>Enabled</b> or <b>Disabled</b>.</li> <li>• <b>Idle cycle flag</b>—Idle cycle flags.</li> <li>• <b>Start end flag</b>—Start and end flag.</li> </ul>	extensive
Interface transmit queues	<p>Name of the transmit queues and their associated statistics for each DS3 channel on the Channelized OC12 PIC.</p> <ul style="list-style-type: none"> <li>• <b>B/W</b>—Queue bandwidth as a percentage of the total interface bandwidth.</li> <li>• <b>WRR</b>—Weighted round-robin (in percent).</li> <li>• <b>Packets</b>—Number of packets transmitted.</li> <li>• <b>Bytes</b>—Number of bytes transmitted.</li> <li>• <b>Drops</b>—Number of packets dropped.</li> <li>• <b>Errors</b>—Number of packet errors.</li> </ul>	extensive
DSU configuration	<p>Information about the DSU configuration. The last three lines (<b>Bit count</b>, <b>Error bit count</b>, and <b>LOS information</b>) are displayed only if a BERT has ever been run on the interface.</p> <ul style="list-style-type: none"> <li>• <b>Compatibility mode</b>—CSU/DSU compatibility mode: <b>None</b>, <b>Larscom</b>, <b>Kentrox</b>, or <b>Digital-Link</b>.</li> <li>• <b>Scrambling</b>—Payload scrambling. It can be <b>Enabled</b> or <b>Disabled</b>.</li> <li>• <b>Subrate</b>—Configured subrate setting. Applies only when <b>Digital-Link</b> compatibility mode is used. It can be <b>Disabled</b> or display units in kbps.</li> <li>• <b>FEAC loopback</b>—(T3) Whether a far-end alarm and control (FEAC) loopback is <b>Active</b> or <b>Inactive</b>. This feature is used to send alarm or status information from the far-end terminal back to the near-end terminal and to initiate T3 loopbacks at the far-end terminal from the near-end terminal.</li> <li>• <b>Response</b>—Whether the FEAC signal is <b>Enabled</b> or <b>Disabled</b>.</li> <li>• <b>Count</b>—Number of FEAC loopbacks.</li> </ul>	extensive
BERT configuration	<p>(DS interfaces) BERT (bit error rate test) checks the quality of the line. This output appears only when a BERT is run on the interface.</p> <ul style="list-style-type: none"> <li>• <b>BERT time period</b>—Configured total time period that the BERT is to run.</li> <li>• <b>Elapsed</b>—Actual time elapsed since the start of the BERT (in seconds).</li> <li>• <b>Induced error rate</b>—Configured rate at which the bit errors are induced in the BERT pattern.</li> <li>• <b>Algorithm</b>—Type of algorithm selected for the BERT.</li> </ul>	detail extensive none

Table 62: Channelized OC show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Packet Forwarding Engine configuration</b>	Information about the configuration of the Packet Forwarding Engine: <ul style="list-style-type: none"> <li>• <b>Destination slot</b>—FPC slot number.</li> <li>• <b>PLP byte</b>—Packet Level Protocol byte.</li> </ul>	<b>extensive</b>
<b>CoS information</b>	Information about the CoS queue for the physical interface. <ul style="list-style-type: none"> <li>• <b>CoS transmit queue</b>—Queue number and its associated user-configured forwarding class name.</li> <li>• <b>Bandwidth %</b>—Percentage of bandwidth allocated to the queue.</li> <li>• <b>Bandwidth bps</b>—Bandwidth allocated to the queue (in bps).</li> <li>• <b>Buffer %</b>—Percentage of buffer space allocated to the queue.</li> <li>• <b>Buffer usec</b>—Amount of buffer space allocated to the queue, in microseconds. This value is nonzero only if the buffer size is configured in terms of time.</li> <li>• <b>Priority</b>—Queue priority: <b>low</b> or <b>high</b>.</li> <li>• <b>Limit</b>—Displayed if rate limiting is configured for the queue. Possible values are <b>none</b> and <b>exact</b>. If <b>exact</b> is configured, the queue transmits only up to the configured bandwidth, even if excess bandwidth is available. If <b>none</b> is configured, the queue transmits beyond the configured bandwidth if bandwidth is available.</li> </ul>	<b>extensive</b>
<b>Logical Interface</b>		
<b>Logical interface</b>	Name of the logical interface.	All levels
<b>Index</b>	Logical interface index number, which reflects its initialization sequence.	<b>detail extensive none</b>
<b>SNMP ifIndex</b>	Logical interface SNMP interface index number.	<b>detail extensive none</b>
<b>Flags</b>	Information about the logical interface. Possible values are described in the “Logical Interface Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels
<b>Encapsulation</b>	Encapsulation on the logical interface.	All levels
<b>Traffic statistics</b>	Total number of bytes and packets received and transmitted on the logical interface. These statistics are the sum of the local and transit statistics. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. It takes awhile (generally, less than 1 second) for this counter to stabilize. <ul style="list-style-type: none"> <li>• <b>Input rate</b>—Rate of bits and packets received on the interface.</li> <li>• <b>Output rate</b>—Rate of bits and packets transmitted on the interface.</li> </ul>	<b>detail extensive</b>
<b>Local statistics</b>	Statistics for traffic received from and transmitted to the Routing Engine. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. It takes awhile (generally, less than 1 second) for this counter to stabilize.	<b>detail extensive</b>

Table 62: Channelized OC show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Transit statistics</b>	Statistics for traffic transiting the router. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. It takes awhile (generally, less than 1 second) for this counter to stabilize.	<b>detail extensive</b>
<b>Protocol</b>	Protocol family configured on the logical interface, such as <b>iso</b> , <b>inet6</b> , or <b>mpls</b> .	<b>detail extensive none</b>
<b>Multilink bundle</b>	(If the logical interface is configured as part of a multilink bundle.) Interface name for the multilink bundle.	<b>detail extensive none</b>
<b>MTU</b>	MTU size on the logical interface.	<b>detail extensive none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Route table</b>	Routing table in which the logical interface address is located. For example, <b>0</b> refers to the routing table <b>inet.0</b> .	<b>detail extensive</b>
<b>Addresses, Flags</b>	Information about the address flags. Possible values are described in the “Addresses Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	<b>detail extensive none</b>
<b>Destination</b>	IP address of the remote side of the connection.	<b>detail extensive none</b>
<b>Local</b>	IP address of the logical interface.	<b>detail extensive none</b>
<b>Broadcast</b>	Broadcast address.	<b>detail extensive none</b>
<b>DLCI</b>	(Frame Relay) DLCI number of the logical interface. The following DLCI information is displayed: <b>Flags</b> , <b>Total down time</b> , <b>Last down</b> , and <b>Traffic statistics</b> . <b>Flags</b> is one or more of the following: <ul style="list-style-type: none"> <li>• <b>Active</b>—Set when the link is active and the DTE and DCE are exchanging information.</li> <li>• <b>Down</b>—Set when the link is active, but no information is received from the DCE.</li> <li>• <b>Unconfigured</b>—Set when the corresponding DLCI in the DCE is not configured.</li> <li>• <b>Configured</b>—Set when the corresponding DLCI in the DCE is configured.</li> <li>• <b>Dce-configured</b>—Displayed when the command is issued from the DTE.</li> </ul>	<b>detail extensive none</b>
<b>DLCI statistics</b>	(Frame Relay) Data-link connection identifier (DLCI) statistics. <ul style="list-style-type: none"> <li>• <b>Active DLCI</b>—Number of active DLCIs.</li> <li>• <b>Inactive DLCI</b>—Number of inactive DLCIs.</li> </ul>	<b>detail extensive none</b>

## Sample Output

### show interfaces extensive (Channelized OC3 IQ) (Physical)

```
user@host> show interfaces extensive coc3-0/0/0
```

```

Physical interface: coc3-0/0/0, Enabled, Physical link is Down
Interface index: 128, SNMP ifIndex: 22, Generation: 11
Description: pink coc3-0/0/0
Link-level type: Controller, Clocking: Internal, SONET mode, Speed: OC3,
Loopback: None, Parent: None
Device flags : Present Running Down
Interface flags: Hardware-Down Point-To-Point SNMP-Traps 16384
Link flags : None
Hold-times : Up 0 ms, Down 0 ms
CoS queues : 4 supported
Last flapped : 2005-01-27 16:39:21 PST (1w0d 22:09 ago)
Statistics last cleared: Never
SONET alarms : PLL, LOS
SONET defects : PLL, LOF, LOS, SEF, AIS-L
SONET PHY:
      Seconds      Count  State
  PLL Lock      681767      1  PLL Lock Error
  PHY Light         0        0  OK
SONET section:
      Seconds      Count  State
  BIP-B1         0        0
  SEF      681767      1  Defect Active
  LOS      681767      1  Defect Active
  LOF      681767      1  Defect Active
  ES-S      681767
  SES-S      681767
  SEFS-S      681767
SONET line:
      Seconds      Count  State
  BIP-B2         0        0
  REI-L         0        0
  RDI-L         0        0  OK
  AIS-L      681767      1  Defect Active
  BERR-SF         0        0  OK

## HDLC configuration:

Giant threshold: 1514, Runt threshold: 2

Timeslots : 1-5

Byte encoding: Nx64K, Data inversion: Disabled, Idle cycle flag: flags,  
Start end flag: shared

## DSO BERT configuration:

BERT time period: 10 seconds, Elapsed: 0 seconds

Induced Error rate: 10e-0, Algorithm: 2^15 - 1, 0.151, Pseudorandom (9)

## Packet Forwarding Engine configuration:

Destination slot: 0, PLP byte: 4 (0x00)

## show interfaces (Channelized STM1 IQ)

<b>Syntax</b>	<pre>show interfaces (type-fpc/pic/port &lt;:channel&gt;&lt;:channel&gt;) &lt;brief   detail   extensive   terse&gt; &lt;descriptions&gt; &lt;media&gt; &lt;snmp-index snmp-index&gt; &lt;statistics&gt;</pre>
<b>Release Information</b>	Command introduced before Junos OS Release 7.4.
<b>Description</b>	(M Series and T Series routers only) Display status information about the specified channelized STM1 IQ interface.
<b>Options</b>	<p><b>type-fpc/pic/port:channel:channel</b>—Interface type with optional corresponding channel levels. The interface type can be one of the following types:</p> <ul style="list-style-type: none"> <li>• <b>type-fpc/pic/port:channel</b>—For the physical channelized STM1 IQ interface, <b>type</b> is <b>cstm1</b>. For the clear channel, <b>type</b> is <b>so</b>. For channelization, the STM1 IQ interface must be converted to interface type <b>cau4</b>.</li> <li>• <b>type-fpc/pic/port:channel</b>—At the first level of channelization, <b>type</b> can be <b>ce1</b> or <b>e1</b> (clear channel or fractional channel from <b>cau4</b>).</li> <li>• <b>type-fpc/pic/port:channel:channel</b>—At the second level of channelization, <b>type</b> is <b>ds</b> (from <b>ce1</b>).</li> </ul> <p><b>brief   detail   extensive   terse</b>—(Optional) Display the specified level of output.</p> <p><b>descriptions</b>—(Optional) Display interface description strings.</p> <p><b>media</b>—(Optional) Display media-specific information about network interfaces.</p> <p><b>snmp-index snmp-index</b>—(Optional) Display information for the specified SNMP index of the interface.</p> <p><b>statistics</b>—(Optional) Display static interface statistics.</p>
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">show interfaces (Channelized STM1 IQ) (Physical) on page 1294</a> <a href="#">show interfaces (Channelized AU-4) (Physical) on page 1294</a> <a href="#">show interfaces (Channelized E1) (Physical) on page 1294</a> <a href="#">show interfaces (DS) on page 1295</a>
<b>Output Fields</b>	See the output field table for the <a href="#">show interfaces (Channelized STM1)</a> command.

## Sample Output

### show interfaces (Channelized STM1 IQ) (Physical)

```
user@host> show interfaces cstm1-0/0/0
Physical interface: cstm1-0/0/0, Enabled, Physical link is Up
  Interface index: 146, SNMP ifIndex: 35
  Link-level type: Frame-relay, Controller, Clocking: Internal, SDH mode,
  Speed: OC3, Loopback: None, Parent: None  Device flags   : Present Running
  Interface flags: Point-To-Point SNMP-Traps
  Link flags      : Keepalives DTE
  ANSI LMI settings: n391dte 6, n392dte 3, n393dte 4, t391dte 10 seconds
  LMI: Input: 51700 (00:00:02 ago), Output: 51701 (00:00:02 ago)
  DTE statistics:
    Enquiries sent                : 43186
    Full enquiries sent           : 8515
    Enquiry responses received    : 43185
    Full enquiry responses received : 8515
  DCE statistics:
    Enquiries received            : 0
    Full enquiries received       : 0
    Enquiry responses sent        : 0
    Full enquiry responses sent   : 0
  Common statistics:
    Unknown messages received     : 0
    Asynchronous updates received : 0
    Out-of-sequence packets received : 0
    Keepalive responses timeout   : 0
  Nonmatching DCE-end DLCIs:
    2
  Last flapped   : 2003-02-06 15:01:56 PST (07:15:06 ago)
...
```

### show interfaces (Channelized AU-4) (Physical)

```
user@host> show interfaces cau4-0/0/0
Physical interface: cau4-0/0/0, Enabled, Physical link is Up
  Interface index: 147, SNMP ifIndex: 36
  Link-level type: Controller, Clocking: Internal, SDH mode, Speed: OC3,
  Loopback: None, Parent: cstm1-0/0/0 Interface index 146
  Device flags   : Present Running
  Interface flags: Point-To-Point SNMP-Traps
  Link flags      : None
  Last flapped   : 2003-02-06 19:36:31 PST (02:40:42 ago)
  SDH alarms     : None
  SDH defects    : None
...
```

### show interfaces (Channelized E1) (Physical)

```
user@host> show interfaces ce1-0/0/0:11
Physical interface: ce1-0/0/0:11, Enabled, Physical link is Up
  Interface index: 169, SNMP ifIndex: 288
  Link-level type: Frame-relay, Controller, Clocking: Internal, Speed: E1,
  Loopback: None, Framing: G704, Parent: cau4-0/0/0 Interface index 147
  Device flags   : Present Running
  Interface flags: Point-To-Point SNMP-Traps
  Link flags      : Keepalives DTE
  ANSI LMI settings: n391dte 6, n392dte 3, n393dte 4, t391dte 10 seconds
```

```

LMI: Input: 51700 (00:00:02 ago), Output: 51701 (00:00:02 ago)
DTE statistics:
  Enquiries sent           : 43186
  Full enquiries sent      : 8515
  Enquiry responses received : 43185
  Full enquiry responses received : 8515
DCE statistics:
  Enquiries received       : 0
  Full enquiries received  : 0
  Enquiry responses sent   : 0
  Full enquiry responses sent : 0
Common statistics:
  Unknown messages received : 0
  Asynchronous updates received : 0
  Out-of-sequence packets received : 0
  Keepalive responses timedout : 0
Nonmatching DCE-end DLCIs:
  2
Last flapped : 2003-02-06 22:05:23 PST (00:13:45 ago)
DS1  alarms : None
DS1  defects : None
SDH  alarms : None
SDH  defects : None
...

```

### show interfaces (DS)

```

user@host> show interfaces ds-0/0/0:11:1
Physical interface: ds-0/0/0:11:1, Enabled, Physical link is Up
  Interface index: 170, SNMP ifIndex: 289
  Link-level type: PPP, MTU: 1504, Clocking: Internal, Speed: 640kbps,
  Loopback: Illegal, FCS: 16, Parent: ce1-0/0/0:11 Interface index 169
  Device flags : Present Running
  Interface flags: Point-To-Point SNMP-Traps
  Link flags : Keepalives
  CoS Queues: 8 maximum usable queues, 4 in use
  Keepalive settings: Interval 10 seconds, Up-count 1, Down-count 3
  Keepalive: Input: 0 (never), Output: 0 (never)
  LCP state: Conf-req-sent
  Egress queues: 8 supported, 4 in use
...
Logical interface ds-0/0/0:11:1.0 (Index 77) (SNMP ifIndex 290)
  Flags: Hardware-Down Point-To-Point SNMP-Traps Encapsulation: PPP
  Bandwidth: 0
  Protocol inet, MTU: 1500
  Flags: Protocol-Down
  Addresses, Flags: Dest-route-down Is-Preferred Is-Primary
    Destination: 10.134.1.0/30, Local: 10.134.1.1
DLCI 100
  Flags: Active, Dce-configured
  Total down time: 0 sec, Last down: Never

```

## show interfaces (Channelized STM1)

**Syntax** `show interfaces e1-fpc/pic/port:e1channel`  
`<brief | detail | extensive | terse>`  
`<descriptions>`  
`<media>`  
`<snmp-index snmp-index>`  
`<statistics>`

**Release Information** Command introduced before Junos OS Release 7.4.

**Description** (M Series and T Series routers only) Display status information about the specified channelized STM1 interface.

**Options** `e1-fpc/pic/port:e1channel`—Display standard status information about the specified channelized STM1 interface.

`brief | detail | extensive | terse`—(Optional) Display the specified level of output.

`descriptions`—(Optional) Display interface description strings.

`media`—(Optional) Display media-specific information about network interfaces.

`snmp-index snmp-index`—(Optional) Display information for the specified SNMP index of the interface.

`statistics`—(Optional) Display static interface statistics.

**Required Privilege Level** view

**List of Sample Output** [show interfaces extensive \(Channelized STM1, SDH\) on page 1307](#)

**Output Fields** [Table 63 on page 1296](#) lists the output fields for the **show interfaces** (all Channelized STM1 interfaces) command. Output fields are listed in the approximate order in which they appear.

**Table 63: Channelized STM1 show interfaces Output Fields**

Field Name	Field Description	Level of Output
<b>Physical Interface</b>		
<b>Physical interface</b>	Name of the physical interface.	All levels
<b>Enabled</b>	State of the interface. Possible values are described in the “Enabled Field” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels
<b>Interface index</b>	Physical interface's index number, which reflects its initialization sequence.	<b>detail extensive none</b>
<b>SNMP ifIndex</b>	SNMP index number for the physical interface.	<b>detail extensive none</b>

Table 63: Channelized STM1 show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Link-level type</b>	Encapsulation being used on the physical interface.	All levels
<b>MTU</b>	MTU size on the physical interface.	All levels
<b>Clocking</b>	Reference clock source. It can be <b>Internal</b> or <b>External</b> .	All levels
<b>Speed</b>	Speed at which the interface is running.	All levels
<b>Loopback</b>	Whether loopback is enabled and the type of loopback ( <b>local</b> or <b>remote</b> ).	All levels
<b>FCS</b>	Frame check sequence on the interface (either <b>16</b> or <b>32</b> ). The default is <b>16</b> bits.	All levels
<b>Framing</b>	Physical layer framing format used on the link. It can be <b>G704</b> , <b>G704-NO-CRC4</b> , or <b>Unframed</b> . The default is <b>G704</b> .	All levels
<b>Parent</b>	(Channelized STM1 IQ interfaces only) Name and interface index of the interface to which a particular child interface belongs. <b>None</b> indicates that this interface is the top level.	All levels
<b>Device flags</b>	Information about the physical device. Possible values are described in the "Device Flags" section under " <a href="#">Common Output Fields Description</a> " on page 1114.	All levels
<b>Interface flags</b>	Information about the interface. Possible values are described in the "Interface Flags" section under " <a href="#">Common Output Fields Description</a> " on page 1114.	All levels
<b>Link flags</b>	Information about the link. Possible values are described in the "Link Flags" section under " <a href="#">Common Output Fields Description</a> " on page 1114.	All levels
<b>Hold-times</b>	Current interface hold-time up and hold-time down, in milliseconds.	<b>detail extensive</b>
<b>Keepalive settings</b>	(PPP and HDLC) Configured settings for keepalives. <ul style="list-style-type: none"> <li><b>intervalseconds</b>—The time in seconds between successive keepalive requests. The range is <b>10</b> seconds through <b>32,767</b> seconds, with a default of <b>10</b> seconds.</li> <li><b>down-count number</b>—The number of keepalive packets a destination must fail to receive before the network takes a link down. The range is <b>1</b> through <b>255</b>, with a default of <b>3</b>.</li> <li><b>up-count number</b>—The number of keepalive packets a destination must receive to change a link's status from down to up. The range is <b>1</b> through <b>255</b>, with a default of <b>1</b>.</li> </ul>	<b>detail extensive none</b>

Table 63: Channelized STM1 show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
Keepalive statistics	<p>(PPP and HDLC) Information about keepalive packets.</p> <ul style="list-style-type: none"> <li><b>Input</b>—Number of keepalive packets received by PPP. <ul style="list-style-type: none"> <li><b>(last seen 00:00:00 ago)</b>—Time since the last keepalive packet was received, in the format <i>hh:mm:ss</i>.</li> </ul> </li> <li><b>Output</b>—Number of keepalive packets sent by PPP and how long ago the last keepalive packets were sent and received. <ul style="list-style-type: none"> <li><b>(last seen 00:00:00 ago)</b>—Time since the last keepalive packet was sent, in the format <i>hh:mm:ss</i>.</li> </ul> </li> </ul>	detail extensive none
ANSI LMI settings or ITU LMI settings	<p>(Frame Relay) Local Management Interface settings. The format is (ANSI or ITU) LMI settings: <i>value, value...xx</i> seconds, where <i>value</i> can be:</p> <ul style="list-style-type: none"> <li><b>n391dte</b>—DTE full status polling interval (1- 255)</li> <li><b>n392dce</b>—DCE error threshold (1-10)</li> <li><b>n392dte</b>—DTE error threshold (1-10)</li> <li><b>n393dce</b>—DCE monitored event count (1-10)</li> <li><b>n393dte</b>—DTE monitored event count (1-10)</li> <li><b>t391dte</b>—DTE polling timer (5-30 seconds)</li> <li><b>t392dce</b>—DCE polling verification timer (5-30 seconds)</li> </ul>	detail extensive none
LMI	<p>(Frame Relay) Statistics about the link management.</p> <ul style="list-style-type: none"> <li><b>Input</b>—Number of packets coming in on the interface (<i>nn</i>) and how much time has passed since the last packet arrived. The format is <b>Input: <i>nn</i> (last seen <i>hh:mm:ss</i> ago)</b>.</li> <li><b>Output</b>—Number of packets sent out on the interface (<i>nn</i>) and how much time has passed since the last packet was sent. The format is <b>Output: <i>nn</i> (last seen <i>hh:mm:ss</i> ago)</b>.</li> </ul>	detail extensive none
DTE statistics	<p>(Frame Relay) Statistics about messages transmitted from the data terminal equipment (DTE) to the data circuit-terminating equipment (DCE):</p> <ul style="list-style-type: none"> <li><b>Enquiries sent</b>—Number of link status enquiries sent from the DTE to the DCE.</li> <li><b>Full enquiries sent</b>—Number of full enquiries sent from the DTE to the DCE.</li> <li><b>Enquiry responses received</b>—Number of enquiry responses received by the DTE from the DCE.</li> <li><b>Full enquiry responses received</b>—Number of full enquiry responses sent from the DTE to the DCE.</li> </ul>	detail extensive none
DCE statistics	<p>(Frame Relay) Statistics about messages transmitted from the DCE to the DTE:</p> <ul style="list-style-type: none"> <li><b>Enquiries received</b>—Number of enquiries received by the DCE from the DTE.</li> <li><b>Full enquiries received</b>—Number of full enquiries received by the DCE from the DTE.</li> <li><b>Enquiry responses sent</b>—Number of enquiry responses sent from the DCE to the DTE.</li> <li><b>Full enquiry responses sent</b>—Number of full enquiry responses sent from the DCE to the DTE.</li> </ul>	detail extensive none

Table 63: Channelized STM1 show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Common statistics</b>	<p>(Frame Relay) Statistics about messages sent between the DTE and the DCE:</p> <ul style="list-style-type: none"> <li>• <b>Unknown messages received</b>—Number of received packets that do not fall into any category.</li> <li>• <b>Asynchronous updates received</b>—Number of link status peer changes received.</li> <li>• <b>Out-of-sequence packets received</b>—Number of packets for which the sequence of the packets received is different from the expected sequence.</li> <li>• <b>Keepalive responses timedout</b>—Number of keepalive responses that timed out when no LMI packet was reported for <b>n392dte</b> or <b>n393dce</b> intervals. (See <b>LMI settings</b>.)</li> </ul>	<b>detail extensive none</b>
<b>Nonmatching DCE-end DLCIs</b>	<p>(Frame Relay, displayed only from the DTE) Number of DLCIs configured from the DCE.</p>	<b>detail extensive none</b>
<b>LCP state</b>	<p>(PPP) Link Control Protocol state.</p> <ul style="list-style-type: none"> <li>• <b>Conf-ack-received</b>—Acknowledgment was received.</li> <li>• <b>Conf-ack-sent</b>—Acknowledgment was sent.</li> <li>• <b>Conf-req-sent</b>—Request was sent.</li> <li>• <b>Down</b>—LCP negotiation is incomplete (not yet completed or has failed).</li> <li>• <b>Not-configured</b>—LCP is not configured on the interface.</li> <li>• <b>Opened</b>—LCP negotiation is successful.</li> </ul>	<b>detail extensive none</b>
<b>NCP state</b>	<p>(PPP) Network Control Protocol state.</p> <ul style="list-style-type: none"> <li>• <b>Conf-ack-received</b>—Acknowledgment was received.</li> <li>• <b>Conf-ack-sent</b>—Acknowledgment was sent.</li> <li>• <b>Conf-req-sent</b>—Request was sent.</li> <li>• <b>Down</b>—NCP negotiation is incomplete (not yet completed or has failed).</li> <li>• <b>Not-configured</b>—NCP is not configured on the interface.</li> <li>• <b>Opened</b>—NCP negotiation is successful.</li> </ul>	<b>detail extensive none</b>
<b>CHAP state</b>	<p>(PPP) Displays the state of the Challenge Handshake Authentication Protocol (CHAP) during its transaction.</p> <ul style="list-style-type: none"> <li>• <b>Chap-Chal-received</b>—Challenge was received but response not yet sent.</li> <li>• <b>Chap-Chal-sent</b>—Challenge was sent.</li> <li>• <b>Chap-Resp-received</b>—Response was received for the challenge sent, but CHAP has not yet moved into the Success state. (Most likely with RADIUS authentication.)</li> <li>• <b>Chap-Resp-sent</b>—Response was sent for the challenge received.</li> <li>• <b>Closed</b>—CHAP authentication is incomplete.</li> <li>• <b>Failure</b>—CHAP authentication failed.</li> <li>• <b>Not-configured</b>—CHAP is not configured on the interface.</li> <li>• <b>Success</b>—CHAP authentication was successful.</li> </ul>	<b>detail extensive none</b>
<b>Last flapped</b>	<p>Date, time, and how long ago the interface went from down to up. The format is <b>Last flapped: year-month-day hour:minute:second timezone (hour:minute:second ago)</b>. For example, <b>Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b>.</p>	<b>detail extensive none</b>

Table 63: Channelized STM1 show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Statistics last cleared</b>	Time when the statistics for the interface were last set to zero.	<b>detail extensive</b>
<b>Traffic statistics</b>	<p>Number and rate of bytes and packets received and transmitted on the physical interface.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>	<b>detail extensive</b>
<b>Input errors</b>	<p>Input errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of the incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that the Junos OS does not handle.</li> <li>• <b>L3 incompletes</b>—Number of incoming packets discarded because they failed Layer 3 (usually IPv4) sanity checks of the header. For example, a frame with less than 20 bytes of available IP header is discarded.</li> <li>• <b>L2 channel errors</b>—Number of times the software did not find a valid logical interface for an incoming frame.</li> <li>• <b>L2 mismatch timeouts</b>—Number of malformed or short packets that caused the incoming packet handler to discard the frame as unreadable.</li> <li>• <b>HS link CRC errors</b>—Number of errors on the high-speed links between the ASICs responsible for handling the router interfaces.</li> <li>• <b>SRAM errors</b>—Number of hardware errors that occurred in the static RAM (SRAM) on the PIC. If the value of this field increments, the PIC is malfunctioning.</li> </ul>	<b>extensive</b>

Table 63: Channelized STM1 show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Output errors</b>	<p>Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and then up, or another problem occurs. If the number of carrier transitions increments quickly (perhaps once every 10 seconds), the cable, the far-end system, or the PIC is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Aged packets</b>—Number of packets that remained in shared packet SDRAM so long that the system automatically purged them. The value in this field should never increment. If it does, it is most likely a software bug or possibly malfunctioning hardware.</li> </ul>	<b>extensive</b>
<b>DS1 alarms</b> <b>DS1 defects</b>	<p>E1 media-specific defects that can prevent the interface from passing packets. When a defect persists for a certain period, it is promoted to an alarm. Based on the router configuration, an alarm can ring the red or yellow alarm bell on the router, or turn on the red or yellow alarm LED on the craft interface. The following lists all possible alarms and defects. For complete explanations of most of these alarms and defects, see <i>Bellcore Telcordia GR-499-CORE</i>.</p> <ul style="list-style-type: none"> <li>• <b>LOS</b>—Loss of signal.</li> <li>• <b>LOF</b>—Loss of frame.</li> <li>• <b>AIS</b>—Alarm indication signal.</li> <li>• <b>YLW</b>—Yellow alarm. Indicates errors at the remote site receiver.</li> </ul>	<b>detail extensive none</b>
<b>SDH alarms</b> <b>SDH defects</b>	<p>SDH media-specific defects that can prevent the interface from passing packets. When a defect persists for a certain period, it is promoted to an alarm. Based on the router configuration, an alarm can ring the red or yellow alarm bell on the router or light the red or yellow alarm LED on the craft interface. See these fields for possible alarms and defects: SDH PHY, SDH regenerator section, SDH multiplex section, and SDH path.</p> <p><b>NOTE:</b> For controller-based SONET PICs, the SDH alarms and SDH defects output in the <b>show interface cstm1 extensive</b> command output only shows the section and line level defects. The path level defects can be found under the SONET (so) interface output.</p>	<b>All levels</b>

Table 63: Channelized STM1 show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
E1 media	<p>Active alarms and defects, plus counts of specific E1 errors with detailed information.</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. State other than <b>OK</b> indicates a problem.</li> </ul> <p>Error types can be:</p> <ul style="list-style-type: none"> <li>• <b>AIS</b>—Alarm indication signal</li> <li>• <b>BEE</b>—Bit error</li> <li>• <b>BES</b>—Bit error seconds</li> <li>• <b>BPV</b>—Bipolar violation</li> <li>• <b>CS</b>—Carrier state</li> <li>• <b>ES</b>—Errored seconds</li> <li>• <b>EXZ</b>—Excessive zeros</li> <li>• <b>FEBE</b>—Far-end block error</li> <li>• <b>LCV</b>—Line code violation</li> <li>• <b>LES</b>—Line error seconds</li> <li>• <b>LOF</b>—Loss of frame</li> <li>• <b>LOS</b>—Loss of signal</li> <li>• <b>PCV</b>—Pulse code violation</li> <li>• <b>SEF</b>—Severely errored framing</li> <li>• <b>SEFS-S</b>—Severely errored framing seconds (section)</li> <li>• <b>SES</b>—Severely errored seconds</li> <li>• <b>UAS</b>—Unavailable seconds</li> <li>• <b>YELLOW</b>—Errors at the remote site receiver</li> </ul>	extensive
Interface transmit queues	<p>Names of the transmit queues and their associated statistics for each E1 channel on the Channelized STM1-to-E1 PIC.</p> <ul style="list-style-type: none"> <li>• <b>B/W</b>—Queue bandwidth as a percentage of the total interface bandwidth.</li> <li>• <b>WRR</b>—Weighted round-robin (in percent).</li> <li>• <b>Packets</b>—Number of packets transmitted.</li> <li>• <b>Bytes</b>—Number of bytes transmitted.</li> <li>• <b>Drops</b>—Number of packets dropped.</li> <li>• <b>Errors</b>—Number of packet errors.</li> </ul>	extensive
HDLC configuration	<p>Information about the HDLC configuration.</p> <ul style="list-style-type: none"> <li>• <b>Giant threshold</b>—Giant threshold programmed into the hardware.</li> <li>• <b>Runt threshold</b>—Runt threshold programmed into the hardware.</li> <li>• <b>Timeslots</b>—Configured time slots for the interface.</li> <li>• <b>Line encoding</b>—Line encoding used. It is always <b>HDB3</b>.</li> </ul>	extensive

Table 63: Channelized STM1 show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>DS1 BERT configuration</b>	<p>BERT (bit error rate test) checks the quality of the line. This output appears only when a BERT is run on the interface.</p> <ul style="list-style-type: none"> <li>• <b>BERT time period</b>—Configured total time period that the BERT is to run.</li> <li>• <b>Elapsed</b>—Actual time elapsed since the start of the BERT (in seconds).</li> <li>• <b>Induced error rate</b>—Configured rate at which the bit errors are induced in the BERT pattern.</li> <li>• <b>Algorithm</b>—Type of algorithm selected for the BERT.</li> </ul>	<b>detail extensive none</b>
<b>SDH PHY</b>	<p>Active alarms and defects, plus counts of specific SDH errors with detailed information.</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. State other than <b>OK</b> indicates a problem.</li> </ul> <p>Subfields are:</p> <ul style="list-style-type: none"> <li>• <b>PLL Lock</b>—Phase-locked loop</li> <li>• <b>PHY Light</b>—Loss of optical signal</li> </ul>	<b>extensive</b>

Table 63: Channelized STM1 show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
SDH tu	<p>Active alarms and defects, plus counts of specific SDH tributary unit (TU) errors with detailed information.</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. State other than <b>OK</b> indicates a problem.</li> </ul> <p>Subfields are:</p> <ul style="list-style-type: none"> <li>• <b>TU-BIP-2</b>—Bit interleaved parity for SONET line overhead</li> <li>• <b>TU-FEBE</b>—(near-end TU)</li> <li>• <b>TU-LOP</b>—Loss of pointer (near-end TU)</li> <li>• <b>TU-AIS</b>—Alarm indication signal (near-end TU)</li> <li>• <b>TU-FERF</b>—(near-end TU)</li> <li>• <b>TU-UNEQ</b>—Unequipped (near-end TU)</li> <li>• <b>TU-PLM</b>—Payload label mismatch (near-end TU)</li> <li>• <b>TU-ES</b>—Errored seconds (near-end TU)</li> <li>• <b>TU-SES</b>—Severely errored seconds (near-end TU)</li> <li>• <b>TU-UAS</b>—Unavailable seconds (near-end TU)</li> <li>• <b>TU-ES-FE</b>—Errored seconds (far-end TU)</li> <li>• <b>TU-SES-FE</b>—Severely errored seconds (far-end TU)</li> <li>• <b>TU-UAS-FE</b>—Unavailable seconds (far-end TU)</li> </ul>	extensive
Received SDH overhead	Values of the received and transmitted SONET overhead:	extensive
Transmitted SDH overhead	<ul style="list-style-type: none"> <li>• <b>C2</b>—Signal label. Allocated to identify the construction and content of the STS-level SPE and for PDI-P.</li> <li>• <b>F1</b>—Section user channel byte. This byte is set aside for the purposes of users.</li> <li>• <b>K1</b> and <b>K2</b>—These bytes are allocated for APS signaling for the protection of the multiplex section.</li> <li>• <b>J0</b>—Section trace. This byte is defined for STS-1 number 1 of an STS-<i>N</i> signal. Used to transmit a 1-byte fixed-length string or a 16-byte message so that a receiving terminal in a section can verify its continued connection to the intended transmitter.</li> <li>• <b>S1</b>—Synchronization status. The S1 byte is located in the first STS-1 of an STS-<i>N</i> signal.</li> <li>• <b>Z3</b> and <b>Z4</b>—Allocated for future use.</li> </ul>	
Received path trace	Channelized OC12 interfaces allow path trace bytes to be sent inband across the SONET/SDH link. The received path trace value is the message received from the router at the other end of the fiber. The transmitted path trace value is the message that this router transmits. This information is specific to each of the 12 channelized OC12 interfaces.	extensive
Transmitted path trace		
Packet Forwarding Engine configuration	<p>Information about the configuration of the Packet Forwarding Engine:</p> <ul style="list-style-type: none"> <li>• <b>Destination slot</b>—FPC slot number.</li> <li>• <b>PLP byte</b>—Packet Level Protocol byte.</li> </ul>	extensive

Table 63: Channelized STM1 show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>CoS information</b>	<p>Information about the CoS queue for the physical interface.</p> <ul style="list-style-type: none"> <li>• <b>CoS transmit queue</b>—Queue number and its associated user-configured forwarding class name.</li> <li>• <b>Bandwidth %</b>—Percentage of bandwidth allocated to the queue.</li> <li>• <b>Bandwidth bps</b>—Bandwidth allocated to the queue (in bps).</li> <li>• <b>Buffer %</b>—Percentage of buffer space allocated to the queue.</li> <li>• <b>Buffer usec</b>—Amount of buffer space allocated to the queue, in microseconds. This value is nonzero only if the buffer size is configured in terms of time.</li> <li>• <b>Priority</b>—Queue priority: <b>low</b> or <b>high</b>.</li> <li>• <b>Limit</b>—Displayed if rate limiting is configured for the queue. Possible values are <b>none</b> and <b>exact</b>. If <b>exact</b> is configured, the queue transmits only up to the configured bandwidth, even if excess bandwidth is available. If <b>none</b> is configured, the queue transmits beyond the configured bandwidth if bandwidth is available.</li> </ul>	<b>extensive</b>
<b>Logical Interface</b>		
<b>Logical interface</b>	Name of the logical interface.	All levels
<b>Enabled</b>	State of the interface. Possible values are described in the “Enabled Field” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels
<b>Index</b>	Logical interface index number, which reflects its initialization sequence.	<b>detail extensive none</b>
<b>SNMP ifIndex</b>	Logical interface SNMP interface index number.	<b>detail extensive none</b>
<b>Flags</b>	Information about the logical interface. Possible values are described in the “Logical Interface Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels
<b>Encapsulation</b>	Encapsulation on the logical interface.	All levels
<b>Protocol</b>	Protocol family configured on the logical interface, such as <b>iso</b> , <b>inet6</b> , or <b>mpls</b> .	<b>detail extensive none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Route table</b>	Routing table in which the logical interface address is located. For example, <b>0</b> refers to the routing table inet.0.	<b>detail extensive</b>
<b>Flags</b>	Information about the protocol family flags. Possible values are described in the “Family Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	<b>detail extensive none</b>
<b>Addresses, Flags</b>	Information about the address flags. Possible values are described in the “Addresses Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	<b>detail extensive none</b>

Table 63: Channelized STM1 show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Destination</b>	IP address of the remote side of the connection.	<b>detail extensive none</b>
<b>Local</b>	IP address of the logical interface.	<b>detail extensive none</b>
<b>Broadcast</b>	Broadcast address.	<b>detail extensive none</b>
<b>DLCI</b>	(Frame Relay) DLCI number of the logical interface. The following DLCI information is displayed: <b>Flags</b> , <b>Total down time</b> , <b>Last down</b> , and <b>Traffic statistics</b> . <b>Flags</b> is one or more of the following: <ul style="list-style-type: none"> <li>• <b>Active</b>—Set when the link is active and the DTE and DCE are exchanging information.</li> <li>• <b>Down</b>—Set when the link is active, but no information is received from the DCE.</li> <li>• <b>Unconfigured</b>—Set when the corresponding DLCI in the DCE is not configured.</li> <li>• <b>Configured</b>—Set when the corresponding DLCI in the DCE is configured.</li> <li>• <b>Dce-configured</b>—Displayed when the command is issued from the DTE.</li> </ul>	<b>detail extensive none</b>
<b>DLCI statistics</b>	(Frame Relay) Data-link connection identifier (DLCI) statistics. <ul style="list-style-type: none"> <li>• <b>Active DLCI</b>—Number of active DLCIs.</li> <li>• <b>Inactive DLCI</b>—Number of inactive DLCIs.</li> </ul>	<b>detail extensive none</b>

## show interfaces (Channelized T1 IQ)

<b>Syntax</b>	<pre>show interfaces (ct1-fpc/pic/port   type-fpc/pic/port&lt;:channel&gt;&lt;:channel&gt;) &lt;brief   detail   extensive   terse&gt; &lt;descriptions&gt; &lt;media&gt; &lt;snmp-index snmp-index&gt; &lt;statistics&gt;</pre>
<b>Release Information</b>	Command introduced in Junos OS Release 7.4.
<b>Description</b>	(M Series and T Series routers only) Display status information about the specified channelized T1 IQ interface.
<b>Options</b>	<p><b>type-fpc/pic/port:channel</b>—Interface type. With optional corresponding channel levels, the interface type can be one of the following:</p> <ul style="list-style-type: none"> <li>• <b>type-fpc/pic/port</b>—For the physical channelized T1 IQ interface, <b>type</b> is <b>ct1</b>.</li> <li>• <b>type-fpc/pic/port:channel</b>—For the clear channel, <b>type</b> is <b>t1</b>. At the first level of channelization, <b>type</b> can be <b>ct1</b> or <b>t1</b>.</li> <li>• <b>type-fpc/pic/port:channel:channel</b>—At the second level of channelization, <b>type</b> can be <b>ds</b>.</li> </ul> <p><b>brief   detail   extensive   terse</b>—(Optional) Display the specified level of output.</p> <p><b>descriptions</b>—(Optional) Display interface description strings.</p> <p><b>media</b>—(Optional) Display media-specific information about network interfaces.</p> <p><b>snmp-index snmp-index</b>—(Optional) Display information for the specified SNMP index of the interface.</p> <p><b>statistics</b>—(Optional) Display static interface statistics.</p>
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<p><a href="#">show interfaces extensive (CT1) on page 1319</a></p> <p><a href="#">show interfaces extensive (T1) on page 1320</a></p> <p><a href="#">show interfaces extensive (DS0) on page 1321</a></p>
<b>Output Fields</b>	Table 64 on page 1312 lists the output fields for the <b>show interfaces</b> (Channelized T1 IQ and T3 IQ interfaces) command. Output fields are listed in the approximate order in which they appear.

Table 64: Channelized T1 IQ and T3 IQ show interfaces Output Fields

Field Name	Field Description	Level of Output
<b>Physical Interface</b>		
<b>Physical interface</b>	Name of the physical interface.	All levels
<b>Enabled</b>	State of the interface. Possible values are described in the “Enabled Field” section under “ <a href="#">Common Output Fields Description</a> ” on page 1114.	All levels
<b>Interface index</b>	Physical interface's index number, which reflects its initialization sequence.	<b>detail extensive none</b>
<b>SNMP ifIndex</b>	SNMP index number for the physical interface.	<b>detail extensive none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Link-level type</b>	Encapsulation being used on the physical interface.	All levels
<b>MTU</b>	MTU size on the physical interface.	All levels
<b>Clocking</b>	Reference clock source. It can be <b>Internal</b> or <b>External</b> .	All levels
<b>Speed</b>	Speed at which the interface is running.	All levels
<b>Loopback</b>	Whether loopback is enabled and the type of loopback ( <b>local</b> or <b>remote</b> ).	All levels
<b>FCS</b>	Frame check sequence on the interface (either <b>16</b> or <b>32</b> ). The default is <b>16</b> bits.	All levels
<b>Framing</b>	Physical layer framing format used on the link. It can be <b>ESF</b> or <b>SF</b> . The default is <b>ESF</b> .	All levels
<b>Parent</b>	Name and interface index of the interface to which a particular child interface belongs. <b>None</b> indicates that this interface is the top level.	All levels
<b>Device flags</b>	Information about the physical device. Possible values are described in the “Device Flags” section under “ <a href="#">Common Output Fields Description</a> ” on page 1114.	All levels
<b>Interface flags</b>	Information about the interface. Possible values are described in the “Interface Flags” section under “ <a href="#">Common Output Fields Description</a> ” on page 1114.	All levels
<b>Link flags</b>	Information about the link. Possible values are described in the “Link Flags” section under “ <a href="#">Common Output Fields Description</a> ” on page 1114.	All levels
<b>Hold-times</b>	Current interface hold-time up and hold-time down, in milliseconds.	<b>detail extensive</b>

Table 64: Channelized T1 IQ and T3 IQ show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
Keepalive settings	Configured settings for keepalives. <ul style="list-style-type: none"> <li><b>interval seconds</b>—The time in seconds between successive keepalive requests. The range is 10 seconds through 32,767 seconds, with a default of 10 seconds.</li> <li><b>down-count number</b>—The number of keepalive packets a destination must fail to receive before the network takes a link down. The range is 1 through 255, with a default of 3.</li> <li><b>up-count number</b>—The number of keepalive packets a destination must receive to change a link's status from down to up. The range is 1 through 255, with a default of 1.</li> </ul>	detail extensive none
Keepalive statistics	Information about keepalive packets. <ul style="list-style-type: none"> <li><b>Input</b>—Number of keepalive packets received by PPP. <ul style="list-style-type: none"> <li><b>(last seen 00:00:00 ago)</b>—Time since the last keepalive packet was received, in the format <i>hh:mm:ss</i>.</li> </ul> </li> <li><b>Output</b>—Number of keepalive packets sent by PPP and how long ago the last keepalive packets were sent and received. <ul style="list-style-type: none"> <li><b>(last seen 00:00:00 ago)</b>—Time since the last keepalive packet was sent, in the format <i>hh:mm:ss</i>.</li> </ul> </li> </ul>	detail extensive none
LMI settings	(Frame Relay) Settings for Local Management Interface (LMI) can be either <b>ANSI LMI settings</b> or <b>ITU LMI settings</b> . ANSI LMI settings is the default. The format is (ANSI or ITU) LMI settings: <i>value, value... xx seconds</i> , where <i>value</i> can be: <ul style="list-style-type: none"> <li><b>n391dte</b>—DTE full status polling interval (1–255)</li> <li><b>n392dce</b>—DCE error threshold (1–10)</li> <li><b>n392dte</b>—DTE error threshold (1–10)</li> <li><b>n393dce</b>—DCE monitored event count (1–10)</li> <li><b>n393dte</b>—DTE monitored event count (1–10)</li> <li><b>t391dte</b>—DTE polling timer (5–30 seconds)</li> <li><b>t392dce</b>—DCE polling verification timer (5–30 seconds)</li> </ul>	detail extensive none
LMI	(Frame Relay) LMI packet statistics: <ul style="list-style-type: none"> <li><b>Input</b>—Number of packets coming in on the interface (<i>nn</i>) and how much time has passed since the last packet arrived. The format is <b>Input: nn (last seen hh:mm:ss ago)</b>.</li> <li><b>Output</b>—Number of packets sent out on the interface (<i>nn</i>) and how much time has passed since the last packet was sent. The format is <b>Output: nn (last sent hh:mm:ss ago)</b>.</li> </ul>	detail extensive none
DTE statistics	(Frame Relay) Statistics about messages transmitted from the data terminal equipment (DTE) to the data communication equipment (DCE): <ul style="list-style-type: none"> <li><b>Enquiries sent</b>—Number of link status enquiries sent from the DTE to the DCE.</li> <li><b>Full enquiries sent</b>—Number of full enquiries sent from the DTE to the DCE.</li> <li><b>Enquiry responses received</b>—Number of enquiry responses received by the DTE from the DCE.</li> <li><b>Full enquiry responses received</b>—Number of full enquiry responses sent from the DTE to the DCE.</li> </ul>	detail extensive none

Table 64: Channelized T1 IQ and T3 IQ show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>DCE statistics</b>	(Frame Relay) Statistics about messages transmitted from the DCE to the DTE: <ul style="list-style-type: none"> <li>• <b>Enquiries received</b>—Number of enquiries received by the DCE from the DTE.</li> <li>• <b>Full enquiries received</b>—Number of full enquiries received by the DCE from the DTE.</li> <li>• <b>Enquiry responses sent</b>—Number of enquiry responses sent from the DCE to the DTE.</li> <li>• <b>Full enquiry responses sent</b>—Number of full enquiry responses sent from the DCE to the DTE.</li> </ul>	<b>detail extensive none</b>
<b>Common statistics</b>	(Frame Relay) Statistics about messages sent between the DTE and the DCE: <ul style="list-style-type: none"> <li>• <b>Unknown messages received</b>—Number of received packets that do not fall into any category.</li> <li>• <b>Asynchronous updates received</b>—Number of link status peer changes received.</li> <li>• <b>Out-of-sequence packets received</b>—Number of packets for which the sequence of the packets received is different from the expected sequence.</li> <li>• <b>Keepalive responses timedout</b>—Number of keepalive responses that timed out when no LMI packet was reported for <b>n392dte</b> or <b>n393dce</b> intervals. (See <b>LMI settings</b>.)</li> </ul>	<b>detail extensive none</b>
<b>Nonmatching DCE-end DLCIs</b>	(Frame Relay) Number of DLCIs configured from the DCE, displayed only from the DTE.	<b>detail extensive none</b>
<b>LCP state</b>	(PPP) Link Control Protocol state. <ul style="list-style-type: none"> <li>• <b>Conf-ack-received</b>—Acknowledgement was received.</li> <li>• <b>Conf-ack-sent</b>—Acknowledgement was sent.</li> <li>• <b>Conf-req-sent</b>—Request was sent.</li> <li>• <b>Down</b>—LCP negotiation is incomplete (not yet completed or has failed).</li> <li>• <b>Not-configured</b>—LCP is not configured on the interface.</li> <li>• <b>Opened</b>—LCP negotiation is successful.</li> </ul>	<b>detail extensive none</b>
<b>NCP state</b>	(PPP) Network Control Protocol state. <ul style="list-style-type: none"> <li>• <b>Conf-ack-received</b>—Acknowledgement was received.</li> <li>• <b>Conf-ack-sent</b>—Acknowledgement was sent.</li> <li>• <b>Conf-req-sent</b>—Request was sent.</li> <li>• <b>Down</b>—NCP negotiation is incomplete (not yet completed or has failed).</li> <li>• <b>Not-configured</b>—NCP is not configured on the interface.</li> <li>• <b>Opened</b>—NCP negotiation is successful.</li> </ul>	<b>detail extensive none</b>

Table 64: Channelized T1 IQ and T3 IQ show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>CHAP state</b>	<p>(PPP) Displays the state of the Challenge Handshake Authentication Protocol (CHAP) during its transaction.</p> <ul style="list-style-type: none"> <li>• <b>Chap-Chal-received</b>—Challenge was received but response not yet sent.</li> <li>• <b>Chap-Chal-sent</b>—Challenge was sent.</li> <li>• <b>Chap-Resp-received</b>—Response was received for the challenge sent, but CHAP has not yet moved into the <b>Success</b> state. (Most likely with RADIUS authentication.)</li> <li>• <b>Chap-Resp-sent</b>—Response was sent for the challenge received.</li> <li>• <b>Closed</b>—CHAP authentication is incomplete.</li> <li>• <b>Failure</b>—CHAP authentication failed.</li> <li>• <b>Not-configured</b>—CHAP is not configured on the interface.</li> <li>• <b>Success</b>—CHAP authentication was successful.</li> </ul>	<b>detail extensive none</b>
<b>Last flapped</b>	Date, time, and how long ago the interface went from down to up. The format is <b>Last flapped: year-month-day hour:minute:second timezone (hour:minute:second ago)</b> . For example, <b>Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> .	<b>detail extensive none</b>
<b>CoS queues</b>	Number of CoS queues configured.	<b>detail extensive none</b>
<b>Statistics last cleared</b>	Time when the statistics for the interface were last set to zero.	<b>detail extensive</b>
<b>Traffic statistics</b>	<p>Number and rate of bytes and packets received and transmitted on the physical interface.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes, Output bytes</b>—Number of bytes received and transmitted on the interface.</li> <li>• <b>Input packets, Output packets</b>—Number of packets received and transmitted on the interface.</li> </ul>	<b>detail extensive</b>

Table 64: Channelized T1 IQ and T3 IQ show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Input errors</b>	<p>Input errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of the incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Giants</b>—Number of frames received that are larger than the giant threshold.</li> <li>• <b>Runts</b>—Number of frames received that are smaller than the runt threshold.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that the Junos OS does not handle.</li> <li>• <b>L3 incompletes</b>—Number of incoming packets discarded because they failed Layer 3 (usually IPv4) sanity checks of the header. For example, a frame with less than 20 bytes of available IP header is discarded.</li> <li>• <b>L2 channel errors</b>—Counter increments when the software could not find a valid logical interface for an incoming frame.</li> <li>• <b>L2 mismatch timeouts</b>—Count of malformed or short packets that caused the incoming packet handler to discard the frame as unreadable.</li> <li>• <b>HS link CRC errors</b>—Count of errors on the high-speed links between the ASICs responsible for handling the router interfaces.</li> <li>• <b>SRAM errors</b>—Number of hardware errors that occurred in the static RAM (SRAM) on the PIC. If the value in this field increments, the PIC is malfunctioning.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>	<b>extensive</b>
<b>Output errors</b>	<p>Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and then up, or another problem occurs. If the number of carrier transitions increments quickly, (perhaps once every 10 seconds), the cable, the far-end system, or the PIC is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Aged packets</b>—Number of packets that remained in shared packet SDRAM so long that the system automatically purged them. The value in this field should never increment. If it does, it is most likely a software bug or possibly malfunctioning hardware.</li> <li>• <b>MTU errors</b>—Number of packets whose size exceeds the MTU of the interface.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>	<b>extensive</b>

Table 64: Channelized T1 IQ and T3 IQ show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Queue counters</b>	CoS queue number and its associated user-configured forwarding class name.  <ul style="list-style-type: none"> <li>• <b>Queued packets</b>—Number of queued packets.</li> <li>• <b>Transmitted packets</b>—Number of transmitted packets.</li> <li>• <b>Dropped packets</b>—Number of packets dropped by the ASIC's RED mechanism.</li> </ul>	<b>detail extensive</b>
<b>DS1 alarms DS1 defects</b>	Media-specific defects that can render the interface unable to pass packets. When a defect persists for a certain amount of time, it is promoted to an alarm. Based on the router configuration, an alarm can ring the red or yellow alarm bell on the router, or turn on the red or yellow alarm LED on the craft interface.  <ul style="list-style-type: none"> <li>• <b>LOS</b>—Loss of signal.</li> <li>• <b>LOF</b>—Loss of frame.</li> <li>• <b>AIS</b>—Alarm indication signal.</li> <li>• <b>YLW</b>—Yellow alarm. Indicates errors at the remote site receiver.</li> </ul>	<b>detail extensive none</b>
<b>T1 media</b>	Counts of T1 media-specific errors.  <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. State other than <b>OK</b> indicates a problem.</li> </ul> <p>The T1 media-specific error types can be:</p> <ul style="list-style-type: none"> <li>• <b>AIS</b>—Alarm indication signal</li> <li>• <b>BEE</b>—Bit error event</li> <li>• <b>BES</b>—Bit error seconds</li> <li>• <b>BPV</b>—Bipolar violation</li> <li>• <b>CS</b>—Carrier state</li> <li>• <b>ES</b>—Errored seconds</li> <li>• <b>EXZ</b>—Excessive zeros</li> <li>• <b>FEBE</b>—Far-end block error</li> <li>• <b>LCV</b>—Line code violation</li> <li>• <b>LES</b>—Line error seconds</li> <li>• <b>LOF</b>—Loss of frame</li> <li>• <b>LOS</b>—Loss of signal</li> <li>• <b>PCV</b>—Pulse code violation</li> <li>• <b>SEF</b>—Severely errored framing</li> <li>• <b>SEFS</b>—Severely errored framing seconds (section)</li> <li>• <b>SES</b>—Severely errored seconds</li> <li>• <b>UAS</b>—Unavailable seconds</li> <li>• <b>YELLOW</b>—Errors at the remote site receiver</li> </ul>	<b>extensive</b>
<b>Line encoding</b>	Line encoding used: <b>B8ZS</b> or <b>AMI</b> .	All levels
<b>Buildout</b>	Buildout setting.	All levels

Table 64: Channelized T1 IQ and T3 IQ show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>HDLC configuration</b>	Information about the HDLC configuration. <ul style="list-style-type: none"> <li>• <b>Policing bucket</b>—Configured state of the receiving policer.</li> <li>• <b>Shaping bucket</b>—Configured state of the transmitting shaper.</li> <li>• <b>Giant threshold</b>—Giant threshold programmed into the hardware.</li> <li>• <b>Runt threshold</b>—Runt threshold programmed into the hardware.</li> <li>• <b>Timeslots</b>—Configured time slots for the interface.</li> <li>• <b>Line encoding</b>—Line encoding used: <b>B8ZS</b> or <b>AMI</b>.</li> <li>• <b>Byte encoding</b>—Byte encoding used: <b>Nx64K</b> or <b>Nx56K</b>.</li> <li>• <b>Data inversion</b>—HDLC data inversion setting: <b>Enabled</b> or <b>Disabled</b>.</li> <li>• <b>Idle cycle Flag</b>—Idle cycle flags.</li> <li>• <b>Start end Flag</b>—Start and end flag.</li> </ul>	<b>extensive</b>
<b>DSO or DS1 BERT configuration</b>	BERT (bit error rate test) checks the quality of the line. This output appears only when a BERT is run on the interface. <ul style="list-style-type: none"> <li>• <b>BERT time period</b>—Configured total time period that the BERT is to run.</li> <li>• <b>Elapsed</b>—Actual time elapsed since the start of the BERT (in seconds).</li> <li>• <b>Induced error rate</b>—Configured rate at which the bit errors are induced in the BERT pattern.</li> <li>• <b>Algorithm</b>—Type of algorithm selected for the BERT.</li> </ul>	<b>detail extensive none</b>
<b>Packet Forwarding Engine configuration</b>	Information about the configuration of the Packet Forwarding Engine: <ul style="list-style-type: none"> <li>• <b>Destination slot</b>—FPC slot number.</li> <li>• <b>PLP byte</b>—Packet Level Protocol byte.</li> </ul>	<b>extensive</b>
<b>Logical Interface</b>		
<b>Logical interface</b>	Name of the logical interface.	<b>All levels</b>
<b>Index</b>	Logical interface index number, which reflects its initialization sequence.	<b>detail extensive none</b>
<b>SNMP ifIndex</b>	Logical interface SNMP interface index number.	<b>detail extensive none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Flags</b>	Information about the logical interface; values are described in the “Logical Interface Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	<b>All levels</b>
<b>Encapsulation</b>	Encapsulation on the logical interface.	<b>All levels</b>
<b>Protocol</b>	Protocol family configured on the logical interface, such as <b>iso</b> , <b>inet6</b> , or <b>mpls</b> .	<b>detail extensive none</b>
<b>MTU</b>	MTU size on the logical interface.	<b>detail extensive none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>

Table 64: Channelized T1 IQ and T3 IQ show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Route table</b>	Routing table in which the logical interface address is located. For example, 0 refers to the routing table inet.0.	<b>detail extensive</b>
<b>Flags</b>	Information about the protocol family flags. Possible values are described in the “Family Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	<b>detail extensive none</b>
<b>Addresses, Flags</b>	Information about the address flags. Possible values are described in the “Addresses Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	<b>detail extensive none</b>
<b>Destination</b>	IP address of the remote side of the connection.	<b>detail extensive none</b>
<b>Local</b>	IP address of the logical interface.	<b>detail extensive none</b>
<b>Broadcast</b>	Broadcast address.	<b>detail extensive none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>DLCI</b>	(Frame Relay) DLCI number of the logical interface. The following DLCI information is displayed: <b>Flags</b> , <b>Total down time</b> , <b>Last down</b> , and <b>Traffic statistics</b> . <b>Flags</b> is one or more of the following: <ul style="list-style-type: none"> <li>• <b>Active</b>—Set when the link is active and the DTE and DCE are exchanging information.</li> <li>• <b>Down</b>—Set when the link is active, but no information is received from the DCE.</li> <li>• <b>Unconfigured</b>—Set when the corresponding DLCI in the DCE is not configured.</li> <li>• <b>Configured</b>—Set when the corresponding DLCI in the DCE is configured.</li> <li>• <b>Dce-configured</b>—Displayed when the command is issued from the DTE.</li> </ul>	<b>detail extensive none</b>
<b>DLCI statistics</b>	(Frame Relay) Data-link connection identifier (DLCI) statistics. <ul style="list-style-type: none"> <li>• <b>Active DLCI</b>—Number of active DLCIs.</li> <li>• <b>Inactive DLCI</b>—Number of inactive DLCIs.</li> </ul>	<b>detail extensive none</b>

## Sample Output

### show interfaces extensive (CTI)

```

user@host> show interfaces extensive ct1-0/1/1
Physical interface: ct1-0/1/1, Enabled, Physical link is Up
Interface index: 145, SNMP ifIndex: 32, Generation: 28
Link-level type: Controller, Clocking: Internal, Speed: T1,
Loopback: None, Framing: ESF, Parent: None

## show interfaces (Channelized T3 IQ)

<b>Syntax</b>	<pre>show interfaces (ct3-fpc/pic/port   type-fpc/pic/port&lt;:channel&gt;&lt;:channel&gt;) &lt;brief   detail   extensive   terse&gt; &lt;descriptions&gt; &lt;media&gt; &lt;snmp-index snmp-index&gt; &lt;statistics&gt;</pre>
<b>Release Information</b>	Command introduced before Junos OS Release 7.4.
<b>Description</b>	(M Series and T Series routers only) Display status information about the specified channelized T3 IQ interface.
<b>Options</b>	<p><b>type-fpc/pic/port:channel</b>—Interface type. With optional corresponding channel levels, the interface type can be one of the following:</p> <ul style="list-style-type: none"> <li>• <b>type-fpc/pic/port</b>—For the physical channelized T3 IQ interface, <b>type</b> is <b>ct3</b>.</li> <li>• <b>type-fpc/pic/port:channel</b>—For the clear channel, <b>type</b> is <b>t3</b>. At the first level of channelization, <b>type</b> can be <b>ct1</b> or <b>t1</b>.</li> <li>• <b>type-fpc/pic/port:channel:channel</b>—At the second level of channelization, <b>type</b> is <b>ds</b>.</li> </ul> <p><b>brief   detail   extensive   terse</b>—(Optional) Display the specified level of output.</p> <p><b>descriptions</b>—(Optional) Display interface description strings.</p> <p><b>media</b>—(Optional) Display media-specific information about network interfaces.</p> <p><b>snmp-index snmp-index</b>—(Optional) Display information for the specified SNMP index of the interface.</p> <p><b>statistics</b>—(Optional) Display static interface statistics.</p>
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<p><a href="#">show interfaces extensive (Channelized T3 IQ) (Physical) on page 1324</a></p> <p><a href="#">show interfaces extensive (Channelized T1 on Channelized T3 IQ) on page 1324</a></p> <p><a href="#">show interfaces extensive (DSO on Channelized T3 IQ) on page 1324</a></p>
<b>Output Fields</b>	See the output field table for the <a href="#">show interfaces (Channelized T1 IQ)</a> command.

## Sample Output

### show interfaces extensive (Channelized T3 IQ) (Physical)

```
user@host> show interfaces extensive ct3-0/0/1
Physical interface: ct3-0/0/1, Enabled, Physical link is Up
  Interface index: 30, SNMP ifIndex: 317, Generation: 29
  Link-level type: Controller, MTU: 4474, Clocking: Internal, Speed: T3,
  Loopback: None, FCS: 16, Mode: C/Bit parity, Parent: None
  Device flags   : Present Running
  Interface flags: Point-To-Point SNMP-Traps
  Link flags     : None
...
```

### show interfaces extensive (Channelized T1 on Channelized T3 IQ)

```
user@host> show interfaces extensive ct1-0/0/1:2
Physical interface: ct1-0/0/1:2, Enabled, Physical link is Up
  Interface index: 175, SNMP ifIndex: 1505, Generation: 174
  Link-level type: Controller, MTU: 1504, Clocking: Internal, Speed: T1,
  Loopback: None, FCS: 16, Framing: ESF, Parent: ct3-0/0/1 (Index 32)
  Device flags   : Present Running
  Interface flags: Point-To-Point SNMP-Traps
  Link flags     : None
...
```

### show interfaces extensive (DSO on Channelized T3 IQ)

```
user@host> show interfaces extensive ds-0/0/1:2:1
Physical interface: ds-0/0/1:2:1, Enabled, Physical link is Up
  Interface index: 176, SNMP ifIndex: 1563, Generation: 175
  Link-level type: PPP, MTU: 1504, Clocking: Internal, Speed: 640kbps,
  Loopback: None, FCS: 16, Parent: ct1-0/0/1:2(Index 175)
  Device flags   : Present Running
  Interface flags: Point-To-Point SNMP-Traps
  Link flags     : Keepalives
...
```

## show interfaces (Discard)

<b>Syntax</b>	<pre>show interfaces dsc &lt;brief   detail   extensive   terse&gt; &lt;descriptions&gt; &lt;media&gt; &lt;snmp-index <i>snmp-index</i>&gt; &lt;statistics&gt;</pre>
<b>Release Information</b>	Command introduced before Junos OS Release 7.4.
<b>Description</b>	Display status information about the specified discard interface.
<b>Options</b>	<p><b>dsc</b>—Display standard information about the specified discard interface.</p> <p><b>brief   detail   extensive   terse</b>—(Optional) Display the specified level of output.</p> <p><b>descriptions</b>—(Optional) Display interface description strings.</p> <p><b>media</b>—This option is not relevant for the discard interface and always shows a value of 0.</p> <p><b>snmp-index <i>snmp-index</i></b>—(Optional) Display information for the specified SNMP index of the interface.</p> <p><b>statistics</b>—(Optional) This option is not relevant for the discard interface and always shows a value of 0.</p>
<b>Required Privilege Level</b>	view

<b>Output Fields</b>	Table 65 on page 1325 lists the output fields for the <b>show interfaces</b> (discard) command. Output fields are listed in the approximate order in which they appear.

Table 65: Discard show interfaces Output Fields

Field Name	Field Description	Level of Output
------------	-------------------	-----------------

Physical Interface

Table 65: Discard show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Physical interface</b>	Name of the physical interface, whether the interface is enabled, and the state of the physical interface: <b>Up</b> or <b>Down</b> .	All levels
<b>Interface index</b>	Physical interface's index number, which reflects its initialization sequence.	<b>detail extensive</b> none
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>SNMP ifIndex</b>	SNMP index number for the physical interface.	<b>detail extensive</b> none
<b>Type</b>	Type of interface. <b>Software-Pseudo</b> indicates a standard software interface with no associated hardware device.	All levels
<b>Link-level type</b>	Encapsulation being used on the physical interface.	All levels
<b>MTU</b>	MTU size on the physical interface.	All levels
<b>Clocking</b>	Reference clock source. It can be <b>Internal</b> or <b>External</b> .	<b>brief detail extensive</b>
<b>Speed</b>	Speed at which the interface is running.	<b>brief detail extensive</b>
<b>Device flags</b>	Information about the physical device. Possible values are described in the "Device Flags" section under <a href="#">"Common Output Fields Description" on page 1114</a> .	All levels
<b>Interface flags</b>	Information about the interface. Possible values are described in the "Interface Flags" section under <a href="#">"Common Output Fields Description" on page 1114</a> .	All levels
<b>Link type</b>	Encapsulation being used on the physical interface.	<b>detail extensive</b>
<b>Link flags</b>	Information about the link. Possible values are described in the "Link Flags" section under <a href="#">"Common Output Fields Description" on page 1114</a> .	<b>detail extensive</b>
<b>Physical info</b>	Information about the physical interface.	<b>detail extensive</b>
<b>Hold-times</b>	Current interface hold-time up and hold-time down. Value is in milliseconds.	<b>detail extensive</b>
<b>Current address, Hardware address</b>	Configured MAC address and hardware MAC address.	<b>detail extensive</b>
<b>Alternate link address</b>	Backup address of the link.	<b>detail extensive</b>
<b>Last flapped</b>	Date, time, and how long ago the interface went from down to up. The format is <b>Last flapped: year-month-day hour:minute:second timezone (hour:minute:second ago)</b> . For example, <b>Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> .	<b>detail extensive</b> none
<b>Statistics last cleared</b>	Time when the statistics for the interface were last set to zero.	<b>detail extensive</b>

Table 65: Discard show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Traffic statistics</b>	<p>Number and rate of bytes and packets received and transmitted on the physical interface.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes, Output bytes</b>—Number of bytes received and transmitted on the interface.</li> <li>• <b>Input packets, Output packets</b>—Number of packets received and transmitted on the interface.</li> </ul>	<b>detail extensive</b>
<b>Input errors</b>	<p>Input errors on the interface:</p> <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Runts</b>—Number of frames received that are smaller than the runt threshold.</li> <li>• <b>Giants</b>—Number of frames received that are larger than the giant threshold.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that the Junos OS does not handle.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>	<b>detail extensive</b>
<b>Output errors</b>	<p>(Extensive only) Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and then up, or another problem occurs. If the number of carrier transitions increments quickly (perhaps once every 10 seconds), the cable, the far-end system, or the PIC is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>MTU errors</b>—Number of packets whose size exceeded the MTU of the interface.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>	<b>detail extensive</b>
<b>Logical Interface</b>		
<b>Logical interface</b>	Name of the logical interface.	All levels
<b>Index</b>	Logical interface index number, which reflects its initialization sequence.	<b>detail extensive</b>
<b>SNMP ifIndex</b>	Logical interface SNMP interface index number.	<b>detail extensive</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>

Table 65: Discard show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Flags</b>	Information about the logical interface. Possible values are described in the “Logical Interface Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels
<b>Encapsulation</b>	Encapsulation on the logical interface.	All levels
<b>Protocol</b>	Protocol family configured on the logical interface, such as <b>iso</b> , <b>inet6</b> , or <b>mpls</b> .	All levels
<b>MTU</b>	MTU size on the logical interface.	<b>detail extensive none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Route Table</b>	Routing table in which the logical interface address is located. For example, <b>0</b> refers to the routing table <b>inet.0</b> .	<b>detail extensive</b>

## Sample Output

### show interfaces dsc

```

user@host> show interfaces dsc
Physical interface: dsc, Enabled, Physical link is Up
  Interface index: 5, SNMP ifIndex: 5
  Type: Software-Pseudo, MTU: Unlimited
  Device flags   : Present Running
  Interface flags: Point-To-Point SNMP-Traps
  Link flags     : None
  Last flapped   : Never
    Input packets : 0
    Output packets: 0

    Resource errors: 0
Logical interface dsc.0 (Index 66) (SNMP ifIndex 235) (Generation 6)
  Flags: Point-To-Point SNMP-Traps Encapsulation: Unspecified
  Protocol inet, MTU: Unlimited, Generation: 14, Route table: 0

```

## show interfaces (Fast Ethernet)

**Syntax** `show interfaces interface-type`  
`<brief | detail | extensive | terse>`  
`<descriptions>`  
`<media>`  
`<snmp-index snmp-index>`  
`<statistics>`

**Release Information** Command introduced before Junos OS Release 7.4.

**Description** Display status information about the specified Fast Ethernet interface.

**Options** *interface-type*—On M Series and T Series routers, the interface type is **fe-fpc/pic/port**.

**brief | detail | extensive | terse**—(Optional) Display the specified level of output.

**descriptions**—(Optional) Display interface description strings.

**media**—(Optional) Display media-specific information about network interfaces.

**snmp-index *snmp-index***—(Optional) Display information for the specified SNMP index of the interface.

**statistics**—(Optional) Display static interface statistics.

**Required Privilege Level** view

**List of Sample Output** [show interfaces \(Fast Ethernet\) on page 1344](#)  
[show interfaces brief \(Fast Ethernet\) on page 1344](#)  
[show interfaces detail \(Fast Ethernet\) on page 1344](#)  
[show interfaces extensive \(Fast Ethernet\) on page 1345](#)

**Output Fields** [Table 66 on page 1330](#) lists the output fields for the **show interfaces (Fast Ethernet)** command. Output fields are listed in the approximate order in which they appear.

*Table 66: show interfaces Fast Ethernet Output Fields*

Field Name	Field Description	Level of Output
<b>Physical Interface</b>		
<b>Physical interface</b>	Name of the physical interface.	All levels
<b>Enabled</b>	State of the interface. Possible values are described in the “Enabled Field” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels
<b>Interface index</b>	Index number of the physical interface, which reflects its initialization sequence.	<b>detail extensive none</b>
<b>SNMP ifIndex</b>	SNMP index number for the physical interface.	<b>detail extensive none</b>

Table 66: show interfaces Fast Ethernet Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Link-level type</b>	Encapsulation being used on the physical interface.	All levels
<b>MTU</b>	Maximum transmission unit size on the physical interface.	All levels
<b>Link-mode</b>	Type of link connection configured for the physical interface: <b>Full-duplex</b> or <b>Half-duplex</b>	<b>extensive</b>
<b>Speed</b>	Speed at which the interface is running.	All levels
<b>Loopback</b>	Loopback status: <b>Enabled</b> or <b>Disabled</b> . If loopback is enabled, type of loopback: <b>Local</b> or <b>Remote</b> .	All levels
<b>Source filtering</b>	Source filtering status: <b>Enabled</b> or <b>Disabled</b> .	All levels
<b>LAN-PHY mode</b>	10-Gigabit Ethernet interface operating in Local Area Network Physical Layer Device (LAN PHY) mode. LAN PHY allows 10-Gigabit Ethernet wide area links to use existing Ethernet applications.	All levels
<b>WAN-PHY mode</b>	10-Gigabit Ethernet interface operating in Wide Area Network Physical Layer Device (WAN PHY) mode. WAN PHY allows 10-Gigabit Ethernet wide area links to use fiber-optic cables and other devices intended for SONET/SDH.	All levels
<b>Unidirectional</b>	Unidirectional link mode status for 10-Gigabit Ethernet interface: <b>Enabled</b> or <b>Disabled</b> for parent interface; <b>Rx-only</b> or <b>Tx-only</b> for child interfaces.	All levels
<b>Flow control</b>	Flow control status: <b>Enabled</b> or <b>Disabled</b> .	All levels
<b>Auto-negotiation</b>	(Gigabit Ethernet interfaces) Autonegotiation status: <b>Enabled</b> or <b>Disabled</b> .	All levels
<b>Remote-fault</b>	(Gigabit Ethernet interfaces) Remote fault status: <ul style="list-style-type: none"> <li>• <b>Online</b>—Autonegotiation is manually configured as online.</li> <li>• <b>Offline</b>—Autonegotiation is manually configured as offline.</li> </ul>	All levels
<b>Device flags</b>	Information about the physical device. Possible values are described in the "Device Flags" section under <a href="#">"Common Output Fields Description" on page 1114</a> .	All levels
<b>Interface flags</b>	Information about the interface. Possible values are described in the "Interface Flags" section under <a href="#">"Common Output Fields Description" on page 1114</a> .	All levels
<b>Link flags</b>	Information about the link. Possible values are described in the "Links Flags" section under <a href="#">"Common Output Fields Description" on page 1114</a> .	All levels
<b>Wavelength</b>	(10-Gigabit Ethernet dense wavelength-division multiplexing [DWDM] interfaces) Displays the configured wavelength, in nanometers (nm).	All levels

Table 66: show interfaces Fast Ethernet Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Frequency</b>	(10-Gigabit Ethernet DWDM interfaces only) Displays the frequency associated with the configured wavelength, in terahertz (THz).	All levels
<b>CoS queues</b>	Number of CoS queues configured.	detail extensive none
<b>Schedulers</b>	(GigabitEthernet intelligent queuing 2 (IQ2) interfaces only) Number of CoS schedulers configured.	extensive
<b>Hold-times</b>	Current interface hold-time up and hold-time down, in milliseconds.	detail extensive
<b>Current address</b>	Configured MAC address.	detail extensive none
<b>Hardware address</b>	Hardware MAC address.	detail extensive none
<b>Last flapped</b>	Date, time, and how long ago the interface went from down to up. The format is <b>Last flapped: year-month-day hour:minute:second:timezone (hour:minute:second ago)</b> . For example, <b>Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> .	detail extensive none
<b>Input Rate</b>	Input rate in bits per second (bps) and packets per second (pps).	None specified
<b>Output Rate</b>	Output rate in bps and pps.	None specified
<b>Statistics last cleared</b>	Time when the statistics for the interface were last set to zero.	detail extensive
<b>Traffic statistics</b>	<p>Number and rate of bytes and packets received and transmitted on the physical interface.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul> <p>Gigabit Ethernet and 10-Gigabit Ethernet IQ PICs count the overhead and CRC bytes.</p> <p>For Gigabit Ethernet IQ PICs, the input byte counts vary by interface type. For more information, see Table 31 under the <a href="#">show interfaces</a> command.</p>	detail extensive

Table 66: show interfaces Fast Ethernet Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Input errors</b>	<p>Input errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of the incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Runts</b>—Number of frames received that are smaller than the runt threshold.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that the Junos OS does not handle.</li> <li>• <b>L3 incompletes</b>—Number of incoming packets discarded because they failed Layer 3 (usually IPv4) sanity checks of the header. For example, a frame with less than 20 bytes of available IP header is discarded. L3 incomplete errors can be ignored by configuring the <b>ignore-l3-incompletes</b> statement.</li> <li>• <b>L2 channel errors</b>—Number of times the software did not find a valid logical interface for an incoming frame.</li> <li>• <b>L2 mismatch timeouts</b>—Number of malformed or short packets that caused the incoming packet handler to discard the frame as unreadable.</li> <li>• <b>FIFO errors</b>—Number of FIFO errors in the receive direction that are reported by the ASIC on the PIC. If this value is ever nonzero, the PIC is probably malfunctioning.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>	<b>extensive</b>

Table 66: show interfaces Fast Ethernet Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Output errors</b>	<p>Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and then up, or another problem occurs. If the number of carrier transitions increments quickly (perhaps once every 10 seconds), the cable, the far-end system, or the PIC or PIM is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Collisions</b>—Number of Ethernet collisions. The Gigabit Ethernet PIC supports only full-duplex operation, so for Gigabit Ethernet PICs, this number should always remain 0. If it is nonzero, there is a software bug.</li> <li>• <b>Aged packets</b>—Number of packets that remained in shared packet SDRAM so long that the system automatically purged them. The value in this field should never increment. If it does, it is most likely a software bug or possibly malfunctioning hardware.</li> <li>• <b>FIFO errors</b>—Number of FIFO errors in the send direction as reported by the ASIC on the PIC. If this value is ever nonzero, the PIC is probably malfunctioning.</li> <li>• <b>HS link CRC errors</b>—Number of errors on the high-speed links between the ASICs responsible for handling the router interfaces.</li> <li>• <b>MTU errors</b>—Number of packets whose size exceeded the MTU of the interface.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>	<b>extensive</b>
<b>Egress queues</b>	<p>Total number of egress queues supported on the specified interface.</p> <p><b>NOTE:</b> In DPCs that are not of the enhanced type, such as DPC 40x 1GE R, DPCE 20x 1GE + 2x 10GE R, or DPCE 40x 1GE R, you might notice a discrepancy in the output of the <b>show interfaces</b> command because incoming packets might be counted in the Egress queues section of the output. This problem occurs on non-enhanced DPCs because the egress queue statistics are polled from IMQ (Inbound Message Queuing) block of the I-chip. The IMQ block does not differentiate between ingress and egress WAN traffic; as a result, the combined statistics are displayed in the egress queue counters on the Routing Engine. In a simple VPLS scenario, if there is no MAC entry in DMAC table (by sending unidirectional traffic), traffic is flooded and the input traffic is accounted in IMQ. For bidirectional traffic (MAC entry in DMAC table), if the outgoing interface is on the same I-chip then both ingress and egress statistics are counted in a combined way. If the outgoing interface is on a different I-chip or FPC, then only egress statistics are accounted in IMQ. This behavior is expected with non-enhanced DPCs</p>	<b>detail extensive</b>
<b>Queue counters (Egress)</b>	<p>CoS queue number and its associated user-configured forwarding class name.</p> <ul style="list-style-type: none"> <li>• <b>Queued packets</b>—Number of queued packets.</li> <li>• <b>Transmitted packets</b>—Number of transmitted packets.</li> <li>• <b>Dropped packets</b>—Number of packets dropped by the ASIC's RED mechanism.</li> </ul>	<b>detail extensive</b>

Table 66: show interfaces Fast Ethernet Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Ingress queues</b>	Total number of ingress queues supported on the specified interface. Displayed on IQ2 interfaces.	<b>extensive</b>
<b>Queue counters (Ingress)</b>	CoS queue number and its associated user-configured forwarding class name. Displayed on IQ2 interfaces. <ul style="list-style-type: none"> <li>• <b>Queued packets</b>—Number of queued packets.</li> <li>• <b>Transmitted packets</b>—Number of transmitted packets.</li> <li>• <b>Dropped packets</b>—Number of packets dropped by the ASIC's RED mechanism.</li> </ul>	<b>extensive</b>
<b>Active alarms and Active defects</b>	Ethernet-specific defects that can prevent the interface from passing packets. When a defect persists for a certain amount of time, it is promoted to an alarm. Based on the routing device configuration, an alarm can ring the red or yellow alarm bell on the routing device, or turn on the red or yellow alarm LED on the craft interface. These fields can contain the value <b>None</b> or <b>Link</b> . <ul style="list-style-type: none"> <li>• <b>None</b>—There are no active defects or alarms.</li> <li>• <b>Link</b>—Interface has lost its link state, which usually means that the cable is unplugged, the far-end system has been turned off, or the PIC is malfunctioning.</li> </ul>	<b>detail extensive none</b>
<b>OTN FEC statistics</b>	The forward error correction (FEC) counters provide the following statistics: <ul style="list-style-type: none"> <li>• <b>Corrected Errors</b>—The count of corrected errors in the last second.</li> <li>• <b>Corrected Error Ratio</b>—The corrected error ratio in the last 25 seconds. For example, 1e-7 is 1 error per 10 million bits.</li> </ul>	
<b>PCS statistics</b>	(10-Gigabit Ethernet interfaces) Displays Physical Coding Sublayer (PCS) fault conditions from the WAN PHY or the LAN PHY device. <ul style="list-style-type: none"> <li>• <b>Bit errors</b>—The number of seconds during which at least one bit error rate (BER) occurred while the PCS receiver is operating in normal mode.</li> <li>• <b>Errored blocks</b>—The number of seconds when at least one errored block occurred while the PCS receiver is operating in normal mode.</li> </ul>	<b>detail extensive</b>

Table 66: show interfaces Fast Ethernet Output Fields (continued)

Field Name	Field Description	Level of Output
MAC statistics	<p>Receive and Transmit statistics reported by the PIC's MAC subsystem, including the following:</p> <ul style="list-style-type: none"> <li>• <b>Total octets</b> and <b>total packets</b>—Total number of octets and packets. For Gigabit Ethernet IQ PICs, the received octets count varies by interface type. For more information, see Table 31 under the <a href="#">show interfaces</a> command.</li> <li>• <b>Unicast packets</b>, <b>Broadcast packets</b>, and <b>Multicast packets</b>—Number of unicast, broadcast, and multicast packets.</li> <li>• <b>CRC/Align errors</b>—Total number of packets received that had a length (excluding framing bits, but including FCS octets) of between 64 and 1518 octets, inclusive, and had either a bad FCS with an integral number of octets (FCS Error) or a bad FCS with a nonintegral number of octets (Alignment Error).</li> <li>• <b>FIFO error</b>—Number of FIFO errors that are reported by the ASIC on the PIC. If this value is ever nonzero, the PIC or a cable is probably malfunctioning.</li> <li>• <b>MAC control frames</b>—Number of MAC control frames.</li> <li>• <b>MAC pause frames</b>—Number of MAC control frames with <b>pause</b> operational code.</li> <li>• <b>Oversized frames</b>—Number of frames that exceed 1518 octets.</li> <li>• <b>Jabber frames</b>—Number of frames that were longer than 1518 octets (excluding framing bits, but including FCS octets), and had either an FCS error or an alignment error. This definition of jabber is different from the definition in IEEE-802.3 section 8.2.1.5 (10BASE5) and section 10.3.1.4 (10BASE2). These documents define jabber as the condition in which any packet exceeds 20 ms. The allowed range to detect jabber is from 20 ms to 150 ms.</li> <li>• <b>Fragment frames</b>—Total number of packets that were less than 64 octets in length (excluding framing bits, but including FCS octets), and had either an FCS error or an alignment error. Fragment frames normally increment because both runts (which are normal occurrences caused by collisions) and noise hits are counted.</li> <li>• <b>VLAN tagged frames</b>—Number of frames that are VLAN tagged. The system uses the TPID of 0x8100 in the frame to determine whether a frame is tagged or not.</li> <li>• <b>Code violations</b>—Number of times an event caused the PHY to indicate "Data reception error" or "invalid data symbol error."</li> </ul>	extensive
OTN Received Overhead Bytes	APS/PCC0: 0x02, APS/PCC1: 0x11, APS/PCC2: 0x47, APS/PCC3: 0x58 Payload Type: 0x08	extensive
OTN Transmitted Overhead Bytes	APS/PCC0: 0x00, APS/PCC1: 0x00, APS/PCC2: 0x00, APS/PCC3: 0x00 Payload Type: 0x08	extensive

Table 66: show interfaces Fast Ethernet Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Filter statistics</b>	<p><b>Receive</b> and <b>Transmit</b> statistics reported by the PIC's MAC address filter subsystem. The filtering is done by the content-addressable memory (CAM) on the PIC. The filter examines a packet's source and destination MAC addresses to determine whether the packet should enter the system or be rejected.</p> <ul style="list-style-type: none"> <li>• <b>Input packet count</b>—Number of packets received from the MAC hardware that the filter processed.</li> <li>• <b>Input packet rejects</b>—Number of packets that the filter rejected because of either the source MAC address or the destination MAC address.</li> <li>• <b>Input DA rejects</b>—Number of packets that the filter rejected because the destination MAC address of the packet is not on the accept list. It is normal for this value to increment. When it increments very quickly and no traffic is entering the routing device from the far-end system, either there is a bad ARP entry on the far-end system, or multicast routing is not on and the far-end system is sending many multicast packets to the local routing device (which the routing device is rejecting).</li> <li>• <b>Input SA rejects</b>—Number of packets that the filter rejected because the source MAC address of the packet is not on the accept list. The value in this field should increment only if source MAC address filtering has been enabled. If filtering is enabled, if the value increments quickly, and if the system is not receiving traffic that it should from the far-end system, it means that the user-configured source MAC addresses for this interface are incorrect.</li> <li>• <b>Output packet count</b>—Number of packets that the filter has given to the MAC hardware.</li> <li>• <b>Output packet pad count</b>—Number of packets the filter padded to the minimum Ethernet size (60 bytes) before giving the packet to the MAC hardware. Usually, padding is done only on small ARP packets, but some very small IP packets can also require padding. If this value increments rapidly, either the system is trying to find an ARP entry for a far-end system that does not exist or it is misconfigured.</li> <li>• <b>Output packet error count</b>—Number of packets with an indicated error that the filter was given to transmit. These packets are usually aged packets or are the result of a bandwidth problem on the FPC hardware. On a normal system, the value of this field should not increment.</li> <li>• <b>CAM destination filters, CAM source filters</b>—Number of entries in the CAM dedicated to destination and source MAC address filters. There can only be up to 64 source entries. If source filtering is disabled, which is the default, the values for these fields should be 0.</li> </ul>	<b>extensive</b>
<b>PMA PHY</b>	<p>(10-Gigabit Ethernet interfaces, WAN PHY mode) SONET error information:</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. Any state other than <b>OK</b> indicates a problem.</li> </ul> <p>Subfields are:</p> <ul style="list-style-type: none"> <li>• <b>PHY Lock</b>—Phase-locked loop</li> <li>• <b>PHY Light</b>—Loss of optical signal</li> </ul>	<b>extensive</b>

<b>Release Information</b>	<p>Command introduced before Junos OS Release 7.4 for Gigabit interfaces.</p> <p>Command introduced in Junos OS Release 8.0 for 10 Gigabit interfaces.</p> <p>Command modified in Junos OS Release 9.5 for SRX Series devices.</p>

Command introduced in Junos OS Release 18.1 for Gigabit interfaces.

**Description** Display status information about the specified Gigabit Ethernet interface.

(M320, M120, MX Series, and T Series routers only) Display status information about the specified 10-Gigabit Ethernet interface.

Display the IPv6 interface traffic statistics about the specified Gigabit Ethernet interface for MX series routers. The input and output bytes (bps) and packets (pps) rates are not displayed for IFD and local traffic.

Display status information and statistics about interfaces on SRX Series appliance running Junos OS.

**NOTE:** On SRX Series appliances, on configuring identical IPs on a single interface, you will not see a warning message; instead, you will see a syslog message.

**Options** For Gigabit interfaces:

***ge-fpc/pic/port***—Display standard information about the specified Gigabit Ethernet interface.

**brief | detail | extensive | terse**—(Optional) Display the specified level of output.

**descriptions**—(Optional) Display interface description strings.

**media**—(Optional) Display media-specific information about network interfaces.

**snmp-index *snmp-index***—(Optional) Display information for the specified SNMP index of the interface.

**statistics**—(Optional) Display static interface statistics.

For 10 Gigabit interfaces:

***xe-fpc/pic/port***—Display standard information about the specified 10-Gigabit Ethernet interface.

**brief | detail | extensive | terse**—(Optional) Display the specified level of output.

**descriptions**—(Optional) Display interface description strings.

**media**—(Optional) Display media-specific information about network interfaces.

**snmp-index *snmp-index***—(Optional) Display information for the specified SNMP index of the interface.

**statistics**—(Optional) Display static interface statistics.

For SRX interfaces:

- **interface-name**—(Optional) Display standard information about the specified interface. Following is a list of typical interface names. Replace *pim* with the PIM slot and port with the port number.
  - **at-*pim*/0/*port***—ATM-over-ADSL or ATM-over-SHDSL interface.
  - **ce1-*pim*/0/ *port***—Channelized E1 interface.
  - **cl-0/0/8**—3G wireless modem interface for SRX320 devices.
  - **ct1-*pim*/0/*port***—Channelized T1 interface.
  - **dl0**—Dialer Interface for initiating ISDN and USB modem connections.
  - **e1-*pim*/0/*port***—E1 interface.
  - **e3-*pim*/0/*port***—E3 interface.
  - **fe-*pim*/0/*port***—Fast Ethernet interface.
  - **ge-*pim*/0/*port***—Gigabit Ethernet interface.
  - **se-*pim*/0/*port***—Serial interface.
  - **t1-*pim*/0/*port***—T1 (also called DS1) interface.
  - **t3-*pim*/0/*port***—T3 (also called DS3) interface.
  - **wx-slot/0/0**—WAN acceleration interface, for the WXC Integrated Services Module (ISM 200).
- **interface-name**—(Optional) Display standard information about the specified interface. Following is a list of typical interface names. Replace *pim* with the PIM slot and port with the port number.
  - **at-*pim*/0/*port***—ATM-over-ADSL or ATM-over-SHDSL interface.
  - **ce1-*pim*/0/ *port***—Channelized E1 interface.
  - **cl-0/0/8**—3G wireless modem interface for SRX320 devices.
  - **ct1-*pim*/0/*port***—Channelized T1 interface.
  - **dl0**—Dialer Interface for initiating ISDN and USB modem connections.
  - **e1-*pim*/0/*port***—E1 interface.
  - **e3-*pim*/0/*port***—E3 interface.
  - **fe-*pim*/0/*port***—Fast Ethernet interface.
  - **ge-*pim*/0/*port***—Gigabit Ethernet interface.
  - **se-*pim*/0/*port***—Serial interface.
  - **t1-*pim*/0/*port***—T1 (also called DS1) interface.

- **t3-pim/0/port**—T3 (also called DS3) interface.
- **wx-slot/0/0**—WAN acceleration interface, for the WXC Integrated Services Module (ISM 200).

**Additional Information** In a logical system, this command displays information only about the logical interfaces and not about the physical interfaces.

**Output Fields** [Table 56 on page 1127](#) describes the output fields for the **show interfaces** (Gigabit Ethernet) command. Output fields are listed in the approximate order in which they appear. For Gigabit Ethernet IQ and IQE PICs, the traffic and MAC statistics vary by interface type. For more information, see [Table 57 on page 1156](#).

*Table 67: show interfaces (Gigabit Ethernet) Output Fields*

Field Name	Field Description	Level of Output
<b>Physical Interface</b>		
<b>Physical interface</b>	Name of the physical interface.	All levels
<b>Enabled</b>	State of the interface. Possible values are described in the “Enabled Field” section under “ <a href="#">Common Output Fields Description</a> ” on page 1114.	All levels
<b>Interface index</b>	Index number of the physical interface, which reflects its initialization sequence.	<b>detail extensive none</b>
<b>SNMP ifIndex</b>	SNMP index number for the physical interface.	<b>detail extensive none</b>

Table 67: show interfaces (Gigabit Ethernet) Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Link-level type</b>	Encapsulation being used on the physical interface.	All levels
<b>MTU</b>	Maximum transmission unit size on the physical interface.	All levels
<b>Speed</b>	Speed at which the interface is running.	All levels
<b>Loopback</b>	Loopback status: <b>Enabled</b> or <b>Disabled</b> . If loopback is enabled, type of loopback: <b>Local</b> or <b>Remote</b> .	All levels
<b>Source filtering</b>	Source filtering status: <b>Enabled</b> or <b>Disabled</b> .	All levels
<b>LAN-PHY mode</b>	10-Gigabit Ethernet interface operating in Local Area Network Physical Layer Device (LAN PHY) mode. LAN PHY allows 10-Gigabit Ethernet wide area links to use existing Ethernet applications.	All levels
<b>WAN-PHY mode</b>	10-Gigabit Ethernet interface operating in Wide Area Network Physical Layer Device (WAN PHY) mode. WAN PHY allows 10-Gigabit Ethernet wide area links to use fiber-optic cables and other devices intended for SONET/SDH.	All levels
<b>Unidirectional</b>	Unidirectional link mode status for 10-Gigabit Ethernet interface: <b>Enabled</b> or <b>Disabled</b> for parent interface; <b>Rx-only</b> or <b>Tx-only</b> for child interfaces.	All levels
<b>Flow control</b>	Flow control status: <b>Enabled</b> or <b>Disabled</b> .	All levels
<b>Auto-negotiation</b>	(Gigabit Ethernet interfaces) Autonegotiation status: <b>Enabled</b> or <b>Disabled</b> .	All levels
<b>Remote-fault</b>	(Gigabit Ethernet interfaces) Remote fault status: <ul style="list-style-type: none"> <li>• <b>Online</b>—Autonegotiation is manually configured as online.</li> <li>• <b>Offline</b>—Autonegotiation is manually configured as offline.</li> </ul>	All levels
<b>Device flags</b>	Information about the physical device. Possible values are described in the "Device Flags" section under <a href="#">"Common Output Fields Description" on page 1114</a> .	All levels
<b>Interface flags</b>	Information about the interface. Possible values are described in the "Interface Flags" section under <a href="#">"Common Output Fields Description" on page 1114</a> .	All levels
<b>Link flags</b>	Information about the link. Possible values are described in the "Links Flags" section under <a href="#">"Common Output Fields Description" on page 1114</a> .	All levels
<b>Wavelength</b>	(10-Gigabit Ethernet dense wavelength-division multiplexing [DWDM] interfaces) Displays the configured wavelength, in nanometers (nm).	All levels
<b>Frequency</b>	(10-Gigabit Ethernet DWDM interfaces only) Displays the frequency associated with the configured wavelength, in terahertz (THz).	All levels
<b>CoS queues</b>	Number of CoS queues configured.	<b>detail extensive none</b>

Table 67: *show interfaces (Gigabit Ethernet) Output Fields (continued)*

Field Name	Field Description	Level of Output
<b>Schedulers</b>	(Gigabit Ethernet intelligent queuing 2 [IQ2] interfaces only) Number of CoS schedulers configured.	<b>extensive</b>
<b>Hold-times</b>	Current interface hold-time up and hold-time down, in milliseconds (ms).	<b>detail extensive</b>
<b>Current address</b>	Configured MAC address.	<b>detail extensive none</b>
<b>Hardware address</b>	Hardware MAC address.	<b>detail extensive none</b>
<b>Last flapped</b>	Date, time, and how long ago the interface went from down to up. The format is <b>Last flapped: year-month-day hour:minute:second:timezone (hour:minute:second ago)</b> . For example, <b>Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> .	<b>detail extensive none</b>
<b>Input Rate</b>	Input rate in bits per second (bps) and packets per second (pps). The value in this field also includes the Layer 2 overhead bytes for ingress traffic on Ethernet interfaces if you enable accounting of Layer 2 overhead at the PIC level or the logical interface level.	None
<b>Output Rate</b>	Output rate in bps and pps. The value in this field also includes the Layer 2 overhead bytes for egress traffic on Ethernet interfaces if you enable accounting of Layer 2 overhead at the PIC level or the logical interface level.	None
<b>Statistics last cleared</b>	Time when the statistics for the interface were last set to zero.	<b>detail extensive</b>
<b>Egress account overhead</b>	Layer 2 overhead in bytes that is accounted in the interface statistics for egress traffic.	<b>detail extensive</b>
<b>Ingress account overhead</b>	Layer 2 overhead in bytes that is accounted in the interface statistics for ingress traffic.	<b>detail extensive</b>
<b>Traffic statistics</b>	<p>Number and rate of bytes and packets received and transmitted on the physical interface.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface. The value in this field also includes the Layer 2 overhead bytes for ingress traffic on Ethernet interfaces if you enable accounting of Layer 2 overhead at the PIC level or the logical interface level.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface. The value in this field also includes the Layer 2 overhead bytes for egress traffic on Ethernet interfaces if you enable accounting of Layer 2 overhead at the PIC level or the logical interface level.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul> <p>Gigabit Ethernet and 10-Gigabit Ethernet IQ PICs count the overhead and CRC bytes.</p> <p>For Gigabit Ethernet IQ PICs, the input byte counts vary by interface type. For more information, see Table 31 under the <a href="#">show interfaces</a> command.</p>	<b>detail extensive</b>

Table 67: show interfaces (Gigabit Ethernet) Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Input errors</b>	<p>Input errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of the incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Runts</b>—Number of frames received that are smaller than the runt threshold.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that Junos OS does not handle.</li> <li>• <b>L3 incompletes</b>—Number of incoming packets discarded because they failed Layer 3 (usually IPv4) sanity checks of the header. For example, a frame with less than 20 bytes of available IP header is discarded. L3 incomplete errors can be ignored by configuring the <b>ignore-l3-incompletes</b> statement.</li> <li>• <b>L2 channel errors</b>—Number of times the software did not find a valid logical interface for an incoming frame.</li> <li>• <b>L2 mismatch timeouts</b>—Number of malformed or short packets that caused the incoming packet handler to discard the frame as unreadable.</li> <li>• <b>FIFO errors</b>—Number of FIFO errors in the receive direction that are reported by the ASIC on the PIC. If this value is ever nonzero, the PIC is probably malfunctioning.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>	<b>extensive</b>

Table 67: show interfaces (Gigabit Ethernet) Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Output errors</b>	<p>Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and then up, or another problem occurs. If the number of carrier transitions increments quickly (perhaps once every 10 seconds), the cable, the far-end system, or the PIC or PIM is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> </ul> <p><b>NOTE:</b> Due to accounting space limitations on certain Type 3 FPCs (which are supported in M320 and T640 routers), the <b>Drops</b> field does not always use the correct value for queue 6 or queue 7 for interfaces on 10-port 1-Gigabit Ethernet PICs.</p> <ul style="list-style-type: none"> <li>• <b>Collisions</b>—Number of Ethernet collisions. The Gigabit Ethernet PIC supports only full-duplex operation, so for Gigabit Ethernet PICs, this number must always be 0. If it is nonzero, there is a software bug.</li> <li>• <b>Aged packets</b>—Number of packets that remained in shared packet SDRAM so long that the system automatically purged them. The value in this field must never increment. If it does, it is most likely a software bug or possibly malfunctioning hardware.</li> <li>• <b>FIFO errors</b>—Number of FIFO errors in the send direction as reported by the ASIC on the PIC. If this value is ever nonzero, the PIC is probably malfunctioning.</li> <li>• <b>HS link CRC errors</b>—Number of errors on the high-speed links between the ASICs responsible for handling the router interfaces.</li> <li>• <b>MTU errors</b>—Number of packets whose size exceeded the MTU of the interface.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>	<b>extensive</b>
<b>Egress queues</b>	<p>Total number of egress queues supported on the specified interface.</p> <p><b>NOTE:</b> In DPCs that are not of the enhanced type, such as DPC 40x 1GER, DPCE 20x 1GE + 2x 10GE R, or DPCE 40x 1GE R, you might notice a discrepancy in the output of the <b>show interfaces</b> command because incoming packets might be counted in the Egress queues section of the output. This problem occurs on non-enhanced DPCs because the egress queue statistics are polled from IMQ (Inbound Message Queuing) block of the I-chip. The IMQ block does not differentiate between ingress and egress WAN traffic; as a result, the combined statistics are displayed in the egress queue counters on the Routing Engine. In a simple VPLS scenario, if there is no MAC entry in DMAC table (by sending unidirectional traffic), traffic is flooded and the input traffic is accounted in IMQ. For bidirectional traffic (MAC entry in DMAC table), if the outgoing interface is on the same I-chip then both ingress and egress statistics are counted in a combined way. If the outgoing interface is on a different I-chip or FPC, then only egress statistics are accounted in IMQ. This behavior is expected with non-enhanced DPCs</p>	<b>detail extensive</b>

Table 67: show interfaces (Gigabit Ethernet) Output Fields (continued)

Field Name	Field Description	Level of Output
Queue counters (Egress)	<p>CoS queue number and its associated user-configured forwarding class name.</p> <ul style="list-style-type: none"> <li>• <b>Queued packets</b>—Number of queued packets.</li> <li>• <b>Transmitted packets</b>—Number of transmitted packets.</li> <li>• <b>Dropped packets</b>—Number of packets dropped by the ASIC's RED mechanism.</li> </ul> <p><b>NOTE:</b> Due to accounting space limitations on certain Type 3 FPCs (which are supported in M320 and T640 routers), the <b>Dropped packets</b> field does not always display the correct value for queue 6 or queue 7 for interfaces on 10-port 1-Gigabit Ethernet PICs.</p>	detail extensive
Ingress queues	Total number of ingress queues supported on the specified interface. Displayed on IQ2 interfaces.	extensive
Queue counters (Ingress)	<p>CoS queue number and its associated user-configured forwarding class name. Displayed on IQ2 interfaces.</p> <ul style="list-style-type: none"> <li>• <b>Queued packets</b>—Number of queued packets.</li> <li>• <b>Transmitted packets</b>—Number of transmitted packets.</li> <li>• <b>Dropped packets</b>—Number of packets dropped by the ASIC's RED mechanism.</li> </ul>	extensive
Active alarms and Active defects	<p>Ethernet-specific defects that can prevent the interface from passing packets. When a defect persists for a certain amount of time, it is promoted to an alarm. Based on the router configuration, an alarm can ring the red or yellow alarm bell on the router, or turn on the red or yellow alarm LED on the craft interface. These fields can contain the value <b>None</b> or <b>Link</b>.</p> <ul style="list-style-type: none"> <li>• <b>None</b>—There are no active defects or alarms.</li> <li>• <b>Link</b>—Interface has lost its link state, which usually means that the cable is unplugged, the far-end system has been turned off, or the PIC is malfunctioning.</li> </ul>	detail extensive none
Interface transmit statistics	<p>(On MX Series devices) Status of the <b>interface-transmit-statistics</b> configuration: Enabled or Disabled.</p> <ul style="list-style-type: none"> <li>• <b>Enabled</b>—When the <b>interface-transmit-statistics</b> statement is included in the configuration. If this is configured, the interface statistics show the actual transmitted load on the interface.</li> <li>• <b>Disabled</b>—When the <b>interface-transmit-statistics</b> statement is not included in the configuration. If this is not configured, the interface statistics show the offered load on the interface.</li> </ul>	detail extensive
OTN FEC statistics	<p>The forward error correction (FEC) counters provide the following statistics:</p> <ul style="list-style-type: none"> <li>• <b>Corrected Errors</b>—Count of corrected errors in the last second.</li> <li>• <b>Corrected Error Ratio</b>—Corrected error ratio in the last 25 seconds. For example, 1e-7 is 1 error per 10 million bits.</li> </ul>	detail extensive

Table 67: show interfaces (Gigabit Ethernet) Output Fields (continued)

Field Name	Field Description	Level of Output
<b>PCS statistics</b>	<p>(10-Gigabit Ethernet interfaces) Displays Physical Coding Sublayer (PCS) fault conditions from the WAN PHY or the LAN PHY device.</p> <ul style="list-style-type: none"> <li>• <b>Bit errors</b>—Number of seconds during which at least one bit error rate (BER) occurred while the PCS receiver is operating in normal mode.</li> <li>• <b>Errored blocks</b>—Number of seconds when at least one errored block occurred while the PCS receiver is operating in normal mode.</li> </ul>	<b>detail extensive</b>
<b>Link Degrad</b>	<p>Shows the link degrade status of the physical link and the estimated bit error rates (BERs). This field is available only for the PICs supporting the physical link monitoring feature.</p> <ul style="list-style-type: none"> <li>• <b>Link Monitoring</b>—Indicates if physical link degrade monitoring is enabled on the interface. <ul style="list-style-type: none"> <li>• <b>Enable</b>—Indicates that link degrade monitoring has been enabled (using the <b>link-degrade-monitor</b> statement) on the interface.</li> <li>• <b>Disable</b>—Indicates that link degrade monitoring has not been enabled on the interface. If link degrade monitoring has not been enabled, the output does not show any related information, such as BER values and thresholds.</li> </ul> </li> <li>• <b>Link Degrad Set Threshold</b>—The BER threshold value at which the link is considered degraded and a corrective action is triggered.</li> <li>• <b>Link Degrad Clear Threshold</b>—The BER threshold value at which the degraded link is considered recovered and the corrective action applied to the interface is reverted.</li> <li>• <b>Estimated BER</b>—The estimated bit error rate.</li> <li>• <b>Link-degrade event</b>—Shows link degrade event information. <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Time (in seconds) elapsed after a link degrade event occurred.</li> <li>• <b>Count</b>—The number of link degrade events recorded.</li> <li>• <b>State</b>—Shows the link degrade status (example: <b>Defect Active</b>).</li> </ul> </li> </ul>	<b>detail extensive</b>

Table 67: *show interfaces (Gigabit Ethernet) Output Fields (continued)*

Field Name	Field Description	Level of Output
MAC statistics	<p>Receive and Transmit statistics reported by the PIC's MAC subsystem, including the following:</p> <ul style="list-style-type: none"> <li>• <b>Total octets</b> and <b>total packets</b>—Total number of octets and packets. For Gigabit Ethernet IQ PICs, the received octets count varies by interface type. For more information, see Table 31 under the <code>show interfaces</code> command.</li> <li>• <b>Unicast packets</b>, <b>Broadcast packets</b>, and <b>Multicast packets</b>—Number of unicast, broadcast, and multicast packets.</li> <li>• <b>CRC/Align errors</b>—Total number of packets received that had a length (excluding framing bits, but including FCS octets) of between 64 and 1518 octets, inclusive, and had either a bad FCS with an integral number of octets (FCS Error) or a bad FCS with a nonintegral number of octets (Alignment Error).</li> <li>• <b>FIFO error</b>—Number of FIFO errors that are reported by the ASIC on the PIC. If this value is ever nonzero, the PIC or a cable is probably malfunctioning.</li> <li>• <b>MAC control frames</b>—Number of MAC control frames.</li> <li>• <b>MAC pause frames</b>—Number of MAC control frames with <b>pause</b> operational code.</li> <li>• <b>Oversized frames</b>—There are two possible conditions regarding the number of oversized frames: <ul style="list-style-type: none"> <li>• Packet length exceeds 1518 octets, or</li> <li>• Packet length exceeds MRU</li> </ul> </li> <li>• <b>Jabber frames</b>—Number of frames that were longer than 1518 octets (excluding framing bits, but including FCS octets), and had either an FCS error or an alignment error. This definition of jabber is different from the definition in IEEE-802.3 section 8.2.1.5 (10BASE5) and section 10.3.1.4 (10BASE2). These documents define jabber as the condition in which any packet exceeds 20 ms. The allowed range to detect jabber is from 20 ms to 150 ms.</li> <li>• <b>Fragment frames</b>—Total number of packets that were less than 64 octets in length (excluding framing bits, but including FCS octets) and had either an FCS error or an alignment error. Fragment frames normally increment because both runts (which are normal occurrences caused by collisions) and noise hits are counted.</li> <li>• <b>VLAN tagged frames</b>—Number of frames that are VLAN tagged. The system uses the TPID of 0x8100 in the frame to determine whether a frame is tagged or not. <p><b>NOTE:</b> The 20-port Gigabit Ethernet MIC (MIC-3D-20GE-SFP) does not have hardware counters for VLAN frames. Therefore, the <b>VLAN tagged frames</b> field displays 0 when the <code>show interfaces</code> command is executed on a 20-port Gigabit Ethernet MIC. In other words, the number of VLAN tagged frames cannot be determined for the 20-port Gigabit Ethernet MIC.</p> </li> <li>• <b>Code violations</b>—Number of times an event caused the PHY to indicate "Data reception error" or "invalid data symbol error."</li> </ul>	extensive
OTN Received Overhead Bytes	APS/PCC0: 0x02, APS/PCC1: 0x11, APS/PCC2: 0x47, APS/PCC3: 0x58 Payload Type: 0x08	extensive
OTN Transmitted Overhead Bytes	APS/PCC0: 0x00, APS/PCC1: 0x00, APS/PCC2: 0x00, APS/PCC3: 0x00 Payload Type: 0x08	extensive

Table 67: show interfaces (Gigabit Ethernet) Output Fields (continued)

Field Name	Field Description	Level of Output
Filter statistics	<p>Receive and Transmit statistics reported by the PIC's MAC address filter subsystem. The filtering is done by the content-addressable memory (CAM) on the PIC. The filter examines a packet's source and destination MAC addresses to determine whether the packet may enter the system or be rejected.</p> <ul style="list-style-type: none"> <li>• <b>Input packet count</b>—Number of packets received from the MAC hardware that the filter processed.</li> <li>• <b>Input packet rejects</b>—Number of packets that the filter rejected because of either the source MAC address or the destination MAC address.</li> <li>• <b>Input DA rejects</b>—Number of packets that the filter rejected because the destination MAC address of the packet is not on the accept list. It is normal for this value to increment. When it increments very quickly and no traffic is entering the router from the far-end system, either there is a bad ARP entry on the far-end system, or multicast routing is not on and the far-end system is sending many multicast packets to the local router (which the router is rejecting).</li> <li>• <b>Input SA rejects</b>—Number of packets that the filter rejected because the source MAC address of the packet is not on the accept list. The value in this field must increment only if source MAC address filtering has been enabled. If filtering is enabled, if the value increments quickly, and if the system is not receiving traffic that it should from the far-end system, it means that the user-configured source MAC addresses for this interface are incorrect.</li> <li>• <b>Output packet count</b>—Number of packets that the filter has given to the MAC hardware.</li> <li>• <b>Output packet pad count</b>—Number of packets the filter padded to the minimum Ethernet size (60 bytes) before giving the packet to the MAC hardware. Usually, padding is done only on small ARP packets, but some very small IP packets can also require padding. If this value increments rapidly, either the system is trying to find an ARP entry for a far-end system that does not exist or it is misconfigured.</li> <li>• <b>Output packet error count</b>—Number of packets with an indicated error that the filter was given to transmit. These packets are usually aged packets or are the result of a bandwidth problem on the FPC hardware. On a normal system, the value of this field must not increment.</li> <li>• <b>CAM destination filters, CAM source filters</b>—Number of entries in the CAM dedicated to destination and source MAC address filters. There can only be up to 64 source entries. If source filtering is disabled, which is the default, the values for these fields must be 0.</li> </ul>	extensive
PMA PHY	<p>(10-Gigabit Ethernet interfaces, WAN PHY mode) SONET error information:</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. Any state other than <b>OK</b> indicates a problem.</li> </ul> <p>Subfields are:</p> <ul style="list-style-type: none"> <li>• <b>PHY Lock</b>—Phase-locked loop</li> <li>• <b>PHY Light</b>—Loss of optical signal</li> </ul>	extensive

Table 67: show interfaces (Gigabit Ethernet) Output Fields (continued)

Field Name	Field Description	Level of Output
<b>WIS section</b>	<p>(10-Gigabit Ethernet interfaces, WAN PHY mode) SONET error information:</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. Any state other than <b>OK</b> indicates a problem.</li> </ul> <p>Subfields are:</p> <ul style="list-style-type: none"> <li>• <b>BIP-B1</b>—Bit interleaved parity for SONET section overhead</li> <li>• <b>SEF</b>—Severely errored framing</li> <li>• <b>LOL</b>—Loss of light</li> <li>• <b>LOF</b>—Loss of frame</li> <li>• <b>ES-S</b>—Errored seconds (section)</li> <li>• <b>SES-S</b>—Severely errored seconds (section)</li> <li>• <b>SEFS-S</b>—Severely errored framing seconds (section)</li> </ul>	<b>extensive</b>
<b>WIS line</b>	<p>(10-Gigabit Ethernet interfaces, WAN PHY mode) Active alarms and defects, plus counts of specific SONET errors with detailed information:</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. Any state other than <b>OK</b> indicates a problem.</li> </ul> <p>Subfields are:</p> <ul style="list-style-type: none"> <li>• <b>BIP-B2</b>—Bit interleaved parity for SONET line overhead</li> <li>• <b>REI-L</b>—Remote error indication (near-end line)</li> <li>• <b>RDI-L</b>—Remote defect indication (near-end line)</li> <li>• <b>AIS-L</b>—Alarm indication signal (near-end line)</li> <li>• <b>BERR-SF</b>—Bit error rate fault (signal failure)</li> <li>• <b>BERR-SD</b>—Bit error rate defect (signal degradation)</li> <li>• <b>ES-L</b>—Errored seconds (near-end line)</li> <li>• <b>SES-L</b>—Severely errored seconds (near-end line)</li> <li>• <b>UAS-L</b>—Unavailable seconds (near-end line)</li> <li>• <b>ES-LFE</b>—Errored seconds (far-end line)</li> <li>• <b>SES-LFE</b>—Severely errored seconds (far-end line)</li> <li>• <b>UAS-LFE</b>—Unavailable seconds (far-end line)</li> </ul>	<b>extensive</b>

Table 67: show interfaces (Gigabit Ethernet) Output Fields (continued)

Field Name	Field Description	Level of Output
<b>WIS path</b>	<p>(10-Gigabit Ethernet interfaces, WAN PHY mode) Active alarms and defects, plus counts of specific SONET errors with detailed information:</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. Any state other than <b>OK</b> indicates a problem.</li> </ul> <p>Subfields are:</p> <ul style="list-style-type: none"> <li>• <b>BIP-B3</b>—Bit interleaved parity for SONET section overhead</li> <li>• <b>REI-P</b>—Remote error indication</li> <li>• <b>LOP-P</b>—Loss of pointer (path)</li> <li>• <b>AIS-P</b>—Path alarm indication signal</li> <li>• <b>RDI-P</b>—Path remote defect indication</li> <li>• <b>UNEQ-P</b>—Path unequipped</li> <li>• <b>PLM-P</b>—Path payload (signal) label mismatch</li> <li>• <b>ES-P</b>—Errored seconds (near-end STS path)</li> <li>• <b>SES-P</b>—Severely errored seconds (near-end STS path)</li> <li>• <b>UAS-P</b>—Unavailable seconds (near-end STS path)</li> <li>• <b>SES-PFE</b>—Severely errored seconds (far-end STS path)</li> <li>• <b>UAS-PFE</b>—Unavailable seconds (far-end STS path)</li> </ul>	<b>extensive</b>

Table 67: show interfaces (Gigabit Ethernet) Output Fields (continued)

Field Name	Field Description	Level of Output
Autonegotiation information	<p>Information about link autonegotiation.</p> <ul style="list-style-type: none"> <li>• <b>Negotiation status:</b> <ul style="list-style-type: none"> <li>• <b>Incomplete</b>—Ethernet interface has the speed or link mode configured.</li> <li>• <b>No autonegotiation</b>—Remote Ethernet interface has the speed or link mode configured, or does not perform autonegotiation.</li> <li>• <b>Complete</b>—Ethernet interface is connected to a device that performs autonegotiation and the autonegotiation process is successful.</li> </ul> </li> <li>• <b>Link partner status</b>—OK when Ethernet interface is connected to a device that performs autonegotiation and the autonegotiation process is successful.</li> <li>• <b>Link partner</b>—Information from the remote Ethernet device: <ul style="list-style-type: none"> <li>• <b>Link mode</b>—Depending on the capability of the link partner, either <b>Full-duplex</b> or <b>Half-duplex</b>.</li> <li>• <b>Flow control</b>—Types of flow control supported by the link partner. For Gigabit Ethernet interfaces, types are <b>Symmetric</b> (link partner supports <b>PAUSE</b> on receive and transmit), <b>Asymmetric</b> (link partner supports <b>PAUSE</b> on transmit), <b>Symmetric/Asymmetric</b> (link partner supports <b>PAUSE</b> on receive and transmit or only <b>PAUSE</b> on transmit), and <b>None</b> (link partner does not support flow control).</li> <li>• <b>Remote fault</b>—Remote fault information from the link partner—<b>Failure</b> indicates a receive link error. <b>OK</b> indicates that the link partner is receiving. <b>Negotiation error</b> indicates a negotiation error. <b>Offline</b> indicates that the link partner is going offline.</li> </ul> </li> <li>• <b>Local resolution</b>—Information from the local Ethernet device: <ul style="list-style-type: none"> <li>• <b>Flow control</b>—Types of flow control supported by the local device. For Gigabit Ethernet interfaces, advertised capabilities are <b>Symmetric/Asymmetric</b> (local device supports <b>PAUSE</b> on receive and transmit or only <b>PAUSE</b> on receive) and <b>None</b> (local device does not support flow control). Depending on the result of the negotiation with the link partner, local resolution flow control type will display <b>Symmetric</b> (local device supports <b>PAUSE</b> on receive and transmit), <b>Asymmetric</b> (local device supports <b>PAUSE</b> on receive), and <b>None</b> (local device does not support flow control).</li> <li>• <b>Remote fault</b>—Remote fault information. <b>Link OK</b> (no error detected on receive), <b>Offline</b> (local interface is offline), and <b>Link Failure</b> (link error detected on receive).</li> </ul> </li> </ul>	extensive
Received path trace, Transmitted path trace	<p>(10-Gigabit Ethernet interfaces, WAN PHY mode) SONET/SDH interfaces allow path trace bytes to be sent inband across the SONET/SDH link. Juniper Networks and other router manufacturers use these bytes to help diagnose misconfigurations and network errors by setting the transmitted path trace message so that it contains the system hostname and name of the physical interface. The received path trace value is the message received from the router at the other end of the fiber. The transmitted path trace value is the message that this router transmits.</p>	extensive
Packet Forwarding Engine configuration	<p>Information about the configuration of the Packet Forwarding Engine:</p> <ul style="list-style-type: none"> <li>• <b>Destination slot</b>—FPC slot number.</li> </ul>	extensive

Table 67: *show interfaces (Gigabit Ethernet) Output Fields (continued)*

Field Name	Field Description	Level of Output
<b>CoS information</b>	<p>Information about the CoS queue for the physical interface.</p> <ul style="list-style-type: none"> <li>• <b>CoS transmit queue</b>—Queue number and its associated user-configured forwarding class name.</li> <li>• <b>Bandwidth %</b>—Percentage of bandwidth allocated to the queue.</li> <li>• <b>Bandwidth bps</b>—Bandwidth allocated to the queue (in bps).</li> <li>• <b>Buffer %</b>—Percentage of buffer space allocated to the queue.</li> <li>• <b>Buffer usec</b>—Amount of buffer space allocated to the queue, in microseconds. This value is nonzero only if the buffer size is configured in terms of time.</li> <li>• <b>Priority</b>—Queue priority: <b>low</b> or <b>high</b>.</li> <li>• <b>Limit</b>—Displayed if rate limiting is configured for the queue. Possible values are <b>none</b> and <b>exact</b>. If <b>exact</b> is configured, the queue transmits only up to the configured bandwidth, even if excess bandwidth is available. If <b>none</b> is configured, the queue transmits beyond the configured bandwidth if bandwidth is available.</li> </ul>	<b>extensive</b>
<b>Logical Interface</b>		
<b>Logical interface</b>	Name of the logical interface.	All levels
<b>Index</b>	Index number of the logical interface, which reflects its initialization sequence.	<b>detail extensive none</b>
<b>SNMP ifIndex</b>	SNMP interface index number for the logical interface.	<b>detail extensive none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Flags</b>	Information about the logical interface. Possible values are described in the “Logical Interface Flags” section under “ <a href="#">Common Output Fields Description</a> ” on page 1114.	All levels

Table 67: show interfaces (Gigabit Ethernet) Output Fields (continued)

Field Name	Field Description	Level of Output
VLAN-Tag	<p>Rewrite profile applied to incoming or outgoing frames on the outer (<b>Out</b>) VLAN tag or for both the outer and inner (<b>In</b>) VLAN tags.</p> <ul style="list-style-type: none"> <li><b>push</b>—An outer VLAN tag is pushed in front of the existing VLAN tag.</li> <li><b>pop</b>—The outer VLAN tag of the incoming frame is removed.</li> <li><b>swap</b>—The outer VLAN tag of the incoming frame is overwritten with the user-specified VLAN tag information.</li> <li><b>push</b>—An outer VLAN tag is pushed in front of the existing VLAN tag.</li> <li><b>push-push</b>—Two VLAN tags are pushed in from the incoming frame.</li> <li><b>swap-push</b>—The outer VLAN tag of the incoming frame is replaced by a user-specified VLAN tag value. A user-specified outer VLAN tag is pushed in front. The outer tag becomes an inner tag in the final frame.</li> <li><b>swap-swap</b>—Both the inner and the outer VLAN tags of the incoming frame are replaced by the user-specified VLAN tag value.</li> <li><b>pop-swap</b>—The outer VLAN tag of the incoming frame is removed, and the inner VLAN tag of the incoming frame is replaced by the user-specified VLAN tag value. The inner tag becomes the outer tag in the final frame.</li> <li><b>pop-pop</b>—Both the outer and inner VLAN tags of the incoming frame are removed.</li> </ul>	brief detail extensive none
Demux	<p>IP demultiplexing (demux) value that appears if this interface is used as the demux underlying interface. The output is one of the following:</p> <ul style="list-style-type: none"> <li>Source Family Inet</li> <li>Destination Family Inet</li> </ul>	detail extensive none
Encapsulation	Encapsulation on the logical interface.	All levels
ACI VLAN	<p>Information displayed for agent circuit identifier (ACI) interface set configured with the <b>agent-circuit-id</b> autoconfiguration stanza.</p> <p><b>Dynamic Profile</b>—Name of the dynamic profile that defines the ACI interface set.</p> <p>If configured, the ACI interface set enables the underlying Ethernet interface to create dynamic VLAN subscriber interfaces based on ACI information.</p> <p><b>NOTE:</b> The ACI VLAN field is replaced with the Line Identity field when an ALI interface set is configured with the <b>line-identity</b> autoconfiguration stanza.</p>	brief detail extensive none
Line Identity	<p>Information displayed for access-line-identifier (ALI) interface sets configured with the <b>line-identity</b> autoconfiguration stanza.</p> <ul style="list-style-type: none"> <li><b>Dynamic Profile</b>—Name of the dynamic profile that defines the ALI interface set.</li> <li>Trusted option used to create the ALI interface set: <b>Circuit-id</b>, <b>Remote-id</b>, or <b>Accept-no-ids</b>. More than one option can be configured.</li> </ul> <p>If configured, the ALI interface set enables the underlying Ethernet interface to create dynamic VLAN subscriber interfaces based on ALI information.</p> <p><b>NOTE:</b> The Line Identity field is replaced with the ACI VLAN field when an ACI interface set is configured with the <b>agent-circuit-id</b> autoconfiguration stanza.</p>	detail

Table 67: show interfaces (Gigabit Ethernet) Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Protocol</b>	Protocol family. Possible values are described in the “Protocol Field” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	<b>detail extensive none</b>
<b>MTU</b>	Maximum transmission unit size on the logical interface.	<b>detail extensive none</b>
<b>Neighbor Discovery Protocol (NDP) Queue Statistics</b>	NDP statistics for protocol <b>inet6</b> under logical interface statistics. <ul style="list-style-type: none"> <li>• <b>Max nh cache</b>—Maximum interface neighbor discovery nexthop cache size.</li> <li>• <b>New hold nh limit</b>—Maximum number of new unresolved nexthops.</li> <li>• <b>Curr nh cnt</b>—Current number of resolved nexthops in the NDP queue.</li> <li>• <b>Curr new hold cnt</b>—Current number of unresolved nexthops in the NDP queue.</li> <li>• <b>NH drop cnt</b>—Number of NDP requests not serviced.</li> </ul>	All levels
<b>Dynamic Profile</b>	Name of the dynamic profile that was used to create this interface configured with a Point-to-Point Protocol over Ethernet (PPPoE) family.	<b>detail extensive none</b>
<b>Service Name Table</b>	Name of the service name table for the interface configured with a PPPoE family.	<b>detail extensive none</b>
<b>Max Sessions</b>	Maximum number of PPPoE logical interfaces that can be activated on the underlying interface.	<b>detail extensive none</b>
<b>Duplicate Protection</b>	State of PPPoE duplicate protection: <b>On</b> or <b>Off</b> . When duplicate protection is configured for the underlying interface, a dynamic PPPoE logical interface cannot be activated when an existing active logical interface is present for the same PPPoE client.	<b>detail extensive none</b>
<b>Direct Connect</b>	State of the configuration to ignore DSL Forum VSAs: <b>On</b> or <b>Off</b> . When configured, the router ignores any of these VSAs received from a directly connected CPE device on the interface.	<b>detail extensive none</b>
<b>AC Name</b>	Name of the access concentrator.	<b>detail extensive none</b>
<b>Maximum labels</b>	Maximum number of MPLS labels configured for the MPLS protocol family on the logical interface.	<b>detail extensive none</b>
<b>Traffic statistics</b>	Number and rate of bytes and packets received and transmitted on the specified interface set. <ul style="list-style-type: none"> <li>• <b>Input bytes, Output bytes</b>—Number of bytes received and transmitted on the interface set. The value in this field also includes the Layer 2 overhead bytes for ingress or egress traffic on Ethernet interfaces if you enable accounting of Layer 2 overhead at the PIC level or the logical interface level.</li> <li>• <b>Input packets, Output packets</b>—Number of packets received and transmitted on the interface set.</li> </ul>	<b>detail extensive</b>
<b>IPv6 transit statistics</b>	Number of IPv6 transit bytes and packets received and transmitted on the logical interface if IPv6 statistics tracking is enabled.	<b>extensive</b>
<b>Local statistics</b>	Number and rate of bytes and packets destined to the router.	<b>extensive</b>

Table 67: show interfaces (Gigabit Ethernet) Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Transit statistics</b>	Number and rate of bytes and packets transiting the switch.  <b>NOTE:</b> For Gigabit Ethernet intelligent queuing 2 (IQ2) interfaces, the logical interface egress statistics might not accurately reflect the traffic on the wire when output shaping is applied. Traffic management output shaping might drop packets after they are tallied by the <b>Output bytes</b> and <b>Output packets</b> interface counters. However, correct values display for both of these egress statistics when per-unit scheduling is enabled for the Gigabit Ethernet IQ2 physical interface, or when a single logical interface is actively using a shared scheduler.	<b>extensive</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Route Table</b>	Route table in which the logical interface address is located. For example, 0 refers to the routing table inet.0.	<b>detail extensive none</b>
<b>Flags</b>	Information about protocol family flags. Possible values are described in the “Family Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	<b>detail extensive</b>
<b>Donor interface</b>	(Unnumbered Ethernet) Interface from which an unnumbered Ethernet interface borrows an IPv4 address.	<b>detail extensive none</b>
<b>Preferred source address</b>	(Unnumbered Ethernet) Secondary IPv4 address of the donor loopback interface that acts as the preferred source address for the unnumbered Ethernet interface.	<b>detail extensive none</b>
<b>Input Filters</b>	Names of any input filters applied to this interface. If you specify a precedence value for any filter in a dynamic profile, filter precedence values appear in parentheses next to all interfaces.	<b>detail extensive</b>
<b>Output Filters</b>	Names of any output filters applied to this interface. If you specify a precedence value for any filter in a dynamic profile, filter precedence values appear in parentheses next to all interfaces.	<b>detail extensive</b>
<b>Mac-Validate Failures</b>	Number of MAC address validation failures for packets and bytes. This field is displayed when MAC address validation is enabled for the logical interface.	<b>detail extensive none</b>
<b>Addresses, Flags</b>	Information about the address flags. Possible values are described in the “Addresses Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	<b>detail extensive none</b>
<b><i>protocol-family</i></b>	Protocol family configured on the logical interface. If the protocol is <b>inet</b> , the IP address of the interface is also displayed.	<b>brief</b>
<b>Flags</b>	Information about the address flag. Possible values are described in the “Addresses Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	<b>detail extensive none</b>
<b>Destination</b>	IP address of the remote side of the connection.	<b>detail extensive none</b>
<b>Local</b>	IP address of the logical interface.	<b>detail extensive none</b>

Table 67: *show interfaces (Gigabit Ethernet) Output Fields (continued)*

Field Name	Field Description	Level of Output
<b>Broadcast</b>	Broadcast address of the logical interface.	<b>detail extensive none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>

The following table describes the output fields for the **show interfaces** (10-Gigabit Ethernet) command.

Field Name	Field Description	Level of Output
<b>Physical interface</b>	Name of the physical interface.	All levels
<b>Enabled</b>	State of the interface. Possible values are described in the “Enabled Field” section under “Common Output Fields Description” on page 1114.	All levels
<b>Interface index</b>	Index number of the physical interface, which reflects its initialization sequence.	<b>detail extensive none</b>
<b>SNMP ifIndex</b>	SNMP index number for the physical interface.	<b>detail extensive none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Link-level type</b>	Encapsulation being used on the physical interface.	All levels
<b>MTU</b>	Maximum transmission unit size on the physical interface.	All levels
<b>Speed</b>	Speed at which the interface is running.	All levels
<b>Loopback</b>	Loopback status: <b>Enabled</b> or <b>Disabled</b> . If loopback is enabled, type of loopback: <b>Local</b> or <b>Remote</b> .	All levels
<b>Source filtering</b>	Source filtering status: <b>Enabled</b> or <b>Disabled</b> .	All levels
<b>LAN-PHY mode</b>	10-Gigabit Ethernet interface operating in Local Area Network Physical Layer Device (LAN PHY) mode. LAN PHY allows 10-Gigabit Ethernet wide area links to use existing Ethernet applications.	All levels
<b>WAN-PHY mode</b>	10-Gigabit Ethernet interface operating in Wide Area Network Physical Layer Device (WAN PHY) mode. WAN PHY allows 10-Gigabit Ethernet wide area links to use fiber-optic cables and other devices intended for SONET/SDH.	All levels
<b>Unidirectional</b>	Unidirectional link mode status for 10-Gigabit Ethernet interface: <b>Enabled</b> or <b>Disabled</b> for parent interface; <b>Rx-only</b> or <b>Tx-only</b> for child interfaces.	All levels
<b>Flow control</b>	Flow control status: <b>Enabled</b> or <b>Disabled</b> .	All levels
<b>Auto-negotiation</b>	(Gigabit Ethernet interfaces) Autonegotiation status: <b>Enabled</b> or <b>Disabled</b> .	All levels

<b>Remote-fault</b>	(Gigabit Ethernet interfaces) Remote fault status: <ul style="list-style-type: none"><li>• <b>Online</b>—Autonegotiation is manually configured as online.</li><li>• <b>Offline</b>—Autonegotiation is manually configured as offline.</li></ul>	All levels
<b>Device flags</b>	Information about the physical device. Possible values are described in the “Device Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels
<b>Interface flags</b>	Information about the interface. Possible values are described in the “Interface Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels
<b>Link flags</b>	Information about the link. Possible values are described in the “Links Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels
<b>Wavelength</b>	(10-Gigabit Ethernet dense wavelength-division multiplexing [DWDM] interfaces) Displays the configured wavelength, in nanometers (nm).	All levels
<b>Frequency</b>	(10-Gigabit Ethernet DWDM interfaces only) Displays the frequency associated with the configured wavelength, in terahertz (THz).	All levels
<b>CoS queues</b>	Number of CoS queues configured.	<b>detail extensive</b> none
<b>Schedulers</b>	(Gigabit Ethernet intelligent queuing 2 (IQ2) interfaces only) Number of CoS schedulers configured.	<b>extensive</b>
<b>Hold-times</b>	Current interface hold-time up and hold-time down, in milliseconds.	<b>detail extensive</b>
<b>Current address</b>	Configured MAC address.	<b>detail extensive</b> none
<b>Hardware address</b>	Hardware MAC address.	<b>detail extensive</b> none
<b>Last flapped</b>	Date, time, and how long ago the interface went from down to up. The format is <b>Last flapped: year-month-day hour:minute:second:timezone (hour:minute:second ago)</b> . For example, <b>Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> .	<b>detail extensive</b> none
<b>Input Rate</b>	Input rate in bits per second (bps) and packets per second (pps). The value in this field also includes the Layer 2 overhead bytes for ingress traffic on Ethernet interfaces if you enable accounting of Layer 2 overhead at the PIC level or the logical interface level.	None specified
<b>Output Rate</b>	Output rate in bps and pps. The value in this field also includes the Layer 2 overhead bytes for egress traffic on Ethernet interfaces if you enable accounting of Layer 2 overhead at the PIC level or the logical interface level.	None specified
<b>Statistics last cleared</b>	Time when the statistics for the interface were last set to zero.	<b>detail extensive</b>
<b>Egress account overhead</b>	Layer 2 overhead in bytes that is accounted in the interface statistics for egress traffic.	<b>detail extensive</b>
<b>Ingress account overhead</b>	Layer 2 overhead in bytes that is accounted in the interface statistics for ingress traffic.	<b>detail extensive</b>

<b>Traffic statistics</b>	<p>Number and rate of bytes and packets received and transmitted on the physical interface.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface. The value in this field also includes the Layer 2 overhead bytes for ingress traffic on Ethernet interfaces if you enable accounting of Layer 2 overhead at the PIC level or the logical interface level.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface. The value in this field also includes the Layer 2 overhead bytes for egress traffic on Ethernet interfaces if you enable accounting of Layer 2 overhead at the PIC level or the logical interface level.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>	<b>detail extensive</b>
<b>Input errors</b>	<p>Input errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of the incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Runts</b>—Number of frames received that are smaller than the runt threshold.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that the Junos OS does not handle.</li> <li>• <b>L3 incompletes</b>—Number of incoming packets discarded because they failed Layer 3 (usually IPv4) sanity checks of the header. For example, a frame with less than 20 bytes of available IP header is discarded. L3 incomplete errors can be ignored by configuring the <b>ignore-l3-incompletes</b> statement.</li> <li>• <b>L2 channel errors</b>—Number of times the software did not find a valid logical interface for an incoming frame.</li> <li>• <b>L2 mismatch timeouts</b>—Number of malformed or short packets that caused the incoming packet handler to discard the frame as unreadable.</li> <li>• <b>FIFO errors</b>—Number of FIFO errors in the receive direction that are reported by the ASIC on the PIC. If this value is ever nonzero, the PIC is probably malfunctioning.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>	<b>extensive</b>

<b>Output errors</b>	<p>Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and then up, or another problem occurs. If the number of carrier transitions increments quickly (perhaps once every 10 seconds), the cable, the far-end system, or the PIC or PIM is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Collisions</b>—Number of Ethernet collisions. The Gigabit Ethernet PIC supports only full-duplex operation, so for Gigabit Ethernet PICs, this number should always remain 0. If it is nonzero, there is a software bug.</li> <li>• <b>Aged packets</b>—Number of packets that remained in shared packet SDRAM so long that the system automatically purged them. The value in this field should never increment. If it does, it is most likely a software bug or possibly malfunctioning hardware.</li> <li>• <b>FIFO errors</b>—Number of FIFO errors in the send direction as reported by the ASIC on the PIC. If this value is ever nonzero, the PIC is probably malfunctioning.</li> <li>• <b>HS link CRC errors</b>—Number of errors on the high-speed links between the ASICs responsible for handling the router interfaces.</li> <li>• <b>MTU errors</b>—Number of packets whose size exceeded the MTU of the interface.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>	<b>extensive</b>
<b>Egress queues</b>	<p>Total number of egress queues supported on the specified interface.</p> <p><b>NOTE:</b> In DPCs that are not of the enhanced type, such as DPC 40x 1GE R, DPCE 20x 1GE + 2x 10GE R, or DPCE 40x 1GE R, you might notice a discrepancy in the output of the <b>show interfaces</b> command because incoming packets might be counted in the Egress queues section of the output. This problem occurs on non-enhanced DPCs because the egress queue statistics are polled from IMQ (Inbound Message Queuing) block of the I-chip. The IMQ block does not differentiate between ingress and egress WAN traffic; as a result, the combined statistics are displayed in the egress queue counters on the Routing Engine. In a simple VPLS scenario, if there is no MAC entry in DMAC table (by sending unidirectional traffic), traffic is flooded and the input traffic is accounted in IMQ. For bidirectional traffic (MAC entry in DMAC table), if the outgoing interface is on the same I-chip then both ingress and egress statistics are counted in a combined way. If the outgoing interface is on a different I-chip or FPC, then only egress statistics are accounted in IMQ. This behavior is expected with non-enhanced DPCs</p>	<b>detail extensive</b>
<b>Queue counters (Egress)</b>	<p>CoS queue number and its associated user-configured forwarding class name.</p> <ul style="list-style-type: none"> <li>• <b>Queued packets</b>—Number of queued packets.</li> <li>• <b>Transmitted packets</b>—Number of transmitted packets.</li> <li>• <b>Dropped packets</b>—Number of packets dropped by the ASIC's RED mechanism.</li> </ul>	<b>detail extensive</b>
<b>Ingress queues</b>	<p>Total number of ingress queues supported on the specified interface. Displayed on IQ2 interfaces.</p>	<b>extensive</b>

<b>Queue counters (Ingress)</b>	CoS queue number and its associated user-configured forwarding class name. Displayed on IQ2 interfaces. <ul style="list-style-type: none"> <li>• <b>Queued packets</b>—Number of queued packets.</li> <li>• <b>Transmitted packets</b>—Number of transmitted packets.</li> <li>• <b>Dropped packets</b>—Number of packets dropped by the ASIC's RED mechanism.</li> </ul>	<b>extensive</b>
<b>Active alarms and Active defects</b>	Ethernet-specific defects that can prevent the interface from passing packets. When a defect persists for a certain amount of time, it is promoted to an alarm. Based on the routing device configuration, an alarm can ring the red or yellow alarm bell on the routing device, or turn on the red or yellow alarm LED on the craft interface. These fields can contain the value <b>None</b> or <b>Link</b> . <ul style="list-style-type: none"> <li>• <b>None</b>—There are no active defects or alarms.</li> <li>• <b>Link</b>—Interface has lost its link state, which usually means that the cable is unplugged, the far-end system has been turned off, or the PIC is malfunctioning.</li> </ul>	<b>detail extensive none</b>
<b>OTN alarms</b>	Active OTN alarms identified on the interface.	<b>detail extensive</b>
<b>OTN defects</b>	OTN defects received on the interface.	<b>detail extensive</b>
<b>OTN FEC Mode</b>	The FECmode configured on the interface. <ul style="list-style-type: none"> <li>• <b>efec</b>—Enhanced forward error correction (EFEC) is configured to detect and correct bit errors.</li> <li>• <b>gfec</b>—G.709 Forward error correction (GFEC) mode is configured to detect and correct bit errors.</li> <li>• <b>none</b>—FEC mode is not configured.</li> </ul>	<b>detail extensive</b>
<b>OTN Rate</b>	OTN mode. <ul style="list-style-type: none"> <li>• <b>fixed-stuff-bytes</b>—Fixed stuff bytes 11.0957 Gbps.</li> <li>• <b>no-fixed-stuff-bytes</b>—No fixed stuff bytes 11.0491 Gbps.</li> <li>• <b>pass-through</b>—Enable OTN passthrough mode.</li> <li>• <b>no-pass-through</b>—Do not enable OTN passthrough mode.</li> </ul>	<b>detail extensive</b>
<b>OTN Line Loopback</b>	Status of the line loopback, if configured for the DWDM OTN PIC. Its value can be: <b>enabled</b> or <b>disabled</b> .	<b>detail extensive</b>
<b>OTN FEC statistics</b>	The forward error correction (FEC) counters for the DWDM OTN PIC. <ul style="list-style-type: none"> <li>• <b>Corrected Errors</b>—The count of corrected errors in the last second.</li> <li>• <b>Corrected Error Ratio</b>—The corrected error ratio in the last 25 seconds. For example, 1e-7 is 1 error per 10 million bits.</li> </ul>	<b>detail extensive</b>
<b>OTN FEC alarms</b>	OTN FEC excessive or degraded error alarms triggered on the interface. <ul style="list-style-type: none"> <li>• <b>FEC Degrade</b>—OTU FEC Degrade defect.</li> <li>• <b>FEC Excessive</b>—OTU FEC Excessive Error defect.</li> </ul>	<b>detail extensive</b>

<b>OTN OC</b>	OTN OC defects triggered on the interface. <ul style="list-style-type: none"><li>• <b>LOS</b>—OC Loss of Signal defect.</li><li>• <b>LOF</b>—OC Loss of Frame defect.</li><li>• <b>LOM</b>—OC Loss of Multiframe defect.</li><li>• <b>Wavelength Lock</b>—OC Wavelength Lock defect.</li></ul>	<b>detail extensive</b>
<b>OTN OTU</b>	OTN OTU defects detected on the interface <ul style="list-style-type: none"><li>• <b>AIS</b>—OTN AIS alarm.</li><li>• <b>BDI</b>—OTN OTU BDI alarm.</li><li>• <b>IAE</b>—OTN OTU IAE alarm.</li><li>• <b>TTIM</b>—OTN OTU TTIM alarm.</li><li>• <b>SF</b>—OTN ODU bit error rate fault alarm.</li><li>• <b>SD</b>—OTN ODU bit error rate defect alarm.</li><li>• <b>TCA-ES</b>—OTN ODU ES threshold alarm.</li><li>• <b>TCA-SES</b>—OTN ODU SES threshold alarm.</li><li>• <b>TCA-UAS</b>—OTN ODU UAS threshold alarm.</li><li>• <b>TCA-BBE</b>—OTN ODU BBE threshold alarm.</li><li>• <b>BIP</b>—OTN ODU BIP threshold alarm.</li><li>• <b>BBE</b>—OTN OTU BBE threshold alarm.</li><li>• <b>ES</b>—OTN OTU ES threshold alarm.</li><li>• <b>SES</b>—OTN OTU SES threshold alarm.</li><li>• <b>UAS</b>—OTN OTU UAS threshold alarm.</li></ul>	<b>detail extensive</b>
<b>Received DAPI</b>	Destination Access Port Interface (DAPI) from which the packets were received.	<b>detail extensive</b>
<b>Received SAPI</b>	Source Access Port Interface (SAPI) from which the packets were received.	<b>detail extensive</b>
<b>Transmitted DAPI</b>	Destination Access Port Interface (DAPI) to which the packets were transmitted.	<b>detail extensive</b>
<b>Transmitted SAPI</b>	Source Access Port Interface (SAPI) to which the packets were transmitted.	<b>detail extensive</b>
<b>PCS statistics</b>	(10-Gigabit Ethernet interfaces) Displays Physical Coding Sublayer (PCS) fault conditions from the WAN PHY or the LAN PHY device. <ul style="list-style-type: none"><li>• <b>Bit errors</b>—The number of seconds during which at least one bit error rate (BER) occurred while the PCS receiver is operating in normal mode.</li><li>• <b>Errored blocks</b>—The number of seconds when at least one errored block occurred while the PCS receiver is operating in normal mode.</li></ul>	<b>detail extensive</b>

<b>MAC statistics</b>	<p>Receive and Transmit statistics reported by the PIC's MAC subsystem, including the following:</p> <ul style="list-style-type: none"> <li>• <b>Total octets and total packets</b>—Total number of octets and packets. For Gigabit Ethernet IQ PICs, the received octets count varies by interface type.</li> <li>• <b>Unicast packets, Broadcast packets, and Multicast packets</b>—Number of unicast, broadcast, and multicast packets.</li> <li>• <b>CRC/Align errors</b>—Total number of packets received that had a length (excluding framing bits, but including FCS octets) of between 64 and 1518 octets, inclusive, and had either a bad FCS with an integral number of octets (FCS Error) or a bad FCS with a nonintegral number of octets (Alignment Error).</li> <li>• <b>FIFO error</b>—Number of FIFO errors that are reported by the ASIC on the PIC. If this value is ever nonzero, the PIC or a cable is probably malfunctioning.</li> <li>• <b>MAC control frames</b>—Number of MAC control frames.</li> <li>• <b>MAC pause frames</b>—Number of MAC control frames with <b>pause</b> operational code.</li> <li>• <b>Oversized frames</b>—Number of frames that exceed 1518 octets.</li> <li>• <b>Jabber frames</b>—Number of frames that were longer than 1518 octets (excluding framing bits, but including FCS octets), and had either an FCS error or an alignment error. This definition of jabber is different from the definition in IEEE-802.3 section 8.2.1.5 (10BASE5) and section 10.3.1.4 (10BASE2). These documents define jabber as the condition in which any packet exceeds 20 ms. The allowed range to detect jabber is from 20 ms to 150 ms.</li> <li>• <b>Fragment frames</b>—Total number of packets that were less than 64 octets in length (excluding framing bits, but including FCS octets), and had either an FCS error or an alignment error. Fragment frames normally increment because both runts (which are normal occurrences caused by collisions) and noise hits are counted.</li> <li>• <b>VLAN tagged frames</b>—Number of frames that are VLAN tagged. The system uses the TPID of 0x8100 in the frame to determine whether a frame is tagged or not.</li> <li>• <b>Code violations</b>—Number of times an event caused the PHY to indicate "Data reception error" or "invalid data symbol error."</li> </ul>	<b>extensive</b>
<b>OTN Received Overhead Bytes</b>	APS/PCC0: 0x02, APS/PCC1: 0x11, APS/PCC2: 0x47, APS/PCC3: 0x58 Payload Type: 0x08	<b>extensive</b>
<b>OTN Transmitted Overhead Bytes</b>	APS/PCC0: 0x00, APS/PCC1: 0x00, APS/PCC2: 0x00, APS/PCC3: 0x00 Payload Type: 0x08	<b>extensive</b>

Filter statistics	<p><b>Receive and Transmit</b> statistics reported by the PIC's MAC address filter subsystem. The filtering is done by the content-addressable memory (CAM) on the PIC. The filter examines a packet's source and destination MAC addresses to determine whether the packet should enter the system or be rejected.</p> <ul style="list-style-type: none"> <li>• <b>Input packet count</b>—Number of packets received from the MAC hardware that the filter processed.</li> <li>• <b>Input packet rejects</b>—Number of packets that the filter rejected because of either the source MAC address or the destination MAC address.</li> <li>• <b>Input DA rejects</b>—Number of packets that the filter rejected because the destination MAC address of the packet is not on the accept list. It is normal for this value to increment. When it increments very quickly and no traffic is entering the routing device from the far-end system, either there is a bad ARP entry on the far-end system, or multicast routing is not on and the far-end system is sending many multicast packets to the local routing device (which the routing device is rejecting).</li> <li>• <b>Input SA rejects</b>—Number of packets that the filter rejected because the source MAC address of the packet is not on the accept list. The value in this field should increment only if source MAC address filtering has been enabled. If filtering is enabled, if the value increments quickly, and if the system is not receiving traffic that it should from the far-end system, it means that the user-configured source MAC addresses for this interface are incorrect.</li> <li>• <b>Output packet count</b>—Number of packets that the filter has given to the MAC hardware.</li> <li>• <b>Output packet pad count</b>—Number of packets the filter padded to the minimum Ethernet size (60 bytes) before giving the packet to the MAC hardware. Usually, padding is done only on small ARP packets, but some very small IP packets can also require padding. If this value increments rapidly, either the system is trying to find an ARP entry for a far-end system that does not exist or it is misconfigured.</li> <li>• <b>Output packet error count</b>—Number of packets with an indicated error that the filter was given to transmit. These packets are usually aged packets or are the result of a bandwidth problem on the FPC hardware. On a normal system, the value of this field should not increment.</li> <li>• <b>CAM destination filters, CAM source filters</b>—Number of entries in the CAM dedicated to destination and source MAC address filters. There can only be up to 64 source entries. If source filtering is disabled, which is the default, the values for these fields should be 0.</li> </ul>	extensive
PMA PHY	<p>(10-Gigabit Ethernet interfaces, WAN PHY mode) SONET error information:</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. Any state other than <b>OK</b> indicates a problem.</li> </ul>	extensive

<b>WIS section</b>	<p>(10-Gigabit Ethernet interfaces, WAN PHY mode) SONET error information:</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. Any state other than <b>OK</b> indicates a problem.</li> </ul> <p>Subfields are:</p> <ul style="list-style-type: none"> <li>• <b>BIP-B1</b>—Bit interleaved parity for SONET section overhead</li> <li>• <b>SEF</b>—Severely errored framing</li> <li>• <b>LOL</b>—Loss of light</li> <li>• <b>LOF</b>—Loss of frame</li> <li>• <b>ES-S</b>—Errored seconds (section)</li> <li>• <b>SES-S</b>—Severely errored seconds (section)</li> <li>• <b>SEFS-S</b>—Severely errored framing seconds (section)</li> </ul>	<b>extensive</b>
<b>WIS line</b>	<p>(10-Gigabit Ethernet interfaces, WAN PHY mode) Active alarms and defects, plus counts of specific SONET errors with detailed information.</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. <b>Autonegotiation information</b>	<p>Information about link autonegotiation.</p> <ul style="list-style-type: none"> <li>• <b>Negotiation status:</b> <ul style="list-style-type: none"> <li>• <b>Incomplete</b>—Ethernet interface has the speed or link mode configured.</li> <li>• <b>No autonegotiation</b>—Remote Ethernet interface has the speed or link mode configured, or does not perform autonegotiation.</li> <li>• <b>Complete</b>—Ethernet interface is connected to a device that performs autonegotiation and the autonegotiation process is successful.</li> </ul> </li> <li>• <b>Link partner status</b>—<b>OK</b> when Ethernet interface is connected to a device that performs autonegotiation and the autonegotiation process is successful.</li> <li>• <b>Link partner:</b> <ul style="list-style-type: none"> <li>• <b>Link mode</b>—Depending on the capability of the attached Ethernet device, either <b>Full-duplex</b> or <b>Half-duplex</b>.</li> <li>• <b>Flow control</b>—Types of flow control supported by the remote Ethernet device. For Fast Ethernet interfaces, the type is <b>None</b>. For Gigabit Ethernet interfaces, types are <b>Symmetric</b> (link partner supports <b>PAUSE</b> on receive and transmit), <b>Asymmetric</b> (link partner supports <b>PAUSE</b> on transmit), and <b>Symmetric/Asymmetric</b> (link partner supports both <b>PAUSE</b> on receive and transmit or only <b>PAUSE</b> receive).</li> <li>• <b>Remote fault</b>—Remote fault information from the link partner—<b>Failure</b> indicates a receive link error. <b>OK</b> indicates that the link partner is receiving. <b>Negotiation error</b> indicates a negotiation error. <b>Offline</b> indicates that the link partner is going offline.</li> </ul> </li> <li>• <b>Local resolution</b>—Information from the link partner: <ul style="list-style-type: none"> <li>• <b>Flow control</b>—Types of flow control supported by the remote Ethernet device. For Gigabit Ethernet interfaces, types are <b>Symmetric</b> (link partner supports <b>PAUSE</b> on receive and transmit), <b>Asymmetric</b> (link partner supports <b>PAUSE</b> on transmit), and <b>Symmetric/Asymmetric</b> (link partner supports both <b>PAUSE</b> on receive and transmit or only <b>PAUSE</b> receive).</li> <li>• <b>Remote fault</b>—Remote fault information. <b>Link OK</b> (no error detected on receive), <b>Offline</b> (local interface is offline), and <b>Link Failure</b> (link error detected on receive).</li> </ul> </li> </ul>	<b>extensive</b>

<b>Received path trace, Transmitted path trace</b>	(10-Gigabit Ethernet interfaces, WAN PHY mode) SONET/SDH interfaces allow path trace bytes to be sent inband across the SONET/SDH link. Juniper Networks and other router manufacturers use these bytes to help diagnose misconfigurations and network errors by setting the transmitted path trace message so that it contains the system hostname and name of the physical interface. The received path trace value is the message received from the routing device at the other end of the fiber. The transmitted path trace value is the message that this routing device transmits.	<b>extensive</b>
<b>Packet Forwarding Engine configuration</b>	Information about the configuration of the Packet Forwarding Engine: <ul style="list-style-type: none"> <li>• <b>Destination slot</b>—FPC slot number.</li> </ul>	<b>extensive</b>
<b>CoS information</b>	Information about the CoS queue for the physical interface. <ul style="list-style-type: none"> <li>• <b>CoS transmit queue</b>—Queue number and its associated user-configured forwarding class name.</li> <li>• <b>Bandwidth %</b>—Percentage of bandwidth allocated to the queue.</li> <li>• <b>Bandwidth bps</b>—Bandwidth allocated to the queue (in bps).</li> <li>• <b>Buffer %</b>—Percentage of buffer space allocated to the queue.</li> <li>• <b>Buffer usec</b>—Amount of buffer space allocated to the queue, in microseconds. This value is nonzero only if the buffer size is configured in terms of time.</li> <li>• <b>Priority</b>—Queue priority: <b>low</b> or <b>high</b>.</li> <li>• <b>Limit</b>—Displayed if rate limiting is configured for the queue. Possible values are <b>none</b> and <b>exact</b>. If <b>exact</b> is configured, the queue transmits only up to the configured bandwidth, even if excess bandwidth is available. If <b>none</b> is configured, the queue transmits beyond the configured bandwidth if bandwidth is available.</li> </ul>	<b>extensive</b>
<b>Logical Interface</b>		
<b>Logical interface</b>	Name of the logical interface.	All levels
<b>Index</b>	Index number of the logical interface, which reflects its initialization sequence.	<b>detail extensive</b> <b>none</b>
<b>SNMP ifIndex</b>	SNMP interface index number for the logical interface.	<b>detail extensive</b> <b>none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Flags</b>	Information about the logical interface. Possible values are described in the “Logical Interface Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels

<b>VLAN-Tag</b>	<p>Rewrite profile applied to incoming or outgoing frames on the outer (<b>Out</b>) VLAN tag or for both the outer and inner (<b>In</b>) VLAN tags.</p> <ul style="list-style-type: none"> <li>• <b>push</b>—An outer VLAN tag is pushed in front of the existing VLAN tag.</li> <li>• <b>pop</b>—The outer VLAN tag of the incoming frame is removed.</li> <li>• <b>swap</b>—The outer VLAN tag of the incoming frame is overwritten with the user specified VLAN tag information.</li> <li>• <b>push</b>—An outer VLAN tag is pushed in front of the existing VLAN tag.</li> <li>• <b>push-push</b>—Two VLAN tags are pushed in from the incoming frame.</li> <li>• <b>swap-push</b>—The outer VLAN tag of the incoming frame is replaced by a user-specified VLAN tag value. A user-specified outer VLAN tag is pushed in front. The outer tag becomes an inner tag in the final frame.</li> <li>• <b>swap-swap</b>—Both the inner and the outer VLAN tags of the incoming frame are replaced by the user specified VLAN tag value.</li> <li>• <b>pop-swap</b>—The outer VLAN tag of the incoming frame is removed, and the inner VLAN tag of the incoming frame is replaced by the user-specified VLAN tag value. The inner tag becomes the outer tag in the final frame.</li> <li>• <b>pop-pop</b>—Both the outer and inner VLAN tags of the incoming frame are removed.</li> </ul>	<b>brief detail</b> <b>extensive</b> none
<b>Demux:</b>	<p>IP demultiplexing (demux) value that appears if this interface is used as the demux underlying interface. The output is one of the following:</p> <ul style="list-style-type: none"> <li>• Source Family Inet</li> <li>• Destination Family Inet</li> </ul>	<b>detail</b> <b>extensive</b> none
<b>Encapsulation</b>	Encapsulation on the logical interface.	All levels
<b>Protocol</b>	Protocol family. Possible values are described in the “Protocol Field” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	<b>detail</b> <b>extensive</b> none
<b>MTU</b>	Maximum transmission unit size on the logical interface.	<b>detail</b> <b>extensive</b> none
<b>Maximum labels</b>	Maximum number of MPLS labels configured for the MPLS protocol family on the logical interface.	<b>detail</b> <b>extensive</b> none
<b>Traffic statistics</b>	<p>Number and rate of bytes and packets received and transmitted on the specified interface set.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes, Output bytes</b>—Number of bytes received and transmitted on the interface set. The value in this field also includes the Layer 2 overhead bytes for ingress or egress traffic on Ethernet interfaces if you enable accounting of Layer 2 overhead at the PIC level or the logical interface level.</li> <li>• <b>Input packets, Output packets</b>—Number of packets received and transmitted on the interface set.</li> </ul>	<b>detail</b> <b>extensive</b>
<b>IPv6 transit statistics</b>	Number of IPv6 transit bytes and packets received and transmitted on the logical interface if IPv6 statistics tracking is enabled.	<b>extensive</b>
<b>Local statistics</b>	Number and rate of bytes and packets destined to the routing device.	<b>extensive</b>

<b>Transit statistics</b>	Number and rate of bytes and packets transiting the switch.  <b>NOTE:</b> For Gigabit Ethernet intelligent queuing 2 (IQ2) interfaces, the logical interface egress statistics might not accurately reflect the traffic on the wire when output shaping is applied. Traffic management output shaping might drop packets after they are tallied by the <b>Output bytes</b> and <b>Output packets</b> interface counters. However, correct values display for both of these egress statistics when per-unit scheduling is enabled for the Gigabit Ethernet IQ2 physical interface, or when a single logical interface is actively using a shared scheduler.	<b>extensive</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Route Table</b>	Route table in which the logical interface address is located. For example, <b>0</b> refers to the routing table inet.0.	<b>detail extensive</b> <b>none</b>
<b>Flags</b>	Information about protocol family flags. Possible values are described in the “Family Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	<b>detail extensive</b>
<b>Donor interface</b>	(Unnumbered Ethernet) Interface from which an unnumbered Ethernet interface borrows an IPv4 address.	<b>detail extensive</b> <b>none</b>
<b>Preferred source address</b>	(Unnumbered Ethernet) Secondary IPv4 address of the donor loopback interface that acts as the preferred source address for the unnumbered Ethernet interface.	<b>detail extensive</b> <b>none</b>
<b>Input Filters</b>	Names of any input filters applied to this interface. If you specify a precedence value for any filter in a dynamic profile, filter precedence values appear in parenthesis next to all interfaces.	<b>detail extensive</b>
<b>Output Filters</b>	Names of any output filters applied to this interface. If you specify a precedence value for any filter in a dynamic profile, filter precedence values appear in parenthesis next to all interfaces.	<b>detail extensive</b>
<b>Mac-Validate Failures</b>	Number of MAC address validation failures for packets and bytes. This field is displayed when MAC address validation is enabled for the logical interface.	<b>detail extensive</b> <b>none</b>
<b>Addresses, Flags</b>	Information about the address flags. Possible values are described in the “Addresses Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	<b>detail extensive</b> <b>none</b>
<b><i>protocol-family</i></b>	Protocol family configured on the logical interface. If the protocol is <b>inet</b> , the IP address of the interface is also displayed.	<b>brief</b>
<b>Flags</b>	Information about address flag (possible values are described in the “Addresses Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	<b>detail extensive</b> <b>none</b>
<b>Destination</b>	IP address of the remote side of the connection.	<b>detail extensive</b> <b>none</b>
<b>Local</b>	IP address of the logical interface.	<b>detail extensive</b> <b>none</b>
<b>Broadcast</b>	Broadcast address of the logical interlace.	<b>detail extensive</b> <b>none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>

For Gigabit Ethernet IQ PICs, traffic and MAC statistics output varies. The following table describes the traffic and MAC statistics for two sample interfaces, each of which is sending traffic in packets of 500 bytes (including 478 bytes for the Layer 3 packet, 18 bytes for the Layer 2 VLAN traffic header, and 4 bytes for cyclic redundancy check [CRC] information). The **ge-0/3/0** interface is the inbound physical interface, and the **ge-0/0/0** interface is the outbound physical interface. On both interfaces, traffic is carried on logical unit **.50** (VLAN 50).

**Table 68: Gigabit and 10 Gigabit Ethernet IQ PIC Traffic and MAC Statistics by Interface Type**

Interface Type	Sample Command	Byte and Octet Counts Include	Comments
Inbound physical interface	<b>show interfaces ge-0/3/0 extensive</b>	Traffic statistics:  Input bytes: 496 bytes per packet, representing the Layer 2 packet  MAC statistics:  Received octets: 500 bytes per packet, representing the Layer 2 packet + 4 bytes	The additional 4 bytes are for the CRC.
Inbound logical interface	<b>show interfaces ge-0/3/0.50 extensive</b>	Traffic statistics:  Input bytes: 478 bytes per packet, representing the Layer 3 packet	
Outbound physical interface	<b>show interfaces ge-0/0/0 extensive</b>	Traffic statistics:  Input bytes: 490 bytes per packet, representing the Layer 3 packet + 12 bytes  MAC statistics:  Received octets: 478 bytes per packet, representing the Layer 3 packet	For input bytes, the additional 12 bytes include 6 bytes for the destination MAC address plus 4 bytes for VLAN plus 2 bytes for the Ethernet type.
Outbound logical interface	<b>show interfaces ge-0/0/0.50 extensive</b>	Traffic statistics:  Input bytes: 478 bytes per packet, representing the Layer 3 packet	

[Table 58 on page 1157](#) lists the output fields for the **show interfaces** command. Output fields are listed in the approximate order in which they appear.

Table 69: show interfaces Output Fields

Field Name	Field Description	Level of Output
<b>Physical Interface</b>		
<b>Physical interface</b>	Name of the physical interface.	All levels
<b>Enabled</b>	State of the interface.	All levels
<b>Interface index</b>	Index number of the physical interface, which reflects its initialization sequence.	<b>detail extensive none</b>
<b>SNMP ifIndex</b>	SNMP index number for the physical interface.	<b>detail extensive none</b>
<b>Link-level type</b>	Encapsulation being used on the physical interface.	All levels
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>MTU</b>	Maximum transmission unit size on the physical interface.	All levels
<b>Link mode</b>	Link mode: Full-duplex or Half-duplex.	
<b>Speed</b>	Speed at which the interface is running.	All levels
<b>BPDU error</b>	Bridge protocol data unit (BPDU) error: Detected or None	
<b>Loopback</b>	Loopback status: <b>Enabled</b> or <b>Disabled</b> . If loopback is enabled, type of loopback: <b>Local</b> or <b>Remote</b> .	All levels
<b>Source filtering</b>	Source filtering status: <b>Enabled</b> or <b>Disabled</b> .	All levels
<b>Flow control</b>	Flow control status: <b>Enabled</b> or <b>Disabled</b> .	All levels
<b>Auto-negotiation</b>	(Gigabit Ethernet interfaces) Autonegotiation status: <b>Enabled</b> or <b>Disabled</b> .	All levels
<b>Remote-fault</b>	(Gigabit Ethernet interfaces) Remote fault status: <ul style="list-style-type: none"> <li>• <b>Online</b>—Autonegotiation is manually configured as online.</li> <li>• <b>Offline</b>—Autonegotiation is manually configured as offline.</li> </ul>	All levels
<b>Device flags</b>	Information about the physical device.	All levels
<b>Interface flags</b>	Information about the interface.	All levels
<b>Link flags</b>	Information about the physical link.	All levels
<b>CoS queues</b>	Number of CoS queues configured.	<b>detail extensive none</b>
<b>Current address</b>	Configured MAC address.	<b>detail extensive none</b>

Table 69: show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Last flapped</b>	Date, time, and how long ago the interface went from down to up. The format is <b>Last flapped: year-month-day hour:minute:second:timezone (hour:minute:second ago)</b> . For example, <b>Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> .	<b>detail extensive none</b>
<b>Input Rate</b>	Input rate in bits per second (bps) and packets per second (pps).	None
<b>Output Rate</b>	Output rate in bps and pps.	None
<b>Active alarms and Active defects</b>	<p>Ethernet-specific defects that can prevent the interface from passing packets. When a defect persists for a certain amount of time, it is promoted to an alarm. These fields can contain the value <b>None</b> or <b>Link</b>.</p> <ul style="list-style-type: none"> <li>• <b>None</b>—There are no active defects or alarms.</li> <li>• <b>Link</b>—Interface has lost its link state, which usually means that the cable is unplugged, the far-end system has been turned off, or the PIC is malfunctioning.</li> </ul>	<b>detail extensive none</b>
<b>Statistics last cleared</b>	Time when the statistics for the interface were last set to zero.	<b>detail extensive</b>
<b>Traffic statistics</b>	<p>Number and rate of bytes and packets received and transmitted on the physical interface.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>	<b>detail extensive</b>

Table 69: show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Input errors</b>	<p>Input errors on the interface.</p> <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of the incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Runts</b>—Number of frames received that are smaller than the runt threshold.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that Junos OS does not handle.</li> <li>• <b>L3 incompletes</b>—Number of incoming packets discarded because they failed Layer 3 (usually IPv4) sanity checks of the header. For example, a frame with less than 20 bytes of available IP header is discarded. L3 incomplete errors can be ignored by configuring the <b>ignore-l3-incompletes</b>.</li> <li>• <b>L2 channel errors</b>—Number of times the software did not find a valid logical interface for an incoming frame.</li> <li>• <b>L2 mismatch timeouts</b>—Number of malformed or short packets that caused the incoming packet handler to discard the frame as unreadable.</li> <li>• <b>FIFO errors</b>—Number of FIFO errors in the receive direction that are reported by the ASIC on the PIC. If this value is ever nonzero, the PIC is probably malfunctioning.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>	<b>extensive</b>
<b>Output errors</b>	<p>Output errors on the interface.</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and then up, or another problem occurs. If the number of carrier transitions increments quickly (perhaps once every 10 seconds), the cable, the far-end system, or the PIC or PIM is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Collisions</b>—Number of Ethernet collisions. The Gigabit Ethernet PIC supports only full-duplex operation; therefore, for Gigabit Ethernet PICs, this number must always remain 0. If it is nonzero, there is a software bug.</li> <li>• <b>Aged packets</b>—Number of packets that remained in shared packet SDRAM so long that the system automatically purged them. The value in this field must never increment. If it does, it is most likely a software bug or possibly malfunctioning hardware.</li> <li>• <b>FIFO errors</b>—Number of FIFO errors in the send direction as reported by the ASIC on the PIC. If this value is ever nonzero, the PIC is probably malfunctioning.</li> <li>• <b>HS link CRC errors</b>—Number of errors on the high-speed links between the ASICs responsible for handling the interfaces.</li> <li>• <b>MTU errors</b>—Number of packets whose size exceeded the MTU of the interface.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>	<b>extensive</b>

Table 69: show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Ingress queues</b>	Total number of ingress queues supported on the specified interface.	<b>extensive</b>
<b>Queue counters and queue number</b>	CoS queue number and its associated user-configured forwarding class name. <ul style="list-style-type: none"> <li>• <b>Queued packets</b>—Number of queued packets.</li> <li>• <b>Transmitted packets</b>—Number of transmitted packets.</li> <li>• <b>Dropped packets</b>—Number of packets dropped by the ASIC's RED mechanism.</li> </ul>	<b>detail extensive</b>
<b>MAC statistics</b>	<p>Receive and Transmit statistics reported by the PIC's MAC subsystem, including the following:</p> <ul style="list-style-type: none"> <li>• <b>Total octets and total packets</b>—Total number of octets and packets.</li> <li>• <b>Unicast packets, Broadcast packets, and Multicast packets</b>—Number of unicast, broadcast, and multicast packets.</li> <li>• <b>CRC/Align errors</b>—Total number of packets received that had a length (excluding framing bits, but including FCS octets) of between 64 and 1518 octets, inclusive, and had either a bad FCS with an integral number of octets (FCS Error) or a bad FCS with a nonintegral number of octets (Alignment Error).</li> <li>• <b>FIFO error</b>—Number of FIFO errors that are reported by the ASIC on the PIC. If this value is ever nonzero, the PIC or a cable is probably malfunctioning.</li> <li>• <b>MAC control frames</b>—Number of MAC control frames.</li> <li>• <b>MAC pause frames</b>—Number of MAC control frames with <b>pause</b> operational code.</li> <li>• <b>Oversized frames</b>—There are two possible conditions regarding the number of oversized frames: <ul style="list-style-type: none"> <li>• Packet length exceeds 1518 octets, or</li> <li>• Packet length exceeds MRU</li> </ul> </li> <li>• <b>Jabber frames</b>—Number of frames that were longer than 1518 octets (excluding framing bits, but including FCS octets), and had either an FCS error or an alignment error. This definition of jabber is different from the definition in IEEE-802.3 section 8.2.1.5 (10BASE5) and section 10.3.1.4 (10BASE2). These documents define jabber as the condition in which any packet exceeds 20 ms. The allowed range to detect jabber is from 20 ms to 150 ms.</li> <li>• <b>Fragment frames</b>—Total number of packets that were less than 64 octets in length (excluding framing bits, but including FCS octets) and had either an FCS error or an alignment error. Fragment frames normally increment because both runts (which are normal occurrences caused by collisions) and noise hits are counted.</li> <li>• <b>VLAN tagged frames</b>—Number of frames that are VLAN tagged. The system uses the TPID of 0x8100 in the frame to determine whether a frame is tagged or not.</li> <li>• <b>Code violations</b>—Number of times an event caused the PHY to indicate "Data reception error" or "invalid data symbol error."</li> </ul>	<b>extensive</b>

Table 69: show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
Filter statistics	<p>Receive and Transmit statistics reported by the PIC's MAC address filter subsystem. The filtering is done by the content-addressable memory (CAM) on the PIC. The filter examines a packet's source and destination MAC addresses to determine whether the packet should enter the system or be rejected.</p> <ul style="list-style-type: none"> <li>• <b>Input packet count</b>—Number of packets received from the MAC hardware that the filter processed.</li> <li>• <b>Input packet rejects</b>—Number of packets that the filter rejected because of either the source MAC address or the destination MAC address.</li> <li>• <b>Input DA rejects</b>—Number of packets that the filter rejected because the destination MAC address of the packet is not on the accept list. It is normal for this value to increment. When it increments very quickly and no traffic is entering the device from the far-end system, either there is a bad ARP entry on the far-end system, or multicast routing is not on and the far-end system is sending many multicast packets to the local device (which the router is rejecting).</li> <li>• <b>Input SA rejects</b>—Number of packets that the filter rejected because the source MAC address of the packet is not on the accept list. The value in this field should increment only if source MAC address filtering has been enabled. If filtering is enabled, if the value increments quickly, and if the system is not receiving traffic that it should from the far-end system, it means that the user-configured source MAC addresses for this interface are incorrect.</li> <li>• <b>Output packet count</b>—Number of packets that the filter has given to the MAC hardware.</li> <li>• <b>Output packet pad count</b>—Number of packets the filter padded to the minimum Ethernet size (60 bytes) before giving the packet to the MAC hardware. Usually, padding is done only on small ARP packets, but some very small IP packets can also require padding. If this value increments rapidly, either the system is trying to find an ARP entry for a far-end system that does not exist or it is misconfigured.</li> <li>• <b>Output packet error count</b>—Number of packets with an indicated error that the filter was given to transmit. These packets are usually aged packets or are the result of a bandwidth problem on the FPC hardware. On a normal system, the value of this field should not increment.</li> <li>• <b>CAM destination filters, CAM source filters</b>—Number of entries in the CAM dedicated to destination and source MAC address filters. There can only be up to 64 source entries. If source filtering is disabled, which is the default, the values for these fields must be 0.</li> </ul>	extensive
Autonegotiation information	<p>Information about link autonegotiation.</p> <ul style="list-style-type: none"> <li>• <b>Negotiation status:</b> <ul style="list-style-type: none"> <li>• <b>Incomplete</b>—Ethernet interface has the speed or link mode configured.</li> <li>• <b>No autonegotiation</b>—Remote Ethernet interface has the speed or link mode configured, or does not perform autonegotiation.</li> <li>• <b>Complete</b>—Ethernet interface is connected to a device that performs autonegotiation and the autonegotiation process is successful.</li> </ul> </li> </ul>	extensive
Packet Forwarding Engine configuration	<p>Information about the configuration of the Packet Forwarding Engine:</p> <ul style="list-style-type: none"> <li>• <b>Destination slot</b>—FPC slot number.</li> </ul>	extensive

Table 69: show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>CoS information</b>	Information about the CoS queue for the physical interface. <ul style="list-style-type: none"> <li>• <b>CoS transmit queue</b>—Queue number and its associated user-configured forwarding class name.</li> <li>• <b>Bandwidth %</b>—Percentage of bandwidth allocated to the queue.</li> <li>• <b>Bandwidth bps</b>—Bandwidth allocated to the queue (in bps).</li> <li>• <b>Buffer %</b>—Percentage of buffer space allocated to the queue.</li> <li>• <b>Buffer usec</b>—Amount of buffer space allocated to the queue, in microseconds. This value is nonzero only if the buffer size is configured in terms of time.</li> <li>• <b>Priority</b>—Queue priority: <b>low</b> or <b>high</b>.</li> <li>• <b>Limit</b>—Displayed if rate limiting is configured for the queue. Possible values are <b>none</b> and <b>exact</b>. If <b>exact</b> is configured, the queue transmits only up to the configured bandwidth, even if excess bandwidth is available. If <b>none</b> is configured, the queue transmits beyond the configured bandwidth if bandwidth is available.</li> </ul>	<b>extensive</b>
<b>Interface transmit statistics</b>	Status of the <b>interface-transmit-statistics</b> configuration: Enabled or Disabled.	<b>detail extensive</b>
<b>Queue counters (Egress)</b>	CoS queue number and its associated user-configured forwarding class name. <ul style="list-style-type: none"> <li>• <b>Queued packets</b>—Number of queued packets.</li> <li>• <b>Transmitted packets</b>—Number of transmitted packets.</li> <li>• <b>Dropped packets</b>—Number of packets dropped by the ASIC's RED mechanism.</li> </ul>	<b>detail extensive</b>
<b>Logical Interface</b>		
<b>Logical interface</b>	Name of the logical interface.	All levels
<b>Index</b>	Index number of the logical interface, which reflects its initialization sequence.	<b>detail extensive none</b>
<b>SNMP ifIndex</b>	SNMP interface index number for the logical interface.	<b>detail extensive none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Flags</b>	Information about the logical interface.	All levels
<b>Encapsulation</b>	Encapsulation on the logical interface.	All levels
<b>Traffic statistics</b>	Number and rate of bytes and packets received and transmitted on the specified interface set. <ul style="list-style-type: none"> <li>• <b>Input bytes, Output bytes</b>—Number of bytes received and transmitted on the interface set. The value in this field also includes the Layer 2 overhead bytes for ingress or egress traffic on Ethernet interfaces if you enable accounting of Layer 2 overhead at the PIC level or the logical interface level.</li> <li>• <b>Input packets, Output packets</b>—Number of packets received and transmitted on the interface set.</li> </ul>	<b>detail extensive</b>

Table 69: show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Local statistics</b>	Number and rate of bytes and packets destined to the device.	<b>extensive</b>
<b>Transit statistics</b>	Number and rate of bytes and packets transiting the switch.  <b>NOTE:</b> For Gigabit Ethernet intelligent queuing 2 (IQ2) interfaces, the logical interface egress statistics might not accurately reflect the traffic on the wire when output shaping is applied. Traffic management output shaping might drop packets after they are tallied by the <b>Output bytes</b> and <b>Output packets</b> interface counters. However, correct values display for both of these egress statistics when per-unit scheduling is enabled for the Gigabit Ethernet IQ2 physical interface, or when a single logical interface is actively using a shared scheduler.	<b>extensive</b>

```

**NOTE:** For Gigabit Ethernet intelligent queuing 2 (IQ2) interfaces, the logical interface egress statistics displayed in the **show interfaces** command output might not accurately reflect the traffic on the wire when output shaping is applied. Traffic management output

shaping might drop packets after they are tallied by the interface counters. For detailed information, see the description of the logical interface **Transit statistics** fields in [Table 56 on page 1127](#).

#### show interfaces (Gigabit Ethernet Unnumbered Interface)

<b>Release Information</b>	<p>Command introduced before Junos OS Release 7.4.</p> <p>Command introduced on PTX Series Packet Transport Routers for Junos OS Release 12.1.</p>
<b>Description</b>	(M Series, T Series, TX Matrix Plus, and PTX Series devices only) Display status information about the management Ethernet and internal Ethernet interfaces.
<b>Options</b>	<p><b>em0   fxp0</b>—(M Series, MX Series, T Series, and PTX Series) Display standard information about the management Ethernet interface. For supported Ethernet interface by chassis and Routing Engine, see <a href="#">“Supported Routing Engines by Router” on page 17</a>.</p> <p><b>bcm0   em0   em1   fxp1   fxp2   ixgbe0   ixgbe1</b>—(M Series, MX Series, T Series, and PTX Series) Display standard information about the internal Ethernet interfaces. See <a href="#">“Supported Routing Engines by Router” on page 17</a> for the internal Ethernet interface names for each Routing Engine by hardware platform.</p> <p><b>brief   detail   extensive   terse</b>—(Optional) Display the specified level of output.</p> <p><b>descriptions</b>—(Optional) Display interface description strings.</p> <p><b>media</b>—(Optional) Display media-specific information.</p> <p><b>snmp-index <i>snmp-index</i></b>—(Optional) Display information for the specified SNMP index of the interface.</p> <p><b>statistics</b>—(Optional) Display static interface statistics.</p>

**Output Fields** [Table 70 on page 1427](#) lists the output fields for the **show interfaces** (management) command on the M Series routers, T Series routers, TX Matrix Plus routers, and PTX Series. Output fields are listed in the approximate order in which they appear.

*Table 70: show interfaces Output Fields for M Series, MX Series, T Series, and PTX Series Routers Management Ethernet Interface*

Field Name	Field Description	Level of Output
<b>Physical Interface</b>		
<b>Physical interface</b>	Name of the physical interface.	All levels
<b>Enabled</b>	State of the interface. Possible values are described in the “Enabled Field” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels
<b>Interface index</b>	Physical interface index number, which reflects its initialization sequence.	<b>detail extensive none</b>
<b>SNMP ifIndex</b>	SNMP index number for the physical interface.	<b>detail extensive none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Type</b>	Type of interface.	All levels

*Table 70: show interfaces Output Fields for M Series, MX Series, T Series, and PTX Series Routers Management Ethernet Interface (continued)*

Field Name	Field Description	Level of Output
<b>Link-level type</b>	Encapsulation type used on the physical interface.	All levels
<b>MTU</b>	Maximum transmission unit (MTU)—Size of the largest packet to be transmitted.	All levels
<b>Clocking</b>	Reference clock source of the interface.	All levels
<b>Speed</b>	Network speed on the interface.	All levels
<b>Device flags</b>	Information about the physical device. Possible values are described in the “Device Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels
<b>Interface flags</b>	Information about the interface. Possible values are described in the “Interface Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels
<b>Link type</b>	Data transmission type.	<b>detail extensive none</b>
<b>Link flags</b>	Information about the link. Possible values are described in the “Link Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	<b>detail extensive</b>
<b>Physical info</b>	Information about the physical interface.	<b>detail extensive</b>
<b>Hold-times</b>	Current interface hold-time up and hold-time down. Value is in milliseconds.	<b>detail extensive</b>
<b>Current address</b>	Configured MAC address.	<b>detail extensive none</b>
<b>Hardware address</b>	Media access control (MAC) address of the interface.	<b>detail extensive none</b>
<b>Alternate link address</b>	Backup link address.	<b>detail extensive</b>
<b>Last flapped</b>	Date, time, and how long ago the interface went from down to up. The format is <b>Last flapped: year-month-day hour:minute:second timezone (hour:minute:second ago)</b> . For example, <b>Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> .	<b>detail extensive none</b>
<b>Input packets</b>	Number of packets received on the physical interface.	None specified
<b>Output packets</b>	Number of packets transmitted on the physical interface.	None specified
<b>Statistics last cleared</b>	Time when the statistics for the interface were last set to zero.	<b>detail extensive</b>
<b>Traffic statistics</b>	Number and rate of bytes and packets received and transmitted on the logical and physical interface. <ul style="list-style-type: none"> <li>• <b>Input bytes, Output bytes</b>—Number of bytes received and transmitted on the interface.</li> <li>• <b>Input packets, Output packets</b>—Number of packets received and transmitted on the interface.</li> </ul>	<b>detail extensive</b>

*Table 70: show interfaces Output Fields for M Series, MX Series, T Series, and PTX Series Routers Management Ethernet Interface (continued)*

Field Name	Field Description	Level of Output
<b>Input errors</b>	<ul style="list-style-type: none"> <li>• <b>Errors</b>—Input errors on the interface.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Runts</b>—Frames received smaller than the runt threshold.</li> <li>• <b>Giants</b>—Frames received larger than the giant threshold.</li> <li>• <b>Policed Discards</b>—Frames that the incoming packet match code discarded because they were not recognized or were not of interest. Usually, this field reports protocols that Junos does not support.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>	<b>extensive</b>
<b>Output errors</b>	<ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and then up, or another problem occurs. If the number of carrier transitions increments quickly, possibly once every 10 seconds, the cable, the remote system, or the interface is malfunctioning.</li> <li>• <b>Errors</b>—Sum of outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet dropped by the ASIC RED mechanism.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>	<b>extensive</b>
<b>Logical Interface</b>		
<b>Logical interface</b>	Name of the logical interface	All levels
<b>Index</b>	Logical interface index number, which reflects its initialization sequence.	<b>detail extensive none</b>
<b>SNMP ifIndex</b>	Logical interface SNMP interface index number.	<b>detail extensive none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Flags</b>	Information about the logical interface; values are described in the “Device Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels
<b>Encapsulation</b>	Encapsulation on the logical interface.	<b>detail extensive none</b>
<b>inet</b>	IP address of the logical interface.	<b>brief</b>
<b>Protocol</b>	Protocol family configured on the logical interface (such as <b>iso</b> or <b>inet6</b> ).	<b>detail extensive none</b>
<b>MTU</b>	MTU size on the logical interface.	<b>detail extensive none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>

*Table 70: show interfaces Output Fields for M Series, MX Series, T Series, and PTX Series Routers Management Ethernet Interface (continued)*

Field Name	Field Description	Level of Output
<b>Route table</b>	Route table in which this address exists. For example, <b>Route table:0</b> refers to inet.0.	<b>detail extensive</b>
<b>Flags</b>	Information about the protocol family flags. Possible values are described in the “Family Flags” section under “ <a href="#">Common Output Fields Description</a> ” on page 1114.	<b>detail extensive none</b>
<b>Addresses, Flags</b>	Information about address flags. Possible values are described in the “Addresses Flags” section under “ <a href="#">Common Output Fields Description</a> ” on page 1114.	<b>detail extensive none</b>
<b>Destination</b>	IP address of the remote side of the connection.	<b>detail extensive none</b>
<b>Local</b>	IP address of the logical interface.	<b>detail extensive none</b>
<b>Broadcast</b>	Broadcast address.	<b>detail extensive none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>

## Sample Output

### show interfaces brief (Management Ethernet)

```

user@host> show interfaces fxp0 brief
Physical interface: fxp0, Enabled, Physical link is Up
  Type: Ethernet, Link-level type: Ethernet, MTU: 1514, Clocking: Unspecified,
  Speed: 100mbps
  Device flags   : Present Running
  Interface flags: SNMP-Traps

Logical interface fxp0.0
  Flags: SNMP-Traps Encapsulation: ENET2
  inet 192.168.70.143/21

```

### show interfaces (Management Ethernet)

```

user@host> show interfaces fxp0
Physical interface: fxp0, Enabled, Physical link is Up
  Interface index: 1, SNMP ifIndex: 1
  Type: Ethernet, Link-level type: Ethernet, MTU: 1514, Speed: 100mbps
  Device flags   : Present Running
  Interface flags: SNMP-Traps
  Link type      : Half-Duplex
  Current address: 00:00:5E:00:53:89, Hardware address: 00:00:5E:00:53:89
  Last flapped   : Never
    Input packets : 80804
    Output packets: 1105

Logical interface fxp0.0 (Index 2) (SNMP ifIndex 13)
  Flags: SNMP-Traps Encapsulation: ENET2
  Protocol inet, MTU: 1500
    Flags: Is-Primary

```

```

Addresses, Flags: Is-Preferred Is-Primary
Destination: 192.168.64/21, Local: 192.168.70.143,
Broadcast: 192.168.71.255

```

### show interfaces (Management Ethernet [TX Matrix Plus Router])

```

user@host> show interfaces em0
Physical interface: em0, Enabled, Physical link is Up
  Interface index: 8, SNMP ifIndex: 17
  Type: Ethernet, Link-level type: Ethernet, MTU: 1514, Speed: 100mbps
  Device flags   : Present Running
  Interface flags: SNMP-Traps
  Link type      : Full-Duplex
  Current address: 00:00:5E:00:53:c0, Hardware address: 00:00:5E:00:53:c0
  Last flapped   : Never
    Input packets : 1424
    Output packets: 5282

Logical interface em0.0 (Index 3) (SNMP ifIndex 18)
  Flags: SNMP-Traps Encapsulation: ENET2
  Input packets : 1424
  Output packets: 5282
  Protocol inet, MTU: 1500
  Flags: Is-Primary
  Addresses, Flags: Is-Preferred Is-Primary
    Destination: 192.168.178.0/25, Local: 192.168.178.11, Broadcast:
    192.168.178.127

```

### show interfaces (Management Ethernet [PTX Series Packet Transport Routers])

```

user@host> show interfaces em0
Physical interface: em0, Enabled, Physical link is Up
  Interface index: 8, SNMP ifIndex: 0
  Type: Ethernet, Link-level type: Ethernet, MTU: 1514, Speed: 1000mbps
  Device flags   : Present Running
  Interface flags: SNMP-Traps
  Link type      : Full-Duplex
  Current address: 00:00:5E:00:53:1b, Hardware address: 00:00:5E:00:53:1b
  Last flapped   : Never
    Input packets : 212581
    Output packets: 71

Logical interface em0.0 (Index 3) (SNMP ifIndex 0)
  Flags: SNMP-Traps Encapsulation: ENET2
  Input packets : 212551
  Output packets: 71
  Protocol inet, MTU: 1500
  Flags: Is-Primary
  Addresses, Flags: Is-Default Is-Preferred Is-Primary
    Destination: 192.168.3/24, Local: 192.168.3.30,
    Broadcast: 192.168.3.255

```

### show interfaces detail (Management Ethernet)

```

user@host> show interfaces fxp0 detail
Physical interface: fxp0, Enabled, Physical link is Up
  Interface index: 1, SNMP ifIndex: 1, Generation: 0
  Type: Ethernet, Link-level type: Ethernet, MTU: 1514, Clocking: Unspecified,
  Speed: 100mbps
  Device flags   : Present Running

```

## show interfaces (PPPoE)

<b>Syntax</b>	<pre>show interfaces pp0.logical &lt;brief   detail   extensive   terse&gt; &lt;descriptions&gt; &lt;media&gt; &lt;snmp-index <i>snmp-index</i>&gt; &lt;statistics&gt;</pre>
<b>Release Information</b>	Command introduced before Junos OS Release 7.4.
<b>Description</b>	(M120 routers, M320 routers, and MX Series routers only). Display status information about the PPPoE interface.
<b>Options</b>	<p><b>pp0.logical</b>—Display standard status information about the PPPoE interface.</p> <p><b>brief   detail   extensive   terse</b>—(Optional) Display the specified level of output.</p> <p><b>descriptions</b>—(Optional) Display interface description strings.</p> <p><b>media</b>—(Optional) Display media-specific information about PPPoE interfaces.</p> <p><b>snmp-index <i>snmp-index</i></b>—(Optional) Display information for the specified SNMP index of the interface.</p> <p><b>statistics</b>—(Optional) Display PPPoE interface statistics.</p>
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<p><a href="#">show interfaces (PPPoE) on page 1448</a></p> <p><a href="#">show interfaces (PPPoE over Aggregated Ethernet) on page 1448</a></p> <p><a href="#">show interfaces brief (PPPoE) on page 1449</a></p> <p><a href="#">show interfaces detail (PPPoE) on page 1449</a></p> <p><a href="#">show interfaces extensive (PPPoE on M120 and M320 Routers) on page 1450</a></p>
<b>Output Fields</b>	Table 71 on page 1442 lists the output fields for the <b>show interfaces (PPPoE)</b> command. Output fields are listed in the approximate order in which they appear.

Table 71: show interfaces (PPPoE) Output Fields

Field Name	Field Description	Level of Output
<b>Physical Interface</b>		
<b>Physical interface</b>	Name of the physical interface.	All levels
<b>Enabled</b>	State of the interface. Possible values are described in the “Enabled Field” section under “Common Output Fields Description” on page 1114.	All levels
<b>Interface index</b>	Physical interface index number, which reflects its initialization sequence.	<b>detail extensive none</b>

Table 71: show interfaces (PPPoE) Output Fields (continued)

Field Name	Field Description	Level of Output
<b>SNMP ifIndex</b>	SNMP index number for the physical interface.	<b>detail extensive none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Type</b>	Physical interface type (PPPoE).	All levels
<b>Link-level type</b>	Encapsulation on the physical interface (PPPoE).	All levels
<b>MTU</b>	MTU size on the physical interface.	All levels
<b>Clocking</b>	Reference clock source. It can be <b>Internal</b> or <b>External</b> .	All levels
<b>Speed</b>	Speed at which the interface is running.	All levels
<b>Device flags</b>	Information about the physical device. Possible values are described in the "Device Flags" section under <a href="#">"Common Output Fields Description" on page 1114</a> .	All levels
<b>Interface flags</b>	Information about the interface. Possible values are described in the "Interface Flags" section under <a href="#">"Common Output Fields Description" on page 1114</a> .	All levels
<b>Link type</b>	Physical interface link type: <b>full duplex</b> or <b>half duplex</b> .	All levels
<b>Link flags</b>	Information about the interface. Possible values are described in the "Link Flags" section under <a href="#">"Common Output Fields Description" on page 1114</a> .	All levels
<b>Input rate</b>	Input rate in bits per second (bps) and packets per second (pps).	None specified
<b>Output rate</b>	Output rate in bps and pps.	None specified
<b>Physical Info</b>	Physical interface information.	All levels
<b>Hold-times</b>	Current interface hold-time up and hold-time down, in milliseconds.	<b>detail extensive</b>
<b>Current address</b>	Configured MAC address.	<b>detail extensive</b>
<b>Hardware address</b>	MAC address of the hardware.	<b>detail extensive</b>
<b>Alternate link address</b>	Backup address of the link.	<b>detail extensive</b>
<b>Statistics last cleared</b>	Time when the statistics for the interface were last set to zero.	<b>detail extensive</b>

Table 71: show interfaces (PPPoE) Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Traffic statistics</b>	<p>Number and rate of bytes and packets received and transmitted on the physical interface.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>	<b>detail extensive</b>
<b>IPv6 transit statistics</b>	<p>Number of IPv6 transit bytes and packets received and transmitted on the physical interface if IPv6 statistics tracking is enabled.</p> <p><b>NOTE:</b> These fields include dropped traffic and exception traffic, as those fields are not separately defined.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>	<b>detail extensive</b>
<b>Input errors</b>	<p>Input errors on the interface:</p> <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Runts</b>—Number of frames received that are smaller than the runt threshold.</li> <li>• <b>Giants</b>—Number of frames received that are larger than the giant threshold.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that the Junos OS does not handle.</li> <li>• <b>Resource errors</b>—Sum of B chip Tx drops and IXP Tx net transmit drops.</li> </ul>	<b>extensive</b>
<b>Output errors</b>	<p>Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b> —Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and then up, or another problem occurs. If the number of carrier transitions increments quickly (perhaps once every 10 seconds), then the cable, the far-end system, or the PIM is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>MTU errors</b>—Number of packets whose size exceeded the MTU of the interface.</li> <li>• <b>Resource errors</b>—Sum of B chip Tx drops and IXP Tx net transmit drops.</li> </ul>	<b>extensive</b>

---

### Logical Interface

---

Table 71: show interfaces (PPPoE) Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Logical interface</b>	Name of the logical interface.	All levels
<b>Index</b>	Logical interface index number (which reflects its initialization sequence).	<b>detail extensive none</b>
<b>SNMP ifIndex</b>	Logical interface SNMP interface index number.	<b>detail extensive none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Flags</b>	Information about the logical interface. Possible values are described in the “Logical Interface Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels
<b>Encapsulation</b>	Type of encapsulation configured on the logical interface.	All levels
<b>PPP parameters</b>	PPP status: <ul style="list-style-type: none"> <li>• LCP restart timer—Length of time (in milliseconds) between successive Link Control Protocol (LCP) configuration requests.</li> <li>• NCP restart timer—Length of time (in milliseconds) between successive Network Control Protocol (NCP) configuration requests.</li> </ul>	<b>detail</b>
<b>PPPoE</b>	PPPoE status: <ul style="list-style-type: none"> <li>• <b>State</b>—State of the logical interface (<b>up</b> or <b>down</b>).</li> <li>• <b>Session ID</b>—PPPoE session ID.</li> <li>• <b>Service name</b>—Type of service required. Can be used to indicate an Internet service provider (ISP) name or a class or quality of service.</li> <li>• <b>Configured AC name</b>—Configured access concentrator name.</li> <li>• <b>Auto-reconnect timeout</b>—Time after which to try to reconnect after a PPPoE session is terminated, in seconds.</li> <li>• <b>Idle Timeout</b>—Length of time (in seconds) that a connection can be idle before disconnecting.</li> <li>• <b>Underlying interface</b>—Interface on which PPPoE is running.</li> </ul>	All levels
<b>Link</b>	Name of the physical interfaces for member links in an aggregated Ethernet bundle for a PPPoE over aggregated Ethernet configuration. PPPoE traffic goes out on these interfaces.	All levels
<b>Traffic statistics</b>	Total number of bytes and packets received and transmitted on the logical interface. These statistics are the sum of the local and transit statistics. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. This counter usually takes less than 1 second to stabilize.	<b>detail extensive</b>

Table 71: show interfaces (PPPoE) Output Fields (continued)

Field Name	Field Description	Level of Output
IPv6 transit statistics	<p>Number of IPv6 transit bytes and packets received and transmitted on the logical interface if IPv6 statistics tracking is enabled.</p> <p><b>NOTE:</b> The packet and byte counts in these fields include traffic that is dropped and does not leave the router.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>	detail extensive
Local statistics	<p>Statistics for traffic received from and transmitted to the Routing Engine. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. This counter usually takes less than 1 second to stabilize.</p>	detail extensive
Transit statistics	<p>Statistics for traffic transiting the router. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. This counter usually takes less than 1 second to stabilize.</p> <p><b>NOTE:</b> The packet and byte counts in these fields include traffic that is dropped and does not leave the router.</p>	detail extensive
Keepalive settings	<p>(PPP and HDLC) Configured settings for keepalives.</p> <ul style="list-style-type: none"> <li>• <b>interval seconds</b>—The time in seconds between successive keepalive requests. The range is 10 seconds through 32,767 seconds, with a default of 10 seconds.</li> <li>• <b>down-count number</b>—The number of keepalive packets a destination must fail to receive before the network takes a link down. The range is 1 through 255, with a default of 3.</li> <li>• <b>up-count number</b>—The number of keepalive packets a destination must receive to change a link's status from down to up. The range is 1 through 255, with a default of 1.</li> </ul>	detail extensive
Keepalive statistics	<p>(PPP and HDLC) Information about keepalive packets.</p> <ul style="list-style-type: none"> <li>• <b>Input</b>—Number of keepalive packets received by PPP. <ul style="list-style-type: none"> <li>• <b>(last seen 00:00:00 ago)</b>—Time the last keepalive packet was received, in the format <i>hh:mm:ss</i>.</li> </ul> </li> <li>• <b>Output</b>—Number of keepalive packets sent by PPP and how long ago the last keepalive packets were sent and received. <ul style="list-style-type: none"> <li>• <b>(last seen 00:00:00 ago)</b>—Time the last keepalive packet was sent, in the format <i>hh:mm:ss</i>.</li> </ul> </li> </ul> <p>(MX Series routers with MPCs/MICs) When an MX Series router with MPCs/MICs is using PPP fast keepalive for a PPP link, the display does not include the number of keepalive packets received or sent, or the amount of time since the router received or sent the last keepalive packet.</p>	detail extensive
Input packets	Number of packets received on the logical interface.	None specified
Output packets	Number of packets transmitted on the logical interface.	None specified

Table 71: show interfaces (PPPoE) Output Fields (continued)

Field Name	Field Description	Level of Output
<b>LCP state</b>	(PPP) Link Control Protocol state.  <ul style="list-style-type: none"> <li>• <b>Conf-ack-received</b>—Acknowledgement was received.</li> <li>• <b>Conf-ack-sent</b>—Acknowledgement was sent.</li> <li>• <b>Conf-req-sent</b>—Request was sent.</li> <li>• <b>Down</b>—LCP negotiation is incomplete (not yet completed or has failed).</li> <li>• <b>Not-configured</b>—LCP is not configured on the interface.</li> <li>• <b>Opened</b>—LCP negotiation is successful.</li> </ul>	none <b>detail extensive</b>
<b>NCP state</b>	(PPP) Network Control Protocol state.  <ul style="list-style-type: none"> <li>• <b>Conf-ack-received</b>—Acknowledgement was received.</li> <li>• <b>Conf-ack-sent</b>—Acknowledgement was sent.</li> <li>• <b>Conf-req-sent</b>—Request was sent.</li> <li>• <b>Down</b>—NCP negotiation is incomplete (not yet completed or has failed).</li> <li>• <b>Not-configured</b>—NCP is not configured on the interface.</li> <li>• <b>Opened</b>—NCP negotiation is successful.</li> </ul>	<b>detail extensive</b> none
<b>CHAP state</b>	(PPP) Displays the state of the Challenge Handshake Authentication Protocol (CHAP) during its transaction.  <ul style="list-style-type: none"> <li>• <b>Chap-Chal-received</b>—Challenge was received but response not yet sent.</li> <li>• <b>Chap-Chal-sent</b>—Challenge was sent.</li> <li>• <b>Chap-Resp-received</b>—Response was received for the challenge sent, but CHAP has not yet moved into the Success state. (Most likely with RADIUS authentication.)</li> <li>• <b>Chap-Resp-sent</b>—Response was sent for the challenge received.</li> <li>• <b>Closed</b>—CHAP authentication is incomplete.</li> <li>• <b>Failure</b>—CHAP authentication failed.</li> <li>• <b>Not-configured</b>—CHAP is not configured on the interface.</li> <li>• <b>Success</b>—CHAP authentication was successful.</li> </ul>	none <b>detail extensive</b>
<b>Protocol</b>	Protocol family configured on the logical interface.	<b>detail extensive</b> none
<i><b>protocol-family</b></i>	Protocol family configured on the logical interface. If the protocol is <b>inet</b> , the IP address of the interface is also displayed.	<b>brief</b>
<b>MTU</b>	MTU size on the logical interface.	<b>detail extensive</b> none
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Route table</b>	Routing table in which the logical interface address is located. For example, <b>0</b> refers to the routing table <b>inet.0</b> .	<b>detail extensive</b> none
<b>Flags</b>	Information about the protocol family flags. Possible values are described in the “Family Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	<b>detail extensive</b> none

Table 71: show interfaces (PPPoE) Output Fields (continued)

Field Name	Field Description	Level of Output
Addresses, Flags	Information about the addresses configured for the protocol family. Possible values are described in the “Addresses Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	detail extensive none
Destination	IP address of the remote side of the connection.	detail extensive none
Local	IP address of the logical interface.	detail extensive none
Broadcast	Broadcast address.	detail extensive none

## Sample Output

### show interfaces (PPPoE)

```

user@host> show interfaces pp0
Physical interface: pp0, Enabled, Physical link is Up
  Interface index: 128, SNMP ifIndex: 24
  Type: PPPoE, Link-level type: PPPoE, MTU: 1532
  Device flags   : Present Running
  Interface flags: Point-To-Point SNMP-Traps
  Link type      : Full-Duplex
  Link flags     : None
  Input rate     : 0 bps (0 pps)
  Output rate    : 0 bps (0 pps)

Logical interface pp0.0 (Index 72) (SNMP ifIndex 72)
  Flags: Hardware-Down Point-To-Point SNMP-Traps 0x4000 Encapsulation: PPPoE
  PPPoE:
    State: SessionDown, Session ID: None,
    Service name: None, Configured AC name: sapphire,
    Auto-reconnect timeout: 100 seconds, Idle timeout: Never,
    Underlying interface: at-5/0/0.0 (Index 70)
  Input packets : 0
  Output packets: 0
  LCP state: Not-configured
  NCP state: inet: Not-configured, inet6: Not-configured, iso: Not-configured,
  mp1s: Not-configured
  CHAP state: Closed
    Protocol inet, MTU: 100
    Flags: User-MTU, Negotiate-Address

```

### show interfaces (PPPoE over Aggregated Ethernet)

```

user@host> show interfaces pp0.1073773821
Logical interface pp0.1073773821 (Index 80) (SNMP ifIndex 32584)
  Flags: Point-To-Point SNMP-Traps 0x4000 Encapsulation: PPPoE
  PPPoE:
    State: SessionUp, Session ID: 1,
    Session AC name: alcor, Remote MAC address: 00:00:5e:00:53:01,
    Underlying interface: demux0.100 (Index 88)
  Link:
    ge-1/0/0.32767
    ge-1/0/1.32767

```

```

    Input packets : 6
    Output packets: 6
    LCP state: Opened
    NCP state: inet: Opened, inet6: Not-configured, iso: Not-configured, mp1s:
Not-configured
    CHAP state: Closed
    PAP state: Success
    Protocol inet, MTU: 1500
    Flags: Sendbcst-pkt-to-re
    Addresses, Flags: Is-Primary
    Local: 203.0.113.1

```

### show interfaces brief (PPPoE)

```

user@host> show interfaces pp0 brief
Physical interface: pp0, Enabled, Physical link is Up
  Type: PPPoE, Link-level type: PPPoE, MTU: 1532, Speed: Unspecified
  Device flags   : Present Running
  Interface flags: Point-To-Point SNMP-Traps

Logical interface pp0.0
  Flags: Hardware-Down Point-To-Point SNMP-Traps 0x4000 Encapsulation: PPPoE
  PPPoE:
    State: SessionDown, Session ID: None,
    Service name: None, Configured AC name: sapphire,
    Auto-reconnect timeout: 100 seconds, Idle timeout: Never,
    Underlying interface: at-5/0/0.0 (Index 70)
  inet

```

### show interfaces detail (PPPoE)

```

user@host> show interfaces pp0 detail
Physical interface: pp0, Enabled, Physical link is Up
  Interface index: 128, SNMP ifIndex: 24, Generation: 9
  Type: PPPoE, Link-level type: PPPoE, MTU: 1532, Speed: Unspecified
  Device flags   : Present Running
  Interface flags: Point-To-Point SNMP-Traps
  Link type      : Full-Duplex
  Link flags     : None
  Physical info  : Unspecified
  Hold-times    : Up 0 ms, Down 0 ms
  Current address: Unspecified, Hardware address: Unspecified
  Alternate link address: Unspecified
  Statistics last cleared: Never
  Traffic statistics:
    Input bytes   : 0          0 bps
    Output bytes  : 0          0 bps
    Input packets : 0          0 pps
    Output packets: 0          0 pps
Logical interface pp0.0 (Index 72) (SNMP ifIndex 72) (Generation 14)
  Flags: Hardware-Down Point-To-Point SNMP-Traps 0x4000 Encapsulation: PPPoE
  PPPoE:
    State: SessionDown, Session ID: None,
    Service name: None, Configured AC name: sapphire,
    Auto-reconnect timeout: 100 seconds, Idle timeout: Never,
    Underlying interface: at-5/0/0.0 (Index 70)
  Traffic statistics:
    Input bytes   : 0
    Output bytes  : 0
    Input packets : 0

```

```

Output packets:                                0
Local statistics:
Input bytes :                                  0
Output bytes :                                 0
Input packets:                                0
Output packets:                               0
Transit statistics:
Input bytes :                                  0          0 bps
Output bytes :                                 0          0 bps
Input packets:                                0          0 pps
Output packets:                               0          0 pps
LCP state: Not-configured
NCP state: inet: Not-configured, inet6: Not-configured, iso: Not-configured,
mpls: Not-configured
CHAP state: Closed
Protocol inet, MTU: 100, Generation: 14, Route table: 0
Flags: User-MTU, Negotiate-Address

```

### show interfaces extensive (PPPoE on M120 and M320 Routers)

```

user@host> show interfaces pp0 extensive
Physical interface: pp0, Enabled, Physical link is Up
Interface index: 128, SNMP ifIndex: 93, Generation: 129
Type: PPPoE, Link-level type: PPPoE, MTU: 1532, Speed: Unspecified
Device flags : Present Running
Interface flags: Point-To-Point SNMP-Traps
Link type : Full-Duplex
Link flags : None
Physical info : Unspecified
Hold-times : Up 0 ms, Down 0 ms
Current address: Unspecified, Hardware address: Unspecified
Alternate link address: Unspecified
Statistics last cleared: Never
Traffic statistics:
Input bytes :          972192          0 bps
Output bytes :         975010          0 bps
Input packets:          1338          0 pps
Output packets:         1473          0 pps
IPv6 transit statistics:
Input bytes :          0

## show interfaces (PTX Series Packet Transport Routers)

---

<b>Syntax</b>	<code>show interfaces et-<i>fpc/pic/port</i></code> <code>&lt;brief   detail   extensive   terse&gt;</code> <code>&lt;descriptions&gt;</code> <code>&lt;media&gt;</code> <code>&lt;snmp-index <i>snmp-index</i>&gt;</code> <code>&lt;statistics&gt;</code>
<b>Release Information</b>	Command introduced in Junos OS Release 8.0. Command introduced in Junos OS Release 12.1 for PTX Series Packet Transport Routers.
<b>Description</b>	(PTX Series Packet Transport Routers only) Display status information about the specified Ethernet interface.
<b>Options</b>	<b>et-<i>fpc/pic/port</i></b> —Display standard information about the specified Ethernet interface.  <b>brief   detail   extensive   terse</b> —(Optional) Display the specified level of output.  <b>descriptions</b> —(Optional) Display interface description strings.  <b>media</b> —(Optional) Display media-specific information about network interfaces.  <b>snmp-index <i>snmp-index</i></b> —(Optional) Display information for the specified SNMP index of the interface.  <b>statistics</b> —(Optional) Display static interface statistics.
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">show interfaces brief (PTX5000 Packet Transport Router) on page 1462</a> <a href="#">show interfaces extensive (PTX5000 Packet Transport Router) on page 1462</a> <a href="#">show interfaces terse (PTX5000 Packet Transport Router) on page 1463</a>
<b>Output Fields</b>	See <a href="#">Table 72 on page 1453</a> for the output fields for the <b>show interfaces</b> (PTX Series Packet Transport Routers) command.

Table 72: show interfaces PTX Series Output Fields

Field Name	Field Description	Level of Output
<b>Physical Interface</b>		
<b>Physical interface</b>	Name of the physical interface.	All levels
<b>Enabled</b>	State of the interface. Possible values are described in the “Enabled Field” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels
<b>Interface index</b>	Index number of the physical interface, which reflects its initialization sequence.	<b>detail extensive none</b>
<b>SNMP ifIndex</b>	SNMP index number for the physical interface.	<b>detail extensive none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Link-level type</b>	Encapsulation being used on the physical interface.	All levels
<b>MTU</b>	Maximum transmission unit size on the physical interface.	All levels
<b>Speed</b>	Speed at which the interface is running.	All levels
<b>BPDU Error</b>	Bridge protocol data unit (BPDU) errors (if any).	All levels
<b>MAC-Rewrite</b>	MAC Rewrite errors (if any).	All levels
<b>Loopback</b>	Loopback status: <b>Enabled</b> or <b>Disabled</b> . If loopback is enabled, type of loopback: <b>Local</b> or <b>Remote</b> .	All levels
<b>Source filtering</b>	Source filtering status: <b>Enabled</b> or <b>Disabled</b> .	All levels
<b>Flow control</b>	Flow control status: <b>Enabled</b> or <b>Disabled</b> .	All levels
<b>Device flags</b>	Information about the physical device. Possible values are described in the “Device Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels
<b>Interface flags</b>	Information about the interface. Possible values are described in the “Interface Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels
<b>Link flags</b>	Information about the link. Possible values are described in the “Links Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels
<b>CoS queues</b>	Number of CoS queues configured.	<b>detail extensive none</b>
<b>Hold-times</b>	Current interface hold-time up and hold-time down, in milliseconds.	<b>detail extensive</b>
<b>Current address</b>	Configured MAC address.	<b>detail extensive none</b>
<b>Hardware address</b>	Hardware MAC address.	<b>detail extensive none</b>

Table 72: show interfaces PTX Series Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Last flapped</b>	Date, time, and how long ago the interface went from down to up. The format is <b>Last flapped: year-month-day hour:minute:second:timezone (hour:minute:second ago)</b> . For example, <b>Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> .	<b>detail extensive none</b>
<b>Statistics last cleared</b>	Time when the statistics for the interface were last set to zero.	<b>detail extensive</b>
<b>Traffic statistics</b>	<p>Number and rate of bytes and packets received and transmitted on the physical interface.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul> <p><b>NOTE:</b> <b>Input bytes</b> and <b>output bytes</b> are counted as Layer 3 packet length.</p>	<b>detail extensive</b>
<b>Input errors</b>	<p>Input errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of the incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Runts</b>—Number of frames received that are smaller than the runt threshold.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that the Junos OS does not handle.</li> <li>• <b>L3 incompletes</b>—Number of incoming packets discarded because they failed Layer 3 (usually IPv4) sanity checks of the header. For example, a frame with less than 20 bytes of available IP header is discarded. L3 incomplete errors can be ignored by configuring the <b>ignore-l3-incompletes</b> statement.</li> </ul> <p><b>NOTE:</b> The L3 incompletes field is <i>not</i> supported on PTX Series Packet Transport Routers.</p> <ul style="list-style-type: none"> <li>• <b>L2 channel errors</b>—Number of times the software did not find a valid logical interface for an incoming frame.</li> <li>• <b>L2 mismatch timeouts</b>—Number of malformed or short packets that caused the incoming packet handler to discard the frame as unreadable.</li> <li>• <b>FIFO errors</b>—Number of FIFO errors in the receive direction that are reported by the ASIC on the PIC. If this value is ever nonzero, the PIC is probably malfunctioning.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>	<b>extensive</b>

Table 72: show interfaces PTX Series Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Output errors</b>	<p>Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and then up, or another problem occurs. If the number of carrier transitions increments quickly (perhaps once every 10 seconds), the cable, the far-end system, or the PIC or PIM is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Collisions</b>—Number of Ethernet collisions. The Gigabit Ethernet PIC supports only full-duplex operation, so for Gigabit Ethernet PICs, this number should always remain 0. If it is nonzero, there is a software bug.</li> <li>• <b>Aged packets</b>—Number of packets that remained in shared packet SDRAM so long that the system automatically purged them. The value in this field should never increment. If it does, it is most likely a software bug or possibly malfunctioning hardware.</li> <li>• <b>FIFO errors</b>—Number of FIFO errors in the send direction as reported by the ASIC on the PIC. If this value is ever nonzero, the PIC is probably malfunctioning.</li> <li>• <b>HS link CRC errors</b>—Number of errors on the high-speed links between the ASICs responsible for handling the router interfaces.</li> <li>• <b>MTU errors</b>—Number of packets whose size exceeded the MTU of the interface.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>	<b>extensive</b>
<b>Egress queues</b>	Total number of egress queues supported on the specified interface.	<b>detail extensive</b>
<b>Queue counters (Egress)</b>	<p>CoS queue number and its associated user-configured forwarding class name.</p> <ul style="list-style-type: none"> <li>• <b>Queued packets</b>—Number of queued packets.</li> <li>• <b>Transmitted packets</b>—Number of transmitted packets.</li> <li>• <b>Dropped packets</b>—Number of packets dropped by the ASIC's RED mechanism.</li> </ul>	<b>detail extensive</b>
<b>Ingress queues</b>	Total number of ingress queues supported on the specified interface.	<b>extensive</b>
<b>Queue counters (Ingress)</b>	<p>CoS queue number and its associated user-configured forwarding class name.</p> <ul style="list-style-type: none"> <li>• <b>Queued packets</b>—Number of queued packets.</li> <li>• <b>Transmitted packets</b>—Number of transmitted packets.</li> <li>• <b>Dropped packets</b>—Number of packets dropped by the ASIC's RED mechanism.</li> </ul>	<b>extensive</b>

Table 72: show interfaces PTX Series Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Active alarms and Active defects</b>	<p>Ethernet-specific defects that can prevent the interface from passing packets. When a defect persists for a certain amount of time, it is promoted to an alarm. Based on the router configuration, an alarm can ring the red or yellow alarm bell on the router, or turn on the red or yellow alarm LED on the craft interface. These fields can contain the value <b>None</b> or <b>Link</b>.</p> <ul style="list-style-type: none"> <li>• <b>None</b>—There are no active defects or alarms.</li> <li>• <b>Link</b>—Interface has lost its link state, which usually means that the cable is unplugged, the far-end system has been turned off, or the PIC is malfunctioning.</li> <li>• <b>LOCAL-FAULT</b>—Link fault signaling operates between the remote PHY RS (Reconciliation sub-layer) and the local RS. A Local Fault is used to signal a detected fault between the remote RS and the local RS to the local Ethernet interface.</li> <li>• <b>REMOTE-FAULT</b>—When the Local Fault status reaches an RS, the RS stops sending MAC data and continuously generates the Remote Fault status on the transmit data path .</li> </ul>	<b>detail extensive none</b>
<b>MAC statistics</b>	<p><b>Receive</b> and <b>Transmit</b> statistics reported by the PIC's MAC subsystem, including the following:</p> <ul style="list-style-type: none"> <li>• <b>Total octets</b> and <b>total packets</b>—Total number of octets and packets.</li> <li>• <b>Unicast packets</b>, <b>Broadcast packets</b>, and <b>Multicast packets</b>—Number of unicast, broadcast, and multicast packets.</li> <li>• <b>CRC/Align errors</b>—Total number of packets received that had a length (excluding framing bits, but including FCS octets) of between 64 and 1518 octets, inclusive, and had either a bad FCS with an integral number of octets (FCS Error) or a bad FCS with a nonintegral number of octets (Alignment Error).</li> <li>• <b>FIFO error</b>—Number of FIFO errors that are reported by the ASIC on the PIC. If this value is ever nonzero, the PIC or a cable is probably malfunctioning.</li> <li>• <b>MAC control frames</b>—Number of MAC control frames.</li> <li>• <b>MAC pause frames</b>—Number of MAC control frames with <b>pause</b> operational code.</li> <li>• <b>Oversized frames</b>—Number of frames that exceed 1518 octets.</li> <li>• <b>Jabber frames</b>—Number of frames that were longer than 1518 octets (excluding framing bits, but including FCS octets), and had either an FCS error or an alignment error. This definition of jabber is different from the definition in IEEE-802.3 section 8.2.1.5 (10BASE5) and section 10.3.1.4 (10BASE2). These documents define jabber as the condition in which any packet exceeds 20 ms. The allowed range to detect jabber is from 20 ms to 150 ms.</li> <li>• <b>Fragment frames</b>—Total number of packets that were less than 64 octets in length (excluding framing bits, but including FCS octets), and had either an FCS error or an alignment error. Fragment frames normally increment because both runts (which are normal occurrences caused by collisions) and noise hits are counted.</li> <li>• <b>VLAN tagged frames</b>—Number of frames that are VLAN tagged. The system uses the TPID of 0x8100 in the frame to determine whether a frame is tagged or not.</li> <li>• <b>Code violations</b>—Number of times an event caused the PHY to indicate "Data reception error" or "invalid data symbol error."</li> </ul>	<b>extensive</b>

Table 72: show interfaces PTX Series Output Fields (continued)

Field Name	Field Description	Level of Output
Filter statistics	<p><b>Receive</b> and <b>Transmit</b> statistics reported by the PIC's MAC address filter subsystem. The filtering is done by the content-addressable memory (CAM) on the PIC. The filter examines a packet's source and destination MAC addresses to determine whether the packet should enter the system or be rejected.</p> <ul style="list-style-type: none"> <li>• <b>Input packet count</b>—Number of packets received from the MAC hardware that the filter processed.</li> <li>• <b>Input packet rejects</b>—Number of packets that the filter rejected because of either the source MAC address or the destination MAC address.</li> <li>• <b>Input DA rejects</b>—Number of packets that the filter rejected because the destination MAC address of the packet is not on the accept list. It is normal for this value to increment. When it increments very quickly and no traffic is entering the router from the far-end system, either there is a bad ARP entry on the far-end system, or multicast routing is not on and the far-end system is sending many multicast packets to the local router (which the router is rejecting).</li> <li>• <b>Input SA rejects</b>—Number of packets that the filter rejected because the source MAC address of the packet is not on the accept list. The value in this field should increment only if source MAC address filtering has been enabled. If filtering is enabled, if the value increments quickly, and if the system is not receiving traffic that it should from the far-end system, it means that the user-configured source MAC addresses for this interface are incorrect.</li> <li>• <b>Output packet count</b>—Number of packets that the filter has given to the MAC hardware.</li> <li>• <b>Output packet pad count</b>—Number of packets the filter padded to the minimum Ethernet size (60 bytes) before giving the packet to the MAC hardware. Usually, padding is done only on small ARP packets, but some very small IP packets can also require padding. If this value increments rapidly, either the system is trying to find an ARP entry for a far-end system that does not exist or it is misconfigured.</li> <li>• <b>Output packet error count</b>—Number of packets with an indicated error that the filter was given to transmit. These packets are usually aged packets or are the result of a bandwidth problem on the FPC hardware. On a normal system, the value of this field should not increment.</li> <li>• <b>CAM destination filters, CAM source filters</b>—Number of entries in the CAM dedicated to destination and source MAC address filters. There can only be up to 64 source entries. If source filtering is disabled, which is the default, the values for these fields should be 0.</li> </ul>	extensive

Table 72: show interfaces PTX Series Output Fields (continued)

Field Name	Field Description	Level of Output
Autonegotiation information	<p>Information about link autonegotiation.</p> <ul style="list-style-type: none"> <li>• <b>Negotiation status:</b> <ul style="list-style-type: none"> <li>• <b>Incomplete</b>—Ethernet interface has the speed or link mode configured.</li> <li>• <b>No autonegotiation</b>—Remote Ethernet interface has the speed or link mode configured, or does not perform autonegotiation.</li> <li>• <b>Complete</b>—Ethernet interface is connected to a device that performs autonegotiation and the autonegotiation process is successful.</li> </ul> </li> <li>• <b>Link partner status</b>—OK when Ethernet interface is connected to a device that performs autonegotiation and the autonegotiation process is successful.</li> <li>• <b>Link partner:</b> <ul style="list-style-type: none"> <li>• <b>Link mode</b>—Depending on the capability of the attached Ethernet device, either <b>Full-duplex</b> or <b>Half-duplex</b>.</li> <li>• <b>Flow control</b>—Types of flow control supported by the remote Ethernet device. For Fast Ethernet interfaces, the type is <b>None</b>. For Gigabit Ethernet interfaces, types are <b>Symmetric</b> (link partner supports <b>PAUSE</b> on receive and transmit), <b>Asymmetric</b> (link partner supports <b>PAUSE</b> on transmit), and <b>Symmetric/Asymmetric</b> (link partner supports both <b>PAUSE</b> on receive and transmit or only <b>PAUSE</b> receive).</li> <li>• <b>Remote fault</b>—Remote fault information from the link partner—<b>Failure</b> indicates a receive link error. <b>OK</b> indicates that the link partner is receiving. <b>Negotiation error</b> indicates a negotiation error. <b>Offline</b> indicates that the link partner is going offline.</li> </ul> </li> <li>• <b>Local resolution</b>—Information from the link partner: <ul style="list-style-type: none"> <li>• <b>Flow control</b>—Types of flow control supported by the remote Ethernet device. For Gigabit Ethernet interfaces, types are <b>Symmetric</b> (link partner supports <b>PAUSE</b> on receive and transmit), <b>Asymmetric</b> (link partner supports <b>PAUSE</b> on transmit), and <b>Symmetric/Asymmetric</b> (link partner supports both <b>PAUSE</b> on receive and transmit or only <b>PAUSE</b> receive).</li> <li>• <b>Remote fault</b>—Remote fault information. <b>Link OK</b> (no error detected on receive), <b>Offline</b> (local interface is offline), and <b>Link Failure</b> (link error detected on receive).</li> </ul> </li> </ul>	extensive
Packet Forwarding Engine configuration	<p>Information about the configuration of the Packet Forwarding Engine:</p> <ul style="list-style-type: none"> <li>• <b>Destination slot</b>—FPC slot number.</li> </ul>	extensive

Table 72: show interfaces PTX Series Output Fields (continued)

Field Name	Field Description	Level of Output
<b>CoS information</b>	<p>Information about the CoS queue for the physical interface.</p> <ul style="list-style-type: none"> <li>• <b>CoS transmit queue</b>—Queue number and its associated user-configured forwarding class name.</li> <li>• <b>Bandwidth %</b>—Percentage of bandwidth allocated to the queue.</li> <li>• <b>Bandwidth bps</b>—Bandwidth allocated to the queue (in bps).</li> <li>• <b>Buffer %</b>—Percentage of buffer space allocated to the queue.</li> <li>• <b>Buffer usec</b>—Amount of buffer space allocated to the queue, in microseconds. This value is nonzero only if the buffer size is configured in terms of time.</li> <li>• <b>Priority</b>—Queue priority: <b>low</b> or <b>high</b>.</li> <li>• <b>Limit</b>—Displayed if rate limiting is configured for the queue. Possible values are <b>none</b> and <b>exact</b>. If <b>exact</b> is configured, the queue transmits only up to the configured bandwidth, even if excess bandwidth is available. If <b>none</b> is configured, the queue transmits beyond the configured bandwidth if bandwidth is available.</li> </ul>	<b>extensive</b>
<b>Logical Interface</b>		
<b>Logical interface</b>	Name of the logical interface.	All levels
<b>Index</b>	Index number of the logical interface, which reflects its initialization sequence.	<b>detail extensive none</b>
<b>SNMP ifIndex</b>	SNMP interface index number for the logical interface.	<b>detail extensive none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Flags</b>	Information about the logical interface. Possible values are described in the “Logical Interface Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels

Table 72: show interfaces PTX Series Output Fields (continued)

Field Name	Field Description	Level of Output
<b>VLAN-Tag</b>	<p>Rewrite profile applied to incoming or outgoing frames on the outer (<b>Out</b>) VLAN tag or for both the outer and inner (<b>In</b>) VLAN tags.</p> <ul style="list-style-type: none"> <li>• <b>push</b>—An outer VLAN tag is pushed in front of the existing VLAN tag.</li> <li>• <b>pop</b>—The outer VLAN tag of the incoming frame is removed.</li> <li>• <b>swap</b>—The outer VLAN tag of the incoming frame is overwritten with the user-specified VLAN tag information.</li> <li>• <b>push</b>—An outer VLAN tag is pushed in front of the existing VLAN tag.</li> <li>• <b>push-push</b>—Two VLAN tags are pushed in from the incoming frame.</li> <li>• <b>swap-push</b>—The outer VLAN tag of the incoming frame is replaced by a user-specified VLAN tag value. A user-specified outer VLAN tag is pushed in front. The outer tag becomes an inner tag in the final frame.</li> <li>• <b>swap-swap</b>—Both the inner and the outer VLAN tags of the incoming frame are replaced by the user-specified VLAN tag value.</li> <li>• <b>pop-swap</b>—The outer VLAN tag of the incoming frame is removed, and the inner VLAN tag of the incoming frame is replaced by the user-specified VLAN tag value. The inner tag becomes the outer tag in the final frame.</li> <li>• <b>pop-pop</b>—Both the outer and inner VLAN tags of the incoming frame are removed.</li> </ul>	<b>brief detail extensive none</b>
<b>Demux</b>	<p>IP demultiplexing (demux) value that appears if this interface is used as the demux underlying interface. The output is one of the following:</p> <ul style="list-style-type: none"> <li>• Source Family Inet</li> <li>• Destination Family Inet</li> </ul>	<b>detail extensive none</b>
<b>Encapsulation</b>	Encapsulation on the logical interface.	All levels
<b>Protocol</b>	Protocol family. Possible values are described in the “Protocol Field” section under “ <a href="#">Common Output Fields Description</a> ” on page 1114.	<b>detail extensive none</b>
<b>MTU</b>	Maximum transmission unit size on the logical interface.	<b>detail extensive none</b>
<b>Maximum labels</b>	Maximum number of MPLS labels configured for the MPLS protocol family on the logical interface.	<b>detail extensive none</b>
<b>Traffic statistics</b>	<p>Number and rate of bytes and packets received and transmitted on the specified interface set.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes, Output bytes</b>—Number of bytes received and transmitted on the interface set</li> <li>• <b>Input packets, Output packets</b>—Number of packets received and transmitted on the interface set.</li> </ul> <p><b>NOTE:</b> <b>Input bytes</b> and <b>output bytes</b> are counted as Layer 3 packet length.</p>	<b>detail extensive</b>
<b>IPv6 transit statistics</b>	Number of IPv6 transit bytes and packets received and transmitted on the logical interface if IPv6 statistics tracking is enabled.	<b>extensive</b>
<b>Local statistics</b>	Number and rate of bytes and packets destined to the router.	<b>extensive</b>

Table 72: show interfaces PTX Series Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Transit statistics</b>	Number and rate of bytes and packets transiting the switch.	<b>extensive</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Route Table</b>	Route table in which the logical interface address is located. For example, 0 refers to the routing table inet.0.	<b>detail extensive none</b>
<b>Flags</b>	Information about protocol family flags. Possible values are described in the “Family Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	<b>detail extensive</b>
<b>Donor interface</b>	(Unnumbered Ethernet) Interface from which an unnumbered Ethernet interface borrows an IPv4 address.	<b>detail extensive none</b>
<b>Preferred source address</b>	(Unnumbered Ethernet) Secondary IPv4 address of the donor loopback interface that acts as the preferred source address for the unnumbered Ethernet interface.	<b>detail extensive none</b>
<b>Input Filters</b>	Names of any input filters applied to this interface. If you specify a precedence value for any filter in a dynamic profile, filter precedence values appear in parentheses next to all interfaces.	<b>detail extensive</b>
<b>Output Filters</b>	Names of any output filters applied to this interface. If you specify a precedence value for any filter in a dynamic profile, filter precedence values appear in parentheses next to all interfaces.	<b>detail extensive</b>
<b>Mac-Validate Failures</b>	Number of MAC address validation failures for packets and bytes. This field is displayed when MAC address validation is enabled for the logical interface.	<b>detail extensive none</b>
<b>Addresses, Flags</b>	Information about the address flags. Possible values are described in the “Addresses Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	<b>detail extensive none</b>
<b>protocol-family</b>	Protocol family configured on the logical interface. If the protocol is <b>inet</b> , the IP address of the interface is also displayed.	<b>brief</b>
<b>Flags</b>	Information about flags (possible values are described in the “Addresses Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	<b>detail extensive none</b>
<b>Destination</b>	IP address of the remote side of the connection.	<b>detail extensive none</b>
<b>Local</b>	IP address of the logical interface.	<b>detail extensive none</b>
<b>Broadcast</b>	Broadcast address of the logical interlace.	<b>detail extensive none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>

## Sample Output

### show interfaces brief (PTX5000 Packet Transport Router)

```
user@host> show interfaces brief et-7/0/0
Physical interface: et-7/0/0, Enabled, Physical link is Up
  Link-level type: Ethernet, MTU: 1514, Speed: 10Gbps, Loopback: Disabled, Source
  filtering: Disabled, Flow control: Enabled
  Device flags   : Present Running
  Interface flags: SNMP-Traps Internal: 0x4000
  Link flags     : None
```

### show interfaces extensive (PTX5000 Packet Transport Router)

```
user@host> show interfaces et-7/0/0 extensive
Physical interface: et-7/0/0, Enabled, Physical link is Up
  Interface index: 168, SNMP ifIndex: 501, Generation: 171
  Link-level type: Ethernet, MTU: 1514, Speed: 10Gbps, BPDU Error: None,
  MAC-REWRITE Error: None, Loopback: Disabled, Source filtering: Disabled, Flow
  control: Enabled
  Device flags   : Present Running
  Interface flags: SNMP-Traps Internal: 0x4000
  Link flags     : None
  CoS queues     : 8 supported, 8 maximum usable queues

## show interfaces (SONET/SDH)

---

<b>Syntax</b>	<code>show interfaces <i>so-fpc/pic/port</i></code> <code>&lt;brief   detail   extensive   terse&gt;</code> <code>&lt;descriptions&gt;</code> <code>&lt;media&gt;</code> <code>&lt;snmp-index <i>snmp-index</i>&gt;</code> <code>&lt;statistics&gt;</code>
<b>Release Information</b>	Command introduced before Junos OS Release 7.4.
<b>Description</b>	(M Series and T Series routers only) Display status information about the specified SONET/SDH interface.
<b>Options</b>	<p><b><i>so-fpc/pic/port</i></b>—Display standard information about the specified SONET/SDH interface.</p> <p><b>brief   detail   extensive   terse</b>—(Optional) Display the specified level of output.</p> <p><b>descriptions</b>—(Optional) Display interface description strings.</p> <p><b>media</b>—(Optional) Display media-specific information about network interfaces.</p> <p><b>snmp-index <i>snmp-index</i></b>—(Optional) Display information for the specified SNMP index of the interface.</p> <p><b>statistics</b>—(Optional) Display static interface statistics.</p>
<b>Required Privilege Level</b>	view

<b>Output Fields</b>	<a href="#">Table 73 on page 1467</a> lists the output fields for the <b>show interfaces</b> (SONET/SDH) command. Output fields are listed in the approximate order in which they appear.

Table 73: SONET/SDH show interfaces Output Fields

Field Name	Field Description	Level of Output
<b>Physical Interface</b>		
<b>Physical interface</b>	Name of the physical interface.	All levels
<b>Enabled</b>	State of the interface. Possible values are described in the “Enabled Field” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels
<b>Interface index</b>	Physical interface's index number, which reflects its initialization sequence.	<b>detail extensive</b> none
<b>SNMP ifIndex</b>	SNMP index number for the physical interface.	<b>detail extensive</b> none
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Link-level type</b>	Encapsulation being used on the physical interface.	All levels
<b>MTU</b>	MTU size on the physical interface.	All levels
<b>Clocking</b>	SONET/SDH reference clock source: <b>Internal</b> or <b>External</b> . Clocking is configured and displayed only for channel 0.	All levels
<b>Framing mode</b>	Framing mode: <b>SONET</b> or <b>SDH</b> .	All levels
<b>Speed</b>	Speed at which the interface is running.	All levels
<b>Loopback</b>	Whether loopback is enabled and the type of loopback ( <b>local</b> or <b>remote</b> ).	All levels
<b>FCS</b>	Frame check sequence on the interface (either <b>16</b> or <b>32</b> ). The default is <b>16</b> bits.	All levels
<b>Payload scrambler</b>	Whether payload scrambling is enabled.	All levels
<b>Device flags</b>	Information about the physical device. Possible values are described in the “Device Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels
<b>Interface flags</b>	Information about the interface. Possible values are described in the “Interface Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels
<b>Shared-interface</b>	Indicates whether the routing domain is the owner or non-owner of the shared interface. If the routing domain is the Root System Domain (RSD), the value is <b>Owner</b> . If the routing domain is a Protected System Domain (PSD) under the RSD, the value is <b>Non-owner</b> .	All levels
<b>Link flags</b>	Information about the link. Possible values are described in the “Link Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels

Table 73: SONET/SDH show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>ANSI or ITU LMI settings</b>	<p>(Frame Relay) Settings for Local Management Interface (LMI). The format is <b>(ANSI or ITU) LMI settings: value, value... xx seconds</b>, where <i>value</i> can be:</p> <ul style="list-style-type: none"> <li>• <b>n391dte</b>—DTE full status polling interval (1-255)</li> <li>• <b>n392dce</b>—DCE error threshold (1-10)</li> <li>• <b>n392dte</b>—DTE error threshold (1-10)</li> <li>• <b>n393dce</b>—DCE monitored event count (1-10)</li> <li>• <b>n393dte</b>—DTE monitored event count (1-10)</li> <li>• <b>t391dte</b>—DTE polling timer (5-30 seconds)</li> <li>• <b>t392dce</b>—DCE polling verification timer (5-30 seconds)</li> </ul>	All levels
<b>LMI</b>	<b>Input: value (hh:mm:ss ago), Output: value (hh:mm:ss ago)</b>	<b>brief none</b>
<b>LMI statistics</b>	<p>(Frame Relay) LMI packet statistics:</p> <ul style="list-style-type: none"> <li>• <b>Input</b>—Number of packets coming in on the interface (<i>nn</i>) and how much time has passed since the last packet arrived. The format is <b>Input: nn (last seen hh:mm:ss ago)</b>.</li> <li>• <b>Output</b>—Number of packets sent out on the interface (<i>nn</i>) and how much time has passed since the last packet was sent. The format is <b>Output: nn (last sent hh:mm:ss ago)</b>.</li> </ul>	<b>detail extensive</b>
<b>DTE statistics</b>	<p>(Frame Relay) Statistics about messages transmitted from the data terminal equipment (DTE) to the data circuit-terminating equipment (DCE):</p> <ul style="list-style-type: none"> <li>• <b>Enquiries sent</b>—Number of link status enquiries sent from the DTE to the DCE.</li> <li>• <b>Full enquiries sent</b>—Number of full enquiries sent from the DTE to the DCE.</li> <li>• <b>Enquiry responses received</b>—Number of enquiry responses received by the DTE from the DCE.</li> <li>• <b>Full enquiry responses received</b>—Number of full enquiry responses sent from the DTE to the DCE.</li> </ul>	<b>detail extensive none</b>
<b>DCE statistics</b>	<p>(Frame Relay) Statistics about messages transmitted from the DCE to the DTE:</p> <ul style="list-style-type: none"> <li>• <b>Enquiries received</b>—Number of enquiries received by the DCE from the DTE.</li> <li>• <b>Full enquiries received</b>—Number of full enquiries received by the DCE from the DTE.</li> <li>• <b>Enquiry responses sent</b>—Number of enquiry responses sent from the DCE to the DTE.</li> <li>• <b>Full enquiry responses sent</b>—Number of full enquiry responses sent from the DCE to the DTE.</li> </ul>	<b>detail extensive none</b>

Table 73: SONET/SDH show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Common statistics</b>	(Frame Relay) Statistics about messages sent between the DTE and the DCE: <ul style="list-style-type: none"> <li>• <b>Unknown messages received</b>—Number of received packets that do not fall into any category.</li> <li>• <b>Asynchronous updates received</b>—Number of link status peer changes received.</li> <li>• <b>Out-of-sequence packets received</b>—Number of packets for which the sequence of the packets received is different from the expected sequence.</li> <li>• <b>Keepalive responses timedout</b>—Number of keepalive responses that timed out when no LMI packet was reported for <b>n392dte</b> or <b>n393dce</b> intervals. (See <b>LMI settings</b>.)</li> </ul>	<b>detail extensive none</b>
<b>Nonmatching DCE-end DLCIs</b>	(Frame Relay. Displayed only from the DTE) Number of DLCIs configured from the DCE.	<b>detail extensive</b>
<b>Hold-times</b>	Current interface hold-time up and hold-time down, in milliseconds.	<b>detail extensive</b>
<b>Keepalive settings</b>	(PPP and HDLC) Configured settings for keepalives. <ul style="list-style-type: none"> <li>• <b>interval seconds</b>—The time in seconds between successive keepalive requests. The range is <b>10</b> seconds through <b>32,767</b> seconds, with a default of <b>10</b> seconds.</li> <li>• <b>down-count number</b>—The number of keepalive packets a destination must fail to receive before the network takes a link down. The range is <b>1</b> through <b>255</b>, with a default of <b>3</b>.</li> <li>• <b>up-count number</b>—The number of keepalive packets a destination must receive to change a link's status from down to up. The range is <b>1</b> through <b>255</b>, with a default of <b>1</b>.</li> </ul>	All levels
<b>Keepalive or Keepalive statistics</b>	(PPP and HDLC) Information about keepalive packets. <ul style="list-style-type: none"> <li>• <b>Input</b>—Number of keepalive packets received by PPP. <ul style="list-style-type: none"> <li>• <b>(last seen 00:00:00 ago)</b>—Time since the last keepalive packet was received, in the format <b>hh:mm:ss</b>.</li> </ul> </li> <li>• <b>Output</b>—Number of keepalive packets sent by PPP and how long ago the last keepalive packets were sent and received. <ul style="list-style-type: none"> <li>• <b>(last seen 00:00:00 ago)</b>—Time since the last keepalive packet was sent, in the format <b>hh:mm:ss</b>.</li> </ul> </li> </ul>	All levels
<b>LCP state</b>	(PPP) Link Control Protocol state. <ul style="list-style-type: none"> <li>• <b>Conf-ack-received</b>—Acknowledgement was received.</li> <li>• <b>Conf-ack-sent</b>—Acknowledgement was sent.</li> <li>• <b>Conf-req-sent</b>—Request was sent.</li> <li>• <b>Down</b>—LCP negotiation is incomplete (not yet completed or has failed).</li> <li>• <b>Not-configured</b>—LCP is not configured on the interface.</li> <li>• <b>Opened</b>—LCP negotiation is successful.</li> </ul>	<b>detail extensive none</b>

Table 73: SONET/SDH show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>NCP state</b>	(PPP) Network Control Protocol state. <ul style="list-style-type: none"> <li>• <b>Conf-ack-received</b>—Acknowledgement was received.</li> <li>• <b>Conf-ack-sent</b>—Acknowledgement was sent.</li> <li>• <b>Conf-req-sent</b>—Request was sent.</li> <li>• <b>Down</b>—NCP negotiation is incomplete (not yet completed or has failed).</li> <li>• <b>Not-configured</b>—NCP is not configured on the interface.</li> <li>• <b>Opened</b>—NCP negotiation is successful.</li> </ul>	<b>detail extensive none</b>
<b>CHAP state</b>	(PPP) Displays the state of the Challenge Handshake Authentication Protocol (CHAP) during its transaction. <ul style="list-style-type: none"> <li>• <b>Chap-Chal-received</b>—Challenge was received but response not yet sent.</li> <li>• <b>Chap-Chal-sent</b>—Challenge was sent.</li> <li>• <b>Chap-Resp-received</b>—Response was received for the challenge sent, but CHAP has not yet moved into the <b>Success</b> state. (Most likely with RADIUS authentication.)</li> <li>• <b>Chap-Resp-sent</b>—Response was sent for the challenge received.</li> <li>• <b>Closed</b>—CHAP authentication is incomplete.</li> <li>• <b>Failure</b>—CHAP authentication failed.</li> <li>• <b>Not-configured</b>—CHAP is not configured on the interface.</li> <li>• <b>Success</b>—CHAP authentication was successful.</li> </ul>	<b>detail extensive none</b>
<b>CoS queues</b>	Number of CoS queues configured.	<b>detail extensive none</b>
<b>Last flapped</b>	Date, time, and how long ago the interface went from down to up. The format is <b>Last flapped: year-month-day hour:minute:second timezone (hour:minute:second ago)</b> . For example, <b>Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> .	<b>detail extensive none</b>
<b>Input rate</b>	Input rate in bits per second (bps) and packets per second (pps).	None specified
<b>Output rate</b>	Output rate in bps and pps.	None specified
<b>Statistics last cleared</b>	Time when the statistics for the interface were last set to zero.	<b>detail extensive</b>
<b>Traffic statistics</b>	Number of bytes and packets received and transmitted on the physical interface, and the traffic rate in bits per seconds (bps). <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>	<b>detail extensive</b>

Table 73: SONET/SDH show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
Label-switched interface (LSI) traffic statistics	(Frame Relay) LSI traffic statistics: <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes and speed, in bits per second (bps), received on the interface.</li> <li>• <b>Output packets</b>—Number of packets and speed, in bps, transmitted on the interface.</li> </ul>	extensive
Input errors	Input errors on the interface whose definitions are as follows: <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of the incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Runts</b>—Number of frames received that are smaller than the runt threshold.</li> <li>• <b>Giants</b>—Number of frames received that are larger than the giant threshold.</li> <li>• <b>Bucket Drops</b>—Drops resulting from the traffic load exceeding the interface transmit/receive leaky bucket configuration. The default is <b>off</b>.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that the Junos OS does not handle.</li> <li>• <b>L3 incompletes</b>—Number of incoming packets discarded because they failed Layer 3 (usually IPv4) sanity checks of the header. For example, a frame with less than 20 bytes of available IP header is discarded.</li> <li>• <b>L2 channel errors</b>—Number of times the software did not find a valid logical interface for an incoming frame.</li> <li>• <b>L2 mismatch timeouts</b>—Number of malformed or short packets that caused the incoming packet handler to discard the frame as unreadable.</li> <li>• <b>HS link CRC errors</b>—Number of errors on the high-speed links between the ASICs responsible for handling the router interfaces.</li> <li>• <b>HS link FIFO overflows</b>—Number of FIFO overflows on the high-speed links between the ASICs responsible for handling the router interfaces.</li> </ul>	extensive

Table 73: SONET/SDH show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Output errors</b>	<p>Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and up, or another problem occurs. If the number of carrier transitions increments quickly (perhaps once every 10 seconds), the cable, the far-end system, or the PIC is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Aged packets</b>—Number of packets that remained in shared packet SDRAM so long that the system automatically purged them. The value in this field should never increment. If it does, it is most likely a software bug or possibly malfunctioning hardware.</li> <li>• <b>HS link FIFO underflows</b>—Number of FIFO underflows on the high-speed links between the ASICs responsible for handling the router interfaces.</li> <li>• <b>MTU errors</b>—Number of packets whose size exceeds the MTU of the interface.</li> </ul>	<b>extensive</b>
<b>IPv6 transit statistics</b>	<p>Number of transit bytes and packets received and transmitted on the physical interface if IPv6 statistics tracking is enabled.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>	<b>detail extensive</b>
<b>Egress queues</b>	Total number of egress queues supported on the specified interface.	<b>detail extensive</b>
<b>Queue counters</b>	<p>CoS queue number and its associated user-configured forwarding class name.</p> <ul style="list-style-type: none"> <li>• <b>Queued packets</b>—Number of queued packets.</li> <li>• <b>Transmitted packets</b>—Number of transmitted packets.</li> <li>• <b>Dropped packets</b>—Number of packets dropped by the ASIC's RED mechanism.</li> </ul>	<b>extensive</b>
<b>SONET alarms</b> <b>SONET defects</b>	(SONET) SONET media-specific alarms and defects that prevents the interface from passing packets. When a defect persists for a certain period, it is promoted to an alarm. Based on the router configuration, an alarm can ring the red or yellow alarm bell on the router or light the red or yellow alarm LED on the craft interface. See these fields for possible alarms and defects: <b>SONET PHY</b> , <b>SONET section</b> , <b>SONET line</b> , and <b>SONET path</b> .	All levels
<b>Link</b>	(For 4-port OC192c PIC operating in OC768-over-4xOC192 mode) The link number. Errors and alarms are displayed for each link.	<b>extensive</b>

Table 73: SONET/SDH show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>SONET PHY</b>	<p>Counts of specific SONET errors with detailed information.</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. State other than <b>OK</b> indicates a problem.</li> </ul> <p>Subfields are:</p> <ul style="list-style-type: none"> <li>• <b>PLL Lock</b>—Phase-locked loop</li> <li>• <b>PHY Light</b>—Loss of optical signal</li> </ul>	<b>extensive</b>
<b>SONET section</b>	<p>Counts of specific SONET errors with detailed information.</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. State other than <b>OK</b> indicates a problem.</li> </ul> <p>Subfields are:</p> <ul style="list-style-type: none"> <li>• <b>BIP-B1</b>—Bit interleaved parity for SONET section overhead</li> <li>• <b>SEF</b>—Severely errored framing</li> <li>• <b>LOL</b>—Loss of light</li> <li>• <b>LOF</b>—Loss of frame</li> <li>• <b>ES-S</b>—Errored seconds (section)</li> <li>• <b>SES-S</b>—Severely errored seconds (section)</li> <li>• <b>SEFS-S</b>—Severely errored framing seconds (section)</li> </ul>	<b>extensive</b>
<b>SONET line</b>	<p>Active alarms and defects, plus counts of specific SONET errors with detailed information.</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. State other than <b>OK</b> indicates a problem.</li> </ul> <p>Subfields are:</p> <ul style="list-style-type: none"> <li>• <b>BIP-B2</b>—Bit interleaved parity for SONET line overhead</li> <li>• <b>REI-L</b>—Remote error indication (near-end line)</li> <li>• <b>RDI-L</b>—Remote defect indication (near-end line)</li> <li>• <b>AIS-L</b>—Alarm indication signal (near-end line)</li> <li>• <b>BERR-SF</b>—Bit error rate fault (signal failure)</li> <li>• <b>BERR-SD</b>—Bit error rate defect (signal degradation)</li> <li>• <b>ES-L</b>—Errored seconds (near-end line)</li> <li>• <b>SES-L</b>—Severely errored seconds (near-end line)</li> <li>• <b>UAS-L</b>—Unavailable seconds (near-end line)</li> <li>• <b>ES-LFE</b>—Errored seconds (far-end line)</li> <li>• <b>SES-LFE</b>—Severely errored seconds (far-end line)</li> <li>• <b>UAS-LFE</b>—Unavailable seconds (far-end line)</li> </ul>	<b>extensive</b>

Table 73: SONET/SDH show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>SONET path</b>	<p>Active alarms and defects, plus counts of specific SONET errors with detailed information.</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. State other than <b>OK</b> indicates a problem.</li> </ul> <p>Subfields are:</p> <ul style="list-style-type: none"> <li>• <b>BIP-B3</b>—Bit interleaved parity for SONET section overhead</li> <li>• <b>REI-P</b>—Remote error indication</li> <li>• <b>LOP-P</b>—Loss of pointer (path)</li> <li>• <b>AIS-P</b>—Path alarm indication signal</li> <li>• <b>RDI-P</b>—Path remote defect indication</li> <li>• <b>UNEQ-P</b>—Path unequipped</li> <li>• <b>PLM-P</b>—Path payload (signal) label mismatch</li> <li>• <b>ES-P</b>—Errored seconds (near-end STS path)</li> <li>• <b>SES-P</b>—Severely errored seconds (near-end STS path)</li> <li>• <b>UAS-P</b>—Unavailable seconds (near-end STS path)</li> <li>• <b>ES-PFE</b>—Errored seconds (far-end STS path)</li> <li>• <b>SES-PFE</b>—Severely errored seconds (far-end STS path)</li> <li>• <b>UAS-PFE</b>—Unavailable seconds (far-end STS path)</li> </ul>	<b>extensive</b>
<b>Received SONET overhead</b>  <b>Transmitted SONET overhead</b>	<p>Values of the received and transmitted SONET overhead:</p> <ul style="list-style-type: none"> <li>• <b>C2</b>—Signal label. Allocated to identify the construction and content of the STS-level SPE and for PDI-P.</li> <li>• <b>F1</b>—Section user channel byte. This byte is set aside for the purposes of users.</li> <li>• <b>K1 and K2</b>—These bytes are allocated for APS signaling for the protection of the multiplex section.</li> <li>• <b>J0</b>—Section trace. This byte is defined for STS-1 number 1 of an STS-<i>N</i> signal. Used to transmit a 1-byte fixed-length string or a 16-byte message so that a receiving terminal in a section can verify its continued connection to the intended transmitter.</li> <li>• <b>S1</b>—Synchronization status. The S1 byte is located in the first STS-1 of an STS-<i>N</i>.</li> <li>• <b>Z3 and Z4</b>—Allocated for future use.</li> </ul>	<b>extensive</b>
<b>SDH alarms</b>  <b>SDH defects</b>	<p>SDH media-specific defects that can prevent the interface from passing packets. When a defect persists for a certain period, it is promoted to an alarm. Based on the router configuration, an alarm can ring the red or yellow alarm bell on the router or light the red or yellow alarm LED on the craft interface. See these fields for possible alarms and defects: <b>SDH PHY</b>, <b>SDH regenerator section</b>, <b>SDH multiplex section</b>, and <b>SDH path</b>.</p>	All levels

Table 73: SONET/SDH show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
SDH PHY	<p>Active alarms and defects, plus counts of specific SDH errors with detailed information.</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. State other than <b>OK</b> indicates a problem.</li> </ul> <p>Subfields are:</p> <ul style="list-style-type: none"> <li>• <b>PLL Lock</b>—Phase-locked loop</li> <li>• <b>PHY Light</b>—Loss of optical signal</li> </ul>	extensive
SDH regenerator section	<p>Active alarms and defects, plus counts of specific SDH errors with detailed information.</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. State other than <b>OK</b> indicates a problem.</li> </ul> <p>Subfields are:</p> <ul style="list-style-type: none"> <li>• <b>RS-BIP8</b>—24-bit BIP for multiplex section overhead (B2 bytes)</li> <li>• <b>OOF</b>—Out of frame</li> <li>• <b>LOS</b>—Loss of signal</li> <li>• <b>LOF</b>—Loss of frame</li> <li>• <b>RS-ES</b>—Errored seconds (near-end regenerator section)</li> <li>• <b>RS-SES</b>—Severely errored seconds (near-end regenerator section)</li> <li>• <b>RS-SEFS</b>—Severely errored framing seconds (regenerator section)</li> </ul>	extensive
SDH multiplex section	<p>Active alarms and defects, plus counts of specific SDH errors with detailed information.</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. State other than <b>OK</b> indicates a problem.</li> </ul> <p>Subfields are:</p> <ul style="list-style-type: none"> <li>• <b>MS-BIP24</b>—8-bit BIP for high-order path overhead (B3 byte)</li> <li>• <b>MS-FEBE</b>—Far-end block error (multiplex section)</li> <li>• <b>MS-FERF</b>—Far-end remote fail (multiplex section)</li> <li>• <b>MS-AIS</b>—Alarm indication signal (multiplex section)</li> <li>• <b>BERR-SF</b>—Bit error rate fault (signal failure)</li> <li>• <b>BERR-SD</b>—Bit error rate defect (signal degradation)</li> <li>• <b>MS-ES</b>—Errored seconds (near-end multiplex section)</li> <li>• <b>MS-SES</b>—Severely errored seconds (near-end multiplex section)</li> <li>• <b>MS-UAS</b>—Unavailable seconds (near-end multiplex section)</li> <li>• <b>MS-ES-FE</b>—Errored seconds (far-end multiplex section)</li> <li>• <b>MS-SES-FE</b>—Severely errored seconds (far-end multiplex section)</li> <li>• <b>MS-UAS-FE</b>—Unavailable seconds (far-end multiplex section)</li> </ul>	extensive

Table 73: SONET/SDH show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>SDH path</b>	<p>Active alarms and defects, plus counts of specific SDH errors with detailed information.</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. State other than <b>OK</b> indicates a problem.</li> </ul> <p>Subfields are:</p> <ul style="list-style-type: none"> <li>• <b>HP-BIP8</b>—8-bit BIP for regenerator section overhead (B1 byte)</li> <li>• <b>HP-FEBE</b>—Far-end block error (high-order path)</li> <li>• <b>HP-LOP</b>—Loss of pointer (high-order path)</li> <li>• <b>HP-AIS</b>—High-order-path alarm indication signal</li> <li>• <b>HP-FERF</b>—Far-end remote fail (high-order path)</li> <li>• <b>HP-UNEQ</b>—Unequipped (high-order path)</li> <li>• <b>HP-PLM</b>—Payload label mismatch (high-order path)</li> <li>• <b>HP-ES</b>—Errored seconds (near-end high-order path)</li> <li>• <b>HP-SES</b>—Severely errored seconds (near-end high-order path)</li> <li>• <b>HP-UAS</b>—Unavailable seconds (near-end high-order path)</li> <li>• <b>HP-ES-FE</b>—Errored seconds (far-end high-order path)</li> <li>• <b>HP-SES-FE</b>—Severely errored seconds (far-end high-order path)</li> <li>• <b>HP-UAS-FE</b>—Unavailable seconds (far-end high-order path)</li> </ul>	<b>extensive</b>
<b>Received SDH overhead</b>  <b>Transmitted SDH overhead</b>	<p>Values of the received and transmitted SONET overhead:</p> <ul style="list-style-type: none"> <li>• <b>C2</b>—Signal label. Allocated to identify the construction and content of the STS-level SPE and for PDI-P.</li> <li>• <b>F1</b>—Section user channel byte. This byte is set aside for the purposes of users.</li> <li>• <b>K1 and K2</b>—These bytes are allocated for APS signaling for the protection of the multiplex section.</li> <li>• <b>J0</b>—Section trace. This byte is defined for STS-1 number 1 of an STS-<i>N</i> signal. Used to transmit a 1-byte fixed-length string or a 16-byte message so that a receiving terminal in a section can verify its continued connection to the intended transmitter.</li> <li>• <b>S1</b>—Synchronization status. The S1 byte is located in the first STS-1 of an STS-<i>N</i>.</li> <li>• <b>Z3 and Z4</b>—Allocated for future use.</li> </ul>	<b>extensive</b>
<b>Received path trace</b>  <b>Transmitted path trace</b>	<p>SONET/SDH interfaces allow path trace bytes to be sent inband across the SONET/SDH link. Juniper Networks and other router manufacturers use these bytes to help diagnose misconfigurations and network errors by setting the transmitted path trace message so that it contains the system hostname and name of the physical interface. The received path trace value is the message received from the router at the other end of the fiber. The transmitted path trace value is the message that this router transmits.</p>	<b>extensive</b>

Table 73: SONET/SDH show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>HDLC configuration</b>	Information about the HDLC configuration. <ul style="list-style-type: none"> <li>• <b>Policing bucket</b>—Configured state of the receiving policer.</li> <li>• <b>Shaping bucket</b>—Configured state of the transmitting shaper.</li> <li>• <b>Giant threshold</b>—Giant threshold programmed into the hardware.</li> <li>• <b>Runt threshold</b>—Runt threshold programmed into the hardware.</li> </ul>	<b>extensive</b>
<b>CoS information</b>	Information about the CoS queue for the physical interface. <ul style="list-style-type: none"> <li>• <b>CoS transmit queue</b>—Queue number and its associated user-configured forwarding class name.</li> <li>• <b>Bandwidth %</b>—Percentage of bandwidth allocated to the queue.</li> <li>• <b>Bandwidth bps</b>—Bandwidth allocated to the queue (in bps).</li> <li>• <b>Buffer %</b>—Percentage of buffer space allocated to the queue.</li> <li>• <b>Buffer usec</b>—Amount of buffer space allocated to the queue, in microseconds. This value is nonzero only if the buffer size is configured in terms of time.</li> <li>• <b>Priority</b>—Queue priority: <b>low</b> or <b>high</b>.</li> <li>• <b>Limit</b>—Displayed if rate limiting is configured for the queue. Possible values are <b>none</b> and <b>exact</b>. If <b>exact</b> is configured, the queue transmits only up to the configured bandwidth, even if excess bandwidth is available. If <b>none</b> is configured, the queue transmits beyond the configured bandwidth if bandwidth is available.</li> </ul>	<b>extensive</b>
<b>Packet Forwarding Engine configuration</b>	Information about the configuration of the Packet Forwarding Engine: <ul style="list-style-type: none"> <li>• <b>Destination slot</b>—FPC slot number.</li> <li>• <b>PLP byte</b>—Packet Level Protocol byte.</li> </ul>	<b>extensive</b>
<b>Logical Interface</b>		
<b>Logical interface</b>	Name of the logical interface.	All levels
<b>Index</b>	Logical interface index number, which reflects its initialization sequence.	<b>detail extensive none</b>
<b>SNMP ifIndex</b>	Logical interface SNMP interface index number.	<b>detail extensive none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Flags</b>	Information about the logical interface. Possible values are described in the "Logical Interface Flags" section under <a href="#">"Common Output Fields Description" on page 1114</a> .	All levels
<b>Encapsulation</b>	Encapsulation on the logical interface.	All levels
<b>PPP parameters</b>	The PPP loopback clear timer value.	<b>extensive</b>

Table 73: SONET/SDH show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Shared interface</b>	Provides the following information: <ul style="list-style-type: none"> <li><b>shared with</b>—(RSD only) Indicates which PSD owns the logical shared interface. For example, <b>psd3</b>.</li> <li><b>peer interface</b>—(PSD only) Lists the logical tunnel interface that peers with the logical shared interface. For example, <b>ut-2/1/0.2</b>.</li> <li><b>tunnel token</b>—Specifies the receive (RX) and transmit (TX) tunnel tokens. For example, <b>Rx: 5.519, Tx: 13.514</b>.</li> </ul>	All levels
<b>Input packets</b>	Number of packets received on the logical interface.	None specified
<b>Output packets</b>	Number of packets transmitted on the logical interface.	None specified
<b>Traffic statistics</b>	Total number of bytes and packets received and transmitted on the logical interface. These statistics are the sum of the local and transit statistics. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. It takes awhile (generally, less than 1 second) for this counter to stabilize.	<b>detail extensive</b>
<b>Local statistics</b>	Statistics for traffic received from and transmitted to the Routing Engine. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. It takes awhile (generally, less than 1 second) for this counter to stabilize.	<b>detail extensive</b>
<b>Transit statistics</b>	Statistics for traffic transiting the router. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. It takes awhile (generally, less than 1 second) for this counter to stabilize.	<b>detail extensive</b>
<b>Protocol</b>	Protocol family configured on the logical interface, such as <b>iso</b> , <b>inet6</b> , or <b>mpls</b> .	<b>detail extensive none</b>
<b>protocol-family</b>	Protocol family configured on the logical interface. If the protocol is <b>inet</b> , the IP address of the interface is also displayed.	<b>brief</b>
<b>Multilink bundle</b>	(If the logical interface is configured as part of a multilink bundle.) Interface name for the multilink bundle.	<b>detail extensive none</b>
<b>AS bundle</b>	(If the logical interface is configured as part of an aggregated SONET bundle.) AS bundle number.	<b>detail extensive</b>
<b>MTU</b>	MTU size on the logical interface.	<b>detail extensive none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Route table</b>	Routing table in which the logical interface address is located. For example, <b>0</b> refers to the routing table <b>inet.0</b> .	<b>detail extensive</b>
<b>Flags</b>	Information about the protocol family flags. Possible values are described in the “Family Flags” section under “ <a href="#">Common Output Fields Description</a> ” on <a href="#">page 1114</a> .	<b>detail extensive none</b>

Table 73: SONET/SDH show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Addresses, Flags</b>	Information about the address flags. Possible values are described in the “Addresses Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	<b>detail extensive none</b>
<b>Destination</b>	IP address of the remote side of the connection.	<b>detail extensive none</b>
<b>Local</b>	IP address of the logical interface.	<b>detail extensive none</b>
<b>Broadcast</b>	Broadcast address of the interface.	<b>detail extensive none</b>
<b>DLCI</b>	(Frame Relay) DLCI number of the logical interface. The following DLCI information is displayed: <b>Flags</b> , <b>Total down time</b> , <b>Last down</b> , and <b>Traffic statistics</b> . <b>Flags</b> is one or more of the following: <ul style="list-style-type: none"> <li>• <b>Active</b>—Set when the link is active and the DTE and DCE are exchanging information.</li> <li>• <b>Down</b>—Set when the link is active, but no information is received from the DCE.</li> <li>• <b>Unconfigured</b>—Set when the corresponding DLCI in the DCE is not configured.</li> <li>• <b>Configured</b>—Set when the corresponding DLCI in the DCE is configured.</li> <li>• <b>Dce-configured</b>—Displayed when the command is issued from the DTE.</li> </ul>	<b>detail extensive</b>
<b>DLCI statistics</b>	(Frame Relay) Data-link connection identifier (DLCI) statistics. <ul style="list-style-type: none"> <li>• <b>Active DLCI</b>—Number of active DLCIs.</li> <li>• <b>Inactive DLCI</b>—Number of inactive DLCIs.</li> </ul>	<b>detail extensive none</b>

## Sample Output

### show interfaces (SDH Mode, PPP)

```

user@host> show interfaces so-0/0/0
Physical interface: so-0/0/0, Enabled, Physical link is Up
  Interface index: 149, SNMP ifIndex: 66
  Link-level type: PPP, MTU: 4474, Clocking: Internal, SDH mode, Speed: OC3,
  Loopback: None, FCS: 16, Payload scrambler: Enabled
  Device flags   : Present Running
  Interface flags: Point-To-Point SNMP-Traps Internal: 0x4000
  Link flags     : Keepalives

### show interfaces detail (IPv6 Tracking)

```

user@host> show interfaces so-0/2/0 detail
Physical interface: so-0/2/0, Enabled, Physical link is Up
  Interface index: 130, SNMP ifIndex: 26, Generation: 131
  Link-level type: PPP, MTU: 4474, Clocking: Internal, SONET mode,
Speed: OC3,
  Loopback: None, FCS: 16, Payload scrambler: Enabled
  Device flags : Present Running
  Interface flags: Point-To-Point SNMP-Traps Internal: 0x4000
  Link flags : Keepalives
  Hold-times : Up 0 ms, Down 0 ms
  Keepalive settings: Interval 10 seconds, Up-count 1, Down-count 3
  Keepalive statistics:
    Input : 7 (last seen 00:00:01 ago)
    Output: 6 (last sent 00:00:08 ago)
  LCP state: Opened

```

```

NCP state: inet: Not-configured, inet6: Opened, iso: Not- configured, mpls:
Not-configured
CHAP state: Closed
PAP state: Closed
CoS queues      : 4 supported, 4 maximum usable queues
Last flapped    : 2007-11-29 08:45:47 PST (1d 03:44 ago)
Statistics last cleared: Never
Traffic statistics:
  Input bytes   :          7407782          40 bps
  Output bytes  :          7307322          48 bps
  Input packets :          107570           0 pps
  Output packets:          108893           0 pps
IPv6 transit statistics:
  Input bytes   :          57328
  Output bytes  :          57400
  Input packets :           1024
  Output packets:           1025
Egress queues: 4 supported, 4 in use
Queue counters:      Queued packets  Transmitted packets  Dropped packets
0 best-effort        1191             1191                 0

Last flapped    : 2008-08-11 10:51:51 PDT (1w1d 04:47 ago)
Input rate      : 0 bps (0 pps)
Output rate     : 0 bps (0 pps)
SONET alarms    : LOL, PLL
SONET defects   : LOL, PLL, LOF, SEF, AIS-L, AIS-P

Logical interface so-7/2/0.0 (Index 67) (SNMP ifIndex 117)
Flags: Device-Down Point-To-Point SNMP-Traps 0x4000 Encapsulation: FR-NLPID
Shared interface:
  Shared with: psd5
  Tunnel token: Rx: 2.517, Tx: 1.517
Input packets : 0
Output packets: 0
DLCI 700
  Flags: Active
  Total down time: 00:01:09 sec, Last down: 284:58:21 ago
    Input packets : 0
    Output packets: 0
DLCI statistics:
  Active DLCI  :1  Inactive DLCI  :0
```

## show interfaces (Serial)

**Syntax** `show interfaces interface-type`  
`<brief | detail | extensive | terse>`  
`<descriptions>`  
`<media>`  
`<snmp-index snmp-index>`  
`<statistics>`

**Release Information** Command introduced before Junos OS Release 7.4.

**Description** Display status information about serial interfaces, including RS-232, RS-422/449, EIA-530, X.21, and V.35.

**Options** *interface-type*—On M Series and T Series routers, the interface type is *se-fpc/pic/port*.

**brief | detail | extensive | terse**—(Optional) Display the specified level of output.

**descriptions**—(Optional) Display interface description strings.

**media**—(Optional) Display media-specific information about network interfaces.

**snmp-index *snmp-index***—(Optional) Display information for the specified SNMP index of the interface.

**statistics**—(Optional) Display static interface statistics.

**Required Privilege Level** view

**List of Sample Output** [show interfaces \(Serial, EIA-530\) on page 1500](#)  
[show interfaces brief \(Serial, EIA-530\) on page 1500](#)  
[show interfaces detail \(Serial, EIA-530\) on page 1501](#)  
[show interfaces extensive \(Serial, EIA-530\) on page 1501](#)  
[show interfaces \(Serial, V.35\) on page 1502](#)  
[show interfaces brief \(Serial, V.35\) on page 1503](#)  
[show interfaces detail \(Serial, V.35\) on page 1503](#)  
[show interfaces extensive \(Serial, V.35\) on page 1504](#)  
[show interfaces statistics detail \(RS 449\) on page 1505](#)

**Output Fields** [Table 74 on page 1494](#) lists the output fields for the **show interfaces (Serial)** command. Output fields are listed in the approximate order in which they appear.

*Table 74: show interfaces (Serial) Output Fields*

Field Name	Field Description	Level of Output
Physical Interface		
Physical interface	Name of the physical interface.	All levels

Table 74: *show interfaces (Serial) Output Fields (continued)*

Field Name	Field Description	Level of Output
<b>Enabled</b>	State of the interface. Possible values are described in the “Enabled Field” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels
<b>Interface index</b>	Physical interface's index number, which reflects its initialization sequence.	<b>detail extensive none</b>
<b>SNMP ifIndex</b>	SNMP index number for the physical interface.	<b>detail extensive none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Type</b>	Type of interface.	All levels
<b>Link-level type</b>	Encapsulation being used on the physical interface.	All levels
<b>MTU</b>	Maximum transmission unit (MTU) size on the physical interface.	All levels
<b>Maximum speed</b>	Maximum speed. The nonconfigurable value is 16,384 kbps.	<b>detail extensive none</b>
<b>Device flags</b>	Information about the physical device. Possible values are described in the “Device Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels
<b>Interface flags</b>	Information about the interface. Possible values are described in the “Interface Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels
<b>Link flags</b>	Information about the link. Possible values are described in the “Link Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels
<b>Hold-times</b>	Current interface hold-time up and hold-time down, in milliseconds.	<b>detail extensive</b>
<b>Keepalive settings</b>	(PPP and HDLC) Configured settings for keepalive packets. <ul style="list-style-type: none"> <li><b>Interval <i>seconds</i></b>—Time between successive keepalive requests. The range of values, in seconds, is 10 to 32,767. The default value is 10.</li> <li><b>Up-count <i>number</i></b>—Number of keepalive packets a destination must receive to change a link's status from down to up. The range of values is 1 to 255. The default value is 1.</li> <li><b>Down-count <i>number</i></b>—Number of keepalive packets a destination must fail to receive before the network takes a link down. The range is 1 to 255. The default value is 3.</li> </ul>	All levels
<b>Keepalive</b>	(PPP and HDLC) Information about keepalive packets. <ul style="list-style-type: none"> <li><b>Input: <i>number (hh:mm:ss ago)</i></b>—Number of keepalive packets received by PPP and the time since the last keepalive packet was received.</li> <li><b>Output: <i>number (hh:mm:ss ago)</i></b>—Number of keepalive packets sent by PPP and the time since the last keepalive packet was sent.</li> </ul>	<b>brief none</b>

Table 74: show interfaces (Serial) Output Fields (continued)

Field Name	Field Description	Level of Output
Keepalive statistics	(PPP and HDLC) Information about keepalive packets. <ul style="list-style-type: none"> <li>• <b>Input:</b> <i>number (last seen hh:mm:ss ago)</i>—Number of keepalive packets received by PPP and the time since the last keepalive packet was received.</li> <li>• <b>Output:</b> <i>number (last seen hh:mm:ss ago)</i>—Number of keepalive packets sent by PPP and the time since the last keepalive packet was sent.</li> </ul>	detail extensive
LCP state	(PPP) Link Control Protocol state. <ul style="list-style-type: none"> <li>• <b>Conf-ack-received</b>—Acknowledgement was received.</li> <li>• <b>Conf-ack-sent</b>—Acknowledgement was sent.</li> <li>• <b>Conf-req-sent</b>—Request was sent.</li> <li>• <b>Down</b>—LCP negotiation is incomplete (not yet completed or has failed).</li> <li>• <b>Not-configured</b>—LCP is not configured on the interface.</li> <li>• <b>Opened</b>—LCP negotiation is successful.</li> </ul>	detail extensive none
NCP state	(PPP) Network Control Protocol state. <ul style="list-style-type: none"> <li>• <b>Conf-ack-received</b>—Acknowledgement was received.</li> <li>• <b>Conf-ack-sent</b>—Acknowledgement was sent.</li> <li>• <b>Conf-req-sent</b>—Request was sent.</li> <li>• <b>Down</b>—NCP negotiation is incomplete (not yet completed or has failed).</li> <li>• <b>Not-configured</b>—NCP is not configured on the interface.</li> <li>• <b>Opened</b>—NCP negotiation is successful.</li> </ul>	detail extensive none
CHAP state	(PPP) Displays the state of the Challenge Handshake Authentication Protocol (CHAP) during its transaction. <ul style="list-style-type: none"> <li>• <b>Chap-Chal-received</b>—Challenge was received but response not yet sent.</li> <li>• <b>Chap-Chal-sent</b>—Challenge was sent.</li> <li>• <b>Chap-Resp-received</b>—Response was received for the challenge sent, but CHAP has not yet moved into the Success state. (Most likely with RADIUS authentication.)</li> <li>• <b>Chap-Resp-sent</b>—Response was sent for the challenge received.</li> <li>• <b>Closed</b>—CHAP authentication is incomplete.</li> <li>• <b>Failure</b>—CHAP authentication failed.</li> <li>• <b>Not-configured</b>—CHAP is not configured on the interface.</li> <li>• <b>Success</b>—CHAP authentication was successful.</li> </ul>	detail extensive none
CoS queues	Number of CoS queues configured.	detail extensive none
Last flapped	Date, time, and how long ago the interface went from down to up. The format is <b>Last flapped: year-month-day hour:minute:second timezone (hour:minute:second ago)</b> . For example, <b>Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> .	detail extensive none
Input Rate	Input rate in bits per second (bps) and packets per second (pps).	None specified
Output Rate	Output rate in bps and pps.	None specified

Table 74: show interfaces (Serial) Output Fields (continued)

Field Name	Field Description	Level of Output
Statistics last cleared	Time when the statistics for the interface were last set to zero.	detail extensive
Traffic statistics	<p>Number and rate of bytes and packets received and transmitted on the physical interface.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>	detail extensive
Input errors	<p>Input errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of the incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Runts</b>—Number of frames received that are smaller than the runt threshold.</li> <li>• <b>Giants</b>—Number of frames received that are larger than the giant threshold.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that the Junos OS does not handle.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>	extensive
Output errors	<p>Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and up, or another problem occurs. If the number of carrier transitions increments quickly (perhaps once every 10 seconds), the cable, the far-end system, or the PIC is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>MTU errors</b>—Number of packets whose size exceeds the MTU of the interface.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>	extensive
Egress queues supported	Total number of egress queues supported on the specified interface. Displayed with the <b>statistics</b> option.	detail extensive
Egress queues in use	Total number of egress queues in use on the specified interface. Displayed with the <b>statistics</b> option.	detail extensive

Table 74: *show interfaces (Serial) Output Fields (continued)*

Field Name	Field Description	Level of Output
<b>Queue counters</b>	CoS queue number and its associated user-configured forwarding class name. Displayed with the <b>statistics</b> option. <ul style="list-style-type: none"> <li><b>Queued packets</b>—Number of queued packets.</li> <li><b>Transmitted packets</b>—Number of transmitted packets.</li> <li><b>Dropped packets</b>—Number of packets dropped by the ASIC's RED mechanism.</li> </ul>	<b>detail extensive</b>
<b>Serial media information</b>	Information about the physical media: <ul style="list-style-type: none"> <li><b>Line protocol</b>—<b>eia530</b>, <b>eia530a</b>, <b>rs232</b>, <b>rs449</b>, <b>v.35</b>, or <b>x.21</b>.</li> <li><b>Resync history</b>—Information about resynchronization events: <ul style="list-style-type: none"> <li><b>Sync loss count</b>—Number of times the synchronization was lost.</li> </ul> </li> <li><b>Data signal</b>—(X.21 and V.35) Information about the data signal: <ul style="list-style-type: none"> <li><b>Rx Clock</b>—Receive clock status: OK (DTE is receiving the receive clock signal) or Not detected (receive clock signal is not being received).</li> </ul> </li> <li><b>Control signals</b>—Information about modem control signals: <ul style="list-style-type: none"> <li><b>Local mode</b>: DCE (data communication equipment) or DTE (data terminal equipment)</li> <li><b>To DCE</b>—Control signals that the Serial PIC sent to the DCE: DTR (Data Terminal Ready: <b>up</b> or <b>down</b>) or RTS (Request To Send: <b>up</b> or <b>down</b>.)</li> <li><b>From DC</b>—Control signals that the Serial PIC received from the DCE: CTS (Clear To Send: <b>up</b> or <b>down</b>), DCD (Data Carrier Detect: <b>up</b> or <b>down</b>), DSR (Data Set Ready: <b>up</b> or <b>down</b>), or TM (Test Mode: <b>up</b> or <b>down</b>).</li> </ul> </li> <li><b>Clocking mode</b>—Clocking used for the transmit clock: <ul style="list-style-type: none"> <li><b>dte</b>—Transmit clock is generated by DTE.</li> <li><b>dce</b>—Transmit clock is generated by the DCE and is looped back as the transmit clock.</li> <li><b>loop-timed</b>—Receive clock from the DCE is looped back as the transmit clock.</li> </ul> </li> <li><b>Clock rate</b>—Rate, in megahertz (MHz), at which the clock is configured.</li> <li><b>Loopback</b>—Configured loopback mode for the interface: <b>dce-remote</b>, <b>dce-local</b>, <b>liu</b>, <b>local</b>, or <b>none</b>.</li> <li><b>Tx clock</b>—Clocking phase of the transmit clock: <b>invert</b> (transmit clock polarity is inverted) or <b>non-invert</b> (transmit clock polarity is not inverted).</li> <li><b>Line encoding</b>—Type of line encoding used: <b>nrz</b> (nonreturn to zero) or <b>nrzi</b> (return to zero inverted).</li> </ul>	<b>detail extensive</b>
<b>Packet Forwarding Engine configuration</b>	Information about the configuration of the Packet Forwarding Engine: <ul style="list-style-type: none"> <li><b>Destination slot</b>—FPC slot number.</li> <li><b>PLP byte</b>—Packet Level Protocol byte.</li> </ul>	<b>extensive</b>

Table 74: *show interfaces (Serial) Output Fields (continued)*

Field Name	Field Description	Level of Output
<b>CoS information</b>	Information about the CoS queue for the physical interface: <ul style="list-style-type: none"> <li>• <b>CoS transmit queue</b>—Queue number and its associated user-configured forwarding class name.</li> <li>• <b>Bandwidth %</b>—Percentage of bandwidth allocated to the queue.</li> <li>• <b>Bandwidth bps</b>—Bandwidth allocated to the queue (in bps).</li> <li>• <b>Buffer %</b>—Percentage of buffer space allocated to the queue.</li> <li>• <b>Buffer usec</b>—Amount of buffer space allocated to the queue, in microseconds. This value is nonzero only if the buffer size is configured in terms of time.</li> <li>• <b>Priority</b>—Queue priority: <b>low</b> or <b>high</b>.</li> <li>• <b>Limit</b>—Displayed if rate limiting is configured for the queue. Possible values are <b>none</b> and <b>exact</b>. If <b>exact</b> is configured, the queue transmits only up to the configured bandwidth, even if excess bandwidth is available. If <b>none</b> is configured, the queue transmits beyond the configured bandwidth if bandwidth is available.</li> </ul>	<b>extensive</b>
<b>Logical Interface</b>		
<b>Logical interface</b>	Name of the logical interface.	All levels
<b>Index</b>	Logical interface index number, which reflects its initialization sequence.	<b>detail extensive none</b>
<b>SNMP ifIndex</b>	Logical interface SNMP interface index number.	<b>detail extensive none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Flags</b>	Information about the logical interface. Possible values are described in the “Logical Interface Flags” section under “ <a href="#">Common Output Fields Description</a> ” on page 1114.	All levels
<b>Encapsulation</b>	Encapsulation on the logical interface.	All levels
<b><i>protocol-family</i></b>	Protocol family configured on the logical interface. If the protocol is <b>inet</b> , the source and destination address are also displayed.	<b>brief</b>
<b>Protocol</b>	Protocol family configured on the logical interface, such as <b>iso</b> , <b>inet6</b> , <b>mpls</b> .	<b>detail extensive none</b>
<b>MTU</b>	MTU size on the logical interface.	<b>detail extensive none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Route Table</b>	Routing table in which the logical interface address is located. For example, <b>0</b> refers to the routing table <b>inet.0</b> .	<b>detail extensive</b>
<b>Flags</b>	Information about protocol family flags. Possible values are described in the “Family Flags” section under “ <a href="#">Common Output Fields Description</a> ” on page 1114.	<b>detail extensive</b>

Table 74: show interfaces (Serial) Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Addresses, Flags</b>	Information about the address flags. Possible values are described in the “Addresses Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	detail extensive none
<b>Destination</b>	IP address of the remote side of the connection.	detail extensive none
<b>Local</b>	IP address of the logical interface.	detail extensive none
<b>Broadcast</b>	Broadcast address of the logical interface.	detail extensive none
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	detail extensive

## Sample Output

### show interfaces (Serial, EIA-530)

```

user@host> show interfaces se-5/0/1
Physical interface: se-5/0/1, Enabled, Physical link is Up
  Interface index: 144, SNMP ifIndex: 41
  Type: Serial, Link-level type: PPP, MTU: 1504, Maximum speed: 16384kbps
  Device flags   : Present Running
  Interface flags: Point-To-Point Internal: 0x4000
  Link flags     : Keepalives
  Keepalive settings: Interval 10 seconds, Up-count 1, Down-count 3
  Keepalive: Input: 32 (00:00:10 ago), Output: 31 (00:00:07 ago)
  LCP state: Opened
  NCP state: inet: Opened, inet6: Not-configured, iso: Not-configured, mpls:
  Not-configured
  CHAP state: Closed
  CoS queues    : 8 supported, 8 maximum usable queues
  Last flapped  : 2006-04-26 15:10:18 PDT (00:05:22 ago)
  Input rate    : 0 bps (0 pps)
  Output rate   : 0 bps (0 pps)

Logical interface se-5/0/1.0 (Index 71) (SNMP ifIndex 45)
  Flags: Point-To-Point SNMP-Traps 0x4000 Encapsulation: PPP
  Protocol inet, MTU: 1500
  Flags: None
  Addresses, Flags: Is-Preferred Is-Primary
    Destination: 12.0.0.0/30, Local: 12.0.0.1, Broadcast: 12.0.0.3

```

### show interfaces brief (Serial, EIA-530)

```

user@host> show interfaces se-5/0/1 brief
Physical interface: se-5/0/1, Enabled, Physical link is Up
  Type: Serial, Link-level type: PPP, MTU: 1504
  Device flags   : Present Running
  Interface flags: Point-To-Point Internal: 0x4000
  Link flags     : Keepalives
  Keepalive settings: Interval 10 seconds, Up-count 1, Down-count 3
  Keepalive: Input: 235 (00:00:10 ago), Output: 234 (00:00:00 ago)

Logical interface se-5/0/1.0

```

```
Flags: Point-To-Point SNMP-Traps 0x4000 Encapsulation: PPP
inet 12.0.0.1/30
```

### show interfaces detail (Serial, EIA-530)

```
user@host> show interfaces se-5/0/1 detail
Physical interface: se-5/0/1, Enabled, Physical link is Up
  Interface index: 144, SNMP ifIndex: 41, Generation: 25
  Type: Serial, Link-level type: PPP, MTU: 1504, Maximum speed: 16384kbps

## show interfaces (T1, E1, or DS)

<b>Syntax</b>	<pre>show interfaces <i>interface-type</i> &lt;brief   detail   extensive   terse&gt; &lt;descriptions&gt; &lt;media&gt; &lt;snmp-index <i>snmp-index</i>&gt; &lt;statistics&gt;</pre>
<b>Release Information</b>	Command introduced before Junos OS Release 7.4.
<b>Description</b>	Display status information about the specified T1, E1, or DS interface.
<b>Options</b>	<p><b><i>interface-type</i></b>—On ACX Series, M Series, MX Series, and T Series routers, the T1 interface type is <b>t1-<i>fpc/pic/port</i></b>, whereas the E1 interface type is <b>e1-<i>fpc/pic/port</i></b>, and DS interface type is <b>ds-<i>fpc/pic/port</i>:&lt;channel&gt;</b>.</p> <p><b>brief   detail   extensive   terse</b>—(Optional) Display the specified level of output.</p> <p><b>descriptions</b>—(Optional) Display interface description strings.</p> <p><b>media</b>—(Optional) Display media-specific information about network interfaces.</p> <p><b>snmp-index <i>snmp-index</i></b>—(Optional) Display information for the specified SNMP index of the interface.</p> <p><b>statistics</b>—(Optional) Display static interface statistics.</p>
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Understanding Interfaces on ACX Series Universal Metro Routers on page 11</a></li> </ul>
<b>List of Sample Output</b>	<p><a href="#">show interfaces (T1, IMA Link) on page 1519</a></p> <p><a href="#">show interfaces (T1, PPP) on page 1520</a></p> <p><a href="#">show interfaces detail (T1, PPP) on page 1520</a></p> <p><a href="#">show interfaces extensive (T1 CRC Errors) on page 1521</a></p> <p><a href="#">show interfaces extensive (T1, PPP) on page 1521</a></p> <p><a href="#">show interfaces (E1, Frame Relay) on page 1523</a></p> <p><a href="#">show interfaces detail (E1, Frame Relay) on page 1524</a></p> <p><a href="#">show interfaces extensive (E1, Frame Relay) on page 1525</a></p> <p><a href="#">show interfaces (E1, IMA Link) on page 1527</a></p> <p><a href="#">show interfaces extensive (T1, TDM-CCC-SATOP) on page 1528</a></p> <p><a href="#">show interfaces extensive (DS, TDM-CCC-CESoPSN) on page 1530</a></p>
<b>Output Fields</b>	<p><a href="#">Table 75 on page 1508</a> lists the output fields for the <b>show interfaces</b> (T1 or E1) command. Output fields are listed in the approximate order in which they appear.</p>

Table 75: T1 or E1 show interfaces Output Fields

Field Name	Field Description	Level of Output
<b>Physical Interface</b>		
<b>Physical interface</b>	Name of the physical interface.	All levels
<b>Enabled</b>	State of the interface. Possible values are described in the “Enabled Field” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels
<b>Interface index</b>	Physical interface's index number, which reflects its initialization sequence.	<b>detail extensive</b> none
<b>SNMP ifIndex</b>	SNMP index number for the physical interface.	<b>detail extensive</b> none
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Link-level type</b>	Encapsulation being used on the physical interface.	All levels
<b>MTU</b>	MTU size on the physical interface.	All levels
<b>Clocking</b>	Reference clock source: <b>Internal</b> or <b>External</b> .	All levels
<b>Speed</b>	Speed at which the interface is running.	All levels
<b>Loopback</b>	Whether loopback is enabled and the type of loopback ( <b>local</b> or <b>remote</b> ).	All levels
<b>FCS</b>	Frame check sequence on the interface (either <b>16</b> or <b>32</b> ). The default is <b>16</b> bits.	All levels
<b>Framing</b>	Physical layer framing format used for the E1 interface on the link: <b>G704</b> , <b>G704-NO-CRC4</b> , or <b>Unframed</b> . The default is <b>G704</b> .  Physical layer framing format used for the T1 interface on the link: <b>SF</b> and <b>ESF</b> . The default is <b>ESF</b> .	All levels
<b>Device flags</b>	Information about the physical device. Possible values are described in the “Device Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels
<b>Interface flags</b>	Information about the interface. Possible values are described in the “Interface Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels
<b>Link flags</b>	Information about the link. Possible values are described in the “Link Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels
<b>Hold-times</b>	Current interface hold-time up and hold-time down, in milliseconds.	<b>detail extensive</b>

Table 75: T1 or E1 show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>IMA Link alarms</b>	Current active IMA link alarms, including the following: <ul style="list-style-type: none"> <li>• LIF</li> <li>• LODS</li> <li>• RFI-IMA</li> <li>• Tx-Mis-Connected</li> <li>• Tx-Unusable-FE</li> <li>• Rx-Unusable-FE</li> <li>• Link Fault</li> </ul>	<b>detail extensive none</b>
<b>IMA Link defects</b>	Current active IMA link defects, including the following: <ul style="list-style-type: none"> <li>• LIF</li> <li>• LODS</li> <li>• RFI-IMA</li> <li>• Tx-Mis-Connected</li> <li>• Tx-Unusable-FE</li> <li>• Rx-Unusable-FE</li> <li>• Link Fault</li> </ul>	<b>detail extensive none</b>
<b>IMA Link state</b>	Current active IMA link status, including the following: <ul style="list-style-type: none"> <li>• <b>Line:</b> synchronized or not synchronized</li> <li>• <b>Near end:</b>—Status of near-end receive and transmit links <ul style="list-style-type: none"> <li>• <b>Rx:</b> Usable or Unusable</li> <li>• <b>Tx:</b> Usable or Unusable</li> </ul> </li> <li>• <b>Far end:</b>—Status of far-end receive and transmit links <ul style="list-style-type: none"> <li>• <b>Rx:</b> Usable or Unusable</li> <li>• <b>Tx:</b> Usable or Unusable</li> </ul> </li> </ul>	<b>detail extensive none</b>

Table 75: T1 or E1 show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
IMA link media	<p>IMA Link Media Status, which provides the seconds and count state for the following link media parameters:</p> <ul style="list-style-type: none"> <li>• LIF</li> <li>• LODS</li> <li>• Err-ICP</li> <li>• IV</li> <li>• Rx-FC</li> <li>• Tx-FC</li> <li>• FE-Defects</li> <li>• FE-Rx-FC</li> <li>• FE-Tx-FC</li> <li>• Rx-ICP</li> <li>• Rx-Stuff</li> <li>• Tx-ICP</li> <li>• Tx-Stuff</li> <li>• Rx-SES</li> <li>• Rx-UAS</li> <li>• Rx-UUS</li> <li>• Tx-UUS</li> <li>• FE-Rx-SES</li> <li>• FE-Rx-UAS</li> <li>• FE-Rx-UUS</li> <li>• FE-Tx-UUS</li> </ul>	detail extensive none
Keepalive settings	<p>(PPP and HDLC) Configured settings for keepalives.</p> <ul style="list-style-type: none"> <li>• <b>interval seconds</b>—The time in seconds between successive keepalive requests. The range is 10 seconds through 32,767 seconds, with a default of 10 seconds.</li> <li>• <b>down-count number</b>—The number of keepalive packets a destination must fail to receive before the network takes a link down. The range is 1 through 255, with a default of 3.</li> <li>• <b>up-count number</b>—The number of keepalive packets a destination must receive to change a link's status from down to up. The range is 1 through 255, with a default of 1.</li> </ul>	detail extensive none
Keepalive statistics	<p>(PPP and HDLC) Information about keepalive packets. (When no level of output is specified, the word <b>statistics</b> is not part of the field name and the <b>last seen</b> text is not displayed.)</p> <ul style="list-style-type: none"> <li>• <b>Input</b>—Number of keepalive packets received by PPP. <ul style="list-style-type: none"> <li>• <b>(last seen 00:00:00 ago)</b>—Time since the last keepalive packet was received, in the format <i>hh:mm:ss</i>.</li> </ul> </li> <li>• <b>Output</b>—Number of keepalive packets sent by PPP and how long ago the last keepalive packets were sent and received. <ul style="list-style-type: none"> <li>• <b>(last seen 00:00:00 ago)</b>—Time since the last keepalive packet was sent, in the format <i>hh:mm:ss</i>.</li> </ul> </li> </ul>	detail extensive none

Table 75: T1 or E1 show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>LMI settings</b>	<p>(Frame Relay) Settings for Local Management Interface (LMI) which can be either ANSI LMI settings or ITU LMI settings. ANSI LMI settings is the default. The format is <b>(ANSI or ITU) LMI settings: value, value... xx</b> seconds, where <i>value</i> can be:</p> <ul style="list-style-type: none"> <li>• <b>n391dte</b>—DTE full status polling interval (1–255)</li> <li>• <b>n392dce</b>—DCE error threshold (1–10)</li> <li>• <b>n392dte</b>—DTE error threshold (1–10)</li> <li>• <b>n393dce</b>—DCE monitored event count (1–10)</li> <li>• <b>n393dte</b>—DTE monitored event count (1–10)</li> <li>• <b>t391dte</b>—DTE polling timer (5–30 seconds)</li> <li>• <b>t392dce</b>—DCE polling verification timer (5–30 seconds)</li> </ul>	<b>detail extensive none</b>
<b>LMI</b>	<p>(Frame Relay) Local Management Interface (LMI) packet statistics:</p> <ul style="list-style-type: none"> <li>• <b>Input</b>—Number of packets coming in on the interface (<i>nn</i>) and how much time has passed since the last packet arrived. The format is <b>Input: nn (last seen hh:mm:ss ago)</b>.</li> <li>• <b>Output</b>—Number of packets sent out on the interface (<i>nn</i>) and how much time has passed since the last packet was sent. The format is <b>Output: nn (last sent hh:mm:ss ago)</b>.</li> </ul>	<b>detail extensive none</b>
<b>DTE statistics</b>	<p>(Frame Relay) Statistics about messages transmitted from the data terminal equipment (DTE) to the data communications equipment (DCE):</p> <ul style="list-style-type: none"> <li>• <b>Enquiries sent</b>—Number of link status enquiries sent from the DTE to the DCE.</li> <li>• <b>Full enquiries sent</b>—Number of full enquiries sent from the DTE to the DCE.</li> <li>• <b>Enquiry responses received</b>—Number of enquiry responses received by the DTE from the DCE.</li> <li>• <b>Full enquiry responses received</b>—Number of full enquiry responses sent from the DTE to the DCE.</li> </ul>	<b>detail extensive none</b>
<b>DCE statistics</b>	<p>(Frame Relay) Statistics about messages transmitted from the DCE to the DTE:</p> <ul style="list-style-type: none"> <li>• <b>Enquiries received</b>—Number of enquiries received by the DCE from the DTE.</li> <li>• <b>Full enquiries received</b>—Number of full enquiries received by the DCE from the DTE.</li> <li>• <b>Enquiry responses sent</b>—Number of enquiry responses sent from the DCE to the DTE.</li> <li>• <b>Full enquiry responses sent</b>—Number of full enquiry responses sent from the DCE to the DTE.</li> </ul>	<b>detail extensive none</b>

Table 75: T1 or E1 show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Common statistics</b>	(Frame Relay) Statistics about messages sent between the DTE and the DCE: <ul style="list-style-type: none"> <li>• <b>Unknown messages received</b>—Number of received packets that do not fall into any category.</li> <li>• <b>Asynchronous updates received</b>—Number of link status peer changes received.</li> <li>• <b>Out-of-sequence packets received</b>—Number of packets for which the sequence of the packets received is different from the expected sequence.</li> <li>• <b>Keepalive responses timedout</b>—Number of keepalive responses that timed out when no Local Management Interface (LMI) packet was reported for n392dte or n393dce intervals. (See LMI settings.)</li> </ul>	<b>detail extensive none</b>
<b>Nonmatching DCE-end DLCIs</b>	(Frame Relay. Displayed only from the DTE.) Number of DLCIs configured from the DCE.	<b>detail extensive none</b>
<b>LCP state</b>	(PPP) Link Control Protocol state. <ul style="list-style-type: none"> <li>• <b>Conf-ack-received</b>—Acknowledgement was received.</li> <li>• <b>Conf-ack-sent</b>—Acknowledgement was sent.</li> <li>• <b>Conf-req-sent</b>—Request was sent.</li> <li>• <b>Down</b>—LCP negotiation is incomplete (not yet completed or has failed).</li> <li>• <b>Not configured</b>—LCP is not configured on the interface.</li> <li>• <b>Opened</b>—LCP negotiation is successful.</li> </ul>	<b>detail extensive none</b>
<b>NCP state</b>	(PPP) Network Control Protocol state. <ul style="list-style-type: none"> <li>• <b>Conf-ack-received</b>—Acknowledgement was received.</li> <li>• <b>Conf-ack-sent</b>—Acknowledgement was sent.</li> <li>• <b>Conf-req-sent</b>—Request was sent.</li> <li>• <b>Down</b>—NCP negotiation is incomplete (not yet completed or has failed).</li> <li>• <b>Not configured</b>—NCP is not configured on the interface.</li> <li>• <b>Opened</b>—NCP negotiation is successful.</li> </ul>	<b>detail extensive none</b>
<b>CHAP state</b>	(PPP) State of the Challenge Handshake Authentication Protocol (CHAP) during its transaction. <ul style="list-style-type: none"> <li>• <b>Chap-Chal-received</b>—Challenge was received but response is not yet sent.</li> <li>• <b>Chap-Chal-sent</b>—Challenge was sent.</li> <li>• <b>Chap-Resp-received</b>—Response was received for the challenge sent, but CHAP has not yet moved into the Success state. (Most likely with RADIUS authentication.)</li> <li>• <b>Chap-Resp-sent</b>—Response was sent for the challenge received.</li> <li>• <b>Down</b>—CHAP authentication is incomplete (not yet completed or has failed).</li> <li>• <b>Not-configured</b>—CHAP is not configured on the interface.</li> <li>• <b>Opened</b>—CHAP authentication was successful.</li> </ul>	<b>detail extensive none</b>
<b>Last flapped</b>	Date, time, and how long ago the interface went from down to up. The format is <b>Last flapped: year-month-day hour:minute:second timezone (hour:minute:second ago)</b> . For example, <b>Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> .	<b>detail extensive none</b>

Table 75: T1 or E1 show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>CoS Queues</b>	Number of CoS queues configured.	<b>detail extensive none</b>
<b>Input rate</b>	Input rate in bits per second (bps) and packets per second (pps).	None specified
<b>Output rate</b>	Output rate in bps and pps.	None specified
<b>Statistics last cleared</b>	Time when the statistics for the interface were last set to zero.	<b>detail extensive</b>
<b>Traffic statistics</b>	<p>Number and rate of bytes and packets received and transmitted on the physical interface.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>	<b>detail extensive</b>
<b>Input errors</b>	<p>Input errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of the incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that the Junos OS does not handle.</li> <li>• <b>L3 incompletes</b>—Number of incoming packets discarded because they failed Layer 3 (usually IPv4) sanity checks of the header. For example, a frame with less than 20 bytes of available IP header is discarded.</li> <li>• <b>L2 channel errors</b>—Number of times the software did not find a valid logical interface for an incoming frame.</li> <li>• <b>L2 mismatch timeouts</b>—Number of malformed or short packets that caused the incoming packet handler to discard the frame as unreadable.</li> <li>• <b>HS link CRC errors</b>—Number of errors on the high-speed links between the ASICs responsible for handling the router interfaces.</li> <li>• <b>SRAM errors</b>—Number of hardware errors that occurred in the static RAM (SRAM) on the PIC or PIM. If the value of this field increments, the PIC or PIM is malfunctioning.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>	<b>extensive</b>

Table 75: T1 or E1 show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Output errors</b>	<p>Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and up, or another problem occurs. If the number of carrier transitions increments quickly (perhaps once every 10 seconds), the cable, the far-end system, or the PIC or PIM is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Aged packets</b>—Number of packets that remained in shared packet SDRAM so long that the system automatically purged them. The value in this field should never increment. If it does, it is most likely a software bug or possibly malfunctioning hardware.</li> <li>• <b>MTU errors</b>—Number of packets whose size exceeded the MTU of the interface.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>	<b>extensive</b>
<b>Queue counters</b>	<p>CoS queue number and its associated user-configured forwarding class name.</p> <ul style="list-style-type: none"> <li>• <b>Queued packets</b>—Number of queued packets.</li> <li>• <b>Transmitted packets</b>—Number of transmitted packets.</li> <li>• <b>Dropped packets</b>—Number of packets dropped by the ASIC's RED mechanism.</li> </ul>	<b>detail extensive</b>
<b>DS1 alarms</b> <b>DS1 defects</b>	<p>E1 media-specific defects that can prevent the interface from passing packets. When a defect persists for a certain amount of time, it is promoted to an alarm. Based on the router configuration, an alarm can ring the red or yellow alarm bell on the router, or turn on the red or yellow alarm LED on the craft interface. The following lists all possible alarms and defects. For complete explanations of most of these alarms and defects, see <i>Bellcore Telcordia GR-499-CORE</i>.</p> <ul style="list-style-type: none"> <li>• <b>AIS</b>—Alarm indication signal.</li> <li>• <b>LOF</b>—Loss of frame.</li> <li>• <b>LOS</b>—Loss of signal.</li> <li>• <b>YLW</b>—Yellow alarm. Indicates errors at the remote site receiver.</li> </ul>	<b>detail extensive none</b>

Table 75: T1 or E1 show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
T1 media or E1 media	<p>Counts of T1 or E1 media-specific errors.</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. State other than <b>OK</b> indicates a problem. The T1 or E1 media-specific error types are:</li> <li>• <b>SEF</b>—Severely errored framing</li> <li>• <b>BEE</b>—Bit error</li> <li>• <b>AIS</b>—Alarm indication signal</li> <li>• <b>LOF</b>—Loss of frame</li> <li>• <b>LOS</b>—Loss of signal</li> <li>• <b>YELLOW</b>—Errors at the remote site receiver</li> <li>• <b>CRC Major</b>—Cyclic redundancy check major alarm threshold exceeded</li> <li>• <b>CRC Minor</b>—Cyclic redundancy check minor alarm threshold exceeded</li> <li>• <b>BPV</b>—Bipolar violation</li> <li>• <b>EXZ</b>—Excessive zeros</li> <li>• <b>LCV</b>—Line code violation</li> <li>• <b>PCV</b>—Pulse code violation</li> <li>• <b>CS</b>—Carrier state</li> <li>• <b>CRC</b>—Cyclic redundancy check</li> <li>• <b>FEBE</b>—Far-end block error (E1 only)</li> <li>• <b>LES</b>—Line error seconds</li> <li>• <b>ES</b>—Errored seconds</li> <li>• <b>BES</b>—Bursty errored seconds</li> <li>• <b>SES</b>—Severely errored seconds</li> <li>• <b>SEFS</b>—Severely errored framing seconds</li> <li>• <b>UAS</b>—Unavailable seconds</li> </ul>	extensive
SAToP Configuration	<p>Information about the SAToP configuration.</p> <ul style="list-style-type: none"> <li>• <b>payload-size</b>—Configure the payload size, in bytes (from 32 through 1024 bytes).</li> <li>• <b>idle-pattern</b>—An 8-bit hexadecimal pattern to replace TDM data in a lost packet (from 0 through 255).</li> <li>• <b>jitter-buffer-packets</b>—Number of packets in the jitter buffer (from 1 through 64 packets).</li> <li>• <b>jitter-buffer-latency</b>—Time delay in the jitter buffer (from 1 through 1000 milliseconds).</li> <li>• <b>excessive-packet-loss-rate</b>—Set packet loss options. The options are <b>groups</b>, <b>sample-period</b>, and <b>threshold</b>.</li> <li>• <b>sample-period</b>—Time required to calculate excessive packet loss rate (from 1000 through 65,535 milliseconds).</li> <li>• <b>threshold</b>—Percentile designating the threshold of excessive packet loss rate (1–100 percent).</li> </ul>	extensive

Table 75: T1 or E1 show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>CESoPSN Configuration</b>	<p>Information about the CESoPSN configuration.</p> <ul style="list-style-type: none"> <li>• <b>packetization-latency</b>—Time required to create packets (from 1000 through 8000 microseconds).</li> <li>• <b>idle-pattern</b>—An 8-bit hexadecimal pattern to replace TDM data in a lost packet (from 0 through 255).</li> <li>• <b>jitter-buffer-packets</b>—Number of packets in the jitter buffer (from 1 through 64 packets).</li> <li>• <b>jitter-buffer-latency</b>—Time delay in the jitter buffer (from 1 through 1000 milliseconds).</li> <li>• <b>excessive-packet-loss-rate</b>—Set packet loss options. The options are <b>sample-period</b> and <b>threshold</b>.</li> <li>• <b>sample-period</b>—Time required to calculate excessive packet loss rate (from 1000 through 65,535 milliseconds).</li> <li>• <b>threshold</b>—Percentile designating the threshold of excessive packet loss rate (1–100 percent).</li> </ul>	<b>extensive</b>
<b>HDLC configuration</b>	<p>Information about the HDLC configuration.</p> <ul style="list-style-type: none"> <li>• <b>Policing bucket</b>—Configured state of the receiving policer.</li> <li>• <b>Shaping bucket</b>—Configured state of the transmitting shaper.</li> <li>• <b>Giant threshold</b>—Giant threshold programmed into the hardware.</li> <li>• <b>Runt threshold</b>—Runt threshold programmed into the hardware.</li> <li>• <b>Timeslots</b>—Time slots configured on the interface.</li> <li>• <b>Buildout</b>—(T1 only) Buildout setting: 0-132, 133-265, 266-398, 399-531, or 532-655 feet.</li> <li>• <b>Timeslots</b>—Configured time slots for the interface.</li> <li>• <b>Byte encoding</b>—(T1 only) Byte encoding used: <b>Nx64K</b> or <b>Nx56K</b>.</li> <li>• <b>Line encoding</b>—Line encoding used. For T1, the value can be <b>B8ZS</b> or <b>AMI</b>. For E1, the value is <b>HDB3</b>.</li> <li>• <b>Data inversion</b>—HDLC data inversion setting: <b>Enabled</b> or <b>Disabled</b>.</li> <li>• <b>Idle cycle flag</b>—Idle cycle flags.</li> <li>• <b>Start end flag</b>—Start and end flag.</li> </ul>	<b>extensive</b>
<b>DS1 BERT configuration</b>	<p>BERT (bit error rate test) checks the quality of the line. This output appears only when a BERT is run on the interface.</p> <ul style="list-style-type: none"> <li>• <b>BERT time period</b>—Configured total time period that the BERT is to run.</li> <li>• <b>Elapsed</b>—Actual time elapsed since the start of the BERT (in seconds).</li> <li>• <b>Induced error rate</b>—Configured rate at which the bit errors are induced in the BERT pattern.</li> <li>• <b>Algorithm</b>—Type of algorithm selected for the BERT.</li> </ul>	<b>detail extensive none</b>
<b>Packet Forwarding Engine configuration</b>	<p>Information about the configuration of the Packet Forwarding Engine:</p> <ul style="list-style-type: none"> <li>• <b>Destination slot</b>—FPC slot number.</li> <li>• <b>PLP byte</b>—Packet Level Protocol byte.</li> </ul>	<b>extensive</b>

Table 75: T1 or E1 show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>CoS information</b>	Information about the CoS queue for the physical interface. <ul style="list-style-type: none"> <li>• <b>CoS transmit queue</b>—Queue number and its associated user-configured forwarding class name.</li> <li>• <b>Bandwidth %</b>—Percentage of bandwidth allocated to the queue.</li> <li>• <b>Bandwidth bps</b>—Bandwidth allocated to the queue (in bps).</li> <li>• <b>Buffer %</b>—Percentage of buffer space allocated to the queue.</li> <li>• <b>Buffer usec</b>—Amount of buffer space allocated to the queue, in microseconds. This value is nonzero only if the buffer size is configured in terms of time.</li> <li>• <b>Priority</b>—Queue priority: <b>low</b> or <b>high</b>.</li> <li>• <b>Limit</b>—Displayed if rate limiting is configured for the queue. Possible values are <b>none</b> and <b>exact</b>. If <b>exact</b> is configured, the queue transmits only up to the configured bandwidth, even if excess bandwidth is available. If <b>none</b> is configured, the queue transmits beyond the configured bandwidth if bandwidth is available.</li> </ul>	<b>extensive</b>
<b>Logical Interface</b>		
<b>Logical interface</b>	Name of the logical interface.	All levels
<b>Index</b>	Logical interface index number, which reflects its initialization sequence.	<b>detail extensive none</b>
<b>SNMP ifIndex</b>	Logical interface SNMP interface index number.	<b>detail extensive none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Flags</b>	Information about the interface. Possible values are described in the “Interface Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels
<b>Encapsulation</b>	Encapsulation on the logical interface.	All levels
<b>Input packets</b>	Number of packets received on the logical interface.	None specified
<b>Output packets</b>	Number of packets transmitted on the logical interface.	None specified
<b>Traffic statistics</b>	(Frame Relay) Number and rate of bytes and packets received and transmitted on the logical interface. <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>	<b>detail extensive</b>
<b>Local statistics</b>	(Frame Relay) Statistics for traffic received from and transmitted to the Routing Engine. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. It takes a while (generally, less than 1 second) for this counter to stabilize.	<b>detail extensive</b>

Table 75: T1 or E1 show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Transit statistics</b>	(Frame Relay) Statistics for traffic transiting the router. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. This counter normally stabilizes in less than 1 second.	<b>detail extensive</b>
<b>Protocol</b>	Protocol family configured on the logical interface, such as <b>iso</b> , <b>inet6</b> , <b>mlfr</b> , or <b>mpls</b> .	<b>detail extensive none</b>
<b>Multilink bundle</b>	Interface name for the multilink bundle, if configured.	<b>detail extensive none</b>
<b>MTU</b>	MTU size on the logical interface.	<b>detail extensive none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Route table</b>	Routing table in which the logical interface address is located. For example, <b>0</b> refers to the routing table <b>inet.0</b> .	<b>detail extensive</b>
<b>Flags</b>	Information about the protocol family flags. Possible values are described in the “Family Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	<b>detail extensive none</b>
<b>Addresses, Flags</b>	Information about the address flags. Possible values are described in the “Addresses Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	<b>detail extensive none</b>
<b>Destination</b>	IP address of the remote side of the connection.	<b>detail extensive none</b>
<b>Local</b>	IP address of the logical interface.	<b>detail extensive none</b>
<b>Broadcast</b>	Broadcast address.	<b>detail extensive none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive none</b>
<b>DLCI</b>	<p>(Frame Relay) DLCI number of the logical interface. The following DLCI information is displayed: <b>Flags</b>, <b>Total down time</b>, <b>Last down</b>, and <b>Traffic statistics</b> or (<b>Input packets</b>, <b>Output packets</b>). <b>Flags</b> can be one or more of the following:</p> <ul style="list-style-type: none"> <li>• <b>Active</b>—Set when the link is active and the DTE and DCE are exchanging information.</li> <li>• <b>Down</b>—Set when the link is active, but no information is received from the DCE.</li> <li>• <b>DCE-Unconfigured</b>—Set when the corresponding DLCI in the DCE is not configured.</li> <li>• <b>Configured</b>—Set when the corresponding DLCI in the DCE is configured.</li> <li>• <b>DCE-configured</b>—Displayed when the command is issued from the DTE.</li> </ul>	<b>detail extensive none</b>
<b>DLCI statistics</b>	<p>(Frame Relay) Data-link connection identifier (DLCI) statistics.</p> <ul style="list-style-type: none"> <li>• <b>Active DLCI</b>—Number of active DLCIs.</li> <li>• <b>Inactive DLCI</b>—Number of inactive DLCIs.</li> </ul>	<b>detail extensive none</b>

Table 75: T1 or E1 show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
CE Info	<p>Information related to the circuit emulation statistics.</p> <ul style="list-style-type: none"> <li>• <b>CE Tx</b>—Number of transmitted packets and bytes (TDM to PSN flow).</li> <li>• <b>CE Rx</b>—Number of received packets and bytes and forward bytes (PSN to TDM flow).</li> <li>• <b>CE Rx Forwarded</b>—Number of forwarded bytes.</li> <li>• <b>CE Strayed</b>—Number of stray packets.</li> <li>• <b>CE Lost</b>—Number of lost packets.</li> <li>• <b>CE Malformed</b>—Number of malformed packets</li> <li>• <b>CE Misinserted</b>—Number of misinserted packets.</li> <li>• <b>CE AIS dropped</b>—Number of dropped bytes due to buffer overrun (PSN to TDM).</li> <li>• <b>CE Dropped</b>—Number of dropped packets during resynchronization</li> <li>• <b>CE Overrun Events</b>—Number of overrun events.</li> <li>• <b>CE Underrun Events</b>—Number of underrun events.</li> </ul>	extensive

## Sample Output

## show interfaces (T3 or E3)

<b>Syntax</b>	show interfaces <i>interface-type</i> <brief   detail   extensive   terse> <descriptions> <media> <snmp-index <i>snmp-index</i> > <statistics>
<b>Release Information</b>	Command introduced before Junos OS Release 7.4.
<b>Description</b>	Display status information about the specified T3 or E3 interface.
<b>Options</b>	<p><b><i>interface-type</i></b>—On M Series and T Series routers, the T3 interface type is <b>t3-fpc/pic/port</b>, whereas the E3 interface type is <b>e3-fpc/pic/port</b>.</p> <p><b>brief   detail   extensive   terse</b>—(Optional) Display the specified level of output.</p> <p><b>descriptions</b>—(Optional) Display interface description strings.</p> <p><b>media</b>—(Optional) Display media-specific information about network interfaces.</p> <p><b>snmp-index <i>snmp-index</i></b>—(Optional) Display information for the specified SNMP index of the interface.</p> <p><b>statistics</b>—(Optional) Display static interface statistics.</p>
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">show interfaces (T3, PPP) on page 1541</a> <a href="#">show interfaces detail (T3, PPP) on page 1542</a> <a href="#">show interfaces extensive (T3, PPP) on page 1543</a> <a href="#">show interfaces (E3, Frame Relay) on page 1544</a> <a href="#">show interfaces detail (E3, Frame Relay) on page 1545</a> <a href="#">show interfaces extensive (E3, Frame Relay) on page 1547</a>
<b>Output Fields</b>	Table 76 on page 1532 lists the output fields for the <b>show interfaces</b> (T3 or E3) command. Output fields are listed in the approximate order in which they appear.

Table 76: T3 or E3 show interfaces Output Fields

Field Name	Field Description	Level of Output
Physical Interface		
<b>Physical interface</b>	Name of the physical interface.	All levels
<b>Enabled</b>	State of the interface. Possible values are described in the “Enabled Field” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels

Table 76: T3 or E3 show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Interface index</b>	Physical interface's index number, which reflects its initialization sequence.	<b>detail extensive</b> none
<b>SNMP ifIndex</b>	SNMP index number for the physical interface.	<b>detail extensive</b> none
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Link-level type</b>	Encapsulation being used on the physical interface.	All levels
<b>MTU</b>	MTU size on the physical interface.	All levels
<b>Clocking</b>	Reference clock source. It can be <b>Internal</b> or <b>External</b> .	All levels
<b>Speed</b>	Speed at which the interface is running.	All levels
<b>Loopback</b>	Whether loopback is enabled and the type of loopback ( <b>local</b> or <b>remote</b> ).	All levels
<b>FCS</b>	Frame check sequence on the interface (either <b>16</b> or <b>32</b> ). The default is <b>16</b> bits.	All levels
<b>Mode</b>	(T3 only) Whether C-bit parity mode or M13 mode is enabled.	All levels
<b>Long buildout</b>	(T3 only) Buildout setting: less than 255 feet (68 meters) or greater than 255 feet and shorter than 450 feet (137 meters).	All levels
<b>Framing</b>	(E3 only) Physical layer framing format used on the link. It can be <b>G751</b> or <b>Unframed</b> . The default is <b>G751</b> .	All levels
<b>Device flags</b>	Information about the physical device. Possible values are described in the "Device Flags" section under <a href="#">"Common Output Fields Description" on page 1114</a> .	All levels
<b>Interface flags</b>	Information about the interface. Possible values are described in the "Interface Flags" section under <a href="#">"Common Output Fields Description" on page 1114</a> .	All levels
<b>Link flags</b>	Information about the link. Possible values are described in the "Link Flags" section under <a href="#">"Common Output Fields Description" on page 1114</a> .	All levels
<b>Hold-times</b>	Current interface hold-time up and hold-time down, in milliseconds.	<b>detail extensive</b>
<b>Keepalive settings</b>	(PPP and HDLC) Configured settings for keepalives. <ul style="list-style-type: none"> <li><b>interval seconds</b>—Time in seconds between successive keepalive requests. The range is <b>10</b> seconds through <b>32,767</b> seconds, with a default of <b>10</b> seconds.</li> <li><b>down-count number</b>—Number of keepalive packets a destination must fail to receive before the network takes a link down. The range is <b>1</b> through <b>255</b>, with a default of <b>3</b>.</li> <li><b>up-count number</b>—Number of keepalive packets a destination must receive to change a link's status from down to up. The range is <b>1</b> through <b>255</b>, with a default of <b>1</b>.</li> </ul>	<b>detail extensive</b> none

Table 76: T3 or E3 show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
Keepalive statistics or Keepalive	<p>(PPP and HDLC) Information about keepalive packets.</p> <ul style="list-style-type: none"> <li><b>Input</b>—Number of keepalive packets received by PPP. <ul style="list-style-type: none"> <li><b>(last seen 00:00:00 ago)</b>—Time since the last keepalive packet was received, in the format <i>hh:mm:ss</i>.</li> </ul> </li> <li><b>Output</b>—Number of keepalive packets sent by PPP and how long ago the last keepalive packets were sent and received. <ul style="list-style-type: none"> <li><b>(last seen 00:00:00 ago)</b>—Time since the last keepalive packet was sent, in the format <i>hh:mm:ss</i>.</li> </ul> </li> </ul>	detail extensive none
LMI settings	<p>(Frame Relay) Local Management Interface (LMI) settings (ANSI or ITU). ANSI LMI settings is the default. The format is <b>LMI settings: value, value... xx seconds</b>, where <i>value</i> can be:</p> <ul style="list-style-type: none"> <li><b>n391dte</b>—DTE full status polling interval (1–255)</li> <li><b>n392dce</b>—DCE error threshold (1–10)</li> <li><b>n392dte</b>—DTE error threshold (1–10)</li> <li><b>n393dce</b>—DCE monitored event count (1–10)</li> <li><b>n393dte</b>—DTE monitored event count (1–10)</li> <li><b>t391dte</b>—DTE polling timer (5–30 seconds)</li> <li><b>t392dce</b>—DCE polling verification timer (5–30 seconds)</li> </ul>	detail extensive none
LMI	<p>(Frame Relay) LMI statistics:</p> <ul style="list-style-type: none"> <li><b>Input</b>—Number of packets coming in on the interface (<i>nn</i>) and how much time has passed since the last packet arrived. The format is <b>Input: nn (last seen hh:mm:ss ago)</b>.</li> <li><b>Output</b>—Number of packets sent out on the interface (<i>nn</i>) and how much time has passed since the last packet was sent. The format is <b>Output: nn (last sent hh:mm:ss ago)</b>.</li> </ul>	detail extensive none
DTE statistics	<p>(Frame Relay) Statistics about messages transmitted from the data terminal equipment (DTE) to the data communications equipment (DCE):</p> <ul style="list-style-type: none"> <li><b>Enquiries sent</b>—Number of link status enquiries sent from the DTE to the DCE.</li> <li><b>Full enquiries sent</b>—Number of full enquiries sent from the DTE to the DCE.</li> <li><b>Enquiry responses received</b>—Number of enquiry responses received by the DTE from the DCE.</li> <li><b>Full enquiry responses received</b>—Number of full enquiry responses sent from the DTE to the DCE.</li> </ul>	detail extensive none
DCE statistics	<p>(Frame Relay) Statistics about messages transmitted from the DCE to the DTE:</p> <ul style="list-style-type: none"> <li><b>Enquiries received</b>—Number of enquiries received by the DCE from the DTE.</li> <li><b>Full enquiries received</b>—Number of full enquiries received by the DCE from the DTE.</li> <li><b>Enquiry responses sent</b>—Number of enquiry responses sent from the DCE to the DTE.</li> <li><b>Full enquiry responses sent</b>—Number of full enquiry responses sent from the DCE to the DTE.</li> </ul>	detail extensive none

Table 76: T3 or E3 show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Common statistics</b>	<p>(Frame Relay) Statistics about messages sent between the DTE and the DCE:</p> <ul style="list-style-type: none"> <li>• <b>Unknown messages received</b>—Number of received packets that do not fall into any category.</li> <li>• <b>Asynchronous updates received</b>—Number of link status peer changes received.</li> <li>• <b>Out-of-sequence packets received</b>—Number of packets for which the sequence of the packets received is different from the expected sequence.</li> <li>• <b>Keepalive responses timedout</b>—Number of keepalive responses that timed out when no LMI packet was reported for <b>n392dte</b> or <b>n393dce</b> intervals. (See <b>LMI settings</b>.)</li> </ul>	<b>detail extensive none</b>
<b>Nonmatching DCE-end DLCIs</b>	(Frame Relay. Displayed only from the DTE.) Number of DLCIs configured from the DCE.	<b>detail extensive none</b>
<b>LCP state</b>	<p>(PPP) Link Control Protocol state.</p> <ul style="list-style-type: none"> <li>• <b>Conf-ack-received</b>—Acknowledgement was received.</li> <li>• <b>Conf-ack-sent</b>—Acknowledgement was sent.</li> <li>• <b>Conf-req-sent</b>—Request was sent.</li> <li>• <b>Down</b>—LCP negotiation is incomplete (not yet completed or has failed).</li> <li>• <b>Opened</b>—LCP negotiation is successful.</li> </ul>	<b>detail extensive none</b>
<b>NCP state</b>	<p>(PPP) Network Control Protocol state.</p> <ul style="list-style-type: none"> <li>• <b>Conf-ack-received</b>—Acknowledgement was received.</li> <li>• <b>Conf-ack-sent</b>—Acknowledgement was sent.</li> <li>• <b>Conf-req-sent</b>—Request was sent.</li> <li>• <b>Down</b>—NCP negotiation is incomplete (not yet completed or has failed).</li> <li>• <b>Opened</b>—NCP negotiation is successful.</li> </ul>	<b>detail extensive none</b>
<b>CHAP state</b>	<p>(PPP) Displays the state of the Challenge Handshake Authentication Protocol (CHAP) during its transaction.</p> <ul style="list-style-type: none"> <li>• <b>Chap-Resp-received</b>—Response received for the challenge sent, but CHAP not yet moved into the Success state. (Most likely with RADIUS authentication.)</li> <li>• <b>Chap-Resp-sent</b>—Response sent for the challenge received.</li> <li>• <b>Chap-Chal-sent</b>—Challenge sent.</li> <li>• <b>Chap-Chal-received</b>—Challenge received but response not yet sent.</li> <li>• <b>Down</b>—CHAP authentication is incomplete (not yet completed or has failed).</li> <li>• <b>Not-configured</b>—CHAP is not configured on the interface.</li> <li>• <b>Opened</b>—CHAP authentication was successful.</li> </ul>	<b>detail extensive none</b>
<b>Last flapped</b>	Date, time, and how long ago the interface went from down to up. The format is <b>Last flapped: year-month-day hour:minute:second timezone (year-month-day hour:minute:second ago)</b> . For example, <b>Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> .	<b>detail extensive none</b>
<b>CoS queues</b>	Number of CoS queues configured.	<b>detail extensive none</b>

Table 76: T3 or E3 show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Input rate</b>	Input rate in bits per second (bps) and packets per second (pps).	None specified
<b>Output rate</b>	Output rate in bps and pps.	None specified
<b>Statistics last cleared</b>	Time when the statistics for the interface were last set to zero.	<b>detail extensive</b>
<b>Traffic statistics</b>	<p>Number and rate of bytes and packets received and transmitted on the physical interface.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface</li> <li>• <b>Output packets</b>—Number of packets received on the interface.</li> </ul>	<b>detail extensive</b>
<b>Input errors</b>	<p>Input errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of the incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Runts</b>—(T3 only) Number of frames received that are smaller than the runt threshold.</li> <li>• <b>Giants</b>—(T3 only) Number of frames received that are larger than the giant threshold.</li> <li>• <b>Bucket Drops</b>—Drops resulting from the traffic load exceeding the interface transmit/receive leaky bucket configuration. The default is <b>off</b>.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that the Junos OS does not handle.</li> <li>• <b>L3 incompletes</b>—Number of incoming packets discarded because they failed Layer 3 (usually IPv4) sanity checks of the header. For example, a frame with less than 20 bytes of available IP header is discarded.</li> <li>• <b>L2 channel errors</b>—Number of times the software did not find a valid logical interface for an incoming frame.</li> <li>• <b>L2 mismatch timeouts</b>—Number of malformed or short packets that caused the incoming packet handler to discard the frame as unreadable.</li> <li>• <b>HS link CRC errors</b>—Number of errors on the high-speed links between the ASICs responsible for handling the router interfaces.</li> <li>• <b>SRAM errors</b>—Number of hardware errors that occurred in the static RAM (SRAM) on the PIC or PIM. If the value of this field increments, the PIC or PIM is malfunctioning.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>	<b>extensive</b>

Table 76: T3 or E3 show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Output errors</b>	<p>Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious:</p> <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and up, or another problem occurs. If the number of carrier transitions increments (perhaps once every 10 seconds), the cable, the far-end system, or the PIC or PIM is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Aged packets</b>—Number of packets that remained in shared packet SDRAM so long that the system automatically purged them. The value in this field should never increment. If it does, it is most likely a software bug or possibly malfunctioning hardware.</li> <li>• <b>MTU errors</b>—Number of packets whose size exceeded the MTU of the interface.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>	<b>extensive</b>
<b>Queue counters</b>	<p>CoS queue number and its associated user-configured forwarding class name.</p> <ul style="list-style-type: none"> <li>• <b>Queued packets</b>—Number of queued packets.</li> <li>• <b>Transmitted packets</b>—Number of transmitted packets.</li> <li>• <b>Dropped packets</b>—Number of packets dropped by the ASIC's RED mechanism.</li> </ul>	<b>detail extensive</b>
<b>Active alarms</b> <b>Active defects</b>	<p>E3 media-specific defects that can render the interface unable to pass packets. When a defect persists for a certain amount of time, it is promoted to an alarm. Based on the router configuration, an alarm can ring the red or yellow alarm bell on the router, or turn on the red or yellow alarm LED on the craft interface.</p> <ul style="list-style-type: none"> <li>• <b>AIS</b>—Alarm indication signal</li> <li>• <b>EXZ</b>—Excessive zeros</li> <li>• <b>FERF</b>—Far-end receive failures</li> <li>• <b>IDLE</b>—Idle code detected</li> <li>• <b>LCD</b>—Loss of cell delineation</li> <li>• <b>LCV</b>—Line code violation</li> <li>• <b>LOF</b>—Loss of frame</li> <li>• <b>LOS</b>—Loss of signal</li> <li>• <b>PLL</b>—Phase-locked loop</li> <li>• <b>YLW</b>—Remote defect indication</li> </ul>	<b>detail extensive none</b>

Table 76: T3 or E3 show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>DS3 media or E3 media</b>	<p>Counts of DS3 (T3) or E3 media-specific errors.</p> <ul style="list-style-type: none"> <li>• <b>Seconds</b>—Number of seconds the defect has been active.</li> <li>• <b>Count</b>—Number of times that the defect has gone from inactive to active.</li> <li>• <b>State</b>—State of the error. State other than OK indicates a problem.</li> </ul> <p>The DS3 or E3 media-specific error types can be:</p> <ul style="list-style-type: none"> <li>• <b>PLL Lock</b>—Phase-locked loop out of lock</li> <li>• <b>Reframing</b>—Frame alignment recovery time</li> <li>• <b>AIS</b>—Alarm indication signal</li> <li>• <b>LOF</b>—Loss of frame</li> <li>• <b>LOS</b>—Loss of signal</li> <li>• <b>IDLE</b>—Idle code detected</li> <li>• <b>YELLOW</b>—Errors at the remote site receiver</li> <li>• <b>BPV</b>—Bipolar violation</li> <li>• <b>EXZ</b>—Excessive zeros</li> <li>• <b>LCV</b>—Line code violation</li> <li>• <b>PCV</b>—(DS3 only) Pulse code violation</li> <li>• <b>CCV</b>—(DS3 only) C-bit coding violation</li> <li>• <b>FEBE</b>—(DS3 only) Far-end block error</li> <li>• <b>LES</b>—Line error seconds</li> <li>• <b>PES</b>—(DS3 only) P-bit errored seconds</li> <li>• <b>PSSES</b>—(DS3 only) P-bit errored seconds (section)</li> <li>• <b>CES</b>—(DS3 only) C-bit errored seconds</li> <li>• <b>CSES</b>—(DS3 only) C-bit severely errored seconds</li> <li>• <b>SEFS</b>—Severely errored framing seconds</li> <li>• <b>UAS</b>—Unavailable seconds</li> </ul>	<b>extensive</b>
<b>HDLC configuration</b>	<p>Information about the HDLC configuration.</p> <ul style="list-style-type: none"> <li>• <b>Policing bucket</b>—Configured state of the receiving policer.</li> <li>• <b>Shaping bucket</b>—Configured state of the transmitting shaper.</li> <li>• <b>Giant threshold</b>—Giant threshold programmed into the hardware.</li> <li>• <b>Runt threshold</b>—Runt threshold programmed into the hardware.</li> <li>• <b>Idle cycle flag</b>—Idle cycle flags.</li> <li>• <b>Start end flag</b>—Start and end flag.</li> </ul>	<b>extensive</b>

Table 76: T3 or E3 show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
DSU configuration	<p>Information about the DSU configuration. The last three lines (<b>Bit count</b>, <b>Error bit count</b>, and <b>LOS information</b>) are displayed only if a BERT has ever been run on the interface.</p> <ul style="list-style-type: none"> <li>• <b>Compatibility mod</b>—CSU/DSU compatibility mode: <b>None</b>, <b>Larscom</b>, <b>Kentrox</b>, or <b>Digital-Link</b>.</li> <li>• <b>Scrambling</b>—Payload scrambling: <b>Enabled</b> or <b>Disabled</b>.</li> <li>• <b>Subrate</b>—Configured subrate setting. Applies only when <b>Digital-Link</b> compatibility mode is used. The subrate can be <b>Disabled</b> or display units in Kbps.</li> <li>• <b>FEAC loopbac</b>—(T3) Whether a far-end alarm and control (FEAC) loopback is <b>Active</b> or <b>Inactive</b>. This feature is used to send alarm or status information from the far-end terminal back to the near-end terminal and to initiate T3 loopbacks at the far-end terminal from the near-end terminal.</li> <li>• <b>Response</b>—Whether the FEAC signal is <b>Enabled</b> or <b>Disabled</b>.</li> <li>• <b>Count</b>—Number of FEAC loopbacks.</li> </ul>	extensive
DS3 (or E3) BERT configuration	<p>BERT (bit error rate test) checks the quality of the line. This output appears only when a BERT is run on the interface.</p> <ul style="list-style-type: none"> <li>• <b>BERT time period</b>—Configured total time period that the BERT is to run.</li> <li>• <b>Elapsed</b>—Actual time elapsed since the start of the BERT (in seconds).</li> <li>• <b>Induced error rate</b>—Configured rate at which the bit errors are induced in the BERT pattern.</li> <li>• <b>Algorithm</b>—Type of algorithm selected for the BERT.</li> </ul>	detail extensive none
Packet Forwarding Engine configuration	<p>Information about the configuration of the Packet Forwarding Engine:</p> <ul style="list-style-type: none"> <li>• <b>Destination slot</b>—FPC slot number.</li> <li>• <b>PLP byte</b>—Packet Level Protocol byte.</li> </ul>	extensive
CoS information	<p>Information about the CoS queue for the physical interface.</p> <ul style="list-style-type: none"> <li>• <b>CoS transmit queue</b>—Queue number and its associated user-configured forwarding class name.</li> <li>• <b>Bandwidth %</b>—Percentage of bandwidth allocated to the queue.</li> <li>• <b>Bandwidth bps</b>—Bandwidth allocated to the queue (in bps).</li> <li>• <b>Buffer %</b>—Percentage of buffer space allocated to the queue.</li> <li>• <b>Buffer usec</b>—Amount of buffer space allocated to the queue, in microseconds. This value is nonzero only if the buffer size is configured in terms of time.</li> <li>• <b>Priority</b>—Queue priority: <b>low</b> or <b>high</b>.</li> <li>• <b>Limit</b>—Displayed if rate limiting is configured for the queue. Possible values are <b>none</b> and <b>exact</b>. If <b>exact</b> is configured, the queue transmits only up to the configured bandwidth, even if excess bandwidth is available. If <b>none</b> is configured, the queue transmits beyond the configured bandwidth if bandwidth is available.</li> </ul>	extensive

---

#### Logical Interface

---

Table 76: T3 or E3 show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Logical interface</b>	Name of the logical interface.	detail extensive none
<b>Index</b>	Logical interface index number, which reflects its initialization sequence.	detail extensive none
<b>SNMP ifIndex</b>	Logical interface SNMP interface index number.	detail extensive none
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	extensive
<b>Flags</b>	Information about the interface. Possible values are described in the “Interface Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	detail extensive none
<b>Encapsulation</b>	Encapsulation on the logical interface.	detail extensive none
<b>Input packets</b>	Number of packets received on the logical interface.	None specified
<b>Output packets</b>	Number of packets transmitted on the logical interface.	None specified
<b>Traffic statistics</b>	<p>(Frame Relay) Number and rate of bytes and packets received and transmitted on the logical interface.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>	detail extensive
<b>Local statistics</b>	(Frame Relay) Statistics for traffic received from and transmitted to the Routing Engine. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. It takes awhile (generally, less than 1 second) for this counter to stabilize.	detail extensive
<b>Transit statistics</b>	(Frame Relay) Statistics for traffic transiting the router. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. This counter normally stabilizes in less than 1 second.	detail extensive
<b>Protocol</b>	Protocol family configured on the logical interface, such as <b>iso</b> , <b>inet6</b> , <b>mlfr</b> , or <b>mpls</b> .	detail extensive none
<b>Multilink bundle</b>	(Multilink) Interface name for the multilink bundle.	detail extensive none
<b>MTU</b>	MTU size on the logical interface.	detail extensive none
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	detail extensive
<b>Route table</b>	Routing table in which the logical interface address is located. For example, 0 refers to the routing table inet.0.	detail extensive
<b>Flags</b>	Information about the protocol family flags. Possible values are described in the “Family Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	detail extensive none

Table 76: T3 or E3 show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Addresses, Flags</b>	Information about the address flags. Possible values are described in the “Addresses Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	<b>detail extensive none</b>
<b>Destination</b>	IP address of the remote side of the connection.	<b>detail extensive none</b>
<b>Local</b>	IP address of the logical interface.	<b>detail extensive none</b>
<b>Broadcast</b>	Broadcast address.	<b>detail extensive none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive none</b>
<b>DLCI</b>	(Frame Relay) DLCI number of the logical interface. The following DLCI information is displayed: <b>Flags</b> , <b>Total down time</b> , <b>Last down</b> , and <b>Traffic statistics</b> (or <b>Input packets</b> , <b>Output packets</b> ). <b>Flags</b> is one or more of the following: <ul style="list-style-type: none"> <li>• <b>Active</b>—Set when the link is active and the DTE and DCE are exchanging information.</li> <li>• <b>Down</b>—Set when the link is active, but no information is received from the DCE.</li> <li>• <b>DCE Unconfigured</b>—Set when the corresponding DLCI in the DCE is not configured.</li> <li>• <b>Configured</b>—Set when the corresponding DLCI in the DCE is configured.</li> <li>• <b>DCE-configured</b>—Displayed when the command is issued from the DTE.</li> </ul>	<b>detail extensive none</b>
<b>DLCI statistics</b>	(Frame Relay) Data-link connection identifier (DLCI) statistics. <ul style="list-style-type: none"> <li>• <b>Active DLCI</b>—Number of active DLCIs.</li> <li>• <b>Inactive DLCI</b>—Number of inactive DLCIs.</li> </ul>	<b>detail extensive none</b>

## Sample Output

### show interfaces (T3, PPP)

```

user@host> show interfaces t3-0/2/0
Physical interface: t3-0/2/0, Enabled, Physical link is Up
  Interface index: 139, SNMP ifIndex: 35
  Link-level type: PPP, MTU: 4474, Clocking: Internal, Speed: T3,
  Loopback: None, FCS: 16, Mode: C/Bit parity,
  Long buildout: Shorter than 255 feet
  Device flags   : Present Running
  Interface flags: Point-To-Point SNMP-Traps Internal: 0x4000
  Link flags     : Keepalives
  Keepalive settings: Interval 10 seconds, Up-count 1, Down-count 3
  Keepalive: Input: 0 (never), Output: 0 (never)
  LCP state: Down
  NCP state: inet: Not-configured, inet6: Not-configured, iso: Not-configured,
  mpls: Not-configured
  CHAP state: Closed
  CoS queues    : 4 supported, 4 in use
  Last flapped  : 2005-12-05 08:43:06 PST (02:18:40 ago)

```

```

Input rate      : 0 bps (0 pps)
Output rate     : 72 bps (0 pps)
Active alarms   : None
Active defects  : None
DS3 BERT configuration:
  BERT time period: 10 seconds, Elapsed: 0 seconds
  Algorithm: 2^15 - 1, 0.151, Pseudorandom (9), Induced error rate: 10e-0

Logical interface t3-0/2/0.0 (Index 66) (SNMP ifIndex 54)
  Flags: Hardware-Down Point-To-Point SNMP-Traps Encapsulation: PPP
  Protocol inet, MTU: 4470
  Flags: Protocol-Down
  Addresses, Flags: Dest-route-down Is-Preferred Is-Primary
    Destination: 198.51.100.0/24, Local: 198.51.100.1, Broadcast:

## show interfaces demux0 (Demux Interfaces)

<b>Syntax</b>	<pre>show interfaces demux0.logical-interface-number &lt;brief   detail   extensive   terse&gt; &lt;descriptions&gt; &lt;media&gt; &lt;snmp-index snmp-index&gt; &lt;statistics&gt;</pre>
<b>Release Information</b>	Command introduced in Junos OS Release 9.0.
<b>Description</b>	(MX Series and M Series routers only) Display status information about the specified demux interface.
<b>Options</b>	<p><b>none</b>—Display standard information about the specified demux interface.</p> <p><b>brief   detail   extensive   terse</b>—(Optional) Display the specified level of output.</p> <p><b>descriptions</b>—(Optional) Display interface description strings.</p> <p><b>media</b>—(Optional) Display media-specific information about network interfaces.</p> <p><b>snmp-index snmp-index</b>—(Optional) Display information for the specified SNMP index of the interface.</p> <p><b>statistics</b>—(Optional) Display static interface statistics.</p>
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Verifying and Managing Agent Circuit Identifier-Based Dynamic VLAN Configuration</a></li> </ul>
<b>List of Sample Output</b>	<p><a href="#">show interfaces demux0 (Demux) on page 1555</a></p> <p><a href="#">show interfaces demux0 (PPPoE over Aggregated Ethernet) on page 1556</a></p> <p><a href="#">show interfaces demux0 extensive (Targeted Distribution for Aggregated Ethernet Links) on page 1557</a></p> <p><a href="#">show interfaces demux0 (ACI Interface Set Configured) on page 1557</a></p>
<b>Output Fields</b>	Table 77 on page 1549 lists the output fields for the <b>show interfaces demux0 (Demux Interfaces)</b> command. Output fields are listed in the approximate order in which they appear.

Table 77: show interfaces demux0 (Demux Interfaces) Output Fields

Field Name	Field Description	Level of Output
Physical Interface		

Table 77: show interfaces demux0 (Demux Interfaces) Output Fields (continued)

Field Name	Field Description	Level of Output
Physical interface	Name of the physical interface.	brief detail extensive none
Interface index	Index number of the physical interface, which reflects its initialization sequence.	brief detail extensive none
Enabled	State of the interface. Possible values are described in the “Enabled Field” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	brief detail extensive none
Physical link	Status of the physical link (Up or Down).	detail extensive none
Admin	Administrative state of the interface (Up or Down).	terse
Interface index	Index number of the physical interface, which reflects its initialization sequence.	detail extensive none
Link	Status of the physical link (Up or Down).	terse
Targeting summary	Status of aggregated Ethernet links that are configured with targeted distribution (primary or backup)	extensive
Bandwidth	Bandwidth allocated to the aggregated Ethernet links that are configured with targeted distribution.	extensive
Proto	Protocol family configured on the interface.	terse
SNMP ifIndex	SNMP index number for the physical interface.	detail extensive none
Generation	Unique number for use by Juniper Networks technical support only.	detail extensive
Type	Type of interface. <b>Software-Pseudo</b> indicates a standard software interface with no associated hardware device.	brief detail extensive none
Link-level type	Encapsulation being used on the physical interface.	brief detail extensive
MTU	Maximum transmission unit size on the physical interface.	brief detail extensive
Clocking	Reference clock source: <b>Internal</b> (1) or <b>External</b> (2).	brief detail extensive
Speed	Speed at which the interface is running.	brief detail extensive
Device flags	Information about the physical device. Possible values are described in the “Device Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	brief detail extensive none
Interface flags	Information about the interface. Possible values are described in the “Interface Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	brief detail extensive none
Link type	Data transmission type.	detail extensive none

Table 77: *show interfaces demux0 (Demux Interfaces) Output Fields (continued)*

Field Name	Field Description	Level of Output
<b>Link flags</b>	Information about the link. Possible values are described in the “Link Flags” section under “ <a href="#">Common Output Fields Description</a> ” on page 1114.	<b>detail extensive none</b>
<b>Physical info</b>	Information about the physical interface.	<b>detail extensive</b>
<b>Hold-times</b>	Current interface hold-time up and hold-time down, in milliseconds.	<b>detail extensive</b>
<b>Current address</b>	Configured MAC address.	<b>detail extensive</b>
<b>Hardware address</b>	Hardware MAC address.	<b>detail extensive</b>
<b>Alternate link address</b>	Backup address of the link.	<b>detail extensive</b>
<b>Last flapped</b>	Date, time, and how long ago the interface went from down to up. The format is <b>Last flapped: year-month-day hour:minute:second:timezone (hour:minute:second ago)</b> . For example, <b>Last flapped: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> .	<b>detail extensive none</b>
<b>Statistics last cleared</b>	Time when the statistics for the interface were last set to zero.	<b>detail extensive</b>
<b>Traffic statistics</b>	<p>Number and rate of bytes and packets received and transmitted on the physical interface.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> <li>• <b>IPv6 transit statistics</b>—Number of IPv6 transit bytes and packets received and transmitted on the physical interface if IPv6 statistics tracking is enabled.</li> </ul> <p><b>NOTE:</b> These fields include dropped traffic and exception traffic, as those fields are not separately defined.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>	<b>detail extensive</b>

Table 77: show interfaces demux0 (Demux Interfaces) Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Input errors</b>	Input errors on the interface whose definitions are as follows: <ul style="list-style-type: none"> <li>• <b>Errors</b>—Sum of the incoming frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the input queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>Framing errors</b>—Number of packets received with an invalid frame checksum (FCS).</li> <li>• <b>Runts</b>—Number of frames received that are smaller than the runt threshold.</li> <li>• <b>Giants</b>—Number of frames received that are larger than the giant packet threshold.</li> <li>• <b>Policed discards</b>—Number of frames that the incoming packet match code discarded because they were not recognized or not of interest. Usually, this field reports protocols that the Junos OS does not handle.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>	<b>extensive</b>
<b>Input Rate</b>	Input rate in bits per second (bps) and packets per second (pps).	<b>none</b>
<b>Output errors</b>	Output errors on the interface. The following paragraphs explain the counters whose meaning might not be obvious: <ul style="list-style-type: none"> <li>• <b>Carrier transitions</b>—Number of times the interface has gone from <b>down</b> to <b>up</b>. This number does not normally increment quickly, increasing only when the cable is unplugged, the far-end system is powered down and then up, or another problem occurs. If the number of carrier transitions increments quickly (perhaps once every 10 seconds), the cable, the far-end system, or the PIC or PIM is malfunctioning.</li> <li>• <b>Errors</b>—Sum of the outgoing frame aborts and FCS errors.</li> <li>• <b>Drops</b>—Number of packets dropped by the output queue of the I/O Manager ASIC. If the interface is saturated, this number increments once for every packet that is dropped by the ASIC's RED mechanism.</li> <li>• <b>MTU errors</b>—Number of packets whose size exceeded the MTU of the interface.</li> <li>• <b>Resource errors</b>—Sum of transmit drops.</li> </ul>	<b>extensive</b>
<b>Output Rate</b>	Output rate in bps and pps.	<b>none</b>
<b>Logical Interface</b>		
<b>Logical interface</b>	Name of the logical interface.	<b>brief detail extensive none</b>
<b>Index</b>	Index number of the logical interface, which reflects its initialization sequence.	<b>detail extensive none</b>
<b>SNMP ifIndex</b>	SNMP interface index number for the logical interface.	<b>detail extensive none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail</b>
<b>Flags</b>	Information about the logical interface. Possible values are described in the "Logical Interface Flags" section under <a href="#">"Common Output Fields Description" on page 1114</a> .	<b>brief detail extensive none</b>

Table 77: show interfaces demux0 (Demux Interfaces) Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Encapsulation</b>	Encapsulation on the logical interface.	<b>brief extensive none</b>
<b>ACI VLAN: Dynamic Profile</b>	Name of the dynamic profile that defines the agent circuit identifier (ACI) interface set. If configured, the ACI interface set enables the underlying demux interface to create dynamic VLAN subscriber interfaces based on ACI information.	<b>brief detail extensive none</b>
<b>Demux</b>	Specific IP demultiplexing (demux) values: <ul style="list-style-type: none"> <li>• <b>Underlying interface</b>—The underlying interface that the demux interface uses.</li> <li>• <b>Index</b>—Index number of the logical interface.</li> <li>• <b>Family</b>—Protocol family configured on the logical interface.</li> <li>• <b>Source prefixes, total</b>—Total number of source prefixes for the underlying interface.</li> <li>• <b>Destination prefixes, total</b>—Total number of destination prefixes for the underlying interface.</li> <li>• <b>Prefix</b>—inet family prefix.</li> </ul>	<b>detail extensive none</b>
<b>protocol-family</b>	Protocol family configured on the logical interface.	<b>brief</b>
<b>Traffic statistics</b>	Number and rate of bytes and packets received and transmitted on the specified interface set. <ul style="list-style-type: none"> <li>• <b>Input bytes, Output bytes</b>—Number of bytes received and transmitted on the interface set.</li> <li>• <b>Input packets, Output packets</b>—Number of packets received and transmitted on the interface set.</li> <li>• <b>IPv6 transit statistics</b>—Number of IPv6 transit bytes and packets received and transmitted on the logical interface if IPv6 statistics tracking is enabled.</li> </ul> <p><b>NOTE:</b> The packet and byte counts in these fields include traffic that is dropped and does not leave the router.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>	<b>detail extensive</b>
<b>Local statistics</b>	Number of transit bytes and packets received and transmitted on the local interface. <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>	<b>detail extensive</b>

Table 77: show interfaces demux0 (Demux Interfaces) Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Transit statistics</b>	<p>Number and rate of bytes and packets transiting the switch.</p> <p><b>NOTE:</b> The packet and byte counts in these fields include traffic that is dropped and does not leave the router.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>	<b>detail extensive</b>
<b>IPv6 Transit statistics</b>	<p>Number of IPv6 transit bytes and packets received and transmitted on the logical interface if IPv6 statistics tracking is enabled.</p> <p><b>NOTE:</b> The packet and byte counts in these fields include traffic that is dropped and does not leave the router.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Number of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Number of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Number of packets received on the interface.</li> <li>• <b>Output packets</b>—Number of packets transmitted on the interface.</li> </ul>	<b>detail extensive</b>
<b>Input packets</b>	Number of packets received on the interface.	none
<b>Output packets</b>	Number of packets transmitted on the interface.	none
<b>Protocol</b>	Protocol family. Possible values are described in the “Protocol Field” section under “ <a href="#">Common Output Fields Description</a> ” on page 1114.	<b>detail extensive</b> none
<b>MTU</b>	Maximum transmission unit size on the logical interface.	<b>detail extensive</b> none
<b>Maximum labels</b>	Maximum number of MPLS labels configured for the MPLS protocol family on the logical interface.	<b>detail extensive</b> none
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Route table</b>	Route table in which the logical interface address is located. For example, 0 refers to the routing table inet.0.	<b>detail extensive</b>
<b>Flags</b>	Information about protocol family flags. Possible values are described in the “Family Flags” section under “ <a href="#">Common Output Fields Description</a> ” on page 1114.	<b>detail extensive</b> none
<b>Mac-Validate Failures</b>	Number of MAC address validation failures for packets and bytes. This field is displayed when MAC address validation is enabled for the logical interface.	<b>detail extensive</b> none
<b>Addresses, Flags</b>	Information about the address flags. Possible values are described in the “Addresses Flags” section under “ <a href="#">Common Output Fields Description</a> ” on page 1114.	<b>detail extensive</b> none
<b>Destination</b>	IP address of the remote side of the connection.	<b>detail extensive</b> statistics none

Table 77: show interfaces demux0 (Demux Interfaces) Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Local</b>	IP address of the logical interface.	<b>detail extensive terse</b> none
<b>Remote</b>	IP address of the remote interface.	<b>terse</b>
<b>Broadcast</b>	Broadcast address of the logical interlace.	<b>detail extensive none</b>
<b>Generation</b>	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
<b>Link</b>	Name of the physical interfaces for member links in an aggregated Ethernet bundle for a PPPoE over aggregated Ethernet configuration. PPPoE traffic goes out on these interfaces.	<b>detail extensive none</b>
<b>Dynamic-profile</b>	Name of the PPPoE dynamic profile assigned to the underlying interface.	<b>detail extensive none</b>
<b>Service Name Table</b>	Name of the PPPoE service name table assigned to the PPPoE underlying interface.	<b>detail extensive none</b>
<b>Max Sessions</b>	Maximum number of dynamic PPPoE logical interfaces that the router can activate on the underlying interface.	<b>detail extensive none</b>
<b>Duplicate Protection</b>	State of duplicate protection: <b>On</b> or <b>Off</b> . Duplicate protection prevents the activation of another dynamic PPPoE logical interface on the same underlying interface when a dynamic PPPoE logical interface for a client with the same MAC address is already active on that interface.	<b>detail extensive none</b>
<b>Direct Connect</b>	State of the configuration to ignore DSL Forum VSAs: <b>On</b> or <b>Off</b> . When configured, the router ignores any of these VSAs received from a directly connected CPE device on the interface.	<b>detail extensive none</b>
<b>AC Name</b>	Name of the access concentrator.	<b>detail extensive none</b>

## Sample Output

### show interfaces demux0 (Demux)

```

user@host> show interfaces demux0
Physical interface: demux0, Enabled, Physical link is Up
  Interface index: 128, SNMP ifIndex: 79, Generation: 129

## show interfaces extensive

---

**Syntax**    show interfaces extensive

**Release Information**    Command introduced before Junos OS Release 7.4.  
Command introduced in Junos OS Release 12.1x48 for PTX Series Packet Transport Routers.  
Command introduced in Junos OS Release 17.2 for PT1000 and PTX10008 Packet Transport Routers.

**Description**    Display extensive information about all interfaces configured on the router.

---

**NOTE:**

- At some times, the cumulative byte counters displayed with the `show interfaces extensive` command on the 10-Gigabit Ethernet MPC with SFP+ is not always increasing and cumulative and does not give the correct results. There is a time lag in collecting these statistics, during which the display might decrease or go from a nonzero number to zero. Eventually, the counter will display the correct result.
  - When the `show interfaces extensive` command is executed on a router with an MPC or a T4000 Type 5 FPC, the Input packet rejects counter of the Filter statistics field also displays statistics related to the following packet errors:
    - Invalid VLAN range
    - Tagged packet received on an untagged interface
  - When the `show interfaces extensive` command is executed on an interface that is configured on a T4000 Type 5 FPC, the IPv6 transit statistics field displays:
    - Total statistics (sum of transit and local statistics) at the physical interface level
    - Transit statistics at the logical interface level
  - When the `show interfaces extensive` command is executed on an aggregate interface in a T1600 Core Router, the IPv6 Input bytes is displayed for an aggregate interface. However, the IPv6 Input bytes is always zero on a member link of an aggregated bundle even when there is IPv6 transit traffic on the member link. This is because the logical interface index of the aggregate logical interface is updated but not the logical interface of the member links in the channel lookup table.
  - The Output packets field under the Traffic statistics section in the output of the `show interfaces extensive` command includes both IPv4 and IPv6 packets. For example, in a scenario in which both IPv4 and IPv6 packets are being mirrored on the same interface and when you deactivate an IPv4 port-mirroring instance on the chassis, the output of the `show interfaces extensive` command shows a value in the Output packets field of the Traffic statistics section, which is the value of IPv6 packets that are mirrored and not of the IPv4 packets. This behavior is expected.
  - For IQ2 PIC interfaces, the output of the `show interfaces extensive` command displays byte statistics that includes Layer 2 headers.
  - If there are active OTN defects when an ISSU is performed, and the defect persists after the upgrade completes, the OTN alarm count is incremented by 1. For example, if an OTN alarm is active with a count of 1 and the defect remains after ISSU, the alarm count is incremented to 2. This behavior is expected.
-

<b>Output Fields</b>	For more information, see the output fields table for the particular interface type in which you are interested. For information about destination class and source class statistics, see the “Destination Class Field” section and the “Source Class Field” section under <a href="#">“Common Output Fields Description” on page 1114</a> . For sample output for specific interfaces, see the other topics in this collection.

## Sample Output

### [show interfaces extensive \(Circuit Emulation\)](#)

If a Circuit Emulation (CE) PIC is configured for SAToP pseudowire, then pseudowire statistics are displayed in the CE information section of the **show interface extensive** output. If SAToP pseudowire is not configured on the CE PIC, then all CE information counters display 0 (zero).

## show interfaces lsi (Label-Switched Interface)

**Syntax** `show interfaces interface-type`  
`<brief | detail | extensive | terse>`  
`<descriptions>`  
`<media>`  
`<routing-instance instance-name>`  
`<snmp-index snmp-index>`  
`<statistics>`

**Release Information** Command introduced before Junos OS Release 7.4.

**Description** Display status information about the specified label-switched interface (LSI).

**Options** *interface-type*—On most routers, the interface type is *lt-fpc/pic/port*.

**brief | detail | extensive | terse**—(Optional) Display the specified level of output.

**descriptions**—(Optional) Display interface description strings.

**media**—(Optional) Display media-specific information about network interfaces.

**routing-instance *instance-name***—(Optional) Display information for the specified routing instance.

**snmp-index *snmp-index***—(Optional) Display information for the specified SNMP index of the interface.

**statistics**—(Optional) Display static interface statistics.

**Required Privilege Level** view

**Related Documentation**

**List of Sample Output** [show interfaces lsi extensive on page 1605](#)

**Output Fields** [Table 78 on page 1603](#) lists the output fields for the **show interfaces** (logical tunnel) command. Output fields are listed in the approximate order in which they appear.

*Table 78: Logical Tunnel show interfaces Output Fields*

Field Name	Field Description	Level of Output
Physical Interface		
Physical interface	Name of the physical interface.	All levels
Logical Interface		

Table 78: Logical Tunnel show interfaces Output Fields (continued)

Field Name	Field Description	Level of Output
Logical interface	Name of the logical interface.	All levels
Index	Logical interface index number, which reflects its initialization sequence.	<b>detail extensive none</b>
SNMP ifIndex	SNMP interface index number.	<b>detail extensive none</b>
Generation	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
Flags	Information about the logical interface. Possible values are described in the “Logical Interface Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	All levels
Encapsulation	Encapsulation on the logical interface.	All levels
Traffic statistics	<p>Total number of bytes and packets received and transmitted on the logical interface. These statistics are the sum of the local and transit statistics. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. It takes awhile (generally, less than 1 second) for this counter to stabilize.</p> <ul style="list-style-type: none"> <li>• <b>Input bytes</b>—Rate of bytes received on the interface.</li> <li>• <b>Output bytes</b>—Rate of bytes transmitted on the interface.</li> <li>• <b>Input packets</b>—Rate of packets received on the interface.</li> <li>• <b>Output packets</b>—Rate of packets transmitted on the interface.</li> </ul>	<b>detail extensive</b>
Local statistics	Statistics for traffic received from and transmitted to the Routing Engine. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. It takes awhile (generally, less than 1 second) for this counter to stabilize.	<b>detail extensive</b>
Transit statistics	Statistics for traffic transiting the router. When a burst of traffic is received, the value in the output packet rate field might briefly exceed the peak cell rate. It takes awhile (generally, less than 1 second) for this counter to stabilize.	<b>detail extensive</b>
Protocol	Protocol family configured on the logical interface, such as <b>iso</b> , <b>inet6</b> , <b>mpls</b> .	<b>detail extensive none</b>
MTU	MTU size on the logical interface.	<b>detail extensive none</b>
Generation	Unique number for use by Juniper Networks technical support only.	<b>detail extensive</b>
Flags	Information about the protocol family flags. Possible values are described in the “Family Flags” section under <a href="#">“Common Output Fields Description” on page 1114</a> .	<b>detail extensive none</b>

## show interfaces media

---

**Syntax**    show interfaces media

**Release Information**    Command introduced before Junos OS Release 7.4.  
Command introduced on PTX Series Packet Transport Routers for Junos OS Release 12.1.

**Description**    Display media-specific information about all configured network interfaces.

**NOTE:** show interfaces media lists details for all interfaces, whereas show interfaces media *interface-name* lists details only for the specified interface.

**Options**    This command has no options.

**Additional Information**    Output from both the **show interfaces *interface-name* detail** and the **show interfaces *interface-name* extensive** commands includes all the information displayed in the output from the **show interfaces media** command.

**Required Privilege Level**    view

**List of Sample Output**    [show interfaces media \(SONET/SDH\) on page 1607](#)  
[show interfaces media \(MX Series Routers\) on page 1607](#)  
[show interfaces media \(PTX Series Packet Transport Routers\) on page 1608](#)

**Output Fields**    The output from the **show interfaces media** command includes fields that display interface media-specific information. These fields are also included in the **show interfaces *interface-name*** command for each particular interface type, and the information provided in the fields is unique to each interface type.

One field unique to the **show interfaces media** command is **interface-type errors** (for example, **SONET errors**). This field appears for channelized E3, channelized T3, channelized OC, E1, E3, SONET, T1, and T3 interfaces. The information provided in this output field is also provided in the output from the **show interfaces *interface-name*** command. (For example, for SONET interfaces, these fields are **SONET section**, **SONET line**, and **SONET path**). For a description of errors, see the chapter with the particular interface type in which you are interested.

## Sample Output

### show interfaces media (SONET/SDH)

The following example displays the output fields unique to the **show interfaces media** command for a SONET interface (with no level of output specified):

```
user@host> show interfaces media so-4/1/2
Physical interface: so-4/1/2, Enabled, Physical link is Up
  Interface index: 168, SNMP ifIndex: 495
  Link-level type: PPP, MTU: 4474, Clocking: Internal, SONET mode, Speed: OC48,
  Loopback: None, FCS: 16, Payload scrambler: Enabled
  Device flags   : Present Running
  Interface flags: Point-To-Point SNMP-Traps 16384
  Link flags     : Keepalives
  Keepalive settings: Interval 10 seconds, Up-count 1, Down-count 3
  Keepalive: Input: 1783 (00:00:00 ago), Output: 1786 (00:00:08 ago)
  LCP state: Opened
  NCP state: inet: Not-configured, inet6: Not-configured, iso: Not-configured,
  mpls: Not-configured
  CHAP state: Not-configured
  CoS queues    : 8 supported
  Last flapped  : 2005-06-15 12:14:59 PDT (04:31:29 ago)
  Input rate    : 0 bps (0 pps)
  Output rate   : 0 bps (0 pps)
  SONET alarms  : None
  SONET defects : None
  SONET errors:
    BIP-B1: 121, BIP-B2: 916, REI-L: 0, BIP-B3: 137, REI-P: 16747, BIP-BIP2: 0
  Received path trace: routerb so-1/1/2
  Transmitted path trace: routera so-4/1/2
```

### show interfaces media (MX Series Routers)

```
user@host>show interfaces media xe-0/0/0
Physical interface: xe-0/0/0, Enabled, Physical link is Up
  Interface index: 145, SNMP ifIndex: 592
  Link-level type: Ethernet, MTU: 1514, LAN-PHY mode, Speed: 10Gbps, BPDU Error:
  None,
  Loopback: None, Source filtering: Disabled, Flow control: Enabled
  Pad to minimum frame size: Enabled
  Device flags   : Present Running
  Interface flags: Hardware-Down SNMP-Traps Internal: 0x0
  Link flags     : None
  CoS queues    : 8 supported, 8 maximum usable queues
  Current address: 08:81:f4:82:a3:f0, Hardware address: 08:81:f4:82:a3:f0
  Last flapped   : 2013-10-26 03:20:40 test (1w6d 00:19 ago)
  Input rate     : 0 bps (0 pps)
  Output rate    : 0 bps (0 pps)
  Active alarms  : LINK
  Active defects : LINK
  PCS statistics
    Bit errors          Seconds
    Errored blocks      78
  MAC statistics:
    Input bytes: 0, Input packets: 0, Output bytes: 0, Output packets: 0
  Filter statistics:
    Filtered packets: 0, Padded packets: 0, Output packet errors: 0
  Interface transmit statistics: Disabled
```

### show interfaces media (PTX Series Packet Transport Routers)

```
user@host> show interfaces media em0
Physical interface: em0, Enabled, Physical link is Up
  Interface index: 8, SNMP ifIndex: 0
  Type: Ethernet, Link-level type: Ethernet, MTU: 1514, Speed: 1000mbps
  Device flags   : Present Running
  Interface flags: SNMP-Traps
  Link type      : Full-Duplex
  Current address: 00:80:f9:25:00:1b, Hardware address: 00:80:f9:25:00:1b
  Last flapped   : Never
  Input packets  : 215151
  Output packets: 72
```

## show interfaces terse

<b>Syntax</b>	show interfaces terse
<b>Release Information</b>	Command introduced before Junos OS Release 7.4. Command introduced on PTX Series Packet Transport Routers for Junos OS Release 12.1.
<b>Description</b>	Display summary information about interfaces.
<b>Options</b>	This command has no options.
<b>Additional Information</b>	Interfaces are always displayed in numerical order, from the lowest to the highest FPC slot number. Within that slot, the lowest PIC slot is shown first. On an individual PIC, the lowest port number is always first.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Examples: Using Logical Systems</i></li> </ul>
<b>List of Sample Output</b>	<a href="#">show interfaces terse on page 1610</a> <a href="#">show interfaces terse (TX Matrix Plus Router) on page 1610</a> <a href="#">show interfaces terse (PTX Series Packet Transport Routers) on page 1611</a>
<b>Output Fields</b>	Table 79 on page 1609 lists the output fields for the <b>show interfaces terse</b> command. Output fields are listed in the approximate order in which they appear.

*Table 79: show interfaces terse Output Fields*

Field Name	Field Description
<b>Interface</b>	Interface name.
<b>Admin</b>	Whether the interface is turned on (up) or off (down).
<b>Link</b>	Link state: <b>up</b> or <b>down</b> .
<b>Proto</b>	Protocol family configured on the logical interface. A logical interface on a router that supports Ethernet OAM always shows the multiservice protocol.
<b>Local</b>	Local IP address of the logical interface.
<b>Remote</b>	Remote IP address of the logical interface.

## Sample Output

## CHAPTER 15

# ANCP Operational Commands

- `clear ancp neighbor`
- `clear ancp statistics`
- `clear ancp subscriber`
- `request ancp oam interface`
- `request ancp oam neighbor`
- `show ancp cos`
- `show ancp neighbor`
- `show ancp statistics`
- `show ancp subscriber`
- `show ancp summary`
- `show ancp summary neighbor`
- `show ancp summary subscriber`

## clear ancp neighbor

---

<b>Syntax</b>	<b>clear ancp neighbor</b> <b>&lt;ip-address <i>ip-address</i>&gt;</b> <b>&lt;system-name <i>mac-address</i>&gt;</b>
<b>Release Information</b>	Command introduced in Junos OS Release 9.4.
<b>Description</b>	<p>Clear the ANCP agent connection with all ANCP neighbors or with the specified ANCP neighbor. This command deletes information for subscribers associated with the neighbor, causing the adjusted traffic rates to revert to the configured rate for the subscriber interfaces. The neighbor remains configured (its administrative state is <i>enabled</i>) and can reestablish adjacencies.</p> <p>This command initiates logout of ANCP-triggered dynamic VLAN sessions on the physical interface associated with the specified neighbor; conventionally autosensed dynamic VLAN sessions and their associated logical interfaces are not affected.</p>
<b>Options</b>	<p><b>none</b>—Clear all ANCP neighbors.</p> <p><b>ip-address <i>ip-address</i></b>—(Optional) Clear the ANCP neighbor specified by the IP address.</p> <p><b>system-name <i>mac-address</i></b>—(Optional) Clear the ANCP neighbor specified by the MAC address.</p>
<b>Required Privilege Level</b>	clear
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">show ancp neighbor on page 1628</a></li></ul>
<b>List of Sample Output</b>	<a href="#">clear ancp neighbor on page 1614</a> <a href="#">show ancp neighbor on page 1614</a>
<b>Output Fields</b>	When you enter this command, you are provided no feedback on the status of your request. You can enter the <b>show ancp neighbor</b> command before and after clearing the ANCP neighbors to verify the clear operation.

## Sample Output

### clear ancp neighbor

```
user@host> clear ancp neighbor
```

### show ancp neighbor

The following sample output displays the connections with ANCP neighbors before and after the **clear ancp neighbor** command was issued.

```
user@host> show ancp neighbor
```

## clear ancp statistics

---

Syntax	<b>clear ancp statistics</b> <b>&lt;ip-address <i>ip-address</i>&gt;</b> <b>&lt;system-name <i>mac-address</i>&gt;</b>
Release Information	Command introduced in Junos OS Release 13.3.
Description	Clear current statistics accumulated by the ANCP agent for all ANCP neighbors or the specified neighbor.
Options	<b>none</b> —Clear all ANCP statistics.  <b>ip-address <i>ip-address</i></b> —(Optional) Clear statistics for the ANCP neighbor specified by the IP address.  <b>system-name <i>mac-address</i></b> —(Optional) Clear statistics for the ANCP neighbor specified by the MAC address.
Required Privilege Level	clear
Related Documentation	<ul style="list-style-type: none"><li>• <a href="#">show ancp neighbor on page 1628</a></li></ul>
List of Sample Output	<a href="#">clear ancp statistics on page 1616</a> <a href="#">show ancp neighbor on page 1616</a>
Output Fields	When you enter this command, you are provided no feedback on the status of your request. You can enter the <b>show ancp neighbor</b> command before and after clearing the ANCP neighbor statistics to verify the clear operation.

## Sample Output

### clear ancp statistics

```
user@host> clear ancp statistics
```

### show ancp neighbor

The following sample output displays statistics for an ANCP neighbor before and after the **clear ancp statistics** command was issued.

```
user@host> show ancp neighbor ip-address 192.168.10.1 detail
Neighbor Information
  IP Address           : 192.168.10.1
  System Name          : 00:00:5E:00:53:02
  Up Time               : 38
  TCP Port             : 64959
```

```

## clear ancp subscriber

---

<b>Syntax</b>	<b>clear ancp subscriber</b> <b>&lt;identifier <i>identifier</i>&gt;</b> <b>&lt;ip-address <i>ip-address</i>&gt;</b> <b>&lt;system-name <i>mac-address</i>&gt;</b>
<b>Release Information</b>	Command introduced in Junos OS Release 11.4.
<b>Description</b>	Clear the ANCP agent connection with all ANCP subscribers or with the specified ANCP subscriber. This command deletes information for the subscribers, causing the adjusted traffic rate to revert to the configured rate for the subscriber interface, but otherwise has no affect on ANCP neighbors.
<b>Options</b>	<b>none</b> —Clear all ANCP subscribers.  <b>identifier <i>identifier-string</i></b> —(Optional) Clear the ANCP subscriber identified by the access loop ID.  <b>ip-address <i>ip-address</i></b> —(Optional) Clear all ANCP subscribers on the neighbor specified by the IP address.  <b>system-name <i>mac-address</i></b> —(Optional) Clear all ANCP subscribers on the neighbor specified by the MAC address.
<b>Required Privilege Level</b>	clear
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">show ancp subscriber on page 1641</a></li></ul>
<b>List of Sample Output</b>	<a href="#">show ancp subscriber brief on page 1618</a> <a href="#">clear ancp subscriber on page 1619</a>
<b>Output Fields</b>	When you enter this command, you are provided no feedback on the status of your request. You can enter the <b>show ancp subscriber</b> command before and after clearing the ANCP neighbors to verify the clear operation.

## Sample Output

### show ancp subscriber brief

```
user@host> show ancp subscriber brief
Loop Identifier      Type      Interface      Rate      Neighbor
                    Kbps
port-1-10            VDSL2     set-ge-10410   64        203.0.113.102
port-1-11            VDSL2     set-ge-10411   64        203.0.113.112
port-2-10            VDSL2     ge-1/0/4.12    64        203.0.113.122
```

port-2-10	VDSL2	ge-1/0/4.12	64	203.0.113.123
port-2-11	VDSL2	ge-1/0/4.13	64	203.0.113.132

```
user@host> clear ancp subscriber identifier port-2-10
```

```
user@host> show ancp subscriber brief
```

Loop	Identifier	Type	Interface	Rate Kbps	Neighbor
	port-1-10	VDSL2	set-ge-10410	64	203.0.113.102
	port-1-11	VDSL2	set-ge-10411	64	203.0.113.112

### clear ancp subscriber

```
user@host> clear ancp subscriber
```

## request ancp oam interface

---

<b>Syntax</b>	<b>request ancp oam interface</b> <i>(interface-name   interface-set set-name)</i> <count <i>count</i> > <timeout <i>duration</i> >
<b>Release Information</b>	Command introduced in Junos OS Release 11.4.
<b>Description</b>	Trigger the access node to run a loopback test on the local loop between the access node and the customer premises equipment. You must specify either an ANCP interface or an ANCP interface set. The access node responds to the NAS with the results of the test.
<b>Options</b>	<p><b>interface-name</b>—Name of the ANCP interface on whose local loop the loopback test is run.</p> <p><b>interface-set set-name</b>—Name of the ANCP interface set on whose local loop the loopback test is run.</p> <p><b>count count</b>—(Optional) Number of times a loopback message is sent on the local loop. Range: 1 through 32. Default: 1.</p> <p><b>timeout duration</b>—(Optional) Period of time in seconds that the NAS waits for a response to the OAM request. Range: 0 through 255. Default: 5.</p>
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Triggering ANCP OAM to Test the Local Loop</i></li></ul>
<b>List of Sample Output</b>	<a href="#">request ancp oam interface on page 1620</a>
<b>Output Fields</b>	When you enter this command, you are provided feedback on the status of your request, including the result of the test, the response code, and the response string returned with the OAM response in the event of failure, an error code is displayed.

## Sample Output

### request ancp oam interface

```
user@host> request ancp oam interface ge-1/0/4.12 count 5 timeout 40
request succeeded
0x503 : DSL line status showtime
DEFAULT RESPONSE
```

## request ancp oam neighbor

<b>Syntax</b>	<pre>request ancp oam neighbor (ip-address <i>ip-address</i>   system-name <i>neighbor-name</i>) subscriber <i>identifier-string</i> &lt;count <i>count</i>&gt; &lt;timeout <i>duration</i>&gt;</pre>
<b>Release Information</b>	Command introduced in Junos OS Release 11.4.
<b>Description</b>	Trigger the access node to run a loopback test on the local loop between the access node and the customer premises equipment. You must specify both the access node and the subscriber. The access node responds to the NAS with the results of the test.
<b>Options</b>	<p><b>ip-address <i>ip-address</i></b>—IP address that specifies the access node on whose local loop the loopback test is run.</p> <p><b>system-name <i>neighbor-name</i></b>—System name that specifies the access node on whose local loop the loopback test is run.</p> <p><b>subscriber <i>identifier-string</i></b>—Access identifier that specifies the subscriber on whose local loop the loopback test is run.</p> <p><b>count <i>count</i></b>—(Optional) Number of times a loopback message is sent on the local loop. Range: 1 through 32. Default: 1.</p> <p><b>timeout <i>duration</i></b>—(Optional) Period of time in seconds that the NAS waits for a response to the OAM request. Range: 0 through 255. Default: 5.</p>
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Triggering ANCP OAM to Test the Local Loop</i></li> </ul>
<b>List of Sample Output</b>	<a href="#">request ancp oam subscriber on page 1621</a>
<b>Output Fields</b>	When you enter this command, you are provided feedback on the status of your request, including the result of the test, the response code, and the response string returned with the OAM response in the event of failure, an error code is displayed.

## Sample Output

### request ancp oam subscriber

```
user@host> request ancp oam neighbor 203.0.113.21 subscriber "dslam port-1-11"
```

```
request succeeded
0x503 : DSL line status showtime
DEFAULT RESPONSE
```

## show ancp cos

<b>Syntax</b>	<code>show ancp cos</code> <code>&lt;identifier <i>identifier</i>&gt;</code> <code>&lt;last-update&gt;</code> <code>&lt;pending-update&gt;</code>
<b>Release Information</b>	Command introduced in Junos OS Release 9.4.
<b>Description</b>	Display information about the CoS state for subscriber traffic.
<b>Options</b>	<p><b>identifier <i>identifier</i></b>—(Optional) Display information about the local loops for the specified access identifier.</p> <p><b>last-update</b>—(Optional) Display the most recently updated CoS information.</p> <p><b>pending-update</b>—(Optional) Display the pending update of CoS information.</p>
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">show ancp neighbor on page 1628</a></li> <li>• <a href="#">show ancp statistics on page 1636</a></li> <li>• <a href="#">show ancp subscriber on page 1641</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">show ancp cos on page 1625</a> <a href="#">show ancp cos last-update on page 1626</a> <a href="#">show ancp cos pending-update on page 1627</a>
<b>Output Fields</b>	Table 80 on page 1623 lists the output fields for the <b>show ancp cos</b> command. Output fields are listed in the approximate order in which they appear.

*Table 80: show ancp cos Output Fields*

Field Name	Field Description
Per-DSL CoS adjustment	Adjustment values applied by the ANCP agent to the actual downstream rates and frame overhead for frame-mode DSL types. The agent then reports the adjusted rates to CoS to establish a shaping rate for the CoS node that corresponds to the subscriber access line.
QoS Adjust Flag	State of QoS adjust: <ul style="list-style-type: none"> <li>• <b>TRUE</b>—The ANCP agent is enabled to adjust the actual downstream data rates and frame overhead and report the adjusted values to CoS.</li> <li>• <b>FALSE</b>—The ANCP agent is not enabled to adjust and report values to CoS.</li> </ul>

Table 80: show ancp cos Output Fields (continued)

Field Name	Field Description
<b>ADSL bytes</b>	Number of bytes by which the actual ADSL downstream cell overhead is adjusted before reporting it to CoS.
<b>ADSL2 bytes</b>	Number of bytes by which the actual ADSL2 downstream cell overhead is adjusted before reporting it to CoS.
<b>ADSL2-PLUS bytes</b>	Number of bytes by which the actual ADSL2+ downstream cell overhead is adjusted before reporting it to CoS.
<b>SDSL overhead adjusted</b>	Percentage by which the actual SDSL downstream rate is adjusted before reporting it to CoS.
<b>SDSL bytes</b>	Number of bytes by which the actual SDSL downstream frame overhead is adjusted before reporting it to CoS.
<b>OTHER overhead adjusted</b>	Percentage by which the actual OTHER downstream rate is adjusted before reporting it to CoS.
<b>OTHER bytes</b>	Number of bytes by which the actual OTHER downstream frame overhead is adjusted before reporting it to CoS.
<b>VDSL overhead adjusted</b>	Percentage by which the actual VDSL downstream rate is adjusted before reporting it to CoS.
<b>VDSL bytes</b>	Number of bytes by which the actual VDSL downstream frame overhead is adjusted before reporting it to CoS.
<b>VDSL2 overhead adjusted</b>	Percentage by which the actual VDSL2 downstream rate is adjusted before reporting it to CoS.
<b>VDSL2 bytes</b>	Number of bytes by which the actual VDSL2 downstream frame overhead is adjusted before reporting it to CoS.
<b>Per-DSL adjustment for reporting</b>	Adjustment values applied by the ANCP agent to the actual downstream rates for individual DSL types to account for traffic overhead. The agent then reports the adjusted rates to AAA.
<b>ADSL adjustment factor</b>	Percentage by which the actual ADSL downstream rate is adjusted before reporting it to AAA.
<b>ADSL2 adjustment factor</b>	Percentage by which the actual ADSL2 downstream rate is adjusted before reporting it to AAA.
<b>ADSL2+ adjustment factor</b>	Percentage by which the actual ADSL2+ downstream rate is adjusted before reporting it to AAA.
<b>VDSL adjustment factor</b>	Percentage by which the actual VDSL downstream rate is adjusted before reporting it to AAA.

Table 80: show ancp cos Output Fields (continued)

Field Name	Field Description
<b>VDSL2 adjustment factor</b>	Percentage by which the actual VDSL2 downstream rate is adjusted before reporting it to AAA.
<b>SDSL adjustment factor</b>	Percentage by which the actual SDSL downstream rate is adjusted before reporting it to AAA.
<b>OTHER adjustment factor</b>	Percentage by which the actual OTHER downstream rate is adjusted before reporting it to AAA.
<b>Keepalive Timer</b>	Interval between the keepalive messages that the ANCP agent sends to CoS.
<b>Cos State</b>	State of the interaction between the ANCP agent and CoS: <ul style="list-style-type: none"> <li>• ANCPD_COS_CONNECT_NEEDED</li> <li>• ANCPD_COS_CONNECT_PENDING</li> <li>• ANCPD_COS_CONNECT_DONE</li> <li>• ANCPD_COS_SESSION_SENT</li> <li>• ANCPD_COS_WRITE_READY</li> </ul>
<b>Connect Time</b>	Time at which the ANCP agent connected to CoS; useful for debugging.
<b>Session Time</b>	Time at which the ANCP agent sent a session connect message to CoS; useful for debugging.
<b>Routing Instance Time</b>	Time at which the ANCP agent sent the routing instance to CoS; useful for debugging.
<b>Keepalive Time</b>	Time at which the last keepalive message was sent.
<b>Update Time</b>	Time at which the shaping rate was last updated.
<b>Type</b>	Subscriber access type: <b>ifl</b> indicates that a single VLAN carries subscriber traffic and <b>iflset</b> indicates that a set of VLANs carries subscriber traffic.
<b>Name</b>	System-wide name of the particular subscriber access.
<b>Index</b>	Access identifier.
<b>Pending Update</b>	Actual downstream data rate to be applied next to this local loop, in Kbps.
<b>Last Update</b>	Adjusted downstream data rate last reported to CoS by the ANCP agent for this local loop, in Kbps.

## Sample Output

show ancp cos

```
user@host> show ancp cos
```

```

<b>Output Fields</b>	<a href="#">Table 81 on page 1628</a> lists the output fields for the <b>show ancp neighbor</b> command. Output fields are listed in the approximate order in which they appear.

*Table 81: show ancp neighbor Output Fields*

Field Name	Field Description	Level of Output
Version	Version of the ANCP implementation: <ul style="list-style-type: none"> <li>• <b>0x31</b>—General Switch Management Protocol (GSMP) version 3, sub-version 1; ANCP version before <i>RFC 6320, Protocol for Access Node Control Mechanism in Broadband Networks</i>.</li> <li>• <b>0x32</b>—ANCP version 1, defined in <i>RFC 6320, Protocol for Access Node Control Mechanism in Broadband Networks</i>.</li> </ul>	<b>brief detail</b> none
IP Address	IP address of the ANCP neighbor.	<b>brief detail</b> none

Table 81: show ancp neighbor Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Partid</b>	Number that associates the ANCP message with a specific partition.	<b>brief none</b>
<b>State</b>	Operational state of the ANCP adjacency: <ul style="list-style-type: none"> <li>• <b>Configured</b>—The neighbor has been configured, but has never been in the <b>Established</b> state. An asterisk (*) is prefixed to the neighbor entry for this state.</li> <li>• <b>Establishing</b>—Adjacency negotiations are in progress for the neighbor. An asterisk (*) is prefixed to the neighbor entry for this state. This state is rarely seen because the adjacency is established so quickly.</li> <li>• <b>Established</b>—Adjacency negotiations have succeeded for the neighbor and an ANCP session has been established.</li> <li>• <b>Not Established</b>—Not Established; adjacency negotiations are ready to begin. Indicates that this neighbor previously had been in the <b>Established</b> state; that is, it has lost a previously established adjacency. An asterisk (*) is prefixed to the neighbor entry for this state.</li> </ul>	All levels
<b>Time</b>	How long the adjacency has been up in one of the following formats: <ul style="list-style-type: none"> <li>• <i>nwndnh</i>—number of weeks, days, and hours</li> <li>• <i>nd hh:mm:ss</i>—number of days, hours, minutes, and seconds</li> </ul>	<b>brief detail none</b>
<b>Subscriber Count</b>	Number of subscribers associated with the ANCP neighbor (access local loop).	<b>brief none</b>
<b>Capabilities</b>	Negotiated ANCP capability: <ul style="list-style-type: none"> <li>• <b>Topo</b>—Topology discovery.</li> <li>• <b>OAM</b>—Performance of local Operations Administration Maintenance (OAM) procedures on an access loop controlled by the router.</li> </ul>	All levels
<b>System Name</b>	MAC address of the ANCP neighbor.	<b>detail</b>
<b>TCP Port</b>	TCP port on which ANCP messages are exchanged.	<b>detail</b>
<b>System Instance</b>	Number identifying the ANCP link instance from the edge device's perspective.	<b>detail</b>
<b>Peer Instance</b>	Number identifying the ANCP instance from the access node's perspective. This number is unique and changes when the node or link comes back up after going down.	<b>detail</b>
<b>Timer</b>	Adjacency timer value advertised by the ANCP peer in 100 ms increments; the interval between ANCP ACK messages. This value remains constant for the duration of an ANCP session.	<b>detail</b>
<b>Partition Type</b>	Number that identifies whether partitions are used and how the ID is negotiated: <ul style="list-style-type: none"> <li>• <b>0</b>—No partition.</li> <li>• <b>1</b>—Fixed partition requested.</li> <li>• <b>2</b>—Fixed partition assigned.</li> </ul>	<b>detail</b>

Table 81: show ancp neighbor Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Partition Flag</b>	Number that specifies the type of partition requested: 1 (new adjacency) or 2 (recovered adjacency).	<b>detail</b>
<b>Partition Identifier</b>	<p>Number that identifies a logical partition of an access node with which the ANCP agent has formed an adjacency.</p> <p>A value of zero indicates that the agent supports each neighbor on an IP address over a single TCP session with a partition ID of zero. This is the default support case.</p> <p>A nonzero value indicates that the agent supports each neighbor on an IP address over a single TCP session with a nonzero partition ID.</p>	<b>detail</b>
<b>Partition Adjacencies</b>	Number of adjacencies that share the partition.	<b>detail</b>
<b>Dead Timer</b>	Remaining period that the edge device waits for adjacency packets from a neighbor before declaring the neighbor to be down. The maximum dead time value is three times the configured adjacency timer value. This field displays the current value based on the time that the last adjacency packet was received.	<b>detail</b>
<b>Received Syn Count</b>	Number of synchronization messages received from neighbors to maintain adjacencies.	<b>detail</b>
<b>Received Synack Count</b>	Number of synchronization acknowledgment messages received from neighbors in response to the node's synchronization messages.	<b>detail</b>
<b>Received Rstack Count</b>	Number of messages received from neighbors indicating that the link to the neighbor needs to be reset.	<b>detail</b>
<b>Received Ack Count</b>	Number of acknowledgment messages periodically received from neighbors after an adjacency has been established.	<b>detail</b>
<b>Received Port Up Count</b>	Number of status messages received from neighbors indicating that a port has transitioned to the up state.	<b>detail</b>
<b>Received Port Down Count</b>	Number of status messages received from neighbors indicating that a port has transitioned to the down state.	<b>detail</b>
<b>Received Generic Resp Count</b>	Number of generic response messages received from neighbors.	<b>detail</b>
<b>Received Adjacency Update Count</b>	Number of adjacency update messages received from neighbors.	<b>detail</b>
<b>Received OAM Count</b>	Number of OAM responses received from neighbors in reply to <b>request</b> commands.	<b>detail</b>
<b>Received Other Count</b>	Number of all other ANCP message packets received from neighbors that do not fit into one of the other categories.	<b>detail</b>
<b>Sent Syn Count</b>	Number of synchronization messages sent to neighbors to maintain adjacencies.	<b>detail</b>

Table 81: show ancp neighbor Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Sent Synack Count</b>	Number of synchronization acknowledgment messages sent to neighbors in response to the their synchronization messages.	<b>detail</b>
<b>Sent Rstack Count</b>	Number of messages sent to neighbors indicating that the link to the neighbor needs to be reset.	<b>detail</b>
<b>Sent Ack Count</b>	Number of acknowledgment messages periodically sent to neighbors after an adjacency has been established.	<b>detail</b>
<b>Sent Generic Resp Count</b>	Number of generic response messages sent to neighbors.	<b>detail</b>
<b>Sent OAM Count</b>	Number of OAM <b>request</b> commands sent to neighbors.	<b>detail</b>
<b>Max Discovery Limit Exceed Count</b>	Number of times that the maximum number of discovery table entries accepted from the neighbor has been exceeded.	<b>detail</b>
<b>Result Codes</b>	<p>Number of generic response messages sent to neighbors that include each of the following result codes:</p> <ul style="list-style-type: none"> <li>• <b>Invalid Request Message Count</b>—A properly formed request message violated the protocol because of timing (such as a race condition) or direction of transmission.</li> <li>• <b>Specified Port(s) Down Count</b>—One or more of the specified ports are down because of a state mismatch between the router and an ANCP control application.</li> <li>• <b>Out of Resources Count</b>—ANCP is out of resources, probably not related to the access lines. This result code is sent only by an access node.</li> <li>• <b>Request Msg Not Implemented Count</b>—</li> <li>• <b>Malformed Msg Count</b>—Message is malformed because it was corrupted in transit or there was an implementation error at either end of the connection.</li> <li>• <b>TLV Missing Count</b>—One or more mandatory TLVs was missing from a request.</li> <li>• <b>Invalid TLV Contents Count</b>—The contents of one or more TLVs in the request do not match its required specification.</li> <li>• <b>Non-Existent Port(s) Count</b>—One or more of the ports specified in a request do not exist, possibly because of a configuration mismatch between the access node and the router or AAA.</li> </ul>	<b>detail</b>

## show ancp statistics

---

Syntax	<code>show ancp statistics</code> <code>&lt;ip-address <i>ip-address</i>&gt;</code> <code>&lt;system-name <i>mac-address</i>&gt;</code>
Release Information	Command introduced in Junos OS Release 13.3.
Description	Display statistics for all ANCP neighbors (access nodes) or the specified ANCP neighbor.
Options	<b>none</b> —Display statistics for all ANCP neighbors, including global statistics not show for individual neighbors.  <b>ip-address <i>ip-address</i></b> —(Optional) Display statistics for only the neighbor with the specified IP address.  <b>system-name <i>mac-address</i></b> —(Optional) Display statistics for only the neighbor with the specified MAC address.
Required Privilege Level	view
Related Documentation	<ul style="list-style-type: none"><li>• <a href="#">show ancp cos on page 1623</a></li><li>• <a href="#">show ancp neighbor on page 1628</a></li><li>• <a href="#">show ancp subscriber on page 1641</a></li></ul>
List of Sample Output	<a href="#">show ancp statistics on page 1638</a> <a href="#">show ancp statistics ip-address on page 1639</a> <a href="#">show ancp statistics system-name on page 1639</a>
Output Fields	<a href="#">Table 82 on page 1636</a> lists the output fields for the <b>show ancp statistics</b> command. Output fields are listed in the approximate order in which they appear.

*Table 82: show ancp statistics Output Fields*

Field Name	Field Description
Number of neighbors	Total count of ANCP neighbors.
Number of subscribers	Total count of ANCP subscribers.
Accept Count	Number of neighbor TCP/IP sessions accepted on listener socket.

Table 82: show ancp statistics Output Fields (continued)

Field Name	Field Description
<b>Accept Fail Count</b>	Number of neighbor TCP/IP sessions that failed due to one of the following causes: session already exists, maximum number of ANCP connections exceeded, creation of session or neighbor failed, or protocol start failed.
<b>No Config Accept Deny Count</b>	Number of neighbor TCP/IP sessions that failed because the neighbor was not configured.
<b>Received Syn Count</b>	Number of synchronization messages received from neighbors to maintain adjacencies.
<b>Received Synack Count</b>	Number of synchronization acknowledgment messages received from neighbors in response to the node's synchronization messages.
<b>Received Rstack Count</b>	Number of messages received from neighbors indicating that the link to the neighbor needs to be reset.
<b>Received Ack Count</b>	Number of acknowledgment messages periodically received from neighbors after an adjacency has been established.
<b>Received Port Up Count</b>	Number of status messages received from neighbors indicating that a port has transitioned to the up state.
<b>Received Port Down Count</b>	Number of status messages received from neighbors indicating that a port has transitioned to the down state.
<b>Received Generic Resp Count</b>	Number of generic response messages received from neighbors.
<b>Received Adjacency Update Count</b>	Number of adjacency update messages received from neighbors.
<b>Received OAM Count</b>	Number of OAM responses received from neighbors in reply to <b>request</b> commands.
<b>Received Other Count</b>	Number of all other ANCP message packets received from neighbors that do not fit into one of the other categories.
<b>Sent Syn Count</b>	Number of synchronization messages sent to neighbors to maintain adjacencies.
<b>Sent Synack Count</b>	Number of synchronization acknowledgment messages sent to neighbors in response to the their synchronization messages.
<b>Sent Rstack Count</b>	Number of messages sent to neighbors indicating that the link to the neighbor needs to be reset.
<b>Sent Ack Count</b>	Number of acknowledgment messages periodically sent to neighbors after an adjacency has been established.
<b>Sent Generic Resp Count</b>	Number of generic response messages sent to neighbors.

Table 82: show ancpl statistics Output Fields (continued)

Field Name	Field Description
Sent OAM Count	Number of OAM request commands sent to neighbors.
Result Codes	<p>Number of generic response messages sent to neighbors that include each of the following result codes:</p> <ul style="list-style-type: none"> <li>• <b>Invalid Request Message Count</b>—A properly formed request messages violated the protocol because of timing (such as a race condition) or direction of transmission.</li> <li>• <b>Specified Port(s) Down Count</b>—One or more of the specified ports are down because of a state mismatch between the router and an ANCP control application.</li> <li>• <b>Out of Resources Count</b>—the ANCP agent is out of resources, probably not related to the access lines. ## show ancp subscriber

<b>Syntax</b>	<pre>show ancp subscriber &lt;brief   detail&gt; &lt;identifier <i>identifier</i>&gt; &lt;ip-address <i>ip-address</i>&gt; &lt;system-name <i>mac-address</i>&gt;</pre>
<b>Release Information</b>	<p>Command introduced in Junos OS Release 9.4.</p> <p><b>neighbor</b> option replaced with <b>ip-address</b> in Junos OS Release 16.1.</p> <p><b>system-name</b> option introduced in Junos OS Release 16.1.</p>
<b>Description</b>	<p>Display information about active subscribers regardless of the subscriber's operational state, for all subscribers (local access loops), the subscriber associated with the access line specified by an ACI, or the subscriber associated with the specified ANCP neighbor (access node).</p> <p>After an ancpd restart, this command displays orphaned entries (marked with an <b>o</b>) for subscriber sessions that were established before the restart but which have not yet been reestablished. As sessions are reestablished, the number of orphaned entries displayed by the command decreases. The number reaches zero when all sessions are reestablished or when the orphaned-interface timer expires.</p>
<b>Options</b>	<p><b>none</b>—Display information about all subscribers.</p> <p><b>brief   detail</b>—(Optional) Display the specified level of detail.</p> <p><b>identifier <i>identifier</i></b>—(Optional) Display information about the subscriber associated with the access line (ACI) specified by the access identifier.</p> <p><b>ip-address <i>ip-address</i></b> —(Optional) Display information about the subscribers connected to the access node specified by the IP address.</p> <p><b>system-name <i>mac-address</i></b>—(Optional) Display information about the subscribers connected to the access node specified by the MAC address.</p>
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">clear ancp subscriber on page 1618</a></li> <li>• <a href="#">show ancp cos on page 1623</a></li> <li>• <a href="#">show ancp neighbor on page 1628</a></li> <li>• <a href="#">show ancp statistics on page 1636</a></li> </ul>

[show ancp subscriber detail on page 1645](#)

[show ancp subscriber identifier identifier-string detail on page 1646](#)

**Output Fields** Table 83 on page 1642 lists the output fields for the **show ancp subscriber** command. Output fields are listed in the approximate order in which they appear.

*Table 83: show ancp subscriber Output Fields*

Field Name	Field Description	Level of Output
<b>Loop Identifier</b>	<p>Access loop identifier as sent by the access node and configured to map the subscriber to an interface.</p> <p>An asterisk (*) indicates that the information might be stale due to receiving a Port Down message with a DSL Line State of Idle.</p> <p>Two asterisks (**) indicate that the neighbor associated with the subscriber has lost its adjacency. In this case, the DSL Line State might be Established.</p> <p>An <b>o</b> indicates that the entry is for an orphaned interface and represents a previously established subscriber session that has not been reestablished after an ancpc restart.</p> <p>The number of orphaned entries decreases as the ANCP neighbors reestablish adjacencies and the protocol subscriber sessions are reestablished. The command output indicates this by removing the <b>o</b> marker.</p> <p>Eventually the number of orphaned entries reaches zero, because either all the adjacencies and subscriber sessions have been reestablished or any remaining orphaned entries are removed when the orphaned-interface timer expires.</p>	<b>brief none</b>
<b>DSL Line State</b>	State of the DSL line: <b>Idle</b> , <b>Showtime</b> , or <b>Silent</b> .	<b>brief detail</b>
<b>Access Type</b>	Type of access line employed by the access node: <b>ADSL1</b> , <b>ADSL2</b> , <b>ADSL2+</b> , <b>VDSL1</b> , <b>VDSL2</b> , <b>SDSL</b> , <b>G.fast</b> , <b>VDSL2 Annex Q</b> , <b>SDSL bonded</b> , <b>VDSL2 bonded</b> , <b>G.fast bonded</b> , <b>VDSL2 Annex Q bonded</b> or <b>OTHER</b> .	<b>brief detail none</b>
<b>Interface</b>	Name of the interface set or logical interface.	<b>brief detail none</b>
<b>Rate Kbps</b>	Actual downstream data rate for this local loop.	<b>brief none</b>
<b>Neighbor</b>	IP address of ANCP neighbor (access node).	<b>brief none</b>

Table 83: show ancp subscriber Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Access Loop Circuit Identifier</b>	<p>Access loop circuit identifier as sent by the access node and configured to map the subscriber to an interface.</p> <p>An asterisk (*) indicates that the information might be stale due to receiving a Port Down message with a DSL Line State of Idle.</p> <p>Two asterisks (**) indicate that the neighbor associated with the subscriber has lost its adjacency. In this case, the DSL Line State might be Established.</p>	<b>detail</b>
<b>Neighbor IP Address</b>	IP address of the ANCP neighbor (access node).	<b>detail</b>
<b>Aggregate Circuit Identifier Binary</b>	Binary identifier for the VLAN circuit ID.	<b>detail</b>
<b>Tech Type</b>	Type of technology employed by the subscriber. Currently Junos OS supports <b>DSL</b> technology type only.	<b>detail</b>
<b>DSL Line Data Link</b>	Data link protocol employed on the access loop: <b>AAL5</b> or <b>Ethernet</b> .	<b>detail</b>
<b>DSL Line Encapsulation</b>	<p>Encapsulation type on the access loop, for Ethernet only:</p> <ul style="list-style-type: none"> <li>0—NA, type not conveyed</li> <li>1—Untagged Ethernet</li> <li>2—Single-tagged Ethernet</li> </ul>	<b>detail</b>
<b>DSL Line Encapsulation Payload</b>	<p>Payload carried across the access loop:</p> <ul style="list-style-type: none"> <li>0—NA, type not conveyed</li> <li>1—PPPoA LLC</li> <li>2—PPPoA null</li> <li>3—IPoA LLC</li> <li>4—IPoA null</li> <li>5—Ethernet over AAL5 LLC with FCS</li> <li>6—Ethernet over AAL5 LLC without FCS</li> <li>7—Ethernet over AAL5 null with FCS</li> <li>8—Ethernet over AAL5 null without FCS</li> </ul>	<b>detail</b>
<b>Interface Type</b>	Type of interface employed for subscriber traffic: <b>ifl</b> for a single VLAN or <b>interface-set</b> for a configured group of VLANs.	<b>detail</b>
<b>Actual Net Data Upstream</b>	Actual upstream data rate for this local loop, in Kbps.	<b>detail</b>
<b>Actual Net Data Downstream</b>	Actual downstream data rate for this local loop, in Kbps.	<b>detail</b>

Table 83: show ancp subscriber Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Minimum Net Data Upstream</b>	Minimum upstream data rate desired by the operator for this local loop, in Kbps.	<b>detail</b>
<b>Minimum Net Data Downstream</b>	Minimum downstream data rate desired by the operator for this local loop, in Kbps.	<b>detail</b>
<b>Maximum Net Data Upstream</b>	Maximum upstream data rate desired by the operator for this local loop, in Kbps.	<b>detail</b>
<b>Maximum Net Data Downstream</b>	Maximum downstream data rate desired by the operator for this local loop, in Kbps.	<b>detail</b>
<b>Attainable Net Data Upstream</b>	Maximum attainable upstream data rate for this local loop, in Kbps.	<b>detail</b>
<b>Attainable Net Data Downstream</b>	Maximum attainable downstream data rate for this local loop, in Kbps.	<b>detail</b>
<b>Minimum Low Power Data Downstream</b>	Minimum downstream data rate desired by the operator for this local loop in low power state, in Kbps.	<b>detail</b>
<b>Minimum Low Power Data Upstream</b>	Minimum upstream data rate desired by the operator for this local loop in low power state, in Kbps.	<b>detail</b>
<b>Maximum Interleave Delay Downstream</b>	Maximum interleaving delay for downstream data, in milliseconds.	<b>detail</b>
<b>Maximum Interleave Delay Upstream</b>	Maximum interleaving delay for upstream data, in milliseconds.	<b>detail</b>
<b>Actual Interleave Delay Downstream</b>	Actual interleaving delay for downstream data, in milliseconds.	<b>detail</b>
<b>Actual Interleave Delay Upstream</b>	Actual interleaving delay for upstream data, in milliseconds.	<b>detail</b>

## Sample Output

show ancp subscriber

```

user@host> show ancp subscriber
  Loop Identifier   DSL Line  Tech Type   Access Type   Interface
Rate  Neighbor

## show ancp summary

<b>Syntax</b>	show ancp summary
<b>Release Information</b>	Command introduced in Junos OS Release 13.1.
<b>Description</b>	Display a summary of the counts and states for all ANCP neighbors and subscribers.
<b>Options</b>	This command has no options.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">show ancp neighbor on page 1628</a></li> <li>• <a href="#">show ancp summary neighbor on page 1649</a></li> <li>• <a href="#">show ancp subscriber on page 1641</a></li> <li>• <a href="#">show ancp summary subscriber on page 1651</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">show ancp summary on page 1648</a>
<b>Output Fields</b>	<a href="#">Table 84 on page 1647</a> lists the output fields for the <b>show ancp summary</b> command. Output fields are listed in the approximate order in which they appear.

*Table 84: show ancp summary Output Fields*

Field Name	Field Description
<b>Configured</b>	Number of ANCP neighbors in the <b>Configured</b> state; that is, that have been configured but never established.
<b>Establishing</b>	Number of ANCP neighbors in the <b>Establishing</b> state; that is, where negotiations are in progress.
<b>Established</b>	Number of ANCP neighbors in the <b>Established</b> state; that is, where negotiations have succeeded and the ANCP session has been established.
<b>Not Estblshd</b>	Number of ANCP neighbors in the <b>Not Estblshd</b> state; that is, that have lost a previously established adjacency and are ready to begin negotiations.
<b>Total</b>	Total number of ANCP neighbors; sum of neighbors in the <b>Configured</b> , <b>Establishing</b> , <b>Established</b> , and <b>Not Estblshd</b> states.
<b>Showtime</b>	Number of DSL lines in <b>Showtime</b> state.
<b>Idle</b>	Number of DSL lines in <b>Idle</b> state.
<b>Silent</b>	Number of DSL lines in <b>Silent</b> state.

*Table 84: show ancp summary Output Fields (continued)*

Field Name	Field Description
<b>Unknown</b>	Number of DSL lines where the state is not <b>Showtime</b> , <b>Idle</b> , or <b>Silent</b> .
<b>Total</b>	Total number of DSL lines (ANCP subscribers); sum of DSL lines in the <b>Showtime</b> , <b>Idle</b> , <b>Silent</b> , and <b>Unknown</b> states.

## Sample Output

### show ancp summary

```
user@host> show ancp summary
```

#### Neighbors Summary:

Configured	Establishing	Established	Not Established	Total
-----	-----	-----	-----	-----
22	0	2	0	24

#### Subscribers Summary:

Showtime	Idle	Silent	Unknown	Total
-----	-----	-----	-----	-----
4	0	0	0	4

## show ancp summary neighbor

<b>Syntax</b>	show ancp summary neighbor <ip-address <i>ip-address</i>   system-name <i>mac-address</i> >
<b>Release Information</b>	Command introduced in Junos OS Release 13.1.
<b>Description</b>	Display a summary of the counts and states for all ANCP neighbors and of the neighbor's subscribers when you specify a particular neighbor.
<b>Options</b>	<b>ip-address <i>ip-address</i></b> —(Optional) IP address of the ANCP neighbor (access node). <b>system-name <i>mac-address</i></b> —(Optional) MAC address of the ANCP neighbor (access node).
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">show ancp summary on page 1647</a></li> <li>• <a href="#">show ancp subscriber on page 1641</a></li> <li>• <a href="#">show ancp summary subscriber on page 1651</a></li> </ul>

## CHAPTER 16

# BFD Operational Commands

- `clear bfd adaptation`
- `clear bfd session`
- `show bfd session`

## clear bfd adaptation

---

<b>Syntax</b>	<code>clear bfd adaptation</code> <code>&lt;all&gt;</code> <code>&lt;address <i>session-address</i>&gt;</code> <code>&lt;discriminator <i>discr-number</i>&gt;</code>
<b>Release Information</b>	Command introduced before Junos OS Release 7.4.
<b>Description</b>	<p>Clear adaptation for Bidirectional Forwarding Detection (BFD) sessions. BFD is a simple hello mechanism that detects failures in a network. Configured BFD interval timers can change, adapting to network situations. Use this command to return BFD interval timers to their configured values.</p> <p>The <b>clear bfd adaptation</b> command is hitless, meaning that the command does not affect traffic flow on the routing device.</p>
<b>Options</b>	<p><b>all</b>—Clear adaptation for all BFD sessions.</p> <p><b>address <i>session-address</i></b>—(Optional) Clear adaptation for all BFD sessions matching the specified address.</p> <p><b>discriminator <i>discr-number</i></b>—(Optional) Clear adaptation for the local BFD session matching the specified discriminator.</p>
<b>Additional Information</b>	For more information, see the description of the <b>bfd-liveness-detection</b> configuration statement in the <i>Junos Routing Protocols Configuration Guide</i> .
<b>Required Privilege Level</b>	clear
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">show bfd session on page 1656</a></li></ul>
<b>List of Sample Output</b>	<a href="#">clear bfd adaptation on page 1654</a>
<b>Output Fields</b>	When you enter this command, you are provided feedback on the status of your request.

## Sample Output

### clear bfd adaptation

```
user@host> clear bfd adaptation
```

## clear bfd session

<b>List of Syntax</b>	<a href="#">Syntax on page 1655</a> <a href="#">Syntax (EX Series Switch and QFX Series) on page 1655</a>
<b>Syntax</b>	<pre>clear bfd session &lt;all&gt; &lt;address <i>session-address</i>&gt; &lt;discriminator <i>discr-number</i>&gt; &lt;logical-system (all   <i>logical-system-name</i>)&gt;</pre>
<b>Syntax (EX Series Switch and QFX Series)</b>	<pre>clear bfd session &lt;all&gt; &lt;address <i>session-address</i>&gt; &lt;discriminator <i>discr-number</i>&gt;</pre>
<b>Release Information</b>	<p>Command introduced before Junos OS Release 7.4.</p> <p>Command introduced in Junos OS Release 12.1 for the QFX Series.</p>
<b>Description</b>	Drop one or more Bidirectional Forwarding Detection (BFD) sessions.
<b>Options</b>	<p><b>all</b>—Drop all BFD sessions.</p> <p><b>address <i>session-address</i></b>—(Optional) Drop all BFD sessions matching the specified address.</p> <p><b>discriminator <i>discr-number</i></b>—(Optional) Drop the local BFD session matching the specified discriminator.</p> <p><b>logical-system (all   <i>logical-system-name</i>)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p>
<b>Required Privilege Level</b>	clear
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">show bfd session on page 1656</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">clear bfd session all on page 1655</a>
<b>Output Fields</b>	When you enter this command, you are provided feedback on the status of your request.

## Sample Output

### clear bfd session all

```
user@host> clear bfd session all
```

## show bfd session

---

**List of Syntax**    [Syntax on page 1656](#)  
                          [Syntax \(EX Series Switch and QFX Series\) on page 1656](#)

**Syntax**    show bfd session  
                  <brief | detail | extensive | summary>  
                  <address *address*>  
                  <client rsvp-oam (brief | detail | extensive | summary) | vpls-oam (brief | detail | extensive |  
                          instance *instance-name* | summary)>  
                  <discriminator *discriminator*>  
                  <logical-system (all | *logical-system-name*)>  
                  <prefix *address*>  
                  <subscriber (address *destination-address* | discriminator *discriminator* | extensive)>

**Syntax (EX Series Switch and QFX Series)**    show bfd session  
  <brief | detail | extensive | summary>  
  <address *address*>  
  <client rsvp-oam (brief | detail | extensive | summary) | vpls-oam (brief | detail | extensive |  
  instance *instance-name* | summary)>  
  <discriminator *discriminator*>  
  <prefix *address*>

**Release Information**    Command introduced before Junos OS Release 7.4.  
                                  Options **discriminator** and **address** introduced in Junos OS Release 8.2.  
                                  Option **prefix** introduced in Junos OS Release 9.0.  
                                  Command introduced in Junos OS Release 12.1 for the QFX Series.  
                                  Option **client** introduced in Junos OS Release 12.3R3.  
                                  Option **subscriber** introduced in Junos OS Release 15.1 for the MX Series.

**Description**    Display information about active Bidirectional Forwarding Detection (BFD) sessions.

**Options**    **none**—(Same as **brief**) Display information about active BFD sessions.

**brief | detail | extensive | summary**—(Optional) Display the specified level of output.

**address *address***—(Optional) Display information about the BFD session for the specified neighbor address.

**client rsvp-oam**

**(brief | detail | extensive | summary)**

**| vpls-oam**

**(brief | detail | extensive | instance *instance-name* | summary)**—(Optional) Display information about RSVP-OAM or VPLS-OAM BFD sessions in the specified level of output. For VPLS-OAM, display the specified level of output or display information about all of the BFD sessions for the specified VPLS routing instance.

**discriminator *discriminator***—(Optional) Display information about the BFD session using the specified local discriminator.

**logical-system (all | *logical-system-name*)**—(Optional) Perform this operation on all logical systems or on a particular logical system.

**<subscriber (address *destination-address* | discriminator *discriminator* | extensive)>**—(Optional) Display information about all BFD sessions for subscribers, or for a single BFD subscriber session with a particular destination address, or with a particular denominator.

**Required Privilege Level**

**Output Fields**

Table 87 on page 1658 describes the output fields for the **show bfd session** command. Output fields are listed in the approximate order in which they appear.

Table 87: show bfd session Output Fields

Field Name	Field Description	Level of Output
Address	Address on which the BFD session is active.	brief detail extensive none
State	State of the BFD session: <b>Up</b> , <b>Down</b> , <b>Init</b> (initializing), or <b>Failing</b> .	brief detail extensive none
Interface	Interface on which the BFD session is active.	brief detail extensive none
Detect Time	Negotiated time interval, in seconds, used to detect BFD control packets.	brief detail extensive none
Transmit Interval	Time interval, in seconds, used by the transmitting system to send BFD control packets.	brief detail extensive none
Multiplier	Negotiated multiplier by which the time interval is multiplied to determine the detection time for the transmitting system.	detail extensive
Session up time	How long a BFD session has been established.	detail extensive
Client	Protocol or process for which the BFD session is active: <b>ISIS</b> , <b>OSPF</b> , <b>DHCP</b> , <b>Static</b> , or <b>VGD</b> .	detail extensive
TX interval	Time interval, in seconds, used by the host system to transmit BFD control packets.	brief detail extensive none
RX interval	Time interval, in seconds, used by the host system to receive BFD control packets.	brief detail extensive none
Authenticate	Indicates that BFD authentication is configured.	detail extensive
keychain	Name of the security authentication keychain being used by a specific client.  BFD authentication information for a client is provided in a single line and includes the <b>keychain</b> , <b>algo</b> , and <b>mode</b> parameters. Multiple clients can be configured on a BFD session.	extensive
algo	BFD authentication algorithm being used for a specific client: <b>keyed-md5</b> , <b>keyed-sha-1</b> , <b>meticulous-keyed-md5</b> , <b>meticulous-keyed-sha-1</b> , or <b>simple-password</b> .  BFD authentication information for a client is provided in a single line and includes the <b>keychain</b> , <b>algo</b> , and <b>mode</b> parameters. Multiple clients can be configured on a BFD session.	extensive

Table 87: show bfd session Output Fields (continued)

Field Name	Field Description	Level of Output
mode	<p>Level of BFD authentication enforcement being used by a specific client: <b>strict</b> or <b>loose</b>. Strict enforcement indicates that authentication is configured at both ends of the session (the default). Loose enforcement indicates that one end of the session might not be authenticated.</p> <p>BFD authentication information for a client is provided in a single line and includes the <b>keychain</b>, <b>algo</b>, and <b>mode</b> parameters. Multiple clients can be configured on a BFD session.</p>	extensive
Local diagnostic	<p>Local diagnostic information about failing BFD sessions.</p> <p>Following are the expected values for Local Diagnostic output field:</p> <ul style="list-style-type: none"> <li>• <b>None</b>—No diagnostic</li> <li>• <b>CtlExpire</b>—Control detection time expired</li> <li>• <b>EchoExpire</b>—Echo detection time expired</li> <li>• <b>NbrSignal</b>—Neighbor signalled session down</li> <li>• <b>FwdPlaneReset</b>—Forwarding plane reset</li> <li>• <b>PathDown</b>—Path down</li> <li>• <b>ConcatPathDown</b>—Concatenated path down</li> <li>• <b>AdminDown</b>—Administratively down</li> </ul>	detail extensive
Remote diagnostic	<p>Remote diagnostic information about failing BFD sessions.</p> <p>Following are the expected values for Remote Diagnostic output field:</p> <ul style="list-style-type: none"> <li>• <b>None</b>—No diagnostic</li> <li>• <b>CtlExpire</b>—Control detection time expired</li> <li>• <b>EchoExpire</b>—Echo detection time expired</li> <li>• <b>NbrSignal</b>—Neighbor signalled session down</li> <li>• <b>FwdPlaneReset</b>—Forwarding plane reset</li> <li>• <b>PathDown</b>—Path down</li> <li>• <b>ConcatPathDown</b>—Concatenated path down</li> <li>• <b>AdminDown</b>—Administratively down</li> </ul>	detail extensive
Remote state	Reports whether the remote system's BFD packets have been received and whether the remote system is receiving transmitted control packets.	detail extensive
Version	BFD version: <b>0</b> or <b>1</b> .	extensive
Replicated	The <b>replicated</b> flag appears when nonstop routing or graceful Routing Engine switchover is configured and the BFD session has been replicated to the backup Routing Engine.	detail extensive
Min async interval	Minimum amount of time, in seconds, between asynchronous control packet transmissions across the BFD session.	extensive
Min slow interval	Minimum amount of time, in seconds, between synchronous control packet transmissions across the BFD session.	extensive

Table 87: show bfd session Output Fields (continued)

Field Name	Field Description	Level of Output
Adaptive async TX interval	Transmission interval being used because of adaptation.	extensive
RX interval	Minimum required receive interval.	extensive
Local min TX interval	Minimum amount of time, in seconds, between control packet transmissions on the local system.	extensive
Local min RX interval	Minimum amount of time, in seconds, between control packet detections on the local system.	extensive
Remote min TX interval	Minimum amount of time, in seconds, between control packet transmissions on the remote system.	extensive
Remote min RX interval	Minimum amount of time, in seconds, between control packet detections on the remote system.	extensive
Threshold transmission interval	Threshold for notification if the transmission interval increases.	extensive
Threshold for detection time	Threshold for notification if the detection time increases.	extensive
Local discriminator	Authentication code used by the local system to identify that BFD session.	extensive
Remote discriminator	Authentication code used by the remote system to identify that BFD session.	extensive
Echo mode	Information about the state of echo transmissions on the BFD session.	extensive
Prefix	LDP FEC address associated with the BFD session.	All levels
Egress, Destination	Displays the LDP FEC destination address. This field is displayed only on a router at the egress of an LDP FEC, where the BFD session has an LDP Operation, Administration, and Maintenance (OAM) client.	All levels
Remote is control-plane independent	<p>The BFD session on the remote peer is running on its Packet Forwarding Engine. In this case, when the remote node undergoes a graceful restart, the local peer can help the remote peer with the graceful restart.</p> <p>The following BFD sessions are not distributed to the Packet Forwarding Engine: tunnel-encapsulated sessions, and sessions over integrated routing and bridging (IRB) interfaces.</p>	extensive

Table 87: show bfd session Output Fields (continued)

Field Name	Field Description	Level of Output
Authentication	<p>Summary status of BFD authentication:</p> <ul style="list-style-type: none"> <li><b>status</b>—<b>enabled/active</b> indicates authentication is configured and active. <b>enabled/inactive</b> indicates authentication is configured but not active. This only occurs when the remote end of the session does not support authentication and loose checking is configured.</li> <li><b>keychain</b>—Name of the security authentication keychain associated with the specified BFD session.</li> <li><b>algo</b>—BFD authentication algorithm being used: <b>keyed-md5</b>, <b>keyed-sha-1</b>, <b>meticulous-keyed-md5</b>, <b>meticulous-keyed-sha-1</b>, or <b>simple-password</b>.</li> <li><b>mode</b>—Level of BFD authentication enforcement: <b>strict</b> or <b>loose</b>. Strict enforcement indicates authentication is configured at both ends of the session (the default). Loose enforcement indicates that one end of the session might not be authenticated.</li> </ul> <p>This information is only shown if BFD authentication is configured.</p>	<b>extensive</b>
Session ID	The BFD session ID number that represents the protection using MPLS fast reroute (FRR) and loop-free alternate (LFA).	<b>detail extensive</b>
sessions	Total number of active BFD sessions.	All levels
clients	Total number of clients that are hosting active BFD sessions.	All levels
Cumulative transmit rate	Total number of BFD control packets transmitted per second on all active sessions.	All levels
Cumulative receive rate	Total number of BFD control packets received per second on all active sessions.	All levels
Multi-hop, min-recv-TTL	Minimum time to live (TTL) accepted if the session is configured for multihop.	<b>extensive</b>
route table	Route table used if the session is configured for multihop.	<b>extensive</b>
local address	<p>Local address of the source used if the session is configured for multihop.</p> <p>The source IP address for outgoing BFD packets from the egress side of an MPLS BFD session is based on the outgoing interface IP address.</p>	<b>extensive</b>

## Sample Output

### show bfd session

```

user@host> show bfd session

Address      State   Interface   Detect Time   Transmit Interval   Multiplier
10.9.1.33    Up      so-7/1/0.0   0.600        0.200           3
10.9.1.29    Up      ge-4/0/0.0   0.600        0.200           3

```

```
2 sessions, 2 clients
Cumulative transmit rate 10.0 pps, cumulative receive rate 10.0 pps
```

### show bfd session brief

The output for the **show bfd session brief** command is identical to that for the **show bfd session** command.

### show bfd session detail

```
user@host> show bfd session detail
```

Address	State	Interface	Detect Time	Transmit Interval	Multiplier
10.9.1.33	Up	so-7/1/0.0	0.600	0.200	3

## clear bgp neighbor

**List of Syntax**    [Syntax on page 1669](#)  
                          [Syntax \(EX Series Switch and QFX Series\) on page 1669](#)

**Syntax**    clear bgp neighbor  
                  <all>  
                  <as *as-number*>  
                  <gracefully>  
                  <instance *instance-name*>  
                  <logical-system (all | *logical-system-name*)>  
                  <malformed-route>  
                  <neighbor>  
                  <soft | soft-inbound>  
                  <soft-minimum-igp>  
                  <stale-routes>

**Syntax (EX Series Switch and QFX Series)**    clear bgp neighbor  
                  <all>  
                  <as *as-number*>  
                  <instance *instance-name*>  
                  <malformed-route>  
                  <neighbor>  
                  <soft | soft-inbound>  
                  <soft-minimum-igp>

**Release Information**    Command introduced before Junos OS Release 7.4.  
                                  Command introduced in Junos OS Release 9.0 for EX Series switches.  
                                  Command introduced in Junos OS Release 11.3 for the QFX Series.  
                                  Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.  
                                  **malformed-route** option introduced in Junos OS Release 13.2.  
                                  **all** option introduced in Junos OS Release 14.2.  
                                  **gracefully** and **stale-routes** options introduced in Junos OS Release 15.1.

**Description**    Perform one of the following tasks:

- Change the state of one or more BGP neighbors to **IDLE**. For neighbors in the **ESTABLISHED** state, this command drops the TCP connection to the neighbors and then reestablishes the connection.
- (**soft** keyword only) Reapply export policies and send refresh updates to one or more BGP neighbors without changing their state.
- (**soft-inbound** keyword only) Send a route-refresh message to one or more BGP neighbors without changing their state, and reapply import policies on the received updates.

**Options**    **all**—Change the state of all BGP neighbors to **IDLE**.

**as *as-number***—(Optional) Apply this command only to neighbors in the specified autonomous system (AS).

**gracefully**—(Optional) Enable the BGP peer to start graceful-restart receiving-speaker mode. The receiving speaker also sends its own routes to the restarted speaker, and sends an End-of-RIB marker when it completes the update. The **clear bgp neighbor *neighbor-address* gracefully** command is the same as **clear bgp neighbor hard** (the default for **clear bgp neighbor**), but it does not use the new Hard Reset subcode on the Notify and Cease messages that are sent. This allows the neighbor to enter GR or LLGR helper mode, if negotiated. The session is still cleared on this router, and this router does not enter GR or LLGR helper mode.

**instance *instance-name***—(Optional) Apply this command only to neighbors for the specified routing instance.

**logical-system (all | *logical-system-name*)**—(Optional) Perform this operation on all logical systems or on a particular logical system.

**malformed-route**—(Optional) Remove malformed routes. If a specific neighbor is provided, Junos OS removes malformed routes for that particular neighbor. Otherwise, Junos OS removes malformed routes for all BGP neighbors. To find routes that have malformed attributes, run the **show route hidden** command, and look for routes marked with **MalformedAttr** in the AS path field.

**neighbor**—(Optional) IP address of a BGP peer. Apply this command only to the specified neighbor.

**soft**—(Optional) Reapply any export policies and send refresh updates to neighbors without clearing the state.

**soft-inbound**—(Optional) Send a route-refresh message to BGP neighbors and reapply import policies on the route updates received from the BGP neighbors without clearing the BGP state.

**soft-minimum-igp**—(Optional) Provide soft refresh of the outbound state when the interior gateway protocol (IGP) metric is reset.

**stale-routes**—(Optional) Any stale route currently being held for the specified neighbor because of BGP graceful restart (GR) or long-lived graceful restart (LLGR) receiver mode operations.

## Sample Output

`clear bgp neighbor`

```
user@host> clear bgp neighbor
```

## clear bgp table

---

Syntax	<code>clear bgp table <i>table-name</i></code> <code>&lt;logical-system (all   <i>logical-system-name</i>)&gt;</code>
Syntax (EX Series Switch and QFX Series)	<code>clear bgp table <i>table-name</i></code>
Release Information	Command introduced in Junos OS Release 9.0. Command introduced in Junos OS Release 9.0 for EX Series switches. Command introduced in Junos OS Release 11.3 for the QFX Series. Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.
Description	Request that BGP refresh routes in a specified routing table.
Options	<b>logical-system (all   <i>logical-system-name</i>)</b> —(Optional) Perform this operation on all logical systems or on a particular logical system.  <b><i>table-name</i></b> —Request that BGP refresh routes in the specified table.
Additional Information	In some cases, a prefix limit is associated with a routing table for a VPN instance. When this limit is exceeded (for example, because of a network misconfiguration), some routes might not be inserted in the table. Such routes need to be added to the table after the network issue is resolved. Use the <b>clear bgp table</b> command to request that BGP refresh routes in a VPN instance table.
Required Privilege Level	clear
List of Sample Output	<a href="#">clear bgp table private.inet.0 on page 1672</a> <a href="#">clear bgp table inet.6 logical-system all on page 1672</a> <a href="#">clear bgp table private.inet.6 logical-system ls1 on page 1673</a> <a href="#">clear bgp table logical-system all inet.0 on page 1673</a> <a href="#">clear bgp table logical-system ls2 private.inet.0 on page 1673</a>
Output Fields	This command produces no output.

## show bgp bmp

**Syntax** `show bgp bmp`

**Release Information** Command introduced in Junos OS Release 9.5.  
 Command introduced in Junos OS Release 9.5 for EX Series switches.  
 Command introduced in Junos OS Release 13.2X51-D15 for the QFX Series.  
 Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.

**Description** Display information about the BGP Monitoring Protocol (BMP).

**Options** This command has no options.

**Required Privilege Level** view

**List of Sample Output** [show bgp bmp on page 1674](#)

**Output Fields** [Table 88 on page 1674](#) lists the output fields for the **show bgp bmp** command. Output fields are listed in the approximate order in which they appear.

*Table 88: show bgp bmp Output Fields*

Field Name	Field Description
<b>BMP station address/port</b>	IP address and port number of the monitoring station to which BGP Monitoring Protocol (BMP) statistics are sent.
<b>BMP session state</b>	Status of the BMP session: <b>UP</b> or <b>DOWN</b> .
<b>Memory consumed by BMP</b>	Memory used by the active BMP session.
<b>Statistics timeout</b>	Amount of time, in seconds, between transmissions of BMP data to the monitoring station.
<b>Memory limit</b>	Threshold, in bytes, at which the routing device stops collecting BMP data.
<b>Memory-connect retry timeout</b>	Amount of time, in seconds, after which the routing device attempts to resume a BMP session that was ended after the configured memory threshold was exceeded.

## Sample Output

### show bgp bmp

```
user@host> show bgp bmp
  BMP station address/port: 172.24.24.157+5454
  BMP session state: DOWN
```

```
Memory consumed by BMP: 0
Statistics timeout: 15
Memory limit: 10485760
Memory connect retry timeout: 600
```

show bgp group

--	---

<b>Release Information</b>	Command introduced before Junos OS Release 7.4.
	Command introduced in Junos OS Release 9.0 for EX Series switches.
	Command introduced in Junos OS Release 11.3 for the QFX Series.
	Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.
	<b>exact-instance</b> option introduced in Junos OS Release 11.4.

<b>Description</b>	Display information about the configured BGP groups.
--------------------	--

**Options** **none**—Display group information about all BGP groups.

**brief | detail | summary**—(Optional) Display the specified level of output.

**group-name**—(Optional) Display group information for the specified group.

**exact-instance *instance-name***—(Optional) Display information for the specified instance only.

**instance *instance-name***—(Optional) Display information about BGP groups for all routing instances whose name begins with this string (for example, **cust1**, **cust11**, and **cust111** are all displayed when you run the **show bgp group instance cust1** command). The instance name can be master for the main instance, or any valid configured instance name or its prefix.

**logical-system** (all | *logical-system-name*)—(Optional) Perform this operation on all logical systems or on a particular logical system.

**rtf**—(Optional) Display BGP group route targeting information.

**Output Fields** Table 89 on page 1677 describes the output fields for the **show bgp group** command. Output fields are listed in the approximate order in which they appear.

Table 89: show bgp group Output Fields

Field Name	Field Description	Level of Output
<b>Group Type or Group</b>	Type of BGP group: <b>Internal</b> or <b>External</b> .	All levels
<b>group-index</b>	Index number for the BGP peer group. The index number differentiates between groups when a single BGP group is split because of different configuration options at the group and peer levels.	<b>rtf detail</b>
<b>AS</b>	AS number of the peer. For internal BGP (IBGP), this number is the same as <b>Local AS</b> .	<b>brief detail</b> none
<b>Local AS</b>	AS number of the local routing device.	<b>brief detail</b> none
<b>Name</b>	Name of a specific BGP group.	<b>brief detail</b> none
<b>Options</b>	The Network Layer Reachability Information (NLRI) format used for BGP VPN multicast.	<b>none</b> none
<b>Index</b>	Unique index number of a BGP group.	<b>brief detail</b> none
<b>Flags</b>	Flags associated with the BGP group. This field is used by Juniper Networks customer support.	<b>brief detail</b> none
<b>BGP-Static Advertisement Policy</b>	Policies configured for the BGP group with the <b>advertise-bgp-static policy</b> statement.	<b>brief</b> none
<b>Remove-private options</b>	Options associated with the <b>remove-private</b> statement.	<b>brief detail</b> none
<b>Holdtime</b>	Maximum number of seconds allowed to elapse between successive keepalive or update messages that BGP receives from a peer in the BGP group, after which the connection to the peer is closed and routing devices through that peer become unavailable.	<b>brief detail</b> none
<b>Export</b>	Export policies configured for the BGP group with the <b>export</b> statement.	<b>brief detail</b> none

Table 89: show bgp group Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Optimal Route Reflection</b>	Client nodes (primary and backup) configured in the BGP group.	<b>brief detail</b> none
<b>MED tracks IGP metric update delay</b>	Time, in seconds, that updates to multiple exit discriminator (MED) are delayed. Also displays the time remaining before the interval is set to expire	All levels
<b>Traffic Statistics Interval</b>	Time between sample periods for labeled-unicast traffic statistics, in seconds.	<b>brief detail</b> none
<b>Total peers</b>	Total number of peers in the group.	<b>brief detail</b> none
<b>Established</b>	Number of peers in the group that are in the established state.	All levels
<b>Active/Received/Accepted/Damped</b>	<p>Multipurpose field that displays information about BGP peer sessions. The field's contents depend upon whether a session is established and whether it was established in the main routing device or in a routing instance.</p> <ul style="list-style-type: none"> <li>If a peer is not established, the field shows the state of the peer session: <b>Active</b>, <b>Connect</b>, or <b>Idle</b>.</li> <li>If a BGP session is established in the main routing device, the field shows the number of active, received, accepted, and damped routes that are received from a neighbor and appear in the <b>inet.0</b> (main) and <b>inet.2</b> (multicast) routing tables. For example, <b>8/10/10/2</b> and <b>2/4/4/0</b> indicate the following: <ul style="list-style-type: none"> <li>8 active routes, 10 received routes, 10 accepted routes, and 2 damped routes from a BGP peer appear in the <b>inet.0</b> routing table.</li> <li>2 active routes, 4 received routes, 4 accepted routes, and no damped routes from a BGP peer appear in the <b>inet.2</b> routing table.</li> </ul> </li> </ul>	<b>summary</b>
<b>ip-addresses</b>	List of peers who are members of the group. The address is followed by the peer's port number.	All levels
<b>Route Queue Timer</b>	Number of seconds until queued routes are sent. If this time has already elapsed, this field displays the number of seconds by which the updates are delayed.	<b>detail</b>
<b>Route Queue</b>	Number of prefixes that are queued up for sending to the peers in the group.	<b>detail</b>
<b>inet.number</b>	<p>Number of active, received, accepted, and damped routes in the routing table. For example, <b>inet.0: 7/10/9/0</b> indicates the following:</p> <ul style="list-style-type: none"> <li>7 active routes, 10 received routes, 9 accepted routes, and no damped routes from a BGP peer appear in the <b>inet.0</b> routing table.</li> </ul>	none

Table 89: show bgp group Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Table inet.number</b>	Information about the routing table. <ul style="list-style-type: none"> <li>• <b>Received prefixes</b>—Total number of prefixes from the peer, both active and inactive, that are in the routing table.</li> <li>• <b>Active prefixes</b>—Number of prefixes received from the peer that are active in the routing table.</li> <li>• <b>Suppressed due to damping</b>—Number of routes currently inactive because of damping or other reasons. These routes do not appear in the forwarding table and are not exported by routing protocols.</li> <li>• <b>Advertised prefixes</b>—Number of prefixes advertised to a peer.</li> <li>• <b>Received external prefixes</b>—Total number of prefixes from the external BGP (EBGP) peers, both active and inactive, that are in the routing table.</li> <li>• <b>Active external prefixes</b>—Number of prefixes received from the EBGP peers that are active in the routing table.</li> <li>• <b>Externals suppressed</b>—Number of routes received from EBGP peers currently inactive because of damping or other reasons.</li> <li>• <b>Received internal prefixes</b>—Total number of prefixes from the IBGP peers, both active and inactive, that are in the routing table.</li> <li>• <b>Active internal prefixes</b>—Number of prefixes received from the IBGP peers that are active in the routing table.</li> <li>• <b>Internals suppressed</b>—Number of routes received from IBGP peers currently inactive because of damping or other reasons.</li> <li>• <b>RIB State</b>—Status of the graceful restart process for this routing table: <b>BGP restart is complete</b>, <b>BGP restart in progress</b>, <b>VPN restart in progress</b>, or <b>VPN restart is complete</b>.</li> </ul>	<b>detail</b>
<b>Groups</b>	Total number of groups.	All levels
<b>Peers</b>	Total number of peers.	All levels
<b>External</b>	Total number of external peers.	All levels
<b>Internal</b>	Total number of internal peers.	All levels
<b>Down peers</b>	Total number of unavailable peers.	All levels
<b>Flaps</b>	Total number of flaps that occurred.	All levels
<b>Table</b>	Name of a routing table.	<b>brief</b> , none
<b>Tot Paths</b>	Total number of routes.	<b>brief</b> , none
<b>Act Paths</b>	Number of active routes.	<b>brief</b> , none
<b>Suppressed</b>	Number of routes currently inactive because of damping or other reasons. These routes do not appear in the forwarding table and are not exported by routing protocols.	<b>brief</b> , none

Table 89: show bgp group Output Fields (continued)

Field Name	Field Description	Level of Output
History	Number of withdrawn routes stored locally to keep track of damping history.	brief, none
Damp State	Number of active routes with a figure of merit greater than zero, but lower than the threshold at which suppression occurs.	brief, none
Pending	Routes being processed by the BGP import policy.	brief, none
Group	Group the peer belongs to in the BGP configuration.	detail
Receive mask	Mask of the received target included in the advertised route.	detail
Entries	Number of route entries received.	detail
Target	Route target that is to be passed by route-target filtering. If a route advertised from the provider edge (PE) routing device matches an entry in the route-target filter, the route is passed to the peer.	detail
Mask	Mask which specifies that the peer receive routes with the given route target.	detail

## show bgp group traffic-statistics

<b>Syntax</b>	<pre>show bgp group traffic-statistics &lt;brief   detail&gt; &lt;group-name&gt; &lt;labeled-path label label&gt; &lt;logical-system (all   logical-system-name)&gt;</pre>
<b>Release Information</b>	<p>Command introduced before Junos OS Release 7.4.</p> <p><b>labeled-path</b> option introduced in Junos OS Release 18.1R1 for the MX Series.</p>
<b>Description</b>	Display the traffic statistics for configured Border Gateway Protocol (BGP) groups.
<b>Options</b>	<p><b>none</b>—Display traffic statistics for all BGP groups.</p> <p><b>brief   detail</b>—(Optional) Display the specified level of output.</p> <p><b>group-name</b>—(Optional) Display BGP traffic statistics for only the specified group.</p> <p><b>label-path</b>—(Optional) Display labeled unicast traffic statistics at the ingress.</p> <p><b>logical-system (all   logical-system-name)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p>
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<p><a href="#">show bgp group traffic-statistics (Per-Group-Label Not Configured) on page 1685</a></p> <p><a href="#">show bgp group traffic-statistics (Per-Group-Label Configured) on page 1685</a></p> <p><a href="#">show bgp group traffic-statistics labeled-path (Labeled Unicast) on page 1686</a></p>
<b>Output Fields</b>	<p><a href="#">Table 90 on page 1684</a> describes the output fields for the <b>show bgp group traffic-statistics</b> command. Output fields are listed in the approximate order in which they appear.</p>

*Table 90: show bgp group traffic-statistics Output Fields*

Field Name	Field Description
<b>Group name</b>	Name of a specific BGP group.
<b>Group Index</b>	Index number for the BGP group.
<b>NLRI</b>	Network layer reachability information (NLRI) indicating the source of the traffic statistics for the BGP group.
<b>FEC</b>	Forwarding equivalence classes (FECs) associated with the BGP group.
<b>Packets</b>	Number of packets sent through each FEC.
<b>Bytes</b>	Number of bytes transmitted through each FEC.

Table 90: show bgp group traffic-statistics Output Fields (continued)

Field Name	Field Description
EgressAS	Autonomous system (AS) number of the egress router.
AdvLabel	Label associated with each FEC.

## show bgp neighbor

**List of Syntax**    [Syntax on page 1687](#)  
                          [Syntax \(EX Series Switch, QFX Series, and OCX Series\) on page 1687](#)

**Syntax**    show bgp neighbor  
                  <exact-instance *instance-name*>  
                  <instance *instance-name*>  
                  <logical-system (all | *logical-system-name*)>  
                  <neighbor-address>  
                  <output-queue>  
                  <orf (detail | *neighbor-address*)>

**Syntax (EX Series Switch, QFX Series, and OCX Series)**    show bgp neighbor  
                          <instance *instance-name*>  
                          <exact-instance *instance-name*>  
                          <neighbor-address>  
                          <orf (*neighbor-address* | detail)>

**Release Information**    Command introduced before Junos OS Release 7.4.  
                          Command introduced in Junos OS Release 9.0 for EX Series switches.  
                          Command introduced in Junos OS Release 11.3 for the QFX Series.  
                          Command introduced in Junos OS Release 14.1x53-D20 for the OCX Series.  
                  **orf** option introduced in Junos OS Release 9.2.  
                  **exact-instance** option introduced in Junos OS Release 11.4.  
                  **output-queue** option introduced in Junos OS Release 16.1

**Description**    Display information about BGP peers.

**Options**    **none**—Display information about all BGP peers.

**exact-instance *instance-name***—(Optional) Display information for the specified instance only.

**instance *instance-name***—(Optional) Display information about BGP peers for all routing instances whose name begins with this string (for example, **cust1**, **cust11**, and **cust111** are all displayed when you run the **show bgp neighbor instance cust1** command).

**logical-system (all | *logical-system-name*)**—(Optional) Perform this operation on all logical systems or on a particular logical system.

**neighbor-address**—(Optional) Display information for only the BGP peer at the specified IP address.

**orf (detail | *neighbor-address*)**—(Optional) Display outbound route-filtering information for all BGP peers or only for the BGP peer at the specified IP address. The default is to display brief output. Use the **detail** option to display detailed output.

**output-queue**—(Optional) Display information regarding the number of routes currently queued in the 17 prioritized BGP output queues.

**Additional Information** For information about the **local-address**, **nlri**, **hold-time**, and **preference** statements, see the *Junos OS Routing Protocols Library*.

**Output Fields** [Table 91 on page 1688](#) describes the output fields for the **show bgp neighbor** command. Output fields are listed in the approximate order in which they appear.

*Table 91: show bgp neighbor Output Fields*

Field Name	Field Description
Peer	Address of the BGP neighbor. The address is followed by the neighbor port number.
AS	AS number of the peer.
Local	Address of the local routing device. The address is followed by the peer port number.
Type	Type of peer: <b>Internal</b> or <b>External</b> .
State	<p>Current state of the BGP session:</p> <ul style="list-style-type: none"> <li>• <b>Active</b>—BGP is initiating a transport protocol connection in an attempt to connect to a peer. If the connection is successful, BGP sends an Open message.</li> <li>• <b>Connect</b>—BGP is waiting for the transport protocol connection to be completed.</li> <li>• <b>Established</b>—The BGP session has been established, and the peers are exchanging update messages.</li> <li>• <b>Idle</b>—This is the first stage of a connection. BGP is waiting for a Start event.</li> <li>• <b>OpenConfirm</b>—BGP has acknowledged receipt of an open message from the peer and is waiting to receive a keepalive or notification message.</li> <li>• <b>OpenSent</b>—BGP has sent an open message and is waiting to receive an open message from the peer.</li> <li>• <b>route reflector client</b>—The BGP session is established with a route reflector client.</li> </ul>

Table 91: show bgp neighbor Output Fields (continued)

Field Name	Field Description
<b>Flags</b>	<p>Internal BGP flags:</p> <ul style="list-style-type: none"> <li>• <b>Aggregate Label</b>—BGP has aggregated a set of incoming labels (labels received from the peer) into a single forwarding label.</li> <li>• <b>CleanUp</b>—The peer session is being shut down.</li> <li>• <b>Delete</b>—This peer has been deleted.</li> <li>• <b>Idled</b>—This peer has been permanently idled.</li> <li>• <b>ImportEval</b>—At the last commit operation, this peer was identified as needing to reevaluate all received routes.</li> <li>• <b>Initializing</b>—The peer session is initializing.</li> <li>• <b>SendRtn</b>—Messages are being sent to the peer.</li> <li>• <b>Sync</b>—This peer is synchronized with the rest of the peer group.</li> <li>• <b>RSync</b>—This peer in the backup Routing Engine is synchronized with the BGP peer in the master Routing Engine for nonstop active routing.</li> <li>• <b>TryConnect</b>—Another attempt is being made to connect to the peer.</li> <li>• <b>Unconfigured</b>—This peer is not configured.</li> <li>• <b>WriteFailed</b>—An attempt to write to this peer failed.</li> </ul>
<b>Last state</b>	<p>Previous state of the BGP session:</p> <ul style="list-style-type: none"> <li>• <b>Active</b>—BGP is initiating a transport protocol connection in an attempt to connect to a peer. If the connection is successful, BGP sends an Open message.</li> <li>• <b>Connect</b>—BGP is waiting for the transport protocol connection to be completed.</li> <li>• <b>Established</b>—The BGP session has been established, and the peers are exchanging update messages.</li> <li>• <b>Idle</b>—This is the first stage of a connection. BGP is waiting for a Start event.</li> <li>• <b>OpenConfirm</b>—BGP has acknowledged receipt of an open message from the peer and is waiting to receive a keepalive or notification message.</li> <li>• <b>OpenSent</b>—BGP has sent an open message and is waiting to receive an open message from the peer.</li> </ul>
<b>Last event</b>	<p>Last activity that occurred in the BGP session:</p> <ul style="list-style-type: none"> <li>• <b>Closed</b>—The BGP session closed.</li> <li>• <b>ConnectRetry</b>—The transport protocol connection failed, and BGP is trying again to connect.</li> <li>• <b>HoldTime</b>—The session ended because the hold timer expired.</li> <li>• <b>KeepAlive</b>—The local routing device sent a BGP keepalive message to the peer.</li> <li>• <b>Open</b>—The local routing device sent a BGP open message to the peer.</li> <li>• <b>OpenFail</b>—The local routing device did not receive an acknowledgment of a BGP open message from the peer.</li> <li>• <b>RecvKeepAlive</b>—The local routing device received a BGP keepalive message from the peer.</li> <li>• <b>RecvNotify</b>—The local routing device received a BGP notification message from the peer.</li> <li>• <b>RecvOpen</b>—The local routing device received a BGP open message from the peer.</li> <li>• <b>RecvUpdate</b>—The local routing device received a BGP update message from the peer.</li> <li>• <b>Start</b>—The peering session started.</li> <li>• <b>Stop</b>—The peering session stopped.</li> <li>• <b>TransportError</b>—A TCP error occurred.</li> </ul>

Table 91: show bgp neighbor Output Fields (continued)

Field Name	Field Description
Last error	<p>Last error that occurred in the BGP session:</p> <ul style="list-style-type: none"> <li>• <b>Cease</b>—An error occurred, such as a version mismatch, that caused the session to close.</li> <li>• <b>Finite State Machine Error</b>—In setting up the session, BGP received a message that it did not understand.</li> <li>• <b>Hold Time Expired</b>—The session's hold time expired.</li> <li>• <b>Message Header Error</b>—The header of a BGP message was malformed.</li> <li>• <b>Open Message Error</b>—A BGP open message contained an error.</li> <li>• <b>None</b>—No errors occurred in the BGP session.</li> <li>• <b>Update Message Error</b>—A BGP update message contained an error.</li> </ul>
Export	Name of the export policy that is configured on the peer.
Import	Name of the import policy that is configured on the peer.
Options	<p>Configured BGP options:</p> <ul style="list-style-type: none"> <li>• <b>AddressFamily</b>—Configured address family: inet or inet-vpn.</li> <li>• <b>AdvertiseBGPStatic</b>—Configured BGP static routes are advertised.</li> <li>• <b>AuthKeyChain</b>—Authentication key change is enabled.</li> <li>• <b>DropPathAttributes</b>—Certain path attributes are configured to be dropped from neighbor updates during inbound processing.</li> <li>• <b>GracefulRestart</b>—Graceful restart is configured.</li> <li>• <b>HoldTime</b>—Hold time configured with the <b>hold-time</b> statement. The hold time is three times the interval at which keepalive messages are sent.</li> <li>• <b>IgnorePathAttributes</b>—Certain path attributes are configured to be ignored in neighbor updates during inbound processing.</li> <li>• <b>Local Address</b>—Address configured with the <b>local-address</b> statement.</li> <li>• <b>LLGR</b>—BGP long-lived graceful restart capability is configured.</li> <li>• <b>LLGRHelperDisabled</b>—BGP long-lived graceful restart is completely disabled for a neighbor.</li> <li>• <b>Multihop</b>—Allow BGP connections to external peers that are not on a directly connected network.</li> <li>• <b>NLRI</b>—Configured MBGP state for the BGP group: <b>multicast</b>, <b>unicast</b>, or both if you have configured <b>nlri any</b>.</li> <li>• <b>Peer AS</b>—Configured peer autonomous system (AS).</li> <li>• <b>Preference</b>—Preference value configured with the <b>preference</b> statement.</li> <li>• <b>Refresh</b>—Configured to refresh automatically when the policy changes.</li> <li>• <b>Rib-group</b>—Configured routing table group.</li> <li>• <b>RFC6514CompliantSafi129</b>—Configured SAFI 129 according to RFC 6514 (BGP VPN multicast used to use SAFI 128).</li> </ul>
Path-attributes dropped	Path attribute codes that are dropped from neighbor updates.
Path-attributes ignored	Path attribute codes that are ignored during neighbor updates.
Peer does not support LLGR Restarter or Receiver functionality	BGP neighbor does not support long-lived graceful restart (LLGR) restarter mode completely.

Table 91: show bgp neighbor Output Fields (continued)

Field Name	Field Description
Peer does not support LLGR Restarter functionality	BGP neighbor does not support long-lived graceful restart (LLGR) restarter mode for any family.
Authentication key change	(Appears only if the <b>authentication-keychain</b> statement has been configured) Name of the authentication keychain enabled.
Authentication algorithm	(Appears only if the <b>authentication-algorithm</b> statement has been configured) Type of authentication algorithm enabled: <b>hmac</b> or <b>md5</b> .
Address families configured	Names of configured address families for the VPN.
BGP-Static Advertisement Policy	Name of the BGP static policy that is configured on the peer.
Local Address	Address of the local routing device.
Remove-private options	Options associated with the <b>remove-private</b> statement.
Holdtime	Hold time configured with the <b>hold-time</b> statement. The hold time is three times the interval at which keepalive messages are sent.
Flags for NLRI inet-label-unicast	Flags related to labeled-unicast: <ul style="list-style-type: none"> <li>• <b>TrafficStatistics</b>—Collection of statistics for labeled-unicast traffic is enabled.</li> </ul>
Traffic statistics	Information about labeled-unicast traffic statistics: <ul style="list-style-type: none"> <li>• <b>Options</b>—Options configured for collecting statistics about labeled-unicast traffic.</li> <li>• <b>File</b>—Name and location of statistics log files.</li> <li>• <b>size</b>—Size of all the log files, in bytes.</li> <li>• <b>files</b>—Number of log files.</li> </ul>
Traffic Statistics Interval	Time between sample periods for labeled-unicast traffic statistics, in seconds.
Preference	Preference value configured with the <b>preference</b> statement.
Outbound Timer	Time for which the route is available in Junos OS routing table before it is exported to BGP. This field is displayed in the output only if the <b>out-delay</b> parameter is configured to a non-zero value.
Number of flaps	Number of times the BGP session has gone down and then come back up.
Peer ID	Router identifier of the peer.
Group index	Index number for the BGP peer group. The index number differentiates between groups when a single BGP group is split because of different configuration options at the group and peer levels.

Table 91: show bgp neighbor Output Fields (continued)

Field Name	Field Description
Peer index	Index that is unique within the BGP group to which the peer belongs.
Local ID	Router identifier of the local routing device.
Local Interface	Name of the interface on the local routing device.
Active holdtime	Hold time that the local routing device negotiated with the peer.
Keepalive Interval	Keepalive interval, in seconds.
BFD	Status of BFD failure detection.
Local Address	Name of directly connected interface over which direct EBGP peering is established.
NLRI and times for LLGR configured on peer	<p>Names of address families and stale time for BGP long-lived graceful restart configured on the BGP peer or neighbor.</p> <p>Times are displayed using the routing protocol daemon (rpd) %#OT format:</p> <p><b>&lt;weeks&gt;w&lt;days&gt;d &lt;hours&gt;:&lt;minutes&gt;:&lt;seconds&gt;</b></p> <p>Zero leading elements are omitted, for example, a value less than one week do not include the weeks.</p>
NLRI and times that peer supports LLGR Restarter for	<p>Names of address families and stale time that the BGP peer supports for restarter mode for BGP long-lived graceful restart.</p> <p>Times are displayed using the routing protocol daemon (rpd) %#OT format:</p> <p><b>&lt;weeks&gt;w&lt;days&gt;d &lt;hours&gt;:&lt;minutes&gt;:&lt;seconds&gt;</b></p> <p>Zero leading elements are omitted, for example, a value less than one week do not include the weeks.</p>
NLRI that peer saved LLGR forwarding for	Name of the address family for which the BGP peer saved BGP long-lived graceful restart forwarding.
Graceful Restart Details	Amount of time that is remaining until LLGR expires and the time remaining on the GR stale timer, along with RIB details, are displayed while LLGR receiver mode is active (a peer that negotiated LLGR has disconnected and not yet reconnected).
NLRI we are holding stale routes for	Names of address families (NLRIs) for which that stale routes are held or preserved when BGP graceful restart receiver mode is active for a neighbor.
Time until end-of-rib is assumed for stale routes	<p>Amount of time remaining on the stale timer until which end-of-RIB (EoR) markers are assumed when BGP graceful restart receiver mode is active for a neighbor.</p> <p>Time is displayed in Coordinated Universal Time (UTC) format (YYYY-MM-DD-HH:MM:SS). Note that the stale timer display ('Time until end-of-rib is assumed') is also present when a session is active, but the neighbor as not yet sent all of the end-of-rib indications.</p>
Time until stale routes are deleted or become long-lived stale	Amount of time up to which stale routes are deleted or become long-lived stale routes when BGP graceful restart receiver mode is active for a neighbor.

Table 91: show bgp neighbor Output Fields (continued)

Field Name	Field Description
NLRI for restart configured on peer	Names of address families configured for restart.
NLRI advertised by peer	Address families supported by the peer: <b>unicast</b> or <b>multicast</b> .
NLRI for this session	Address families being used for this session.
Peer supports Refresh capability	Remote peer's ability to send and request full routing table readvertisement (route refresh capability). For more information, see RFC 2918, <i>Route Refresh Capability for BGP-4</i> .
Restart time configured on peer	Configured time allowed for restart on the neighbor.
Stale routes from peer are kept for	When graceful restart is negotiated, the maximum time allowed to hold routes from neighbors after the BGP session has gone down.
Peer does not support Restarter functionality	Graceful restart restarter-mode is disabled on the peer.
Peer does not support Receiver functionality	Graceful restart helper-mode is disabled on the peer.
Restart time requested by this peer	Restart time requested by this neighbor during capability negotiation.
Restart flag received from the peer	When this field appears, the BGP speaker has restarted (Restarting), and this peer should not wait for the <b>end-of-rib</b> marker from the speaker before advertising routing information to the speaker.
NLRI that peer supports restart for	Neighbor supports graceful restart for this address family.
NLRI peer can save forwarding state	Neighbor supporting this address family saves all forwarding states.
NLRI that peer saved forwarding for	Neighbor saves all forwarding states for this address family.
NLRI that restart is negotiated for	Router supports graceful restart for this address family.
NLRI of received end-of-rib markers	Address families for which end-of-routing-table markers are received from the neighbor.
NLRI of all end-of-rib markers sent	Address families for which end-of-routing-table markers are sent to the neighbor.
Peer supports 4 byte AS extension (peer-as 1)	Peer understands 4-byte AS numbers in BGP messages. The peer is running Junos OS Release 9.1 or later.

Table 91: show bgp neighbor Output Fields (continued)

Field Name	Field Description
NLRIs for which peer can receive multiple paths	Appears in the command output of the local router if the downstream peer is configured to receive multiple BGP routes to a single destination, instead of only receiving the active route.  Possible value is inet-unicast.
NLRIs for which peer can send multiple paths: inet-unicast	Appears in the command output of the local router if the upstream peer is configured to send multiple BGP routes to a single destination, instead of only sending the active route.  Possible value is inet-unicast.
Table inet.number	Information about the routing table: <ul style="list-style-type: none"> <li>• <b>RIB State</b>—BGP is in the graceful restart process for this routing table: <b>restart is complete</b> or <b>restart in progress</b>.</li> <li>• <b>Bit</b>—Number that represents the entry in the routing table for this peer.</li> <li>• <b>Send state</b>—State of the BGP group: <b>in sync</b>, <b>not in sync</b>, or <b>not advertising</b>.</li> <li>• <b>Active prefixes</b>—Number of prefixes received from the peer that are active in the routing table.</li> <li>• <b>Received prefixes</b>—Total number of prefixes from the peer, both active and inactive, that are in the routing table.</li> <li>• <b>Accepted prefixes</b>—Total number of prefixes from the peer that have been accepted by a routing policy.</li> <li>• <b>Suppressed due to damping</b>—Number of routes currently inactive because of damping or other reasons. These routes do not appear in the forwarding table and are not exported by routing protocols.</li> </ul>
Last traffic (seconds)	Last time any traffic was received from the peer or sent to the peer, and the last time the local routing device checked.
Input messages	Messages that BGP has received from the receive socket buffer, showing the total number of messages, number of update messages, number of times a policy is changed and refreshed, and the buffer size in octets. The buffer size is 16 KB.
Output messages	Messages that BGP has written to the transmit socket buffer, showing the total number of messages, number of update messages, number of times a policy is changed and refreshed, and the buffer size in octets. The buffer size is 16 KB.
Input dropped path attributes	Information about dropped path attributes: <ul style="list-style-type: none"> <li>• <b>Code</b>—Path attribute code.</li> <li>• <b>Count</b>—Path attribute count.</li> </ul>
Input ignored path attributes	Information about ignored path attributes: <ul style="list-style-type: none"> <li>• <b>Code</b>—Path attribute code.</li> <li>• <b>Count</b>—Path attribute count.</li> </ul>

Table 91: show bgp neighbor Output Fields (continued)

Field Name	Field Description
<b>Output queue</b>	<p>Number of BGP packets that are queued to be transmitted to a particular neighbor for a particular routing table. Output queue 0 is for unicast NLRIs, and queue 1 is for multicast NLRIs.</p> <p>It also specifies the routing table name and the NLRI that the table was advertised through, in the format <b>(routing table name, NLRI)</b>.</p> <p><b>NOTE:</b> The output queue of routing tables that are not advertised, will only show up at <b>extensive</b> output level.</p>
<b>Trace options</b>	Configured tracing of BGP protocol packets and operations.
<b>Trace file</b>	Name of the file to receive the output of the tracing operation.
<b>Filter Updates rcv</b>	<p>(<b>orf</b> option only) Number of outbound-route filters received for each configured address family.</p> <p><b>NOTE:</b> The counter is cumulative. For example, the counter is increased after the remote peer either resends or clears the outbound route filtering prefix list.</p>
<b>Immediate</b>	<p>(<b>orf</b> option only) Number of route updates received with the immediate flag set. The immediate flag indicates that the BGP peer should readvertise the updated routes.</p> <p><b>NOTE:</b> The counter is cumulative. For example, the counter is increased after the remote peer either resends or clears the outbound route filtering prefix list.</p>
<b>Filter</b>	( <b>orf</b> option only) Type of prefix filter received: <b>prefix-based</b> or <b>extended-community</b> .
<b>Received filter entries</b>	( <b>orf</b> option only) List of received filters displayed.
<b>seq</b>	( <b>orf</b> option only) Numerical order assigned to this prefix entry among all the received outbound route filter prefix entries.
<b>prefix</b>	( <b>orf</b> option only) Address for the prefix entry that matches the filter.
<b>minlength</b>	( <b>orf</b> option only) Minimum prefix length, in bits, required to match this prefix.
<b>maxlength</b>	( <b>orf</b> option only) Maximum prefix length, in bits, required to match this prefix.
<b>match</b>	( <b>orf</b> option only) For this prefix match, whether to <b>permit</b> or <b>deny</b> route updates.

## Sample Output

### show bgp neighbor

```
user@host > show bgp neighbor
```

For M Series, MX Series, and T Series routers running Junos OS Release 16.1 or later, the **show bgp neighbor** output includes the BGP group the peer belongs to, the routing instance (if any) that the peer is configured in, and the routing instance that the peer is using for the forwarding context (if applicable). An example follows.

```

Peer: 10.255.7.250+179 AS 10   Local: 10.255.7.248+63740 AS 10
  Group: toAsbr2               Routing-Instance: master
  Forwarding routing-instance: toAs2
    Type: Internal   State: Established   Flags: <Sync>
  Last State: OpenConfirm   Last Event: RecvKeepAlive
  Last Error: None
  Export: [ redistrib_static ]
  Options: <Preference LocalAddress PeerAS Refresh>
  Options: <AdvertiseBGPStatic>
  Local Address: 10.255.7.248 Holdtime: 90 Preference: 170 Outbound Timer: 50
  Number of flaps: 0
  Peer ID: 10.255.7.250   Local ID: 10.255.7.248   Active Holdtime: 90
  Keepalive Interval: 30   Group index: 0   Peer index: 0
  BFD: disabled, down
  NLRI for restart configured on peer: inet-unicast
  NLRI advertised by peer: inet-unicast
  NLRI for this session: inet-unicast
  Peer supports Refresh capability (2)
  Stale routes from peer are kept for: 300
  Peer does not support Restarter functionality
  NLRI that restart is negotiated for: inet-unicast
  NLRI of received end-of-rib markers: inet-unicast
  NLRI of all end-of-rib markers sent: inet-unicast
  Peer supports 4 byte AS extension (peer-as 10)
  Peer does not support Addpath
  NLRI that we support extended nexthop encoding for: inet-unicast
  NLRI that peer supports extended nexthop encoding for: inet-unicast

```

Table inet.0 Bit: 10000

```

  RIB State: BGP restart is complete
  Send state: in sync
  Active prefixes:           1
  Received prefixes:         1
  Accepted prefixes:         1
  Suppressed due to damping: 0
  Advertised prefixes:       1
  Last traffic (seconds): Received 9   Sent 5   Checked 5
  Input messages: Total 36   Updates 2   Refreshes 0   Octets 718
  Output messages: Total 37   Updates 1   Refreshes 0   Octets 796
  Output Queue[0]: 0 (inet.0, inet-unicast)

```

```

## show bgp replication

**Syntax**    `show bgp replication`

**Release Information**    Command introduced in Junos OS Release 8.5.  
 Command introduced in Junos OS Release 11.3 for the QFX Series.  
 Support for **logical-system** option introduced in Junos OS Release 13.3

**Description**    Displays the status of BGP state replication between the master and backup Routing Engines on devices that have nonstop active routing configured on them.

**CAUTION:** Before attempting nonstop active routing switchover, check the output of `show bgp replication` to confirm that BGP routing table synchronization has completed on the backup Routing Engine. The **complete** status in the output of `show task replication` only indicates that the socket replication has completed and the BGP synchronization is in progress.

To determine whether BGP synchronization is complete, you must check the **Protocol state** and **Synchronization state** fields in the output of `show bgp replication` on the master Routing Engine. The **Protocol state** must be **idle** and the **Synchronization state** must be **complete**. If you perform NSR switchover before the BGP synchronization has completed, the BGP session might flap.

**Options**    This command has no options.

**Required Privilege Level**    view

**Related Documentation**    • [show bgp replication logical-system](#)

**List of Sample Output**    [show bgp replication \(for Master\) on page 1707](#)  
[show bgp replication \(for Master\) on page 1707](#)  
[show bgp replication \(for Backup\) on page 1707](#)

**Output Fields**    [Table 92 on page 1706](#) lists the output fields for the `show bgp replication` command. Output fields are listed in the approximate order in which they appear.

Table 92: show bgp replication Output Fields

Field Name	Field Description
Precision timer registration	<p>State of BGP precision timer feature in the kernel.</p> <ul style="list-style-type: none"> <li>• <b>Registered</b>—BGP registers with the precision-timer feature in the kernel for auto keepalive generation after switchover.</li> <li>• <b>NotRegistered</b>—Keepalive format of BGP is not registered.</li> </ul>
session state	State of the current internal BGP state replication session, Up or Down, and the duration for which the session has been in the indicated state.
flaps	Total number of flaps that occurred.
protocol state	Current state of the protocol operation, Active, Connect, Idle, and the duration for which the protocol has been in the indicated state.
synchronization state	<p>Synchronization state at the time of executing the command. The states can be:</p> <ul style="list-style-type: none"> <li>• <b>Idle</b></li> <li>• <b>Neighbor</b>—Indicates that the neighbor state synchronization is in progress.</li> <li>• <b>AckWait</b>—Indicates that the request processing is over.</li> <li>• <b>ORF</b>—Indicates that the outbound routing filter synchronization is in progress.</li> <li>• <b>RIB</b>—Indicates that the routing table synchronization is in progress.</li> <li>• <b>Complete</b></li> </ul>
number of peers waiting	<p>Total number of peers waiting for various messages:</p> <ul style="list-style-type: none"> <li>• <b>AckWait</b>—Number of peers waiting for a connection establishment or completed acknowledgment messages.</li> <li>• <b>SoWait</b>—Number of peers waiting for TCP socket-related operations.</li> <li>• <b>Scheduled</b>—Number of peers being synchronized.</li> </ul>
messages sent	<p>Number of various types of messages that have been sent since internal replication session became active:</p> <ul style="list-style-type: none"> <li>• <b>Open</b>—Number of Open messages sent.</li> <li>• <b>Establish</b>—Number of connection establishment acknowledgment messages sent.</li> <li>• <b>Update</b>—Number of update messages sent.</li> <li>• <b>Error</b>—Number of error messages sent.</li> <li>• <b>Complete</b>—Number of connection complete acknowledgment messages sent.</li> </ul>
messages received	<p>Total number of messages received:</p> <ul style="list-style-type: none"> <li>• <b>Open</b>—Number of Open messages received.</li> <li>• <b>Request</b>—Number of request messages received: <ul style="list-style-type: none"> <li>• <b>Wildcard</b>—Number of requests received that used wildcards in the target address.</li> <li>• <b>Targeted</b>—Number of requests received that used a specific address.</li> </ul> </li> <li>• <b>EstablishAck</b>—Number of connection establishment acknowledgement messages received.</li> <li>• <b>CompleteAck</b>—Number of connection completed acknowledgement messages received.</li> </ul>

## Sample Output

### show bgp replication (for Master)

```
user@host> show bgp replication
Synchronization master:
  Precision timer registration: Registered
  Session state: Up, Since: 10:14
  Flaps: 1, Last flap reason: Backup closed connection
  Protocol state: Idle, Since: 10:14
  Synchronization state: Complete
  Number of peers waiting: AckWait: 0, SoWait: 0, Scheduled: 0
  Messages sent: Open 1, Establish 11, GrHelper 0, Update 0, GrStaleLabel 0 Error
0, Complete 1
  Messages received: Open 1, Request 1 wildcard 0 targeted, EstablishAck 11,
GrHelperAck 0, CompleteAck 1
```

### show bgp replication (for Master)

```
user@host> show bgp replication
Synchronization master:
  Session state: Up, Since: 44:07
  Flaps: 0
  Protocol state: Idle, Since: 14
  Synchronization state: Complete
  Number of peers waiting: AckWait: 0, SoWait: 0, Scheduled: 0
  Messages sent: Open 1, Establish 924, Update 381, Error 60, Complete 114
  Messages received: Open 1, Request 1 wildcard 113 targeted, EstablishAck 924,
CompleteAck 114
```

### show bgp replication (for Backup)

```
user@host> show bgp replication
Synchronization backup:
  State: Established 13 ago
  , Unsync timer: 2

  Unsync entry queue:
    Instance: 0 Neighbor: 30.30.30.1 elapsed: 7
    Instance: 0 Neighbor: 40.40.40.3 elapsed: 7
    Instance: 0 Neighbor: 40.40.40.4 elapsed: 7
    Instance: 0 Neighbor: 40.40.40.5 elapsed: 7
    Instance: 0 Neighbor: 40.40.40.6 elapsed: 7
    Instance: 0 Neighbor: 40.40.40.1 elapsed: 7
    Instance: 0 Neighbor: 40.40.40.2 elapsed: 7
```

[show bgp summary \(BGP Graceful Restart or Long-Lived Graceful Restart\) on page 1713](#)

**Output Fields** [Table 93 on page 1709](#) describes the output fields for the **show bgp summary** command. Output fields are listed in the approximate order in which they appear.

*Table 93: show bgp summary Output Fields*

Field Name	Field Description
<b>Groups</b>	Number of BGP groups.
<b>Peers</b>	Number of BGP peers.
<b>Down peers</b>	Number of down BGP peers.
<b>Table</b>	Name of routing table.
<b>Tot Paths</b>	Total number of paths.
<b>Act Paths</b>	Number of active routes.
<b>Suppressed</b>	Number of routes currently inactive because of damping or other reasons. These routes do not appear in the forwarding table and are not exported by routing protocols.
<b>History</b>	Number of withdrawn routes stored locally to keep track of damping history.
<b>Damp State</b>	Number of routes with a figure of merit greater than zero, but still active because the value has not reached the threshold at which suppression occurs.
<b>Pending</b>	Routes in process by BGP import policy.
<b>Peer</b>	Address of each BGP peer. Each peer has one line of output.
<b>AS</b>	Peer's AS number.
<b>InPkt</b>	Number of packets received from the peer.
<b>OutPkt</b>	Number of packets sent to the peer.
<b>OutQ</b>	Number of BGP packets that are queued to be transmitted to a particular neighbor. It normally is 0 because the queue usually is emptied quickly.
<b>Flaps</b>	Number of times the BGP session has gone down and then come back up.
<b>Last Up/Down</b>	Last time since the neighbor transitioned to or from the established state.

Table 93: show bgp summary Output Fields (continued)

Field Name	Field Description
<b>State #Active /Received/Accepted /Damped</b>	<p>Multipurpose field that displays information about BGP peer sessions. The field's contents depend upon whether a session is established and whether it was established on the main routing device or in a routing instance.</p> <ul style="list-style-type: none"> <li>If a peer is not established, the field shows the state of the peer session: <b>Active</b>, <b>Connect</b>, or <b>Idle</b>. In general, the Idle state is the first stage of a connection. BGP is waiting for a Start event. A session can be idle for other reasons as well. The reason that a session is idle is sometimes displayed. For example: <b>Idle (Removal in progress)</b> or <b>Idle (LicenseFailure)</b>.</li> <li>If a BGP session is established on the main routing device, the field shows the number of active, received, accepted, and damped routes that are received from a neighbor and appear in the <b>inet.0</b> (main) and <b>inet.2</b> (multicast) routing tables. For example, <b>8/10/10/2</b> and <b>2/4/4/0</b> indicate the following: <ul style="list-style-type: none"> <li>8 active routes, 10 received routes, 10 accepted routes, and 2 damped routes from a BGP peer appear in the <b>inet.0</b> routing table.</li> <li>2 active routes, 4 received routes, 4 accepted routes, and no damped routes from a BGP peer appear in the <b>inet.2</b> routing table.</li> </ul> </li> <li>If a BGP session is established in a routing instance, the field indicates the established (<b>Establ</b>) state, identifies the specific routing table that receives BGP updates, and shows the number of active, received, and damped routes that are received from a neighbor. For example, <b>Establ VPN-AB.inet.0: 2/4/0</b> indicates the following: <ul style="list-style-type: none"> <li>The BGP session is established.</li> <li>Routes are received in the <b>VPN-AB.inet.0</b> routing table.</li> <li>The local routing device has two active routes, four received routes, and no damped routes from a BGP peer.</li> </ul> </li> </ul> <p>When a BGP session is established, the peers are exchanging update messages.</p> <p><b>NOTE:</b> When graceful restart or LLGR helper mode is active, the RIB information is now displayed by the <b>show bgp summary</b> command. If a BGP session is established on the main routing device, the field shows the number of active, received, accepted, and damped routes that are received from a neighbor and appear in the <b>inet.0</b> (main) and <b>inet.2</b> (multicast) routing tables. For example, <b>8/10/10/2</b> and <b>2/4/4/0</b> indicate the following:</p> <ul style="list-style-type: none"> <li>8 active routes, 10 received routes, 10 accepted routes, and 2 damped routes from a BGP peer appear in the <b>inet.0</b> routing table.</li> <li>2 active routes, 4 received routes, 4 accepted routes, and no damped routes from a BGP peer appear in the <b>inet.2</b> routing table.</li> </ul>

## show policy damping

---

List of Syntax	<a href="#">Syntax on page 1714</a> <a href="#">Syntax (EX Series Switch and QFX Series) on page 1714</a>
Syntax	<code>show policy damping</code> <code>&lt;logical-system (all   <i>logical-system-name</i>)&gt;</code>
Syntax (EX Series Switch and QFX Series)	<code>show policy damping</code>
Release Information	Command introduced before Junos OS Release 7.4. Command introduced in Junos OS Release 9.0 for EX Series switches. Command introduced in Junos OS Release 11.3 for the QFX Series. Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.
Description	Display information about BGP route flap damping parameters.
Options	<b>none</b> —Display information about BGP route flap damping parameters.  <b>logical-system (all   <i>logical-system-name</i>)</b> —(Optional) Perform this operation on all logical systems or on a particular logical system.
Additional Information	In the output from this command, figure-of-merit values correlate with the probability of future instability of a routing device. Routes with higher figure-of-merit values are suppressed for longer periods of time. The figure-of-merit value decays exponentially over time. A figure-of-merit value of zero is assigned to each new route. The value is increased each time the route is withdrawn or readvertised, or when one of its path attributes changes.
Required Privilege Level	view
Related Documentation	<ul style="list-style-type: none"><li>• “Configuring BGP Flap Damping Parameters” in the <i>Routing Policies, Firewall Filters, and Traffic Policers Feature Guide</i></li><li>• <a href="#">clear bgp damping on page 1668</a></li><li>• <a href="#">show route damping on page 2223</a></li></ul>
List of Sample Output	<a href="#">show policy damping on page 1715</a>
Output Fields	<a href="#">Table 94 on page 1715</a> describes the output fields for the <b>show policy damping</b> command. Output fields are listed in the approximate order in which they appear.

Table 94: show policy damping Output Fields

Field Name	Field Description
<b>Halflife</b>	Decay half-life, in minutes. The value represents the period during which the accumulated figure-of-merit value is reduced by half if the route remains stable. If a route has flapped, but then becomes stable, the figure-of-merit value for the route decays exponentially. For example, for a route with a figure-of-merit value of 1500, if no incidents occur, its figure-of-merit value is reduced to 750 after 15 minutes and to 375 after another 15 minutes.
<b>Reuse merit</b>	Figure-of-merit value below which a suppressed route can be used again. A suppressed route becomes reusable when its figure-of-merit value decays to a value below a reuse threshold, and the route once again is considered usable and can be installed in the forwarding table and exported from the routing table.
<b>Suppress/cutoff merit</b>	Figure-of-merit value above which a route is suppressed for use or inclusion in advertisements. When a route's figure-of-merit value reaches a particular level, called the cutoff or suppression threshold, the route is suppressed. When a route is suppressed, the routing table no longer installs the route into the forwarding table and no longer exports this route to any of the routing protocols.
<b>Maximum suppress time</b>	Maximum hold-down time, in minutes. The value represents the maximum time that a route can be suppressed no matter how unstable it has been before this period of stability.
<b>Computed values</b>	<ul style="list-style-type: none"> <li>• <b>Merit ceiling</b>—Maximum merit that a flapping route can collect.</li> <li>• <b>Maximum decay</b>—Maximum decay half-life, in minutes.</li> </ul>

## Sample Output

### show policy damping

```

user@host> show policy damping
Default damping information:
  Halflife: 15 minutes
  Reuse merit: 750 Suppress/cutoff merit: 3000
  Maximum suppress time: 60 minutes
  Computed values:
    Merit ceiling: 12110
    Maximum decay: 6193
Damping information for "standard-damping":
  Halflife: 10 minutes
  Reuse merit: 4000 Suppress/cutoff merit: 8000
  Maximum suppress time: 30 minutes
  Computed values:
    Merit ceiling: 32120
    Maximum decay: 12453

```

## CHAPTER 18

# ES-IS Operational Commands

- `clear esis adjacency`
- `clear esis statistics`
- `show esis adjacency`
- `show esis interface`
- `show esis statistics`

## clear esis adjacency

---

<b>Syntax</b>	<code>clear esis adjacency</code> <code>&lt;instance <i>instance-name</i>&gt;</code> <code>&lt;interface <i>interface-name</i>&gt;</code> <code>&lt;neighbor&gt;</code>
<b>Release Information</b>	Command introduced before Junos OS Release 7.4.
<b>Description</b>	Clear End System-to-Intermediate System (ES-IS) adjacencies.
<b>Options</b>	<b>none</b> —Clear all ES-IS adjacencies.  <b>instance <i>instance-name</i></b> —(Optional) Clear adjacencies for the specified routing instance only.  <b>interface <i>interface-name</i></b> —(Optional) Clear adjacencies for the specified interface only.  <b>neighbor</b> —(Optional) Clear adjacencies for the specified neighbor only.
<b>Required Privilege Level</b>	clear
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">show esis adjacency on page 1720</a></li></ul>
<b>List of Sample Output</b>	<a href="#">clear esis adjacency on page 1718</a>
<b>Output Fields</b>	When you enter this command, you are provided feedback on the status of your request.

## Sample Output

### clear esis adjacency

```
user@host> clear esis adjacency
```

## clear esis statistics

---

<b>Syntax</b>	clear esis statistics <instance <i>instance-name</i> >
<b>Release Information</b>	Command introduced before Junos OS Release 7.4.
<b>Description</b>	Clear End System-to-Intermediate System (ES-IS) packet statistics.
<b>Options</b>	<b>none</b> —Clear ES-IS packet statistics for all routing instances.  <b>instance <i>instance-name</i></b> —(Optional) Clear ES-IS packet statistics for the specified routing instance only.
<b>Required Privilege Level</b>	clear
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">show esis statistics on page 1725</a></li></ul>
<b>List of Sample Output</b>	<a href="#">clear esis statistics on page 1719</a>
<b>Output Fields</b>	When you enter this command, you are provided feedback on the status of your request.

## Sample Output

### clear esis statistics

```
user@host> clear esis statistics
```

## show esis adjacency

**Syntax** show esis adjacency  
 <brief | detail | extensive>  
 <esis-neighbor-id>  
 <instance *instance-name*>  
 <interface *interface-name*>

**Release Information** Command introduced before Junos OS Release 7.4.

**Description** Display End System-to-Intermediate System (ES-IS) adjacencies.

**Options** **none**—(Same as **brief**) Display all ES-IS adjacencies.

**brief | detail | extensive**—(Optional) Display the specified level of output.

**esis-neighbor-id**—(Optional) Display adjacencies for the specified neighbor's network service access point (NSAP) only.

**instance *instance-name***—(Optional) Display adjacencies for the specified routing instance only.

**interface *interface-name***—(Optional) Display adjacencies for the specified interface only.

**Required Privilege Level** view

- [show esis adjacency detail on page 1721](#)
- [show esis adjacency extensive on page 1721](#)

**Output Fields** [Table 95 on page 1720](#) describes the output fields for the **show esis adjacency** command. Output fields are listed in the approximate order in which they appear.

*Table 95: show esis adjacency Output Fields*

Field Name	Field Description	Level of Output
Nbr Type	Type of network service access point (NSAP) of this neighbor.	<b>brief</b> none
NSAP/NET	NSAP of this neighbor.	All levels
Type	Type of NSAP of this neighbor.	<b>detail</b> extensive

Table 95: show esis adjacency Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Hold (secs)</b>	Holdtime interval advertised by this neighbor.	<b>brief none</b>
<b>Interface</b>	Interface through which the neighbor is reachable.	All levels
<b>Advertised holdtime</b>	Holdtime interval advertised by this neighbor.	<b>detail extensive</b>
<b>Expires in</b>	How long until the adjacency expires, in seconds.	<b>detail extensive</b>
<b>SNPA</b>	Subnetwork point of attachment (MAC address of the neighbor).	<b>detail extensive</b>
<b>Transition log</b>	List of recent transitions. <ul style="list-style-type: none"> <li>• <b>When</b>—Time of advertisement from this neighbor.</li> <li>• <b>State</b>—State of the adjacency: <b>Up</b>, <b>Down</b>, <b>New</b>, <b>One-way</b>, <b>Initializing</b>, or <b>Rejected</b>.</li> <li>• <b>Event</b>—Event causing the state.</li> <li>• <b>Down reason</b>—Reason the adjacency is down.</li> </ul>	<b>extensive</b>

## Sample Output

### show esis adjacency

```

user@host> show esis adjacency
Nbr   NSAP/NET                               Hold  Interface
Type                                     (secs)
IS    47.0005.80ff.f800.0000.0108.0001.0102.5501.6008    135 fe-0/0/0.0

```

### show esis adjacency brief

The output for the **show esis adjacency brief** command is identical to that for the **show esis adjacency** command. For sample output, see [show esis adjacency on page 1721](#).

### show esis adjacency detail

```

user@host> show esis adjacency detail
NSAP/NET: 47.0005.80ff.f800.0000.0108.0001.0102.5501.6008, Type: IS
Interface: fe-0/0/0.0, Advertised hold time: 180 secs, Expires in: 173 secs
SNPA: 0:5:85:c1:73:71

```

### show esis adjacency extensive

```

user@host> show esis adjacency extensive
NSAP/NET: 47.0005.80ff.f800.0000.0108.0001.0102.5501.6008, Type: IS
Interface: fe-0/0/0.0, Advertised hold time: 180 secs, Expires in: 167 secs
SNPA: 0:5:85:c1:73:71
Transition log:
When           State      Event           Down reason
Sun Nov 26 22:07:35  Up        Received ISH

```

## show esis interface

<b>Syntax</b>	show esis interface <brief   detail   extensive> <instance <i>instance-name</i> > <interface <i>interface-name</i> >
<b>Release Information</b>	Command introduced before Junos OS Release 7.4.
<b>Description</b>	Display End System-to-Intermediate System (ES-IS) interface information.
<b>Options</b>	<p><b>none</b>—(Same as <b>brief</b>) Display information for all configured ES-IS interfaces.</p> <p><b>brief   detail   extensive</b>—(Optional) Display the specified level of output.</p> <p><b>instance <i>instance-name</i></b>—(Optional) Display configured interfaces for the specified routing instance only.</p> <p><b>interface <i>interface-name</i></b>—(Optional) Display information about the specified interface only.</p>
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">show esis interface on page 1724</a> <a href="#">show esis interface brief on page 1724</a> <a href="#">show esis interface detail on page 1724</a> <a href="#">show esis interface extensive on page 1724</a>
<b>Output Fields</b>	Table 96 on page 1723 describes the output fields for the <b>show esis interface</b> command. Output fields are listed in the approximate order in which they appear.

Table 96: show esis interface Output Fields

Field Name	Field Description	Level of Output
<b>Interface</b>	Interface through which the adjacency is made.	All levels
<b>Receives</b>	Types of hello messages that are received.	All levels
<b>Sends</b>	Types of hello messages that are sent.	All levels
<b>Hello interval</b>	Interface's hello interval, in seconds.	All levels
<b>Adjacencies or Num Adj</b>	Number of adjacencies established on this interface.	All levels
<b>Holdtime</b>	Interface's hold time, in seconds.	<b>detail extensive</b>

Table 96: show esis interface Output Fields (continued)

Field Name	Field Description	Level of Output
State	Internal implementation information.	detail extensive
End system configuration timer	Time, in seconds, for the end system to configure itself for ES-IS.	detail extensive
Interface index	Index value.	detail extensive
NET used in hello	Network entity title used in hello messages.	detail extensive

## Sample Output

### show esis interface

```

user@host> show esis interface
Interface          Receives    Sends Hello Interval  Num Adj
fe-0/0/0.0         ISH         ISH         60.00                1
lo0.0              ISH         -           60.00                0

```

### show esis interface brief

The output for the **show esis interface brief** command is identical to that for the **show esis interface** command. For sample output, see [show esis interface on page 1724](#).

### show esis interface detail

```

user@host> show esis interface detail
Interface: fe-0/0/0.0
  Receives: ISH, Sends: ISH, Hello interval: 60.00
  Adjacencies: 1, Holdtime: 180, End system configuration timer: 180
  Interface index: 68, State: 0x2
  NET used in hello: 47.0005.80ff.f800.0000.0108.0001.0102.5501.6007

Interface: lo0.0
  Receives: ISH, Sends: - , Hello interval: 60.00
  Adjacencies: 0, Holdtime: 180, End system configuration timer: 180
  Interface index: 64, State: 0x2
  NET used in hello: 47.0005.80ff.f800.0000.0108.0001.0102.5501.6007

```

### show esis interface extensive

The output for the **show esis interface extensive** command is identical to that for the **show esis interface detail** command. For sample output, see [show esis interface detail on page 1724](#).

## show esis statistics

<b>Syntax</b>	show esis statistics <instance <i>instance-name</i> >
<b>Release Information</b>	Command introduced before Junos OS Release 7.4.
<b>Description</b>	Display End System-to-Intermediate System (ES-IS) packet statistics.
<b>Options</b>	<p><b>none</b>—Display ES-IS packet statistics for all routing instances.</p> <p><b>instance <i>instance-name</i></b>—(Optional) Display ES-IS statistics for the specified routing instance only.</p>
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li><a href="#">clear esis statistics on page 1719</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">show esis statistics on page 1726</a>
<b>Output Fields</b>	<p><a href="#">Table 97 on page 1725</a> describes the output fields for the <b>show esis statistics</b> command. Output fields are listed in the approximate order in which they appear.</p>

*Table 97: show esis statistics Output Fields*

Field Name	Field Description
<b>PDU type</b>	Protocol data unit type.
<b>Received</b>	Number of PDUs received since IS-IS started or since the statistics were set to zero.
<b>Processed</b>	Number of PDUs received less the number dropped.
<b>Drops</b>	Number of PDUs dropped.
<b>Sent</b>	Number of PDUs transmitted since IS-IS started or since the statistics were set to zero.
<b>Total packets received/sent</b>	Total number of PDUs received and transmitted since IS-IS started or since the statistics were set to zero.

## Sample Output

### show esis statistics

```
user@host> show esis statistics
PDU type  Received Processed Drops   Sent
ESH              3         3     0     8
ISH             11        10     1     4
RD              0         0     0     0
Unknown         0         0     0     0
Totals         14        13     1    12
Total packets received: 14 sent: 0
```

## clear amt statistics

---

<b>Syntax</b>	<code>clear amt statistics</code> <code>&lt;instance <i>instance-name</i>&gt;</code> <code>&lt;logical-system (all   <i>logical-system-name</i>)&gt;</code>
<b>Release Information</b>	Command introduced in JUNOS Release 10.2.
<b>Description</b>	Clear Automatic Multicast Tunneling (AMT) statistics.
<b>Options</b>	<b>none</b> —Clear the multicast statistics for all AMT tunnel interfaces.  <b>instance <i>instance-name</i></b> —(Optional) Clear AMT multicast statistics for the specified instance.  <b>logical-system (all   <i>logical-system-name</i>)</b> —(Optional) Perform this operation on all logical systems or on a particular logical system.
<b>Required Privilege Level</b>	clear
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">show amt statistics on page 1768</a></li></ul>
<b>List of Sample Output</b>	<a href="#">clear amt statistics on page 1730</a>
<b>Output Fields</b>	When you enter this command, you are provided feedback on the status of your request.

## Sample Output

### clear amt statistics

```
user@host> clear amt statistics
```

## clear amt tunnel

<b>Syntax</b>	<pre>clear amt tunnel &lt;gateway <i>gateway-ip-addr</i>&gt; &lt;port <i>port-number</i>&gt; &lt;instance <i>instance-name</i>&gt; &lt;logical-system (all   <i>logical-system-name</i>)&gt; &lt;statistics&gt; &lt;tunnel-interface <i>interface-name</i>&gt;</pre>
<b>Release Information</b>	Command introduced in JUNOS Release 10.2.
<b>Description</b>	Clear the Automatic Multicast Tunneling (AMT) multicast state. Optionally, clear AMT protocol statistics.
<b>Options</b>	<p><b>none</b>—Clear multicast state for all AMT tunnel interfaces.</p> <p><b>gateway <i>gateway-ip-addr</i> port <i>port-number</i></b>—(Optional) Clear the AMT multicast state for the specified gateway address. If no port is specified, clear the AMT multicast state for all AMT gateways with the given IP address.</p> <p><b>instance <i>instance-name</i></b>—(Optional) Clear the AMT multicast state for the specified instance.</p> <p><b>logical-system (all   <i>logical-system-name</i>)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p> <p><b>statistics</b>—(Optional) Clear multicast statistics for all AMT tunnels or for specified tunnels.</p> <p><b>tunnel-interface <i>interface-name</i></b>—(Optional) Clear the AMT multicast state for the specified AMT tunnel interface.</p>
<b>Required Privilege Level</b>	clear
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">show amt tunnel on page 1773</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">clear amt tunnel on page 1731</a> <a href="#">clear amt tunnel statistics gateway-address on page 1732</a>
<b>Output Fields</b>	When you enter this command, you are provided feedback on the status of your request.

## Sample Output

### clear amt tunnel

```
user@host> clear amt tunnel
```

### clear amt tunnel statistics gateway-address

```
user@host> clear amt tunnel statistics gateway-address 100.31.1.21 port 4000
```

## clear igmp membership

<b>List of Syntax</b>	<a href="#">Syntax on page 1733</a> <a href="#">Syntax (EX Series Switch and the QFX Series) on page 1733</a>
<b>Syntax</b>	<pre>clear igmp membership &lt;all&gt; &lt;group <i>address-range</i>&gt; &lt;interface <i>interface-name</i>&gt; &lt;logical-system (all   <i>logical-system-name</i>)&gt;</pre>
<b>Syntax (EX Series Switch and the QFX Series)</b>	<pre>clear igmp membership &lt;group <i>address-range</i>&gt; &lt;interface <i>interface-name</i>&gt;</pre>
<b>Release Information</b>	<p>Command introduced before Junos OS Release 7.4.</p> <p>Command introduced in Junos OS Release 9.0 for EX Series switches.</p> <p>Command introduced in Junos OS Release 11.3 for the QFX Series.</p> <p>Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.</p>
<b>Description</b>	Clear Internet Group Management Protocol (IGMP) group members.
<b>Options</b>	<p><b>all</b>—Clear IGMP members for groups and interfaces in the master instance.</p> <p><b>group <i>address-range</i></b>—(Optional) Clear all IGMP members that are in a particular address range. An example of a range is <b>233.252/16</b>. If you omit the destination prefix length, the default is <b>/32</b>.</p> <p><b>interface <i>interface-name</i></b>—(Optional) Clear all IGMP group members on an interface.</p> <p><b>logical-system (all   <i>logical-system-name</i>)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p>
<b>Required Privilege Level</b>	clear
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">show igmp group on page 1787</a></li> <li>• <a href="#">show igmp interface on page 1791</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">clear igmp membership all on page 1734</a> <a href="#">clear igmp membership interface on page 1734</a> <a href="#">clear igmp membership group on page 1735</a>
<b>Output Fields</b>	See <a href="#">show igmp group</a> for an explanation of output fields.

## Sample Output

### clear igmp membership all

The following sample output displays IGMP group information before and after the **clear igmp membership** command is entered:

```
user@host> show igmp group
Interface      Group           Last Reported   Timeout
so-0/0/0       198.51.100.253  203.0.113.1     186
so-0/0/0       198.51.100.254  203.0.113.1     186
so-0/0/0       198.51.100.255  203.0.113.1     187
so-0/0/0       198.51.100.240  203.0.113.1     188
local          198.51.100.6    (null)           0
local          198.51.100.5    (null)           0
local          198.51.100.25   (null)           0
local          198.51.100.22   (null)           0
local          198.51.100.2    (null)           0
local          198.51.100.13   (null)           0
```

```
user@host> clear igmp membership all
Clearing Group Membership Info for so-0/0/0
Clearing Group Membership Info for so-1/0/0
Clearing Group Membership Info for so-2/0/0
```

```
user@host> show igmp group
Interface      Group           Last Reported   Timeout
local          198.51.100.6    (null)           0
local          198.51.100.5    (null)           0
local          198.51.100.254  (null)           0
local          198.51.100.255  (null)           0
local          198.51.100.2    (null)           0
local          198.51.100.13   (null)           0
```

### clear igmp membership interface

The following sample output displays IGMP group information before and after the **clear igmp membership interface** command is issued:

```
user@host> show igmp group
Interface      Group           Last Reported   Timeout
so-0/0/0       198.51.100.253  203.0.113.1     210
so-0/0/0       198.51.100.200  203.0.113.1     210
so-0/0/0       198.51.100.255  203.0.113.1     215
so-0/0/0       198.51.100.254  203.0.113.1     216
local          198.51.100.6    (null)           0
local          198.51.100.5    (null)           0

<b>Output Fields</b>	When you enter this command, you are provided feedback on the status of your request.

## Sample Output

### clear msdp statistics

```
user@host> clear msdp statistics
```

## clear multicast bandwidth-admission

**Syntax** clear multicast bandwidth-admission  
 <group *group-address*>  
 <inet | inet6>  
 <instance *instance-name*>  
 <interface *interface-name*>  
 <source *source-address*>

**Release Information** Command introduced in Junos OS Release 8.3.  
 Command introduced in Junos OS Release 9.0 for EX Series switches.  
**inet6** and **instance** options introduced in Junos OS Release 10.0 for EX Series switches.  
 Command introduced in Junos OS Release 11.3 for the QFX Series.  
 Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.

**Description** Reapply IP multicast bandwidth admissions.

**Options** **none**—Reapply multicast bandwidth admissions for all IPv4 forwarding entries in the master routing instance.

**group *group-address***—(Optional) Reapply multicast bandwidth admissions for the specified group.

**inet**—(Optional) Reapply multicast bandwidth admission settings for IPv4 flows.

**inet6**—(Optional) Reapply multicast bandwidth admission settings for IPv6 flows.

**instance *instance-name***—(Optional) Reapply multicast bandwidth admission settings for the specified instance. If you do not specify an instance, the command applies to the master routing instance.

**interface *interface-name***—(Optional) Examines the corresponding outbound interface in the relevant entries and acts as follows:

- If the interface is congested, and it was admitted previously, it is removed.
- If the interface was rejected previously, the **clear multicast bandwidth-admission** command enables the interface to be admitted as long as enough bandwidth exists on the interface.
- If you do not specify an interface, issuing the **clear multicast bandwidth-admission** command readmits any previously rejected interface for the relevant entries as long as enough bandwidth exists on the interface.

To manually reject previously admitted outbound interfaces, you must specify the interface.

**source *source-address***—(Optional) Use with the **group** option to reapply multicast bandwidth admission settings for the specified (source, group) entry.

**Required Privilege Level**    clear

**Related Documentation**    • [show multicast interface on page 1843](#)

**List of Sample Output**    [clear multicast bandwidth-admission on page 1746](#)

**Output Fields**    When you enter this command, you are provided feedback on the status of your request.

## Sample Output

`clear multicast bandwidth-admission`

```
user@host> clear multicast bandwidth-admission
```

## clear multicast forwarding-cache

<b>Syntax</b>	clear multicast forwarding-cache <all> <inet   inet6> <instance <i>instance-name</i> > <logical-system (all   <i>logical-system-name</i> )>
<b>Release Information</b>	Command introduced in Junos OS Release 12.2.
<b>Description</b>	Clear IP multicast forwarding cache entries.  This command is not supported for next-generation multiprotocol BGP multicast VPNs (MVPNs).
<b>Options</b>	<p><b>all</b>—Clear all multicast forwarding cache entries in the master instance.</p> <p><b>inet</b>—(Optional) Clear multicast forwarding cache entries for IPv4 family addresses.</p> <p><b>inet6</b>—(Optional) Clear multicast forwarding cache entries for IPv6 family addresses.</p> <p><b>instance <i>instance-name</i></b>—(Optional) Clear multicast forwarding cache entries on a specific routing instance.</p> <p><b>logical-system (all   <i>logical-system-name</i>)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p>
<b>Required Privilege Level</b>	clear
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">show multicast forwarding-cache statistics on page 1841</a></li> </ul>

## clear pim join

---

**List of Syntax**    [Syntax on page 1754](#)  
                          [Syntax \(EX Series Switch and the QFX Series\) on page 1754](#)

**Syntax**    clear pim join  
              <all>  
              <group-address>  
              <bidirectional | dense | sparse>  
              <exact>  
              <inet | inet6>  
              <instance *instance-name*>  
              <logical-system (all | *logical-system-name*)>  
              <rp *ip-address/prefix* | source *ip-address/prefix*>  
              <sg | star-g>

**Syntax (EX Series Switch and the QFX Series)**    clear pim join  
  <all>  
  <group-address>  
  <dense | sparse>  
  <exact>  
  <inet | inet6>  
  <instance *instance-name*>  
  <rp *ip-address/prefix* | source *ip-address/prefix*>  
  <sg | star-g>

**Release Information**    Command introduced before Junos OS Release 7.4.  
                              Command introduced in Junos OS Release 9.0 for EX Series switches.  
                              **inet6** and **instance** options introduced in Junos OS Release 10.0 for EX Series switches.  
                              Command introduced in Junos OS Release 11.3 for the QFX Series.  
                              Multiple new filter options introduced in Junos OS Release 13.2.  
                              Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.

**Description**    Clear the Protocol Independent Multicast (PIM) join and prune states.

**Options**    **all**—To clear PIM join and prune states for all groups and family addresses in the master instance, you must specify “all”.

**group-address**—(Optional) Clear the PIM join and prune states for a group address.

**bidirectional | dense | sparse**—(Optional) Clear PIM bidirectional mode, dense mode, or sparse and source-specific multicast (SSM) mode entries.

**exact**—(Optional) Clear only the group that exactly matches the specified group address.

**inet | inet6**—(Optional) Clear the PIM entries for IPv4 or IPv6 family addresses, respectively.

**instance *instance-name***—(Optional) Clear the entries for a specific PIM-enabled routing instance.

**logical-system (all | *logical-system-name*)**—(Optional) Perform this operation on all logical systems or on a particular logical system.

**rp *ip-address/prefix* | source *ip-address/prefix***—(Optional) Clear the PIM entries with a specified rendezvous point (RP) address and prefix or with a specified source address and prefix. You can omit the prefix.

**sg | star-g**—(Optional) Clear PIM (S,G) or (\*G) entries.

**Additional Information** The **clear pim join** command cannot be used to clear the PIM join and prune state on a backup Routing Engine when nonstop active routing is enabled.

**Required Privilege Level** clear

**Related Documentation**

**Output Fields** When you enter this command, you are provided feedback on the status of your request.

## Sample Output

**clear pim join all**

```
user@host> clear pim join all
Cleared 8 Join/Prune states
```

**clear pim join inet6 all**

```
user@host> clear pim join inet6 all
Cleared 4 Join/Prune states
```

**clear pim join inet6 star-g all**

```
user@host> clear pim join inet6 star-g all
Cleared 1 Join/Prune states
```

## clear pim join-distribution

---

<b>Syntax</b>	<pre>clear pim join-distribution &lt;all&gt; &lt;instance <i>instance-name</i>&gt; &lt;logical-system (all   <i>logical-system-name</i>)&gt;</pre>
<b>Release Information</b>	Command introduced in Junos OS Release 10.0.
<b>Description</b>	<p>Clear the PIM <b>join-redistribute</b> states.</p> <p>Use the <b>show pim source</b> command to find out if there are multiple paths available for a source (for example, an RP).</p> <p>When you include the <b>join-load-balance</b> statement in the configuration, the PIM join states are distributed evenly on available equal-cost multipath links. When an upstream neighbor link fails, Junos OS redistributes the PIM join states to the remaining links. However, when new links are added or the failed link is restored, the existing PIM joins are not redistributed to the new link. New flows will be distributed to the new links. However, in a network without new joins and prunes, the new link is not used for multicast traffic. The <b>clear pim join-distribution</b> command redistributes the existing flows to the new upstream neighbors. Redistributing the existing flows causes traffic to be disrupted, so we recommend that you run the <b>clear pim join-distribution</b> command during a maintenance window.</p>
<b>Options</b>	<p><b>all</b>— (Optional) Clear the PIM <b>join-redistribute</b> states for all groups and family addresses in the master instance.</p> <p><b>none</b>— Automatically clear all PIM join/prune states.</p> <p><b>instance <i>instance-name</i></b>—(Optional) Redistribute the join states for a specific PIM-enabled routing instance.</p> <p><b>logical-system (all   <i>logical-system-name</i>)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p>
<b>Additional Information</b>	The <b>clear pim join-distribution</b> command cannot be used to redistribute the PIM join states on a backup Routing Engine when nonstop active routing is enabled.
<b>Required Privilege Level</b>	clear
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">show pim neighbors on page 1920</a></li><li>• <a href="#">show pim join on page 1897</a></li><li>• <a href="#">join-load-balance</a></li></ul>

List of Sample Output [clear pim join-distribution all on page 1757](#)

**Output Fields** When you enter this command, you are provided no feedback on the status of your request. You can enter the **show pim join** command before and after distributing the join state to verify the operation.

## Sample Output

[clear pim join-distribution all](#)

```
user@host> clear pim join-distribution all
```

## clear pim register

AMT error message count
AMT incomplete packet            :           0
AMT invalid mac                  :           0
AMT unexpected type              :           0
AMT invalid relay discovery address :           0
AMT invalid membership request address :           0
AMT invalid membership update address :           0
AMT incomplete relay discovery messages :           0
AMT incomplete membership request messages :           0
AMT incomplete membership update messages :           0
AMT no active gateway            :           0

```

AMT invalid inner header checksum	:	0
AMT gateways timed out	:	0

## show amt summary

<b>Syntax</b>	show amt summary <instance <i>instance-name</i> > <logical-system (all   <i>logical-system-name</i> )>
<b>Release Information</b>	Command introduced in Junos OS Release 10.2.
<b>Description</b>	Display summary information about the Automatic Multicast Tunneling (AMT) protocol.
<b>Options</b>	<p><b>none</b>—Display summary information about all AMT protocol instances.</p> <p><b>instance <i>instance-name</i></b>—(Optional) Display information for the specified instance only.</p> <p><b>logical-system (all   <i>logical-system-name</i>)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p>
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">clear amt tunnel on page 1731</a></li> <li>• <a href="#">show amt statistics on page 1768</a></li> <li>• <a href="#">show amt tunnel on page 1773</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">show amt summary on page 1772</a>
<b>Output Fields</b>	Table 99 on page 1771 describes the output fields for the <b>show amt summary</b> command. Output fields are listed in the approximate order in which they appear.

Table 99: show amt summary Output Fields

Field Name	Field Description	Level of Output
<b>AMT anycast prefix</b>	Prefix advertised by unicast routing protocols to route AMT discovery messages to the router from nearby AMT gateways.	All levels
<b>AMT anycast address</b>	Anycast address configured from which the anycast prefix is derived.	All levels
<b>AMT local address</b>	Local unique AMT relay IP address configured. Used to send AMT relay advertisement messages, it is the IP source address of AMT control messages and the source address of the data tunnel encapsulation.	All levels
<b>AMT tunnel limit</b>	Maximum number of AMT tunnels that can be created.	All levels
<b>active tunnels</b>	Number of active AMT tunnel interfaces.	All levels

## Sample Output

### show amt summary

```
user@host> show amt summary
AMT anycast prefix : 20.0.0.4/32
AMT anycast address : 20.0.0.4
AMT local address : 20.0.0.4
AMT tunnel limit : 1000, active tunnels : 2
```

## show amt tunnel

<b>Syntax</b>	<pre>show amt tunnel &lt;brief   detail&gt; &lt;gateway-address <i>gateway-ip-address</i>&gt; &lt;port <i>port-number</i>&gt; &lt;instance <i>instance-name</i>&gt; &lt;logical-system (all   <i>logical-system-name</i>)&gt; &lt;tunnel-interface <i>interface-name</i>&gt;</pre>
<b>Release Information</b>	Command introduced in Junos OS Release 10.2.
<b>Description</b>	Display information about the Automatic Multicast Tunneling (AMT) dynamic tunnels.
<b>Options</b>	<p><b>none</b>—Display summary information about all AMT protocol instances.</p> <p><b>brief   detail</b>—(Optional) Display the specified level of detail.</p> <p><b>gateway-address <i>gateway-ip-address</i> port <i>port-number</i></b>—(Optional) Display information for the specified AMT gateway only. If no port is specified, display information for all AMT gateways with the given IP address.</p> <p><b>instance <i>instance-name</i></b>—(Optional) Display information for the specified instance only.</p> <p><b>logical-system (all   <i>logical-system-name</i>)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p> <p><b>tunnel-interface <i>interface-name</i></b>—(Optional) Display information for the specified AMT tunnel interface only.</p>
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">clear amt tunnel on page 1731</a></li> <li>• <a href="#">show amt statistics on page 1768</a></li> <li>• <a href="#">show amt summary on page 1771</a></li> </ul>
<b>List of Sample Output</b>	<p><a href="#">show amt tunnel on page 1774</a></p> <p><a href="#">show amt tunnel detail on page 1775</a></p> <p><a href="#">show amt tunnel tunnel-interface on page 1775</a></p> <p><a href="#">show amt tunnel gateway-address on page 1775</a></p> <p><a href="#">show amt tunnel gateway-address detail on page 1775</a></p>
<b>Output Fields</b>	Table 100 on page 1774 describes the output fields for the <b>show amt tunnel</b> command. Output fields are listed in the approximate order in which they appear.

Table 100: show amt tunnel Output Fields

Field Name	Field Description	Level of Output
<b>AMT gateway address</b>	Address of the AMT gateway that is being connected by the AMT tunnel.	All levels
<b>port</b>	Client port used by the AMT tunnel.	All levels
<b>AMT tunnel interface</b>	Dynamically created AMT logical interfaces used by the AMT tunnel in the format <b>ud-FPC/PIC/Port.unit</b> .	All levels
<b>AMT tunnel state</b>	State of the AMT tunnel. The state is normally <b>Active</b> . <ul style="list-style-type: none"> <li>• <b>Active</b>—The tunnel is active.</li> <li>• <b>Pending</b>—The tunnel creation is pending. This is a transient state.</li> <li>• <b>Down</b>—The tunnel is in the down state.</li> <li>• <b>Graceful restart pending</b>—Graceful restart is in progress.</li> <li>• <b>Reviving</b>—The routing protocol daemon or Routing Engine was restarted (not gracefully). The tunnel remains in the reviving state until the AMT gateway sends a control message. When the message is received the tunnel is moved to the <b>Active</b> state. If no message is received before the AMT tunnel inactivity timer expires, the tunnel is deleted.</li> </ul>	All levels
<b>AMT tunnel inactivity timeout</b>	Number of seconds since the most recent control message was received from an AMT gateway. If no message is received before the AMT tunnel inactivity timer expires, the tunnel is deleted.	All levels
<b>Number of groups</b>	Number of multicast groups using the tunnel.	All levels
<b>Group</b>	Multicast group address or addresses using the tunnel.	<b>detail</b>
<b>Include Source</b>	Multicast source address for each IGMPv3 group using the tunnel.	<b>detail</b>
<b>AMT message count</b>	Statistics for AMT messages: <ul style="list-style-type: none"> <li>• <b>AMT Request</b>—Number of AMT relay tunnel request messages received.</li> <li>• <b>AMT membership update</b>—Number of AMT membership update messages received.</li> </ul>	All levels

## Sample Output

### show amt tunnel

```

user@host> show amt tunnel
AMT gateway address : 11.11.11.2, port : 2268
AMT tunnel interface : ud-5/1/10.1120256
AMT tunnel state : Active
AMT tunnel inactivity timeout : 15
Number of groups : 1

AMT message count:
AMT Request      AMT membership update
2                2

```

### show amt tunnel detail

```

user@host> show amt tunnel detail
AMT gateway address : 11.11.11.2, port : 2268
AMT tunnel interface : ud-5/3/10.1120512
AMT tunnel state : Active
AMT tunnel inactivity timeout : 62
Number of groups : 1
Group: 226.2.3.2

AMT message count:
AMT Request      AMT membership update
2                2

AMT gateway address : 11.11.11.3, port : 2268
AMT tunnel interface : ud-5/2/10.1120513
AMT tunnel state : Active
AMT tunnel inactivity timeout : 214
Number of groups : 1
Group: 226.2.3.3

AMT message count:
AMT Request      AMT membership update
2                2

```

### show amt tunnel tunnel-interface

```

user@host> show amt tunnel tunnel-interface ud-5/3/10.1120512
AMT gateway address : 11.11.11.2, port : 2268
AMT tunnel interface : ud-5/3/10.1120512
AMT tunnel state : Active
AMT tunnel inactivity timeout : 145
Number of groups : 1

AMT message count:
AMT Request      AMT membership update
2                2

```

### show amt tunnel gateway-address

```

user@host> show amt tunnel gateway-address 11.11.11.3 port 2268
AMT gateway address : 11.11.11.3, port : 2268
AMT tunnel interface : ud-5/2/10.1120513
AMT tunnel state : Active
AMT tunnel inactivity timeout : 214
Number of groups : 1
Group: 226.2.3.3

AMT message count:
AMT Request      AMT membership update
2                2

```

### show amt tunnel gateway-address detail

```

user@host> show amt tunnel gateway-address 11.11.11.2 detail
AMT gateway address : 11.11.11.2, port : 2268
AMT tunnel interface : ud-5/3/10.1120512
AMT tunnel state : Active
AMT tunnel inactivity timeout : 234
Number of groups : 1

```

Group: 226.2.3.2

AMT message count:

AMT Request	AMT membership update
2	2

## show dvmrp interfaces

**Syntax** show dvmrp interfaces  
<logical-system (all | *logical-system-name*)>

### Release Information

**NOTE:** Distance Vector Multicast Routing Protocol (DVMRP) was deprecated in Junos OS Release 16.1. Although DVMRP commands continue to be available and configurable in the CLI, they are no longer visible and are scheduled for removal in a subsequent release.

Command introduced before Junos OS Release 7.4.

**Description** Display information about Distance Vector Multicast Routing Protocol (DVMRP)–enabled interfaces.

**Options** **none**—(Same as **logical-system all**) Display information about DVMRP-enabled interfaces.  
**logical-system (all | *logical-system-name*)**—(Optional) Perform this operation on all logical systems or on a particular logical system.

**Required Privilege Level** view

**List of Sample Output** [show dvmrp interfaces on page 1779](#)

**Output Fields** [Table 101 on page 1777](#) describes the output fields for the **show dvmrp interfaces** command. Output fields are listed in the approximate order in which they appear.

*Table 101: show dvmrp interfaces Output Fields*

Field Name	Field Description
<b>Interface</b>	Name of the interface.
<b>State</b>	State of the interface: <b>up</b> or <b>down</b> .
<b>Leaf</b>	Whether the interface is a leaf (that is, whether it has no neighbors) or whether it has neighbors.
<b>Metric</b>	Interface metric: a value from 1 through 31.
<b>Announce</b>	Number of routes the interface is announcing.

*Table 101: show dvmrp interfaces Output Fields (continued)*

Field Name	Field Description
<b>Mode</b>	DVMRP mode: <ul style="list-style-type: none"><li>• <b>Forwarding</b>—DVMRP does both the routing and the multicast data forwarding.</li><li>• <b>Unicast-routing</b>—DVMRP does only the routing. Forwarding of the multicast data packets can be done by enabling PIM on the interface.</li></ul>

## Sample Output

### show dvmrp interfaces

```
user@host> show dvmrp interfaces
Interface State Leaf Metric Announce Mode
fxp0.0    Up    N    1    4 Forwarding
fxp1.0    Up    N    1    4 Forwarding
fxp2.0    Up    N    1    3 Forwarding
lo0.0     Up    Y    1    0 Unicast-routing
```

## show dvmrp neighbors

**Syntax** `show dvmrp neighbors`  
`<logical-system (all | logical-system-name)>`

### Release Information

**NOTE:** Distance Vector Multicast Routing Protocol (DVMRP) was deprecated in Junos OS Release 16.1. Although DVMRP commands continue to be available and configurable in the CLI, they are no longer visible and are scheduled for removal in a subsequent release.

Command introduced before Junos OS Release 7.4.

**Description** Display information about Distance Vector Multicast Routing Protocol (DVMRP) neighbors.

**Options** **none**—(Same as **logical-system all**) Display information about DVMRP neighbors.  
**logical-system (all | *logical-system-name*)**—(Optional) Perform this operation on all logical systems or on a particular logical system.

**Required Privilege Level** view

**List of Sample Output** [show dvmrp neighbors on page 1781](#)

**Output Fields** [Table 102 on page 1780](#) describes the output fields for the **show dvmrp neighbors** command. Output fields are listed in the approximate order in which they appear.

*Table 102: show dvmrp neighbors Output Fields*

Field Name	Field Description
<b>Neighbor</b>	Address of the neighboring DVMRP router.
<b>Interface</b>	Interface through which the neighbor is reachable.
<b>Version</b>	Version of DVMRP that the neighbor is running, in the format <i>majorminor</i> .
<b>Flags</b>	Information about the neighbor: <ul style="list-style-type: none"> <li><b>1</b>—One way. The local router has seen the neighbor, but the neighbor has not seen the local router.</li> <li><b>G</b>—Neighbor supports generation ID.</li> <li><b>L</b>—Neighbor is a leaf router.</li> <li><b>M</b>—Neighbor supports mtrace.</li> <li><b>N</b>—Neighbor supports netmask in prune messages and graft messages.</li> <li><b>P</b>—Neighbor supports pruning.</li> <li><b>S</b>—Neighbor supports SNMP.</li> </ul>

*Table 102: show dvmrp neighbors Output Fields (continued)*

Field Name	Field Description
<b>Routes</b>	Number of routes learned from the neighbor.
<b>Timeout</b>	How long until the DVMRP neighbor information times out, in seconds.
<b>Transitions</b>	Number of generation ID changes that have occurred since the local router learned about the neighbor.

## Sample Output

### show dvmrp neighbors

```
user@host> show dvmrp neighbors
Neighbor      Interface    Version  Flags    Routes  Timeout  Transitions
192.168.1.1   ipip.0       3.255    PGM      3        28        1
```

## show dvmrp prefix

**Syntax** show dvmrp prefix  
 <brief | detail>  
 <logical-system (all | *logical-system-name*)>  
 <prefix>

### Release Information

**NOTE:** Distance Vector Multicast Routing Protocol (DVMRP) was deprecated in Junos OS Release 16.1. Although DVMRP commands continue to be available and configurable in the CLI, they are no longer visible and are scheduled for removal in a subsequent release.

Command introduced before Junos OS Release 7.4.

**Description** Display information about Distance Vector Multicast Routing Protocol (DVMRP) prefixes.

**Options** **none**—Display standard information about all DVMRP prefixes.

**brief | detail**—(Optional) Display the specified level of output.

**logical-system (all | *logical-system-name*)**—(Optional) Perform this operation on all logical systems or on a particular logical system.

**prefix**—(Optional) Display information about specific prefixes.

**Required Privilege Level** view

**List of Sample Output** [show dvmrp prefix on page 1784](#)  
[show dvmrp prefix brief on page 1784](#)  
[show dvmrp prefix detail on page 1784](#)

**Output Fields** [Table 103 on page 1782](#) describes the output fields for the **show dvmrp prefix** command. Output fields are listed in the approximate order in which they appear.

*Table 103: show dvmrp prefix Output Fields*

Field Name	Field Description	Level of Output
Prefix	DVMRP route.	All levels
Next hop	Next hop from which the route was learned.	All levels
Age	Last time that the route was refreshed.	All levels
<i>multicast-group</i>	Multicast group address.	<b>detail</b>

*Table 103: show dvmrp prefix Output Fields (continued)*

Field Name	Field Description	Level of Output
<b>Prunes sent</b>	Number of prune messages sent to the multicast group.	<b>detail</b>
<b>Grafts sent</b>	Number of grafts sent to the multicast group.	<b>detail</b>
<b>Cache lifetime</b>	Lifetime of the group in the multicast cache, in seconds.	<b>detail</b>
<b>Prune lifetime</b>	Lifetime remaining and total lifetime of prune messages, in seconds.	<b>detail</b>

## Sample Output

### show dvmrp prefix

```
user@host> show dvmrp prefix
Prefix          Next hop      Age
10.38.0.0       /30 10.38.0.1 00:06:17
10.38.0.4       /30 10.38.0.5 00:06:13
10.38.0.8       /30 10.38.0.2 00:00:04
10.38.0.12      /30 10.38.0.6 00:00:04
10.255.14.114   /32 10.255.14.114 00:06:17
10.255.14.142   /32 10.38.0.2 00:00:04
10.255.14.144   /32 10.38.0.2 00:00:04
10.255.70.15    /32 10.38.0.6 00:00:04
192.168.14.0    /24 192.168.14.114 00:06:17
192.168.195.40 /30 192.168.195.41 00:06:17
192.168.195.92 /30 10.38.0.2 00:00:04
```

### show dvmrp prefix brief

The output for the **show dvmrp prefix brief** command is identical to that for the **show dvmrp prefix** command.

### show dvmrp prefix detail

```
user@host> show dvmrp prefix detail
Prefix          Next hop      Age
10.38.0.0       /30 10.38.0.1 00:06:28
10.38.0.4       /30 10.38.0.5 00:06:24
10.38.0.8       /30 10.38.0.2 00:00:15
10.38.0.12      /30 10.38.0.6 00:00:15
10.255.14.114   /32 10.255.14.114 00:06:28
10.255.14.142   /32 10.38.0.2 00:00:15
10.255.14.144   /32 10.38.0.2 00:00:15

```

## show dvmrp prunes

**Syntax** show dvmrp prunes  
 <all | rx | tx>  
 <logical-system (all | *logical-system-name*)>

### Release Information

**NOTE:** Distance Vector Multicast Routing Protocol (DVMRP) was deprecated in Junos OS Release 16.1. Although DVMRP commands continue to be available and configurable in the CLI, they are no longer visible and are scheduled for removal in a subsequent release.

Command introduced before Junos OS Release 7.4.

**Description** Display information about active Distance Vector Multicast Routing Protocol (DVMRP) prune messages.

**Options** **none**—Display received and transmitted DVMRP prune information.

**all**—(Optional) Display information about all received and transmitted prune messages.

**rx**—(Optional) Display information about received prune messages.

**tx**—(Optional) Display information about transmitted prune messages.

**logical-system (all | *logical-system-name*)**—(Optional) Perform this operation on all logical systems or on a particular logical system.

**Required Privilege Level** view

**List of Sample Output** [show dvmrp prunes on page 1786](#)

**Output Fields** [Table 104 on page 1785](#) describes the output fields for the **show dvmrp prunes** command. Output fields are listed in the approximate order in which they appear.

*Table 104: show dvmrp prunes Output Fields*

Field Name	Field Description
Group	Group address.
Source prefix	Prefix for the prune.
Timeout	How long until the prune message expires, in seconds.
Neighbor	Neighbor to which the prune was sent or from which the prune was received.

## Sample Output

### show dvmrp prunes

```
user@host> show dvmrp prunes
Group          Source prefix      Timeout Neighbor
224.0.1.1      128.112.0.0        /12    7077 192.168.1.1

<b>Output Fields</b>	<p><a href="#">Table 106 on page 1792</a> describes the output fields for the <b>show igmp interface</b> command. Output fields are listed in the approximate order in which they appear.</p>

Table 106: show igmp interface Output Fields

Field Name	Field Description	Level of Output
<b>Interface</b>	Name of the interface.	All levels
<b>Querier</b>	Address of the routing device that has been elected to send membership queries.	All levels
<b>State</b>	State of the interface: <b>Up</b> or <b>Down</b> .	All levels
<b>SSM Map Policy</b>	Name of the source-specific multicast (SSM) map policy that has been applied to the IGMP interface.	All levels
<b>Timeout</b>	How long until the IGMP querier is declared to be unreachable, in seconds.	All levels
<b>Version</b>	IGMP version being used on the interface: 1, 2, or 3.	All levels
<b>Groups</b>	Number of groups on the interface.	All levels
<b>Group limit</b>	Maximum number of groups allowed on the interface. Any joins requested after the limit is reached are rejected.	All levels
<b>Group threshold</b>	Configured threshold at which a warning message is generated.  This threshold is based on a percentage of groups received on the interface. If the number of groups received reaches the configured threshold, the device generates a warning message.	All levels
<b>Group log-interval</b>	Time (in seconds) between consecutive log messages.	All levels
<b>Immediate Leave</b>	State of the immediate leave option: <ul style="list-style-type: none"> <li>• <b>On</b>—Indicates that the router removes a host from the multicast group as soon as the router receives a leave group message from a host associated with the interface.</li> <li>• <b>Off</b>—Indicates that after receiving a leave group message, instead of removing a host from the multicast group immediately, the router sends a group query to determine if another receiver responds.</li> </ul>	All levels
<b>Promiscuous Mode</b>	State of the promiscuous mode option: <ul style="list-style-type: none"> <li>• <b>On</b>—Indicates that the router can accept IGMP reports from subnetworks that are not associated with its interfaces.</li> <li>• <b>Off</b>—Indicates that the router can accept IGMP reports only from subnetworks that are associated with its interfaces.</li> </ul>	All levels
<b>Distributed</b>	State of IGMP, which, by default, takes place on the Routing Engine for MX Series routers but can be distributed to the Packet Forwarding Engine to provide faster processing of join and leave events. <ul style="list-style-type: none"> <li>• <b>On</b>—distributed IGMP is enabled.</li> </ul>	All levels

Table 106: show igmp interface Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Passive</b>	<p>State of the passive mode option:</p> <ul style="list-style-type: none"> <li>• <b>On</b>—Indicates that the router can run IGMP on the interface but not send or receive control traffic such as IGMP reports, queries, and leaves.</li> <li>• <b>Off</b>—Indicates that the router can run IGMP on the interface and send or receive control traffic such as IGMP reports, queries, and leaves.</li> </ul> <p>The <b>passive</b> statement enables you to selectively activate up to two out of a possible three available query or control traffic options. When enabled, the following options appear after the <b>on</b> state declaration:</p> <ul style="list-style-type: none"> <li>• <b>send-general-query</b>—The interface sends general queries.</li> <li>• <b>send-group-query</b>—The interface sends group-specific and group-source-specific queries.</li> <li>• <b>allow-receive</b>—The interface receives control traffic.</li> </ul>	All levels
<b>OIF map</b>	Name of the OIF map (if configured) associated with the interface.	All levels
<b>SSM map</b>	Name of the source-specific multicast (SSM) map (if configured) used on the interface.	All levels
<b>Configured Parameters</b>	<p>Information configured by the user:</p> <ul style="list-style-type: none"> <li>• <b>IGMP Query Interval</b>—Interval (in seconds) at which this router sends membership queries when it is the querier.</li> <li>• <b>IGMP Query Response Interval</b>—Time (in seconds) that the router waits for a report in response to a general query.</li> <li>• <b>IGMP Last Member Query Interval</b>—Time (in seconds) that the router waits for a report in response to a group-specific query.</li> <li>• <b>IGMP Robustness Count</b>—Number of times the router retries a query.</li> </ul>	All levels
<b>Derived Parameters</b>	<p>Derived information:</p> <ul style="list-style-type: none"> <li>• <b>IGMP Membership Timeout</b>—Timeout period (in seconds) for group membership. If no report is received for these groups before the timeout expires, the group membership is removed.</li> <li>• <b>IGMP Other Querier Present Timeout</b>—Time (in seconds) that the router waits for the IGMP querier to send a query.</li> </ul>	All levels

## Sample Output

### show igmp interface

```

user@host> show igmp interface
Interface: at-0/3/1.0
  Querier: 203.0.3.113.31
  State:      Up Timeout:   None Version:  2 Groups:    4
  SSM Map Policy: ssm-policy-A
Interface: so-1/0/0.0
  Querier: 203.0.113.11
  State:      Up Timeout:   None Version:  2 Groups:    2
  SSM Map Policy: ssm-policy-B
Interface: so-1/0/1.0

```

```
Querier: 203.0.113.21
State:      Up Timeout:   None Version:  2 Groups:    4
SSM Map Policy: ssm-policy-C
Immediate Leave: On
Promiscuous Mode: Off
Passive: Off
Distributed: OnConfigured Parameters:

IGMP Query Interval: 125.0
IGMP Query Response Interval: 10.0
IGMP Last Member Query Interval: 1.0
IGMP Robustness Count: 2

Derived Parameters:
IGMP Membership Timeout: 260.0
IGMP Other Querier Present Timeout: 255.0
```

### `show igmp interface brief`

The output for the **show igmp interface brief** command is identical to that for the **show igmp interface** command. For sample output, see [show igmp interface on page 1793](#).

### `show igmp interface detail`

The output for the **show igmp interface detail** command is identical to that for the **show igmp interface** command. For sample output, see [show igmp interface on page 1793](#).

### `show igmp interface <interface-name>`

```
user@host# show igmp interface ge-3/2/0.0
Interface: ge-3/2/0.0
Querier: 203.0.113.111
State: Up Timeout:   None
Version:  3
Groups:    1
Group limit: 8
Group threshold: 60
Group log-interval: 10
Immediate leave: Off
Promiscuous mode: Off
Distributed: On
```

## show igmp snooping interface

<b>Syntax</b>	<pre>show igmp snooping interface <i>interface-name</i> &lt;brief   detail&gt; &lt;bridge-domain <i>bridge-domain-name</i>&gt; &lt;logical-system <i>logical-system-name</i>&gt; &lt;virtual-switch <i>virtual-switch-name</i>&gt; &lt;vlan-id <i>vlan-identifier</i>&gt;</pre>
<b>Release Information</b>	Command introduced in Junos OS Release 8.5.
<b>Description</b>	Display IGMP snooping interface information.
<b>Options</b>	<p><b>none</b> —Display detailed information.</p> <p><b>brief   detail</b>—(Optional) When applicable, this option lets you choose the how much detail to display.</p> <p><b>bridge-domain <i>bridge-domain-name</i></b>—(Optional) Display information about a particular bridge domain.</p> <p><b>logical-system <i>logical-system-name</i></b>—(Optional) Display information about a particular logical system, or type 'all'.</p> <p><b>virtual-switch <i>virtual-switch-name</i></b>—(Optional) Display information about a particular virtual switch.</p> <p><b>vlan-id <i>vlan-identifier</i></b>—(Optional) Display information about a particular VLAN.</p>

<b>Output Fields</b>	<p><a href="#">Table 107 on page 1796</a> lists the output fields for the <b>show igmp snooping interface</b> command. Output fields are listed in the approximate order in which they appear.</p>

Table 107: show igmp snooping interface Output Fields

Field Name	Field Description	Level of Output
<b>Routing-instance or Instance</b>	Routing instance for IGMP snooping.	All levels
<b>Bridge Domain or Vlan</b>	Bridge domain or VLAN for which IGMP snooping is enabled.	All levels
<b>Learning Domain</b>	Learning domain for snooping.	All levels
<b>interface</b>	Interfaces that are being snooped in this learning domain.	All levels
<b>Groups</b>	Number of groups on the interface.	All levels
<b>State</b>	State of the interface: <b>Up</b> or <b>Down</b> .	All levels
<b>Up Groups</b>	Number of active multicast groups attached to the logical interface.	All levels
<b>immediate-leave</b>	State of immediate leave: <b>On</b> or <b>Off</b> .	All levels
<b>router-interface</b>	Router interfaces that are part of this learning domain.	All levels
<b>Group limit</b>	Maximum number of (source,group) pairs allowed per interface. When a group limit is not configured, this field is not shown.	All levels
<b>Data-forwarding receiver: yes</b>	VLAN associated with the interface is configured as a data-forwarding multicast receiver VLAN using multicast VLAN registration (MVR) on EX Series switches with Enhanced Layer 2 Software (ELS).	All levels
<b>IGMP Query Interval</b>	Frequency (in seconds) with which this router sends membership queries when it is the querier.	All levels
<b>IGMP Query Response Interval</b>	Time (in seconds) that the router waits for a response to a general query.	All levels
<b>IGMP Last Member Query Interval</b>	Time (in seconds) that the router waits for a report in response to a group-specific query.	All levels
<b>IGMP Robustness Count</b>	Number of times the router retries a query.	All levels
<b>IGMP Membership Timeout</b>	Timeout for group membership. If no report is received for these groups before the timeout expires, the group membership is removed.	All levels
<b>IGMP Other Querier Present Timeout</b>	Time that the router waits for the IGMP querier to send a query.	All levels

## Sample Output

### show igmp snooping interface

```

user@host> show igmp snooping interface ge-0/1/4
Instance: default-switch

Bridge-Domain: sample

Learning-Domain: default
Interface: ge-0/1/4.0
State: Up Groups: 0
Immediate leave: Off
Router interface: no

Configured Parameters:
IGMP Query Interval: 125.0
IGMP Query Response Interval: 10.0
IGMP Last Member Query Interval: 1.0
IGMP Robustness Count: 2

Derived Parameters:
IGMP Membership Timeout: 260.0
IGMP Other Querier Present Timeout: 255.0

```

### show igmp snooping interface (logical systems)

```

user@host> show igmp snooping interface logical-system all
logical-system: default
Instance: VPLS-6
Learning-Domain: default
Interface: ge-0/2/2.601
    State:          Up Groups:    10
    Immediate leave: Off
    Router interface: no

Configured Parameters:
IGMP Query Interval: 125.0
IGMP Query Response Interval: 10.0
IGMP Last Member Query Interval: 1.0
IGMP Robustness Count: 2

Instance: VS-4
Bridge-Domain: VS-4-BD-1
Learning-Domain: vlan-id 1041
Interface: ae2.3
    State:          Up Groups:    0
    Immediate leave: Off
    Router interface: no
Interface: ge-0/2/2.1041
    State:          Up Groups:    20
    Immediate leave: Off
    Router interface: no

Configured Parameters:
IGMP Query Interval: 125.0
IGMP Query Response Interval: 10.0
IGMP Last Member Query Interval: 1.0
IGMP Robustness Count: 2

```

Instance: default-switch  
Bridge-Domain: bd-200  
Learning-Domain: default  
Interface: ge-0/2/2.100  
State: Up Groups: 20  
Immediate leave: Off  
Router interface: no

Configured Parameters:  
IGMP Query Interval: 125.0  
IGMP Query Response Interval: 10.0  
IGMP Last Member Query Interval: 1.0  
IGMP Robustness Count: 2

Bridge-Domain: bd0  
Learning-Domain: default  
Interface: ae0.0  
State: Up Groups: 0  
Immediate leave: Off  
Router interface: yes  
Interface: ae1.0  
State: Up Groups: 0  
Immediate leave: Off  
Router interface: no  
Interface: ge-0/2/2.0  
State: Up Groups: 32  
Immediate leave: Off  
Router interface: no

Configured Parameters:  
IGMP Query Interval: 125.0  
IGMP Query Response Interval: 10.0  
IGMP Last Member Query Interval: 1.0  
IGMP Robustness Count: 2

Instance: VPLS-1  
Learning-Domain: default  
Interface: ge-0/2/2.502  
State: Up Groups: 11  
Immediate leave: Off  
Router interface: no

Configured Parameters:  
IGMP Query Interval: 125.0  
IGMP Query Response Interval: 10.0  
IGMP Last Member Query Interval: 1.0  
IGMP Robustness Count: 2

Instance: VS-1  
Bridge-Domain: VS-BD-1  
Learning-Domain: default  
Interface: ae2.0  
State: Up Groups: 0  
Immediate leave: Off  
Router interface: no  
Interface: ge-0/2/2.1010  
State: Up Groups: 20  
Immediate leave: Off  
Router interface: no

Configured Parameters:

```

IGMP Query Interval: 125.0
IGMP Query Response Interval: 10.0
IGMP Last Member Query Interval: 1.0
IGMP Robustness Count: 2

```

```

Bridge-Domain: VS-BD-2
Learning-Domain: default
Interface: ae2.0
    State:          Up Groups:      0

Interface: ge-0/2/2.1011
    State:          Up Groups:      20
    Immediate leave: Off
    Router interface: no

```

```

Configured Parameters:
IGMP Query Interval: 125.0
IGMP Query Response Interval: 10.0
IGMP Last Member Query Interval: 1.0
IGMP Robustness Count: 2

```

```

Instance: VPLS-p2mp
Learning-Domain: default
Interface: ge-0/2/2.3001
    State:          Up Groups:      0
    Immediate leave: Off
    Router interface: no

```

```

Configured Parameters:
IGMP Query Interval: 125.0
IGMP Query Response Interval: 10.0
IGMP Last Member Query Interval: 1.0
IGMP Robustness Count: 2

```

### show igmp snooping interface (Group Limit Configured)

```

user@host> show igmp snooping interface instance vpls1
Instance: vpls1

```

```

Learning-Domain: default
Interface: ge-1/3/9.0
    State:          Up Groups:      0
    Immediate leave: Off
    Router interface: yes
Interface: ge-1/3/8.0
    State:          Up Groups:      0
    Immediate leave: Off
    Router interface: yes
    Group limit:    1000

```

```

Configured Parameters:
IGMP Query Interval: 125.0
IGMP Query Response Interval: 10.0
IGMP Last Member Query Interval: 1.0
IGMP Robustness Count: 2

```

### show igmp snooping interface (ELS EX Series switches with MVR configured)

```

user@host> show igmp snooping interface instance vpls1

```

```
Instance: default-switch

Vlan: v2

Learning-Domain: default
Interface: ge-0/0/0.0
  State:          Up Groups:      0
  Immediate leave: Off
  Router interface: no
  Group limit:     3
  Data-forwarding receiver: yes
```

## show igmp snooping membership

<b>Syntax</b>	<pre>show igmp snooping membership &lt;brief   detail&gt; &lt;interface <i>interface-name</i>&gt; &lt;vlan (<i>vlan-id</i>   <i>vlan-name</i>)&gt; &lt;bridge-domain <i>bridge-domain-name</i>&gt; &lt;group <i>group-name</i>&gt; &lt;logical-system <i>logical-system-name</i>&gt; &lt;virtual-switch <i>virtual-switch-name</i>&gt; &lt;vlan-id <i>vlan-identifier</i>&gt;</pre>
<b>Release Information</b>	<p>Command introduced in Junos OS Release 8.5.</p> <p>Command introduced in Junos OS Release 18.1R1 for the SRX1500 devices.</p>
<b>Description</b>	Display the multicast group membership information maintained by IGMP snooping.
<b>Options</b>	<p><b>none</b>—Display the multicast group membership information about all VLANs on which IGMP snooping is enabled.</p> <p><b>brief   detail</b>—(Optional) Display the specified level of output. The default is <b>brief</b>.</p> <p><b>interface <i>interface-name</i></b>—(Optional) Display the multicast group membership information about the specified interface.</p> <p><b>vlan (<i>vlan-id</i>   <i>vlan-name</i>)</b>—(Optional) Display the multicast group membership for the specified VLAN.</p> <p><b>bridge-domain <i>bridge-domain-name</i></b>—(Optional) Display information about a particular bridge domain.</p> <p><b>group <i>group-name</i></b>—(Optional) Display information about this group address.</p> <p><b>logical-system <i>logical-system-name</i></b>—(Optional) Display information about a particular logical system, or type 'all'.</p> <p><b>virtual-switch <i>virtual-switch-name</i></b>—(Optional) Display information about a particular virtual switch.</p> <p><b>vlan-id <i>vlan-identifier</i></b>—(Optional) Display information about a particular VLAN.</p>

**Output Fields** [Table 108 on page 1802](#) lists the output fields for the **show igmp snooping membership** command. Output fields are listed in the approximate order in which they appear.

*Table 108: show igmp snooping membership Output Fields*

Field Name	Field Description	Level of Output
VLAN	Name of the VLAN.	All
Instance	Routing instance for IGMP snooping.	All levels
Learning Domain	Learning domain for snooping.	All levels
Interface	Interface on which this router is a proxy.	detail
Data-forwarding receiver: yes	VLAN associated with the interface is configured as a data-forwarding multicast receiver VLAN using multicast VLAN registration (MVR) on EX Series switches with Enhanced Layer 2 Software (ELS).	All levels
Up Groups or Groups	Number of active multicast groups attached to the logical interface.	All levels
Group	Multicast group address in the membership database.	All levels
Group Mode	Mode the SSM group is operating in: <b>Include</b> or <b>Exclude</b> .	All levels
Source	Source address used on queries.	detail
Last reported by	Address of source last replying to the query.	detail
Group Timeout	Time remaining until a group in exclude mode moves to include mode. The timer is refreshed when a listener in exclude mode sends a report. A group in include mode or configured as a static group displays a zero timer.	All levels
Timeout	Length of time (in seconds) left until the entry is purged.	detail
Type	Way that the group membership information was learned: <ul style="list-style-type: none"> <li>• <b>Dynamic</b>—Group membership was learned by the IGMP protocol.</li> <li>• <b>Static</b>—Group membership was learned by configuration.</li> </ul>	detail
Include receiver	Source address of receiver included in membership with timeout (in seconds).	detail

## Sample Output

## show igmp snooping statistics

---

<b>Syntax</b>	<code>show igmp snooping statistics</code> <code>&lt;brief   detail&gt;</code> <code>&lt;bridge-domain <i>bridge-domain-name</i>&gt;</code> <code>&lt;logical-system <i>logical-system-name</i>&gt;</code> <code>&lt;virtual-switch <i>virtual-switch-name</i>&gt;</code> <code>&lt;vlan-id <i>vlan-identifier</i>&gt;</code>
<b>Release Information</b>	Command introduced in Junos OS Release 8.5. Command introduced in Junos OS Release 18.1R1 for the SR1500 devices.
<b>Description</b>	Display IGMP snooping statistics.
<b>Options</b>	<b>none</b> —(Optional) Display detailed information.  <b>brief   detail</b> —(Optional) Display the specified level of output.  <b>bridge-domain <i>bridge-domain-name</i></b> —(Optional) Display information about a particular bridge domain.  <b>logical-system <i>logical-system-name</i></b> —(Optional) Display information about a particular logical system, or type 'all'.  <b>virtual-switch <i>virtual-switch-name</i></b> —(Optional) Display information about a particular virtual switch.  <b>vlan-id <i>vlan-identifier</i></b> —(Optional) Display information about a particular VLAN.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">show igmp snooping interface on page 1795</a></li><li>• <a href="#">show igmp snooping membership on page 1801</a></li><li>• <a href="#">clear igmp snooping statistics on page 1738</a></li></ul>

<b>Output Fields</b>	<a href="#">Table 109 on page 1807</a> lists the output fields for the <b>show igmp snooping statistics</b> command. Output fields are listed in the approximate order in which they appear.

Table 109: show igmp snooping statistics Output Fields

Field Name	Field Description	Level of Output
<b>Routing-instance</b>	Routing instance for IGMP snooping.	All levels
<b>IGMP packet statistics</b>	Heading for IGMP snooping statistics for all interfaces or for the specified interface.	All levels
<b>learning-domain</b>	Appears at end of “IGMP packets statistics” line.	All levels
<b>IGMP Message type</b>	Summary of IGMP statistics: <ul style="list-style-type: none"> <li>• <b>Membership Query</b>—Number of membership queries sent and received.</li> <li>• <b>V1 Membership Report</b>—Number of version 1 membership reports sent and received.</li> <li>• <b>DVMRP</b>—Number of DVMRP messages sent or received.</li> <li>• <b>PIM V1</b>—Number of PIM version 1 messages sent or received.</li> <li>• <b>Cisco Trace</b>—Number of Cisco trace messages sent or received.</li> <li>• <b>V2 Membership Report</b>—Number of version 2 membership reports sent or received.</li> <li>• <b>Group Leave</b>—Number of group leave messages sent or received.</li> <li>• <b>Domain Wide Report</b>—Number of domain-wide reports sent or received.</li> <li>• <b>V3 Membership Report</b>—Number of version 3 membership reports sent or received.</li> <li>• <b>Other Unknown types</b>—Number of unknown message types received.</li> <li>• <b>IGMP v3 unsupported type</b>—Number of messages received with unknown and unsupported IGMP version 3 message types.</li> <li>• <b>IGMP v3 source required for SSM</b>—Number of IGMP version 3 messages received that contained no source.</li> <li>• <b>IGMP v3 mode not applicable for SSM</b>—Number of IGMP version 3 messages received that did not contain a mode applicable for source-specific multicast (SSM).</li> </ul>	All levels
<b>Received</b>	Number of messages received.	All levels
<b>Sent</b>	Number of messages sent.	All levels
<b>Rx errors</b>	Number of received packets that contained errors.	All levels
<b>IGMP Global Statistics</b>	Summary of IGMP snooping statistics for all interfaces. <ul style="list-style-type: none"> <li>• <b>Bad Length</b>—Number of messages received with length errors so severe that further classification could not occur.</li> <li>• <b>Bad Checksum</b>—Number of messages received with a bad IP checksum. No further classification was performed.</li> <li>• <b>Rx non-local</b>—Number of messages received from senders that are not local.</li> </ul>	All levels

## Sample Output

### show igmp snooping statistics

```
user@host> show igmp snooping statistics
Routing-instance foo

IGMP packet statistics for all interfaces in learning-domain vlan-100

IGMP Message type      Received      Sent  Rx errors

## show mld group

<b>Syntax</b>	show mld group <brief   detail> <group-name> <logical-system (all   <i>logical-system-name</i> )>
<b>Release Information</b>	Command introduced before Junos OS Release 7.4.
<b>Description</b>	Display information about Multicast Listener Discovery (MLD) group membership.
<b>Options</b>	<p><b>none</b>—Display standard information about all MLD groups.</p> <p><b>brief   detail</b>—(Optional) Display the specified level of output.</p> <p><b>group-name</b>—(Optional) Display MLD information about the specified group.</p> <p><b>logical-system (all   <i>logical-system-name</i>)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p>
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li><a href="#">clear mld membership on page 1741</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">show mld group (Include Mode) on page 1815</a> <a href="#">show mld group (Exclude Mode) on page 1816</a> <a href="#">show mld group brief on page 1816</a> <a href="#">show mld group detail (Include Mode) on page 1816</a> <a href="#">show mld group detail (Exclude Mode) on page 1817</a>
<b>Output Fields</b>	<a href="#">Table 111 on page 1814</a> describes the output fields for the <b>show mld group</b> command. Output fields are listed in the approximate order in which they appear.

Table 111: show mld group Output Fields

Field Name	Field Description	Level of Output
<b>Interface</b>	Name of the interface that received the MLD membership report; <b>local</b> means that the local router joined the group itself.	All levels
<b>Group</b>	Group address.	All levels
<b>Source</b>	Source address.	All levels
<b>Group Mode</b>	Mode the SSM group is operating in: <b>Include</b> or <b>Exclude</b> .	All levels
<b>Last reported by</b>	Address of the host that last reported membership in this group.	All levels

Table 111: show mld group Output Fields (continued)

Field Name	Field Description	Level of Output
Source timeout	Time remaining until the group traffic is no longer forwarded. The timer is refreshed when a listener in include mode sends a report. A group in exclude mode or configured as a static group displays a zero timer.	detail
Timeout	Time remaining until the group membership is removed.	brief none
Group timeout	Time remaining until a group in exclude mode moves to include mode. The timer is refreshed when a listener in exclude mode sends a report. A group in include mode or configured as a static group displays a zero timer.	detail
Type	Type of group membership: <ul style="list-style-type: none"> <li>• <b>Dynamic</b>—Host reported the membership.</li> <li>• <b>Static</b>—Membership is configured.</li> </ul>	All levels

## Sample Output

## show mld interface

<b>Syntax</b>	show mld interface <brief   detail> <interface-name> <logical-system (all   <i>logical-system-name</i> )>
<b>Release Information</b>	Command introduced before Junos OS Release 7.4.
<b>Description</b>	Display information about multipoint Listener Discovery (MLD)-enabled interfaces.
<b>Options</b>	<p><b>none</b>—Display standard information about all MLD-enabled interfaces.</p> <p><b>brief   detail</b>—(Optional) Display the specified level of output.</p> <p><b>interface-name</b>—(Optional) Display information about the specified interface.</p> <p><b>logical-system (all   <i>logical-system-name</i>)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p>
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li><a href="#">clear mld membership on page 1741</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">show mld interface on page 1820</a> <a href="#">show mld interface brief on page 1821</a> <a href="#">show mld interface detail on page 1821</a> <a href="#">show mld interface &lt;interface-name&gt; on page 1821</a>
<b>Output Fields</b>	<p><a href="#">Table 112 on page 1818</a> describes the output fields for the <b>show mld interface</b> command. Output fields are listed in the approximate order in which they appear.</p>

Table 112: show mld interface Output Fields

Field Name	Field Description	Level of Output
Interface	Name of the interface.	All levels
Querier	Address of the router that has been elected to send membership queries.	All levels
State	State of the interface: <b>Up</b> or <b>Down</b> .	All levels
SSM Map Policy	Name of the source-specific multicast (SSM) map policy that has been applied to the interface.	All levels
SSM Map Policy	Name of the source-specific multicast (SSM) map policy at the MLD interface.	All levels

Table 112: show mld interface Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Timeout</b>	How long until the MLD querier is declared to be unreachable, in seconds.	All levels
<b>Version</b>	MLD version being used on the interface: 1 or 2.	All levels
<b>Groups</b>	Number of groups on the interface.	All levels
<b>Passive</b>	<p>State of the passive mode option:</p> <ul style="list-style-type: none"> <li>• <b>On</b>—Indicates that the router can run IGMP or MLD on the interface but not send or receive control traffic such as IGMP or MLD reports, queries, and leaves.</li> <li>• <b>Off</b>—Indicates that the router can run IGMP or MLD on the interface and send or receive control traffic such as IGMP or MLD reports, queries, and leaves.</li> </ul> <p>The <b>passive</b> statement enables you to selectively activate up to two out of a possible three available query or control traffic options. When enabled, the following options appear after the <b>on</b> state declaration:</p> <ul style="list-style-type: none"> <li>• <b>send-general-query</b>—The interface sends general queries.</li> <li>• <b>send-group-query</b>—The interface sends group-specific and group-source-specific queries.</li> <li>• <b>allow-receive</b>—The interface receives control traffic</li> </ul>	All levels
<b>OIF map</b>	Name of the OIF map associated to the interface.	All levels
<b>SSM map</b>	Name of the source-specific multicast (SSM) map used on the interface, if configured.	All levels
<b>Group limit</b>	Maximum number of groups allowed on the interface. Any memberships requested after the limit is reached are rejected.	All levels
<b>Group threshold</b>	<p>Configured threshold at which a warning message is generated.</p> <p>This threshold is based on a percentage of groups received on the interface. If the number of groups received reaches the configured threshold, the device generates a warning message.</p>	All levels
<b>Group log-interval</b>	Time (in seconds) between consecutive log messages.	All levels
<b>Immediate Leave</b>	<p>State of the immediate leave option:</p> <ul style="list-style-type: none"> <li>• <b>On</b>—Indicates that the router removes a host from the multicast group as soon as the router receives a multicast listener done message from a host associated with the interface.</li> <li>• <b>Off</b>—Indicates that after receiving a multicast listener done message, instead of removing a host from the multicast group immediately, the router sends a group query to determine if another receiver responds.</li> </ul>	All levels

Table 112: show mld interface Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Distributed</b>	State of MLD, which, by default, takes place on the Routing Engine for MX Series routers but can be distributed to the Packet Forwarding Engine to provide faster processing of join and leave events. <ul style="list-style-type: none"> <li>• <b>On</b>—distributed MLD is enabled.</li> </ul>	All levels
<b>Configured Parameters</b>	Information configured by the user. <ul style="list-style-type: none"> <li>• <b>MLD Query Interval (.1 secs)</b>—Interval at which this router sends membership queries when it is the querier.</li> <li>• <b>MLD Query Response Interval (.1 secs)</b>—Time that the router waits for a report in response to a general query.</li> <li>• <b>MLD Last Member Query Interval (.1 secs)</b>—Time that the router waits for a report in response to a group-specific query.</li> <li>• <b>MLD Robustness Count</b>—Number of times the router retries a query.</li> </ul>	All levels
<b>Derived Parameters</b>	Derived information. <ul style="list-style-type: none"> <li>• <b>MLD Membership Timeout (.1 secs)</b>—Timeout period for group membership. If no report is received for these groups before the timeout expires, the group membership will be removed.</li> <li>• <b>MLD Other Querier Present Timeout (.1 secs)</b>—Time that the router waits for the IGMP querier to send a query.</li> </ul>	All levels

## Sample Output

### show mld interface

```

user@host> show mld interface
Interface: fe-0/0/0
  Querier: None
  State: Up      Timeout:      0    Version:  1    Groups:      0
  SSM Map Policy: ssm-policy-A
Interface: at-0/3/1.0
  Querier: 8038::c0a8:c345
  State: Up      Timeout:    None    Version:  1    Groups:      0
  SSM Map Policy: ssm-policy-B
Interface: fe-1/0/1.0
  Querier: ::192.168.195.73
  State: Up      Timeout:    None    Version:  1    Groups:      3
  SSM Map Policy: ssm-policy-C
  SSM map: ipv6map1
Immediate Leave: On

Promiscuous Mode: Off
Passive: Off
Distributed: OnConfigured Parameters:

Configured Parameters:
MLD Query Interval (.1 secs): 1250
MLD Query Response Interval (.1 secs): 100
MLD Last Member Query Interval (.1 secs): 10
MLD Robustness Count: 2

```

```
Derived Parameters:
MLD Membership Timeout (.1secs): 2600
MLD Other Querier Present Timeout (.1 secs): 2550
```

### **show mld interface brief**

The output for the **show mld interface brief** command is identical to that for the **show mld interface** command. For sample output, see [show mld interface on page 1820](#).

### **show mld interface detail**

The output for the **show mld interface detail** command is identical to that for the **show mld interface** command. For sample output, see [show mld interface on page 1820](#).

### **show mld interface <interface-name>**

```
user@host# show mld interface ge-3/2/0.0
Interface: ge-3/2/0.0
Querier: 203.0.113.111
State: Up Timeout:      None Version: 3 Groups:      1
Group limit: 8
Group threshold: 60
Group log-interval: 10
Immediate leave: Off
Promiscuous mode: Off   Distributed: On
```

## show mld statistics

---

<b>Syntax</b>	<code>show mld statistics</code> <code>&lt;interface <i>interface-name</i>&gt;</code> <code>&lt;logical-system (all   <i>logical-system-name</i>)&gt;</code>
<b>Release Information</b>	Command introduced before Junos OS Release 7.4.
<b>Description</b>	Display information about Multicast Listener Discovery (MLD) statistics.
<b>Options</b>	<b>none</b> —Display MLD statistics for all interfaces.  <b>interface <i>interface-name</i></b> —(Optional) Display statistics about the specified interface.  <b>logical-system (all   <i>logical-system-name</i>)</b> —(Optional) Perform this operation on all logical systems or on a particular logical system.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">clear mld statistics on page 1742</a></li></ul>
<b>List of Sample Output</b>	<a href="#">show mld statistics on page 1823</a> <a href="#">show mld statistics interface on page 1824</a>
<b>Output Fields</b>	<a href="#">Table 113 on page 1822</a> describes the output fields for the <b>show mld statistics</b> command. Output fields are listed in the approximate order in which they appear.

*Table 113: show mld statistics Output Fields*

Field Name	Field Description
Received	Number of received packets.
Sent	Number of transmitted packets.
Rx errors	Number of received packets that contained errors.

Table 113: show mld statistics Output Fields (continued)

Field Name	Field Description
<b>MLD Message type</b>	Summary of MLD statistics. <ul style="list-style-type: none"> <li>• <b>Listener Query (v1/v2)</b>—Number of membership queries sent and received.</li> <li>• <b>Listener Report (v1)</b>—Number of version 1 membership reports sent and received.</li> <li>• <b>Listener Done (v1/v2)</b>—Number of Listener Done messages sent and received.</li> <li>• <b>Listener Report (v2)</b>—Number of version 2 membership reports sent and received.</li> <li>• <b>Other Unknown types</b>—Number of unknown message types received.</li> <li>• <b>MLD v2 source required for SSM</b>—Number of MLD version 2 messages received that contained no source.</li> <li>• <b>MLD v2 mode not applicable for SSM</b>—Number of MLD version 2 messages received that did not contain a mode applicable for source-specific multicast (SSM).</li> </ul>
<b>MLD Global Statistics</b>	Summary of MLD statistics for all interfaces. <ul style="list-style-type: none"> <li>• <b>Bad Length</b>—Number of messages received with length errors so severe that further classification could not occur.</li> <li>• <b>Bad Checksum</b>—Number of messages received with an invalid IP checksum. No further classification was performed.</li> <li>• <b>Bad Receive If</b>—Number of messages received on an interface not enabled for MLD.</li> <li>• <b>Rx non-local</b>—Number of messages received from nonlocal senders.</li> <li>• <b>Timed out</b>—Number of groups that timed out as a result of not receiving an explicit leave message.</li> <li>• <b>Rejected Report</b>—Number of reports dropped because of the MLD group policy.</li> <li>• <b>Total Interfaces</b>—Number of interfaces configured to support IGMP.</li> </ul>

## Sample Output

### show mld statistics

```

user@host> show mld statistics
MLD packet statistics for all interfaces
MLD Message type      Received      Sent  Rx errors
Listener Query (v1/v2)    0            2      0
Listener Report (v1)      0            0      0
Listener Done (v1/v2)    0            0      0
Listener Report (v2)      0            0      0
Other Unknown types      0            0      0
MLD v2 source required for SSM    2
MLD v2 mode not applicable for SSM 0

MLD Global Statistics
Bad Length              0
Bad Checksum            0
Bad Receive If          0
Rx non-local            0

```

Timed out	0
Rejected Report	0
Total Interfaces	2

#### show mld statistics interface

```
user@host> show mld statistics interface fe-1/0/1.0
MLD interface packet statistics for fe-1/0/1.0
MLD Message type      Received      Sent  Rx errors
Listener Query (v1/v2)      0           2      0
Listener Report (v1)        0           0      0
Listener Done (v1/v2)       0           0      0
Listener Report (v2)        0           0      0
Other Unknown types                0      0
MLD v2 source required for SSM    2
MLD v2 mode not applicable for SSM 0

MLD Global Statistics
Bad Length                0
Bad Checksum              0
Bad Receive If            0
Rx non-local              0
Timed out                 0
Rejected Report           0
Total Interfaces          2
```

## show msdp

<b>Syntax</b>	show msdp <brief   detail> <instance <i>instance-name</i> > <logical-system (all   <i>logical-system-name</i> )> <peer <i>peer-address</i> >
<b>Release Information</b>	Command introduced before Junos OS Release 7.4. Command introduced in Junos OS Release 12.1 for the QFX Series. Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.
<b>Description</b>	Display Multicast Source Discovery Protocol (MSDP) information.
<b>Options</b>	<p><b>none</b>—Display standard MSDP information for all routing instances.</p> <p><b>brief   detail</b>—(Optional) Display the specified level of output.</p> <p><b>instance <i>instance-name</i></b>—(Optional) Display information for the specified instance only.</p> <p><b>logical-system (all   <i>logical-system-name</i>)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p> <p><b>peer <i>peer-address</i></b>—(Optional) Display information about the specified peer only,</p>
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">show msdp source on page 1828</a></li> <li>• <a href="#">show msdp source-active on page 1830</a></li> <li>• <a href="#">show msdp statistics on page 1833</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">show msdp on page 1826</a> <a href="#">show msdp brief on page 1826</a> <a href="#">show msdp detail on page 1826</a>
<b>Output Fields</b>	Table 114 on page 1825 describes the output fields for the <b>show msdp</b> command. Output fields are listed in the approximate order in which they appear.

Table 114: show msdp Output Fields

Field Name	Field Description	Level of Output
Peer address	IP address of the peer.	All levels
Local address	Local address of the peer.	All levels

Table 114: show msdp Output Fields (continued)

Field Name	Field Description	Level of Output
State	Status of the MSDP connection: <b>Listen</b> , <b>Established</b> , or <b>Inactive</b> .	All levels
Last up/down	Time at which the most recent peer-state change occurred.	All levels
Peer-Group	Peer group name.	All levels
SA Count	Number of source-active cache entries advertised by each peer that were accepted, compared to the number that were received, in the format <i>number-accepted/number-received</i> .	All levels
Peer Connect Retries	Number of peer connection retries.	detail
State timer expires	Number of seconds before another message is sent to a peer.	detail
Peer Times out	Number of seconds to wait for a response from the peer before the peer is declared unavailable.	detail
SA accepted	Number of entries in the source-active cache accepted from the peer.	detail
SA received	Number of entries in the source-active cache received by the peer.	detail

## Sample Output

### show msdp

```

user@host> show msdp
Peer address    Local address  State          Last up/down  Peer-Group    SA Count
198.32.8.193    198.32.8.195  Established    5d 19:25:44   North23       120/150
198.32.8.194    198.32.8.195  Established    3d 19:27:27   North23       300/345
198.32.8.196    198.32.8.195  Established    5d 19:39:36   North23       10/13
198.32.8.197    198.32.8.195  Established    5d 19:32:27   North23       5/6
198.32.8.198    198.32.8.195  Established    3d 19:33:04   North23       2305/3000

```

### show msdp brief

The output for the **show msdp brief** command is identical to that for the **show msdp** command. For sample output, see [show msdp on page 1826](#).

### show msdp detail

```

user@host> show msdp detail
Peer: 10.255.70.15
Local address: 10.255.70.19
State: Established
Peer Connect Retries: 0
State timer expires: 22
Peer Times out: 49
SA accepted: 0
SA received: 0

```

## show msdp source

---

<b>Syntax</b>	<code>show msdp source</code> <code>&lt;instance <i>instance-name</i>&gt;</code> <code>&lt;logical-system (all   <i>logical-system-name</i>)&gt;</code> <code>&lt;source-address&gt;</code>
<b>Release Information</b>	Command introduced before Junos OS Release 7.4. Command introduced in Junos OS Release 12.1 for the QFX Series. Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.
<b>Description</b>	Display multicast sources learned from Multicast Source Discovery Protocol (MSDP).
<b>Options</b>	<b>none</b> —Display standard MSDP source information for all routing instances.  <b>instance <i>instance-name</i></b> —(Optional) Display information for the specified instance only.  <b>logical-system (all   <i>logical-system-name</i>)</b> —(Optional) Perform this operation on all logical systems or on a particular logical system.  <b>source-address</b> —(Optional) IP address and optional prefix length. Display information for the specified source address only.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">show msdp on page 1825</a></li><li>• <a href="#">show msdp source-active on page 1830</a></li><li>• <a href="#">show msdp statistics on page 1833</a></li></ul>
<b>List of Sample Output</b>	<a href="#">show msdp source on page 1829</a>

**Output Fields** Table 115 on page 1829 describes the output fields for the **show msdp source** command. Output fields are listed in the approximate order in which they appear.

*Table 115: show msdp source Output Fields*

Field Name	Field Description
Source address	IP address of the source.
/Len	Length of the prefix for this IP address.
Type	Discovery method for this multicast source: <ul style="list-style-type: none"> <li>• <b>Configured</b>—Source-active limit explicitly configured for this source.</li> <li>• <b>Dynamic</b>—Source-active limit established when this source was discovered.</li> </ul>
Maximum	Source-active limit applied to this source.
Threshold	Source-active threshold applied to this source.
Exceeded	Number of source-active messages received from this source exceeding the established maximum.

## Sample Output

**show msdp source**

```

user@host> show msdp source
Source address /Len  Type      Maximum  Threshold  Exceeded
0.0.0.0       /0    Configured    5        none       0
10.1.0.0      /16   Configured   500      none       0
10.1.1.1      /32   Configured  10000    none       0
10.1.1.2      /32   Dynamic     6936     none       0
10.1.5.5      /32   Dynamic     500      none      123
10.2.1.1      /32   Dynamic      2        none       0

```

## show msdp source-active

---

<b>Syntax</b>	<pre>show msdp source-active &lt;brief   detail&gt; &lt;group <i>group</i>&gt; &lt;instance <i>instance-name</i>&gt; &lt;local&gt; &lt;logical-system (all   <i>logical-system-name</i>)&gt; &lt;originator <i>originator</i>&gt; &lt;peer <i>peer-address</i>&gt; &lt;source <i>source-address</i>&gt;</pre>
<b>Release Information</b>	Command introduced before Junos OS Release 7.4. Command introduced in Junos OS Release 12.1 for the QFX Series. Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.
<b>Description</b>	Display the Multicast Source Discovery Protocol (MSDP) source-active cache.
<b>Options</b>	<p><b>none</b>—Display standard MSDP source-active cache information for all routing instances.</p> <p><b>brief   detail</b>—(Optional) Display the specified level of output.</p> <p><b>group <i>group</i></b>—(Optional) Display source-active cache information for the specified group.</p> <p><b>instance <i>instance-name</i></b>—(Optional) Display information for the specified instance.</p> <p><b>local</b>—(Optional) Display all source-active caches originated by this router.</p> <p><b>logical-system (all   <i>logical-system-name</i>)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p> <p><b>originator <i>originator</i></b>—(Optional) Display information about the peer that originated the source-active cache entries.</p> <p><b>peer <i>peer-address</i></b>—(Optional) Display the source-active cache of the specified peer.</p> <p><b>source <i>source-address</i></b>—(Optional) Display the source-active cache of the specified source.</p>
<b>Required Privilege Level</b>	view

[show msdp source-active source on page 1832](#)

**Output Fields** Table 116 on page 1831 describes the output fields for the **show msdp source-active** command. Output fields are listed in the approximate order in which they appear.

*Table 116: show msdp source-active Output Fields*

Field Name	Field Description
Global active source limit exceeded	Number of times all peers have exceeded configured active source limits.
Global active source limit maximum	Configured number of active source messages accepted by the device.
Global active source limit threshold	Configured threshold for applying random early discard (RED) to drop some but not all MSDP active source messages.
Global active source limit log-warning	Threshold at which a warning message is logged (percentage of the number of active source messages accepted by the device).
Global active source limit log interval	Time (in seconds) between consecutive log messages.
Group address	Multicast address of the group.
Source address	IP address of the source.
Peer address	IP address of the peer.
Originator	Router ID configured on the source of the rendezvous point (RP) that originated the message, or the loopback address when the router ID is not configured.
Flags	Flags: <b>Accept</b> , <b>Reject</b> , or <b>Filtered</b> .

## Sample Output

**show msdp source-active**

```

user@host> show msdp source-active
Group address  Source address  Peer address  Originator  Flags
230.0.0.0     192.168.195.46  local        10.255.14.30  Accept
230.0.0.1     192.168.195.46  local        10.255.14.30  Accept
230.0.0.2     192.168.195.46  local        10.255.14.30  Accept
230.0.0.3     192.168.195.46  local        10.255.14.30  Accept
230.0.0.4     192.168.195.46  local        10.255.14.30  Accept

```

### show msdp source-active brief

The output for the **show msdp source-active brief** command is identical to that for the **show msdp source-active** command. For sample output, see [show msdp source-active on page 1831](#).

### show msdp source-active detail

The output for the **show msdp source-active detail** command is identical to that for the **show msdp source-active** command. For sample output, see [show msdp source-active on page 1831](#).

### show msdp source-active source

```
user@host> show msdp source-active source 192.168.215.246
```

```
Global active source limit exceeded: 0
```

```
Global active source limit maximum: 25000
```

```
Global active source limit threshold: 24000
```

```
Global active source limit log-warning: 100
```

```
Global active source limit log interval: 0
```

Group address	Source address	Peer address	Originator	Flags
226.2.2.1	192.168.215.246	10.255.182.140	10.255.182.140	Accept

## show msdp statistics

<b>Syntax</b>	show msdp statistics <instance <i>instance-name</i> > <logical-system (all   <i>logical-system-name</i> )> <peer <i>peer-address</i> >
<b>Release Information</b>	Command introduced before Junos OS Release 7.4. Command introduced in Junos OS Release 12.1 for the QFX Series. Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.
<b>Description</b>	Display statistics about Multicast Source Discovery Protocol (MSDP) peers.
<b>Options</b>	<b>none</b> —Display statistics about all MSDP peers for all routing instances.  <b>instance <i>instance-name</i></b> —(Optional) Display statistics about a specific MSDP instance.  <b>logical-system (all   <i>logical-system-name</i>)</b> —(Optional) Perform this operation on all logical systems or on a particular logical system.  <b>peer <i>peer-address</i></b> —(Optional) Display statistics about a particular MSDP peer.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li><a href="#">clear msdp statistics on page 1744</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">show msdp statistics on page 1835</a> <a href="#">show msdp statistics peer on page 1835</a>
<b>Output Fields</b>	Table 117 on page 1833 describes the output fields for the <b>show msdp statistics</b> command. Output fields are listed in the approximate order in which they appear.

*Table 117: show msdp statistics Output Fields*

Field Name	Field Description
Global active source limit exceeded	Number of times all peers have exceeded configured active source limits.
Global active source limit maximum	Configured number of active source messages accepted by the device.
Global active source limit threshold	Configured threshold for applying random early discard (RED) to drop some but not all MSDP active source messages.
Global active source limit log-warning	Threshold at which a warning message is logged (percentage of the number of active source messages accepted by the device).

Table 117: show msdp statistics Output Fields (continued)

Field Name	Field Description
<b>Global active source limit log interval</b>	Time (in seconds) between consecutive log messages.
<b>Peer</b>	Address of peer.
<b>Last State Change</b>	How long ago the peer state changed.
<b>Last message received from the peer</b>	How long ago the last message was received from the peer.
<b>RPF Failures</b>	Number of reverse path forwarding (RPF) failures.
<b>Remote Closes</b>	Number of times the remote peer closed.
<b>Peer Timeouts</b>	Number of peer timeouts.
<b>SA messages sent</b>	Number of source-active messages sent.
<b>SA messages received</b>	Number of source-active messages received.
<b>SA request messages sent</b>	Number of source-active request messages sent.
<b>SA request messages received</b>	Number of source-active request messages received.
<b>SA response messages sent</b>	Number of source-active response messages sent.
<b>SA response messages received</b>	Number of source-active response messages received.
<b>SA messages with zero Entry Count received</b>	Entry Count is a field within SA message that defines how many source/group tuples are present in the SA message. The counter is incremented each time an SA with an Entry Count of zero is received.
<b>Active source exceeded</b>	Number of times this peer has exceeded configured source-active limits.
<b>Active source Maximum</b>	Configured number of active source messages accepted by this peer.
<b>Active source threshold</b>	Configured threshold on this peer for applying random early discard (RED) to drop some but not all MSDP active source messages.
<b>Active source log-warning</b>	Configured threshold on this peer at which a warning message is logged (percentage of the number of active source messages accepted by the device).
<b>Active source log-interval</b>	Time (in seconds) between consecutive log messages on this peer.

Table 117: show msdp statistics Output Fields (continued)

Field Name	Field Description
Keepalive messages sent	Number of keepalive messages sent.
Keepalive messages received	Number of keepalive messages received.
Unknown messages received	Number of unknown messages received.
Error messages received	Number of error messages received.

## Sample Output

### show msdp statistics

```

user@host> show msdp statistics
Global active source limit exceeded: 0
Global active source limit maximum: 10
Global active source limit threshold: 8
Global active source limit log-warning: 60
Global active source limit log interval: 60

Peer: 10.255.245.39
Last State Change: 11:54:49 (00:24:59)
Last message received from peer: 11:53:32 (00:26:16)
RPF Failures: 0
Remote Closes: 0
Peer Timeouts: 0
SA messages sent: 376
SA messages received: 459
SA messages with zero Entry Count received: 0
SA request messages sent: 0
SA request messages received: 0
SA response messages sent: 0
SA response messages received: 0
Active source exceeded: 0
Active source Maximum: 10
Active source threshold: 8
Active source log-warning: 60
Active source log-interval 120
Keepalive messages sent: 17
Keepalive messages received: 19
Unknown messages received: 0
Error messages received: 0

```

### show msdp statistics peer

```

user@host> show msdp statistics peer 10.255.182.140
Peer: 10.255.182.140
  Last State Change: 8:19:23 (00:01:08)
  Last message received from peer: 8:20:05 (00:00:26)
  RPF Failures: 0
  Remote Closes: 0
  Peer Timeouts: 0

```

SA messages sent: 17  
SA messages received: 16  
SA request messages sent: 0  
SA request messages received: 0  
SA response messages sent: 0  
SA response messages received: 0  
Active source exceeded: 20  
Active source Maximum: 10  
Active source threshold: 8  
Active source log-warning: 60  
Active source log-interval: 120  
Keepalive messages sent: 0  
Keepalive messages received: 0  
Unknown messages received: 0  
Error messages received: 0

## show multicast backup-pe-groups

**Syntax** show multicast backup-pe-groups  
 <address *pe-address*>  
 <group *group-name*>  
 <instance *instance-name*>  
 <logical-system (all | *logical-system-name*)>

**Release Information** Command introduced in Junos OS Release 9.0.

**Description** Display backup PE router group information when ingress PE redundancy is configured. Ingress PE redundancy provides a backup resource when point-to-multipoint LSPs are configured for multicast distribution.

**Options** **none**—Display standard information about all backup PE groups.

**address *pe-address***—(Optional) Display the groups that a PE address is associated with.

**group *group***—(Optional) Display the backup PE group information for a particular group.

**instance *instance-name***—(Optional) Display backup PE group information for a specific multicast instance.

**logical-system (all | *logical-system-name*)**—(Optional) Perform this operation on all logical systems or on a particular logical system.

**Required Privilege Level** view

**List of Sample Output** [show multicast backup-pe-groups on page 1838](#)

**Output Fields** [Table 118 on page 1837](#) describes the output fields for the **show multicast backup-pe-groups** command. Output fields are listed in the approximate order in which they appear.

*Table 118: show multicast backup-pe-groups Output Fields*

Field Name	Field Description
Backup PE Group	Group name.
Designated PE	Primary PE router. Address of the PE router that is currently forwarding traffic on the static route.
Transitions	Number of times that the designated PE router has transitioned from the most eligible PE router to a backup PE router and back again to the most eligible PE router.
Last Transition	Time of the most recent transition.
Local Address	Address of the local PE router.
Backup PE List	List of PE routers that are configured to be backups for the group.

## Sample Output

### show multicast backup-pe-groups

```
user@host> show multicast backup-pe-groups
Instance: master

Backup PE group: b1
  Designated PE: 10.255.165.7
  Transitions: 1
  Last Transition: 03:15:01
  Local Address: 10.255.165.7
  Backup PE List:
    10.255.165.8

Backup PE group: b2
  Designated PE: 10.255.165.7
  Transitions: 2
  Last Transition: 02:58:20
  Local Address: 10.255.165.7
  Backup PE List:
    10.255.165.9
    10.255.165.8
```

## show multicast flow-map

<b>List of Syntax</b>	<a href="#">Syntax on page 1839</a> <a href="#">Syntax (EX Series Switch and the QFX Series) on page 1839</a>
<b>Syntax</b>	<pre>show multicast flow-map &lt;brief   detail&gt; &lt;logical-system (all   <i>logical-system-name</i>)&gt;</pre>
<b>Syntax (EX Series Switch and the QFX Series)</b>	<pre>show multicast flow-map &lt;brief   detail&gt;</pre>
<b>Release Information</b>	<p>Command introduced in Junos OS Release 8.2.</p> <p>Command introduced in Junos OS Release 9.0 for EX Series switches.</p> <p>Command introduced in Junos OS Release 11.3 for the QFX Series.</p> <p>Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.</p>
<b>Description</b>	Display configuration information about IP multicast flow maps.
<b>Options</b>	<p><b>none</b>—Display configuration information about IP multicast flow maps on all systems.</p> <p><b>brief   detail</b>—(Optional) Display the specified level of output.</p> <p><b>logical-system (all   <i>logical-system-name</i>)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p>
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">show multicast flow-map on page 1840</a> <a href="#">show multicast flow-map detail on page 1840</a>
<b>Output Fields</b>	<p><a href="#">Table 119 on page 1839</a> describes the output fields for the <b>show multicast flow-map</b> command. Output fields are listed in the approximate order in which they appear.</p>

*Table 119: show multicast flow-map Output Fields*

Field Name	Field Description	Levels of Output
<b>Name</b>	Name of the flow map.	All levels
<b>Policy</b>	Name of the policy associated with the flow map.	All levels
<b>Cache-timeout</b>	Cache timeout value assigned to the flow map.	All levels
<b>Bandwidth</b>	Bandwidth setting associated with the flow map.	All levels
<b>Adaptive</b>	Whether or not adaptive mode is enabled for the flow map.	none

Table 119: show multicast flow-map Output Fields (continued)

Field Name	Field Description	Levels of Output
<b>Flow-map</b>	Name of the flow map.	<b>detail</b>
<b>Adaptive Bandwidth</b>	Whether or not adaptive mode is enabled for the flow map.	<b>detail</b>
<b>Redundant Sources</b>	Redundant sources defined for the same destination group.	<b>detail</b>

## Sample Output

### show multicast flow-map

```

user@host> show multicast flow-map
Instance: master
Name          Policy          Cache timeout    Bandwidth Adaptive
map2          policy2         never            2000000 no
map1          policy1         60 seconds      2000000 no

```

## Sample Output

### show multicast flow-map detail

```

user@host> show multicast flow-map detail
Instance: master
Flow-map: map1
  Policy:          policy1
  Cache Timeout:   600 seconds
  Bandwidth:       2000000
  Adaptive Bandwidth: yes
  Redundant Sources: 10.11.11.11
  Redundant Sources: 10.11.11.12
  Redundant Sources: 10.11.11.13

```

## show multicast forwarding-cache statistics

<b>Syntax</b>	show multicast forwarding-cache statistics <inet   inet6> <instance <i>instance-name</i> > <logical-system (all   <i>logical-system-name</i> )>
<b>Release Information</b>	Command introduced in Junos OS Release 12.2. Starting in Junos OS Release 16.1, output includes general and rendezvous-point tree (RPT) suppression states.
<b>Description</b>	Display IP multicast forwarding cache statistics.
<b>Options</b>	<p><b>none</b>—Display multicast forwarding cache statistics for all supported address families for all routing instances.</p> <p><b>inet   inet6</b>—(Optional) Display multicast forwarding cache statistics for IPv4 or IPv6 family addresses, respectively.</p> <p><b>instance <i>instance-name</i></b>—(Optional) Display multicast forwarding cache statistics for a specific routing instance.</p> <p><b>logical-system (all   <i>logical-system-name</i>)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p>
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">clear multicast forwarding-cache on page 1747</a></li> <li>• <i>threshold</i></li> </ul>
<b>List of Sample Output</b>	<a href="#">show multicast forwarding cache statistics instance on page 1842</a> <a href="#">show multicast forwarding cache statistics instance (Forwarding-cache suppression is disabled) on page 1842</a>
<b>Output Fields</b>	<a href="#">Table 120 on page 1841</a> describes the output fields for the <b>show multicast forwarding-cache statistics</b> command. Output fields are listed in the approximate order in which they appear.

Table 120: show multicast forwarding-cache statistics Output Fields

Field Name	Field Description
Instance	Name of the routing instance for which multicast forwarding cache statistics are displayed.
Family	Protocol family for which multicast forwarding cache statistics are displayed: <b>ALL</b> , <b>INET</b> , or <b>INET6</b> .

Table 120: show multicast forwarding-cache statistics Output Fields (continued)

Field Name	Field Description
General (or MVPN RPT) Suppression Active	Indicates whether suppression is configured.
General (or MVPN RPT) Entries Used	Number of currently used multicast forwarding cache entries.
General (or MVPN RPT) Suppress Threshold	Maximum number of multicast forwarding cache entries that can be added to the cache. When the number of entries reaches the configured threshold, the device suspends adding new multicast forwarding cache entries.
General (or MVPN RPT) Reuse Value	Number of multicast forwarding cache entries that must be reached before the device creates new multicast forwarding cache entries. When the total number of multicast forwarding cache entries is below the reuse value, the device resumes adding new multicast forwarding cache entries.

## Sample Output

### show multicast forwarding cache statistics instance

```

user@host> show multicast forwarding-cache statistic instance mvpn1 inet6
  Instance: mvpn1 Family: INET6
  General Suppression Active          Yes
  General Entries Used                0
  General Suppress Threshold         200
  General Reuse Value                 200
  MVPN RPT Suppression Active        Yes
  MVPN RPT Entries Used              0
  MVPN RPT Suppress Threshold        200
  MVPN RPT Reuse Value                200

```

### show multicast forwarding cache statistics instance (Forwarding-cache suppression is disabled)

```

user@host> show multicast forwarding-cache statistic instance mvpn1
  Instance: mvpn1 Family: ALL
  Forwarding-cache suppression disabled Not enabled by configuration

```

## show multicast interface

<b>List of Syntax</b>	<a href="#">Syntax on page 1843</a> <a href="#">Syntax (EX Series Switch and the QFX Series) on page 1843</a>
<b>Syntax</b>	show multicast interface <logical-system (all   <i>logical-system-name</i> )>
<b>Syntax (EX Series Switch and the QFX Series)</b>	show multicast interface
<b>Release Information</b>	Command introduced in Junos OS Release 8.3. Command introduced in Junos OS Release 9.0 for EX Series switches. Command introduced in Junos OS Release 11.3 for the QFX Series. Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.
<b>Description</b>	Display bandwidth information about IP multicast interfaces.
<b>Options</b>	<b>none</b> —Display all interfaces that have multicast configured.  <b>logical-system (all   <i>logical-system-name</i>)</b> —(Optional) Perform this operation on all logical systems or on a particular logical system.
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">show multicast interface on page 1844</a>
<b>Output Fields</b>	<a href="#">Table 121 on page 1843</a> describes the output fields for the <b>show multicast interface</b> command. Output fields are listed in the approximate order in which they appear.

*Table 121: show multicast interface Output Fields*

Field Name	Field Description
<b>Interface</b>	Name of the multicast interface.
<b>Maximum bandwidth (bps)</b>	Maximum bandwidth setting, in bits per second, for this interface.
<b>Remaining bandwidth (bps)</b>	Amount of bandwidth, in bits per second, remaining on the interface.

Table 121: show multicast interface Output Fields (continued)

Field Name	Field Description
<b>Mapped bandwidth deduction (bps)</b>	<p>Amount of bandwidth, in bits per second, used by any flows that are mapped to the interface.</p> <p><b>NOTE:</b> Adding the mapped bandwidth deduction value to the local bandwidth deduction value results in the total deduction value for the interface.</p> <p>This field does not appear in the output when the no QoS adjustment feature is disabled.</p>
<b>Local bandwidth deduction (bps)</b>	<p>Amount of bandwidth, in bits per second, used by any mapped flows that are traversing the interface.</p> <p><b>NOTE:</b> Adding the mapped bandwidth deduction value to the local bandwidth deduction value results in the total deduction value for the interface.</p> <p>This field does not appear in the output when the no QoS adjustment feature is disabled.</p>
<b>Reverse OIF mapping</b>	<p>State of the reverse OIF mapping feature (<b>on</b> or <b>off</b>).</p> <p><b>NOTE:</b> This field does not appear in the output when the no QoS adjustment feature is disabled.</p>
<b>Reverse OIF mapping no QoS adjustment</b>	<p>State of the no QoS adjustment feature (<b>on</b> or <b>off</b>) for interfaces that are using reverse OIF mapping.</p> <p><b>NOTE:</b> This field does not appear in the output when the no QoS adjustment feature is disabled.</p>
<b>Leave timer</b>	<p>Amount of time a mapped interface remains active after the last mapping ends.</p> <p><b>NOTE:</b> This field does not appear in the output when the no QoS adjustment feature is disabled.</p>
<b>No QoS adjustment</b>	<p>State (<b>on</b>) of the no QoS adjustment feature when this feature is enabled.</p> <p><b>NOTE:</b> This field does not appear in the output when the no QoS adjustment feature is disabled.</p>

## Sample Output

### show multicast interface

```

user@host> show multicast interface
Interface          Maximum bandwidth (bps) Remaining bandwidth (bps)
fe-0/0/3           100000000                0
fe-0/0/3.210       100000000                -2000000
fe-0/0/3.220       100000000               100000000
fe-0/0/3.230       200000000               180000000
fe-0/0/2.200       100000000               100000000

```

## show multicast minfo

<b>Syntax</b>	<code>show multicast minfo</code> <code>&lt;host&gt;</code>
<b>Release Information</b>	Command introduced before Junos OS Release 7.4. Command introduced in Junos OS Release 9.0 for EX Series switches. Command introduced in Junos OS Release 11.3 for the QFX Series. Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.
<b>Description</b>	Display configuration information about IP multicast networks, including neighboring multicast router addresses.
<b>Options</b>	<b>none</b> —Display configuration information about all multicast networks.  <b>host</b> —(Optional) Display configuration information about a particular host. Replace <i>host</i> with a hostname or IP address.
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">show multicast minfo on page 1847</a>
<b>Output Fields</b>	<a href="#">Table 122 on page 1846</a> describes the output fields for the <b>show multicast minfo</b> command. Output fields are listed in the approximate order in which they appear.

Table 122: show multicast minfo Output Fields

Field Name	Field Description
<i>source-address</i>	Query address, hostname (DNS name or IP address of the source address), and multicast protocol version or the software version of another vendor.
<i>ip-address-1—&gt;ip-address-2</i>	Queried router interface address and directly attached neighbor interface address, respectively.
<i>(name or ip-address)</i>	Name or IP address of neighbor.
<i>[metric/threshold/type/flags]</i>	Neighbor's multicast profile: <ul style="list-style-type: none"> <li><b>metric</b>—Always has a value of 1, because <b>minfo</b> queries the directly connected interfaces of a device.</li> <li><b>threshold</b>—Multicast threshold time-to-live (TTL). The range of values is 0 through 255.</li> <li><b>type</b>—Multicast connection type: <b>pim</b> or <b>tunnel</b>.</li> <li><b>flags</b>—Flags for this route: <ul style="list-style-type: none"> <li><b>querier</b>—Queried router is the designated router for the neighboring session.</li> <li><b>leaf</b>—Link is a leaf in the multicast network.</li> <li><b>down</b>—Link status indicator.</li> </ul> </li> </ul>

## Sample Output

### show multicast mrinfo

```
user@host> show multicast mrinfo 10.35.4.1
10.35.4.1 (10.35.4.1) [version 12.0]:
  192.168.195.166 -> 0.0.0.0 (local) [1/0/pim/querier/leaf]
  10.38.20.1 -> 0.0.0.0 (local) [1/0/pim/querier/leaf]
  10.47.1.1 -> 10.47.1.2 (10.47.1.2) [1/5/pim]
  0.0.0.0 -> 0.0.0.0 (local) [1/0/pim/down]
```

## show multicast next-hops

<b>List of Syntax</b>	<a href="#">Syntax on page 1848</a> <a href="#">Syntax (EX Series Switch and the QFX Series) on page 1848</a>
<b>Syntax</b>	<pre>show multicast next-hops &lt;brief   detail   terse&gt; &lt;identifier-number&gt; &lt;inet   inet6&gt; &lt;logical-system (all   logical-system-name)&gt;</pre>

**Output Fields** [Table 123 on page 1849](#) describes the output fields for the **show multicast next-hops** command. Output fields are listed in the approximate order in which they appear.

*Table 123: show multicast next-hops Output Fields*

Field Name	Field Description
<b>Family</b>	Protocol family (such as <b>INET</b> ).
<b>ID</b>	Next-hop identifier of the prefix. The identifier is returned by the routing device's Packet Forwarding Engine.
<b>RefCount</b>	Number of cache entries that are using this next hop.
<b>KRefCount</b>	Kernel reference count for the next hop.
<b>Downstream interface</b>	Interface names associated with each multicast next-hop ID.
<b>Incoming interface list</b>	List of interfaces that accept incoming traffic. Only shown for routes that do not use strict RPF-based forwarding, for example for bidirectional PIM.

## Sample Output

### show multicast next-hops

```
user@host> show multicast next-hops
Family: INET
ID      Refcount  KRefCount Downstream interface
262142      4          2 so-1/0/0.0
262143      2          1 mt-1/1/0.49152
262148      2          1 mt-1/1/0.32769
```

### show multicast next-hops (Ingress Router, Multipoint LDP Inband Signaling for Point-to-Multipoint LSPs)

```
user@host> show multicast next-hops
Family: INET
ID      Refcount  KRefCount Downstream interface Addr
1048580      2          1 1048576
(0x600dc04)  1          0 1048584
(0x600ea04)  1          0 (0x600e924)

## show multicast route

---

**List of Syntax**    [Syntax on page 1856](#)  
                          [Syntax \(EX Series Switch and the QFX Series\) on page 1856](#)

**Syntax**    show multicast route  
                  <brief | detail | extensive | summary>  
                  <active | all | inactive>  
                  <group *group*>  
                  <inet | inet6>  
                  <instance *instance name*>  
                  <logical-system (all | *logical-system-name*)>  
                  <oif-count>  
                  <*regular-expression*>  
                  <source-prefix *source-prefix*>

**Syntax (EX Series Switch and the QFX Series)**    show multicast route  
  <brief | detail | extensive | summary>  
  <active | all | inactive>  
  <group *group*>  
  <inet | inet6>  
  <instance *instance name*>  
  <*regular-expression*>  
  <source-prefix *source-prefix*>

**Release Information**    Command introduced before Junos OS Release 7.4.  
                              Command introduced in Junos OS Release 9.0 for EX Series switches.  
                              inet6 and **instance** options introduced in Junos OS Release 10.0 for EX Series switches.  
                              Command introduced in Junos OS Release 11.3 for the QFX Series.  
                              Support for bidirectional PIM added in Junos OS Release 12.1.  
                              Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.  
                              **oif-count** option introduced in Junos OS Release 16.1 for the MX Series.  
                              xxxSupport for PIM NSR support for VXLAN added in Junos OS Release 16.2.

**Description**    Display the entries in the IP multicast forwarding table. You can display similar information with the **show route table inet.1** command.

**NOTE:** On all SRX Series devices, when a multicast route is not available, pending sessions are not torn down, and subsequent packets are queued. If no multicast route resolve comes back, then the traffic flow has to wait for the pending session to timed out. Then packets can trigger new pending session create and route resolve.

---

**Options**    **none**—Display standard information about all entries in the multicast forwarding table for all routing instances.

**brief | detail | extensive | summary**—(Optional) Display the specified level of output.

**active | all | inactive**—(Optional) Display all active entries, all entries, or all inactive entries, respectively, in the multicast forwarding table.

**group group**—(Optional) Display the cache entries for a particular group.

**inet | inet6**—(Optional) Display multicast forwarding table entries for IPv4 or IPv6 family addresses, respectively.

**instance instance-name**—(Optional) Display entries in the multicast forwarding table for a specific multicast instance.

**logical-system (all | logical-system-name)**—(Optional) Perform this operation on all logical systems or on a particular logical system.

**oif-count**—(Optional) Display a count of outgoing interfaces rather than listing them.

**regular-expression**—(Optional) Display information about the multicast forwarding table entries that match a UNIX OS-style regular expression.

**source-prefix source-prefix**—(Optional) Display the cache entries for a particular source prefix.

**Required Privilege Level**

**Output Fields**

[Table 126 on page 1858](#) describes the output fields for the **show multicast route** command. Output fields are listed in the approximate order in which they appear.

Table 126: show multicast route Output Fields

Field Name	Field Description	Level of Output
family	IPv4 address family ( <b>INET</b> ) or IPv6 address family ( <b>INET6</b> ).	All levels
Group	Group address.  For any-source multicast routes, for example for bidirectional PIM, the group address includes the prefix length.	All levels
Source	Prefix and length of the source as it is in the multicast forwarding table.	All levels
Incoming interface list	List of interfaces that accept incoming traffic. Only shown for routes that do not use strict RPF-based forwarding, for example for bidirectional PIM.	All levels
Upstream interface	Name of the interface on which the packet with this source prefix is expected to arrive.	All levels
Upstream rpf interface list	When multicast-only fast reroute (MoFRR) is enabled, a PIM router propagates join messages on two upstream RPF interfaces to receive multicast traffic on both links for the same join request.	All levels
Downstream interface list	List of interface names to which the packet with this source prefix is forwarded.  <b>distributed-gmp</b> — Added in Junos OS Release 17.4R1 to indicate that line cards with <i>distributed</i> IGMP interfaces are receiving multicast traffic for a given (s,g).	All levels
Number of outgoing interfaces	Total number of outgoing interfaces for each (S,G) entry.	<b>extensive</b>
Session description	Name of the multicast session.	<b>detail extensive</b>
Statistics	Rate at which packets are being forwarded for this source and group entry (in Kbps and pps), and number of packets that have been forwarded to this prefix. If one or more of the kilobits per second packet forwarding statistic queries fails or times out, the statistics field displays <b>Forwarding statistics are not available</b> .  <b>NOTE:</b> On QFX Series switches and OCX Series switches, this field does not report valid statistics.	<b>detail extensive</b>
Next-hop ID	Next-hop identifier of the prefix. The identifier is returned by the routing device's Packet Forwarding Engine and is also displayed in the output of the <b>show multicast nexthops</b> command.	<b>detail extensive</b>
Incoming interface list ID	For bidirectional PIM, incoming interface list identifier.  Identifiers for interfaces that accept incoming traffic. Only shown for routes that do not use strict RPF-based forwarding, for example for bidirectional PIM.	<b>detail extensive</b>

Table 126: show multicast route Output Fields (continued)

Field Name	Field Description	Level of Output
Upstream protocol	The protocol that maintains the active multicast forwarding route for this group or source.  When the <b>show multicast route extensive</b> command is used with the <b>display-origin-protocol</b> option, the field name is only <b>Protocol</b> and not <b>Upstream Protocol</b> . However, this field also displays the protocol that installed the active route.	detail extensive
Route type	Type of multicast route. Values can be (S,G) or (*,G).	summary
Route state	Whether the group is <b>Active</b> or <b>Inactive</b> .	summary extensive
Route count	Number of multicast routes.	summary
Forwarding state	Whether the prefix is pruned or forwarding.	extensive
Cache lifetime/timeout	Number of seconds until the prefix is removed from the multicast forwarding table. A value of <b>never</b> indicates a permanent forwarding entry. A value of <b>forever</b> indicates routes that do not have keepalive times.	extensive
Wrong incoming interface notifications	Number of times that the upstream interface was not available.	extensive
Uptime	Time since the creation of a multicast route.	extensive

## Sample Output

Starting in Junos OS Release 16.1, **show multicast route** displays the top-level hierarchical next hop.

### show multicast route

```

user@host> show multicast route

## show multicast rpf

<b>List of Syntax</b>	<a href="#">Syntax on page 1867</a> <a href="#">Syntax (EX Series Switch and the QFX Series) on page 1867</a>
<b>Syntax</b>	<pre>show multicast rpf &lt;inet   inet6&gt; &lt;instance <i>instance-name</i>&gt; &lt;logical-system (all   <i>logical-system-name</i>)&gt; &lt;prefix&gt; &lt;summary&gt;</pre>
<b>Syntax (EX Series Switch and the QFX Series)</b>	<pre>show multicast rpf &lt;inet   inet6&gt; &lt;instance <i>instance-name</i>&gt; &lt;prefix&gt; &lt;summary&gt;</pre>
<b>Release Information</b>	<p>Command introduced before Junos OS Release 7.4.</p> <p>Command introduced in Junos OS Release 9.0 for EX Series switches.</p> <p><b>inet6</b> and <b>instance</b> options introduced in Junos OS Release 10.0 for EX Series switches.</p> <p>Command introduced in Junos OS Release 11.3 for the QFX Series.</p> <p>Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.</p>
<b>Description</b>	Display information about multicast reverse-path-forwarding (RPF) calculations.
<b>Options</b>	<p><b>none</b>—Display RPF calculation information for all supported address families.</p> <p><b>inet   inet6</b>—(Optional) Display the RPF calculation information for IPv4 or IPv6 family addresses, respectively.</p> <p><b>instance <i>instance-name</i></b>—(Optional) Display information about multicast RPF calculations for a specific multicast instance.</p> <p><b>logical-system (all   <i>logical-system-name</i>)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p> <p><b>prefix</b>—(Optional) Display the RPF calculation information for the specified prefix.</p> <p><b>summary</b>—(Optional) Display a summary of all multicast RPF information.</p>
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">show multicast rpf on page 1868</a> <a href="#">show multicast rpf inet6 on page 1869</a> <a href="#">show multicast rpf prefix on page 1870</a> <a href="#">show multicast rpf summary on page 1870</a>

**Output Fields** Table 127 on page 1868 describes the output fields for the **show multicast rpf** command. Output fields are listed in the approximate order in which they appear.

*Table 127: show multicast rpf Output Fields*

Field Name	Field Description
Instance	Name of the routing instance. (Displayed when multicast is configured within a routing instance.)
Source prefix	Prefix and length of the source as it exists in the multicast forwarding table.
Protocol	How the route was learned.
Interface	Upstream RPF interface.  <b>NOTE:</b> The displayed interface information does not apply to bidirectional PIM RP addresses. This is because the <b>show multicast rpf</b> command does not take into account equal-cost paths or the designated forwarder. For accurate upstream RPF interface information, always use the <b>show pim join extensive</b> command when bidirectional PIM is configured.
Neighbor	Upstream RPF neighbor.  <b>NOTE:</b> The displayed neighbor information does not apply to bidirectional PIM. This is because the <b>show multicast rpf</b> command does not take into account equal-cost paths or the designated forwarder. For accurate upstream RPF neighbor information, always use the <b>show pim join extensive</b> command when bidirectional PIM is configured.

## Sample Output

larry          2001:db8::1234/128 fe-0/0/0.1     0

```

## show multicast snooping next-hops

**Syntax** show multicast snooping next-hops  
 <brief | detail>  
 <identifier *next-hop-ID*>  
 <inet>  
 <inet6>  
 <logical-system *logical-system-name*>

**Release Information** Command introduced in Junos OS Release 11.2.

**Description** Display information about the IP multicast snooping next-hops.

**Options** **brief | detail**—(Optional) Display the specified level of output.

**inet**—(Optional) Display information for IPv4 multicast next hops only. If a family is not specified, both IPv4 and IPv6 results will be shown.

**inet6**—(Optional) Display information for IPv6 multicast next hops only. If a family is not specified, both IPv4 and IPv6 results will be shown.

**logical-system *logical-system-name***—(Optional) Display information about a particular logical system, or type 'all'.

**Required Privilege Level** view

**List of Sample Output** [show multicast snooping next-hops on page 1875](#)  
[show multicast snooping next-hops \(IGMP snooping enabled on a VPLS\) on page 1875](#)

**Output Fields** [Table 129 on page 1873](#) describes the output fields for the **show multicast snooping next-hops** command. Output fields are listed in the approximate order in which they appear.

*Table 129: show multicast snooping next-hops Output Fields*

Field Name	Field Description
Family	Protocol family for which multicast snooping next hops are displayed: <b>INET</b> or <b>INET6</b> .
Refcount	Number of cache entries that are using this next hop.
KRefcount	Kernel reference count for the next hop.
Downstream interface	Interface names associated with each multicast next-hop ID.

*Table 129: show multicast snooping next-hops Output Fields (continued)*

Field Name	Field Description
<b>Nexthop Id</b>	Identifier for the next-hop.  <b>NOTE:</b> To see the next-hop ID for a given PE mesh group, <b>igmp-snooping</b> must be enabled for the relevant VPLS routing instance. (Junos OS creates a default CE and VE mesh groups for each VPLS routing instance. The next hop of the VE mesh group is the set of VE mesh-group interfaces of the remaining PEs in the same VPLS routing instance.)

---

## Sample Output

### show multicast snooping next-hops

```

user@host> show multicast snooping next-hops
Family: INET
ID          Refcount KRefCount Downstream interface Nexthop Id
1048574      4          1 ge-0/1/0.1000
               ge-0/1/2.1000
               ge-0/1/3.1000

1048574      4          1 ge-0/1/0.1000-(2000)
               1048575
               1048576

1048575      2          0 ge-0/1/2.1000-(2001)
               ge-0/1/3.1000-(2002)

1048576      2          0 lsi.1048578-(2003)
               lsi.1048579-(2004)

```

### show multicast snooping next-hops (IGMP snooping enabled on a VPLS)

In this example, ID 1048585 is the VE next-hop ID created for the VE next hop that is holding VE interfaces for the routing instance. It only appears if igmp snooping is enabled on the VPLS.

```

user@host> show multicast snooping next-hops
Family: INET
ID          Refcount KRefCount Downstream interface Addr
1048588      2          1 1048585
1048589      2          1 1048585

## show multicast sessions

---

**List of Syntax**    [Syntax on page 1876](#)  
                         [Syntax \(EX Series Switch and the QFX Series\) on page 1876](#)

**Syntax**    show multicast sessions  
              <brief | detail | extensive>  
              <logical-system (all | *logical-system-name*)>  
              <*regular-expression*>

**Syntax (EX Series Switch and the QFX Series)**    show multicast sessions  
                         <brief | detail | extensive>  
                         <*regular-expression*>

**Release Information**    Command introduced before Junos OS Release 7.4.  
                              Command introduced in Junos OS Release 9.0 for EX Series switches.  
                              Command introduced in Junos OS Release 11.3 for the QFX Series.  
                              Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.

**Description**    Display information about announced IP multicast sessions.

**NOTE:** On all SRX Series devices, only 100 packets can be queued during pending (S, G) route. However, when multiple multicast sessions enter the route resolve process at the same time, buffer resources are not sufficient to queue 100 packets for each session.

---

**Options**    **none**— Display standard information about all multicast sessions for all routing instances.  
  
              **brief | detail | extensive**—(Optional) Display the specified level of output.  
  
              **logical-system (all | *logical-system-name*)**—(Optional) Perform this operation on all logical systems or on a particular logical system.  
  
              ***regular-expression***—(Optional) Display information about announced sessions that match a UNIX-style regular expression.

**Required Privilege Level**    view

**List of Sample Output**    [show multicast sessions on page 1878](#)

## show multicast snooping route

---

**Syntax**    show multicast snooping route  
              <regexp>  
              <active>  
              <all>  
              <bridge-domain *bridge-domain-name*>  
              <brief >  
              <control>  
              <data>  
              <detail >  
              <extensive>  
              <group *group*>  
              <inactive>  
              <inet>  
              <inet6>  
              <instance *instance-name*>  
              <logical-system *logical-system-name*>  
              <mesh-group *mesh-group-name*>  
              <qualified-vlan *vlan-id*>  
              <source-prefix *source-prefix*>  
              <vlan *vlan-id*>

**Release Information**    Command introduced in Junos OS Release 8.5.  
                              Support for **control**, **data**, **qualified-vlan** and **vlan** options introduced in Junos OS Release 13.3 for EX Series switches.

**Description**    Display the entries in the IP multicast snooping forwarding table. You can display some of this information with the **show route table inet.1** command.

**Options**    **none**—Display standard information about all entries in the multicast snooping table for all virtual switches and all bridge domains.

**active | all | inactive** —(Optional) Display all active entries, all entries, or all inactive entries, respectively, in the multicast snooping table.

**bridge-domain *bridge-domain***—(Optional) Display the entries for a particular bridge domain.

**brief | detail | extensive**—(Optional) Display the specified level of output.

**control**—(Optional) Display control route entries.

**data**—(Optional) Display data route entries.

**group *group***—(Optional) Display the entries for a particular group.

**inet**—(Optional) Display IPv4 information.

**inet6**—(Optional) Display IPv6 information.

**instance *instance-name***—(Optional) Display the entries for a multicast instance.

**logical-system *logical-system-name***—(Optional) Display information about a particular logical system, or type 'all'.

**mesh-group *mesh-group-name***—(Optional) Display the entries for a particular mesh group.

**qualified-vlan *vlan-id***—(Optional) Display the entries for a particular qualified VLAN.

**regexp**—(Optional) Display information about the multicast forwarding table entries that match a UNIX-style regular expression.

**source-prefix *source-prefix***—(Optional) Display the entries for a particular source prefix.

**vlan *vlan-id***—(Optional) Display the entries for a particular VLAN.

**Required Privilege Level** view

[show multicast snooping route instance vs on page 1882](#)  
[show multicast snooping route extensive on page 1882](#)

**Output Fields** [Table 131 on page 1881](#) describes the output fields for the **show multicast snooping route** command. Output fields are listed in the approximate order in which they appear.

*Table 131: show multicast snooping route Output Fields*

Field Name	Field Description	Level of Output
<b>Nexthop Bulking</b>	Displays whether next-hop bulk updating is <b>ON</b> or <b>OFF</b> (only for routing-instance type of <b>virtual switch</b> or <b>vpls</b> ).	All levels
<b>Family</b>	IPv4 address family ( <b>INET</b> ) or IPv6 address family ( <b>INET6</b> ).	All levels
<b>Group</b>	Group address.	All levels
<b>Source</b>	Prefix and length of the source as it is in the multicast forwarding table. For (*G) entries, this field is set to "*".	All levels
<b>Routing-instance</b>	Name of the routing instance to which this routing information applies. (Displayed when multicast is configured within a routing instance.)	All levels
<b>Learning Domain</b>	Name of the learning domain to which this routing information applies.	<b>detail extensive</b>
<b>Statistics</b>	Rate at which packets are being forwarded for this source and group entry (in Kbps and pps), and number of packets that have been forwarded to this prefix.	<b>detail extensive</b>
<b>Next-hop ID</b>	Next-hop identifier of the prefix. The identifier is returned by the router's Packet Forwarding Engine and is also displayed in the output of the <b>show multicast nexthops</b> command.	<b>detail extensive</b>
<b>Route state</b>	Whether the group is <b>Active</b> or <b>Inactive</b> .	<b>extensive</b>

Table 131: show multicast snooping route Output Fields (continued)

Field Name	Field Description	Level of Output
Forwarding state	Whether the prefix is <b>Pruned</b> or <b>Forwarding</b> .	extensive
Cache lifetime/timeout	Number of seconds until the prefix is removed from the multicast forwarding table. A value of <b>never</b> indicates a permanent forwarding entry.	extensive

## Sample Output

## show multicast statistics

<b>Syntax</b>	<pre>show multicast statistics &lt;inet   inet6&gt; &lt;instance <i>instance-name</i>&gt; &lt;interface <i>interface-name</i>&gt; &lt;logical-system (all   <i>logical-system-name</i>)&gt;</pre>
<b>Release Information</b>	<p>Command introduced before Junos OS Release 7.4.</p> <p><b>interface</b> option introduced in Junos OS Release 16.1 for the MX Series.</p>
<b>Description</b>	Display IP multicast statistics.
<b>Options</b>	<p><b>none</b>—Display multicast statistics for all supported address families for all routing instances.</p> <p><b>inet   inet6</b>—(Optional) Display multicast statistics for IPv4 or IPv6 family addresses, respectively.</p> <p><b>instance <i>instance-name</i></b>—(Optional) Display statistics for a specific routing instance.</p> <p><b>interface <i>interface-name</i></b>—(Optional) Display statistics for a specific interface.</p> <p><b>logical-system (all   <i>logical-system-name</i>)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p>
<b>Additional Information</b>	The input and output interface multicast statistics are consistent, but not timely. They are constructed from the forwarding statistics, which are gathered at 30-second intervals. Therefore, the output from this command always lags the true count by up to 30 seconds.
<b>Required Privilege Level</b>	view

<b>Output Fields</b>	<a href="#">Table 132 on page 1884</a> describes the output fields for the <b>show multicast statistics</b> command. Output fields are listed in the approximate order in which they appear.

Table 132: show multicast statistics Output Fields

Field Name	Field Description
Family	Protocol family for which multicast statistics are displayed: <b>INET</b> or <b>INET6</b> .

Table 132: show multicast statistics Output Fields (continued)

Field Name	Field Description
<b>Interface</b>	Name of the interface for which statistics are being reported.
<b>Routing Protocol</b>	Primary multicast protocol on the interface: <b>PIM</b> , <b>DVMRP for INET</b> , or <b>PIM for INET6</b> .
<b>Mismatch</b>	Number of multicast packets that did not arrive on the correct upstream interface.
<b>Kernel Resolve</b>	Number of resolve requests processed by the primary multicast protocol on the interface.
<b>Resolve No Route</b>	Number of resolve requests that were ignored because there was no route to the source.
<b>In Kbytes</b>	Total accumulated incoming packets (in KB) since the last time the <b>clear multicast statistics</b> command was issued.
<b>Out Kbytes</b>	Total accumulated outgoing packets (in KB) since the last time the <b>clear multicast statistics</b> command was issued.
<b>Mismatch error</b>	Number of mismatches that were ignored because of internal errors.
<b>Mismatch No Route</b>	Number of mismatches that were ignored because there was no route to the source.
<b>Routing Notify</b>	Number of times that the multicast routing system has been notified of a new multicast source by a multicast routing protocol .
<b>Resolve Error</b>	Number of resolve requests that were ignored because of internal errors.
<b>In Packets</b>	Total number of incoming packets since the last time the <b>clear multicast statistics</b> command was issued.
<b>Out Packets</b>	Total number of outgoing packets since the last time the <b>clear multicast statistics</b> command was issued.
<b>Resolve requests on interfaces not enabled for multicast <i>n</i></b>	Number of resolve requests on interfaces that are not enabled for multicast that have accumulated since the <b>clear multicast statistics</b> command was last issued.
<b>Resolve requests with no route to source <i>n</i></b>	Number of resolve requests with no route to the source that have accumulated since the <b>clear multicast statistics</b> command was last issued.
<b>Routing notifications on interfaces not enabled for multicast <i>n</i></b>	Number of routing notifications on interfaces not enabled for multicast that have accumulated since the <b>clear multicast statistics</b> command was last issued.
<b>Routing notifications with no route to source <i>n</i></b>	Number of routing notifications with no route to the source that have accumulated since the <b>clear multicast statistics</b> command was last issued.
<b>Interface Mismatches on interfaces not enabled for multicast <i>n</i></b>	Number of interface mismatches on interfaces not enabled for multicast that have accumulated since the <b>clear multicast statistics</b> command was last issued.

*Table 132: show multicast statistics Output Fields (continued)*

Field Name	Field Description
<b>Group Membership on interfaces not enabled for multicast</b> <i>n</i>	Number of group memberships on interfaces not enabled for multicast that have accumulated since the <b>clear multicast statistics</b> command was last issued.

## show pim bootstrap

**List of Syntax** [Syntax on page 1892](#)  
[Syntax \(EX Series Switch and the QFX Series\) on page 1892](#)

**Syntax** show pim bootstrap  
 <instance *instance-name*>  
 <logical-system (all | *logical-system-name*)>

**Syntax (EX Series Switch and the QFX Series)** show pim bootstrap  
 <instance *instance-name*>

**Release Information** Command introduced before Junos OS Release 7.4.  
 Command introduced in Junos OS Release 9.0 for EX Series switches.  
**instance** option introduced in Junos OS Release 10.0 for EX Series switches.  
 Command introduced in Junos OS Release 11.3 for the QFX Series.  
 Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.

**Description** For sparse mode only, display information about Protocol Independent Multicast (PIM) bootstrap routers.

**Options** **none**—Display PIM bootstrap router information for all routing instances.

**instance *instance-name***—(Optional) Display information about bootstrap routers for a specific PIM-enabled routing instance.

**logical-system (all | *logical-system-name*)**—(Optional) Perform this operation on all logical systems or on a particular logical system.

**Required Privilege Level** view

**List of Sample Output** [show pim bootstrap on page 1893](#)  
[show pim bootstrap instance on page 1893](#)

**Output Fields** [Table 134 on page 1892](#) describes the output fields for the **show pim bootstrap** command. Output fields are listed in the approximate order in which they appear.

*Table 134: show pim bootstrap Output Fields*

Field Name	Field Description
Instance	Name of the routing instance.
BSR	Bootstrap router.
Pri	Priority of the routing device as elected to be the bootstrap router.

*Table 134: show pim bootstrap Output Fields (continued)*

Field Name	Field Description
<b>Local address</b>	Local routing device address.
<b>Pri</b>	Local routing device address priority to be elected as the bootstrap router.
<b>State</b>	Local routing device election state: <b>Candidate</b> , <b>Elected</b> , or <b>Ineligible</b> .
<b>Timeout</b>	How long until the local routing device declares the bootstrap router to be unreachable, in seconds.

## Sample Output

### show pim bootstrap

```
user@host> show pim bootstrap
Instance: PIM.master
```

BSR	Pri	Local address	Pri	State	Timeout
None	0	10.255.71.46	0	InEligible	0
2001:db8:1:1:1:0:aff:785c	34	2001:db8:1:1:1:0:aff:7c12	0	InEligible	0

### show pim bootstrap instance

```
user@host> show pim bootstrap instance VPN-A
Instance: PIM.VPN-A
```

BSR	Pri	Local address	Pri	State	Timeout
None	0	192.168.196.105	0	InEligible	0

<b>List of Sample Output</b>	<a href="#">show pim interfaces on page 1896</a>
<b>Output Fields</b>	<p><a href="#">Table 135 on page 1894</a> describes the output fields for the <b>show pim interfaces</b> command. Output fields are listed in the approximate order in which they appear.</p>

Table 135: show pim interfaces Output Fields

Field Name	Field Description
Instance	Name of the routing instance.

Table 135: *show pim interfaces* Output Fields (continued)

Field Name	Field Description
<b>Name</b>	Interface name.
<b>State</b>	State of the interface. The state also is displayed in the <b>show interfaces</b> command.
<b>Mode</b>	<p>PIM mode running on the interface:</p> <ul style="list-style-type: none"> <li>• <b>B</b>—In bidirectional mode, multicast groups are carried across the network over bidirectional shared trees. This type of tree minimizes PIM routing state, which is especially important in networks with numerous and dispersed senders and receivers.</li> <li>• <b>S</b>—In sparse mode, routing devices must join and leave multicast groups explicitly. Upstream routing devices do not forward multicast traffic to this routing device unless this device has sent an explicit request (using a join message) to receive multicast traffic.</li> <li>• <b>Dense</b>—Unlike sparse mode, where data is forwarded only to routing devices sending an explicit request, dense mode implements a flood-and-prune mechanism, similar to DVMRP (the first multicast protocol used to support the multicast backbone). (Not supported on QFX Series.)</li> <li>• <b>Sparse-Dense</b>—Sparse-dense mode allows the interface to operate on a per-group basis in either sparse or dense mode. A group specified as <b>dense</b> is not mapped to a rendezvous point (RP). Instead, data packets destined for that group are forwarded using PIM-Dense Mode (PIM-DM) rules. A group specified as <b>sparse</b> is mapped to an RP, and data packets are forwarded using PIM-Sparse Mode (PIM-SM) rules.</li> </ul> <p>When sparse-dense mode is configured, the output includes both <b>S</b> and <b>D</b>. When bidirectional-sparse mode is configured, the output includes <b>S</b> and <b>B</b>. When bidirectional-sparse-dense mode is configured, the output includes <b>B</b>, <b>S</b>, and <b>D</b>.</p>
<b>IP</b>	Version number of the address family on the interface: <b>4</b> (IPv4) or <b>6</b> (IPv6).
<b>V</b>	PIM version running on the interface: 1 or 2.
<b>State</b>	<p>State of PIM on the interface:</p> <ul style="list-style-type: none"> <li>• <b>Active</b>—Bidirectional mode is enabled on the interface and on all PIM neighbors.</li> <li>• <b>DR</b>—Designated router.</li> <li>• <b>NotCap</b>—Bidirectional mode is not enabled on the interface. This can happen when bidirectional PIM is not configured locally, when one of the neighbors is not configured for bidirectional PIM, or when one of the neighbors has not implemented the bidirectional PIM protocol.</li> <li>• <b>NotDR</b>—Not the designated router.</li> <li>• <b>P2P</b>—Point to point.</li> </ul>
<b>NbrCnt</b>	Number of neighbors that have been seen on the interface.
<b>JoinCnt(sg)</b>	Number of (s,g) join messages that have been seen on the interface.
<b>JointCnt(*g)</b>	Number of (*g) join messages that have been seen on the interface.
<b>DR address</b>	Address of the designated router.

## Sample Output

### show pim interfaces

```
user@host> show pim interfaces
```

Stat = Status, V = Version, NbrCnt = Neighbor Count,

                  <sg | star-g>

**Release Information**    Command introduced before Junos OS Release 7.4.  
                          Command introduced in Junos OS Release 9.0 for EX Series switches.  
                          **summary** option introduced in Junos OS Release 9.6.  
                          **inet6** and **instance** options introduced in Junos OS Release 10.0 for EX Series switches.  
                          Support for bidirectional PIM added in Junos OS Release 12.1.  
                          Command introduced in Junos OS Release 11.3 for the QFX Series.  
                          Multiple new filter options introduced in Junos OS Release 13.2.  
                          Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.  
                          **downstream-count** option introduced in Junos OS Release 16.1.  
                          Support for PIM NSR support for VXLAN added in Junos OS Release 16.2  
                          Support for RFC 5496 (via **rpf-vector**) added in Junos OS Release 17.3R1.

**Description**    Display information about Protocol Independent Multicast (PIM) groups for all PIM modes.

For bidirectional PIM, display information about PIM group ranges (\*G-range) for each active bidirectional RP group range, in addition to each of the joined (\*G) routes.

**Options**    **none**—Display the standard information about PIM groups for all supported family addresses for all routing instances.

**brief | detail | extensive | summary**—(Optional) Display the specified level of output.

**bidirectional | dense | sparse**—(Optional) Display information about PIM bidirectional mode, dense mode, or sparse and source-specific multicast (SSM) mode entries.

**downstream-count**—(Optional) Display the downstream count instead of a list.

**exact**—(Optional) Display information about only the group that exactly matches the specified group address.

**inet | inet6**—(Optional) Display PIM group information for IPv4 or IPv6 family addresses, respectively.

**instance *instance-name***—(Optional) Display information about groups for the specified PIM-enabled routing instance only.

**logical-system (all | *logical-system-name*)**—(Optional) Perform this operation on all logical systems or on a particular logical system.

**range**—(Optional) Address range of the group, specified as *prefix/prefix-length*.

**rp *ip-address/prefix* | source *ip-address/prefix***—(Optional) Display information about the PIM entries with a specified rendezvous point (RP) address and prefix or with a specified source address and prefix. You can omit the prefix.

**sg | star-g**—(Optional) Display information about PIM (S,G) or (\*,G) entries.

*Table 136: show pim join Output Fields*

Field Name	Field Description	Level of Output
<b>Instance</b>	Name of the routing instance.	<b>brief detail extensive summary none</b>
<b>Family</b>	Name of the address family: <b>inet</b> (IPv4) or <b>inet6</b> (IPv6).	<b>brief detail extensive summary none</b>
<b>Route type</b>	Type of multicast route: (S,G) or (*,G).	<b>summary</b>
<b>Route count</b>	Number of (S,G) routes and number of (*,G) routes.	<b>summary</b>
<b>R</b>	Rendezvous Point Tree.	<b>brief detail extensive none</b>
<b>S</b>	Sparse.	<b>brief detail extensive none</b>
<b>W</b>	Wildcard.	<b>brief detail extensive none</b>
<b>Group</b>	Group address.	<b>brief detail extensive none</b>
<b>Bidirectional group prefix length</b>	For bidirectional PIM, length of the IP prefix for RP group ranges.	All levels
<b>Source</b>	Multicast source: <ul style="list-style-type: none"> <li>• * (wildcard value)</li> <li>• <i>ipv4-address</i></li> <li>• <i>ipv6-address</i></li> </ul>	<b>brief detail extensive none</b>
<b>RP</b>	Rendezvous point for the PIM group.	<b>brief detail extensive none</b>
<b>Flags</b>	PIM flags: <ul style="list-style-type: none"> <li>• <b>bidirectional</b>—Bidirectional mode entry.</li> <li>• <b>dense</b>—Dense mode entry.</li> <li>• <b>rptree</b>—Entry is on the rendezvous point tree.</li> <li>• <b>sparse</b>—Sparse mode entry.</li> <li>• <b>spt</b>—Entry is on the shortest-path tree for the source.</li> <li>• <b>wildcard</b>—Entry is on the shared tree.</li> </ul>	<b>brief detail extensive none</b>

Table 136: show pim join Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Upstream interface</b>	<p>RPF interface toward the source address for the source-specific state (S,G) or toward the rendezvous point (RP) address for the non-source-specific state (*G).</p> <p>For bidirectional PIM, <b>RP Link</b> means that the interface is directly connected to a subnet that contains a phantom RP address.</p> <p>A pseudo multipoint LDP (M-LDP) interface appears on egress nodes in M-LDP point-to-multipoint LSPs with inband signaling.</p>	<b>brief detail extensive none</b>
<b>Upstream neighbor</b>	<p>Information about the upstream neighbor: <b>Direct</b>, <b>Local</b>, <b>Unknown</b>, or a specific IP address.</p> <p>For bidirectional PIM, <b>Direct</b> means that the interface is directly connected to a subnet that contains a phantom RP address.</p> <p>The multipoint LDP (M-LDP) root appears on egress nodes in M-LDP point-to-multipoint LSPs with inband signaling.</p>	<b>extensive</b>
Upstream rpf-vector	Information about the upstream Reverse Path Forwarding (RPF) vector; appears in conjunction with the <b>rpf-vector</b> command.	<b>extensive</b>
Active upstream interface	When multicast-only fast reroute (MoFRR) is configured in a PIM domain, the upstream interface for the active path. A PIM router propagates join messages on two upstream RPF interfaces to receive multicast traffic on both links for the same join request. Preference is given to two paths that do not converge to the same immediate upstream router. PIM installs appropriate multicast routes with upstream neighbors as RPF next hops with two (primary and backup) interfaces.	<b>extensive</b>
Active upstream neighbor	On the MoFRR primary path, the IP address of the neighbor that is directly connected to the active upstream interface.	<b>extensive</b>
MoFRR Backup upstream interface	<p>The MoFRR upstream interface that is used when the primary path fails.</p> <p>When the primary path fails, the backup path is upgraded to primary, and traffic is forwarded accordingly. If there are alternate paths available, a new backup path is calculated and the appropriate multicast route is updated or installed.</p>	<b>extensive</b>
MoFRR Backup upstream neighbor	IP address of the MoFRR upstream neighbor.	<b>extensive</b>

Table 136: show pim join Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Upstream state</b>	<p>Information about the upstream interface:</p> <ul style="list-style-type: none"> <li>• <b>Join to RP</b>—Sending a join to the rendezvous point.</li> <li>• <b>Join to Source</b>—Sending a join to the source.</li> <li>• <b>Local RP</b>—Sending neither join messages nor prune messages toward the RP, because this routing device is the rendezvous point.</li> <li>• <b>Local Source</b>—Sending neither join messages nor prune messages toward the source, because the source is locally attached to this routing device.</li> <li>• <b>No Prune to RP</b>—Automatically sent to RP when SPT and RPT are on the same path.</li> <li>• <b>Prune to RP</b>—Sending a prune to the rendezvous point.</li> <li>• <b>Prune to Source</b>—Sending a prune to the source.</li> </ul> <p><b>NOTE:</b> RP group range entries have <b>None</b> in the <b>Upstream state</b> field because RP group ranges do not trigger actual PIM join messages between routing devices.</p>	<b>extensive</b>
<b>Downstream neighbors</b>	<p>Information about downstream interfaces:</p> <ul style="list-style-type: none"> <li>• <b>Interface</b>—Interface name for the downstream neighbor. A pseudo PIM-SM interface appears for all IGMP-only interfaces. A pseudo multipoint LDP (Pseudo-MLDP) interface appears on ingress root nodes in M-LDP point-to-multipoint LSPs with inband signaling.</li> <li>• <b>Interface address</b>—Address of the downstream neighbor.</li> <li>• <b>State</b>—Information about the downstream neighbor: <b>join</b> or <b>prune</b>.</li> <li>• <b>Flags</b>—PIM join flags: <b>R (RPtree)</b>, <b>S (Sparse)</b>, <b>W (Wildcard)</b>, or <b>zero</b>.</li> <li>• <b>Uptime</b>—Time since the downstream interface joined the group.</li> <li>• <b>Time since last Join</b>—Time since the last join message was received from the downstream interface.</li> <li>• <b>Time since last Prune</b>—Time since the last prune message was received from the downstream interface.</li> <li>• <b>rpf-vector</b>—IP address of the RPF vector TLV .</li> </ul>	<b>extensive</b>
<b>Number of downstream interfaces</b>	Total number of outgoing interfaces for each (S,G) entry.	<b>extensive</b>
<b>Assert Timeout</b>	Length of time between assert cycles on the downstream interface. Not displayed if the assert timer is null.	<b>extensive</b>
<b>Keepalive timeout</b>	Time remaining until the downstream join state is updated (in seconds). If the downstream join state is not updated before this keepalive timer reaches zero, the entry is deleted. If there is a directly connected host, <b>Keepalive timeout</b> is <b>Infinity</b> .	<b>extensive</b>
<b>Uptime</b>	Time since the creation of (S,G) or (*G) state. The uptime is not refreshed every time a PIM join message is received for an existing (S,G) or (*G) state.	<b>extensive</b>

Table 136: show pim join Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Bidirectional accepting interfaces</b>	<p>Interfaces on the routing device that forward bidirectional PIM traffic.</p> <p>The reasons for forwarding bidirectional PIM traffic are that the interface is the winner of the designated forwarder election (<b>DF Winner</b>), or the interface is the reverse path forwarding (RPF) interface toward the RP (RPF).</p>	<b>extensive</b>

## show pim mdt

---

<b>Syntax</b>	<code>show pim mdt instance <i>instance-name</i></code> <code>&lt;brief   detail   extensive&gt;</code> <code>data-mdt-joins</code> <code>data-mdt-limit</code> <code>inet</code> <code>inet6</code> <code>&lt;incoming   outgoing&gt;</code> <code>&lt;logical-system (all   logical-system-name)&gt;</code> <code>&lt;range&gt;</code>
<b>Release Information</b>	Command introduced before Junos OS Release 7.4. Support for IPv6 added in Junos OS Release 17.3R1.
<b>Description</b>	Display information about Protocol Independent Multicast (PIM) default multicast distribution tree (MDT) and the data MDTs in a Layer 3 VPN environment for a routing instance.
<b>Options</b>	<p><b>instance <i>instance-name</i></b>—Display information about data-MDTs for a specific PIM-enabled routing instance.</p> <p><b>brief   detail   extensive</b>—(Optional) Display the specified level of output.</p> <p><b>data-mdt-joins</b>— Show received PIM data-mdt-joins.</p> <p><b>data-mdt-limits</b>— Show received PIM data-mdt-limits.</p> <p><b>incoming   outgoing</b>—(Optional) Display incoming or outgoing multicast data tunnels, respectively.</p> <p><b>inet   inet6</b>—Display IPv4 or IPv6 multicast data tunnels.</p> <p><b>logical-system (all   <i>logical-system-name</i>)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p> <p><b>range</b>—(Optional) Display information about an IP address with optional prefix length representing a particular multicast group.</p>
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">show pim mdt &lt;variables&gt; instance on page 1913</a> <a href="#">show pim mdt instance detail on page 1914</a> <a href="#">show pim mdt instance extensive on page 1914</a> <a href="#">show pim mdt instance incoming on page 1915</a> <a href="#">show pim mdt instance outgoing on page 1915</a> <a href="#">show pim mdt instance (SSM Mode) on page 1915</a>

**Output Fields** Table 137 on page 1913 describes the output fields for the **show pim mdt** command. Output fields are listed in the approximate order in which they appear.

*Table 137: show pim mdt Output Fields*

Field Name	Field Description	Level of Output
<b>Instance</b>	Name of the routing instance.	All levels
<b>Tunnel direction</b>	Direction the tunnel faces, from the router's perspective: <b>Outgoing</b> or <b>Incoming</b> .	All levels
<b>Tunnel mode</b>	Mode the tunnel is operating in: <b>PIM-SSM</b> or <b>PIM-ASM</b> .	All levels
<b>Default group address</b>	Default multicast group address using this tunnel.	All levels
<b>Default source address</b>	Default multicast source address using this tunnel.	All levels
<b>Default tunnel interface</b>	Default multicast tunnel interface.	All levels
<b>Default tunnel source</b>	Address used as the source address for outgoing PIM control messages.	All levels
<b>C-Group</b>	Customer-facing multicast group address using this tunnel. If you enable dynamic reuse of data MDT group addresses, more than one group address can use the same data MDT.	<b>detail</b>
<b>C-Source</b>	IP address of the multicast source in the customer's address space. If you enable dynamic reuse of data MDT group addresses, more than one source address can use the same data MDT.	<b>detail</b>
<b>P-Group</b>	Service provider-facing multicast group address using this tunnel.	<b>detail</b>
<b>Data tunnel interface</b>	Multicast data tunnel interface that set up the data-MDT tunnel.	<b>detail</b>
<b>Last known forwarding rate</b>	Last known rate, in kilobits per second, at which the tunnel was forwarding traffic.	<b>detail</b>
<b>Configured threshold rate</b>	Rate, in kilobits per second, above which a data-MDT tunnel is created and below which it is deleted.	<b>detail</b>
<b>Tunnel uptime</b>	Time that this data-MDT tunnel has existed. The format is <i>hours:minutes:seconds</i> .	<b>detail</b>

## Sample Output

### show pim mdt <variables> instance

Use this command to display MDT information for default MDT and data-MDT for IPv4 and/or IPv6 traffic. )

```
user@host> show pim mdt inet | inet6 instance VPN-A
Instance: PIM.VPN-A Family: INET
Tunnel direction: Outgoing

```

## show pim mdt data-mdt-joins

---

**Syntax** `show pim mdt data-mdt-joins`  
`<logical-system (all | logical-system-name)> instance instance-name`

**Release Information** Command introduced in Junos OS Release 11.2.

**Description** In a draft-rosen Layer 3 multicast virtual private network (MVPN) configured with service provider tunnels, display the advertisements of new multicast distribution tree (MDT) group addresses cached by the provider edge (PE) routers in the specified VPN routing and forwarding (VRF) instance that is configured to use the Protocol Independent Multicast (PIM) protocol.

**Options** **instance *instance-name***—Display data MDT join packets cached by PE routers in a specific PIM instance.

**logical-system (all | *logical-system-name*)**—(Optional) Perform this operation on all logical systems or on a particular logical system.

**NOTE:** Draft-rosen multicast VPNs are not supported in a logical system environment even though the configuration statements can be configured under the logical-systems hierarchy.

**Required Privilege Level** view

**Related Documentation**

- *Understanding Data MDTs*
- *Example: Configuring Data MDTs and Provider Tunnels Operating in Source-Specific Multicast Mode*
- *Example: Configuring Data MDTs and Provider Tunnels Operating in Any-Source Multicast Mode*

**List of Sample Output** [show pim mdt data-mdt-joins on page 1917](#)

**Output Fields** [Table 138 on page 1917](#) describes the output fields for the **show pim mdt data-mdt-joins** command. Output fields are listed in the approximate order in which they appear.

Table 138: show pim mdt data-mdt-joins Output Fields

Field Name	Field Description
<b>C-Group</b>	IPv4 group address in the address space of the customer's VPN-specific PIM-enabled routing instance of the multicast traffic destination. This 32-bit value is carried in the C-group field of the MDT join TLV packet.
<b>C-Source</b>	IPv4 address in the address space of the customer's VPN-specific PIM-enabled routing instance of the multicast traffic source. This 32-bit value is carried in the C-source field of the MDT join TLV packet.
<b>P-Group</b>	IPv4 group address in the service provider's address space of the new data MDT that the PE router will use to encapsulate the VPN multicast traffic flow (C-Source, C-Group). This 32-bit value is carried in the P-group field of the MDT join TLV packet.
<b>P-Source</b>	IPv4 address of the PE router.
<b>Timeout</b>	Timeout, in seconds, remaining for this cache entry. When the cache entry is created, this field is set to 180 seconds. After an entry times out, the PE router deletes the entry from its cache and prunes itself off the data MDT.

## Sample Output

### show pim mdt data-mdt-joins

```

user@host show pim mdt data-mdt-joins instance VPN-A
C-Source   C-Group   P-Source   P-Group   Timeout
20.2.15.9  225.1.1.2 20.0.0.5   239.10.10.0 172
20.2.15.9  225.1.1.3 20.0.0.5   239.10.10.1 172

```

## show pim mdt data-mdt-limit

**Syntax** `show pim mdt data-mdt-limit instance instance-name`  
`<logical-system (all | logical-system-name)>`

**Release Information** Command introduced in Junos OS Release 12.2.

**Description** Display the maximum number configured and the currently active data multicast distribution trees (MDTs) for a specific VPN routing and forwarding (VRF) instance.

**Options** **instance *instance-name***—Display data MDT information for the specified VRF instance.  
**logical-system (all | *logical-system-name*)**—(Optional) Perform this operation on all logical systems or on a particular logical system.

**NOTE:** Draft-rosen multicast VPNs are not supported in a logical system environment even though the configuration statements can be configured under the logical-systems hierarchy.

**Required Privilege Level** view

**List of Sample Output** [show pim mdt data-mdt-limit on page 1919](#)

**Output Fields** [Table 139 on page 1918](#) describes the output fields for the **show pim mdt data-mdt-limit** command. Output fields are listed in the approximate order in which they appear.

*Table 139: show pim mdt data-mdt-limit Output Fields*

Field Name	Field Description
Maximum Data Tunnels	Maximum number of data MDTs created in this VRF instance. If the number is 0, no data MDTs are created for this VRF instance.
Active Data Tunnels	Active number of data MDTs in this VRF instance.

## Sample Output

### show pim mdt data-mdt-limit

```
user@host show pim mdt data-mdt-limit instance VPN-A
Maximum Data Tunnels          10
Active Data Tunnels           2
```

**Output Fields** Table 140 on page 1921 describes the output fields for the **show pim neighbors** command. Output fields are listed in the approximate order in which they appear.

*Table 140: show pim neighbors Output Fields*

Field Name	Field Description	Level of Output
<b>Instance</b>	Name of the routing instance.	All levels
<b>Interface</b>	Interface through which the neighbor is reachable.	All levels
<b>Neighbor addr</b>	Address of the neighboring PIM routing device.	All levels
<b>IP</b>	IP version: 4 or 6.	All levels
<b>V</b>	PIM version running on the neighbor: 1 or 2.	All levels
<b>Mode</b>	PIM mode of the neighbor: <b>Sparse</b> , <b>Dense</b> , <b>SparseDense</b> , or <b>Unknown</b> . When the neighbor is running PIM version 2, this mode is always <b>Unknown</b> .	All levels
<b>Option</b>	Can be one or more of the following: <ul style="list-style-type: none"> <li>• <b>B</b>—Bidirectional Capable.</li> <li>• <b>G</b>—Generation Identifier.</li> <li>• <b>H</b>—Hello Option Holdtime.</li> <li>• <b>L</b>—Hello Option LAN Prune Delay.</li> <li>• <b>P</b>—Hello Option DR Priority.</li> <li>• <b>T</b>—Tracking bit.</li> <li>• <b>A</b>—Join attribute; used in conjunction with <b>pim rpf-vector</b>.</li> </ul>	<b>brief</b> none
<b>Uptime</b>	Time the neighbor has been operational since the PIM process was last initialized. Starting in Junos OS release 17.3R1, <b>uptime</b> is not reset during ISSU. The time format is as follows: <b>dd:hh:mm:ss ago</b> for less than a week and <b>nwnd:hh:mm:ss ago</b> for more than a week.	All levels
<b>Address</b>	Address of the neighboring PIM routing device.	<b>detail</b>
<b>BFD</b>	Status and operational state of the Bidirectional Forwarding Detection (BFD) protocol on the interface: <b>Enabled</b> , <b>Operational state is up</b> , or <b>Disabled</b> .	<b>detail</b>
<b>Hello Option Holdtime</b>	Time for which the neighbor is available, in seconds. The range of values is 0 through 65,535.	<b>detail</b>
<b>Hello Default Holdtime</b>	Default holdtime and the time remaining if the <b>holdtime</b> option is not in the received hello message.	<b>detail</b>
<b>Hello Option DR Priority</b>	Designated router election priority. The range of values is 0 through 255.	<b>detail</b>
<b>Hello Option Join Attribute</b>	Appears in conjunction with the <b>rpf-vector</b> command. The Join attribute is included in the PIM join messages of PIM routers that can receive type 1 Encoded-Source Address.	<b>detail</b>

Table 140: show pim neighbors Output Fields (continued)

Field Name	Field Description	Level of Output
Hello Option Generation ID	9-digit or 10-digit number used to tag hello messages.	detail
Hello Option Bi-Directional PIM supported	Neighbor can process bidirectional PIM messages.	detail
Hello Option LAN Prune Delay	Time to wait before the neighbor receives prune messages, in the format <b>delay nnn ms override nnnn ms</b> .	detail
Join Suppression supported	Neighbor is capable of join suppression.	detail
Rx Join	Information about joins received from the neighbor. <ul style="list-style-type: none"> <li>• <b>Group</b>—Group addresses in the join message.</li> <li>• <b>Source</b>—Address of the source in the join message.</li> <li>• <b>Timeout</b>—Time for which the join is valid.</li> </ul>	detail

  `<brief | detail | extensive>`  
  `<group-address>`  
  `<inet | inet6>`  
  `<instance instance-name>`

**Release Information**   Command introduced before Junos OS Release 7.4.  
                              Command introduced in Junos OS Release 9.0 for EX Series switches.  
                              **inet6** and **instance** options introduced in Junos OS Release 10.0 for EX Series switches.  
                              Command introduced in Junos OS Release 11.3 for the QFX Series.  
                              Support for bidirectional PIM added in Junos OS Release 12.1.  
                              Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.

**Description**   Display information about Protocol Independent Multicast (PIM) rendezvous points (RPs).

**Options**   **none**—Display standard information about PIM RPs for all groups and family addresses for all routing instances.

**brief | detail | extensive**—(Optional) Display the specified level of output.

**group-address**—(Optional) Display the RPs for a particular group. If you specify a group address, the output lists the routing device that is the RP for that group.

**inet | inet6**—(Optional) Display information for IPv4 or IPv6 family addresses, respectively.

**instance instance-name**—(Optional) Display information about RPs for a specific PIM-enabled routing instance.

**logical-system (all | logical-system-name)**—(Optional) Perform this operation on all logical systems or on a particular logical system.

**Required Privilege Level**   view

**Output Fields** [Table 141 on page 1925](#) describes the output fields for the **show pim rps** command. Output fields are listed in the approximate order in which they appear.

*Table 141: show pim rps Output Fields*

Field Name	Field Description	Level of Output
<b>Instance</b>	Name of the routing instance.	All levels
<b>Family or Address family</b>	Name of the address family: <b>inet</b> (IPv4) or <b>inet6</b> (IPv6).	All levels
<b>RP address</b>	Address of the rendezvous point.	All levels
<b>Type</b>	Type of RP: <ul style="list-style-type: none"> <li><b>auto-rp</b>—Address of the RP known through the Auto-RP protocol.</li> <li><b>bootstrap</b>—Address of the RP known through the bootstrap router protocol (BSR).</li> <li><b>embedded</b>—Address of the RP known through an embedded RP (IPv6).</li> <li><b>static</b>—Address of RP known through static configuration.</li> </ul>	<b>brief none</b>
<b>Holdtime</b>	How long to keep the RP active, with time remaining, in seconds.	All levels
<b>Timeout</b>	How long until the local routing device determines the RP to be unreachable, in seconds.	All levels
<b>Groups</b>	Number of groups currently using this RP.	All levels
<b>Group prefixes</b>	Addresses of groups that this RP can span.	<b>brief none</b>
<b>Learned via</b>	Address and method by which the RP was learned.	<b>detail extensive</b>

Table 141: show pim rps Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Mode</b>	The PIM mode of the RP: bidirectional or sparse.  If a sparse and bidirectional RPs are configured with the same RP address, they appear as separate entries in both formats.	All levels
<b>Time Active</b>	How long the RP has been active, in the format <i>hh:mm:ss</i> .	detail extensive
<b>Device Index</b>	Index value of the order in which Junos OS finds and initializes the interface.  For bidirectional RPs, the <b>Device Index</b> output field is omitted because bidirectional RPs do not require encapsulation and de-encapsulation interfaces.	detail extensive
<b>Subunit</b>	Logical unit number of the interface.  For bidirectional RPs, the <b>Subunit</b> output field is omitted because bidirectional RPs do not require encapsulation and de-encapsulation interfaces.	detail extensive
<b>Interface</b>	Either the encapsulation or the de-encapsulation logical interface, depending on whether this routing device is a designated router (DR) facing an RP router, or is the local RP, respectively.  For bidirectional RPs, the <b>Interface</b> output field is omitted because bidirectional RPs do not require encapsulation and de-encapsulation interfaces.	detail extensive
<b>Group Ranges</b>	Addresses of groups that this RP spans.	detail extensive <i>group-address</i>
<b>Active groups using RP</b>	Number of groups currently using this RP.	detail extensive
<b>total</b>	Total number of active groups for this RP.	detail extensive

Table 141: show pim rps Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Register State for RP</b>	<p>Current register state for each group:</p> <ul style="list-style-type: none"> <li>• <b>Group</b>—Multicast group address.</li> <li>• <b>Source</b>—Multicast source address for which the PIM register is sent or received, depending on whether this router is a designated router facing an RP router, or is the local RP, respectively:</li> <li>• <b>First Hop</b>—PIM-designated routing device that sent the Register message (the source address in the IP header).</li> <li>• <b>RP Address</b>—RP to which the Register message was sent (the destination address in the IP header).</li> <li>• <b>State</b>: <ul style="list-style-type: none"> <li>On the designated router: <ul style="list-style-type: none"> <li>• <b>Send</b>—Sending Register messages.</li> <li>• <b>Probe</b>—Sent a null register. If a Register-Stop message does not arrive in 5 seconds, the designated router resumes sending Register messages.</li> <li>• <b>Suppress</b>—Received a Register-Stop message. The designated router is waiting for the timer to resume before changing to <b>Probe</b> state.</li> </ul> </li> <li>On the RP: <ul style="list-style-type: none"> <li>• <b>Receive</b>—Receiving Register messages.</li> </ul> </li> </ul> </li> </ul>	<b>extensive</b>
<b>Anycast-PIM rpset</b>	If anycast RP is configured, the addresses of the RPs in the set.	<b>extensive</b>
<b>Anycast-PIM local address used</b>	If anycast RP is configured, the local address used by the RP.	<b>extensive</b>
<b>Anycast-PIM Register State</b>	<p>If anycast RP is configured, the current register state for each group:</p> <ul style="list-style-type: none"> <li>• <b>Group</b>—Multicast group address.</li> <li>• <b>Source</b>—Multicast source address for which the PIM register is sent or received, depending on whether this routing device is a designated router facing an RP router, or is the local RP, respectively.</li> <li>• <b>Origin</b>—How the information was obtained: <ul style="list-style-type: none"> <li>• <b>DIRECT</b>—From a local attachment</li> <li>• <b>MSDP</b>—From the Multicast Source Discovery Protocol (MSDP)</li> <li>• <b>DR</b>—From the designated router</li> </ul> </li> </ul>	<b>extensive</b>
<b>RP selected</b>	For sparse mode and bidirectional mode, the identity of the RP for the specified group address.	<i>group-address</i>

## show pim snooping join

<b>Syntax</b>	show pim snooping join <brief   detail   extensive> <instance <i>instance-name</i> > <logical-system <i>logical-system-name</i> > <vlan-id <i>vlan-id</i> >
<b>Release Information</b>	Command introduced in Junos OS Release 12.3 for MX Series 3D Universal Edge devices. Command introduced in Junos OS Release 13.2 for M Series Multiservice Edge devices.
<b>Description</b>	Display information about Protocol Independent Multicast (PIM) snooping joins.
<b>Options</b>	<p><b>none</b>—Display detailed information.</p> <p><b>brief   detail   extensive</b>—(Optional) Display the specified level of output.</p> <p><b>instance <i>instance-name</i></b>—(Optional) Display PIM snooping join information for the specified routing instance.</p> <p><b>logical-system <i>logical-system-name</i></b>—(Optional) Display information about a particular logical system, or type 'all'.</p> <p><b>vlan-id <i>vlan-identifier</i></b>—(Optional) Display PIM snooping join information for the specified VLAN.</p>
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li><i>PIM Snooping for VPLS</i></li> </ul>
<b>List of Sample Output</b>	<a href="#">show pim snooping join on page 1937</a> <a href="#">show pim snooping join extensive on page 1937</a> <a href="#">show pim snooping join instance on page 1937</a> <a href="#">show pim snooping join vlan-id on page 1938</a>
<b>Output Fields</b>	Table 143 on page 1935 lists the output fields for the <b>show pim snooping join</b> command. Output fields are listed in the approximate order in which they appear.

Table 143: show pim snooping join Output Fields

Field Name	Field Description	Level of Output
Instance	Routing instance for PIM snooping.	All levels
Learning-Domain	Learning domain for PIM snooping.	All levels
Group	Multicast group address.	All levels

Table 143: show pim snooping join Output Fields (continued)

Field Name	Field Description	Level of Output
Source	Multicast source address: <ul style="list-style-type: none"> <li>• * (wildcard value)</li> <li>• &lt;ipv4-address&gt;</li> <li>• &lt;ipv6-address&gt;</li> </ul>	All levels
Flags	PIM flags: <ul style="list-style-type: none"> <li>• <b>bidirectional</b>—Bidirectional mode entry.</li> <li>• <b>dense</b>—Dense mode entry.</li> <li>• <b>rptree</b>—Entry is on the rendezvous point tree.</li> <li>• <b>sparse</b>—Sparse mode entry.</li> <li>• <b>spt</b>—Entry is on the shortest-path tree for the source.</li> <li>• <b>wildcard</b>—Entry is on the shared tree.</li> </ul>	All levels
Upstream state	Information about the upstream interface: <ul style="list-style-type: none"> <li>• <b>Join to RP</b>—Sending a join to the rendezvous point.</li> <li>• <b>Join to Source</b>—Sending a join to the source.</li> <li>• <b>Local RP</b>—Sending neither join messages nor prune messages toward the RP, because this router is the rendezvous point.</li> <li>• <b>Local Source</b>—Sending neither join messages nor prune messages toward the source, because the source is locally attached to this routing device.</li> <li>• <b>Prune to RP</b>—Sending a prune to the rendezvous point.</li> <li>• <b>Prune to Source</b>—Sending a prune to the source.</li> </ul> <p><b>NOTE:</b> RP group range entries have <b>None</b> in the <b>Upstream state</b> field because RP group ranges do not trigger actual PIM join messages between routers.</p>	All levels
Upstream neighbor	Information about the upstream neighbor: <b>Direct</b> , <b>Local</b> , <b>Unknown</b> , or a specific IP address. <p>For bidirectional PIM, <b>Direct</b> means that the interface is directly connected to a subnet that contains a phantom RP address.</p>	All levels
Upstream port	RPF interface toward the source address for the source-specific state (S,G) or toward the rendezvous point (RP) address for the non-source-specific state (*G). <p>For bidirectional PIM, <b>RP Link</b> means that the interface is directly connected to a subnet that contains a phantom RP address.</p>	All levels
Downstream port	Information about downstream interfaces.	<b>extensive</b>
Downstream neighbors	Address of the downstream neighbor.	<b>extensive</b>
Timeout	Time remaining until the downstream join state is updated (in seconds).	<b>extensive</b>

## Sample Output

<b>Syntax</b>	show pim snooping statistics <instance <i>instance-name</i> > <interface <i>interface-name</i> > <logical-system <i>logical-system-name</i> > <vlan-id <i>vlan-id</i> >
<b>Release Information</b>	Command introduced in Junos OS Release 12.3 for MX Series 3D Universal Edge devices. Command introduced in Junos OS Release 13.2 for M Series Multiservice Edge devices.
<b>Description</b>	Display Protocol Independent Multicast (PIM) snooping statistics.
<b>Options</b>	<p><b>none</b>—Display PIM statistics.</p> <p><b>instance <i>instance-name</i></b>—(Optional) Display statistics for a specific routing instance enabled by Protocol Independent Multicast (PIM) snooping.</p> <p><b>interface <i>interface-name</i></b>—(Optional) Display statistics about the specified interface for PIM snooping.</p> <p><b>logical-system <i>logical-system-name</i></b>—(Optional) Display information about a particular logical system, or type 'all'.</p> <p><b>vlan-id <i>vlan-identifier</i></b>—(Optional) Display PIM snooping statistics information for the specified VLAN.</p>
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>PIM Snooping for VPLS</i></li> <li>• <a href="#">clear pim snooping statistics on page 1762</a></li> </ul>

<b>Output Fields</b>	<a href="#">Table 145 on page 1944</a> lists the output fields for the <b>show pim snooping statistics</b> command. Output fields are listed in the approximate order in which they appear.

Table 145: show pim snooping statistics Output Fields

Field Name	Field Description	Level of Output
Instance	Routing instance for PIM snooping.	All levels
Learning-Domain	Learning domain for PIM snooping.	All levels

Table 145: show pim snooping statistics Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Tx J/P messages</b>	Total number of transmitted join/prune packets.	All levels
<b>Rx J/P messages</b>	Total number of received join/prune packets.	All levels
<b>Rx J/P messages -- seen</b>	Number of join/prune packets seen but not received on the upstream interface.	All levels
<b>Rx J/P messages -- received</b>	Number of join/prune packets received on the downstream interface.	All levels
<b>Rx Hello messages</b>	Total number of received hello packets.	All levels
<b>Rx Version Unknown</b>	Number of packets received with an unknown version number.	All levels
<b>Rx Neighbor Unknown</b>	Number of packets received from an unknown neighbor.	All levels
<b>Rx Upstream Neighbor Unknown</b>	Number of packets received with unknown upstream neighbor information.	All levels
<b>Rx Bad Length</b>	Number of packets received containing incorrect length information.	All levels
<b>Rx J/P Busy Drop</b>	Number of join/prune packets dropped while the router is busy.	All levels
<b>Rx J/P Group Aggregate 0</b>	Number of join/prune packets received containing the aggregate group information.	All levels
<b>Rx Malformed Packet</b>	Number of malformed packets received.	All levels
<b>Rx No PIM Interface</b>	Number of packets received without the interface information.	All levels
<b>Rx No Upstream Neighbor</b>	Number of packets received without upstream neighbor information.	All levels
<b>Rx Unknown Hello Option</b>	Number of hello packets received with unknown options.	All levels

## Sample Output

### show pim snooping statistics

```

user@host> show pim snooping statistics
Instance: vpls1
Learning-Domain: vlan-id 10

## [show pim source \(Egress Node with Multipoint LDP Inband Signaling for Point-to-Multipoint LSPs\) on page 1951](#)

**Output Fields** [Table 146 on page 1950](#) describes the output fields for the **show pim source** command. Output fields are listed in the approximate order in which they appear.

*Table 146: show pim source Output Fields*

Field Name	Field Description
<b>Instance</b>	Name of the routing instance.
<b>Source</b>	Address of the source or reverse path.
<b>Prefix/length</b>	Prefix and prefix length for the route used to reach the RPF address.
<b>Upstream Protocol</b>	Protocol toward the source address.
<b>Upstream interface</b>	RPF interface toward the source address.  A pseudo multipoint LDP (M-LDP) interface appears on egress nodes in M-LDP point-to-multipoint LSPs with inband signaling.
<b>Upstream Neighbor</b>	Address of the RPF neighbor used to reach the source address.  The multipoint LDP (M-LDP) root appears on egress nodes in M-LDP point-to-multipoint LSPs with inband signaling.

## Sample Output

### show pim source

```

user@host> show pim source
Instance: PIM.master Family: INET

Source 10.255.14.144
  Prefix 10.255.14.144/32
  Upstream interface Local
  Upstream neighbor Local

Source 10.255.70.15
  Prefix 10.255.70.15/32
  Upstream interface so-1/0/0.0
  Upstream neighbor 10.111.10.2

Instance: PIM.master Family: INET6

```

### show pim source brief

The output for the **show pim source brief** command is identical to that for the **show pim source** command. For sample output, see [show pim source on page 1950](#).

**show pim source detail**

```

user@host> show pim source detail
Instance: PIM.master Family: INET

Source 10.255.14.144
  Prefix 10.255.14.144/32
  Upstream interface Local
  Upstream neighbor Local
  Active groups:233.252.0.0
    233.252.0.1
    233.252.0.1

Source 10.255.70.15
  Prefix 10.255.70.15/32
  Upstream interface so-1/0/0.0
  Upstream neighbor 10.111.10.2
  Active groups:233.252.0.1

Instance: PIM.master Family: INET6

```

**show pim source (Egress Node with Multipoint LDP Inband Signaling for Point-to-Multipoint LSPs)**

```

user@host> show pim source
Instance: PIM.master Family: INET

Source 10.1.1.1
  Prefix 10.1.1.1/32
  Upstream interface Local
  Upstream neighbor Local

Source 10.2.7.7
  Prefix 10.2.7.0/24
  Upstream protocol MLDP
  Upstream interface Pseudo MLDP
  Upstream neighbor MLDP LSP root <10.1.1.2>

Source 192.168.219.11
  Prefix 192.168.219.0/28
  Upstream protocol MLDP
  Upstream interface Pseudo MLDP
  Upstream neighbor via MLDP-inband
  Upstream interface fe-1/3/0.0
  Upstream neighbor 192.168.140.1
  Upstream neighbor MLDP LSP root <10.1.1.2>

Instance: PIM.master Family: INET6
Source 2001:db8::1:2:7:7
  Prefix 2001:db8::1:2:7:0/120
  Upstream protocol MLDP
  Upstream interface Pseudo MLDP
  Upstream neighbor via MLDP-inband
  Upstream interface fe-1/3/0.0
  Upstream neighbor 192.168.140.1
  Upstream neighbor MLDP LSP root <10.1.1.2>

```

## show pim statistics

---

<b>List of Syntax</b>	<a href="#">Syntax on page 1952</a> <a href="#">Syntax (EX Series Switch and the QFX Series) on page 1952</a>
<b>Syntax</b>	<pre>show pim statistics &lt;inet   inet6&gt; &lt;instance <i>instance-name</i>&gt; &lt;interface <i>interface-name</i>&gt; &lt;logical-system (all   <i>logical-system-name</i>)&gt;</pre>

**Output Fields** Table 147 on page 1953 describes the output fields for the **show pim statistics** command. Output fields are listed in the approximate order in which they appear.

*Table 147: show pim statistics Output Fields*

Field Name	Field Description
Instance	<p>Name of the routing instance.</p> <p>This field only appears if you specify an interface, for example:</p> <ul style="list-style-type: none"> <li>• <b>inet interface <i>interface-name</i></b></li> <li>• <b>inet6 interface <i>interface-name</i></b></li> <li>• <b>interface <i>interface-name</i></b></li> </ul>
Family	<p>Output is for IPv4 or IPv6 PIM statistics. <b>INET</b> indicates IPv4 statistics, and <b>INET6</b> indicates IPv6 statistics.</p> <p>This field only appears if you specify an interface, for example:</p> <ul style="list-style-type: none"> <li>• <b>inet interface <i>interface-name</i></b></li> <li>• <b>inet6 interface <i>interface-name</i></b></li> <li>• <b>interface <i>interface-name</i></b></li> </ul>
PIM statistics	PIM statistics for all interfaces or for the specified interface.
PIM message type	Message type for which statistics are displayed.
Received	Number of received statistics.
Sent	Number of messages sent of a certain type.
Rx errors	Number of received packets that contained errors.
V2 Hello	PIM version 2 hello packets.
V2 Register	PIM version 2 register packets.
V2 Register Stop	PIM version 2 register stop packets.
V2 Join Prune	PIM version 2 join and prune packets.
V2 Bootstrap	PIM version 2 bootstrap packets.
V2 Assert	PIM version 2 assert packets.
V2 Graft	PIM version 2 graft packets.
V2 Graft Ack	PIM version 2 graft acknowledgment packets.
V2 Candidate RP	PIM version 2 candidate RP packets.

*Table 147: show pim statistics Output Fields (continued)*

Field Name	Field Description
V2 State Refresh	PIM version 2 control messages related to PIM dense mode (PIM-DM) state refresh.  State refresh is an extension to PIM-DM. It not supported in Junos OS.
V2 DF Election	PIM version 2 send and receive messages associated with bidirectional PIM designated forwarder election.
V1 Query	PIM version 1 query packets.
V1 Register	PIM version 1 register packets.
V1 Register Stop	PIM version 1 register stop packets.
V1 Join Prune	PIM version 1 join and prune packets.
V1 RP Reachability	PIM version 1 RP reachability packets.
V1 Assert	PIM version 1 assert packets.
V1 Graft	PIM version 1 graft packets.
V1 Graft Ack	PIM version 1 graft acknowledgment packets.
AutoRP Announce	Auto-RP announce packets.
AutoRP Mapping	Auto-RP mapping packets.
AutoRP Unknown type	Auto-RP packets with an unknown type.
Anycast Register	Auto-RP announce packets.
Anycast Register Stop	Auto-RP announce packets.
Global Statistics	Summary of PIM statistics for all interfaces.
Hello dropped on neighbor policy	Number of hello packets dropped because of a configured neighbor policy.
Unknown type	Number of PIM control packets received with an unknown type.
V1 Unknown type	Number of PIM version 1 control packets received with an unknown type.
Unknown Version	Number of PIM control packets received with an unknown version. The version is not version 1 or version 2.

*Table 147: show pim statistics Output Fields (continued)*

Field Name	Field Description
Neighbor unknown	Number of PIM control packets received (excluding PIM hello) without first receiving the hello packet.
Bad Length	Number of PIM control packets received for which the packet size does not match the PIM length field in the packet.
Bad Checksum	Number of PIM control packets received for which the calculated checksum does not match the checksum field in the packet.
Bad Receive If	Number of PIM control packets received on an interface that does not have PIM configured.
Rx Bad Data	Number of PIM control packets received that contain data for TCP Bad register packets.
Rx Intf disabled	Number of PIM control packets received on an interface that has PIM disabled.
Rx V1 Require V2	Number of PIM version 1 control packets received on an interface configured for PIM version 2.
Rx V2 Require V1	Number of PIM version 2 control packets received on an interface configured for PIM version 1.
Rx Register not RP	Number of PIM register packets received when the routing device is not the RP for the group.
Rx Register no route	Number of PIM register packets received when the RP does not have a unicast route back to the source.
Rx Register no decap if	Number of PIM register packets received when the RP does not have a de-encapsulation interface.
Null Register Timeout	Number of NULL register timeout packets.
RP Filtered Source	Number of PIM packets received when the routing device has a source address filter configured for the RP.
Rx Unknown Reg Stop	Number of register stop messages received with an unknown type.
Rx Join/Prune no state	Number of join and prune messages received for which the routing device has no state.
Rx Join/Prune on upstream if	Number of join and prune messages received on the interface used to reach the upstream routing device, toward the RP.
Rx Join/Prune for invalid group	Number of join or prune messages received for invalid multicast group addresses.

*Table 147: show pim statistics Output Fields (continued)*

Field Name	Field Description
Rx Join/Prune messages dropped	Number of join and prune messages received and dropped.
Rx sparse join for dense group	Number of PIM sparse mode join messages received for a group that is configured for dense mode.
Rx Graft/Graft Ack no state	Number of graft and graft acknowledgment messages received for which the router or switch has no state.
Rx Graft on upstream if	Number of graft messages received on the interface used to reach the upstream routing device, toward the RP.
Rx CRP not BSR	Number of BSR messages received in which the PIM message type is Candidate-RP-Advertisement, not Bootstrap.
Rx BSR when BSR	Number of BSR messages received in which the PIM message type is Bootstrap.
Rx BSR not RPF if	Number of BSR messages received on an interface that is not the RPF interface.
Rx unknown hello opt	Number of PIM hello packets received with options that Junos OS does not support.
Rx data no state	Number of PIM control packets received for which the routing device has no state for the data type.
Rx RP no state	Number of PIM control packets received for which the routing device has no state for the RP.
Rx aggregate	Number of PIM aggregate MDT packets received.
Rx malformed packet	Number of PIM control packets received with a malformed IP unicast or multicast address family.
No RP	Number of PIM control packets received with no RP address.
No register encaps if	Number of PIM register packets received when the first-hop routing device does not have an encapsulation interface.
No route upstream	Number of PIM control packets received when the routing device does not have a unicast route to the the interface used to reach the upstream routing device, toward the RP.
Nexthop Unusable	Number of PIM control packets with an unusable nexthop. A path can be unusable if the route is hidden or the link is down.
RP mismatch	Number of PIM control packets received for which the routing device has an RP mismatch.

Table 147: show pim statistics Output Fields (continued)

Field Name	Field Description
RP mode mismatch	RP mode (sparse or bidirectional) mismatches encountered when processing join and prune messages.
RPF neighbor unknown	Number of PIM control packets received for which the routing device has an unknown RPF neighbor for the source.
Rx Joins/Prunes filtered	The number of join and prune messages filtered because of configured route filters and source address filters.
Tx Joins/Prunes filtered	The number of join and prune messages filtered because of configured route filters and source address filters.
Embedded-RP invalid addr	Number of packets received with an invalid embedded RP address in PIM join messages and other types of messages sent between routing domains.
Embedded-RP limit exceed	Number of times the limit configured with the <b>maximum-rps</b> statement is exceeded. The <b>maximum-rps</b> statement limits the number of embedded RPs created in a specific routing instance. The range is from 1 through 500. The default is 100.
Embedded-RP added	<p>Number of packets in which the embedded RP for IPv6 is added.</p> <p>The following receive events trigger extraction of an IPv6 embedded RP address on the routing device:</p> <ul style="list-style-type: none"> <li>• Multicast Listener Discovery (MLD) report for an embedded RP multicast group address</li> <li>• PIM join message with an embedded RP multicast group address</li> <li>• Static embedded RP multicast group address associated with an interface</li> <li>• Packets sent to an embedded RP multicast group address received on the DR</li> </ul> <p>An embedded RP node discovered through these receive events is added if it does not already exist on the routing platform.</p>
Embedded-RP removed	Number of packets in which the embedded RP for IPv6 is removed. The embedded RP is removed whenever all PIM join states using this RP are removed or the configuration changes to remove the embedded RP feature.
Rx Register msgs filtering drop	Number of received register messages dropped because of a filter configured for PIM register messages.
Tx Register msgs filtering drop	Number of register messages dropped because of a filter configured for PIM register messages.
Rx Bidir Join/Prune on non-Bidir if	Error counter for join and prune messages received on non-bidirectional PIM interfaces.

Table 147: show pim statistics Output Fields (continued)

Field Name	Field Description
Rx Bidir Join/Prune on non-DF if	Error counter for join and prune messages received on non-designated forwarder interfaces.
V4 (S,G) Maximum	Maximum number of (S,G) IPv4 multicast routes accepted for the VPN routing and forwarding (VRF) routing instance. If this number is met, additional (S,G) entries are not accepted.
V4 (S,G) Accepted	Number of accepted (S,G) IPv4 multicast routes.
V4 (S,G) Threshold	Threshold at which a warning message is logged (percentage of the maximum number of (S,G) IPv4 multicast routes accepted by the device).
V4 (S,G) Log Interval	Time (in seconds) between consecutive log messages.
V6 (S,G) Maximum	Maximum number of (S,G) IPv6 multicast routes accepted for the VPN routing and forwarding (VRF) routing instance. If this number is met, additional (S,G) entries are not accepted.
V6 (S,G) Accepted	Number of accepted (S,G) IPv6 multicast routes.
V6 (S,G) Threshold	Threshold at which a warning message is logged (percentage of the maximum number of (S,G) IPv6 multicast routes accepted by the device).
V6 (S,G) Log Interval	Time (in seconds) between consecutive log messages.
V4 (grp-prefix, RP) Maximum	Maximum number of group-to-rendezvous point (RP) IPv4 multicast mappings accepted for the VRF routing instance. If this number is met, additional mappings are not accepted.
V4 (grp-prefix, RP) Accepted	Number of accepted group-to-RP IPv4 multicast mappings.
V4 (grp-prefix, RP) Threshold	Threshold at which a warning message is logged (percentage of the maximum number of group-to-RP IPv4 multicast mappings accepted by the device).
V4 (grp-prefix, RP) Log Interval	Time (in seconds) between consecutive log messages.
V6 (grp-prefix, RP) Maximum	Maximum number of group-to RP IPv6 multicast mappings accepted for the VRF routing instance. If this number is met, additional mappings are not accepted.
V6 (grp-prefix, RP) Accepted	Number of accepted group-to-RP IPv6 multicast mappings.

Table 147: show pim statistics Output Fields (continued)

Field Name	Field Description
V6 (grp-prefix, RP) Threshold	Threshold at which a warning message is logged (percentage of the maximum number of group-to-RP IPv6 multicast mappings accepted by the device).
V6 (grp-prefix, RP) Log Interval	Time (in seconds) between consecutive log messages.
V4 Register Maximum	Maximum number of IPv4 PIM registers accepted for the VRF routing instance. If this number is met, additional PIM registers are not accepted.  You configure the register limits on the RP.
V4 Register Accepted	Number of accepted IPv4 PIM registers.
V4 Register Threshold	Threshold at which a warning message is logged (percentage of the maximum number of IPv4 PIM registers accepted by the device).
V4 Register Log Interval	Time (in seconds) between consecutive log messages.
V6 Register Maximum	Maximum number of IPv6 PIM registers accepted for the VRF routing instance. If this number is met, additional PIM registers are not accepted.  You configure the register limits on the RP.
V6 Register Accepted	Number of accepted IPv6 PIM registers.
V6 Register Threshold	Threshold at which a warning message is logged (percentage of the maximum number of IPv6 PIM registers accepted by the device).
V6 Register Log Interval	Time (in seconds) between consecutive log messages.
(*G) Join drop due to SSM range check	PIM join messages that are dropped because the multicast addresses are outside of the SSM address range of 232.0.0.0 through 232.255.255.255. You can extend the accepted SSM address range by configuring the <b>ssm-groups</b> statement.

## Sample Output

### show pim statistics

```

user@host> show pim statistics
PIM Message type    Received    Sent    Rx errors
V2 Hello            15          32       0
V2 Register         0          362      0
V2 Register Stop    483         0        0
V2 Join Prune       18         518      0
V2 Bootstrap        0           0        0

## show sap listen

<b>Syntax</b>	show sap listen <brief   detail> <logical-system (all   <i>logical-system-name</i> )>
<b>Release Information</b>	Command introduced before Junos OS Release 7.4.
<b>Description</b>	Display the addresses that the router is listening to in order to receive multicast Session Announcement Protocol (SAP) session announcements.
<b>Options</b>	<p><b>none</b>—Display standard information about the addresses that the router is listening to in order to receive multicast SAP session announcements.</p> <p><b>brief   detail</b>—(Optional) Display the specified level of output.</p> <p><b>logical-system (all   <i>logical-system-name</i>)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p>
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">show sap listen on page 1965</a> <a href="#">show sap listen brief on page 1966</a> <a href="#">show sap listen detail on page 1966</a>
<b>Output Fields</b>	Table 148 on page 1965 describes the output fields for the <b>show sap listen</b> command. Output fields are listed in the approximate order in which they appear.

Table 148: show sap listen Output Fields

Field Name	Field Description
Group address	Address of the group that the local router is listening to for SAP messages.
Port	UDP port number used for SAP.

## Sample Output

### show sap listen

```
user@host> show sap listen
Group address  Port
224.2.127.254 9875
239.255.255.255 9875
```

### `show sap listen brief`

The output for the **show sap listen brief** command is identical to that for the **show sap listen** command. For sample output, see [show sap listen on page 1965](#).

### `show sap listen detail`

The output for the **show sap listen detail** command is identical to that for the **show sap listen** command. For sample output, see [show sap listen on page 1965](#).

## test msdp

---

<b>Syntax</b>	<code>test msdp (dependent-peers <i>prefix</i>   rpf-peer <i>originator</i>)</code> <code>&lt;instance <i>instance-name</i>&gt;</code> <code>&lt;logical-system (all   <i>logical-system-name</i>)&gt;</code>
<b>Release Information</b>	Command introduced before Junos OS Release 7.4. Command introduced in Junos OS Release 12.1 for the QFX Series. Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.
<b>Description</b>	Find Multicast Source Discovery Protocol (MSDP) peers.
<b>Options</b>	<b>dependent-peers <i>prefix</i></b> —Find downstream dependent MSDP peers. <b>rpf-peer <i>originator</i></b> —Find the MSDP reverse-path-forwarding (RPF) peer for the originator. <b>instance <i>instance-name</i></b> —(Optional) Find MDSP peers for the specified routing instance. <b>logical-system (all   <i>logical-system-name</i>)</b> —(Optional) Perform this operation on all logical systems or on a particular logical system.
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">test msdp dependent-peers on page 1967</a>
<b>Output Fields</b>	When you enter this command, you are provided feedback on the status of your request.

## Sample Output

### test msdp dependent-peers

```
user@host> test msdp dependent-peers 10.0.0.1/24
```

## CHAPTER 20

# IPv6 Operational Commands

- `clear ipv6 neighbors`
- `clear ipv6 router-advertisement`
- `show ipv6 neighbors`
- `show ipv6 router-advertisement`

## clear ipv6 neighbors

---

<b>Syntax</b>	<code>clear ipv6 neighbors</code> <code>&lt;all&gt;</code> <code>&lt;host <i>host-name</i>&gt;</code> <code>&lt;interface <i>interface-name</i>&gt;</code> <code>&lt;logical-system <i>logical-system-name</i>&gt;</code> <code>&lt;tenant <i>name</i>&gt;</code> <code>&lt;vpn <i>vpn-name</i>&gt;</code>
<b>Release Information</b>	Command introduced before Junos OS Release 7.4. Command introduced in Junos OS Release 9.3 for EX Series switches. Command introduced in Junos OS Release 12.2 for the QFX Series. Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series. <b>interface</b> , <b>logical-system</b> , <b>tenant</b> , and <b>vpn</b> options added in Junos OS Release 18.3.
<b>Description</b>	Clear IPv6 neighbor cache information.
<b>Options</b>	<b>none</b> —Clear all IPv6 neighbor cache information.  <b>all</b> —(Optional) Clear all IPv6 neighbor cache information.  <b>host <i>hostname</i></b> —(Optional) Clear the information for the specified IPv6 neighbors.  <b>interface <i>interface-name</i></b> —(Optional) Clear information about IPv6 for the specified logical interface  <b>logical-system <i>logical-system-name</i></b> —(Optional) Clear the IPv6 entries for the specified logical system; only available on the main router context.  <b>tenant <i>name</i></b> —(Optional) Clear the name of the tenant.  <b>vpn <i>vpn-name</i></b> —(Optional) Clear entries in the IPv6 table for the specified virtual private network's (VPN) routing table.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">show ipv6 neighbors on page 1973</a></li></ul>
<b>List of Sample Output</b>	<a href="#">clear ipv6 neighbors on page 1971</a>
<b>Output Fields</b>	When you enter this command, you are provided feedback on the status of your request.

## Sample Output

clear ipv6 neighbors

```
user@host> clear ipv6 neighbors
```

## clear ipv6 router-advertisement

---

<b>Syntax</b>	<code>clear ipv6 router-advertisement</code> <code>&lt;interface <i>interface</i>&gt;</code> <code>&lt;logical-system (all   <i>logical-system-name</i>)&gt;</code>
<b>Release Information</b>	Command introduced before Junos OS Release 7.4.
<b>Description</b>	Clear IPv6 router advertisement counters.
<b>Options</b>	<b>none</b> —Clear IPv6 router advertisement counters for all interfaces.  <b>interface <i>interface</i></b> —(Optional) Clear IPv6 router advertisement counters for the specified interface.  <b>logical-system (all   <i>logical-system-name</i>)</b> —(Optional) Perform this operation on all logical systems or on a particular logical system.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">show ipv6 router-advertisement on page 1976</a></li></ul>
<b>List of Sample Output</b>	<a href="#">clear ipv6 router-advertisement on page 1972</a>
<b>Output Fields</b>	When you enter this command, you are provided feedback on the status of your request.

## Sample Output

### clear ipv6 router-advertisement

```
user@host> clear ipv6 router-advertisement
```

## show ipv6 neighbors

**Syntax**    `show ipv6 neighbors`  
               `<flags>`  
               `<hostname host-name>`  
               `<interface interface-name>`  
               `<logical-system logical-system-name>`  
               `<reference-count count>`  
               `<tenant name>`  
               `<vpn vpn-name>`

**Release Information**    Command introduced before Junos OS Release 7.4.  
                               Command introduced in Junos OS Release 9.3 for EX Series switches.  
                               Command introduced in Junos OS Release 12.2 for the QFX Series.  
                               Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.  
                               **flags**, **hostname**, **interface**, **logical-system**, **reference-count**, **tenant**, and **vpn** options added in Junos OS Release 18.3.

**Description**    Display information about the IPv6 neighbor cache.

**NOTE:** Starting with Junos OS Release 16.1, `show ipv6 neighbors` command does not display the underlying ifl information if `enhanced-convergence` statement at `[edit irb unit unit-number]` hierarchy level and `enhanced-ip` statement at `[edit chassis network-services]` hierarchy level is configured for the destination interface IRB.

**Options**    **none**—Display the entries in the IPv6 table.

**flags**—(Optional) Display the flags set, if any.

**hostname *host-name***—(Optional) Display the hostname.

**interface *interface-name***—(Optional) Display information about IPv6 for the specified logical interface

**logical-system *logical-system-name***—(Optional) Display the IPv6 entries for the specified logical system; only available on the main router context.

**reference-count *count***—(Optional) Display the IPv6 next-hop reference count.

**tenant *name***—(Optional) Display the name of the tenant.

**vpn *vpn-name***—(Optional) Display entries in the IPv6 table for the specified virtual private network's (VPN) routing table.

**Required Privilege Level**    view

## Related Documentation

- [clear ipv6 neighbors on page 1970](#)

## List of Sample Output

[show ipv6 neighbors on page 1974](#)  
[show ipv6 neighbors on page 1974](#)

## Output Fields

Table 149 on page 1974 describes the output fields for the **show ipv6 neighbors** command. Output fields are listed in the approximate order in which they appear.

*Table 149: show ipv6 neighbors Output Fields*

Field Name	Field Description
IPv6 Address	Name of the IPv6 interface.
Linklayer Address	Link-layer address.
State	State of the link: <b>up</b> , <b>down</b> , <b>incomplete</b> , <b>reachable</b> , <b>stale</b> , or <b>unreachable</b> .
Exp	Number of seconds until the entry expires.
Rtr	Whether the neighbor is a routing device: <b>yes</b> or <b>no</b> .
Secure	Whether this entry was created using the Secure Neighbor Discovery (SEND) protocol: <b>yes</b> or <b>no</b> .
Interface	Name of the interface.

## Sample Output

### show ipv6 neighbors

```
user@host> show ipv6 neighbors
IPv6 Address      Linklayer Address  State      Exp Rtr Secure
Interface
2001:db8:0:1:2a0:a514:0:24c  00:05:85:8f:c8:bd  stale      546 yes no
fe-1/2/0.1
fe80::2a0:a514:0:24c      00:05:85:8f:c8:bd  stale      258 yes no
fe-1/2/0.1
fe80::2a0:a514:0:64c      00:05:85:8f:c8:bd  stale      111 yes no
fe-1/2/1.5
fe80::2a0:a514:0:a4c      00:05:85:8f:c8:bd  stale      327 yes no
fe-1/2/2.9
```

### show ipv6 neighbors

The command displaying the underlying I2 ifl information when **enhanced-convergence** statement and **enhanced-ip** statement is not configured.

```
IPv6 Address      Linklayer Address  State      Exp Rtr Secure
Interface
23::23:0:0:2      00:00:23:00:00:02  reachable  0   no  no      irb.0
```

[xe-2/2/0.0]

The command not displaying the underlying l2 ifl information when **enhanced-convergence** statement and **enhanced-ip** statement is configured.

IPv6 Address Interface	Linklayer Address	State	Exp	Rtr	Secure	
23::23:0:0:2	00:00:23:00:00:02	reachable	0	no	no	irb.0

## show ipv6 router-advertisement

---

<b>Syntax</b>	<code>show ipv6 router-advertisement</code> <code>&lt;conflicts&gt;</code> <code>&lt;interface <i>interface</i>&gt;</code> <code>&lt;logical-system (all   <i>logical-system-name</i>)&gt;</code> <code>&lt;prefix <i>prefix/prefix length</i>&gt;</code>
<b>Release Information</b>	Command introduced before Junos OS Release 7.4. Command introduced in Junos OS Release 12.2 for the QFX Series. Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.
<b>Description</b>	Display information about IPv6 router advertisements, including statistics about messages sent and received on interfaces, and information received from advertisements from other routers.
<b>Options</b>	<b>none</b> —Display all IPv6 router advertisement information for all interfaces.  <b>conflicts</b> —(Optional) Display only the IPv6 router advertisement information that is conflicting.  <b>interface <i>interface</i></b> —(Optional) Display IPv6 router advertisement information for the specified interface.  <b>logical-system (all   <i>logical-system-name</i>)</b> —(Optional) Perform this operation on all logical systems or on a particular logical system.  <b>prefix <i>prefix/prefix length</i></b> —(Optional) Display IPv6 router advertisement information for the specified prefix.
<b>Additional Information</b>	The display identifies conflicting information by enclosing the value the router is advertising in brackets.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">clear ipv6 router-advertisement on page 1972</a></li></ul>
<b>List of Sample Output</b>	<a href="#">show ipv6 router-advertisement on page 1977</a> <a href="#">show ipv6 router-advertisement conflicts on page 1978</a> <a href="#">show ipv6 router-advertisement prefix on page 1978</a>
<b>Output Fields</b>	<a href="#">Table 150 on page 1977</a> describes the output fields for the <b>show ipv6 router-advertisement</b> command. Output fields are listed in the approximate order in which they appear.

Table 150: show ipv6 router-advertisement Output Fields

Field Name	Field Description
Interface	Name of the interface.
Advertisements sent	Number of router advertisements sent and the elapsed time since they were sent.
Solicits received	Number of solicitation messages received.
Advertisements received	Number of router advertisements received.
Advertisements from	Names of interfaces from which router advertisements have been received and the elapsed time since the last one was received.
Managed	Managed address configuration flag: 0 (stateless) or 1 (stateful).
Other configuration	Other stateful configuration flag: 0 (stateless) or 1 (stateful).
Reachable time	Time that a node identifies a neighbor as reachable after receiving a reachability confirmation, in milliseconds.
Default lifetime	Default lifetime, in seconds: from 0 seconds to 18.2 hours. A setting of 0 indicates that the router is not a default router.
Retransmit timer	Time between retransmitted Neighbor Solicitation messages, in milliseconds.
Current hop limit	Configured current hop limit.
Prefix	Name and length of the prefix.
Valid lifetime	How long the prefix remains valid for onlink determination.
Preferred lifetime	How long the prefix generated by stateless autoconfiguration remains preferred.
On link	Onlink flag: 0 (not onlink) or 1 (onlink).
Autonomous	Autonomous address configuration flag: 0 (not autonomous) or 1 (autonomous).

## Sample Output

### show ipv6 router-advertisement

```

user@host> show ipv6 router-advertisement
Interface: fe-0/1/1.0
  Advertisements sent: 0
  Solicits received: 0
  Advertisements received: 0
Interface: fxp0.0
  Advertisements sent: 0
  Solicits received: 0
  Advertisements received: 1

```

```

Advertisement from fe80::2d0:b7ff:fe1e:7b0e, heard 00:00:13 ago
Managed: 0
Other configuration: 0 [1]
  Reachable time: 0 ms
  Default lifetime: 1800 sec
  Retransmit timer: 0 ms
  Current hop limit: 64

```

#### show ipv6 router-advertisement conflicts

```

user@host> show ipv6 router-advertisement conflicts
Interface: fxp0.0
  Advertisement from fe80::2d0:b7ff:fe1e:7b0e, heard 00:01:08 ago
  Other configuration: 0 [1]

```

#### show ipv6 router-advertisement prefix

```

user@host> show ipv6 router-advertisement prefix 2001:db8:8040::/16
Interface: fe-0/1/3.0
  Advertisements sent: 3, last sent 00:04:11 ago
  Solicits received: 0
  Advertisements received: 3
  Advertisement from fe80::290:69ff:fe9a:5403, heard 00:00:05 ago
  Managed: 0
  Other configuration: 0
  Reachable time: 0 ms
  Default lifetime: 180 sec [1800 sec]
  Retransmit timer: 0 ms
  Current hop limit: 64
  Prefix: 2001:db8:8040:1::/64
    Valid lifetime: 2592000 sec
    Preferred lifetime: 604800 sec
    On link: 1
    Autonomous: 1

```

## Sample Output

### clear isis adjacency

The following sample output displays IS-IS adjacency database information before and after the **clear isis adjacency** command is entered:

```
user@host> show isis adjacency
IS-IS adjacency database:
Interface      System          L State      Hold (secs) SNPA
so-1/0/0.0     karaku1         3 Up         26
so-1/1/3.0     1921.6800.5080 3 Up         23
so-5/0/0.0     1921.6800.5080 3 Up         19
```

user@host> clear isis adjacency karaku1

```
user@host> show isis adjacency
IS-IS adjacency database:
Interface      System          L State      Hold (secs) SNPA
so-1/0/0.0     karaku1         3 Initializing 26
so-1/1/3.0     1921.6800.5080 3 Up         24
so-5/0/0.0     1921.6800.5080 3 Up         21
```

### clear isis adjacency all

```
user@host> clear isis adjacency all
IS-IS adjacency database:
Interface      System          L State      Hold (secs) SNPA
so-1/0/0.0     karaku1         3 Initializing 26
so-1/1/3.0     1921.6800.5080 3 Initializing 24
so-5/0/0.0     1921.6800.5080 3 Initializing 21
```

## Sample Output

### clear isis database

The following sample output displays IS-IS link-state database information before and after the **clear isis database all** command is entered:

```
user@host> show isis database
IS-IS level 1 link-state database:
LSP ID                Sequence Checksum Lifetime (secs)
crater.00-00          0x12   0x84dd             1139
1 LSPs
IS-IS level 2 link-state database:
LSP ID                Sequence Checksum Lifetime (secs)
crater.00-00          0x19   0xe92c             1134
badlands.00-00        0x16   0x1454             985
carlsbad.00-00        0x33   0x220b             1015
ranier.00-00          0x2e   0xfc31             1007
1921.6800.5066.00-00  0x11   0x7313              566
1921.6800.5067.00-00  0x14   0xd9d4              939
6 LSPs

user@host> clear isis database all

user@host> show isis database
IS-IS level 1 link-state database:
LSP ID                Sequence Checksum Lifetime (secs)

IS-IS level 2 link-state database:
LSP ID                Sequence Checksum Lifetime (secs)
```

## clear isis overload

---

List of Syntax	<a href="#">Syntax on page 1984</a> <a href="#">Syntax (EX Series Switches and QFX Series) on page 1984</a>
Syntax	<pre>clear isis overload &lt;instance <i>instance-name</i>&gt; &lt;logical-system (all   <i>logical-system-name</i>)&gt;</pre>
Syntax (EX Series Switches and QFX Series)	<pre>clear isis overload &lt;instance <i>instance-name</i>&gt;</pre>
Release Information	Command introduced before Junos OS Release 7.4. Command introduced in Junos OS Release 9.0 for EX Series switches. Command introduced in Junos OS Release 12.1 for the QFX Series. Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.
Description	<p>Reset the IS-IS dynamic overload bit. This command can appear to not work, continuing to display <b>overload</b> after execution. The bit is reset only if the root cause is corrected by configuration remotely or locally.</p> <p>When other routers detect that the overload bit is set, they do not use this routing device for transit traffic, but they do use it for packets destined to the overloaded routing device's directly connected networks and IP prefixes.</p>
Options	<p><b>none</b>—Reset the IS-IS dynamic overload bit.</p> <p><b>instance <i>instance-name</i></b>—(Optional) Reset the IS-IS dynamic overload bit for the specified routing instance.</p> <p><b>logical-system (all   <i>logical-system-name</i>)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p>
Required Privilege Level	clear

**Output Fields** Table 151 on page 1989 describes the output fields for the **show isis adjacency** command. Output fields are listed in the approximate order in which they appear.

*Table 151: show isis adjacency Output Fields*

Field Name	Field Description	Level of Output
<b>Interface</b>	Interface through which the neighbor is reachable.	All levels
<b>System</b>	System identifier ( <b>sysid</b> ), displayed as a name, if possible.	<b>brief</b>
<b>L or Level</b>	Level: <ul style="list-style-type: none"> <li>• 1—Level 1 only</li> <li>• 2—Level 2 only</li> <li>• 3—Level 1 and Level 2</li> </ul> An exclamation point (!) preceding the level number indicates that the adjacency is missing an IP address.	All levels
<b>State</b>	State of the adjacency: <b>Up</b> , <b>Down</b> , <b>New</b> , <b>One-way</b> , <b>Initializing</b> , or <b>Rejected</b> .	All levels
<b>Hold (secs)</b>	Remaining hold time of the adjacency.	<b>brief</b>
<b>SNPA</b>	Subnetwork point of attachment (MAC address of the next hop).	<b>brief</b>
<b>Expires in</b>	How long until the adjacency expires, in seconds.	<b>detail</b>
<b>Priority</b>	Priority to become the designated intermediate system.	<b>detail extensive</b>
<b>Up/Down transitions</b>	Count of adjacency status changes from <b>Up</b> to <b>Down</b> or from <b>Down</b> to <b>Up</b> .	<b>detail</b>
<b>Last transition</b>	Time of the last <b>Up/Down</b> transition.	<b>detail</b>
<b>Circuit type</b>	Bit mask of levels on this interface: 1=Level 1 router; 2=Level 2 router; 3=both Level 1 and Level 2 router.	<b>detail</b>
<b>Speaks</b>	Protocols supported by this neighbor.	<b>detail extensive</b>
<b>MAC address</b>	MAC address of the interface.	<b>detail extensive</b>
<b>Topologies</b>	Supported topologies.	<b>detail extensive</b>
<b>Restart capable</b>	Whether a neighbor is capable of graceful restart: <b>Yes</b> or <b>No</b> .	<b>detail extensive</b>
<b>Adjacency advertisement: Advertise</b>	This routing device has signaled to advertise this interface to its neighbors in their link-state PDUs.	<b>detail extensive</b>
<b>Adjacency advertisement: Suppress</b>	This neighbor has signaled not to advertise the interface in the routing device's outbound link-state PDUs.	<b>detail extensive</b>

*Table 151: show isis adjacency Output Fields (continued)*

Field Name	Field Description	Level of Output
<b>IP addresses</b>	IP address of this neighbor.	<b>detail extensive</b>
IPv6 Address	IPv6 address of the neighbor.	<b>detail extensive</b>
Level 1 IPv4 Adj-SID	Level 1 IPv4 node-SID of the adjacent neighbor.	<b>detail extensive</b>
Level 1 IPv6 Adj-SID	Level 1 IPv6 node-SID of the adjacent neighbor.	
Level 2 IPv4 Adj-SID	Level 2 IPv4 node-SID of the adjacent neighbor.	<b>detail extensive</b>
Level 2 IPv6 Adj-SID	Level 2 IPv6 node-SID of the adjacent neighbor.	<b>detail extensive</b>

Table 151: show isis adjacency Output Fields (continued)

Field Name	Field Description	Level of Output
Transition log	<p>List of recent transitions, including:</p> <ul style="list-style-type: none"> <li>• <b>When</b>—Time at which an IS-IS adjacency transition occurred.</li> <li>• <b>State</b>—Current state of the IS-IS adjacency (<b>up</b>, <b>down</b>, or <b>rejected</b>). <ul style="list-style-type: none"> <li>• <b>Up</b>—Adjacency is up and operational.</li> <li>• <b>Down</b>—Adjacency is down and not available.</li> <li>• <b>Rejected</b>—Adjacency has been rejected.</li> </ul> </li> <li>• <b>Event</b>—Type of transition that occurred. <ul style="list-style-type: none"> <li>• <b>Seenself</b>—Possible routing loop has been detected.</li> <li>• <b>Interface down</b>—IS-IS interface has gone down and is no longer available.</li> <li>• <b>Error</b>—Adjacency error.</li> </ul> </li> <li>• <b>Down reason</b>—Reason that an IS-IS adjacency is down: <ul style="list-style-type: none"> <li>• <b>3-Way Handshake Failed</b>—Connection establishment failed.</li> <li>• <b>Address Mismatch</b>—Address mismatch caused link failure.</li> <li>• <b>Aged Out</b>—Link expired.</li> <li>• <b>ISO Area Mismatch</b>—IS-IS area mismatch caused link failure.</li> <li>• <b>Bad Hello</b>—Unacceptable hello message caused link failure.</li> <li>• <b>BFD Session Down</b>—Bidirectional failure detection caused link failure.</li> <li>• <b>Interface Disabled</b>—IS-IS interface is disabled.</li> <li>• <b>Interface Down</b>—IS-IS interface is unavailable.</li> <li>• <b>Interface Level Disabled</b>—IS-IS level is disabled.</li> <li>• <b>Level Changed</b>—IS-IS level has changed on the adjacency.</li> <li>• <b>Level Mismatch</b>—Levels on adjacency are not compatible.</li> <li>• <b>MPLS LSP Down</b>—Label-switched path (LSP) is unavailable.</li> <li>• <b>MT Topology Changed</b>—IS-IS topology has changed.</li> <li>• <b>MT Topology Mismatch</b>—IS-IS topology is mismatched.</li> <li>• <b>Remote System ID Changed</b>—Adjacency peer system ID changed.</li> <li>• <b>Protocol Shutdown</b>—IS-IS protocol is disabled.</li> <li>• <b>CLI Command</b>—Adjacency brought down by user.</li> <li>• <b>Unknown</b>—Unknown.</li> </ul> </li> </ul>	extensive

## Sample Output

### show isis adjacency

```

<b>Output Fields</b>	<p><a href="#">Table 153 on page 1995</a> lists the output fields for the <b>show isis backup coverage</b> command. Output fields are listed in the approximate order in which they appear.</p>

*Table 153: show isis backup coverage Output Fields*

Field Name	Field Description
Topology	Type of topology or address family: <b>IPV4 Unicast</b> or <b>IPV6 Unicast</b> .

*Table 153: show isis backup coverage Output Fields (continued)*

Field Name	Field Description
<b>Level</b>	IS-IS level: <ul style="list-style-type: none"> <li>• 1—Level 1</li> <li>• 2—Level 2</li> </ul>
<b>Node</b>	By topology, the percentage of all routes configured on the node that are protected through backup coverage.
<b>IPv4</b>	Percentage of IPv4 unicast routes that are protected through backup coverage.
<b>IPv6</b>	Percentage of IPv6 unicast routes that are protected through backup coverage.
<b>CLNS</b>	Percentage of Connectionless Network Service (CLNS) routes that are protected through backup coverage.

## Sample Output

### show isis backup coverage

```

user@host> show isis backup coverage
Backup Coverage:
  Topology   Level1  Node   IPv4   IPv6   CLNS
  IPV4 Unicast  2  28.57% 22.22% 0.00% 0.00%
  IPV6 Unicast  2   0.00% 0.00% 0.00% 0.00%

```

## show isis backup label-switched-path

<b>Syntax</b>	<b>show isis backup label-switched-path</b> <b>&lt;logical-system (all   <i>logical-system-name</i>)&gt;</b>
<b>Syntax (EX Series Switches and QFX Series)</b>	<b>show isis backup label-switched-path</b>
<b>Release Information</b>	Command introduced in Junos OS Release 9.5. Command introduced in Junos OS Release 9.5 for EX Series switches. Command introduced in Junos OS Release 12.1 for the QFX Series. Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.
<b>Description</b>	Display information about MPLS label-switched-paths (LSPs) designated as backup routes for IS-IS routes.
<b>Options</b>	<b>none</b> —Display information about MPLS LSPs designated as backup routes for IS-IS routes.  <b>logical-system (all   <i>logical-system-name</i>)</b> —(Optional) Perform this operation on all logical systems or on a particular logical system.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Understanding Loop-Free Alternate Routes for IS-IS</i></li> <li>• <i>Example: Configuring Node-Link Protection for IS-IS Routes in a Layer 3 VPN</i></li> <li>• <a href="#">show isis backup coverage on page 1995</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">show isis backup label-switched-path on page 1998</a>
<b>Output Fields</b>	<a href="#">Table 154 on page 1997</a> lists the output fields for the <b>show isis backup label-switched-path</b> command. Output fields are listed in the approximate order in which they appear.

*Table 154: show isis backup label-switched-path Output Fields*

Field Name	Field Description
<b>Backup MPLS LSPs</b>	List of MPLS LSPs designated as backup paths for IS-IS routes.
<b>Egress</b>	IP address of the egress routing device for the LSP.

Table 154: *show isis backup label-switched-path* Output Fields (continued)

Field Name	Field Description
Status	State of the LSP: <ul style="list-style-type: none"><li>• <b>Up</b>—The routing device can detect RSVP hello messages from the neighbor.</li><li>• <b>Down</b>—The routing device has received one of the following indications:<ul style="list-style-type: none"><li>• Communication failure from the neighbor.</li><li>• Communication from IGP that the neighbor is unavailable.</li><li>• Change in the sequence numbers in the RSVP hello messages sent by the neighbor.</li></ul></li><li>• <b>Deleted</b>—LSP is no longer available as a backup path.</li></ul>
Last change	Time elapsed since the neighbor state changed either from up to down or from down to up. The format is <i>hh:mm:ss</i> .
TE-metric	Configured traffic engineering metric.
Metric	Configured metric.

## Sample Output

### show isis backup label-switched-path

```
user@host> show isis backup label-switched-path
Backup MPLS LSPs:
f-to-g, Egress: 192.168.1.4, Status: up, Last change: 06:12:03
TE-metric: 9, Metric: 0
```

## show isis backup spf results

### show isis backup spf results no-coverage on page 2001

**Output Fields** Table 155 on page 2000 lists the output fields for the **show isis backup spf results** command. Output fields are listed in the approximate order in which they appear.

*Table 155: show isis backup spf results Output Fields*

Field Name	Field Description
<b>node-name</b>	Name of the destination node.
<b>Address</b>	Address of the destination node.
<b>Primary next-hop</b>	Interface and name of the node of the primary next hop to reach the destination.
<b>Root</b>	Name of the next-hop neighbor.
<b>Metric</b>	Metric to the node.
<b>Eligible</b>	Indicates that the next-hop neighbor has been designated as a backup path to the destination node.
<b>Backup next-hop</b>	Name of the interface of the backup next hop.
<b>SNPA</b>	Subnetwork point of attachment (MAC address of the next hop).
<b>LSP</b>	Name of the MPLS label-switched path (LSP) designated as a backup path.
<b>Not eligible</b>	Indicates that the next-hop neighbor cannot function as a backup path to the destination.
<b>Reason</b>	Describes why the next-hop neighbor is designated as <b>Not eligible</b> as a backup path.

## show isis context-identifier

**Syntax** show isis context-identifier  
 <brief | detail | extensive>  
 <identifier name>  
 <instance instance-name>  
 <logical-system (all | logical-system-name)>

**Release Information** Command introduced in Junos OS Release 10.4.

**Description** Display IS-IS context identifier information.

**Options** **brief | detail | extensive**—(Optional) Display the specified level of output.

**identifier name**—(Optional) Display information about the specified context identifier.

**instance instance-name**—(Optional) Display entries for the specified routing instance.

**logical-system (all | logical-system-name)**—(Optional) Display the context identifier information for all logical systems or for a particular logical system.

**Required Privilege Level** View

**Output Fields** [Table 156 on page 2003](#) lists the output fields for the **show isis context-identifier** command. Output fields are listed in the approximate order in which they appear.

*Table 156: show isis context-identifier Output Fields*

Field Name	Field Description	Level of Output
Context	IPv4 address that defines a protection pair. The context is manually configured on both primary and protector PEs.	detail
Owner	Protocol that requires the context.	detail
Role	Role of the PE, which is either primary or protector.	detail
Primary	Name of the primary PE.	detail
Metric	Advertised interior gateway protocol (IGP) metric.	detail

## Sample Output

```
user@host> show isis context-identifier detail
```

```
IS-IS context database:
```

```
Context      Owner    Role    Primary    Metric
2.2.4.3      MPLS     Primary pro3-e     1
```

Advertiser pro3-e, Router ID 10.255.245.198, Metric 1, Level 1  
Advertiser pro3-e, Router ID 10.255.245.198, Metric 1, Level 2  
Advertiser pro3-c, Router ID 10.255.245.196, Metric 11, Level 2

## show isis database

**List of Syntax**    [Syntax on page 2005](#)  
                          [Syntax \(EX Series Switches and QFX Series\) on page 2005](#)

**Syntax**    show isis database  
                  <system-id>  
                  <brief | detail | extensive>  
                  <instance *instance-name*>  
                  <level (1 | 2)>  
                  <logical-system (all | *logical-system-name*)>

**Output Fields** [Table 157 on page 2006](#) describes the output fields for the **show isis database** command. Output fields are listed in the approximate order in which they appear. Fields that contain internal IS-IS information useful only in troubleshooting obscure problems are not described in the table. For more details about these fields, contact your customer support representative.

*Table 157: show isis database Output Fields*

Field Name	Field Description	Level of Output
<b>Interface name</b>	Name of the interface on which the link-state PDU has been received; always <b>IS-IS</b> for this command.	All levels
level	Level of intermediate system: <ul style="list-style-type: none"> <li>• 1—Intermediate system routes within an area; when the destination is outside an area, it routes toward a Level 2 system.</li> <li>• 2—Intermediate system routes between areas and toward other ASs.</li> </ul>	All levels
LSP ID	Link-state PDU identifier.	All levels
Sequence	Sequence number of the link-state PDU.	All levels
Checksum	Checksum value of the link-state PDU.	All levels
Lifetime (secs)	Remaining lifetime of the link-state PDU, in seconds.	All levels
Attributes	Attributes of the specified database: <b>L1</b> , <b>L2</b> , <b>Overload</b> , or <b>Attached</b> (L1 only).	none <b>brief</b>
# LSPs	Total number of link-state PDUs in the specified link-state database.	none <b>brief</b>
IP prefix	Prefix advertised by this link-state PDU.	<b>detail extensive</b>
IS neighbor	IS-IS neighbor of the advertising system.	<b>detail extensive</b>
IP prefix	IPv4 prefix advertised by this link-state PDU.	<b>detail extensive</b>
V6 prefix	IPv6 prefix advertised by this link-state PDU.	<b>detail extensive</b>
Metric	Metric of the prefix or neighbor.	<b>detail extensive</b>

Table 157: show isis database Output Fields (continued)

Field Name	Field Description	Level of Output
Header	<ul style="list-style-type: none"> <li>• <b>LSP ID</b>—Link state PDU identifier of the header.</li> <li>• <b>Length</b>—Header length.</li> <li>• <b>Allocated Length</b>—Amount of length available for the header.</li> <li>• <b>Router ID</b>—Address of the local routing device.</li> <li>• <b>Remaining Lifetime</b>—Remaining lifetime of the link-state PDU, in seconds.</li> </ul>	extensive
Packet	<ul style="list-style-type: none"> <li>• <b>LSP ID</b>—The identifier for the link-state PDU.</li> <li>• <b>Length</b>—Packet length.</li> <li>• <b>Lifetime</b>—Remaining lifetime, in seconds.</li> <li>• <b>Checksum</b>—The checksum of the link-state PDU.</li> <li>• <b>Sequence</b>—The sequence number of the link-state PDU. Every time the link-state PDU is updated, this number increments.</li> <li>• <b>Attributes</b>—Packet attributes.</li> <li>• <b>NLPID</b>—Network layer protocol identifier.</li> <li>• <b>Fixed length</b>—Specifies the set length for the packet.</li> </ul>	extensive
TLVs	<ul style="list-style-type: none"> <li>• <b>Area Address</b>—Area addresses that the routing device can reach.</li> <li>• <b>Speaks</b>—Supported routing protocols.</li> <li>• <b>IP router id</b>—ID of the routing device (usually the IP address).</li> <li>• <b>IP address</b>—IPv4 address.</li> <li>• <b>Hostname</b>—Assigned name of the routing device.</li> <li>• <b>IP prefix</b>—IP prefix of the routing device.</li> <li>• <b>Metric</b>—IS-IS metric that measures the cost of the adjacency between the originating routing device and the advertised routing device.</li> <li>• <b>IP extended prefix</b>—Extended IP prefix of the routing device.</li> <li>• <b>IS neighbor</b>—Directly attached neighbor's name and metric.</li> <li>• <b>IS extended neighbor</b>—Directly attached neighbor's name, metric, IP address, local interface index, and remote interface index.  The interface indexes enable Junos OS to support unnumbered extensions for IS-IS, as described in RFC 4205.</li> <li>• <b>Router Capability</b>—ID of the routing device and flag.  <b>NOTE:</b> Router capability also specifies SPRING capability and SPRING algorithm when segment routing is enabled on the routing device.</li> </ul>	extensive
Extended IS Reachability TLV	Type and length of the TLV is useful to identify the IS extended neighbors packed in this TLV.	extensive
SubTLV len	The length of the SubTLV of IS extended neighbor.	extensive

## show isis hostname

---

**List of Syntax**   [Syntax on page 2020](#)  
[Syntax \(EX Series Switches and QFX Series\) on page 2020](#)

**Syntax**   `show isis hostname`  
`<logical-system (all | logical-system-name)>`

**Syntax (EX Series Switches and QFX Series)**   `show isis hostname`

**Release Information**   Command introduced before Junos OS Release 7.4.  
Command introduced in Junos OS Release 9.0 for EX Series switches.  
Command introduced in Junos OS Release 12.1 for the QFX Series.  
Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.

**Description**   Display IS-IS hostname database information.

This command displays the system ID-to-name cache. The output shows if the mapping has been learned by receipt of a Hostname TLV #137 (type dynamic) configured in Junos OS with the **set system host-name** command, or a static mapping defined in Junos OS with the **set system static-host-mapping *hostname* sysid** command (type static). The local router always has its type set to static even if **static-host-mapping** is not configured.

**Options**   **none**—Display IS-IS hostname database information.

**logical-system (all | *logical-system-name*)**—(Optional) Perform this operation on all logical systems or on a particular logical system.

**Required Privilege Level**   view

**List of Sample Output**   [show isis hostname on page 2021](#)

**Output Fields**   [Table 158 on page 2020](#) describes the output fields for the **show isis hostname** command. Output fields are listed in the approximate order in which they appear.

*Table 158: show isis hostname Output Fields*

Field Name	Field Description
System Id	System identifier mapped to the hostname.
Hostname	Hostname mapped to the system identifier.

Table 158: show isis hostname Output Fields (continued)

Field Name	Field Description
Type	Type of mapping between system identifier and hostname. <ul style="list-style-type: none"><li>• <b>Dynamic</b>—Hostname mapping determined as described in RFC 2763, <i>Dynamic Hostname Exchange Mechanism for IS-IS</i>.</li><li>• <b>Static</b>—Hostname mapping configured by user.</li></ul>

Sample Output

show isis hostname

```
user@host> show isis hostname
IS-IS hostname database:
System Id      Hostname      Type
1921.6800.4201 isis1         Dynamic
1921.6800.4202 isis2         Static
1921.6800.4203 isis3         Dynamic
```

```
show isis interface
```

[show isis interface extensive on page 2025](#)

**Output Fields** [Table 159 on page 2023](#) describes the output fields for the **show isis interface** command. Output fields are listed in the approximate order in which they appear.

*Table 159: show isis interface Output Fields*

Field Name	Field Description	Level of Output
<b>interface-name</b>	Name of the interface.	<b>detail</b>
<b>Designated router</b>	Routing device selected by other routers that is responsible for sending link-state advertisements that describe the network. Used only on broadcast networks.	<b>detail</b>
<b>Index</b>	Interface index assigned by the Junos OS kernel.	<b>detail</b>
<b>State</b>	Internal implementation information.	<b>detail</b>
<b>Circuit id</b>	Circuit identifier.  <b>NOTE:</b> Each IS-IS interface is assigned a circuit ID value to identify the interface within the linkstate database. All interfaces (loopback, broadcast, and so on) and all point-to-point links share the locally significant value of 0x01, and this value is not incremented.	<b>detail</b>
<b>Circuit type</b>	Circuit type: <ul style="list-style-type: none"> <li>• 1—Level 1 only</li> <li>• 2—Level 2 only</li> <li>• 3—Level 1 and Level 2</li> </ul>	<b>detail</b>
<b>LSP interval</b>	Interval between link-state PDUs sent from the interface.	<b>detail</b>
<b>CSNP interval</b>	Interval between complete sequence number PDUs sent from the interface.	<b>detail extensive</b>
<b>Sysid</b>	System identifier.	<b>detail</b>
<b>Interface</b>	Interface through which the adjacency is made.	<b>none brief</b>
<b>L or Level</b>	Level: <ul style="list-style-type: none"> <li>• 1—Level 1 only</li> <li>• 2—Level 2 only</li> <li>• 3—Level 1 and Level 2</li> </ul> <b>NOTE:</b> The default IS-IS level on loopback interfaces are always same as the IS-IS level configured on other IS-IS interfaces in a router. You can also configure IS-IS level on loopback interfaces per your requirement.	All levels
<b>CirID</b>	Circuit identifier.	<b>none brief</b>

Table 159: show isis interface Output Fields (continued)

Field Name	Field Description	Level of Output
Level 1 DR	Level 1 designated intermediate system.	none <b>brief</b>
Level 2 DR	Level 2 designated intermediate system.	none <b>brief</b>
L1/L2 Metric	Interface's metric for Level 1 and Level 2. If there is no information, the metric is 0.	none <b>brief</b>
Flood-group Area-ID	Flood-group is configured on a specific IS-IS interface  <b>NOTE:</b> Seen only when Flood-group is configured.	<b>detail extensive</b>
Adjacency advertisement: Advertise	This routing device has signaled to advertise this interface to its neighbors in their label-switched paths (LSPs).	<b>detail extensive</b>
Adjacency advertisement: Suppress	This neighbor has signaled not to advertise this interface in the routing device's outbound LSPs.	<b>detail extensive</b>
Adjacencies	Number of adjacencies established on this interface.	<b>detail</b>
Priority	Priority value for this interface.	<b>detail</b>
Metric	Metric value for this interface.	<b>detail</b>
Hello(s) / Hello Interval	Interface's hello interval.	<b>detail extensive</b>
Hold(s) / Hold Time	Interface's hold time.	<b>detail extensive</b>
Designated Router	Router responsible for sending network link-state advertisements, which describe all the routing devices attached to the network.	<b>detail</b>
Hello padding	Type of hello padding: <ul style="list-style-type: none"> <li>• <b>Adaptive</b>—On point-to-point connections, the hello packets are padded from the initial detection of a new neighbor until the neighbor verifies the adjacency as Up in the adjacency state TLV. If the neighbor does not support the adjacency state TLV, then padding continues. On LAN connections, padding starts from the initial detection of a new neighbor until there is at least one active adjacency on the interface.</li> <li>• <b>Loose</b>—(Default) The hello packet is padded from the initial detection of a new neighbor until the adjacency transitions to the Up state.</li> <li>• <b>Strict</b>—Padding is performed on all interface types and for all adjacency states, and is continuous.</li> </ul>	<b>extensive</b>
LDP sync state	Current LDP synchronization state: <b>in sync</b> , <b>in holddown</b> , or <b>not supported</b> .	<b>extensive</b>
reason	Reason for being in the LDP sync state.	<b>extensive</b>

Table 159: show isis interface Output Fields (continued)

Field Name	Field Description	Level of Output
<b>config holdtime</b>	Configured value of the hold timer.	<b>extensive</b>
<b>remaining</b>	If the state is not in sync and the hold time is not infinity, then this field displays the remaining hold time in seconds.	<b>extensive</b>
<b>IIH max size</b>	Configured value of IS-IS hello packets	<b>extensive</b>

## Sample Output

### show isis interface

```

user@host> show isis interface
IS-IS interface database:
Interface          L CirID Level 1 DR      Level 2 DR      L1/L2 Metric
at-2/3/0.0         3   0x1 Point to Point    Point to Point    10/10
lo0.0              3   0x1 Passive           Passive           0/0

```

### show isis interface brief

The output for the **show isis interface brief** command is identical to that for the **show isis interface** command. For sample output, see [show isis interface on page 2025](#).

### show isis interface detail

```

user@host> show isis interface detail
IS-IS interface database:
at-2/3/0.0
  Index: 66, State: 0x6, Circuit id: 0x1, Circuit type: 3
  LSP interval: 100 ms, CSNP interval: 5 s

## show isis overview

<b>Syntax</b>	<b>show isis overview</b> <instance <i>instance-name</i> > <logical-system (all   <i>logical-system-name</i> )>
<b>Syntax (EX Series Switches and QFX Series)</b>	<b>show isis overview</b> <instance <i>instance-name</i> >
<b>Release Information</b>	Command introduced in Junos OS Release 8.5. Command introduced in Junos OS Release 9.0 for EX Series switches. Command introduced in Junos OS Release 12.1 for the QFX Series. Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.
<b>Description</b>	Display IS-IS overview information.
<b>Options</b>	<b>none</b> —Display standard overview information about IS-IS for all routing instances.  <b>instance <i>instance-name</i></b> —(Optional) Display overview information for the specified routing instance.  <b>logical-system (all   <i>logical-system-name</i>)</b> —(Optional) Perform this operation on all logical systems or on a particular logical system.
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">show isis overview on page 2029</a>
<b>Output Fields</b>	<a href="#">Table 160 on page 2027</a> lists the output fields for the <b>show isis overview</b> command. Output fields are listed in the approximate order in which they appear.

*Table 160: show isis overview Output Fields*

Field Name	Field Description
Hostname	Name of the router.
Sysid	Part of the ISO address of the routing device.
Areaid	The area number of the routing device.
Instance	IS-IS routing instance.
Router ID	Router ID of the routing device.
Adjacency holddown	Adjacency holddown capability: <b>enabled</b> or <b>disabled</b> .

Table 160: show isis overview Output Fields (continued)

Field Name	Field Description
Maximum Areas	Maximum number of IS-IS areas advertised by the routing device.
LSP life time	Lifetime of the link-state PDU, in seconds.
Filter low life time LSPs up to	LSPs with a lifetime lower than this value are filtered out.
Attached bit evaluation	Attached bit capability: <b>enabled</b> or <b>disabled</b> .
SPF delay	Delay before performing consecutive shortest-path-first (SPF) calculations.
SPF holddown	Delay before performing additional SPF calculations after the maximum number of consecutive SPF calculations is reached.
SPF rapid runs	Maximum number of SPF calculations that can be performed in succession before the holddown timer begins.
Overload bit at startup is set	Overload bit capability is enabled.
Overload high metrics	Overload high metrics capability: <b>enabled</b> or <b>disabled</b> .
Overload timeout	Time period after which overload is reset and the time that remains before the timer is set to expire.
Traffic engineering	Traffic engineering capability: <b>enabled</b> or <b>disabled</b> .
Restart	Graceful restart capability: <b>enabled</b> or <b>disabled</b> .
Restart duration	Time period for complete reacquisition of IS-IS neighbors.
Helper mode	Graceful restart helper capability: <b>enabled</b> or <b>disabled</b> .
Level	IS-IS level: <ul style="list-style-type: none"> <li>• 1—Level 1 information</li> <li>• 2—Level 2 information</li> </ul>
IPv4 is enabled	IP Protocol version 4 capability is enabled.
IPv6 is enabled	IP Protocol version 6 capability is enabled.
Micro-loop avoidance	Micro-loop avoidance is enabled. Generally adjacent nodes converge faster than neighboring nodes causing traffic to loop. A route convergence delay is configured to avoid such micro loops.
Internal route preference	Preference value of internal routes.

Table 160: show isis overview Output Fields (continued)

Field Name	Field Description
External route preference	Preference value of external routes.
Prefix export limit	Number of prefixes allowed to be exported, as configured by the <b>prefix-export-limit</b> statement.
Prefix export count	Number of prefixes exported.
Wide area metrics are enabled	Wide area metrics capability is enabled.
Narrow metrics are enabled	Narrow metrics capability is enabled.
Adjacency holddown is active	IS-IS adjacencies come up one after another when adjacency holddown is enabled.

## Sample Output

### show isis overview

```

user@host> show isis overview
Instance: master

<b>Syntax (EX Series Switches and QFX Series)</b>	<pre>show isis route &lt;destination&gt; [inet   inet6] [instance instance-name] [topology (ipv4-multicast   ipv6-multicast   ipv6-unicast   unicast)]</pre>
<b>Release Information</b>	<p>Command introduced before Junos OS Release 7.4.</p> <p>Command introduced in Junos OS Release 9.0 for EX Series switches.</p> <p>Command introduced in Junos OS Release 12.1 for the QFX Series.</p> <p>Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.</p>
<b>Description</b>	Display the routes in the IS-IS routing table.
<b>Options</b>	<p><b>none</b>—Display all routes in the IS-IS routing table for all supported address families for all routing instances.</p> <p><b>destination</b>—(Optional) Destination address for the route.</p> <p><b>inet   inet6</b>—(Optional) Display inet (IPv4) or inet6 (IPv6) routes, respectively.</p> <p><b>instance instance-name</b>—(Optional) Display routes for the specified routing instance only.</p> <p><b>logical-system (all   logical-system-name)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p> <p><b>topology (ipv4-multicast   ipv6-multicast   ipv6-unicast   unicast)</b>—(Optional) Display routes for the specified topology only, or use unicast to display information, if available, for both IPv4 and IPv6 unicast topologies.</p>
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">show isis route logical-system on page 2032</a> <a href="#">show isis route floodgroup on page 2032</a> <a href="#">show isis route (CLNS) on page 2033</a> <a href="#">show isis route on page 2033</a>

**Output Fields** Table 161 on page 2032 describes the output fields for the **show isis route** command. Output fields are listed in the approximate order in which they appear.

*Table 161: show isis route Output Fields*

Field Name	Field Description
<b>Current version</b>	Number of the current version of the IS-IS routing table.
<b>L1</b>	Version of Level 1 SPF that was run.
<b>L2</b>	Version of Level 2 SPF that was run.
<b>Prefix or Label</b>	Destination of the route.
<b>L</b>	IS-IS level: <ul style="list-style-type: none"> <li>• 1—Level 1 only</li> <li>• 2—Level 2 only</li> <li>• 3—Level 1 and Level 2</li> </ul>
<b>Version</b>	Version of SPF that generated the route.
<b>Metric</b>	Metric value associated with the route.
<b>Type</b>	Metric type: <b>int</b> (internal) or <b>ext</b> (external).
<b>Interface</b>	Interface to the next hop.
<b>Via</b>	System identifier of the next hop, displayed as a name if possible.
<b>ISO Routes</b>	ISO routing table entries.
<b>snpa</b>	MAC address.

## Sample Output

**Output Fields** Table 162 on page 2036 describes the output fields for the **show isis spf** command. Output fields are listed in the approximate order in which they appear.

*Table 162: show isis spf Output Fields*

Field Name	Field Description
Node	System ID of a node.
Metric	Metric to the node.
Interface	Interface of the next hop.
Via	System ID of the next hop.
SNPA	Subnetwork point of attachment (MAC address of the next hop).
Start time	(log option only) Time that the SPF computation started.
Elapsed (secs)	(log option only) Length of time, in seconds, required to complete the SPF computation.
Count	(log option only) Number of times the SPF was triggered.
Reason	(log option only) Reason that the SPF computation was completed.

## Sample Output

### show isis spf log

## show isis statistics

---

List of Syntax	<a href="#">Syntax on page 2040</a> <a href="#">Syntax (EX Series Switches and QFX Series) on page 2040</a>
Syntax	<code>show isis statistics</code> <code>&lt;instance <i>instance-name</i>&gt;</code> <code>&lt;logical-system (all   <i>logical-system-name</i>)&gt;</code>
Syntax (EX Series Switches and QFX Series)	<code>show isis statistics</code> <code>&lt;instance <i>instance-name</i>&gt;</code>
Release Information	Command introduced before Junos OS Release 7.4. Command introduced in Junos OS Release 9.0 for EX Series switches. Command introduced in Junos OS Release 12.1 for the QFX Series. Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.
Description	Display statistics about IS-IS traffic.
Options	<b>none</b> —Display IS-IS traffic statistics for all routing instances.  <b>instance <i>instance-name</i></b> —(Optional) Display statistics for the specified routing instance.  <b>logical-system (all   <i>logical-system-name</i>)</b> —(Optional) Perform this operation on all logical systems or on a particular logical system.
Required Privilege Level	view
Related Documentation	<ul style="list-style-type: none"><li>• <a href="#">clear isis statistics on page 1986</a></li></ul>
List of Sample Output	<a href="#">show isis statistics on page 2042</a>
Output Fields	<a href="#">Table 163 on page 2041</a> describes the output fields for the <b>show isis statistics</b> command. Output fields are listed in the approximate order in which they appear.

Table 163: show isis statistics Output Fields

Field Name	Field Description
PDU type	<p>PDU type:</p> <ul style="list-style-type: none"> <li>• <b>CSNP</b>—Complete sequence number PDUs contain a complete list of all link-state PDUs in the IS-IS database. CSNPs are sent periodically on all links, and the receiving systems use the information in the CSNP to update and synchronize their link-state PDU databases. The designated router multicasts CSNPs on broadcast links in place of sending explicit acknowledgments for each link-state PDU.</li> <li>• <b>IIH</b>—IS-IS hello packets are broadcast to discover the identity of neighboring IS-IS systems and to determine whether the neighbors are Level 1 or Level 2 intermediate systems.</li> <li>• <b>LSP</b>—Link-state PDUs contain information about the state of adjacencies to neighboring IS-IS systems. Link-state PDUs are flooded periodically throughout an area.</li> <li>• <b>PSNP</b>—Partial sequence number PDUs are sent multicast by a receiver when it detects that it is missing a link-state PDU (when its link-state PDU database is out of date). The receiver sends a PSNP to the system that transmitted the CSNP, effectively requesting that the missing link-state PDU be transmitted. That routing device, in turn, forwards the missing link-state PDU to the requesting routing device.</li> <li>• <b>Unknown</b>—The PDU type is unknown.</li> </ul>
Received	Number of PDUs received since IS-IS started or since the statistics were set to zero.
Processed	Number of PDUs received less the number dropped.
Drops	Number of PDUs dropped.
Sent	Number of PDUs transmitted since IS-IS started or since the statistics were set to zero.
Rexmit	Number of PDUs retransmitted since IS-IS started or since the statistics were set to zero.
Total packets received/sent	Total number of PDUs received and transmitted since IS-IS started or since the statistics were set to zero.
SNP queue length	Number of CSPN and PSNP packets currently waiting in the queue for processing. This value is almost always 0.
LSP queue length	Number of link-state PDUs waiting in the queue for processing. This value is almost always 0.
SPF runs	Number of shortest-path-first (SPF) calculations that have been performed. If this number is incrementing rapidly, it indicates that the network is unstable.
Fragments rebuilt	Number of link-state PDU fragments that the local system has computed.
LSP regenerations	Number of link-state PDUs that have been regenerated. A link-state PDU is regenerated when it is nearing the end of its lifetime and it has not changed.
Purges initiated	Number of purges that the system initiated. A purge is initiated if the software decides that a link-state PDU must be removed from the network.

## Sample Output

### show isis statistics

```
user@host> show isis statistics
IS-IS statistics for merino:
```

PDU type	Received	Processed	Drops	Sent	Rexmit
LSP	12227	12227	0	8184	683
IIH	113808	113808	0	115817	0
CSNP	198868	198868	0	198934	0
PSNP	6985	6979	6	8274	0
Unknown	0	0	0	0	0
Totals	331888	331882	6	331209	683

```
Total packets received: 331888 Sent: 331892
```

```
SNP queue length:          0 Drops:          0
LSP queue length:          0 Drops:          0
```

```
SPF runs:                  1014
Fragments rebuilt:         1038
LSP regenerations:         425
Purges initiated:          0
```

## CHAPTER 22

# LLDP Operational Commands

- `clear lldp neighbors`
- `clear lldp statistics`
- `show lldp`
- `show lldp local-information`
- `show lldp neighbors`
- `show lldp remote-global-statistics`
- `show lldp statistics`

## clear lldp neighbors

---

Syntax	<code>clear lldp neighbor</code> <code>&lt;interface <i>interface-name</i>&gt;</code>
Release Information	Command introduced in Junos OS Release 9.6.
Description	<p>Clear information regarding all Link Layer Discovery Protocol (LLDP) neighbors or LLDP neighbors of the specified interface.</p> <p>For information about interface names, see <a href="#">"Interface Naming Overview" on page 33</a>. For information about interface names for TX Matrix routers, see <i>TX Matrix Router Chassis and Interface Names</i>. For information about FPC numbering on TX Matrix routers, see <i>Routing Matrix with a TX Matrix Router FPC Numbering</i>.</p> <p>For information about interface names in the Junos Fusion technology, see <i>Understanding Junos Fusion Ports</i>.</p>
Options	<code>interface <i>interface-name</i></code> —(Optional) Clear the LLDP neighbors on the specified interface.
Required Privilege Level	clear
Related Documentation	<ul style="list-style-type: none"><li>• <a href="#">clear lldp statistics on page 2045</a></li></ul>
List of Sample Output	<a href="#">clear lldp neighbors on page 2044</a> <a href="#">clear lldp neighbors interface ge-0/1/1.0 on page 2044</a>
Output Fields	When you enter this command, you are provided no feedback on the status of your request. You can enter the <code>show lldp neighbors</code> command before and after clearing the LLDP neighbors to verify the clear operation.

### Sample Output

#### clear lldp neighbors

```
user@switch> clear lldp neighbors
```

#### clear lldp neighbors interface ge-0/1/1.0

```
user@switch> clear lldp neighbors interface ge-0/1/1.0
```

## clear lldp statistics

<b>Syntax</b>	<code>clear lldpp neighbor</code> <code>&lt;interface <i>interface-name</i>&gt;</code>
<b>Release Information</b>	Command introduced in Junos OS Release 9.6.
<b>Description</b>	<p>Clear all Link Layer Discovery Protocols (LLDP) statistics or LLDP statistics associated with the specified interface.</p> <p>For information about interface names, see <a href="#">"Interface Naming Overview" on page 33</a>. For information about interface names for TX Matrix routers, see <i>TX Matrix Router Chassis and Interface Names</i>. For information about FPC numbering on TX Matrix routers, see <i>Routing Matrix with a TX Matrix Router FPC Numbering</i>.</p> <p>For information about interface names in the Junos Fusion technology, see <i>Understanding Junos Fusion Ports</i>.</p>
<b>Options</b>	<code>interface <i>interface-name</i></code> —(Optional) Clear LLDP statistics on the specified interface.
<b>Required Privilege Level</b>	clear
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">clear lldp neighbors on page 2044</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">clear lldp statistics on page 2045</a> <a href="#">clear lldp statistics interface ge-0/1/1.0 on page 2045</a>
<b>Output Fields</b>	When you enter this command, you are provided no feedback on the status of your request. You can enter the <code>show lldp statistics</code> command before and after clearing the LLDP statistics to verify the clear operation.

## Sample Output

### clear lldp statistics

```
user@switch> clear lldp statistics
```

### clear lldp statistics interface ge-0/1/1.0

```
user@switch> clear lldp statistics interface ge-0/1/1.0
```

## show lldp

<b>Syntax</b>	<code>show lldp</code> <code>&lt;detail&gt;</code>
<b>Release Information</b>	Command introduced in Junos OS Release 9.6.
<b>Description</b>	Display information about the Link Layer Discovery Protocol (LLDP).
<b>Options</b>	<b>detail</b> —(Optional) Display the detailed output level.
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">show lldp on page 2048</a> <a href="#">show lldp detail on page 2048</a>
<b>Output Fields</b>	<a href="#">Table 164 on page 2046</a> describes the output fields for the <b>show lldp</b> command. Output fields are listed in the approximate order in which they appear.

*Table 164: show lldp Output Fields*

Field Name	Field Description
LLDP	Status of LLDP: <b>Enabled</b> or <b>Disabled</b> .
Advertisement interval	Value of the advertisement interval parameter.
Transmit delay	Value of the transmit delay parameter.
Hold timer	Value of the hold timer parameter.
Notification interval	Value of the notification interval parameter.
Config Trap Interval	Value of the configuration trap parameter.
Connection Hold timer	Value of the connection hold timer parameter.
Port ID TLV subtype	<ul style="list-style-type: none"> <li><i>interface-name</i>—Indicates the interface name as the port information for the local device.</li> <li><b>locally-assigned</b>—Indicates that the sub-type for port ID TLV generation is locally assigned value of SNMP index of the interface.</li> </ul> <p>For more information about port ID TLV subtype, see <i>port-id-subtype</i>.</p>

Table 164: show lldp Output Fields (continued)

Field Name	Field Description
Port Description TLV type	<p>Following value used for port description TLV:</p> <ul style="list-style-type: none"> <li><b>interface-alias (ifAlias)</b>—Indicates that the <i>ifAlias</i> MIB object value is used to generate the port description TLV.</li> <li><b>interface-description (ifDescr)</b>—Indicates that the <i>ifDescr</i> MIB object value is used to generate the port description TLV.</li> </ul> <p>For more information about port description TLV type, see <i>port-description-type</i>.</p>
Interface	<p>Name of the interface for which LLDP configuration information is being reported</p> <p>For information about interface names, see <a href="#">"Interface Naming Overview" on page 33</a>. For information about interface names for TX Matrix routers, see <i>TX Matrix Router Chassis and Interface Names</i>. For information about FPC numbering on TX Matrix routers, see <i>Routing Matrix with a TX Matrix Router FPC Numbering</i>.</p>
Parent Interface	Name of the aggregated Ethernet interface, if any, to which the interface belongs.
LLDP	LLDP operating state. The state can be Enabled or Disabled.
LLDP-MED	LLDP-MED operating state. The state can be Enabled or Disabled.
Power Negotiation	LLDP power negotiation operating state. The state can be Enabled or Disabled.
LLDP basic TLVs supported	List of basic LLDP TLVs supported by this device ( <b>detail</b> only).
LLDP 802 TLVs supported	List of IEEE 802.1 LLDP TLVs supported by this device ( <b>detail</b> only).

## Sample Output

### show lldp

```
user@host> show lldp
LLDP                               : Enabled
Advertisement interval             : 30 seconds
Transmit delay                     : 2 seconds
Hold timer                        : 120 seconds
Notification interval             : 0 Second(s)
Config Trap Interval              : 0 seconds
Connection Hold timer             : 300 seconds
Port ID TLV subtype               : locally-assigned
Port Description TLV type         : interface-description (ifDescr)

Interface      Parent Interface  LLDP      LLDP-MED    Power Negotiation
all            -                Enabled
```

## Sample Output

### show lldp detail

```
user@host> show lldp detail
LLDP                               : Enabled
Advertisement interval             : 30 seconds
Transmit delay                     : 2 seconds
Hold timer                        : 120 seconds
Notification interval             : 0 Second(s)
Config Trap Interval              : 0 seconds
Connection Hold timer             : 300 seconds
Port ID TLV subtype               : locally-assigned
Port Description TLV type         : interface-description (ifDescr)

Interface      Parent Interface  LLDP      LLDP-MED    Power Negotiation
Neighbor count
all            -                Enabled
2

Interface      Parent Interface  Vlan-id   Vlan-name
xe-0/0/0       -                4080      vlan-4080
xe-0/0/1       -                4080      vlan-4080

Basic Management TLVs supported:
End Of LLDPDU, Chassis ID, Port ID, Time To Live, Port Description, System Name,
System Description, System Capabilities, Management Address

Organizationally Specific TLVs supported:
Port VLAN tag, VLAN Name, MAC/PHY Configuration/Status, Link Aggregation,Maximum
Frame Size
```

## show lldp local-information

<b>Syntax</b>	show lldp local-information
<b>Release Information</b>	Command introduced in Junos OS Release 9.6.
<b>Description</b>	Display local Link Layer Discovery Protocol (LLDP) information.
<b>Options</b>	This command has no options.
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">show lldp local-information(Management Information Address Subtype is IPv4) on page 2051</a> <a href="#">show lldp local-information(Management Information Address Subtype is IPv6) on page 2051</a>
<b>Output Fields</b>	<a href="#">Table 165 on page 2049</a> describes the output fields for the <b>show lldp local-information</b> command. Output fields are listed in the approximate order in which they appear.

*Table 165: show lldp local-information Output Fields*

Field Name	Field Description
<b>LLDP Local Information details</b>	Information that follows pertains to the local system.
<b>Chassis ID</b>	List of chassis identifiers for local information.
<b>System name</b>	Local system name reported by LLDP.
<b>System descr</b>	Local system description reported by LLDP.
<b>System Capabilities</b>	Capabilities (such as <b>Bridge</b> or <b>Router</b> ) that are <b>Supported</b> or <b>Enabled</b> by system on the interface.
<b>Management Information</b>	Listed by <b>Interface Name</b> , <b>Address Subtype</b> (such as <b>ipv4</b> , <b>ipv6</b> ), <b>Address</b> (such as <b>192.168.168.229</b> , <b>1fd::1a10</b> ), <b>Interface Number</b> , and <b>Interface Numbering Subtype</b> .
<b>Interface Name</b>	List of local interfaces.  For information about interface names, see <a href="#">"Interface Naming Overview" on page 33</a> . For information about interface names for TX Matrix routers, see <i>TX Matrix Router Chassis and Interface Names</i> . For information about FPC numbering on TX Matrix routers, see <i>Routing Matrix with a TX Matrix Router FPC Numbering</i> .
<b>Parent Interface</b>	Name of the <b>ae</b> interface to which the interface belongs
<b>Interface ID</b>	List of local interface identifiers.

*Table 165: show lldp local-information Output Fields (continued)*

Field Name	Field Description
<b>Interface Description</b>	List of local interface descriptions.
<b>Status</b>	List of interface conditions: <b>UP</b> or <b>DOWN</b> .

---

## Sample Output

### show lldp local-information(Management Information Address Subtype is IPv4)

```

user@host> show lldp local-information
LLDP Local Information details

Chassis ID   : 64:87:88:65:37:c0
System name  : apg-hp1
System descr : Juniper Networks, Inc. mx240 , version 14.1I20131231_0701_builder
[builder] Build date: 2013-12-31 07:13:42 UTC

System Capabilities
  Supported      : Bridge Router
  Enabled        : Bridge Router

Management Information
  Interface Name : Unknown
  Address Subtype : IPv4(1)
  Address        : 10.216.97.103
  Interface Number : 1

```

## show lldp neighbors

**Syntax** `show lldp neighbors`  
`<interface interface-name>`

**Release Information** Command introduced in Junos OS Release 9.6.

**Description** Display information about LLDP neighbors.

For information about interface names, see ["Interface Naming Overview" on page 33](#). For information about interface names for TX Matrix routers, see *TX Matrix Router Chassis and Interface Names*. For information about FPC numbering on TX Matrix routers, see *Routing Matrix with a TX Matrix Router FPC Numbering*.

For information about extended port names in the Junos Fusion technology, see *Understanding Junos Fusion Ports*.

**Options** `interface interface-name`—(Optional) Display the neighbor information about a particular physical interface.

**NOTE:** Starting with Junos OS Release 14.2, you can also display LLDP neighbor details for management interfaces, such as `fxp` or `me`, on MX Series routers.

**Required Privilege Level** view

**Related Documentation**

- [clear lldp neighbors on page 2044](#)

**List of Sample Output**

- [show lldp neighbors on page 2055](#)
- [show lldp neighbors interface ge-0/0/4 \(Management Address is IPv4\) on page 2055](#)
- [show lldp neighbors interface ge-0/0/4 \(Management Address is IPv6\) on page 2056](#)
- [show lldp neighbors \(Management Ethernet Interfaces\) on page 2057](#)

**Output Fields** [Table 166 on page 2052](#) describes the output fields for the `show lldp neighbors` command. Output fields are listed in the approximate order in which they appear.

*Table 166: show lldp neighbors Output Fields*

Field Name	Field Description
LLDP Remote Devices Information	Information about remote devices.

Table 166: show lldp neighbors Output Fields (continued)

Field Name	Field Description
<b>LocalInterface</b>	List of local interfaces for which neighbor information is available.
<b>ChassisId</b>	List of chassis identifiers for neighbors.
<b>PortInfo</b>	List of port information gathered from neighbors. This could be the port identifier or port description.
<b>SysName</b>	List of system names gathered from neighbors.
<b>LLDP Neighbor Information</b>	Information about both local and neighbor systems on the interface (appears when the <b>interface</b> option is used).
<b>Local Information</b>	Information about local systems on the interface (appears when the <b>interface</b> option is used).
<b>Neighbor Information</b>	Information about both local and neighbor system on the interface (appears when the <b>interface</b> option is used).
<b>Index</b>	Local interface index (appears when the <b>interface</b> option is used).
<b>Time Mark</b>	Date and timestamp of information (appears when the <b>interface</b> option is used).
<b>Time To Live</b>	Number of seconds for which this information is valid (appears when the <b>interface</b> option is used).
<b>Local Interface</b>	Name of the local physical interface (appears when the <b>interface</b> option is used).
<b>Parent Interface</b>	Name of the <b>ae</b> interface to which the interface belongs
<b>Local Port ID</b>	Local port identifier (appears when the <b>interface</b> option is used).
<b>Neighbor Information</b>	Information about neighbor systems on the interface (appears when the <b>interface</b> option is used).
<b>Chassis type</b>	Type of chassis identifier supplied, such as <b>MAC address</b> (appears when the <b>interface</b> option is used).
<b>Chassis ID</b>	Chassis identifier of type listed (appears when the <b>interface</b> option is used).
<b>Port type</b>	Type of port identifier supplied, such as <b>local</b> (appears when the <b>interface</b> option is used).
<b>Port ID</b>	Port identifier of type listed (appears when the <b>interface</b> option is used).
<b>Port description</b>	Port description (appears when the <b>interface</b> option is used).

*Table 166: show lldp neighbors Output Fields (continued)*

Field Name	Field Description
<b>System name</b>	Name supplied by the system on the interface (appears when the <b>interface</b> option is used).
<b>System Description</b>	Description supplied by the system on the interface (appears when the <b>interface</b> option is used).
<b>System Capabilities</b>	Capabilities (such as <b>bridge</b> or <b>router</b> ) that are <b>Supported</b> or <b>Enabled</b> by the system on the interface (appears when the <b>interface</b> option is used).
<b>Management address</b>	Details of the management address: <b>Address Type</b> (such as <b>ipv4</b> and <b>ipv6</b> ), <b>Address</b> (such as <b>10.204.34.35</b> , <b>1fd::1a10</b> ), <b>Interface Number</b> , <b>Interface Subtype</b> , and <b>Organization Identifier (OID)</b> (appears when the <b>interface</b> option is used).
<b>Organization Info</b>	One or more entries listing remote information by Organizationally Unique Identifier (OUI), <b>Subtype</b> , <b>Index</b> , and <b>Info</b> (appears when the <b>interface</b> option is used).

---

## Sample Output

### show lldp neighbors

```
user@host> show lldp neighbors
```

Local Interface	Parent Interface	Chassis Id	Port info	System Name
ge-2/0/0	ae0	ac:4b:c8:92:67:c0	528	apg-hp
ge-2/0/1	ae0	ac:4b:c8:92:67:c0	529	apg-hp

## Sample Output

### show lldp neighbors interface ge-0/0/4 (Management Address is IPv4)

```
user@host> show lldp neighbors interface ge-0/0/4
```

## show lldp remote-global-statistics

---

<b>Syntax</b>	show lldp remote-global-statistics
<b>Release Information</b>	Command introduced in Junos OS Release 9.6.
<b>Description</b>	Display remote Link Layer Discovery Protocol (LLDP) global statistics.
<b>Options</b>	This command has no options.
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">show lldp remote-global-statistics on page 2059</a>
<b>Output Fields</b>	<a href="#">Table 167 on page 2058</a> describes the output fields for the <b>show lldp remote-global-statistics</b> command. Output fields are listed in the approximate order in which they appear.

*Table 167: show lldp remote-global-statistics Output Fields*

Field Name	Field Description
LLDP Remote Database Table Counters	Information about remote database table counters.
LastchangeTime	Time elapsed between LLDP agent startup and the last change to the remote database table information.
Inserts	Number of insertions made in the remote database table.
Deletes	Number of deletions made in the remote database table.
Drops	Number of LLDP frames dropped from the remote database table because of errors.
Ageouts	Number of remote database table entries that have aged out of the table.

## Sample Output

### show lldp remote-global-statistics

```
user@host> show lldp remote-global-statistics
user@host> show lldp remote-global-statistics
LLDP Remote Database Table Counters
LastchangeTime      Inserts    Deletes    Drops    Ageouts
00:00:76 (76 sec)   192        0           0         0
```

## show lldp statistics

**Syntax** `show lldp statistics`  
`<interface interface-name>`

**Release Information** Command introduced in Junos OS Release 9.6.

**Description** Display information about Link Layer Discovery Protocol (LLDP) statistics.

**Options** `interface interface-name`—(Optional) Display the statistics about a particular physical interface.

**NOTE:** Starting with Junos OS Release 14.2, you can also display LLDP statistical details for management interfaces, such as `fxp` or `me`, on MX Series routers.

**Required Privilege Level** view

**Related Documentation** • [clear lldp statistics on page 2045](#)

**List of Sample Output** [show lldp statistics on page 2062](#)  
[show lldp statistics interface ge-0/1/1 on page 2062](#)

**Output Fields** [Table 168 on page 2060](#) describes the output fields for the `show lldp statistics` command. Output fields are listed in the approximate order in which they appear.

*Table 168: show lldp statistics Output Fields*

Field Name	Field Description
Interface	Interface name.  For information about interface names, see <a href="#">“Interface Naming Overview” on page 33</a> . For information about interface names for TX Matrix routers, see <i>TX Matrix Router Chassis and Interface Names</i> . For information about FPC numbering on TX Matrix routers, see <i>Routing Matrix with a TX Matrix Router FPC Numbering</i> .  For information about extended port names in the Junos Fusion technology, see <i>Understanding Junos Fusion Ports</i> .
Received	Number of LLDP frames received on this interface.
Transmitted	Number of LLDP frames sent on this interface.

*Table 168: show lldp statistics Output Fields (continued)*

Field Name	Field Description
<b>Unknown-TLVs</b>	Number of LLDP frames with unsupported content received on this interface.
<b>With-Errors</b>	Number of LLDP frames with errors received on this interface.
<b>Discarded</b>	Number of LLDP frames received on this interface that were discarded because of problems.
<b>Transmitted</b>	Total number of LLDP frames that were transmitted on an interface.
<b>Untransmitted</b>	Total number of LLDP frames that were untransmitted on an interface.

## Sample Output

### show lldp statistics

```
user@host> show lldp statistics
```

Interface	Parent Interface	Received	Unknown TLVs	With Errors
xe-3/0/0.0	ae31.0	1564	0	0

## CHAPTER 23

# MVRP Operational Commands

- `show mvrp`
- `show mvrp applicant-state`
- `show mvrp dynamic-vlan-memberships`
- `show mvrp interface`
- `show mvrp registration-state`
- `show mvrp statistics`

## show mvrp

---

<b>Syntax</b>	show mvrp
<b>Release Information</b>	Command introduced in Junos OS Release 10.0 for EX Series switches. Command introduced in Junos OS Release 10.1 for MX Series routers. Command introduced in Junos OS Release 13.2X50-D10 for EX Series switches. Command introduced in Junos OS Release 15.1X49-D70 for SRX Series devices.
<b>Description</b>	Display Multiple VLAN Registration Protocol (MVRP) configuration information.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Example: Configuring Automatic VLAN Administration Using MVRP on EX Series Switches</i></li><li>• <i>Verifying That MVRP Is Working Correctly on Switches</i></li><li>• <a href="#">show mvrp statistics on page 2075</a></li><li>• <a href="#">show mvrp applicant-state on page 2067</a></li><li>• <a href="#">show mvrp dynamic-vlan-memberships on page 2069</a></li><li>• <a href="#">show mvrp interface on page 2071</a></li><li>• <a href="#">show mvrp registration-state on page 2073</a></li><li>• <a href="#">show mvrp statistics on page 2075</a></li><li>• <a href="#">show mvrp applicant-state on page 2067</a></li><li>• <a href="#">show mvrp dynamic-vlan-memberships on page 2069</a></li><li>• <a href="#">show mvrp interface on page 2071</a></li><li>• <a href="#">show mvrp registration-state on page 2073</a></li></ul>
<b>List of Sample Output</b>	<a href="#">show mvrp (EX Series switches and MX Series routers) on page 2065</a> <a href="#">show mvrp (SRX1500, SRX300, SRX550M, SRX345, SRX340 and SRX320) on page 2065</a> <a href="#">show mvrp (EX Series switches) on page 2066</a>
<b>Output Fields</b>	<a href="#">Table 169 on page 2064</a> lists the output fields for the <b>show mvrp</b> command. Output fields are listed in the approximate order in which they appear.

*Table 169: show mvrp Output Fields*

Field Name	Field Description
MVRP dynamic VLAN creation	Displays whether global MVRP dynamic VLAN creation is <b>Enabled</b> or <b>Disabled</b> .

---

Table 169: show mvrp Output Fields (continued)

Field Name	Field Description
<b>Global MVRP configuration</b>	Displays global MVRP information: <ul style="list-style-type: none"> <li>• <b>MVRP status</b>—Displays whether MVRP is <b>Enabled</b> or <b>Disabled</b>.</li> <li>• <b>MVRP dynamic vlan creation</b>—Displays whether global MVRP dynamic VLAN creation is <b>Enabled</b> or <b>Disabled</b>.</li> </ul>
<b>MVRP BPDU MAC address</b>	Displays the multicast media access control (MAC) address for MVRP. If configured, the provider MVRP multicast MAC address is used; otherwise, the customer MVRP multicast MAC address is used.
<b>MVRP timers (ms)</b>	Displays MVRP timer information: <ul style="list-style-type: none"> <li>• <b>Interface</b>—The interface on which MVRP is configured.</li> <li>• <b>Join</b>—The maximum number of milliseconds the interfaces must wait before sending VLAN advertisements.</li> <li>• <b>Leave</b>—The number of milliseconds an interface must wait after receiving a Leave message to remove the interface from the VLAN specified in the message.</li> <li>• <b>LeaveAll</b>—The interval at which LeaveAll messages are sent on interfaces. LeaveAll messages maintain current MVRP VLAN membership information in the network.</li> </ul>
<b>Interface based configuration</b>	Displays interface-specific MVRP information: <ul style="list-style-type: none"> <li>• <b>Interface</b>—The interface on which MVRP is configured.</li> <li>• <b>Status</b>—Displays whether MVRP is <b>Enabled</b> or <b>Disabled</b>.</li> <li>• <b>Registration</b>—Displays whether registration for the interface is <b>Forbidden</b> or <b>Normal</b>.</li> <li>• <b>Dynamic VLAN Creation</b>—Displays whether interface dynamic VLAN creation is <b>Enabled</b> or <b>Disabled</b>.</li> </ul>

## Sample Output

### show mvrp (EX Series switches and MX Series routers)

```

user@host> show mvrp
MVRP configuration for routing instance 'default-switch'
MVRP dynamic VLAN creation : Enabled
MVRP BPDU MAC address      : Customer bridge group (01-80-C2-00-00-21)
MVRP timers (ms)
  Interface    Join    Leave  LeaveAll
  ge-11/2/8    200    800    10000
  ge-11/0/9    200    800    10000
  ge-11/3/0    200    800    10000

```

## Sample Output

### show mvrp (SRX1500, SRX300, SRX550M, SRX345, SRX340 and SRX320)

```

user@host> show mvrp
MVRP configuration for routing instance 'default-switch'
MVRP dynamic VLAN creation : Enabled
MVRP BPDU MAC address      : Customer bridge group (00-00-5E-00-53-00)
MVRP timers (ms)
  Interface    Join    Leave  LeaveAll
  ge-0/0/1     200    800    60

```

## Sample Output

### show mvrp (EX Series switches)

```
user@switch> show mvrp
```

#### Global MVRP configuration

MVRP status : Enabled

MVRP dynamic vlan creation: Enabled

#### MVRP Timers (ms):

Interface	Join	Leave	LeaveAll
-----	----	-----	-----
all	200	600	10000
xe-0/1/1.0	200	600	10000

#### Interface based configuration:

Interface	Status	Registration	Dynamic VLAN Creation
-----	-----	-----	-----
all	Disabled	Normal	Enabled
xe-0/1/1.0	Enabled	Normal	Enabled

## show mvrp applicant-state

Syntax	show mvrp applicant-state
Release Information	Command introduced in Junos OS Release 10.1. Command introduced in Junos OS Release 15.1X49-D70 for SRX Series devices.
Description	For MX Series routers, EX Series switches, SRX1500, SRX300, SRX550M, SRX345, SRX340, and SRX320, display Multiple VLAN Registration Protocol (MVRP) applicant state information.
Required Privilege Level	view
Related Documentation	<ul style="list-style-type: none"><li>• <a href="#">show mvrp on page 2064</a></li><li>• <a href="#">show mvrp interface on page 2071</a></li><li>• <a href="#">show mvrp registration-state on page 2073</a></li><li>• <a href="#">show mvrp statistics on page 2075</a></li><li>• <a href="#">show mvrp interface on page 2071</a></li><li>• <a href="#">show mvrp registration-state on page 2073</a></li></ul>
List of Sample Output	<a href="#">show mvrp applicant-state (EX Series and MX Series) on page 2068</a> <a href="#">show mvrp applicant-state on page 2068</a>
Output Fields	<a href="#">Table 170 on page 2067</a> lists the output fields for the <b>show mvrp applicant-state</b> command. Output fields are listed in the approximate order in which they appear.

Table 170: show mvrp applicant-state Output Fields

Field Name	Field Description
VLAN Id	Displays the VLAN ID number.
Interface	Displays the interface number associated with the VLAN ID.

Table 170: show mvrp applicant-state Output Fields (continued)

Field Name	Field Description
<b>State</b>	<p>Displays one of the following MVRP registrar states:</p> <ul style="list-style-type: none"> <li>• VO— Very anxious observer.</li> <li>• VP —Very anxious passive.</li> <li>• VA —Very anxious new.</li> <li>• AN —Anxious new.</li> <li>• AA —Anxious active.</li> <li>• QA —Quiet active.</li> <li>• LA —Leaving active.</li> <li>• AO —Anxious observer.</li> <li>• QO —Quiet observer.</li> <li>• LO —Leaving observer.</li> <li>• AP —Anxious passive.</li> <li>• QA —Quiet passive.</li> </ul>

## Sample Output (EX Series and MX Series)

### show mvrp applicant-state (EX Series and MX Series)

```

user@host> show mvrp applicant-state
MVRP applicant state for routing instance 'default-switch'
(VO) Very anxious observer, (VP) Very anxious passive, (VA) Very anxious new,
(AN) Anxious new, (AA) Anxious active, (QA) Quiet active, (LA) Leaving active,
(AO) Anxious observer, (QO) Quiet observer, (LO) Leaving observer,
(AP) Anxious passive, (QP) Quiet passive

VLAN Id      Interface      State
-----
100          ge-11/3/0      Declaring (QA)
200          ge-11/3/0      Declaring (QA)
300          ge-11/3/0      Declaring (QA)

```

## Sample Output (SRX1500, SRX300, SRX550M, SRX345, SRX340, and SRX320)

### show mvrp applicant-state

```

user@host> show mvrp applicant-state
MVRP applicant state for routing instance 'default-switch'
(VO) Very anxious observer, (VP) Very anxious passive, (VA) Very anxious new,
(AN) Anxious new, (AA) Anxious active, (QA) Quiet active, (LA) Leaving active,
(AO) Anxious observer, (QO) Quiet observer, (LO) Leaving observer,
(AP) Anxious passive, (QP) Quiet passive

VLAN Id      Interface      State
-----
1            ge-0/0/1      Idle (VO)
30           ge-0/0/1      Idle (VO)
40           ge-0/0/1      Idle (VO)
50           ge-0/0/1      Idle (VO)
100          ge-0/0/1      Idle (VO)

```

## show mvrp dynamic-vlan-memberships

<b>Syntax</b>	show mvrp dynamic-vlan-memberships
<b>Release Information</b>	<p>Command introduced in Junos OS Release 10.0 for EX Series switches.</p> <p>Command introduced in Junos OS Release 10.1 for MX Series routers.</p> <p>Command introduced in Junos OS Release 13.2X50-D10 for EX Series switches.</p> <p>Command introduced in Junos OS Release 15.1X49-D70 for SRX Series devices.</p>
<b>Description</b>	Display all VLANs that have been created dynamically using Multiple VLAN Registration Protocol (MVRP) on the router, switch, or SRX Series device.
<b>Required Privilege Level</b>	clear
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Example: Configuring Automatic VLAN Administration Using MVRP on EX Series Switches</i></li> <li>• <i>Verifying That MVRP Is Working Correctly on Switches</i></li> <li>• <a href="#">show mvrp on page 2064</a></li> <li>• <a href="#">show mvrp applicant-state on page 2067</a></li> <li>• <a href="#">show mvrp interface on page 2071</a></li> <li>• <a href="#">show mvrp registration-state on page 2073</a></li> <li>• <a href="#">show mvrp registration-state on page 2073</a></li> <li>• <a href="#">show mvrp statistics on page 2075</a></li> </ul>
<b>List of Sample Output</b>	<p><a href="#">show mvrp dynamic-vlan-memberships (MX Series and EX Series) on page 2069</a></p> <p><a href="#">show mvrp dynamic-vlan-memberships (EX Series) on page 2070</a></p> <p><a href="#">show mvrp dynamic-vlan-memberships on page 2070</a></p>
<b>Output Fields</b>	<a href="#">Table 171 on page 2069</a> lists the output fields for the <b>show mvrp dynamic-vlan-memberships</b> command on MX Series routers and EX Series switches. Output fields are listed in the approximate order in which they appear.

*Table 171: show mvrp dynamic-vlan-memberships Output Fields*

Field Name	Field Description
VLAN Id	The VLAN ID of the dynamically created VLAN.
Interfaces	The interface or interfaces that are bound to the dynamically created VLAN.

## Sample Output (MX Series Routers and EX Series Switches)

show mvrp dynamic-vlan-

### memberships (MX Series and EX Series)

```
user@host> show mvrp dynamic-vlan-memberships
MVRP dynamic vlans for routing instance 'default-switch'
(s) static vlan, (f) fixed registration

VLAN Id      Interfaces
  100 (s)    ge-11/3/0
  200 (s)    ge-11/3/0
  300 (s)
```

### Sample Output (EX Series Switches)

#### show mvrp dynamic-vlan-memberships (EX Series)

```
user@switch> show mvrp dynamic-vlan-memberships
VLAN Name      Interfaces
-----
__mvrp_100__    xe-0/1/1.0
                 xe-0/1/0.0
__mvrp_200__    xe-0/1/1.0
                 xe-0/1/0.0
__mvrp_300__    xe-0/1/1.0
```

### Sample Output (SRX1500, SRX300, SRX550M, SRX345, SRX340, SRX320)

#### show mvrp dynamic-vlan-memberships

```
user@host> show mvrp dynamic-vlan-memberships
MVRP dynamic vlans for routing instance 'default-switch'
(s) static vlan, (f) fixed registration

VLAN Id      Interfaces
   1 (s)
  30 (s)
  40 (s)    ge-0/0/1
  50 (s)    ge-0/0/1
 100 (s)    ge-0/0/1 (f)
```

## show mvrp interface

<b>Syntax</b>	show mvrp interface
<b>Release Information</b>	Command introduced in Junos OS Release 10.1. Command introduced in Junos OS Release 15.1X49-D70 for SRX Series devices.
<b>Description</b>	Display Multiple VLAN Registration Protocol (MVRP) interface-specific information.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">show mvrp on page 2064</a></li> <li>• <a href="#">show mvrp applicant-state on page 2067</a></li> <li>• <a href="#">show mvrp dynamic-vlan-memberships on page 2069</a></li> <li>• <a href="#">show mvrp registration-state on page 2073</a></li> <li>• <a href="#">show mvrp registration-state on page 2073</a></li> <li>• <a href="#">show mvrp statistics on page 2075</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">show mvrp interface on page 2071</a> <a href="#">show mvrp interface on page 2072</a>
<b>Output Fields</b>	<a href="#">Table 172 on page 2071</a> lists the output fields for the <b>show mvrp interface</b> command. Output fields are listed in the approximate order in which they appear.

*Table 172: show mvrp interface Output Fields*

Field Name	Field Description
Interface	Interface on which MVRP is configured.
Status	Status of the MVRP: <b>Enabled</b> or <b>Disabled</b> .
Registration Mode	Registration for the interface: <b>Fixed</b> , <b>Forbidden</b> , or <b>Normal</b> .
Applicant Mode	Applicant mode.

## Sample Output (MX Series Routers and SX Series Switches)

### show mvrp interface

```

user@host> show mvrp interface
MVRP interface information for routing instance 'default-switch'

Interface      Status      Registration  Applicant
              Mode        Mode

```

ge-11/2/8	Enabled	Normal	Normal
ge-11/0/9	Enabled	Normal	Normal
ge-11/3/0	Enabled	Normal	Normal

### Sample Output (SRX1500, SRX300, SRX550M, SRX345, SRX340 and SRX320)

#### show mvrp interface

```
user@host> show mvrp interface
MVRP interface information for routing instance 'default-switch'
```

Interface	Status Mode	Registration Mode	Applicant Mode
ge-0/0/1	Enabled	Normal	Normal

## show mvrp registration-state

<b>Syntax</b>	show mvrp registration-state
<b>Release Information</b>	Command introduced in Junos OS Release 10.1. Command introduced in Junos OS Release 15.1X49-D70 for SRX Series devices.
<b>Description</b>	For MX Series routers, EX Series switches and SRX1500, SRX300, SRX550M, SRX345, SRX340 and SRX320, display Multiple VLAN Registration Protocol (MVRP) registration state information.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">show mvrp on page 2064</a></li> <li>• <a href="#">show mvrp dynamic-vlan-memberships on page 2069</a></li> <li>• <a href="#">show mvrp interface on page 2071</a></li> <li>• <a href="#">show mvrp statistics on page 2075</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">show mvrp registration-state (EX Series and MX Series) on page 2074</a> <a href="#">show mvrp registration-state (SRX1500, SRX300, SRX550M, SRX345, SRX340 and SRX320) on page 2074</a>
<b>Output Fields</b>	Table 173 on page 2073 lists the output fields for the <b>show mvrp registration-state</b> command. Output fields are listed in the approximate order in which they appear.

Table 173: show mvrp registration-state Output Fields

Field Name	Field Description
VLAN Id	Displays the VLAN ID number.
Interface	Displays the interface number associated with the VLAN ID.
Registrar State	Displays whether the registrar state is Registered or Empty.
Forced State	Displays whether the forced state is Registered or Empty.
Managed State	Displays one of the following states: <ul style="list-style-type: none"> <li>• <b>fixed</b>—VLANs always stay in a registered state and are declared as such on all other forwarding ports.</li> <li>• <b>normal</b>—VLANs participate in the MVRP protocol and honor incoming join requests normally.</li> <li>• <b>forbidden</b>—VLANs ignore the incoming join requests and always stay in an unregistered state.</li> </ul>
STP State	Displays whether the Spanning Tree Protocol (STP) is Blocking or Forwarding.

## Sample Output

### show mvrp registration-state (EX Series and MX Series)

```
user@host> show mvrp registration-state
MVRP registration state for routing instance 'default-switch'
```

VLAN Id	Interface	Registrar State	Forced State	Managed State	STP State
100	ge-11/2/8	Empty	Registered	Fixed	Forwarding
	ge-11/0/9	Empty	Empty	Normal	Forwarding
	ge-11/3/0	Registered	Registered	Normal	Forwarding
101	ge-11/2/8	Empty	Registered	Fixed	Forwarding
	ge-11/0/9	Empty	Empty	Normal	Forwarding
	ge-11/3/0	Registered	Registered	Normal	Forwarding

## Sample Output

### show mvrp registration-state (SRX1500, SRX300, SRX550M, SRX345, SRX340 and SRX320)

```
user@host> show mvrp registration-state
MVRP registration state for routing instance 'default-switch'
```

VLAN Id	Interface	Registrar State	Forced State	Managed State	STP State
1	ge-0/0/1	Empty	Empty	Normal	Forwarding
30	ge-0/0/1	Empty	Empty	Normal	Forwarding
40	ge-0/0/1	Registered	Registered	Normal	Forwarding
50	ge-0/0/1	Registered	Registered	Normal	Forwarding
100	ge-0/0/1	Empty	Registered	Fixed	Forwarding

## show mvrp statistics

<b>List of Syntax</b>	<a href="#">Syntax (EX Series Switches) on page 2075</a> <a href="#">Syntax (Switches with ELS Support) on page 2075</a> <a href="#">Syntax (SRX Devices) on page 2075</a>
<b>Syntax (EX Series Switches)</b>	<pre>show mvrp statistics &lt;interface <i>interface-name</i>&gt;</pre>
<b>Syntax (Switches with ELS Support)</b>	<pre>show mvrp statistics &lt;interface <i>interface-name</i>&gt; &lt;routing-instance <i>routing-instance-name</i>&gt;</pre>
<b>Syntax (SRX Devices)</b>	<pre>show mvrp statistics</pre>
<b>Release Information</b>	<p>Command introduced in Junos OS Release 10.0 for EX Series switches.</p> <p>Command introduced in Junos OS Release 13.2X50-D10 (ELS).</p> <p>Command introduced in Junos OS Release 15.1X49-D70 for SRX Series devices.</p>
<b>Description</b>	Display Multiple VLAN Registration Protocol (MVRP) statistics in the form of Multiple Registration Protocol data unit (MRPDU) messages.
<b>Options</b>	<p><b>none</b>—Show MVRP statistics for all interfaces on the switch.</p> <p><b>interface <i>interface-name</i></b>—(Optional) Show MVRP statistics for the specified interface.</p>
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">show mvrp on page 2064</a></li> <li>• <i>clear mvrp statistics</i></li> <li>• <i>Example: Configuring Automatic VLAN Administration Using MVRP on EX Series Switches</i></li> <li>• <i>Verifying That MVRP Is Working Correctly on Switches</i></li> <li>• <i>Verifying That MVRP Is Working Correctly on EX Series Switches with ELS Support</i></li> </ul>
<b>List of Sample Output</b>	<a href="#">show mvrp statistics interface xe-0/1/1.0 on page 2078</a> <a href="#">show mvrp statistics on page 2078</a> <a href="#">show mvrp statistics (SRX Devices) on page 2078</a>
<b>Output Fields</b>	<p><a href="#">Table 171 on page 2069</a> lists the output fields for the <b>show mvrp statistics</b> command on EX Series switches. Output fields are listed in the approximate order in which they appear.</p>

Table 174: show mvrp statistics Output Fields

Field Name	Field Description
MRPDU received	Number of MRPDU messages received on the switch.
Invalid PDU received	Number of invalid MRPDU messages received on the switch.
New received	Number of new messages received on the switch.
Join Empty received	Number of MRP JoinEmpty messages received on the switch. Either this value or the value for <i>JoinIn received</i> should increase when the value for <i>MRPDU received</i> increases. If this value is not incrementing when it should, you might have a Junos OS release version compatibility issue. To fix a version compatibility issue, see <i>Configuring Multiple VLAN Registration Protocol (MVRP) on Switches</i> .
Join In received	Number of MRP JoinIn messages received on the switch. Either this value or the value for <i>JoinEmpty received</i> should increase when the value for <i>MRPDU received</i> increases. If this value is not incrementing when it should, you might have a Junos OS release version compatibility issue. To fix a version compatibility issue, see <i>Configuring Multiple VLAN Registration Protocol (MVRP) on Switches</i> .
Empty received	Number of MRP Empty messages received on the switch.
In received	Number of MRP In messages received on the switch.
Leave received	Number of MRP Leave messages received on the switch.
LeaveAll received	Number of LeaveAll messages received on the switch.
MRPDU transmitted	Number of MRPDU messages transmitted from the switch.
MRPDU transmit failures	Number of MRPDU transmit failures from the switch.
New transmitted	Number of new messages transmitted from the switch.
Join Empty transmitted	Number of JoinEmpty messages sent from the switch.
Join In transmitted	Number of MRP JoinIn messages sent from the switch.
Empty transmitted	Number of MRP Empty messages sent from the switch.
In transmitted	Number of MRP In messages sent from the switch.
Leave transmitted	Number of MRP Leave Empty messages sent from the switch.
LeaveAll transmitted	Number of MRP LeaveAll messages sent from the switch.

Table 175 on page 2077 lists the output fields for the **show mvrp statistics** command on SRX devices. Output fields are listed in the approximate order in which they appear.

Table 175: show mvrp statistics Output Fields

Field Name	Field Description
Interface name	Interface for which MVRP statistics are displayed.
VLAN IDs registered	Number of Virtual LAN (VLAN) IDs registered.
Sent MVRP PDUs	Number of MRPDU messages transmitted from the switch.
Received MVRP PDUs without error	Number of MRPDU messages received on the switch.
Received MVRP PDUs with error	Number of invalid MRPDU messages received on the switch.
Transmitted Join Empty	Number of JoinEmpty messages sent from the switch.
Transmitted Leave All	Number of MRP LeaveAll messages sent from the switch.
Received Join In	Number of MRP JoinIn messages received on the switch. Either this value or the value for <b>Received Join Empty</b> should increase when the value for <b>Received MVRP PDUs without error</b> increases. If this value is not incrementing when it should, you might have a Junos OS release compatibility issue. To resolve the issue, see <i>Configuring Multiple VLAN Registration Protocol (MVRP) on Switches</i> .
Transmitted Join In	Number of MRP JoinIn messages sent from the switch.
Transmitted Empty	Number of MRP Empty messages sent from the switch.
Transmitted Leave	Number of MRP LeaveEmpty messages sent from the switch.
Transmitted In	Number of MRP In messages sent from the switch.
Transmitted New	Number of New messages transmitted from the switch.
Received Leave All	Number of LeaveAll messages received on the switch.
Received Leave	Number of MRP Leave messages received on the switch.
Received In	Number of MRP In messages received on the switch.
Received Empty	Number of MRP Empty messages received on the switch.
Received Join Empty	Number of MRP JoinEmpty messages received on the switch. Either this value or the value for <b>Received Join In</b> should increase when the value for <b>Received MVRP PDUs without error</b> increases. If this value is not incrementing when it should, you might have a Junos OS release compatibility issue. To resolve the issue, see <i>Configuring Multiple VLAN Registration Protocol (MVRP) on Switches</i> .
Received New	Number of New messages received on the switch.

## Sample Output

### show mvrp statistics interface xe-0/1/1.0

```
user@switch> show mvrp statistics interface xe-0/1/1.0
MVRP statistics
MRPDU received           : 3342

## clear (ospf | ospf3) database

---

**List of Syntax**    [Syntax on page 2082](#)  
                          [Syntax \(EX Series Switch and QFX Series\) on page 2082](#)

**Syntax**    clear (ospf | ospf3) database  
              <all>  
              <advertising-router (*router-id* | self)>  
              <area *area-id*>  
              <asbrsummary>  
              <external>  
              <instance *instance-name*>  
              <inter-area-prefix>  
              <inter-area-router>  
              <intra-area-prefix>  
              <link-local>  
              <logical-system (all | *logical-system-name*)>  
              <lsa-id *lsa-id*>  
              <netsummary>  
              <network>  
              <nssa>  
              <opaque-area>  
              <purge>  
              <realm (ipv4-multicast | ipv4-unicast | ipv6-multicast)>  
              <router>

**Syntax (EX Series Switch and QFX Series)**    clear (ospf | ospf3) database  
  <all>  
  <advertising-router (*router-id* | self)>  
  <area *area-id*>  
  <asbrsummary>  
  <external>  
  <instance *instance-name*>  
  <inter-area-prefix>  
  <inter-area-router>  
  <intra-area-prefix>  
  <link-local>  
  <lsa-id *lsa-id*>  
  <netsummary>  
  <network>  
  <nssa>  
  <opaque-area>  
  <purge>  
  <router>

**Release Information**    Command introduced before Junos OS Release 7.4.  
                              **advertising-router** *router-id*, **netsummary**, **network**, **nssa**, **opaque-area**, and **router** options added in Junos OS Release 8.3. You must use the **purge** command with these options.  
                              **area** *area-id* option added in Junos OS Release 8.3.  
                              Command introduced in Junos OS Release 9.0 for EX Series switches.  
                              **realm** option added in Junos OS Release 9.2.  
                              **advertising-router** (*router-id* | **self**) option added in Junos OS Release 9.5.

**advertising-router** (*router-id* | **self**) option introduced in Junos OS Release 9.5 for EX Series switches.

Command introduced in Junos OS Release 11.3 for the QFX Series.

Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.

**purge** option (and all options that are dependent on the **purge** option) hidden in Junos OS Release 13.3.

**Description** With the master Routing Engine, delete entries in the Open Shortest Path First (OSPF) link-state advertisement (LSA) database. With the backup Routing Engine, delete the OSPF LSA database and sync the new database with the master Routing Engine.

**CAUTION:** You can also use the **purge** command with any of the options to discard rather than delete the specified LSA entries. This command is useful only for testing. Use it with care, because it causes significant network disruption.

**Options** **all**—Delete all LSAs other than the system's own LSAs, which are regenerated. To resynchronize the database, the system destroys all adjacent neighbors that are in the state **EXSTART** or higher. The neighbors are then reacquired and the databases are synchronized.

**advertising-router** (*router-id* | **self**)—(Optional) Discard entries for the LSA entries advertised by the specified routing device or by this routing device.

**area** *area-id*—(Optional) Discard entries for the LSAs in the specified area.

**asbrsummary**—(Optional) Discard summary AS boundary router LSA entries.

**external**—(Optional) Discard external LSAs.

**instance** *instance-name*—(Optional) Delete or discard entries for the specified routing instance only.

**inter-area-prefix**—(OSPFv3 only) (Optional) Discard interarea prefix LSAs.

**inter-area-router**—(OSPFv3 only) (Optional) Discard interarea router LSAs.

**intra-area-prefix**—(OSPFv3 only) (Optional) Discard intra-area prefix LSAs.

**logical-system** (**all** | *logical-system-name*)—(Optional) Perform this operation on all logical systems or on a particular logical system.

**link-local**—(Optional) Delete link-local LSAs.

**lsa-id** *lsa-id*—(Optional) Discard the LSA entries with the specified LSA identifier.

**netsummary**—(Optional) Discard summary network LSAs.

**network**—(Optional) Discard network LSAs.

**nssa**—(Optional) Discard not-so-stubby area (NSSA) LSAs.

**opaque-area**—(Optional) Discard opaque area-scope LSAs.

**realm (ipv4-multicast | ipv4-unicast | ipv6-multicast)**—(OSPFv3 only) (Optional)  
Delete the entries for the specified OSPFv3 realm, or address family. Use the **realm** option to specify an address family for OSPFv3 other than IPv6 unicast, which is the default.

**router**—(Optional) Discard router LSAs.

**purge**—(Optional) Discard all entries in the link-state advertisement database. All link-state advertisements are set to **MAXAGE** and are flooded. The database is repopulated when the originators of the link-state advertisements receive the **MAXAGE** link-state advertisements and reissue them.

**Required Privilege Level**

**List of Sample Output**    [clear ospf database all on page 2084](#)

**Output Fields**    When you enter this command, you are provided feedback on the status of your request.

## Sample Output

`clear ospf database all`

```
user@host> clear ospf database all
```

## clear (ospf | ospf3) io-statistics

<b>List of Syntax</b>	<a href="#">Syntax on page 2085</a> <a href="#">Syntax (EX Series Switch and QFX Series) on page 2085</a>
<b>Syntax</b>	clear (ospf   ospf3) io-statistics <logical-system (all   <i>logical-system-name</i> )>
<b>Syntax (EX Series Switch and QFX Series)</b>	clear (ospf   ospf3) io-statistics
<b>Release Information</b>	Command introduced before Junos OS Release 7.4. Command introduced in Junos OS Release 9.0 for EX Series switches. Command introduced in Junos OS Release 11.3 for the QFX Series. Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.
<b>Description</b>	Clear Open Shortest Path First (OSPF) input and output statistics.
<b>Options</b>	<b>none</b> —Clear OSPF input and output statistics.  <b>logical-system (all   <i>logical-system-name</i>)</b> —(Optional) Perform this operation on all logical systems or on a particular logical system.
<b>Required Privilege Level</b>	clear
<b>List of Sample Output</b>	<a href="#">clear ospf io-statistics on page 2085</a>
<b>Output Fields</b>	When you enter this command, you are provided feedback on the status of your request.

### Sample Output

#### clear ospf io-statistics

```
user@host> clear ospf io-statistics
```

## clear (ospf | ospf3) neighbor

---

**List of Syntax**    [Syntax on page 2086](#)  
                          [Syntax \(EX Series Switch and QFX Series\) on page 2086](#)

**Syntax**    clear (ospf | ospf3) neighbor  
              <all>  
              <area *area-id*>  
              <instance *instance-name*>  
              <interface *interface-name*>  
              <logical-system (all | *logical-system-name*)>  
              <neighbor>  
              <realm (ipv4-multicast | ipv4-unicast | ipv6-multicast)>

**Syntax (EX Series Switch and QFX Series)**    clear (ospf | ospf3) neighbor  
  <all>  
  <area *area-id*>  
  <instance *instance-name*>  
  <interface *interface-name*>  
  <neighbor>

**Release Information**    Command introduced before Junos OS Release 7.4.  
                              Command introduced in Junos OS Release 9.0 for EX Series switches.  
                              **realm** option introduced in Junos OS Release 9.2.  
                              Command introduced in Junos OS Release 11.3 for the QFX Series.  
                              Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.

**Description**    Tear down Open Shortest Path First (OSPF) neighbor connections.

**Options**    **all**—Tear down OSPF connections with all neighbors for all routing instances.

**area *area-id***—(Optional) Tear down neighbor connections for the specified area only.

**instance *instance-name***—(Optional) Tear down neighbor connections for the specified routing instance only.

**interface *interface-name***—(Optional) Tear down neighbor connections for the specified interface only.

**logical-system (all | *logical-system-name*)**—(Optional) Perform this operation on all logical systems or on a particular logical system.

**neighbor**—(Optional) Clear the state of the specified neighbor only.

**realm (ipv4-multicast | ipv4-unicast | ipv6-multicast)**—(Optional) (OSPFv3 only) Clear the state of the specified OSPFv3 realm, or address family. Use the **realm** option to specify an address family for OSPFv3 other than IPv6 unicast, which is the default.

**Required Privilege Level**    clear

Output Fields	<a href="#">Table 176 on page 2093</a> lists the output fields for the <b>show (ospf   ospf3) backup coverage</b> command. Output fields are listed in the approximate order in which they appear.

Table 176: `show (ospf | ospf3) backup coverage` Output Fields

Field Name	Field Description
<b>Node Coverage</b>	Information about backup coverage for each OSPF node.
<b>Area</b>	Area number. Area <b>0.0.0.0</b> is the backbone.
<b>Covered Nodes</b>	Number of nodes for which backup coverage is available.
<b>Total Nodes</b>	Total number of OSPF nodes.
<b>Route Coverage</b>	Information about backup coverage for each type of OSPF route.
<b>Path Type</b>	Type of OSPF path: <b>Intra</b> , <b>Inter</b> , <b>Ext1</b> , <b>Ext2</b> , and <b>All</b> .
<b>Covered Routes</b>	For each path type, the number of routes for which backup coverage is available.
<b>Total Routes</b>	For each path type, the total number of configured routes.
<b>Percent Covered</b>	For all nodes and for each path type, the percentage for which backup coverage is available.

## Sample Output

### `show ospf backup coverage`

```

user@host> show ospf backup coverage
Topology default coverage:

Node Coverage:

Area              Covered  Total  Percent
                  Nodes   Nodes  Covered
0.0.0.0           4       5    80.00%

Route Coverage:

Path Type  Covered  Total  Percent
           Routes Routes  Covered
Intra      8       14    57.14%
Inter      0       0    100.00%
Ext1       0       0    100.00%
Ext2       1       1    100.00%
All        9       15    60.00%

```

### `show ospf3 backup coverage`

```

user @host > show ospf3 backup coverage
show ospf3 backup coverage
Node Coverage:

Area              Covered  Total  Percent
                  Nodes   Nodes  Covered

```

0.0.0.0                      4              5      80.00%

Route Coverage:

Path Type	Covered Routes	Total Routes	Percent Covered
Intra	4	6	66.67%
Inter	0	0	100.00%
Ext1	0	0	100.00%
Ext2	1	1	100.00%
All	5	7	71.43%

show (ospf | ospf3) backup lsp

Syntax	show (ospf   ospf3) backup lsp <logical-system (all   <i>logical-system-name</i> )> <realm (ipv4-unicast   ipv6-unicast)>
Release Information	Command introduced in Junos OS Release 10.0.
Description	Display information about MPLS label-switched-paths (LSPs) designated as backup routes for OSPF routes.
	<div> <b>NOTE:</b> MPLS LSPs can be used as backup routes only for routes in the default OSPFv2 topology and not for any configured topology. Additionally, MPLS LSPs cannot be used as backup routes for nondefault instances either for OSPFv2 or OSPFv3.</div>
Options	<p><b>none</b>—Display information all MPLS LSPs designated as backup routes.</p> <p><b>logical-system (all   <i>logical-system-name</i>)</b>—(Optional) Display information about MPLS LSPs designated as backup routes for all logical systems or a specific logical system.</p> <p><b>realm (ipv4-unicast   ipv6-unicast)</b>—(Optional) (OSPFv3 only) Display information about MPLS LSPs designated as backup routes for a specific realm, or address family.</p>
Required Privilege Level	view

Output Fields	<p>Table 177 on page 2095 lists the output fields for the <b>show (ospf   ospf3) backup lsp</b> command. Output fields are listed in the approximate order in which they appear.</p>

Table 177: show (ospf | ospf3) backup lsp Output Fields

Field Name	Field Description
<i>MPLS LSP name</i>	Name of each MPLS LSP designated as a backup path.
Egress	IP address of the egress router for the LSP.

Table 177: *show (ospf | ospf3) backup lsp* Output Fields (continued)

Field Name	Field Description
Status	<p>State of the LSP:</p> <ul style="list-style-type: none"> <li>• <b>Up</b>—The router can detect RSVP hello messages from the neighbor.</li> <li>• <b>Down</b>—The router has received one of the following indications: <ul style="list-style-type: none"> <li>• Communication failure from the neighbor.</li> <li>• Communication from IGP that the neighbor is unavailable.</li> <li>• Change in the sequence numbers in the RSVP hello messages sent by the neighbor.</li> </ul> </li> <li>• <b>Deleted</b>—The LSP is no longer available as a backup path.</li> </ul>
Last change	Time elapsed since the neighbor state changed either from <b>up</b> or <b>down</b> or from <b>down</b> to <b>up</b> . The format is <i>hh:mm:ss</i> .
TE-metric	Configured traffic engineering metric.
Metric	Configured metric.

## Sample Output

### show ospf backup lsp

```
user@host> show ospf backup lsp
tobanff
  Egress: 10.255.71.239, Status: up, Last change: 00:00:23
  TE-metric: 0, Metric: 0
```

## Sample Output

### show ospf3 backup lsp

```
user@host> show ospf3 backup lsp
tobanff
  Egress: 10.255.71.239, Status: up, Last change: 00:00:45
  TE-metric: 0, Metric: 0
```

## show (ospf | ospf3) backup neighbor

<b>Syntax</b>	<pre>show (ospf   ospf3) backup neighbor &lt;area <i>area-id</i>&gt; &lt;instance (default   <i>instance-name</i>)&gt; &lt;logical-system (default   ipv4-multicast   <i>logical-system-name</i>)&gt; &lt;topology (default   ipv4-multicast   <i>topology-name</i>)&gt;</pre>

**Output Fields** Table 180 on page 2107 lists the output fields for the **show ospf context-identifier** command. Output fields are listed in the approximate order in which they appear.

*Table 180: show ospf context-identifier Output Fields*

Field Name	Field Description	Level of Output
<b>Context</b>	IPv4 address that defines a protection pair. The context is manually configured on both primary and protector provider edge (PE) devices.	All levels
<b>Status</b>	State of the path: <b>active</b> or <b>inactive</b> .	All levels
<b>Metric</b>	Advertised OSPF metric.	All levels
<b>Area</b>	OSPF area number.	All levels
<b>Other Advertisements</b>	Other advertisements received by the OSPF node: <ul style="list-style-type: none"> <li>• <b>Advertising router</b>— Address of the device that sent the advertisement.</li> <li>• <b>Type</b>—Type of OSPF path: <b>inter-area</b> and <b>stub</b>.</li> <li>• <b>Metric</b>—Advertised OSPF metric.</li> <li>• <b>None</b>—No additional advertisements were received by the OSPF node.</li> </ul>	<b>detail</b>

## Sample Output

### show ospf context-identifier

```
user@host> show ospf context-identifier
Context-id: 2.2.4.3
Status: active, Metric: 65534, PE role: protector, Area: 0.0.0.0
```

### show ospf context-identifier detail

```
user@host> show ospf context-identifier detail
Context-id: 88.24.13.1
Status: inactive, Metric: 0, PE role: protector, Area: 0.0.0.13
Other Advertisements:
Advertising router: 8.8.8.103
Type: stub link
Metric: 65534
```

```
show ospf database
```

## Release Information

Command introduced before Junos OS Release 7.4.

Command introduced in Junos OS Release 9.0 for EX Series switches.

**advertising-router self (address | self)** option introduced in Junos OS Release 9.5.

**advertising-router self (address | self)** option introduced in Junos OS Release 9.5 for EX Series switches.

Command introduced in Junos OS Release 11.3 for the QFX Series.

Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.

### Description

Display the entries in the OSPF version 2 (OSPFv2) link-state database, which contains data about link-state advertisement (LSA) packets.

## Options

**none**—Display standard information about entries in the OSPFv2 link-state database for all routing instances.

**brief | detail | extensive | summary**—(Optional) Display the specified level of output.

**advertising-router (*address* | *self*)**—(Optional) Display the LSAs advertised either by a particular routing device or by this routing device.

**area *area-id***—(Optional) Display the LSAs in a particular area.

**asbrsummary**—(Optional) Display summary AS boundary router LSA entries.

**external**—(Optional) Display external LSAs.

**instance *instance-name***—(Optional) Display all OSPF database information under the named routing instance.

**link-local**—(Optional) Display information about link-local LSAs.

**logical-system (*all* | *logical-system-name*)**—(Optional) Perform this operation on all logical systems or on a particular logical system.

**lsa-id *lsa-id***—(Optional) Display the LSA with the specified LSA identifier.

**netsummary**—(Optional) Display summary network LSAs.

**network**—(Optional) Display information about network LSAs.

**nssa**—(Optional) Display information about not-so-stubby area (NSSA) LSAs.

**opaque-area**—(Optional) Display opaque area-scope LSAs.

**router**—(Optional) Display information about router LSAs.

**Required Privilege Level**

**Output Fields**

[Table 181 on page 2109](#) describes the output fields for the **show ospf database** command. Output fields are listed in the approximate order in which they appear.

*Table 181: show ospf database Output Fields*

Field Name	Field Description	Level of Output
area	Area number. Area 0.0.0.0 is the backbone area.	All levels

Table 181: show ospf database Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Type</b>	Type of link advertisement: <b>ASBR Sum</b> , <b>Extern</b> , <b>Network</b> , <b>NSSA</b> , <b>OpaqArea</b> , <b>Router</b> , or <b>Summary</b> .	All levels
<b>ID</b>	LSA identifier included in the advertisement. An asterisk preceding the identifier marks database entries that originated from the local routing device.	All levels
<b>Adv Rtr</b>	Address of the routing device that sent the advertisement.	All levels
<b>Seq</b>	Link sequence number of the advertisement.	All levels
<b>Age</b>	Time elapsed since the LSA was originated, in seconds.	All levels
<b>Opt</b>	Optional OSPF capabilities associated with the LSA.	All levels
<b>Cksum</b>	Checksum value of the LSA.	All levels
<b>Len</b>	Length of the advertisement, in bytes.	All levels
<b>Router</b>	Router link-state advertisement information: <ul style="list-style-type: none"> <li><b>bits</b>—Flags describing the routing device that generated the LSP.</li> <li><b>link count</b>—Number of links in the advertisement.</li> <li><b>id</b>—ID of a routing device or subnet on the link.</li> <li><b>data</b>—For stub networks, the subnet mask. Otherwise, the IP address of the routing device that generated the LSP.</li> <li><b>type</b>—Type of link. It can be <b>PointToPoint</b>, <b>Transit</b>, <b>Stub</b>, or <b>Virtual</b>.</li> <li><b>TOS count</b>—Number of type-of-service (ToS) entries in the advertisement.</li> <li><b>TOS 0 metric</b>—Metric for ToS 0.</li> <li><b>TOS</b>—Type-of-service (ToS) value.</li> <li><b>metric</b>—Metric for the ToS.</li> </ul>	<b>detail extensive</b>
<b>Network</b>	Network link-state advertisement information: <ul style="list-style-type: none"> <li><b>mask</b>—Network mask.</li> <li><b>attached router</b>—ID of the attached neighbor.</li> </ul>	<b>detail extensive</b>
<b>Summary</b>	Summary link-state advertisement information: <ul style="list-style-type: none"> <li><b>mask</b>—Network mask.</li> <li><b>TOS</b>—Type-of-service (ToS) value.</li> <li><b>metric</b>—Metric for the ToS.</li> </ul>	<b>detail extensive</b>
<b>Gen timer</b>	How long until the LSA is regenerated.	<b>extensive</b>
<b>Aging timer</b>	How long until the LSA expires.	<b>extensive</b>
<b>Installed hh:mm:ss ago</b>	How long ago the route was installed.	<b>extensive</b>

Table 181: show ospf database Output Fields (continued)

Field Name	Field Description	Level of Output
expires in <i>hh:mm:ss</i>	How long until the route expires.	extensive
sent <i>hh:mm:ss</i> ago	How long ago the LSA was sent.	extensive
Last changed <i>hh:mm:ss</i> ago	How long ago the route was changed.	extensive
Change count	Number of times the route has changed.	extensive
Ours	Indicates that this is a local advertisement.	extensive
Router LSAs	Number of router link-state advertisements in the link-state database.	summary
Network LSAs	Number of network link-state advertisements in the link-state database.	summary
Summary LSAs	Number of summary link-state advertisements in the link-state database.	summary
NSSA LSAs	Number of not-so-stubby area link-state advertisements in the link-state database.	summary

**Release Information**    Command introduced before Junos OS Release 7.4.  
                                  Command introduced in Junos OS Release 9.0 for EX Series switches.  
                                  **realm** option introduced in Junos OS Release 9.2.  
                                  **advertising-router** (*address* | **self**) option introduced in Junos Release 9.5.  
                                  **advertising-router** (*address* | **self**) option introduced in Junos OS Release 9.5 for EX Series switches.  
                                  Command introduced in Junos OS Release 11.3 for the QFX Series.

**Description**    Display the entries in the OSPF version 3 (OSPFv3) link-state database, which contains data about link-state advertisement (LSA) packets.

**Options**    **none**—Display standard information about all entries in the OSPFv3 link-state database.

**brief | detail | extensive | summary**—(Optional) Display the specified level of output.

**advertising-router (*address* | *self*)**—(Optional) Display the LSAs advertised either by a particular routing device or by this routing device.

**area *area-id***—(Optional) Display the LSAs in a particular area.

**external**—(Optional) Display external LSAs.

**instance *instance-name***—(Optional) Display all OSPF database information under the named routing instance.

**inter-area-prefix**—(Optional) Display information about interarea-prefix LSAs.

**inter-area-router**—(Optional) Display information about interarea-router LSAs.

**intra-area-prefix**—(Optional) Display information about intra-area-prefix LSAs.

**link**—(Optional) Display information about link LSAs.

**link-local**—(Optional) Display information about link-local LSAs.

**logical-system (*all* | *logical-system-name*)**—(Optional) Perform this operation on all logical systems or on a particular logical system.

**lsa-id *lsa-id***—(Optional) Display the LSA with the specified LSA identifier.

**network**—(Optional) Display information about network LSAs.

**nssa**—(Optional) Display information about not-so-stubby area (NSSA) LSAs.

**realm (*ipv4-multicast* | *ipv4-unicast* | *ipv6-multicast*)**—(Optional) Display information about the specified OSPFv3 realm, or address family. Use the **realm** option to specify an address family other than IPv6 unicast, which is the default.

**router**—(Optional) Display information about router LSAs.

**Required Privilege Level**

[show ospf3 database summary on page 2128](#)

**Output Fields**

[Table 182 on page 2121](#) lists the output fields for the **show ospf3 database** command. Output fields are listed in the approximate order in which they appear.

Table 182: show ospf3 database Output Fields

Field Name	Field Description	Level of Output
OSPF link state database, area <i>area-number</i>	Entries in the link-state database for this area.	brief detail extensive
OSPF AS SCOPE link state database	Entries in the AS scope link-state database.	brief detail extensive
OSPF Link-Local link state database, interface <i>interface-name</i>	Entries in the link-local link-state database for this interface.	brief detail extensive
area	Area number. Area 0.0.0.0 is the backbone area.	All levels
Type	Type of link advertisement: <b>Extern</b> , <b>InterArPfx</b> , <b>InterArRtr</b> , <b>IntraArPrx</b> , <b>Link</b> , <b>Network</b> , <b>NSSA</b> , or <b>Router</b> .	brief detail extensive
ID	Link identifier included in the advertisement. An asterisk (*) preceding the identifier marks database entries that originated from the local routing device.	brief detail extensive
Adv Rtr	Address of the routing device that sent the advertisement.	brief detail extensive
Seq	Link sequence number of the advertisement.	brief detail extensive
Age	Time elapsed since the LSA was originated, in seconds.	brief detail extensive
Cksum	Checksum value of the LSA.	brief detail extensive
Len	Length of the advertisement, in bytes.	brief detail extensive
<b>Router (Router Link-State Advertisements)</b>		
bits	Flags describing the routing device that generated the LSP.	detail extensive
Options	Option bits carried in the router LSA.	detail extensive
<b>For Each Router Link</b>		
Type	Type of interface. The value of all other output fields describing a routing device interface depends on the interface's type: <ul style="list-style-type: none"> <li>• <b>PointToPoint (1)</b>—Point-to-point connection to another routing device.</li> <li>• <b>Transit (2)</b>—Connection to a transit network.</li> <li>• <b>Virtual (4)</b>—Virtual link.</li> </ul>	detail extensive
Loc-if-id	Local interface ID assigned to the interface that uniquely identifies the interface with the routing device.	detail extensive
Nbr-if-id	Interface ID of the neighbor's interface for this routing device link.	detail extensive

Table 182: show ospf3 database Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Nbr-rtr-id</b>	Router ID of the neighbor routing device (for type 2 interfaces, the attached link's designated router).	detail extensive
<b>Metric</b>	Cost of the router link.	detail extensive
<b>Gen timer</b>	How long until the LSA is regenerated, in the format <i>hours:minutes:seconds</i> .	extensive
<b>Aging timer</b>	How long until the LSA expires, in the format <i>hours:minutes:seconds</i> .	extensive
<b>Installed <i>nn:nn:nn</i> ago</b>	How long ago the route was installed, in the format <i>hours:minutes:seconds</i> .	extensive
<b>expires in <i>nn:nn:nn</i></b>	How long until the route expires, in the format <i>hours:minutes:seconds</i> .	extensive
<b>sent <i>nn:nn:nn</i> ago</b>	Time elapsed since the LSA was last transmitted or flooded to an adjacency or an interface, respectively, in the format <i>hours:minutes:seconds</i> .	extensive
<b>Ours</b>	Indicates that this is a local advertisement.	extensive
<b>Network (Network Link-State Advertisements)</b>		
<b>Options</b>	Option bits carried in the network LSA.	detail extensive
<b>Attached Router</b>	Router IDs of each of the routing devices attached to the link. Only routing devices that are fully adjacent to the designated router are listed. The designated router includes itself in this list.	detail extensive
<b>InterArPfx (Interarea-Prefix Link-State Advertisements)</b>		
<b>Prefix</b>	IPv6 address prefix.	detail extensive
<b>Prefix-options</b>	Option bit associated with the prefix.	detail extensive
<b>Metric</b>	Cost of this route. Expressed in the same units as the interface costs in the router LSAs. When the interarea-prefix LSA is describing a route to a range of addresses, the cost is set to the maximum cost to any reachable component of the address range.	detail extensive
<b>Gen timer</b>	How long until the LSA is regenerated, in the format <i>hours:minutes:seconds</i> .	extensive
<b>Aging timer</b>	How long until the LSA expires, in the format <i>hours:minutes:seconds</i> .	extensive
<b>Installed <i>nn:nn:nn</i> ago</b>	How long ago the route was installed, in the format <i>hours:minutes:seconds</i> .	extensive
<b>expires in <i>nn:nn:nn</i></b>	How long until the route expires, in the format <i>hours:minutes:seconds</i> .	extensive
<b>sent <i>nn:nn:nn</i> ago</b>	Time elapsed since the LSA was last transmitted or flooded to an adjacency or an interface, respectively, in the format <i>hours:minutes:seconds</i> .	extensive

Table 182: show ospf3 database Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Ours</b>	Indicates that this is a local advertisement.	<b>extensive</b>
<b>InterArRtr (Interarea-Router Link-State Advertisements)</b>		
<b>Dest-router-id</b>	Router ID of the routing device described by the LSA.	<b>detail extensive</b>
<b>options</b>	Optional capabilities supported by the routing device.	<b>detail extensive</b>
<b>Metric</b>	Cost of this route. Expressed in the same units as the interface costs in the router LSAs. When the interarea-prefix LSA is describing a route to a range of addresses, the cost is set to the maximum cost to any reachable component of the address range.	<b>detail extensive</b>
<b>Prefix</b>	IPv6 address prefix.	<b>extensive</b>
<b>Prefix-options</b>	Option bit associated with the prefix.	<b>extensive</b>
<b>Extern (External Link-State Advertisements)</b>		
<b>Prefix</b>	IPv6 address prefix.	<b>detail extensive</b>
<b>Prefix-options</b>	Option bit associated with the prefix.	<b>detail extensive</b>
<b>Metric</b>	Cost of the route, which depends on the value of <b>Type</b> .	<b>detail extensive</b>
<b>Type <i>n</i></b>	Type of external metric: <b>Type 1</b> or <b>Type 2</b> .	<b>detail extensive</b>
<b>Aging timer</b>	How long until the LSA expires, in the format <i>hours:minutes:seconds</i> .	<b>extensive</b>
<b>Installed <i>nn:nn:nn</i> ago</b>	How long ago the route was installed, in the format <i>hours:minutes:seconds</i> .	<b>extensive</b>
<b>expires in <i>nn:nn:nn</i></b>	How long until the route expires, in the format <i>hours:minutes:seconds</i> .	<b>extensive</b>
<b>sent <i>nn:nn:nn</i> ago</b>	Time elapsed since the LSA was last transmitted or flooded to an adjacency or an interface, respectively, in the format <i>hours:minutes:seconds</i> .	<b>extensive</b>
<b>Link (Link-State Advertisements)</b>		
<b>IPv6-Address</b>	IPv6 link-local address on the link for which this link LSA originated.	<b>detail extensive</b>
<b>Options</b>	Option bits carried in the link LSA.	<b>detail extensive</b>
<b>priority</b>	Router priority of the interface attaching the originating routing device to the link.	<b>detail extensive</b>
<b>Prefix-count</b>	Number of IPv6 address prefixes contained in the LSA. The rest of the link LSA contains a list of IPv6 prefixes to be associated with the link.	<b>detail extensive</b>
<b>Prefix</b>	IPv6 address prefix.	<b>detail extensive</b>

Table 182: show ospf3 database Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Prefix-options</b>	Option bit associated with the prefix.	detail extensive
<b>Gen timer</b>	How long until the LSA is regenerated, in the format <i>hours:minutes:seconds</i> .	extensive
<b>Aging timer</b>	How long until the LSA expires, in the format <i>hours:minutes:seconds</i> .	extensive
<b>Installed <i>nn:nn:nn</i> ago</b>	How long ago the route was installed, in the format <i>hours:minutes:seconds</i> .	extensive
<b>expires in <i>nn:nn:nn</i></b>	How long until the route expires, in the format <i>hours:minutes:seconds</i> .	extensive
<b>sent <i>nn:nn:nn</i> ago</b>	Time elapsed since the LSA was last transmitted or flooded to an adjacency or an interface, respectively, in the format <i>hours:minutes:seconds</i> .	extensive
<b>Ours</b>	Indicates that this is a local advertisement.	extensive
<b>IntraArPfx (Intra-Area-Prefix Link-State Advertisements)</b>		
<b>Ref-lsa-type</b>	LSA type of the referenced LSA. <ul style="list-style-type: none"> <li>• <b>Router</b>—Address prefixes are associated with a router LSA.</li> <li>• <b>Network</b>—Address prefixes are associated with a network LSA.</li> </ul>	detail extensive
<b>Ref-lsa-id</b>	Link-state ID of the referenced LSA.	detail extensive
<b>Ref-router-id</b>	Advertising router ID of the referenced LSA.	detail extensive
<b>Prefix-count</b>	Number of IPv6 address prefixes contained in the LSA. The rest of the link LSA contains a list of IPv6 prefixes to be associated with the link.	detail extensive
<b>Prefix</b>	IPv6 address prefix.	detail extensive
<b>Prefix-options</b>	Option bit associated with the prefix.	detail extensive
<b>Metric</b>	Cost of this prefix. Expressed in the same units as the interface costs in the router LSAs.	detail extensive
<b>Gen timer</b>	How long until the LSA is regenerated, in the format <i>hours:minutes:seconds</i> .	extensive
<b>Aging timer</b>	How long until the LSA expires, in the format <i>hours:minutes:seconds</i> .	extensive
<b>Installed <i>hh:mm:ss</i> ago</b>	How long ago the route was installed, in the format <i>hours:minutes:seconds</i> .	extensive
<b>expires in <i>hh:mm:ss</i></b>	How long until the route expires, in the format <i>hours:minutes:seconds</i> .	extensive
<b>sent <i>hh:mm:ss</i> ago</b>	Time elapsed since the LSA was last transmitted or flooded to an adjacency or an interface, respectively, in the format <i>hours:minutes:seconds</i> .	extensive

Table 182: show ospf3 database Output Fields (continued)

## show (ospf | ospf3) interface

---

**List of Syntax**    [Syntax on page 2130](#)  
                         [Syntax \(EX Series Switches and QFX Series\) on page 2130](#)

**Syntax**    `show (ospf | ospf3) interface`  
                 `<brief | detail | extensive>`  
                 `<area area-id>`  
                 `<interface-name>`  
                 `<instance instance-name>`  
                 `<logical-system (all | logical-system-name)>`  
                 `<realm (ipv4-multicast | ipv4-unicast | ipv6-multicast)>`

**Syntax (EX Series Switches and QFX Series)**    `show (ospf | ospf3) interface`  
                 `<brief | detail | extensive>`  
                 `<area area-id>`  
                 `<interface-name>`  
                 `<instance instance-name>`

**Release Information**    Command introduced before Junos OS Release 7.4.  
                             Command introduced in Junos OS Release 9.0 for EX Series switches.  
                             **area** option introduced in Junos OS Release 9.2.  
                             **area** option introduced in Junos OS Release 9.2 for EX Series switches.  
                             **realm** option introduced in Junos OS Release 9.2.  
                             Command introduced in Junos OS Release 11.3 for the QFX Series.  
                             Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.

**Description**    Display the status of OSPF interfaces.

**Options**    **none**—Display standard information about the status of all OSPF interfaces for all routing instances

**brief | detail | extensive**—(Optional) Display the specified level of output.

**area *area-id***—(Optional) Display information about the interfaces that belong to the specified area.

**interface-name**—(Optional) Display information for the specified interface.

**instance *instance-name***—(Optional) Display all OSPF interfaces under the named routing instance.

**logical-system (all | *logical-system-name*)**—(Optional) Perform this operation on all logical systems or on a particular logical system.

**realm (ipv4-multicast | ipv4-unicast | ipv6-multicast)**—(OSPFv3 only) (Optional)  
                             Display information about the interfaces for the specified OSPFv3 realm, or address family. Use the **realm** option to specify an address family for OSPFv3 other than IPv6 unicast, which is the default.

**Required Privilege Level** view

**List of Sample Output** [show ospf interface brief on page 2133](#)  
[show ospf interface detail on page 2133](#)  
[show ospf3 interface detail on page 2133](#)  
[show ospf interface detail\(When Multiarea Adjacency Is Configured\) on page 2133](#)  
[show ospf interface area area-id on page 2135](#)  
[show ospf interface extensive \(When Flooding Reduction Is Enabled\) on page 2135](#)  
[show ospf interface extensive \(When LDP Synchronization Is Configured\) on page 2135](#)

**Output Fields** [Table 183 on page 2131](#) lists the output fields for the **show (ospf | ospf3) interface** command. Output fields are listed in the approximate order in which they appear.

*Table 183: show (ospf | ospf3) interface Output Fields*

Field Name	Field Description	Level of Output
<b>Interface</b>	Name of the interface running OSPF version 2 or OSPF version 3.	All levels
<b>State</b>	State of the interface: <b>BDR</b> , <b>Down</b> , <b>DR</b> , <b>DRother</b> , <b>Loop</b> , <b>PtToPt</b> , or <b>Waiting</b> .	All levels
<b>Area</b>	Number of the area that the interface is in.	All levels
<b>DR ID</b>	Address of the area's designated router.	All levels
<b>BDR ID</b>	Backup designated router for a particular subnet.	All levels
<b>Nbrs</b>	Number of neighbors on this interface.	All levels
<b>Type</b>	Type of interface: <b>LAN</b> , <b>NBMA</b> , <b>P2MP</b> , <b>P2P</b> , or <b>Virtual</b> .	detail extensive
<b>Address</b>	IP address of the neighbor.	detail extensive
<b>Mask</b>	Netmask of the neighbor.	detail extensive
<b>Prefix-length</b>	(OSPFv3) IPv6 prefix length, in bits.	detail extensive
<b>OSPF3-Intf-Index</b>	(OSPFv3) OSPF version 3 interface index.	detail extensive
<b>MTU</b>	Interface maximum transmission unit (MTU).	detail extensive
<b>Cost</b>	Interface cost (metric).	detail extensive
<b>DR addr</b>	Address of the designated router.	detail extensive
<b>BDR addr</b>	Address of the backup designated router.	detail extensive
<b>Adj count</b>	Number of adjacent neighbors.	detail extensive

Table 183: show (ospf | ospf3) interface Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Secondary</b>	Indicates that this interface is configured as a secondary interface for this area. This interface can belong to more than one area, but can be designated as a primary interface for only one area.	<b>detail extensive</b>
<b>Flood Reduction</b>	Indicates that this interface is configured with flooding reduction. All self-originated LSAs from this interface are initially sent with the <b>DoNotAge</b> bit set. As a result, LSAs are refreshed only when a change occurs.	<b>extensive</b>
<b>Priority</b>	Router priority used in designated router (DR) election on this interface.	<b>detail extensive</b>
<b>Flood list</b>	List of link-state advertisements (LSAs) that might be about to flood this interface.	<b>extensive</b>
<b>Ack list</b>	Acknowledgment list. List of pending acknowledgments on this interface.	<b>extensive</b>
<b>Descriptor list</b>	List of packet descriptors.	<b>extensive</b>
<b>Hello</b>	Configured value for the hello timer.	<b>detail extensive</b>
<b>Dead</b>	Configured value for the dead timer.	<b>detail extensive</b>
<b>Auth type</b>	(OSPFv2) Authentication mechanism for sending and receiving OSPF protocol packets: <ul style="list-style-type: none"> <li>• <b>MD5</b>—The MD5 mechanism is configured in accordance with RFC 2328.</li> <li>• <b>None</b>—No authentication method is configured.</li> <li>• <b>Password</b>—A simple password (RFC 2328) is configured.</li> </ul>	<b>detail extensive</b>
<b>Topology</b>	(Multiarea adjacency) Name of topology: <b>default</b> or <b>name</b> .	
<b>LDP sync state</b>	(OSPFv2 and LDP synchronization) Current state of LDP synchronization: <b>in sync</b> , <b>in holddown</b> , and <b>not supported</b> .	<b>extensive</b>
<b>reason</b>	(OSPFv2 and LDP synchronization) Reason for the current state of LDP synchronization. The LDP session might be up or down, or adjacency might be up or down.	<b>extensive</b>
<b>config holdtime</b>	(OSPFv2 and LDP synchronization) Configured value of the hold timer.  If the state is not synchronized, and the hold time is not infinity, the <b>remaining</b> field displays the number of seconds that remain until the configured hold timer expires.	<b>extensive</b>
<b>IPSec SA name</b>	(OSPFv2) Name of the IPSec security association name.	<b>detail extensive</b>
<b>Active key ID</b>	(OSPFv2 and MD5) Number from 0 to 255 that uniquely identifies an MD5 key.	<b>detail extensive</b>

Table 183: show (ospf | ospf3) interface Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Start time</b>	(OSPFv2 and MD5) Time at which the routing device starts using an MD5 key to authenticate OSPF packets transmitted on the interface on which this key is configured. To authenticate received OSPF protocol packets, the key becomes effective immediately after the configuration is committed. If the start time option is not configured, the key is effective immediately for send and receive and is displayed as <b>Start time 1970 Jan 01 00:00:00 PST</b> .	<b>detail extensive</b>
<b>ReXmit</b>	Configured value for the Retransmit timer.	<b>detail extensive</b>
<b>Stub, Not Stub, or Stub NSSA</b>	Type of area.	<b>detail extensive</b>

## show (ospf | ospf3) neighbor

**List of Syntax**    [Syntax on page 2141](#)  
                          [Syntax \(EX Series Switches and QFX Series\) on page 2141](#)

**Syntax**    `show (ospf | ospf3) neighbor`  
                  `<brief | detail | extensive>`  
                  `<area area-id>`  
                  `<instance (all | instance-name)>`  
                  `<interface interface-name>`  
                  `<logical-system (all | logical-system-name)>`  
                  `<neighbor>`  
                  `<realm (ipv4-multicast | ipv4-unicast | ipv6-multicast)>`

**Syntax (EX Series Switches and QFX Series)**    `show (ospf | ospf3) neighbor`  
                  `<brief | detail | extensive>`  
                  `<area area-id>`  
                  `<instance (all | instance-name)>`  
                  `<interface interface-name>`  
                  `<neighbor>`

**Release Information**    Command introduced before Junos OS Release 7.4.  
                                  Command introduced in Junos OS Release 9.0 for EX Series switches.  
                                  **instance all** option introduced in Junos OS Release 9.1.  
                                  **instance all** option introduced in Junos OS Release 9.1 for EX Series switches.  
                                  **area**, **interface**, and **realm** options introduced in Junos OS Release 9.2.  
                                  **area** and **interface** options introduced in Junos OS Release 9.2 for EX Series switches.  
                                  Command introduced in Junos OS Release 11.3 for the QFX Series.  
                                  Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.

**Description**    Display information about OSPF neighbors.

CPU utilization might increase while the device learns its OSPF neighbors. We recommend that you use the **show (ospf | ospf3) neighbor** command after the device learns and establishes OSPF neighbor adjacencies. Depending on the size of your network, this might take several minutes. If you receive a “timeout communicating with routing daemon” error when using the **show (ospf | ospf3) neighbor** command, wait several minutes before attempting to use the command again. This is not a critical system error, but you might experience a delay in using the CLI.

**Options**    **none**—Display standard information about all OSPF neighbors for all routing instances.

**brief | detail | extensive**—(Optional) Display the specified level of output.

**area *area-id***—(Optional) Display information about the OSPF neighbors for the specified area.

**instance (all | *instance-name*)**—(Optional) Display all OSPF interfaces for all routing instances or under the named routing instance.

**interface *interface-name***—(Optional) Display information about OSPF neighbors for the specified logical interface.

**logical-system (all | *logical-system-name*)**—(Optional) Perform this operation on all logical systems or on a particular logical system.

**neighbor**—(Optional) Display information about the specified OSPF neighbor.

**realm (ipv4-multicast | ipv4-unicast | ipv6-multicast)**—(OSPFv3 only) (Optional) Display information about the OSPF neighbors for the specified OSPFv3 realm, or address family. Use the **realm** option to specify an address family for OSPFv3 other than IPv6 unicast, which is the default.

**Required Privilege Level** view

*Table 186: show (ospf | ospf3) neighbor Output Fields*

Field Name	Field Description	Level of Output
Address	Address of the neighbor.	All levels
Interface	Interface through which the neighbor is reachable.	All levels

Table 186: `show (ospf | ospf3) neighbor` Output Fields (continued)

Field Name	Field Description	Level of Output
<b>State</b>	<p>State of the neighbor:</p> <ul style="list-style-type: none"> <li>• <b>Attempt</b>—Valid only for neighbors attached to nonbroadcast networks. It indicates that no recent information has been received from the neighbor, but that a more concerted effort must be made to contact the neighbor.</li> <li>• <b>Down</b>—Initial state of a neighbor conversation. It indicates that no recent information has been received from the neighbor. Hello packets might continue to be sent to neighbors in the <b>Down</b> state, although at a reduced frequency.</li> <li>• <b>Exchange</b>—Routing device is describing its entire link-state database by sending database description packets to the neighbor. Each packet has a sequence number and is explicitly acknowledged.</li> <li>• <b>ExStart</b>—First step in creating an adjacency between the two neighboring routing devices. The goal of this step is to determine which routing device is the master, and to determine the initial sequence number.</li> <li>• <b>Full</b>—Neighboring routing devices are fully adjacent. These adjacencies appear in router link and network link advertisements.</li> <li>• <b>Init</b>—A hello packet has recently been sent by the neighbor. However, bidirectional communication has not yet been established with the neighbor. This state may occur, for example, because the routing device itself did not appear in the neighbor's hello packet.</li> <li>• <b>Loading</b>—Link-state request packets are sent to the neighbor to acquire more recent advertisements that have been discovered (but not yet received) in the <b>Exchange</b> state.</li> <li>• <b>2Way</b>—Communication between the two routing devices is bidirectional. This state has been ensured by the operation of the Hello Protocol. This is the most advanced state short of beginning adjacency establishment. The (backup) designated router is selected from the set of neighbors in state <b>2Way</b> or greater.</li> </ul>	All levels
<b>ID</b>	Router ID of the neighbor.	All levels
<b>Pri</b>	Priority of the neighbor to become the designated router.	All levels
<b>Dead</b>	Number of seconds until the neighbor becomes unreachable.	All levels
<b>Link state acknowledgment list</b>	Number of link-state acknowledgments received.	<b>extensive</b>
<b>Link state retransmission list</b>	<p>Total number of link-state advertisements retransmitted. For <b>extensive</b> output only, the following information is also displayed:</p> <ul style="list-style-type: none"> <li>• <b>Type</b>—Type of link advertisement: <b>ASBR</b>, <b>Sum</b>, <b>Extern</b>, <b>Network</b>, <b>NSSA</b>, <b>OpaqueArea</b>, <b>Router</b>, or <b>Summary</b>.</li> <li>• <b>LSA ID</b>—LSA identifier included in the advertisement. An asterisk preceding the identifier marks database entries that originated from the local routing device.</li> <li>• <b>Adv rtr</b>—Address of the routing device that sent the advertisement.</li> <li>• <b>Seq</b>—Link sequence number of the advertisement.</li> </ul>	<b>detail extensive</b>

Table 186: `show (ospf | ospf3) neighbor` Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Neighbor-address</b>	(OSPFv3 only) If the neighbor uses virtual links, the <b>Neighbor-address</b> is the site-local, local, or global address. If the neighbor uses a physical interface, the <b>Neighbor-address</b> is an IPv6 link-local address.	detail extensive
<b>area</b>	Area that the neighbor is in.	detail extensive
<b>OSPF3-Intf-Index</b>	(OSPFv3 only) Displays the OSPFv3 interface index.	detail extensive
<b>opt</b>	Option bits received in the hello packets from the neighbor.	detail extensive
<b>DR or DR-ID</b>	Address of the designated router.	detail extensive
<b>BDR or BDR-ID</b>	Address of the backup designated router.	detail extensive
<b>Up</b>	Length of time since the neighbor came up.	detail extensive
<b>adjacent</b>	Length of time since the adjacency with the neighbor was established.	detail extensive
<b>SPRING Adjacency Labels</b>	Segment routing in networking adjacency labels.  <i>NOTE:</i> Displayed only when segment routing is enabled	detail extensive
<b>Label</b>	Segment routing label.	detail extensive
<b>Flags</b>	Segment routing flags. Flags VL indicate <i>value</i> and <i>local</i> .	detail extensive

<b>List of Syntax</b>	<a href="#">Syntax on page 2148</a> <a href="#">Syntax (EX Series Switch and QFX Series) on page 2148</a>
<b>Syntax</b>	<pre>show (ospf   ospf3) overview &lt;brief   extensive&gt; &lt;instance <i>instance-name</i>&gt; &lt;logical-system (all   <i>logical-system-name</i>)&gt; &lt;realm (ipv4-multicast   ipv4-unicast   ipv6-multicast)&gt;</pre>
<b>Syntax (EX Series Switch and QFX Series)</b>	<pre>show (ospf   ospf3) overview &lt;brief   extensive&gt; &lt;instance <i>instance-name</i>&gt;</pre>
<b>Release Information</b>	Command introduced in Junos OS Release 7.4. Command introduced in Junos OS Release 9.0 for EX Series switches. <b>realm</b> option introduced in Junos OS Release 9.2. Database protection introduced in Junos 10.2. Command introduced in Junos OS Release 11.3 for the QFX Series. Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.
<b>Description</b>	Display Open Shortest Path First (OSPF) overview information.
<b>Options</b>	<p><b>none</b>—Display standard information about all OSPF neighbors for all routing instances.</p> <p><b>brief   extensive</b>—(Optional) Display the specified level of output.</p> <p><b>instance <i>instance-name</i></b>—(Optional) Display all OSPF interfaces under the named routing instance.</p> <p><b>logical-system (all   <i>logical-system-name</i>)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p> <p><b>realm (ipv4-multicast   ipv4-unicast   ipv6-multicast)</b>—(Optional) (OSPFv3 only) Display information about the specified OSPFv3 realm, or address family. Use the <b>realm</b> option to specify an address family for OSPFv3 other than IPv6 unicast, which is the default.</p>
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">show ospf overview on page 2150</a> <a href="#">show ospf overview (With Database Protection) on page 2151</a> <a href="#">show ospf3 overview (With Database Protection) on page 2152</a> <a href="#">show ospf overview extensive on page 2152</a>

**Output Fields** Table 187 on page 2149 lists the output fields for the **show ospf overview** command. Output fields are listed in the approximate order in which they appear.

*Table 187: show ospf overview Output Fields*

Field name	Field Description	Level of Output
<b>Instance</b>	OSPF routing instance.	All levels
<b>Router ID</b>	Router ID of the routing device.	All levels
<b>Route table index</b>	Route table index.	All levels
<b>Configured overload</b>	Overload capability is enabled. If the overload timer is also configured, display the time that remains before it is set to expire. This field is not displayed after the timer expires.	All levels
<b>Topology</b>	Topology identifier.	All levels
<b>Prefix export count</b>	Number of prefixes exported into OSPF.	All levels
<b>Full SPF runs</b>	Number of complete Shortest Path First calculations.	All levels
<b>SPF delay</b>	Delay before performing consecutive Shortest Path First calculations.	All levels
<b>SPF holddown</b>	Delay before performing additional Shortest Path First (SPF) calculations after the maximum number of consecutive SPF calculations is reached.	All levels
<b>SPF rapid runs</b>	Maximum number of Shortest Path First calculations that can be performed in succession before the hold-down timer begins.	All levels
<b>LSA refresh time</b>	Refresh period for link-state advertisement (in minutes).	All levels
<b>SPRING</b>	Source protocol routing in networking: <b>enable</b> or <b>disable</b> .	All levels
<b>Node Segments</b>	Nodes of source protocol routing in networking: <b>enable</b> or <b>disable</b> .	All levels
<b>Ipv4 Index</b>	Ipv4 Index.	All levels
<b>Index Range</b>	Ipv4 Index range.	All levels
<b>Node Segment Blocks Allocated</b>	Details about node segment blocks.	All levels
<b>Database protection state</b>	Current state of database protection.	All levels
<b>Warning threshold</b>	Threshold at which a warning message is logged (percentage of maximum LSA count).	All levels
<b>Non self-generated LSAs</b>	Number of LSAs whose router ID is not equal to the local router ID: <b>Current</b> , <b>Warning</b> (threshold), and <b>Allowed</b> .	All levels

Table 187: show ospf overview Output Fields (continued)

Field name	Field Description	Level of Output
Ignore time	How long the database has been in the ignore state.	All levels
Reset time	How long the database must stay out of the ignore or isolated state before it returns to normal operations.	All levels
Ignore count	Number of times the database has been in the ignore state: <b>Current</b> and <b>Allowed</b> .	All levels
Restart	Graceful restart capability: <b>enabled</b> or <b>disabled</b> .	All levels
Restart duration	Time period for complete reacquisition of OSPF neighbors.	All levels
Restart grace period	Time period for which the neighbors should consider the restarting routing device as part of the topology.	All levels
Graceful restart helper mode	(OSPFv2) Standard graceful restart helper capability (based on RFC 3623): <b>enabled</b> or <b>disabled</b> .	All levels
Restart-signaling helper mode	(OSPFv2) Restart signaling-based graceful restart helper capability (based on RFC 4811, RFC 4812, and RFC 4813): <b>enabled</b> or <b>disabled</b> .	All levels
Helper mode	(OSPFv3) Graceful restart helper capability: <b>enabled</b> or <b>disabled</b> .	All levels
Trace options	OSPF-specific trace options.	<b>extensive</b>
Trace file	Name of the file to receive the output of the tracing operation.	<b>extensive</b>
Area	Area number. Area 0.0.0.0 is the backbone area.	All levels
Stub type	Stub type of area: <b>Normal Stub</b> , <b>Not Stub</b> , or <b>Not so Stubby Stub</b> .	All levels
Authentication Type	Type of authentication: <b>None</b> , <b>Password</b> , or <b>MD5</b> .  <b>NOTE:</b> The <b>Authentication Type</b> field refers to the authentication configured at the <code>[edit protocols ospf area area-id]</code> level. Any authentication configured for an interface in this area will not affect the value of this field.	All levels
Area border routers	Number of area border routers.	All levels
Neighbors	Number of autonomous system boundary routers.	All levels

## show (ospf | ospf3) route

**List of Syntax**    [Syntax on page 2153](#)  
                          [Syntax \(EX Series Switch and QFX Series\) on page 2153](#)

**Syntax**    show (ospf | ospf3) route  
                  <brief | detail | extensive>  
                  <abr | asbr | extern | inter | intra>  
                  <destination>  
                  <instance (default | ipv4-multicast | *instance-name*)>  
                  <logical-system (default | ipv4-multicast | *logical-system-name*)>  
                  <network>  
                  <no-backup-coverage>  
                  <realm (ipv4-multicast | ipv4-unicast | ipv6-multicast)>  
                  <router>  
                  <topology (default | ipv4-multicast | *topology-name*)>  
                  <transit>

**Syntax (EX Series Switch and QFX Series)**    show (ospf | ospf3) route  
                  <brief | detail | extensive>  
                  <abr | asbr | extern | inter | intra>  
                  <destination>  
                  <instance *instance-name*>  
                  <network>  
                  <no-backup-coverage>  
                  <router>  
                  <topology (default | ipv4-multicast | *topology-name*)>  
                  <transit>

**Release Information**    Command introduced before Junos OS Release 7.4.  
                                  Command introduced in Junos OS Release 9.0 for EX Series switches.  
                                  **topology** option introduced in Junos OS Release 9.0.  
                                  **realm** option introduced in Junos OS Release 9.2.  
                                  Command introduced in Junos OS Release 11.3 for the QFX Series.  
                                  Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.

**Description**    Display the entries in the Open Shortest Path First (OSPF) routing table.

**Options**    **none**—Display standard information about all entries in the OSPF routing table for all routing instances and all topologies.

**destination**—Display routes to the specified IP address (with optional destination prefix length).

**brief | detail | extensive**—(Optional) Display the specified level of output.

**abr**—(Optional) Display routes to area border routers.

**asbr**—(Optional) Display routes to autonomous system border routers.

**extern**—(Optional) Display external routes.

**inter**—(Optional) Display interarea routes.

**intra**—(Optional) Display intra-area routes.

**instance (default | ipv4-multicast | *instance-name*)**—(Optional) Display entries for the default routing instance, the IPv4 multicast routing instance, or for the specified routing instance.

**logical-system (default | ipv4-multicast | *logical-system-name*)**—(Optional) Perform this operation on the default logical system, the IPv4 multicast logical system, or on a particular logical system.

**network**—(Optional) Display routes to networks.

**no-backup-coverage**—(Optional) Display routes with no backup coverage.

**realm (ipv4-multicast | ipv4-unicast | ipv6-multicast)**—(OSPFv3 only) (Optional) Display entries in the routing table for the specified OSPFv3 realm, or address family. Use the **realm** option to specify an address family for OSPFv3 other than IPv6 unicast, which is the default.

**router**—(Optional) Display routes to all routers.

**topology (default | ipv4-multicast | *topology-name*)**—(OSPFv2 only) (Optional) Display routes for the default OSPF topology, IPv4 multicast topology, or for a particular topology.

**transit**—(Optional) (OSPFv3 only) Display OSPFv3 routes to pseudonodes.

**Required Privilege Level**

view

**List of Sample Output**

**Output Fields** [Table 188 on page 2154](#) list the output fields for the **show (ospf | ospf3) route** command. Output fields are listed in the approximate order in which they appear.

*Table 188: show (ospf | ospf3) route Output Fields*

Field Name	Field Description	Output Level
Topology	Name of the topology.	All levels
Prefix	Destination of the route.	All levels

Table 188: *show (ospf | ospf3) route* Output Fields (continued)

Field Name	Field Description	Output Level
<b>Path type</b>	How the route was learned: <ul style="list-style-type: none"> <li>• <b>Inter</b>—Interarea route</li> <li>• <b>Ext1</b>—External type 1 route</li> <li>• <b>Ext2</b>—External type 2 route</li> <li>• <b>Intra</b>—Intra-area route</li> </ul>	All levels
<b>Route type</b>	The type of routing device from which the route was learned: <ul style="list-style-type: none"> <li>• <b>AS BR</b>—Route to AS border router.</li> <li>• <b>Area BR</b>—Route to area border router.</li> <li>• <b>Area/AS BR</b>—Route to router that is both an <b>Area BR</b> and <b>AS BR</b>.</li> <li>• <b>Network</b>—Network router.</li> <li>• <b>Router</b>—Route to a router that is neither an <b>Area BR</b> nor an <b>AS BR</b>.</li> <li>• <b>Transit</b>—(OSPFv3 only) Route to a pseudonode representing a transit network, LAN, or nonbroadcast multiaccess (NBMA) link.</li> <li>• <b>Discard</b>—Route to a summary discard.</li> </ul>	All levels
<b>NH Type</b>	Next-hop type: <b>LSP</b> or <b>IP</b> .	All levels
<b>Metric</b>	Route's metric value.	All levels
<b>NH-interface</b>	(OSPFv3 only) Interface through which the route's next hop is reachable.	All levels
<b>NH-addr</b>	(OSPFv3 only) IPv6 address of the next hop.	All levels
<b>NextHop Interface</b>	(OSPFv2 only) Interface through which the route's next hop is reachable.	All levels
<b>Nexthop addr/label</b>	(OSPFv2 only) If the <b>NH Type</b> is <b>IP</b> , then it is the address of the next hop. If the <b>NH Type</b> is <b>LSP</b> , then it is the name of the label-switched path.	All levels
<b>Area</b>	Area ID of the route.	detail
<b>Origin</b>	Router from which the route was learned.	detail
<b>Type 7</b>	Route was learned through a not-so-stubby area (NSSA) link-state advertisement (LSA).	detail
<b>P-bit</b>	Route was learned through NSSA LSA and the propagate bit was set.	detail
<b>Fwd NZ</b>	Forwarding address is nonzero. <b>Fwd NZ</b> is only displayed if the route is learned through an NSSA LSA.	detail

Table 188: *show (ospf | ospf3) route Output Fields (continued)*

Field Name	Field Description	Output Level
<b>optional-capability</b>	Optional capabilities propagated in the router LSA. This field is in the output for intra-area router routes only (when <b>Route Type</b> is <b>Area BR</b> , <b>AS BR</b> , <b>Area/AS BR</b> , or <b>Router</b> ), not for interarea router routes or network routes. Three bits in this field are defined as follows: <ul style="list-style-type: none"> <li>• <b>0x4 (V)</b>—Routing device is at the end of a virtual active link.</li> <li>• <b>0x2 (E)</b>—Routing device is an autonomous system boundary router.</li> <li>• <b>0x1 (B)</b>—Routing device is an area border router.</li> </ul>	<b>detail</b>
<b>priority</b>	The priority assigned to the prefix: <ul style="list-style-type: none"> <li>• <b>high</b></li> <li>• <b>medium</b></li> <li>• <b>low</b></li> </ul> <p><b>NOTE:</b> The <b>priority</b> field applies only to routes of type <b>Network</b>.</p>	<b>detail</b>
<b>BGP-ORR Generation-ID</b>	Display the BGP-ORR generation identifier of the main OSPF route. This field is shown only for non-zero values.	<b>extensive</b>

<b>Output Fields</b>	<p><a href="#">Table 189 on page 2160</a> lists the output fields for the <b>show (ospf   ospf3) statistics</b> command. Output fields are listed in the approximate order in which they appear.</p>

*Table 189: show (ospf | ospf3) statistics Output Fields*

Field Name	Field Description
<b>Packet type</b>	Type of OSPF packet.
<b>Total Sent/Total Received</b>	Total number of packets sent and received.
<b>Last 5 seconds Sent/Last 5 seconds Received</b>	Total number of packets sent and received in the last 5 seconds.
<b>DBDs retransmitted</b>	Total number of database description packets retransmitted, and number retransmitted in the last 5 seconds.
<b>LSAs flooded</b>	Total number of link-state advertisements flooded, and number flooded in the last 5 seconds.
<b>LSAs flooded high-prio</b>	<p>Total number of high priority link-state advertisements flooded, and number flooded in the last 5 seconds.</p> <p>A link-state advertisement is deemed a high priority if it has changed since it was last sent.</p>
<b>LSAs retransmitted</b>	Total number of link-state advertisements retransmitted, and number retransmitted in the last 5 seconds.
<b>LSAs transmitted to nbr</b>	Total number of link-state advertisements transmitted to a neighbor, and number transmitted in the last 5 seconds.
<b>LSAs requested</b>	Total number of link-state advertisements requested by neighboring devices, and number requested in the last 5 seconds.
<b>LSAs acknowledged</b>	Total number of link-state advertisements acknowledged, and number acknowledged in the last 5 seconds.
<b>Flood queue depth</b>	Total number of entries in the extended queue.
<b>Total rexmit entries</b>	Total number of retransmission entries waiting to be sent from the OSPF routing instance.
<b>db summaries</b>	Total number of database description summaries waiting to be sent from the OSPF routing instance.
<b>lsreq entries</b>	Total number of link-state request entries waiting to be sent from the OSPF routing instance.

Table 189: `show (ospf | ospf3) statistics` Output Fields (continued)

Field Name	Field Description
<b>Receive errors</b>	<p>Number and type of receive errors. Some sample receive errors include:</p> <ul style="list-style-type: none"> <li>• mtu mismatches</li> <li>• no interface found</li> <li>• no virtual link found</li> <li>• nssa mismatches</li> <li>• stub area mismatches</li> <li>• subnet mismatches</li> </ul> <p>If there are no receive errors, the output displays <b>none</b>.</p>

## Sample Output

### show ospf statistics

- `show route community-name`
- `show route damping`
- `show route detail`
- `show route exact`
- `show route export`
- `show route export vrf-target`
- `show route extensive`
- `show route flow validation`
- `show route forwarding-table`
- `show route forwarding-table interface-name`
- `show route hidden`
- `show route inactive-path`
- `show route inactive-prefix`
- `show route instance`

- `show route label`
- `show route label-switched-path`
- `show route localization`
- `show route martians`
- `show route match-prefix`
- `show route next-hop`
- `show route no-community`
- `show route output`
- `show route protocol`
- `show route range`
- `show route receive-protocol`
- `show route resolution`
- `show route snooping`
- `show route source-gateway`
- `show route summary`
- `show route table`
- `show route terse`

## show as-path

<b>List of Syntax</b>	<a href="#">Syntax on page 2167</a> <a href="#">Syntax (EX Series Switches) on page 2167</a>
<b>Syntax</b>	<pre>show as-path &lt;brief   detail&gt; &lt;logical-system (all   <i>logical-system-name</i>)&gt;</pre>
<b>Syntax (EX Series Switches)</b>	<pre>show as-path &lt;brief   detail&gt;</pre>
<b>Release Information</b>	<p>Command introduced before Junos OS Release 7.4.</p> <p>Command introduced in Junos OS Release 9.0 for EX Series switches.</p> <p>Command introduced in Junos OS Release 11.3 for the QFX Series.</p> <p>Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.</p>
<b>Description</b>	<p>Display the distribution of autonomous system (AS) paths that the local routing device is using (usually through the routing table). Use this command to debug problems for AS paths and to understand how AS paths have been manipulated through a policy (through the <b>as-path-prepend</b> action) or through aggregation.</p> <p>AS paths are stored in a hash table. A hash table is one method for fast lookup. Each entry in the table is called a bucket. Junos OS computes a hash value that indicates in which bucket the AS path is stored. The AS paths are dispersed among the hash buckets so that a manageable number of AS paths is stored in each bucket. Only unique AS paths are stored. Duplicate AS paths increase a reference count, but do not increase the number of AS paths stored in the hash table.</p>
<b>Options</b>	<p><b>none</b>—Display basic information about AS paths that the local routing device is using (same as brief).</p> <p><b>brief   detail</b>—(Optional) Display the specified level of output.</p> <p><b>logical-system (all   <i>logical-system-name</i>)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p>
<b>Required Privilege Level</b>	view

<b>Output Fields</b>	<p><a href="#">Table 190 on page 2168</a> lists the output fields for the <b>show as-path</b> command. Output fields are listed in the approximate order in which they appear.</p>

Table 190: show as-path Output Fields

Field Name	Field Description	Level of Output
<b>Total AS paths</b>	Total number of AS paths.	<b>brief</b> none
<b>Bucket</b>	Bucket number.	All levels
<b>Count</b>	Number of AS path entries in this bucket.	All levels
<b>AS path</b>	<p>AS path through which the route was learned. The letters at the end of the AS path indicate the path origin, providing an indication of the state of the route at the point at which the AS path originated:</p> <ul style="list-style-type: none"> <li>• <b>I</b>—IGP.</li> <li>• <b>E</b>—EGP.</li> <li>• <b>?</b>—Incomplete; typically, the AS path was aggregated.</li> <li>• <b>Atomic</b>—Route is an aggregate of several route prefixes.</li> <li>• <b>Aggregator</b>—Routing device has summarized a range of prefixes.</li> </ul>	All levels
<b>domain</b>	Number of independent AS domains. The AS paths of an independent AS domain are not shared with the AS paths and AS path attributes of other domains, including the master routing instance domain.	<b>detail</b>
<b>neighbor as</b>	AS peer address.	<b>detail</b>
<b>length</b>	Length of the AS path.	<b>detail</b>
<b>segments</b>	Length of the AS segment descriptor.	<b>detail</b>
<b>unique-count</b>	Number of unique autonomous systems (ASs) present in the AS path	<b>detail</b>
<b>references</b>	Path reference count.	<b>detail</b>

## show as-path domain

---

**List of Syntax**   [Syntax on page 2172](#)  
[Syntax \(EX Series Switches\) on page 2172](#)

**Syntax**   `show as-path domain`  
`<logical-system (all | logical-system-name)>`

**Syntax (EX Series Switches)**   `show as-path domain`

**Release Information**   Command introduced before Junos OS Release 7.4.  
Command introduced in Junos OS Release 9.0 for EX Series switches.

**Description**   Display autonomous system (AS) path domain information.

**Options**   **none**—(Optional) Display AS path domain information for all routing instances.  
**logical-system (all | *logical-system-name*)**—(Optional) Perform this operation on all logical systems or on a particular logical system.

**Required Privilege Level**   view

**List of Sample Output**   [show as-path domain on page 2174](#)

**Output Fields**   [Table 191 on page 2172](#) lists the output fields for the **show as-path domain** command. Output fields are listed in the approximate order in which they appear

*Table 191: show as-path domain Output Fields*

Field Name	Field Description
<b>Domain</b>	Number of independent AS domains. The AS paths of an independent AS domain are not shared with the AS paths and AS path attributes of other domains, including the master routing instance domain.
<b>Primary</b>	Primary AS number.
<b>References</b>	Path reference count.
<b>Number Paths</b>	Number of known AS paths.

*Table 191: show as-path domain Output Fields (continued)*

Field Name	Field Description
<b>Flags</b>	Information about the AS path: <ul style="list-style-type: none"><li>• <b>ASLoop</b>—Path contains an AS loop.</li><li>• <b>Atomic</b>—Path includes the ATOMIC_AGGREGATE path attribute.</li><li>• <b>Local</b>—Path was created by local aggregation.</li><li>• <b>Master</b>—Path was created by the master routing instance.</li></ul>
<b>Local AS</b>	AS number of the local routing device.
<b>Loops</b>	How many times this AS number can appear in an AS path.

## Sample Output

show as-path domain

```
user@host> show as-path domain
Domain: 1          Primary: 10458
References:        3 Paths:      30383
Flags: Master
Local AS: 10458   Loops: 1
```

## show as-path summary

<b>List of Syntax</b>	<a href="#">Syntax on page 2175</a> <a href="#">Syntax (EX Series Switches) on page 2175</a>
<b>Syntax</b>	<pre>show as-path summary &lt;logical-system (all   <i>logical-system-name</i>)&gt;</pre>
<b>Syntax (EX Series Switches)</b>	show as-path summary
<b>Release Information</b>	<p>Command introduced before Junos OS Release 7.4.</p> <p>Command introduced in Junos OS Release 9.0 for EX Series switches.</p>
<b>Description</b>	<p>Display autonomous system (AS) path summary information.</p> <p>AS paths are stored in a hash table. A hash table is one method for fast lookup. Each entry in the table is called a bucket. Junos OS computes a hash value that indicates in which bucket the AS path is stored. The AS paths are dispersed among the hash buckets so that a manageable number of AS paths is stored in each bucket. Only unique AS paths are stored. Duplicate AS paths increase a reference count, but do not increase the number of AS paths stored in the hash table.</p>
<b>Options</b>	<p><b>none</b>—(Optional) Display AS path summary information for all routing instances.</p> <p><b>logical-system (all   <i>logical-system-name</i>)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p>
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">show as-path on page 2167</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">show as-path summary on page 2176</a>
<b>Output Fields</b>	<p><a href="#">Table 192 on page 2175</a> lists the output fields for the <b>show as-path summary</b> command. Output fields are listed in the approximate order in which they appear.</p>

*Table 192: show as-path summary Output Fields*

Field Name	Field Description
AS Paths	Number of AS paths.
Buckets	Number of hash buckets in use.
Max	Maximum number of AS path entries per bucket.

*Table 192: show as-path summary Output Fields (continued)*

Field Name	Field Description
<b>Min</b>	Minimum number of AS path entries per bucket.
<b>Avg</b>	Average number of AS path entries per bucket.
<b>Std deviation</b>	Standard deviation of AS path entries per bucket.

## Sample Output

show as-path summary

```
user@host> show as-path summary
AS Paths  Buckets  Max   Min   Avg   Std deviation
30425     1024     95    12    29    6.481419
```

## show route

**List of Syntax**    [Syntax on page 2177](#)  
                           [Syntax \(EX Series Switches\) on page 2177](#)

**Syntax**    show route  
                   <all>  
                   <destination-prefix>  
                   <logical-system (all | *logical-system-name*)>  
                   <private>  
                   <te-ipv4-prefix-ip *te-ipv4-prefix-ip*>  
                   <te-ipv4-prefix-node-ip *te-ipv4-prefix-node-ip*>  
                   <te-ipv4-prefix-node-iso *te-ipv4-prefix-node-iso*>

**Syntax (EX Series Switches)**    show route  
   <all>  
   <destination-prefix>  
   <private>

**Release Information**    Command introduced before Junos OS Release 7.4.  
                                   Command introduced in Junos OS Release 9.0 for EX Series switches.  
                                   Option **private** introduced in Junos OS Release 9.5.  
                                   Option **private** introduced in Junos OS Release 9.5 for EX Series switches.  
                                   Command introduced in Junos OS Release 15.1R3 on MX Series routers for enhanced subscriber management.  
                                   Option **display-client-data** introduced in Junos OS Release 16.2R1 on MX80, MX104, MX240, MX480, MX960, MX2010, MX2020, vMX Series routers.  
                                   Options **te-ipv4-prefix-ip**, **te-ipv4-prefix-node-ip**, and **te-ipv4-prefix-node-iso** introduced in Junos OS Release 17.2R1 on MX Series and PTX Series.

**Description**    Display the active entries in the routing tables.

**Options**    **none**—Display brief information about all active entries in the routing tables.

**all**—(Optional) Display information about all routing tables, including private, or internal, routing tables.

**destination-prefix**—(Optional) Display active entries for the specified address or range of addresses.

**logical-system (all | *logical-system-name*)**—(Optional) Perform this operation on all logical systems or on a particular logical system.

**private**—(Optional) Display information only about all private, or internal, routing tables.

**display-client-data** —(Optional) Display client id and cookie information for routes installed by the routing protocol process client applications.

**te-ipv4-prefix-ip *te-ipv4-prefix-ip***—(Optional) Display IPv4 address of the traffic-engineering prefix, without the mask length if present in the routing table.

**te-ipv4-prefix-node-ip** *te-ipv4-prefix-node-ip*—(Optional) Display all prefixes that have originated from the traffic-engineering node. You can filter IPv4 node addresses from the traffic-engineered routes in the **lsdist.0** table.

**te-ipv4-prefix-node-iso** *te-ipv4-prefix-node-iso*—(Optional) Display all prefixes that have originated from the traffic-engineering node. You can filter IPv4 routes with the specified ISO circuit ID from the **lsdist.0** table.

**Output Fields**

[Table 193 on page 2178](#) describes the output fields for the **show route** command. Output fields are listed in the approximate order in which they appear.

*Table 193: show route Output Fields*

Field Name	Field Description
<i>routing-table-name</i>	Name of the routing table (for example, inet.0).
<i>number destinations</i>	Number of destinations for which there are routes in the routing table.

Table 193: show route Output Fields (continued)

Field Name	Field Description
<i>number routes</i>	<p>Number of routes in the routing table and total number of routes in the following states:</p> <ul style="list-style-type: none"> <li>• <b>active</b> (routes that are active).</li> <li>• <b>holddown</b> (routes that are in the pending state before being declared inactive). A holddown route was once the active route and is no longer the active route. The route is in the holddown state because a protocol still has interest in the route, meaning that the interest bit is set. A protocol might have its interest bit set on the previously active route because the protocol is still advertising the route. The route will be deleted after all protocols withdraw their advertisement of the route and remove their interest bit. A persistent holddown state often means that the interested protocol is not releasing its interest bit properly.</li> </ul> <p>However, if you have configured advertisement of multiple routes (with the <b>add-path</b> or <b>advertise-inactive</b> statement), the holddown bit is most likely set because BGP is advertising the route as an active route. In this case, you can ignore the holddown state because nothing is wrong.</p> <ul style="list-style-type: none"> <li>• <b>hidden</b> (routes that are not used because of a routing policy).</li> </ul>
<i>destination-prefix</i>	<p>Route destination (for example:10.0.0.1/24). Sometimes the route information is presented in another format, such as:</p> <ul style="list-style-type: none"> <li>• <b>MPLS-label</b> (for example, 80001).</li> <li>• <b>interface-name</b> (for example, ge-1/0/2).</li> <li>• <b>neighbor-address:control-word-status:encapsulation type:vc-id:source</b> (Layer 2 circuit only. For example, 10.1.1.195:NoCtrlWord:1:1:Local/96): <ul style="list-style-type: none"> <li>• <b>neighbor-address</b>—Address of the neighbor.</li> <li>• <b>control-word-status</b>—Whether the use of the control word has been negotiated for this virtual circuit: <b>NoCtrlWord</b> or <b>CtrlWord</b>.</li> <li>• <b>encapsulation type</b>—Type of encapsulation, represented by a number: (1) Frame Relay DLCI, (2) ATM AAL5 VCC transport, (3) ATM transparent cell transport, (4) Ethernet, (5) VLAN Ethernet, (6) HDLC, (7) PPP, (8) ATM VCC cell transport, (10) ATM VPC cell transport.</li> <li>• <b>vc-id</b>—Virtual circuit identifier.</li> <li>• <b>source</b>—Source of the advertisement: <b>Local</b> or <b>Remote</b>.</li> </ul> </li> </ul>
<i>[ protocol, preference ]</i>	<p>Protocol from which the route was learned and the preference value for the route.</p> <ul style="list-style-type: none"> <li>• <b>+</b>—A plus sign indicates the active route, which is the route installed from the routing table into the forwarding table.</li> <li>• <b>-</b>—A hyphen indicates the last active route.</li> <li>• <b>*</b>—An asterisk indicates that the route is both the active and the last active route. An asterisk before a <b>to</b> line indicates the best subpath to the route.</li> </ul> <p>In every routing metric except for the BGP <b>LocalPref</b> attribute, a lesser value is preferred. In order to use common comparison routines, Junos OS stores the 1's complement of the <b>LocalPref</b> value in the <b>Preference2</b> field. For example, if the <b>LocalPref</b> value for Route 1 is 100, the <b>Preference2</b> value is -101. If the <b>LocalPref</b> value for Route 2 is 155, the <b>Preference2</b> value is -156. Route 2 is preferred because it has a higher <b>LocalPref</b> value and a lower <b>Preference2</b> value.</p>
<i>weeks:days hours:minutes:seconds</i>	How long the route been known (for example, <b>2w4d 13:11:14</b> , or 2 weeks, 4 days, 13 hours, 11 minutes, and 14 seconds).
<i>metric</i>	Cost value of the indicated route. For routes within an AS, the cost is determined by the IGP and the individual protocol metrics. For external routes, destinations, or routing domains, the cost is determined by a preference value.

Table 193: show route Output Fields (continued)

Field Name	Field Description
<b>localpref</b>	Local preference value included in the route.
<b>from</b>	Interface from which the route was received.
<b>AS path</b>	<p>AS path through which the route was learned. The letters at the end of the AS path indicate the path origin, providing an indication of the state of the route at the point at which the AS path originated:</p> <ul style="list-style-type: none"> <li>• <b>I</b>—IGP.</li> <li>• <b>E</b>—EGP.</li> <li>• <b>?</b>—Incomplete; typically, the AS path was aggregated.</li> </ul> <p>When AS path numbers are included in the route, the format is as follows:</p> <ul style="list-style-type: none"> <li>• <b>[ ]</b>—Brackets enclose the local AS number associated with the AS path if more than one AS number is configured on the routing device, or if AS path prepending is configured.</li> <li>• <b>{ }</b>—Braces enclose AS sets, which are groups of AS numbers in which the order does not matter. A set commonly results from route aggregation. The numbers in each AS set are displayed in ascending order.</li> <li>• <b>( )</b>—Parentheses enclose a confederation.</li> <li>• <b>( [ ] )</b>—Parentheses and brackets enclose a confederation set.</li> </ul> <p><b>NOTE:</b> In Junos OS Release 10.3 and later, the AS path field displays an unrecognized attribute and associated hexadecimal value if BGP receives attribute 128 (attribute set) and you have not configured an independent domain in any routing instance.</p>
<b>encapsulated</b>	Extended next-hop encoding capability enabled for the specified BGP community for routing IPv4 traffic over IPv6 tunnels. When BGP receives routes without the tunnel community, IPv4-Over IPv6 tunnels are not created and BGP routes are resolved without encapsulation.
<b>Route Labels</b>	Stack of labels carried in the BGP route update.
<b>validation-state</b>	<p>(BGP-learned routes) Validation status of the route:</p> <ul style="list-style-type: none"> <li>• <b>Invalid</b>—Indicates that the prefix is found, but either the corresponding AS received from the EBGp peer is not the AS that appears in the database, or the prefix length in the BGP update message is longer than the maximum length permitted in the database.</li> <li>• <b>Unknown</b>—Indicates that the prefix is not among the prefixes or prefix ranges in the database.</li> <li>• <b>Unverified</b>—Indicates that the origin of the prefix is not verified against the database. This is because the database got populated and the validation is not called for in the BGP import policy, although origin validation is enabled, or the origin validation is not enabled for the BGP peers.</li> <li>• <b>Valid</b>—Indicates that the prefix and autonomous system pair are found in the database.</li> </ul>
<b>to</b>	<p>Next hop to the destination. An angle bracket (&gt;) indicates that the route is the selected route.</p> <p>If the destination is <b>Discard</b>, traffic is dropped.</p>

Table 193: show route Output Fields (continued)

Field Name	Field Description
via	<p>Interface used to reach the next hop. If there is more than one interface available to the next hop, the interface that is actually used is followed by the word <b>Selected</b>. This field can also contain the following information:</p> <ul style="list-style-type: none"> <li>• <b>Weight</b>—Value used to distinguish primary, secondary, and fast reroute backup routes. Weight information is available when MPLS label-switched path (LSP) link protection, node-link protection, or fast reroute is enabled, or when the standby state is enabled for secondary paths. A lower weight value is preferred. Among routes with the same weight value, load balancing is possible.</li> <li>• <b>Balance</b>—Balance coefficient indicating how traffic of unequal cost is distributed among next hops when a routing device is performing unequal-cost load balancing. This information is available when you enable BGP multipath load balancing.</li> <li>• <b>lsp-path-name</b>—Name of the LSP used to reach the next hop.</li> <li>• <b>label-action</b>—MPLS label and operation occurring at the next hop. The operation can be <b>pop</b> (where a label is removed from the top of the stack), <b>push</b> (where another label is added to the label stack), or <b>swap</b> (where a label is replaced by another label). For VPNs, expect to see multiple <b>push</b> operations, corresponding to the inner and outer labels required for VPN routes (in the case of a direct PE-to-PE connection, the VPN route would have the inner label push only).</li> </ul>
Private unicast	(Enhanced subscriber management for MX Series routers) Indicates that an access-internal route is managed by enhanced subscriber management. By contrast, access-internal routes <i>not</i> managed by enhanced subscriber management are displayed with associated next-hop and media access control (MAC) address information.
balance	Distribution of the load based on the underlying operational interface bandwidth for equal-cost multipaths (ECMP) across the nexthop gateways in percentages.

## Sample Output

### show route

```

user@host> show route
inet.0: 11 destinations, 12 routes (11 active, 0 holddown, 0 hidden)
+ = Active Route, - = Last Active, * = Both

1:65500:1:10.0.0.20/240
    * [MVPN/70] 19:53:41, metric2 1
        Indirect
1:65500:1:10.0.0.40/240
    * [BGP/170] 19:53:29, localpref 100, from 10.0.0.30
        AS path: I
        > to 10.0.24.4 via lt-0/3/0.24, label-switched-path toD
        [BGP/170] 19:53:26, localpref 100, from 10.0.0.33
        AS path: I
        > to 10.0.24.4 via lt-0/3/0.24, label-switched-path toD
1:65500:1:10.0.0.60/240
    * [BGP/170] 19:53:29, localpref 100, from 10.0.0.30
        AS path: I
        > to 10.0.28.8 via lt-0/3/0.28, label-switched-path toF
        [BGP/170] 19:53:25, localpref 100, from 10.0.0.33
        AS path: I
        > to 10.0.28.8 via lt-0/3/0.28, label-switched-path toF

```

### show route (VPN)

The following sample output shows a VPN route with composite next hops enabled. The first **Push** operation corresponds to the outer label. The second **Push** operation corresponds to the inner label.

```
user@host> show route 192.0.2.0

13979:665001.inet.0: 871 destinations, 3556 routes (871 active, 0 holddown, 0
hidden)
+ = Active Route, - = Last Active, * = Both

192.0.2.0/24          [BGP/170] 00:28:32, localpref 100, from 10.9.9.160
                     AS path: 13980 ?, validation-state: unverified
                     > to 10.100.0.42 via ae2.0, Push 16, Push 300368(top)
                     [BGP/170] 00:28:28, localpref 100, from 10.9.9.169
                     AS path: 13980 ?, validation-state: unverified
                     > to 10.100.0.42 via ae2.0, Push 126016, Push 300368(top)

## show route active-path

---

<b>List of Syntax</b>	<a href="#">Syntax on page 2198</a> <a href="#">Syntax (EX Series Switches) on page 2198</a>
<b>Syntax</b>	<code>show route active-path</code> <code>&lt;brief   detail   extensive   terse&gt;</code> <code>&lt;logical-system (all   <i>logical-system-name</i>)&gt;</code>
<b>Syntax (EX Series Switches)</b>	<code>show route active-path</code> <code>&lt;brief   detail   extensive   terse&gt;</code>
<b>Release Information</b>	Command introduced in Junos OS Release 8.0. Command introduced in Junos OS Release 9.0 for EX Series switches.
<b>Description</b>	Display all active routes for destinations. An active route is a route that is selected as the best path. Inactive routes are not displayed.
<b>Options</b>	<b>none</b> —Display all active routes.  <b>brief   detail   extensive   terse</b> —(Optional) Display the specified level of output. If you do not specify a level of output, the system defaults to <b>brief</b> .  <b>logical-system (all   <i>logical-system-name</i>)</b> —(Optional) Perform this operation on all logical systems or on a particular logical system.
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">show route active-path on page 2198</a> <a href="#">show route active-path brief on page 2199</a> <a href="#">show route active-path detail on page 2199</a> <a href="#">show route active-path extensive on page 2200</a> <a href="#">show route active-path terse on page 2202</a>
<b>Output Fields</b>	For information about output fields, see the output field tables for the <a href="#">show route</a> command, the <a href="#">show route detail</a> command, the <a href="#">show route extensive</a> command, or the <a href="#">show route terse</a> command.

## Sample Output

### show route active-path

```
user@host> show route active-path

inet.0: 7 destinations, 7 routes (6 active, 0 holddown, 1 hidden)
+ = Active Route, - = Last Active, * = Both

10.255.70.19/32    *[Direct/0] 21:33:52
```

```

> via lo0.0
10.255.71.50/32 * [IS-IS/15] 00:18:13, metric 10
> to 172.16.100.1 via so-2/1/3.0
172.16.100.1/24 * [Direct/0] 00:18:36
> via so-2/1/3.0
172.16.100.1/32 * [Local/0] 00:18:41
Local via so-2/1/3.0
192.168.64.0/21 * [Direct/0] 21:33:52
> via fxp0.0
192.168.70.19/32 * [Local/0] 21:33:52
Local via fxp0.0

```

### show route active-path brief

The output for the **show route active-path brief** command is identical to that for the **show route active-path** command. For sample output, see [show route active-path on page 2198](#).

### show route active-path detail

```

user@host> show route active-path detail

## show route advertising-protocol

<b>Syntax</b>	show route advertising-protocol <i>protocol neighbor-address</i> <brief   detail   extensive   terse> <logical-system (all   <i>logical-system-name</i> )>
<b>Release Information</b>	Command introduced before Junos OS Release 7.4.
<b>Description</b>	Display the routing information as it has been prepared for advertisement to a particular neighbor of a particular dynamic routing protocol.
<b>Options</b>	<p><b>brief   detail   extensive   terse</b>—(Optional) Display the specified level of output.</p> <p><b>logical-system (all   <i>logical-system-name</i>)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p> <p><b><i>neighbor-address</i></b>—Address of the neighboring router to which the route entry is being transmitted.</p> <p><b><i>protocol</i></b>—Protocol transmitting the route:</p> <ul style="list-style-type: none"> <li>• <b>bgp</b>—Border Gateway Protocol</li> <li>• <b>dvmrp</b>—Distance Vector Multicast Routing Protocol</li> <li>• <b>msdp</b>—Multicast Source Discovery Protocol</li> <li>• <b>pim</b>—Protocol Independent Multicast</li> <li>• <b>rip</b>—Routing Information Protocol</li> <li>• <b>ripng</b>—Routing Information Protocol next generation</li> </ul>
<b>Additional Information</b>	Routes displayed are routes that the routing table has exported into the routing protocol and that have been filtered by the associated protocol's <b>export</b> routing policy statements. Starting with Junos OS Release 13.3, you can display the routing instance table <b>foo</b> for any address family, on a VPN route reflector, or a VPN AS boundary router that is advertising local VPN routes. However, If you do not specify the <b>table</b> in the command, the output displays each VRF prefix twice.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Example: Configuring the MED Attribute That Determines the Exit Point in an AS</i></li> </ul>
<b>List of Sample Output</b>	<a href="#">show route advertising-protocol bgp (Layer 3 VPN) on page 2206</a> <a href="#">show route advertising-protocol bgp detail on page 2206</a>

[show route advertising-protocol bgp detail \(Aggregate Extended Community Bandwidth\) on page 2206](#)

[show route advertising-protocol bgp detail \(Layer 2 VPN\) on page 2207](#)  
[show route advertising-protocol bgp detail \(Layer 3 VPN\) on page 2207](#)  
[show route advertising-protocol bgp extensive all \(Next Hop Self with RIB-out IP Address\) on page 2208](#)

**Output Fields** [Table 194 on page 2204](#) lists the output fields for the **show route advertising-protocol** command. Output fields are listed in the approximate order in which they appear.

*Table 194: show route advertising-protocol Output Fields*

Field Name	Field Description	Level of Output
<i>routing-table-name</i>	Name of the routing table—for example, inet.0.	All levels
<i>number destinations</i>	Number of destinations for which there are routes in the routing table.	All levels
<i>number routes</i>	Number of routes in the routing table and total number of routes in the following states: <ul style="list-style-type: none"> <li>• <b>active</b> (routes that are active)</li> <li>• <b>holddown</b> (routes that are in the pending state before being declared inactive)</li> <li>• <b>hidden</b> (routes that are not used because of a routing policy)</li> </ul>	All levels
<b>Prefix</b>	Destination prefix.	<b>brief none</b>
<i>destination-prefix (entry, announced)</i>	Destination prefix. The <b>entry</b> value is the number of routes for this destination, and the <b>announced</b> value is the number of routes being announced for this destination.	<b>detail extensive</b>
<b>BGP group and type</b>	BGP group name and type ( <b>Internal</b> or <b>External</b> ).	<b>detail extensive</b>
<b>Route Distinguisher</b>	Unique 64-bit prefix augmenting each IP subnet.	<b>detail extensive</b>
<b>Advertised Label</b>	Incoming label advertised by the Label Distribution Protocol (LDP). When an IP packet enters a label-switched path (LSP), the ingress router examines the packet and assigns it a label based on its destination, placing the label in the packet's header. The label transforms the packet from one that is forwarded based on its IP routing information to one that is forwarded based on information associated with the label.	<b>detail extensive</b>
<b>Label-Base, range</b>	First label in a block of labels and label block size. A remote PE router uses this first label when sending traffic toward the advertising PE router.	<b>detail extensive</b>
<b>VPN Label</b>	Virtual private network (VPN) label. Packets are sent between CE and PE routers by advertising VPN labels. VPN labels transit over either a Resource Reservation Protocol (RSVP) or a Label Distribution Protocol (LDP) label-switched path (LSP) tunnel.	<b>detail extensive</b>

Table 194: *show route advertising-protocol* Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Nexthop</b>	<p>Next hop to the destination. An angle bracket (&gt;) indicates that the route is the selected route.</p> <p>If the next-hop advertisement to the peer is <b>Self</b>, and the RIB-out next hop is a specific IP address, the RIB-out IP address is included in the extensive output. See <a href="#">show route advertising-protocol bgp extensive all (Next Hop Self with RIB-out IP Address)</a> on page 2208.</p>	All levels
<b>MED</b>	Multiple exit discriminator value included in the route.	<b>brief</b>
<b>Lclpref or Localpref</b>	Local preference value included in the route.	All levels
<b>Queued</b>	When BGP route prioritization is enabled and a route is present in a priority queue, this shows which priority queue the route is in.	All levels except <b>brief</b>
<b>AS path</b>	<p>AS path through which the route was learned. The letters at the end of the AS path indicate the path origin, providing an indication of the state of the route at the point at which the AS path originated:</p> <ul style="list-style-type: none"> <li>• <b>I</b>—IGP.</li> <li>• <b>E</b>—EGP.</li> <li>• <b>?</b>—Incomplete; typically, the AS path was aggregated.</li> </ul> <p>When AS path numbers are included in the route, the format is as follows:</p> <ul style="list-style-type: none"> <li>• <b>[ ]</b>—Brackets enclose the local AS number associated with the AS path if configured on the router, or if AS path prepending is configured.</li> <li>• <b>{ }</b>—Braces enclose AS sets, which are groups of AS numbers in which the order does not matter. A set commonly results from route aggregation. The numbers in each AS set are displayed in ascending order.</li> <li>• <b>( )</b>—Parentheses enclose a confederation.</li> <li>• <b>( [ ] )</b>—Parentheses and brackets enclose a confederation set.</li> </ul> <p><b>NOTE:</b> In Junos OS Release 10.3 and later, the AS path field displays an unrecognized attribute and associated hexadecimal value if BGP receives attribute 128 (attribute set) and you have not configured an independent domain in any routing instance.</p>	All levels
<b>Route Labels</b>	Stack of labels carried in the BGP route update.	<b>detail extensive</b>
<b>Cluster list</b>	(For route reflected output only) Cluster ID sent by the route reflector.	<b>detail extensive</b>
<b>Originator ID</b>	(For route reflected output only) Address of routing device that originally sent the route to the route reflector.	<b>detail extensive</b>
<b>Communities</b>	Community path attribute for the route. See the output field table for the <a href="#">show route detail</a> command for all possible values for this field.	<b>detail extensive</b>
<b>AIGP</b>	Accumulated interior gateway protocol (AIGP) BGP attribute.	<b>detail extensive</b>

Table 194: show route advertising-protocol Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Attrset AS</b>	Number, local preference, and path of the autonomous system (AS) that originated the route. These values are stored in the <b>Attrset</b> attribute at the originating router.	<b>detail extensive</b>
<b>Layer2-info:encaps</b>	Layer 2 encapsulation (for example, VPLS).	<b>detail extensive</b>
<b>control flags</b>	Control flags: <b>none</b> or <b>Site Down</b> .	<b>detail extensive</b>
<b>mtu</b>	Maximum transmission unit (MTU) of the Layer 2 circuit.	<b>detail extensive</b>

<b>Syntax</b>	<pre>show route all &lt;logical-system (all   <i>logical-system-name</i>)&gt;</pre>
<b>Syntax (EX Series Switches)</b>	<pre>show route all</pre>
<b>Release Information</b>	<p>Command introduced before Junos OS Release 7.4.</p> <p>Command introduced in Junos OS Release 9.0 for EX Series switches.</p>
<b>Description</b>	<p>Display information about all routes in all routing tables, including private, or internal, tables.</p>
<b>Options</b>	<p><b>none</b>—Display information about all routes in all routing tables, including private, or internal, tables.</p> <p><b>logical-system (all   <i>logical-system-name</i>)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p>
<b>Required Privilege Level</b>	<p>view</p>
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">show route brief on page 2216</a></li> <li>• <a href="#">show route detail on page 2228</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">show route all on page 2209</a>
<b>Output Fields</b>	<p>In Junos OS Release 9.5 and later, only the output fields for the <b>show route all</b> command display all routing tables, including private, or hidden, routing tables. The output field table of the <a href="#">show route</a> command does not display entries for private, or hidden, routing tables in Junos OS Release 9.5 and later.</p>

## Sample Output

### show route all

The following example displays a snippet of output from the **show route** command and then displays the same snippet of output from the **show route all** command:

```
user@host> show route
mpls.0: 7 destinations, 7 routes (5 active, 0 holddown, 2 hidden)
Restart Complete
+ = Active Route, - = Last Active, * = Both
0                *[MPLS/0] 2d 02:24:39, metric 1
```

```

1          Receive
          *[MPLS/0] 2d 02:24:39, metric 1
          Receive
2          *[MPLS/0] 2d 02:24:39, metric 1
          Receive
800017     *[VPLS/7] 1d 14:00:16
          > via vt-3/2/0.32769, Pop
800018     *[VPLS/7] 1d 14:00:26
          > via vt-3/2/0.32772, Pop

user@host> show route all
mpls.0: 7 destinations, 7 routes (5 active, 0 holddown, 2 hidden)
Restart Complete
+ = Active Route, - = Last Active, * = Both
0          *[MPLS/0] 2d 02:19:12, metric 1
          Receive
1          *[MPLS/0] 2d 02:19:12, metric 1
          Receive
2          *[MPLS/0] 2d 02:19:12, metric 1

              Unusable
```

## show route aspath-regex

<b>List of Syntax</b>	<a href="#">Syntax on page 2211</a> <a href="#">Syntax (EX Series Switches) on page 2211</a>
<b>Syntax</b>	<pre>show route aspath-regex <i>regular-expression</i> &lt;logical-system (all   <i>logical-system-name</i>)&gt;</pre>
<b>Syntax (EX Series Switches)</b>	<pre>show route aspath-regex <i>regular-expression</i></pre>
<b>Release Information</b>	<p>Command introduced before Junos OS Release 7.4.</p> <p>Command introduced in Junos OS Release 9.0 for EX Series switches.</p>
<b>Description</b>	<p>Display the entries in the routing table that match the specified autonomous system (AS) path regular expression.</p>
<b>Options</b>	<p><b><i>regular-expression</i></b>—Regular expression that matches an entire AS path.</p> <p><b><i>logical-system (all   logical-system-name)</i></b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p>
<b>Additional Information</b>	<p>You can specify a regular expression as:</p> <ul style="list-style-type: none"> <li>• An individual AS number</li> <li>• A period wildcard used in place of an AS number</li> <li>• An AS path regular expression that is enclosed in parentheses</li> </ul> <p>You also can include the operators described in the table of AS path regular expression operators in the <i>Junos Policy Framework Configuration Guide</i>. The following list summarizes these operators:</p> <ul style="list-style-type: none"> <li>• <b><i>{m,n}</i></b>—At least <i>m</i> and at most <i>n</i> repetitions of the AS path term.</li> <li>• <b><i>{m}</i></b>—Exactly <i>m</i> repetitions of the AS path term.</li> <li>• <b><i>{m,}</i></b>—<i>m</i> or more repetitions of the AS path term.</li> <li>• <b><i>*</i></b>—Zero or more repetitions of an AS path term.</li> <li>• <b><i>+</i></b>—One or more repetitions of an AS path term.</li> <li>• <b><i>?</i></b>—Zero or one repetition of an AS path term.</li> <li>• <b><i>aspath_term   aspath_term</i></b>—Match one of the two AS path terms.</li> </ul> <p>When you specify more than one AS number or path term, or when you include an operator in the regular expression, enclose the entire regular expression in quotation marks. For example, to match any path that contains AS number 234, specify the following command:</p>

```
show route aspath-regex ".* 234.*"
```

## show route ccc

---

<b>Syntax</b>	<code>show route ccc ccc</code> <code>&lt;brief   detail   extensive   terse&gt;</code> <code>&lt;logical-system (all   <i>logical-system-name</i>)&gt;</code>
<b>Release Information</b>	Command introduced before Junos OS Release 7.4.
<b>Description</b>	Display circuit cross-connect (CCC) entries in the Multiprotocol Link Switching (MPLS) routing table.
<b>Options</b>	<b>ccc</b> —Name of an entry with a circuit cross-connect interface.  <b>brief   detail   extensive   terse</b> —(Optional) Display the specified level of output.  <b>logical-system (all   <i>logical-system-name</i>)</b> —(Optional) Perform this operation on all logical systems or on a particular logical system.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">show connections</a></li></ul>
<b>List of Sample Output</b>	<a href="#">show route ccc extensive on page 2218</a>
<b>Output Fields</b>	For information about output fields, see the output field tables for the <a href="#">show route</a> command, the <a href="#">show route detail</a> command, the <a href="#">show route extensive</a> command, or the <a href="#">show route terse</a> command.

## Sample Output

### show route ccc extensive

```
user@host> show route ccc fe-0/1/0.600 extensive
mpls.0: 19 destinations, 19 routes (19 active, 0 holddown, 0 hidden)
fe-0/1/2.600 (1 entry, 1 announced)
TSI:
KRT in-kernel fe-0/1/2.600.0      /16 -> {0.0.0.0}
      *CCC      Preference: 7
                Next-hop reference count: 2
                Next hop: via so-0/0/3.0 weight 0x1, selected
                Label operation: Push 101424
                State: <Active Int>
                Local AS: 100
                Age: 28:13 Metric: 3
                Task: MPLS

                AS path: I
```

## show route community

<b>List of Syntax</b>	<a href="#">Syntax on page 2219</a> <a href="#">Syntax (EX Series Switches) on page 2219</a>
<b>Syntax</b>	<pre>show route community <i>as-number:community-value</i> &lt;brief   detail   extensive   terse&gt; &lt;logical-system (all   <i>logical-system-name</i>)&gt;</pre>
<b>Syntax (EX Series Switches)</b>	<pre>show route community <i>as-number:community-value</i> &lt;brief   detail   extensive   terse&gt;</pre>
<b>Release Information</b>	<p>Command introduced before Junos OS Release 7.4.</p> <p>Command introduced in Junos OS Release 9.0 for EX Series switches.</p>
<b>Description</b>	<p>Display the route entries in each routing table that are members of a Border Gateway Protocol (BGP) community.</p>
<b>Options</b>	<p><b><i>as-number:community-value</i></b>—One or more community identifiers. <b><i>as-number</i></b> is the AS number, and <b><i>community-value</i></b> is the community identifier. When you specify more than one community identifier, enclose the identifiers in double quotation marks. Community identifiers can include wildcards.</p> <p>For example:</p> <pre>user@host&gt; show route table inet.0 protocol bgp community "12083:6015" community "12083:65551"</pre> <p>or</p> <pre>user@host&gt; show route table inet.0 protocol bgp community [12083:6014 12083:65551]</pre> <p><b>brief   detail   extensive   terse</b>—(Optional) Display the specified level of output.</p> <p><b>logical-system (all   <i>logical-system-name</i>)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p>
<b>Additional Information</b>	<p>Specifying the community option displays all routes matching the community found within the routing table. The community option does not limit the output to only the routes being advertised to the neighbor after any egress routing policy.</p>
<b>Required Privilege Level</b>	view

## show route damping

<b>List of Syntax</b>	<a href="#">Syntax on page 2223</a> <a href="#">Syntax (EX Series Switch and QFX Series) on page 2223</a>
<b>Syntax</b>	<pre>show route damping (decayed   history   suppressed) &lt;brief   detail   extensive   terse&gt; &lt;logical-system (all   <i>logical-system-name</i>)&gt;</pre>
<b>Syntax (EX Series Switch and QFX Series)</b>	<pre>show route damping (decayed   history   suppressed) &lt;brief   detail   extensive   terse&gt;</pre>
<b>Release Information</b>	<p>Command introduced before Junos OS Release 7.4.</p> <p>Command introduced in Junos OS Release 9.0 for EX Series switches.</p> <p>Command introduced in Junos OS Release 11.3 for the QFX Series.</p> <p>Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.</p>
<b>Description</b>	Display the BGP routes for which updates might have been reduced because of route flap damping.
<b>Options</b>	<p><b>brief   detail   extensive   terse</b>—(Optional) Display the specified level of output. If you do not specify a level of output, the system defaults to brief.</p> <p><b>decayed</b>—Display route damping entries that might no longer be valid, but are not suppressed.</p> <p><b>history</b>—Display entries that have already been withdrawn, but have been logged.</p> <p><b>logical-system (all   <i>logical-system-name</i>)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p> <p><b>suppressed</b>—Display entries that have been suppressed and are no longer being installed into the forwarding table or exported by routing protocols.</p>
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">clear bgp damping on page 1668</a></li> <li>• <a href="#">show policy damping on page 1714</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">show route damping decayed detail on page 2226</a> <a href="#">show route damping history on page 2227</a> <a href="#">show route damping history detail on page 2227</a>
<b>Output Fields</b>	<p><a href="#">Table 195 on page 2224</a> lists the output fields for the <b>show route damping</b> command. Output fields are listed in the approximate order in which they appear.</p>

Table 195: show route damping Output Fields

Field Name	Field Description	Level of Output
<i>routing-table-name</i>	Name of the routing table—for example, <b>inet.0</b> .	All levels
<b>destinations</b>	Number of destinations for which there are routes in the routing table.	All levels
<i>number routes</i>	Number of routes in the routing table and total number of routes in the following states: <ul style="list-style-type: none"> <li>• <b>active</b></li> <li>• <b>holdddown</b> (routes that are in a pending state before being declared inactive)</li> <li>• <b>hidden</b> (the routes are not used because of a routing policy)</li> </ul>	All levels
<i>destination-prefix (entry, announced)</i>	Destination prefix. The <b>entry</b> value is the number of routes for this destination, and the <b>announced</b> value is the number of routes being announced for this destination.	<b>detail extensive</b>
<i>[protocol, preference]</i>	Protocol from which the route was learned and the preference value for the route. <ul style="list-style-type: none"> <li>• <b>+</b>—A plus sign indicates the active route, which is the route installed from the routing table into the forwarding table.</li> <li>• <b>-</b>—A hyphen indicates the last active route.</li> <li>• <b>*</b>—An asterisk indicates that the route is both the active and the last active route. An asterisk before a <b>to</b> line indicates the best subpath to the route.</li> </ul> <p>In every routing metric except for the BGP <b>LocalPref</b> attribute, a lesser value is preferred. In order to use common comparison routines, Junos OS stores the 1's complement of the <b>LocalPref</b> value in the <b>Preference2</b> field. For example, if the <b>LocalPref</b> value for Route 1 is 100, the <b>Preference2</b> value is -101. If the <b>LocalPref</b> value for Route 2 is 155, the <b>Preference2</b> value is -156. Route 2 is preferred because it has a higher <b>LocalPref</b> value and a lower <b>Preference2</b> value.</p>	All levels
<b>Next-hop reference count</b>	Number of references made to the next hop.	<b>detail extensive</b>
<b>Source</b>	IP address of the route source.	<b>detail extensive</b>
<b>Next hop</b>	Network layer address of the directly reachable neighboring system.	<b>detail extensive</b>
<b>via</b>	Interface used to reach the next hop. If there is more than one interface available to the next hop, the interface that is actually used is followed by the word <b>Selected</b> .	<b>detail extensive</b>
<b>Protocol next hop</b>	Network layer address of the remote routing device that advertised the prefix. This address is used to derive a forwarding next hop.	<b>detail extensive</b>
<b>Indirect next hop</b>	Index designation used to specify the mapping between protocol next hops, tags, kernel export policy, and the forwarding next hops.	<b>detail extensive</b>
<b>State</b>	Flags for this route. For a description of possible values for this field, see the output field table for the <a href="#">show route detail</a> command.	<b>detail extensive</b>

Table 195: show route damping Output Fields (continued)

Field Name	Field Description	Level of Output
Local AS	AS number of the local routing device.	detail extensive
Peer AS	AS number of the peer routing device.	detail extensive
Age	How long the route has been known.	detail extensive
Metric	Metric for the route.	detail extensive
Task	Name of the protocol that has added the route.	detail extensive
Announcement bits	List of protocols that announce this route. <i>n-Resolve inet</i> indicates that the route is used for route resolution for next hops found in the routing table. <i>n</i> is an index used by Juniper Networks customer support only.	detail extensive
AS path	<p>AS path through which the route was learned. The letters at the end of the AS path indicate the path origin, providing an indication of the state of the route at the point at which the AS path originated:</p> <ul style="list-style-type: none"> <li>• I—IGP.</li> <li>• E—EGP.</li> <li>• ?—Incomplete; typically, the AS path was aggregated.</li> </ul> <p>When AS path numbers are included in the route, the format is as follows:</p> <ul style="list-style-type: none"> <li>• [ ]—Brackets enclose the local AS number associated with the AS path if more than one AS number is configured on the routing device or if AS path prepending is configured.</li> <li>• { }—Braces enclose AS sets, which are groups of AS numbers in which the order does not matter. A set commonly results from route aggregation. The numbers in each AS set are displayed in ascending order.</li> <li>• ( )—Parentheses enclose a confederation.</li> <li>• ( [ ] )—Parentheses and brackets enclose a confederation set.</li> </ul> <p><b>NOTE:</b> In Junos OS Release 10.3 and later, the AS path field displays an unrecognized attribute and associated hexadecimal value if BGP receives attribute 128 (attribute set) and you have not configured an independent domain in any routing instance.</p>	All levels
to	Next hop to the destination. An angle bracket (>) indicates that the route is the selected route.	brief none
via	Interface used to reach the next hop. If there is more than one interface available to the next hop, the interface that is actually used is followed by the word <b>Selected</b> .	brief none
Communities	Community path attribute for the route. See the output field table for the <a href="#">show route detail</a> command.	detail extensive
Localpref	Local preference value included in the route.	All levels
Router ID	BGP router ID as advertised by the neighbor in the open message.	detail extensive

Table 195: show route damping Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Merit (last update/now)</b>	Last updated and current figure-of-merit value.	<b>detail extensive</b>
<b>damping-parameters</b>	Name that identifies the damping parameters used, which is defined in the damping statement at the <b>[edit policy-options]</b> hierarchy level.	<b>detail extensive</b>
<b>Last update</b>	Time of most recent change in path attributes.	<b>detail extensive</b>
<b>First update</b>	Time of first change in path attributes, which started the route damping process.	<b>detail extensive</b>
<b>Flaps</b>	Number of times the route has gone up or down or its path attributes have changed.	<b>detail extensive</b>
<b>Suppressed</b>	( <b>suppressed</b> keyword only) This route is currently suppressed. A suppressed route does not appear in the forwarding table and routing protocols do not export it.	All levels
<b>Reusable in</b>	( <b>suppressed</b> keyword only) Time when a suppressed route will again be available.	All levels
<b>Preference will be</b>	( <b>suppressed</b> keyword only) Preference value that will be applied to the route when it is again active.	All levels

<b>Options</b>	<p><b>none</b>—Display all active entries in the routing table on all systems.</p> <p><b>destination-prefix</b>—(Optional) Display active entries for the specified address or range of addresses.</p> <p><b>logical-system (all   logical-system-name)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p>
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">show route detail on page 2239</a> <a href="#">show route detail (with BGP Multipath) on page 2245</a> <a href="#">show route label detail (Multipoint LDP Inband Signaling for Point-to-Multipoint LSPs) on page 2246</a> <a href="#">show route label detail (Multipoint LDP with Multicast-Only Fast Reroute) on page 2246</a>
<b>Output Fields</b>	<p><a href="#">Table 196 on page 2228</a> describes the output fields for the <b>show route detail</b> command. Output fields are listed in the approximate order in which they appear.</p>

*Table 196: show route detail Output Fields*

Field Name	Field Description
<i>routing-table-name</i>	Name of the routing table (for example, inet.0).
<i>number destinations</i>	Number of destinations for which there are routes in the routing table.

Table 196: show route detail Output Fields (continued)

Field Name	Field Description
<i>number routes</i>	<p>Number of routes in the routing table and total number of routes in the following states:</p> <ul style="list-style-type: none"> <li>• <b>active</b> (routes that are active)</li> <li>• <b>holddown</b> (routes that are in the pending state before being declared inactive)</li> <li>• <b>hidden</b> (routes that are not used because of a routing policy)</li> </ul>
<i>route-destination</i> (entry, announced)	<p>Route destination (for example:10.0.0.1/24). The <b>entry</b> value is the number of routes for this destination, and the <b>announced</b> value is the number of routes being announced for this destination. Sometimes the route destination is presented in another format, such as:</p> <ul style="list-style-type: none"> <li>• <b>MPLS-label</b> (for example, 80001).</li> <li>• <b>interface-name</b> (for example, ge-1/0/2).</li> <li>• <b>neighbor-address:control-word-status:encapsulation type:vc-id:source</b> (Layer 2 circuit only; for example, 10.1.1.195:NoCtrlWord:1:1:Local/96). <ul style="list-style-type: none"> <li>• <b>neighbor-address</b>—Address of the neighbor.</li> <li>• <b>control-word-status</b>—Whether the use of the control word has been negotiated for this virtual circuit: <b>NoCtrlWord</b> or <b>CtrlWord</b>.</li> <li>• <b>encapsulation type</b>—Type of encapsulation, represented by a number: (1) Frame Relay DLCI, (2) ATM AAL5 VCC transport, (3) ATM transparent cell transport, (4) Ethernet, (5) VLAN Ethernet, (6) HDLC, (7) PPP, (8) ATM VCC cell transport, (10) ATM VPC cell transport.</li> <li>• <b>vc-id</b>—Virtual circuit identifier.</li> <li>• <b>source</b>—Source of the advertisement: <b>Local</b> or <b>Remote</b>.</li> <li>• <b>source</b>—Source of the advertisement: <b>Local</b> or <b>Remote</b>.</li> </ul> </li> </ul>
<i>label stacking</i>	<p>(Next-to-the-last-hop routing device for MPLS only) Depth of the MPLS label stack, where the label-popping operation is needed to remove one or more labels from the top of the stack. A pair of routes is displayed, because the pop operation is performed only when the stack depth is two or more labels.</p> <ul style="list-style-type: none"> <li>• <b>S=0 route</b> indicates that a packet with an incoming label stack depth of 2 or more exits this routing device with one fewer label (the label-popping operation is performed).</li> <li>• If there is no <b>S=</b> information, the route is a normal MPLS route, which has a stack depth of 1 (the label-popping operation is not performed).</li> </ul>

Table 196: show route detail Output Fields (continued)

Field Name	Field Description
[protocol, preference]	<p>Protocol from which the route was learned and the preference value for the route.</p> <ul style="list-style-type: none"> <li>• +—A plus sign indicates the active route, which is the route installed from the routing table into the forwarding table.</li> <li>• - —A hyphen indicates the last active route.</li> <li>• *—An asterisk indicates that the route is both the active and the last active route. An asterisk before a to line indicates the best subpath to the route.</li> </ul> <p>In every routing metric except for the BGP <b>LocalPref</b> attribute, a lesser value is preferred. In order to use common comparison routines, Junos OS stores the 1's complement of the <b>LocalPref</b> value in the <b>Preference2</b> field. For example, if the <b>LocalPref</b> value for Route 1 is 100, the <b>Preference2</b> value is -101. If the <b>LocalPref</b> value for Route 2 is 155, the <b>Preference2</b> value is -156. Route 2 is preferred because it has a higher <b>LocalPref</b> value.</p> <p><b>Preference2</b> values are signed integers, that is, <b>Preference2</b> values can be either positive or negative values. However, Junos OS evaluates <b>Preference2</b> values as unsigned integers that are represented by positive values. Based on the <b>Preference2</b> values, Junos OS evaluates a preferred route differently in the following scenarios:</p> <ul style="list-style-type: none"> <li>• <b>Both Signed Preference2 values</b> <ul style="list-style-type: none"> <li>• Route A = -101</li> <li>• Route B = -156</li> </ul> <p>Where both the <b>Preference2</b> values are signed, Junos OS evaluates only the unsigned value of <b>Preference2</b> and Route A, which has a lower <b>Preference2</b> value is preferred.</p> </li> <li>• <b>Unsigned Preference2 values</b> <p>Now consider both unsigned <b>Preference2</b> values:</p> <ul style="list-style-type: none"> <li>• Route A = 4294967096</li> <li>• Route B = 200</li> </ul> <p>Here, Junos OS considers the lesser <b>Preference2</b> value and Route B with a <b>Preference2</b> value of 200 is preferred because it is less than 4294967096.</p> </li> <li>• <b>Combination of signed and unsigned Preference2 values</b> <p>When <b>Preference2</b> values of two routes are compared, and for one route the <b>Preference2</b> is a signed value, and for the other route it is an unsigned value, Junos OS prefers the route with the positive <b>Preference2</b> value over the negative <b>Preference2</b> value. For example, consider the following signed and unsigned <b>Preference2</b> values:</p> <ul style="list-style-type: none"> <li>• Route A = -200</li> <li>• Route B = 200</li> </ul> <p>In this case, Route B with a <b>Preference2</b> value of 200 is preferred although this value is greater than -200, because Junos OS evaluates only the unsigned value of the <b>Preference2</b> value.</p> </li> </ul>
Level	(IS-IS only). In IS-IS, a single AS can be divided into smaller groups called areas. Routing between areas is organized hierarchically, allowing a domain to be administratively divided into smaller areas. This organization is accomplished by configuring Level 1 and Level 2 intermediate systems. Level 1 systems route within an area. When the destination is outside an area, they route toward a Level 2 system. Level 2 intermediate systems route between areas and toward other ASs.
Route Distinguisher	IP subnet augmented with a 64-bit prefix.
PMSI	Provider multicast service interface (MVPN routing table).

Table 196: show route detail Output Fields (continued)

Field Name	Field Description
<b>Next-hop type</b>	Type of next hop. For a description of possible values for this field, see <a href="#">Table 197 on page 2234</a> .
<b>Next-hop reference count</b>	Number of references made to the next hop.
<b>Flood nexthop branches exceed maximum message</b>	Indicates that the number of flood next-hop branches exceeded the system limit of 32 branches, and only a subset of the flood next-hop branches were installed in the kernel.
<b>Source</b>	IP address of the route source.
<b>Next hop</b>	Network layer address of the directly reachable neighboring system.
<b>via</b>	<p>Interface used to reach the next hop. If there is more than one interface available to the next hop, the name of the interface that is actually used is followed by the word <b>Selected</b>. This field can also contain the following information:</p> <ul style="list-style-type: none"> <li>• <b>Weight</b>—Value used to distinguish primary, secondary, and fast reroute backup routes. Weight information is available when MPLS label-switched path (LSP) link protection, node-link protection, or fast reroute is enabled, or when the standby state is enabled for secondary paths. A lower weight value is preferred. Among routes with the same weight value, load balancing is possible.</li> <li>• <b>Balance</b>—Balance coefficient indicating how traffic of unequal cost is distributed among next hops when a routing device is performing unequal-cost load balancing. This information is available when you enable BGP multipath load balancing.</li> </ul>
<b>Label-switched-path lsp-path-name</b>	Name of the LSP used to reach the next hop.
<b>Label operation</b>	MPLS label and operation occurring at this routing device. The operation can be <b>pop</b> (where a label is removed from the top of the stack), <b>push</b> (where another label is added to the label stack), or <b>swap</b> (where a label is replaced by another label).
<b>Interface</b>	(Local only) Local interface name.
<b>Protocol next hop</b>	Network layer address of the remote routing device that advertised the prefix. This address is used to derive a forwarding next hop.
<b>Indirect next hop</b>	Index designation used to specify the mapping between protocol next hops, tags, kernel export policy, and the forwarding next hops.
<b>State</b>	State of the route (a route can be in more than one state). See <a href="#">Table 198 on page 2236</a> .
<b>Local AS</b>	AS number of the local routing device.
<b>Age</b>	How long the route has been known.
<b>AIGP</b>	Accumulated interior gateway protocol (AIGP) BGP attribute.

Table 196: show route detail Output Fields (continued)

Field Name	Field Description
<b>Metric</b>	Cost value of the indicated route. For routes within an AS, the cost is determined by IGP and the individual protocol metrics. For external routes, destinations, or routing domains, the cost is determined by a preference value.
<b>MED-plus-IGP</b>	Metric value for BGP path selection to which the IGP cost to the next-hop destination has been added.
<b>TTL-Action</b>	For MPLS LSPs, state of the TTL propagation attribute. Can be enabled or disabled for all RSVP-signaled and LDP-signaled LSPs or for specific VRF routing instances.  For sample output, see <a href="#">show route table</a> .
<b>Task</b>	Name of the protocol that has added the route.
<b>Announcement bits</b>	The number of BGP peers or protocols to which Junos OS has announced this route, followed by the list of the recipients of the announcement. Junos OS can also announce the route to the KRT for installing the route into the Packet Forwarding Engine, to a resolve tree, a L2 VC, or even a VPN. For example, <b>n-Resolve inet</b> indicates that the specified route is used for route resolution for next hops found in the routing table.  <ul style="list-style-type: none"> <li><b>n</b>—An index used by Juniper Networks customer support only.</li> </ul>
<b>AS path</b>	<p>AS path through which the route was learned. The letters at the end of the AS path indicate the path origin, providing an indication of the state of the route at the point at which the AS path originated:</p> <ul style="list-style-type: none"> <li><b>I</b>—IGP.</li> <li><b>E</b>—EGP.</li> <li><b>Recorded</b>—The AS path is recorded by the sample process (sampled).</li> <li><b>?</b>—Incomplete; typically, the AS path was aggregated.</li> </ul> <p>When AS path numbers are included in the route, the format is as follows:</p> <ul style="list-style-type: none"> <li><b>[ ]</b>—Brackets enclose the number that precedes the AS path. This number represents the number of ASs present in the AS path, when calculated as defined in RFC 4271. This value is used in the AS-path merge process, as defined in RFC 4893.</li> <li><b>[ ]</b>—If more than one AS number is configured on the routing device, or if AS path prepending is configured, brackets enclose the local AS number associated with the AS path.</li> <li><b>{ }</b>—Braces enclose AS sets, which are groups of AS numbers in which the order does not matter. A set commonly results from route aggregation. The numbers in each AS set are displayed in ascending order.</li> <li><b>( )</b>—Parentheses enclose a confederation.</li> <li><b>( [ ] )</b>—Parentheses and brackets enclose a confederation set.</li> </ul> <p><b>NOTE:</b> In Junos OS Release 10.3 and later, the AS path field displays an unrecognized attribute and associated hexadecimal value if BGP receives attribute 128 (attribute set) and you have not configured an independent domain in any routing instance.</p>

Table 196: show route detail Output Fields (continued)

Field Name	Field Description
<b>validation-state</b>	<p>(BGP-learned routes) Validation status of the route:</p> <ul style="list-style-type: none"> <li>• <b>Invalid</b>—Indicates that the prefix is found, but either the corresponding AS received from the EBGp peer is not the AS that appears in the database, or the prefix length in the BGP update message is longer than the maximum length permitted in the database.</li> <li>• <b>Unknown</b>—Indicates that the prefix is not among the prefixes or prefix ranges in the database.</li> <li>• <b>Unverified</b>—Indicates that the origin of the prefix is not verified against the database. This is because the database got populated and the validation is not called for in the BGP import policy, although origin validation is enabled, or the origin validation is not enabled for the BGP peers.</li> <li>• <b>Valid</b>—Indicates that the prefix and autonomous system pair are found in the database.</li> </ul>
ORR Generation-ID	Displays the optimal route reflection (ORR) generation identifier. ISIS and OSPF interior gateway protocol (IGP) updates filed whenever any of the corresponding ORR route has its metric valued changed, or if the ORR route is added or deleted.
FECs bound to route	Point-to-multipoint root address, multicast source address, and multicast group address when multipoint LDP (M-LDP) inband signaling is configured.
Primary Upstream	When multipoint LDP with multicast-only fast reroute (MoFRR) is configured, the primary upstream path. MoFRR transmits a multicast join message from a receiver toward a source on a primary path, while also transmitting a secondary multicast join message from the receiver toward the source on a backup path.
RPF Nexthops	When multipoint LDP with MoFRR is configured, the reverse-path forwarding (RPF) next-hop information. Data packets are received from both the primary path and the secondary paths. The redundant packets are discarded at topology merge points due to the RPF checks.
Label	Multiple MPLS labels are used to control MoFRR stream selection. Each label represents a separate route, but each references the same interface list check. Only the primary label is forwarded while all others are dropped. Multiple interfaces can receive packets using the same label.
weight	Value used to distinguish MoFRR primary and backup routes. A lower weight value is preferred. Among routes with the same weight value, load balancing is possible.
VC Label	MPLS label assigned to the Layer 2 circuit virtual connection.
MTU	Maximum transmission unit (MTU) of the Layer 2 circuit.
VLAN ID	VLAN identifier of the Layer 2 circuit.
Prefixes bound to route	Forwarding equivalent class (FEC) bound to this route. Applicable only to routes installed by LDP.
Communities	Community path attribute for the route. See <a href="#">Table 199 on page 2238</a> for all possible values for this field.
Layer2-info: encaps	Layer 2 encapsulation (for example, VPLS).
control flags	Control flags: <b>none</b> or <b>Site Down</b> .
mtu	Maximum transmission unit (MTU) information.

Table 196: show route detail Output Fields (continued)

Field Name	Field Description
<b>Label-Base, range</b>	First label in a block of labels and label block size. A remote PE routing device uses this first label when sending traffic toward the advertising PE routing device.
<b>status vector</b>	Layer 2 VPN and VPLS network layer reachability information (NLRI).
<b>Accepted Multipath</b>	Current active path when BGP multipath is configured.
<b>Accepted LongLivedStale</b>	The LongLivedStale flag indicates that the route was marked LLGR-stale by this router, as part of the operation of LLGR receiver mode. Either this flag or the LongLivedStaleImport flag may be displayed for a route. Neither of these flags are displayed at the same time as the Stale (ordinary GR stale) flag.
<b>Accepted LongLivedStaleImport</b>	<p>The LongLivedStaleImport flag indicates that the route was marked LLGR-stale when it was received from a peer, or by import policy. Either this flag or the LongLivedStale flag may be displayed for a route. Neither of these flags are displayed at the same time as the Stale (ordinary GR stale) flag.</p> <p>Accept all received BGP long-lived graceful restart (LLGR) and LLGR stale routes learned from configured neighbors and import into the inet.0 routing table</p>
<b>ImportAccepted LongLivedStaleImport</b>	<p>Accept all received BGP long-lived graceful restart (LLGR) and LLGR stale routes learned from configured neighbors and imported into the inet.0 routing table</p> <p>The LongLivedStaleImport flag indicates that the route was marked LLGR-stale when it was received from a peer, or by import policy.</p>
<b>Accepted MultipathContrib</b>	Path currently contributing to BGP multipath.
<b>Localpref</b>	Local preference value included in the route.
<b>Router ID</b>	BGP router ID as advertised by the neighbor in the open message.
<b>Primary Routing Table</b>	In a routing table group, the name of the primary routing table in which the route resides.
<b>Secondary Tables</b>	In a routing table group, the name of one or more secondary tables in which the route resides.

[Table 197 on page 2234](#) describes all possible values for the Next-hop Types output field.

Table 197: Next-hop Types Output Field Values

Next-Hop Type	Description
<b>Broadcast (bcast)</b>	Broadcast next hop.
<b>Deny</b>	Deny next hop.
<b>Discard</b>	Discard next hop.
<b>Dynamic List</b>	Dynamic list next hop

*Table 197: Next-hop Types Output Field Values (continued)*

Next-Hop Type	Description
<b>Flood</b>	Flood next hop. Consists of components called branches, up to a maximum of 32 branches. Each flood next-hop branch sends a copy of the traffic to the forwarding interface. Used by point-to-multipoint RSVP, point-to-multipoint LDP, point-to-multipoint CCC, and multicast.
<b>Hold</b>	Next hop is waiting to be resolved into a unicast or multicast type.
<b>Indexed (idxd)</b>	Indexed next hop.
<b>Indirect (indr)</b>	Used with applications that have a protocol next hop address that is remote. You are likely to see this next-hop type for internal BGP (IBGP) routes when the BGP next hop is a BGP neighbor that is not directly connected.
<b>Interface</b>	Used for a network address assigned to an interface. Unlike the router next hop, the interface next hop does not reference any specific node on the network.
<b>Local (locl)</b>	Local address on an interface. This next-hop type causes packets with this destination address to be received locally.
<b>Multicast (mcst)</b>	Wire multicast next hop (limited to the LAN).
<b>Multicast discard (mdsc)</b>	Multicast discard.
<b>Multicast group (mgrp)</b>	Multicast group member.
<b>Receive (recv)</b>	Receive.
<b>Reject (rjct)</b>	Discard. An ICMP unreachable message was sent.
<b>Resolve (rslv)</b>	Resolving next hop.
<b>Routed multicast (mcrt)</b>	Regular multicast next hop.
<b>Router</b>	<p>A specific node or set of nodes to which the routing device forwards packets that match the route prefix.</p> <p>To qualify as next-hop type router, the route must meet the following criteria:</p> <ul style="list-style-type: none"> <li>• Must not be a direct or local subnet for the routing device.</li> <li>• Must have a next hop that is directly connected to the routing device.</li> </ul>
<b>Table</b>	Routing table next hop.

*Table 197: Next-hop Types Output Field Values (continued)*

Next-Hop Type	Description
Unicast (ucst)	Unicast.
Unilist (ulst)	List of unicast next hops. A packet sent to this next hop goes to any next hop in the list.

Table 198 on page 2236 describes all possible values for the State output field. A route can be in more than one state (for example, <Active NoReadvrt Int Ext>).

*Table 198: State Output Field Values*

Value	Description
Accounting	Route needs accounting.
Active	Route is active.
Always Compare MED	Path with a lower multiple exit discriminator (MED) is available.
AS path	Shorter AS path is available.
Cisco Non-deterministic MED selection	Cisco nondeterministic MED is enabled, and a path with a lower MED is available.
Clone	Route is a clone.
Cluster list length	Length of cluster list sent by the route reflector.
Delete	Route has been deleted.
Ex	Exterior route.
Ext	BGP route received from an external BGP neighbor.
FlashAll	Forces all protocols to be notified of a change to any route, active or inactive, for a prefix. When not set, protocols are informed of a prefix only when the active route changes.
Hidden	Route not used because of routing policy.
IfCheck	Route needs forwarding RPF check.
IGP metric	Path through next hop with lower IGP metric is available.
Inactive reason	Flags for this route, which was not selected as best for a particular destination.
Initial	Route being added.

Table 198: State Output Field Values (continued)

Value	Description
<b>Int</b>	Interior route.
<b>Int Ext</b>	BGP route received from an internal BGP peer or a BGP confederation peer.
<b>Interior &gt; Exterior &gt; Exterior via Interior</b>	Direct, static, IGP, or EBGp path is available.
<b>Local Preference</b>	Path with a higher local preference value is available.
<b>Martian</b>	Route is a martian (ignored because it is obviously invalid).
<b>MartianOK</b>	Route exempt from martian filtering.
<b>Next hop address</b>	Path with lower metric next hop is available.
<b>No difference</b>	Path from neighbor with lower IP address is available.
<b>NoReadvrt</b>	Route not to be advertised.
<b>NotBest</b>	Route not chosen because it does not have the lowest MED.
<b>Not Best in its group</b>	Incoming BGP AS is not the best of a group (only one AS can be the best).
<b>NotInstall</b>	Route not to be installed in the forwarding table.
<b>NSR-incapable</b>	Route added by non-NSR supported protocols.
<b>Number of gateways</b>	Path with a greater number of next hops is available.
<b>Origin</b>	Path with a lower origin code is available.
<b>Pending</b>	Route pending because of a hold-down configured on another route.
<b>Programmed</b>	Route installed programatically by on-box or off-box applications using API.
<b>Release</b>	Route scheduled for release.
<b>RIB preference</b>	Route from a higher-numbered routing table is available.
<b>Route Distinguisher</b>	64-bit prefix added to IP subnets to make them unique.
<b>Route Metric or MED comparison</b>	Route with a lower metric or MED is available.
<b>Route Preference</b>	Route with lower preference value is available

*Table 198: State Output Field Values (continued)*

Value	Description
<b>Router ID</b>	Path through a neighbor with lower ID is available.
<b>Secondary</b>	Route not a primary route.
<b>Unusable path</b>	Path is not usable because of one of the following conditions: <ul style="list-style-type: none"> <li>• The route is damped.</li> <li>• The route is rejected by an import policy.</li> <li>• The route is unresolved.</li> </ul>
<b>Update source</b>	Last tiebreaker is the lowest IP address value.
<b>ProtectionCand</b>	Indicates paths requesting protection.
<b>ProtectionPath</b>	Indicates the route entry that can be used as a protection path.

[Table 199 on page 2238](#) describes the possible values for the Communities output field.

*Table 199: Communities Output Field Values*

Value	Description
<i>area-number</i>	4 bytes, encoding a 32-bit area number. For AS-external routes, the value is <b>0</b> . A nonzero value identifies the route as internal to the OSPF domain, and as within the identified area. Area numbers are relative to a particular OSPF domain.
<b>bandwidth: local AS number:link-bandwidth-number</b>	Link-bandwidth community value used for unequal-cost load balancing. When BGP has several candidate paths available for multipath purposes, it does not perform unequal-cost load balancing according to the link-bandwidth community unless all candidate paths have this attribute.
<b>domain-id</b>	Unique configurable number that identifies the OSPF domain.
<b>domain-id-vendor</b>	Unique configurable number that further identifies the OSPF domain.
<i>link-bandwidth-number</i>	Link-bandwidth number: from <b>0</b> through <b>4,294,967,295</b> (bytes per second).
<i>local AS number</i>	Local AS number: from <b>1</b> through <b>65,535</b> .
<i>options</i>	1 byte. Currently this is only used if the route type is <b>5</b> or <b>7</b> . Setting the least significant bit in the field indicates that the route carries a type 2 metric.
<b>origin</b>	(Used with VPNs) Identifies where the route came from.
<i>ospf-route-type</i>	1 byte, encoded as <b>1</b> or <b>2</b> for intra-area routes (depending on whether the route came from a type 1 or a type 2 LSA); <b>3</b> for summary routes; <b>5</b> for external routes (area number must be <b>0</b> ); <b>7</b> for NSSA routes; or <b>129</b> for sham link endpoint addresses.

Table 199: Communities Output Field Values (continued)

Value	Description
<b>route-type-vendor</b>	Displays the area number, OSPF route type, and option of the route. This is configured using the BGP extended community attribute <b>0x8000</b> . The format is <b>area-number:ospf-route-type:options</b> .
<b>rte-type</b>	Displays the area number, OSPF route type, and option of the route. This is configured using the BGP extended community attribute <b>0x0306</b> . The format is <b>area-number:ospf-route-type:options</b> .
<b>target</b>	Defines which VPN the route participates in; <b>target</b> has the format <b>32-bit IP address:16-bit number</b> . For example, 10.19.0.0:100.
<b>unknown IANA</b>	Incoming IANA codes with a value between <b>0x1</b> and <b>0x7fff</b> . This code of the BGP extended community attribute is accepted, but it is not recognized.
<b>unknown OSPF vendor community</b>	Incoming IANA codes with a value above <b>0x8000</b> . This code of the BGP extended community attribute is accepted, but it is not recognized.

## Sample Output

### show route detail

```

user@host> show route detail

inet.0: 22 destinations, 23 routes (21 active, 0 holddown, 1 hidden)

## show route export

---

List of Syntax	<a href="#">Syntax on page 2250</a> <a href="#">Syntax (EX Series Switches) on page 2250</a>
Syntax	<pre>show route export &lt;brief   detail&gt; &lt;instance &lt;instance-name&gt;   routing-table-name&gt; &lt;logical-system (all   logical-system-name)&gt;</pre>
Syntax (EX Series Switches)	<pre>show route export &lt;brief   detail&gt; &lt;instance &lt;instance-name&gt;   routing-table-name&gt;</pre>
Release Information	Command introduced before Junos OS Release 7.4. Command introduced in Junos OS Release 9.0 for EX Series switches.
Description	Display policy-based route export information. Policy-based export simplifies the process of exchanging route information between routing instances.
Options	<p><b>none</b>—(Same as <b>brief</b>.) Display standard information about policy-based export for all instances and routing tables on all systems.</p> <p><b>brief   detail</b>—(Optional) Display the specified level of output.</p> <p><b>instance &lt;instance-name&gt;</b>—(Optional) Display a particular routing instance for which policy-based export is currently enabled.</p> <p><b>logical-system (all   logical-system-name)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p> <p><b>routing-table-name</b>—(Optional) Display information about policy-based export for all routing tables whose name begins with this string (for example, inet.0 and inet6.0 are both displayed when you run the <b>show route export inet</b> command).</p>
Required Privilege Level	view
List of Sample Output	<a href="#">show route export on page 2251</a> <a href="#">show route export detail on page 2251</a> <a href="#">show route export instance detail on page 2252</a>
Output Fields	<a href="#">Table 200 on page 2251</a> lists the output fields for the <b>show route export</b> command. Output fields are listed in the approximate order in which they appear.

Table 200: show route export Output Fields

Field Name	Field Description	Level of Output
Table or <i>table-name</i>	Name of the routing tables that either import or export routes.	All levels
Routes	Number of routes exported from this table into other tables. If a particular route is exported to different tables, the counter will only increment by one.	<b>brief</b> none
Export	Whether the table is currently exporting routes to other tables: <b>Y</b> or <b>N</b> (Yes or No).	<b>brief</b> none
Import	Tables currently importing routes from the originator table. (Not displayed for tables that are not exporting any routes.)	<b>detail</b>
Flags	( <b>instance</b> keyword only) Flags for this feature on this instance: <ul style="list-style-type: none"> <li><b>config auto-policy</b>—The policy was deduced from the configured IGP export policies.</li> <li><b>cleanup</b>—Configuration information for this instance is no longer valid.</li> <li><b>config</b>—The instance was explicitly configured.</li> </ul>	<b>detail</b>
Options	( <b>instance</b> keyword only) Configured option displays the type of routing tables the feature handles: <ul style="list-style-type: none"> <li><b>unicast</b>—Indicates <i>instance.inet.0</i>.</li> <li><b>multicast</b>—Indicates <i>instance.inet.2</i>.</li> <li><b>unicast multicast</b>—Indicates <i>instance.inet.0</i> and <i>instance.inet.2</i>.</li> </ul>	<b>detail</b>
Import policy	( <b>instance</b> keyword only) Policy that <b>route export</b> uses to construct the import-export matrix. Not displayed if the instance type is <b>vrf</b> .	<b>detail</b>
Instance	( <b>instance</b> keyword only) Name of the routing instance.	<b>detail</b>
Type	( <b>instance</b> keyword only) Type of routing instance: <b>forwarding</b> , <b>non-forwarding</b> , or <b>vrf</b> .	<b>detail</b>

## Sample Output

### show route export

```

user@host> show route export
Table           Export      Routes
inet.0          N           0
black.inet.0    Y           3
red.inet.0      Y           4

```

### show route export detail

```

user@host> show route export detail
inet.0                      Routes:      0
black.inet.0                Routes:      3
    Import: [ inet.0 ]
red.inet.0                   Routes:      4
    Import: [ inet.0 ]

```

### show route export instance detail

```
user@host> show route export instance detail
Instance: master                               Type: forwarding
  Flags: <config auto-policy> Options: <unicast multicast>
  Import policy: [ (ospf-master-from-red || isis-master-from-black) ]
Instance: black                               Type: non-forwarding
Instance: red                                 Type: non-forwarding
```

## show route export vrf-target

<b>Syntax</b>	show route export vrf-target <brief   detail> <community <i>community--regular-expression</i> > <logical-system (all   <i>logical-system-name</i> )>
<b>Release Information</b>	Command introduced before Junos OS Release 7.4.
<b>Description</b>	Display the VPN routing and forwarding (VRF) target communities for which policy-based route export is currently distributing routes. This command is relevant when there are overlapping virtual private networks (VPNs).
<b>Options</b>	<p><b>none</b>—Display standard information about all target communities.</p> <p><b>brief   detail</b>—(Optional) Display the specified level of output. If you do not specify a level of output, the system defaults to brief.</p> <p><b>community <i>community-regular-expression</i></b>—(Optional) Display information about the specified community.</p> <p><b>logical-system (all   <i>logical-system-name</i>)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p>
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">show route export vrf-target on page 2254</a> <a href="#">show route export vrf-target community on page 2254</a> <a href="#">show route export vrf-target detail on page 2254</a>
<b>Output Fields</b>	Table 201 on page 2253 lists the output fields for the <b>show route export vrf-target</b> command. Output fields are listed in the approximate order in which they appear.

Table 201: show route export vrf-target Output Fields

Field Name	Field Description	Level of Output
Route target	Target communities for which auto-export is currently distributing routes.	brief none
Family	Routing table entries for the specified family.	brief none
<i>type-of-routing-table(s)</i>	Type of routing tables the feature handles: <ul style="list-style-type: none"> <li>unicast—Indicates <i>instance.inet.0</i>.</li> <li>multicast—Indicates <i>instance.inet.2</i>.</li> <li>unicast multicast—Indicates <i>instance.inet.0</i> and <i>instance.inet.2</i>.</li> </ul>	brief none
Import	Number of routing tables that are currently importing routes with this target community. Omitted for tables that are not importing routes.	brief none

Table 201: show route export vrf-target Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Export</b>	Number of routing tables that are currently exporting routes with this target community. Omitted for tables that are not exporting routes.	<b>brief</b> none
<b>Target</b>	Target communities, family, and options for which auto-export is currently distributing routes.	<b>detail</b>
<b>Import table(s)</b>	Name of the routing tables that are importing a particular route target.	<b>detail</b>
<b>Export table(s)</b>	Name of the routing tables that are exporting a particular route target.	<b>detail</b>

## Sample Output

### show route export vrf-target

```

user@host> show route export vrf-target
Route Target          Family      Import    Export
69:1                  inet    unicast      2         2
69:2                  inet    unicast      2         2

```

### show route export vrf-target community

```

user@host> show route export vrf-target community target:69:1
Route Target          Family      Import    Export
69:1                  inet    unicast      2         2

```

### show route export vrf-target detail

```

user@host> show route export vrf-target detail
Target: 1:12          inet    unicast
  Import table(s): vrf-11.inet.0 vrf-12.inet.0
  Export table(s): vrf-12.inet.0
Target: 1:13          inet    unicast
  Import table(s): vrf-12.inet.0 vrf-13.inet.0
  Export table(s): vrf-13.inet.0

```

## show route extensive

<b>List of Syntax</b>	<a href="#">Syntax on page 2255</a> <a href="#">Syntax (EX Series Switches) on page 2255</a>
<b>Syntax</b>	<pre>show route extensive &lt;destination-prefix&gt; &lt;logical-system (all   logical-system-name)&gt;</pre>
<b>Syntax (EX Series Switches)</b>	<pre>show route extensive &lt;destination-prefix&gt;</pre>
<b>Release Information</b>	<p>Command introduced before Junos OS Release 7.4.</p> <p>Command introduced in Junos OS Release 9.0 for EX Series switches.</p>
<b>Description</b>	Display extensive information about the active entries in the routing tables.
<b>Options</b>	<p><b>none</b>—Display all active entries in the routing table.</p> <p><b>destination-prefix</b>—(Optional) Display active entries for the specified address or range of addresses.</p> <p><b>logical-system (all   logical-system-name)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p>
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">show route extensive on page 2262</a> <a href="#">show route extensive (Access Route) on page 2269</a> <a href="#">show route extensive (BGP PIC Edge) on page 2269</a> <a href="#">show route extensive (FRR and LFA) on page 2270</a> <a href="#">show route extensive (IS-IS) on page 2271</a> <a href="#">show route extensive (Route Reflector) on page 2271</a> <a href="#">show route label detail (Multipoint LDP Inband Signaling for Point-to-Multipoint LSPs) on page 2271</a> <a href="#">show route label detail (Multipoint LDP with Multicast-Only Fast Reroute) on page 2272</a>
<b>Output Fields</b>	<p><a href="#">Table 202 on page 2255</a> describes the output fields for the <b>show route extensive</b> command. Output fields are listed in the approximate order in which they appear.</p>

Table 202: show route extensive Output Fields

Field Name	Field Description
<i>routing-table-name</i>	Name of the routing table (for example, inet.0).
<i>number destinations</i>	Number of destinations for which there are routes in the routing table.

Table 202: show route extensive Output Fields (continued)

Field Name	Field Description
<i>number routes</i>	<p>Number of routes in the routing table and total number of routes in the following states:</p> <ul style="list-style-type: none"> <li>• <b>active</b> (routes that are active).</li> <li>• <b>holddown</b> (routes that are in the pending state before being declared inactive).</li> <li>• <b>hidden</b> (routes that are not used because of a routing policy).</li> </ul>
<i>route-destination</i> (entry, announced)	<p>Route destination (for example: 10.0.0.1/24). The <b>entry</b> value is the number of route for this destination, and the <b>announced</b> value is the number of routes being announced for this destination. Sometimes the route destination is presented in another format, such as:</p> <ul style="list-style-type: none"> <li>• <b>MPLS-label</b> (for example, 80001).</li> <li>• <b>interface-name</b> (for example, ge-1/0/2).</li> <li>• <b>neighbor-address:control-word-status:encapsulation type:vc-id:source</b> (Layer 2 circuit only; for example, 10.1.1.195:NoCtrlWord:1:1:Local/96). <ul style="list-style-type: none"> <li>• <b>neighbor-address</b>—Address of the neighbor.</li> <li>• <b>control-word-status</b>—Whether the use of the control word has been negotiated for this virtual circuit: <b>NoCtrlWord</b> or <b>CtrlWord</b>.</li> <li>• <b>encapsulation type</b>—Type of encapsulation, represented by a number: (1) Frame Relay DLCI, (2) ATM AAL5 VCC transport, (3) ATM transparent cell transport, (4) Ethernet, (5) VLAN Ethernet, (6) HDLC, (7) PPP, (8) ATM VCC cell transport, (10) ATM VPC cell transport.</li> <li>• <b>vc-id</b>—Virtual circuit identifier.</li> <li>• <b>source</b>—Source of the advertisement: <b>Local</b> or <b>Remote</b>.</li> </ul> </li> </ul>
<b>TSI</b>	Protocol header information.
<b>label stacking</b>	<p>(Next-to-the-last-hop routing device for MPLS only) Depth of the MPLS label stack, where the label-popping operation is needed to remove one or more labels from the top of the stack. A pair of routes is displayed, because the pop operation is performed only when the stack depth is two or more labels.</p> <ul style="list-style-type: none"> <li>• <b>S=0 route</b> indicates that a packet with an incoming label stack depth of two or more exits this router with one fewer label (the label-popping operation is performed).</li> <li>• If there is no <b>S=</b> information, the route is a normal MPLS route, which has a stack depth of 1 (the label-popping operation is not performed).</li> </ul>
<b>[protocol, preference]</b>	<p>Protocol from which the route was learned and the preference value for the route.</p> <ul style="list-style-type: none"> <li>• <b>+</b>—A plus sign indicates the active route, which is the route installed from the routing table into the forwarding table.</li> <li>• <b>-</b>—A hyphen indicates the last active route.</li> <li>• <b>*</b>—An asterisk indicates that the route is both the active and the last active route. An asterisk before a <b>to</b> line indicates the best subpath to the route.</li> </ul> <p>In every routing metric except for the BGP <b>LocalPref</b> attribute, a lesser value is preferred. In order to use common comparison routines, Junos OS stores the 1's complement of the <b>LocalPref</b> value in the <b>Preference2</b> field. For example, if the <b>LocalPref</b> value for Route 1 is 100, the <b>Preference2</b> value is -101. If the <b>LocalPref</b> value for Route 2 is 155, the <b>Preference2</b> value is -156. Route 2 is preferred because it has a higher <b>LocalPref</b> value and a lower <b>Preference2</b> value.</p>

Table 202: show route extensive Output Fields (continued)

Field Name	Field Description
<b>Level</b>	(IS-IS only). In IS-IS, a single autonomous system (AS) can be divided into smaller groups called areas. Routing between areas is organized hierarchically, allowing a domain to be administratively divided into smaller areas. This organization is accomplished by configuring Level 1 and Level 2 intermediate systems. Level 1 systems route within an area. When the destination is outside an area, they route toward a Level 2 system. Level 2 intermediate systems route between areas and toward other ASs.
<b>Route Distinguisher</b>	IP subnet augmented with a 64-bit prefix.
<b>PMSI</b>	Provider multicast service interface (MVPN routing table).
<b>Next-hop type</b>	Type of next hop. For a description of possible values for this field, see the Output Field table in the <a href="#">show route detail</a> command.
<b>Next-hop reference count</b>	Number of references made to the next hop.
<b>Flood nexthop branches exceed maximum message</b>	Indicates that the number of flood next-hop branches exceeded the system limit of 32 branches, and only a subset of the flood next-hop branches were installed in the kernel.
<b>Source</b>	IP address of the route source.
<b>Next hop</b>	Network layer address of the directly reachable neighboring system.
<b>via</b>	Interface used to reach the next hop. If there is more than one interface available to the next hop, the name of the interface that is actually used is followed by the word <b>Selected</b> . This field can also contain the following information: <ul style="list-style-type: none"> <li>• <b>Weight</b>—Value used to distinguish primary, secondary, and fast reroute backup routes. Weight information is available when MPLS label-switched path (LSP) link protection, node-link protection, or fast reroute is enabled, or when the standby state is enabled for secondary paths. A lower weight value is preferred. Among routes with the same weight value, load balancing is possible.</li> <li>• <b>Balance</b>—Balance coefficient indicating how traffic of unequal cost is distributed among next hops when a routing device is performing unequal-cost load balancing. This information is available when you enable BGP multipath load balancing.</li> </ul>
<b>Label-switched-path lsp-path-name</b>	Name of the LSP used to reach the next hop.
<b>Label operation</b>	MPLS label and operation occurring at this routing device. The operation can be <b>pop</b> (where a label is removed from the top of the stack), <b>push</b> (where another label is added to the label stack), or <b>swap</b> (where a label is replaced by another label).
<b>Offset</b>	Whether the metric has been increased or decreased by an offset value.
<b>Interface</b>	(Local only) Local interface name.
<b>Protocol next hop</b>	Network layer address of the remote routing device that advertised the prefix. This address is used to recursively derive a forwarding next hop.

Table 202: *show route extensive Output Fields (continued)*

Field Name	Field Description
<b><i>label-operation</i></b>	MPLS label and operation occurring at this routing device. The operation can be <b>pop</b> (where a label is removed from the top of the stack), <b>push</b> (where another label is added to the label stack), or <b>swap</b> (where a label is replaced by another label).
<b>Indirect next hops</b>	<p>When present, a list of nodes that are used to resolve the path to the next-hop destination, in the order that they are resolved.</p> <p>When BGP PIC Edge is enabled, the output lines that contain <b>Indirect next hop: weight</b> follow next hops that the software can use to repair paths where a link failure occurs. The next-hop weight has one of the following values:</p> <ul style="list-style-type: none"><li>• 0x1 indicates active next hops.</li><li>• 0x4000 indicates passive next hops.</li></ul>
<b>State</b>	State of the route (a route can be in more than one state). See the Output Field table in the <a href="#">show route detail</a> command.
<b>Session ID</b>	The BFD session ID number that represents the protection using MPLS fast reroute (FRR) and loop-free alternate (LFA).
<b>Weight</b>	<p>Weight for the backup path. If the weight of an indirect next hop is larger than zero, the weight value is shown.</p> <p>For sample output, see <a href="#">show route table</a>.</p>

Table 202: show route extensive Output Fields (continued)

Field Name	Field Description
Inactive reason	<p>If the route is inactive, the reason for its current state is indicated. Typical reasons include:</p> <ul style="list-style-type: none"> <li>• <b>Active preferred</b>—Currently active route was selected over this route.</li> <li>• <b>Always compare MED</b>—Path with a lower multiple exit discriminator (MED) is available.</li> <li>• <b>AS path</b>—Shorter AS path is available.</li> <li>• <b>Cisco Non-deterministic MED selection</b>—Cisco nondeterministic MED is enabled and a path with a lower MED is available.</li> <li>• <b>Cluster list length</b>—Path with a shorter cluster list length is available.</li> <li>• <b>Forwarding use only</b>—Path is only available for forwarding purposes.</li> <li>• <b>IGP metric</b>—Path through the next hop with a lower IGP metric is available.</li> <li>• <b>IGP metric type</b>—Path with a lower OSPF link-state advertisement type is available.</li> <li>• <b>Interior &gt; Exterior &gt; Exterior via Interior</b>—Direct, static, IGP, or EBGp path is available.</li> <li>• <b>Local preference</b>—Path with a higher local preference value is available.</li> <li>• <b>Next hop address</b>—Path with a lower metric next hop is available.</li> <li>• <b>No difference</b>—Path from a neighbor with a lower IP address is available.</li> <li>• <b>Not Best in its group</b>—Occurs when multiple peers of the same external AS advertise the same prefix and are grouped together in the selection process. When this reason is displayed, an additional reason is provided (typically one of the other reasons listed).</li> <li>• <b>Number of gateways</b>—Path with a higher number of next hops is available.</li> <li>• <b>Origin</b>—Path with a lower origin code is available.</li> <li>• <b>OSPF version</b>—Path does not support the indicated OSPF version.</li> <li>• <b>RIB preference</b>—Route from a higher-numbered routing table is available.</li> <li>• <b>Route distinguisher</b>—64-bit prefix added to IP subnets to make them unique.</li> <li>• <b>Route metric or MED comparison</b>—Route with a lower metric or MED is available.</li> <li>• <b>Route preference</b>—Route with a lower preference value is available.</li> <li>• <b>Router ID</b>—Path through a neighbor with a lower ID is available.</li> <li>• <b>Unusable path</b>—Path is not usable because of one of the following conditions: the route is damped, the route is rejected by an import policy, or the route is unresolved.</li> <li>• <b>Update source</b>—Last tiebreaker is the lowest IP address value.</li> </ul>
Local AS	Autonomous system (AS) number of the local routing device.
Age	How long the route has been known.
AIGP	Accumulated interior gateway protocol (AIGP) BGP attribute.
Metric	Cost value of the indicated route. For routes within an AS, the cost is determined by IGP and the individual protocol metrics. For external routes, destinations, or routing domains, the cost is determined by a preference value.
MED-plus-IGP	Metric value for BGP path selection to which the IGP cost to the next-hop destination has been added.
TTL-Action	<p>For MPLS LSPs, state of the TTL propagation attribute. Can be enabled or disabled for all RSVP-signaled and LDP-signaled LSPs or for specific VRF routing instances.</p> <p>For sample output, see <a href="#">show route table</a>.</p>

Table 202: show route extensive Output Fields (continued)

Field Name	Field Description
<b>Task</b>	Name of the protocol that has added the route.
<b>Announcement bits</b>	<p>List of protocols that are consumers of the route. Using the following output as an example, <b>Announcement bits (3): 0-KRT 5-Resolve tree 2 8-BGP RT Background</b> there are (3) announcement bits to reflect the three clients (protocols) that have state for this route: Kernel (0-KRT), 5 (resolution tree process 2), and 8 (BGP).</p> <p>The notation <b><i>n</i>-Resolve inet</b> indicates that the route is used for route resolution for next hops found in the routing table. <i>n</i> is an index used by Juniper Networks customer support only.</p>
<b>AS path</b>	<p>AS path through which the route was learned. The letters at the end of the AS path indicate the path origin, providing an indication of the state of the route at the point at which the AS path originated:</p> <ul style="list-style-type: none"> <li>• <b>I</b>—IGP.</li> <li>• <b>E</b>—EGP.</li> <li>• <b>Recorded</b>—The AS path is recorded by the sample process (sampled).</li> <li>• <b>?</b>—Incomplete; typically, the AS path was aggregated.</li> </ul> <p>When AS path numbers are included in the route, the format is as follows:</p> <ul style="list-style-type: none"> <li>• <b>[ ]</b>—Brackets enclose the local AS number associated with the AS path if more than one AS number is configured on the routing device, or if AS path prepending is configured.</li> <li>• <b>{ }</b>—Braces enclose AS sets, which are groups of AS numbers in which the order does not matter. A set commonly results from route aggregation. The numbers in each AS set are displayed in ascending order.</li> <li>• <b>( )</b>—Parentheses enclose a confederation.</li> <li>• <b>( [ ] )</b>—Parentheses and brackets enclose a confederation set.</li> </ul> <p><b>NOTE:</b> In Junos OS Release 10.3 and later, the AS path field displays an unrecognized attribute and associated hexadecimal value if BGP receives attribute 128 (attribute set) and you have not configured an independent domain in any routing instance.</p>
<b>validation-state</b>	<p>(BGP-learned routes) Validation status of the route:</p> <ul style="list-style-type: none"> <li>• <b>Invalid</b>—Indicates that the prefix is found, but either the corresponding AS received from the EBGp peer is not the AS that appears in the database, or the prefix length in the BGP update message is longer than the maximum length permitted in the database.</li> <li>• <b>Unknown</b>—Indicates that the prefix is not among the prefixes or prefix ranges in the database.</li> <li>• <b>Unverified</b>—Indicates that origin validation is not enabled for the BGP peers.</li> <li>• <b>Valid</b>—Indicates that the prefix and autonomous system pair are found in the database.</li> </ul>
<b>FECs bound to route</b>	Point-to-multipoint root address, multicast source address, and multicast group address when multipoint LDP (M-LDP) inband signaling is configured.
<b>AS path: I &lt;Originator&gt;</b>	(For route reflected output only) Originator ID attribute set by the route reflector.

Table 202: show route extensive Output Fields (continued)

Field Name	Field Description
<b>route status</b>	Indicates the status of a BGP route: <ul style="list-style-type: none"> <li>• <b>Accepted</b>—The specified BGP route is imported by the default BGP policy.</li> <li>• <b>Import</b>—The route is imported into a Layer 3 VPN routing instance.</li> <li>• <b>Import-Protect</b>—A remote instance egress that is protected.</li> <li>• <b>Multipath</b>—A BGP multipath active route.</li> <li>• <b>MultipathContrib</b>—The route is not active but contributes to the BGP multipath.</li> <li>• <b>Protect</b>—An egress route that is protected.</li> <li>• <b>Stale</b>—A route that is marked stale due to graceful restart.</li> </ul>
Primary Upstream	When multipoint LDP with multicast-only fast reroute (MoFRR) is configured, the primary upstream path. MoFRR transmits a multicast join message from a receiver toward a source on a primary path, while also transmitting a secondary multicast join message from the receiver toward the source on a backup path.
RPF Nexthops	When multipoint LDP with MoFRR is configured, the reverse-path forwarding (RPF) next-hop information. Data packets are received from both the primary path and the secondary paths. The redundant packets are discarded at topology merge points due to the RPF checks.
Label	Multiple MPLS labels are used to control MoFRR stream selection. Each label represents a separate route, but each references the same interface list check. Only the primary label is forwarded while all others are dropped. Multiple interfaces can receive packets using the same label.
weight	Value used to distinguish MoFRR primary and backup routes. A lower weight value is preferred. Among routes with the same weight value, load balancing is possible.
VC Label	MPLS label assigned to the Layer 2 circuit virtual connection.
MTU	Maximum transmission unit (MTU) of the Layer 2 circuit.
VLAN ID	VLAN identifier of the Layer 2 circuit.
Cluster list	(For route reflected output only) Cluster ID sent by the route reflector.
Originator ID	(For route reflected output only) Address of router that originally sent the route to the route reflector.
Prefixes bound to route	Forwarding Equivalent Class (FEC) bound to this route. Applicable only to routes installed by LDP.
Communities	Community path attribute for the route. See the Output Field table in the <a href="#">show route detail</a> command for all possible values for this field.
Layer2-info: encaps	Layer 2 encapsulation (for example, VPLS).
control flags	Control flags: <b>none</b> or Site Down.
mtu	Maximum transmission unit (MTU) information.
Label-Base, range	First label in a block of labels and label block size. A remote PE routing device uses this first label when sending traffic toward the advertising PE routing device.

Table 202: show route extensive Output Fields (continued)

Field Name	Field Description
<b>status vector</b>	Layer 2 VPN and VPLS network layer reachability information (NLRI).
<b>Localpref</b>	Local preference value included in the route.
<b>Router ID</b>	BGP router ID as advertised by the neighbor in the open message.
<b>Primary Routing Table</b>	In a routing table group, the name of the primary routing table in which the route resides.
<b>Secondary Tables</b>	In a routing table group, the name of one or more secondary tables in which the route resides.
<b>Originating RIB</b>	Name of the routing table whose active route was used to determine the forwarding next-hop entry in the resolution database. For example, in the case of inet.0 resolving through inet.0 and inet.3, this field indicates which routing table, inet.0 or inet.3, provided the best path for a particular prefix.
<b>Node path count</b>	Number of nodes in the path.
<b>Forwarding nexthops</b>	Number of forwarding next hops. The forwarding next hop is the network layer address of the directly reachable neighboring system (if applicable) and the interface used to reach it.

## Sample Output

### show route extensive

```

user@host> show route extensive
inet.0: 22 destinations, 23 routes (21 active, 0 holddown, 1 hidden)

## show route flow validation

**List of Syntax**   [Syntax on page 2273](#)  
[Syntax \(EX Series Switches\) on page 2273](#)

**Syntax**   `show route flow validation`  
                   `<brief | detail>`  
                   `<ip-prefix>`  
                   `<table table-name>`  
                   `<logical-system (all | logical-system-name)>`

**Syntax (EX Series Switches)**   `show route flow validation`  
   `<brief | detail>`  
   `<ip-prefix>`  
   `<table table-name>`

**Release Information**   Command introduced before Junos OS Release 7.4.  
                                   Command introduced in Junos OS Release 9.0 for EX Series switches.

**Description**   Display flow route information.

**Options**   **none**—Display flow route information.

**brief | detail**—(Optional) Display the specified level of output. If you do not specify a level of output, the system defaults to brief.

**ip-prefix**—(Optional) IP address for the flow route.

**logical-system (all | logical-system-name)**—(Optional) Perform this operation on all logical systems or on a particular logical system.

**table table-name**—(Optional) Display flow route information for all routing tables whose name begins with this string (for example, inet.0 and inet6.0 are both displayed when you run the **show route flow validation inet** command).

**Required Privilege Level**   view

**List of Sample Output**   [show route flow validation on page 2274](#)  
                                   [show route flow validation \(IPv6\) on page 2274](#)

**Output Fields**   [Table 203 on page 2273](#) lists the output fields for the **show route flow validation** command. Output fields are listed in the approximate order in which they appear.

*Table 203: show route flow validation Output Fields*

Field Name	Field Description	Level of Output
<i>routing-table-name</i>	Name of the routing table (for example, inet.0).	All levels

Table 203: show route flow validation Output Fields (continued)

Field Name	Field Description	Level of Output
<i>prefix</i>	Route address.	All levels
Active unicast route	Active route in the routing table.	All levels
Dependent flow destinations	Number of flows for which there are routes in the routing table.	All levels
Origin	Source of the route flow.	All levels
Neighbor AS	Autonomous system identifier of the neighbor.	All levels
Flow destination	Number of entries and number of destinations that match the route flow.	All levels
Unicast best match	Destination that is the best match for the route flow.	All levels
Flags	Information about the route flow.	All levels

## Sample Output

### show route flow validation

```

user@host> show route flow validation
inet.0:
10.0.5.0/24Active unicast route
Dependent flow destinations: 1
Origin: 192.168.224.218, Neighbor AS: 64501
Flow destination (3 entries, 1 match origin)
Unicast best match: 10.0.5.0/24
Flags: SubtreeApex Consistent

```

### show route flow validation (IPv6)

```

user@host> show route flow validation
inet6.0:
2001:db8::11:11:11:0/120
    Active unicast route
        Dependent flow destinations: 2
        Origin: 2001:db8::13:14:2:2, Neighbor AS: 2000
2001:db8::11:11:11:10/128
    Flow destination (1 entries, 1 match origin, next-as)
        Unicast best match: 2001:db8::11:11:11:0/120
        Flags: Consistent
2001:db8::11:11:11:30/128
    Flow destination (1 entries, 1 match origin, next-as)
        Unicast best match: 2001:db8::11:11:11:0/120
        Flags: Consistent

```

## show route forwarding-table

**List of Syntax**    [Syntax on page 2275](#)  
                          [Syntax \(MX Series Routers\) on page 2275](#)  
                          [Syntax \(TX Matrix and TX Matrix Plus Routers\) on page 2275](#)

                  <vlan (all | *vlan-name*)>  
                  <vpn *vpn*>

**Syntax (TX Matrix and TX Matrix Plus Routers)**    show route forwarding-table  
                  <detail | extensive | summary>  
                  <all>  
                  <ccc *interface-name*>  
                  <destination *destination-prefix*>  
                  <family *family* | matching *matching*>  
                  <interface-name *interface-name*>  
                  <matching *matching*>  
                  <label *name*>  
                  <lcc *number*>  
                  <multicast>  
                  <table *routing-instance-name*>  
                  <vpn *vpn*>

**Release Information**    Command introduced before Junos OS Release 7.4.  
                                  Option **bridge-domain** introduced in Junos OS Release 7.5

Option **learning-vlan-id** introduced in Junos OS Release 8.4

Options **all** and **vlan** introduced in Junos OS Release 9.6.

Command introduced in Junos OS Release 11.3 for the QFX Series.

Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.

**Description** Display the Routing Engine's forwarding table, including the network-layer prefixes and their next hops. This command is used to help verify that the routing protocol process has relayed the correction information to the forwarding table. The Routing Engine constructs and maintains one or more routing tables. From the routing tables, the Routing Engine derives a table of active routes, called the forwarding table.

**NOTE:** The Routing Engine copies the forwarding table to the Packet Forwarding Engine, the part of the router that is responsible for forwarding packets. To display the entries in the Packet Forwarding Engine's forwarding table, use the **show pfe route** command.

**Options** **none**—Display the routes in the forwarding tables. By default, the **show route forwarding-table** command does not display information about private, or internal, forwarding tables.

**detail | extensive | summary**—(Optional) Display the specified level of output.

**all**—(Optional) Display routing table entries for all forwarding tables, including private, or internal, tables.

**bridge-domain (all | bridge-domain-name)**—(MX Series routers only) (Optional) Display route entries for all bridge domains or the specified bridge domain.

**ccc interface-name**—(Optional) Display route entries for the specified circuit cross-connect interface.

**destination destination-prefix**—(Optional) Destination prefix.

**family family**—(Optional) Display routing table entries for the specified family: **bridge** (**ccc | destination | detail | extensive | interface-name | label | learning-vlan-id | matching | multicast | summary | table | vlan | vpn**), **ethernet-switching**, **evpn**, **fibre-channel**, **fmembers**, **inet**, **inet6**, **iso**, **mcsnoop-inet**, **mcsnoop-inet6**, **mpls**, **satellite-inet**, **satellite-inet6**, **satellite-vpls**, **tnp**, **unix**, **vpls**, or **vlan-classification**.

**interface-name interface-name**—(Optional) Display routing table entries for the specified interface.

**label name**—(Optional) Display route entries for the specified label.

**lcc number**—(TX Matrix and TX matrix Plus routers only) (Optional) On a routing matrix composed of a TX Matrix router and T640 routers, display information for the specified T640 router (or line-card chassis) connected to the TX Matrix router. On a routing matrix composed of the TX Matrix Plus router and T1600 or T4000 routers,

display information for the specified router (line-card chassis) connected to the TX Matrix Plus router.

Replace *number* with the following values depending on the LCC configuration:

- 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.
- 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.
- 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.
- 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.

**learning-vlan-id** *learning-vlan-id*—(MX Series routers only) (Optional) Display learned information for all VLANs or for the specified VLAN.

**matching** *matching*—(Optional) Display routing table entries matching the specified prefix or prefix length.

**multicast**—(Optional) Display routing table entries for multicast routes.

**table** —(Optional) Display route entries for all the routing tables in the main routing instance or for the specified routing instance. If your device supports logical systems, you can also display route entries for the specified logical system and routing instance. To view the routing instances on your device, use the [show route instance](#) command.

**vlan** (**all** | *vlan-name*)—(Optional) Display information for all VLANs or for the specified VLAN.

**vpn** *vpn*—(Optional) Display routing table entries for a specified VPN.

**Required Privilege Level**

view

**Output Fields** [Table 204 on page 2278](#) lists the output fields for the **show route forwarding-table** command. Output fields are listed in the approximate order in which they appear. Field names might be abbreviated (as shown in parentheses) when no level of output is specified, or when the **detail** keyword is used instead of the **extensive** keyword.

*Table 204: show route forwarding-table Output Fields*

Field Name	Field Description	Level of Output
Logical system	Name of the logical system. This field is displayed if you specify the <b>table logical-system-name/routing-instance-name</b> option on a device that is configured for and supports logical systems.	All levels
Routing table	Name of the routing table (for example, inet, inet6, mpls).	All levels

Table 204: show route forwarding-table Output Fields (continued)

Field Name	Field Description	Level of Output
Enabled protocols	<p>The features and protocols that have been enabled for a given routing table. This field can contain the following values:</p> <ul style="list-style-type: none"> <li>• BUM hashing—BUM hashing is enabled.</li> <li>• MAC Stats—Mac Statistics is enabled.</li> <li>• Bridging—Routing instance is a normal layer 2 bridge.</li> <li>• No VLAN—No VLANs are associated with the bridge domain.</li> <li>• All VLANs—The <b>vlan-id all</b> statement has been enabled for this bridge domain.</li> <li>• Single VLAN—Single VLAN ID is associated with the bridge domain.</li> <li>• MAC action drop—New MACs will be dropped when the MAC address limit is reached.</li> <li>• Dual VLAN—Dual VLAN tags are associated with the bridge domain</li> <li>• No local switching—No local switching is enabled for this routing instance..</li> <li>• Learning disabled—Layer 2 learning is disabled for this routing instance.</li> <li>• MAC limit reached—The maximum number of MAC addresses that was configured for this routing instance has been reached.</li> <li>• VPLS—The VPLS protocol is enabled.</li> <li>• No IRB I2-copy—The no-irb-layer-2-copy feature is enabled for this routing instance.</li> <li>• ACKed by all peers—All peers have acknowledged this routing instance.</li> <li>• BUM Pruning—BUM pruning is enabled on the VPLS instance.</li> <li>• Def BD VXLAN—VXLAN is enabled for the default bridge domain.</li> <li>• EVPN—EVPN protocol is enabled for this routing instance.</li> <li>• Def BD OVSDb—Open vSwitch Database (OVSDb) is enabled on the default bridge domain.</li> <li>• Def BD Ingress replication—VXLAN ingress node replication is enabled on the default bridge domain.</li> <li>• L2 backhaul—Layer 2 backhaul is enabled.</li> <li>• FRR optimize—Fast reroute optimization</li> <li>• MAC pinning—MAC pinning is enabled for this bridge domain.</li> <li>• MAC Aging Timer—The MAC table aging time is set per routing instance.</li> <li>• EVPN VXLAN—This routing instance supports EVPN with VXLAN encapsulation.</li> <li>• PBBN—This routing instance is configured as a provider backbone bridged network.</li> <li>• PBN—This routing instance is configured as a provider bridge network.</li> <li>• ETREE—The ETREE protocol is enabled on this EVPN routing instance.</li> <li>• ARP/NDP suppression—EVPN ARP NDP suppression is enabled in this routing instance.</li> <li>• Def BD EVPN VXLAN—EVPN VXLAN is enabled for the default bridge domain.</li> <li>• MPLS control word—Control word is enabled for this MPLS routing instance.</li> </ul>	All levels
Address family	Address family (for example, IP, IPv6, ISO, MPLS, and VPLS).	All levels
Destination	Destination of the route.	detail extensive

Table 204: *show route forwarding-table* Output Fields (continued)

Field Name	Field Description	Level of Output
Route Type (Type)	<p>How the route was placed into the forwarding table. When the <b>detail</b> keyword is used, the route type might be abbreviated (as shown in parentheses):</p> <ul style="list-style-type: none"> <li>• <b>cloned (clon)</b>—(TCP or multicast only) Cloned route.</li> <li>• <b>destination (dest)</b>—Remote addresses directly reachable through an interface.</li> <li>• <b>destination down (iddn)</b>—Destination route for which the interface is unreachable.</li> <li>• <b>interface cloned (ifcl)</b>—Cloned route for which the interface is unreachable.</li> <li>• <b>route down (ifdn)</b>—Interface route for which the interface is unreachable.</li> <li>• <b>ignore (ignr)</b>—Ignore this route.</li> <li>• <b>interface (intf)</b>—Installed as a result of configuring an interface.</li> <li>• <b>permanent (perm)</b>—Routes installed by the kernel when the routing table is initialized.</li> <li>• <b>user</b>—Routes installed by the routing protocol process or as a result of the configuration.</li> </ul>	All levels
Route Reference (RtRef)	Number of routes to reference.	<b>detail extensive</b>
Flags	<p>Route type flags:</p> <ul style="list-style-type: none"> <li>• <b>none</b>—No flags are enabled.</li> <li>• <b>accounting</b>—Route has accounting enabled.</li> <li>• <b>cached</b>—Cache route.</li> <li>• <b>incoming-iface interface-number</b>—Check against incoming interface.</li> <li>• <b>prefix load balance</b>—Load balancing is enabled for this prefix.</li> <li>• <b>rt nh decoupled</b>—Route has been decoupled from the next hop to the destination.</li> <li>• <b>sent to PFE</b>—Route has been sent to the Packet Forwarding Engine.</li> <li>• <b>static</b>—Static route.</li> </ul>	<b>extensive</b>
Next hop	IP address of the next hop to the destination.	<b>detail extensive</b>

Table 204: show route forwarding-table Output Fields (continued)

Field Name	Field Description	Level of Output
Next hop Type (Type)	<p>Next-hop type. When the <b>detail</b> keyword is used, the next-hop type might be abbreviated (as indicated in parentheses):</p> <ul style="list-style-type: none"> <li>• <b>broadcast (bcst)</b>—Broadcast.</li> <li>• <b>deny</b>—Deny.</li> <li>• <b>discard (dscd)</b>—Discard.</li> <li>• <b>hold</b>—Next hop is waiting to be resolved into a unicast or multicast type.</li> <li>• <b>indexed (idxd)</b>—Indexed next hop.</li> <li>• <b>indirect (indr)</b>—Indirect next hop.</li> <li>• <b>local (locl)</b>—Local address on an interface.</li> <li>• <b>routed multicast (mcrst)</b>—Regular multicast next hop.</li> <li>• <b>multicast (mcst)</b>—Wire multicast next hop (limited to the LAN).</li> <li>• <b>multicast discard (mdsc)</b>—Multicast discard.</li> <li>• <b>multicast group (mgrp)</b>—Multicast group member.</li> <li>• <b>receive (rcv)</b>—Receive.</li> <li>• <b>reject (rjct)</b>—Discard. An ICMP unreachable message was sent.</li> <li>• <b>resolve (rslv)</b>—Resolving the next hop.</li> <li>• <b>unicast (ucst)</b>—Unicast.</li> <li>• <b>unilist (ulst)</b>—List of unicast next hops. A packet sent to this next hop goes to any next hop in the list.</li> </ul>	<b>detail extensive</b>
Index	Software index of the next hop that is used to route the traffic for a given prefix.	<b>detail extensive none</b>
Route interface-index	Logical interface index from which the route is learned. For example, for interface routes, this is the logical interface index of the route itself. For static routes, this field is zero. For routes learned through routing protocols, this is the logical interface index from which the route is learned.	<b>extensive</b>
Reference (NhRef)	Number of routes that refer to this next hop.	<b>detail extensive none</b>
Next-hop interface (Netif)	Interface used to reach the next hop.	<b>detail extensive none</b>
Weight	Value used to distinguish primary, secondary, and fast reroute backup routes. Weight information is available when MPLS label-switched path (LSP) link protection, node-link protection, or fast reroute is enabled, or when the standby state is enabled for secondary paths. A lower weight value is preferred. Among routes with the same weight value, load balancing is possible (see the <b>Balance</b> field description).	<b>extensive</b>
Balance	Balance coefficient indicating how traffic of unequal cost is distributed among next hops when a router is performing unequal-cost load balancing. This information is available when you enable BGP multipath load balancing.	<b>extensive</b>
RPF interface	List of interfaces from which the prefix can be accepted. Reverse path forwarding (RPF) information is displayed only when <b>rpf-check</b> is configured on the interface.	<b>extensive</b>

## Sample Output

## show route forwarding-table

```

### show route forwarding-table extensive (RPF)

The next example is based on the following configuration, which enables an RPF check on all routes that are learned from this interface, including the interface route:

```

so-1/1/0 {
  unit 0 {
    family inet {
      rpf-check;
      address 192.0.2.2/30;
    }
  }
}

user@host> show route forwarding-table extensive
Routing table: inet [Index 0]
Internet:
...
...
Destination: 192.0.2.3/32

```

```
Route type: destination
Route reference: 0
Flags: sent to PFE
Nexthop: 192.0.2.3
Next-hop type: broadcast
Next-hop interface: so-1/1/0.0
RPF interface: so-1/1/0.0

Route interface-index: 67
Index: 328      Reference: 1
```

### show route forwarding-table (dynamic list next hop)

The **show route forwarding table** output shows the two next hop elements for a multihomed EVPN destination.

```
user@host> show route forwarding-table label 299952 extensive
MPLS:

Destination: 299952
Route type: user
Route reference: 0
Multicast RPF nh index: 0
P2mpidx: 0
Flags: sent to PFE, rt nh decoupled
Next-hop type: indirect
Nexthop:
Next-hop type: composite
Next-hop type: indirect
Nexthop: 1.0.0.4
Next-hop type: Push 301632, Push 299776(top)
Load Balance Label: None
Next-hop interface: ge-0/0/1.0
Next-hop type: indirect
Nexthop: 1.0.0.4
Next-hop type: Push 301344, Push 299792(top)
Load Balance Label: None
Next-hop interface: ge-0/0/1.0

Route interface-index: 0
Index: 1048575 Reference: 2
Index: 601      Reference: 2
Index: 1048574 Reference: 3
Index: 600 Reference: 2
Index: 1048577 Reference: 3
Index: 619 Reference: 2
```

After one of the PE router has been disabled in the EVPN multihomed network, the same **show route forwarding table** output command shows one next hop element and one empty next hop element.

```
user@host> show route forwarding-table label 299952 extensive
Routing table: default.mpls [Index 0]

## show route forwarding-table interface-name

<b>Syntax</b>	show route forwarding-table interface-name <i>interface-name</i> <detail   extensive> <all>
<b>Release Information</b>	Command introduced in Junos OS Release 9.6.
<b>Description</b>	Display the interfaces in the Routing Engine's forwarding table.
<b>Options</b>	<p><b>none</b>—Display information for the specified interface.</p> <p><b>detail   extensive</b>—(Optional) Display the specified level of output.</p> <p><b>all</b>—(Optional) Display all interfaces in the routing table.</p>
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">show route forwarding-table interface-name fe-0/1/1 on page 2294</a> <a href="#">show route forwarding-table interface-name all on page 2294</a> <a href="#">show route forwarding-table interface-name all detail on page 2295</a>
<b>Output Fields</b>	Table 205 on page 2293 lists the output fields for the <b>show route forwarding-table interface-name</b> command. Output fields are listed in the approximate order in which they appear.

Table 205: show route forwarding-table interface-name Output Fields

Field Name	Field Description	Level of Output
<b>Name</b>	Name of the interface (for example <b>fe-0/1/1</b> , <b>lo0</b> , <b>ae0</b> , and so on).	All levels
<b>MTU</b>	Interface's maximum transmission unit (MTU).	All levels
<b>Afam</b>	Configured address family (for example <b>inet</b> , <b>tnp</b> , <b>inet6</b> , and so on).	<b>detail extensive</b>
<b>Network</b>	Network information: <ul style="list-style-type: none"> <li>• <b>&lt;Link&gt;</b>—Physical interface, not a logical interface.</li> <li>• <b>&lt;PtoP&gt;</b>—Point-to-point network.</li> <li>• <b>ipaddress</b>—Network address.</li> </ul>	All levels
<b>Address</b>	Address of the interface. The address can be a MAC address, IPv4 address, IPv6 address, and so on.	All levels
<b>IPkts</b>	Number of packets received on the interface.	All levels
<b>Ierr</b>	Number of packets received on the interface with errors.	All levels

Table 205: show route forwarding-table interface-name Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Opkts</b>	Number of packets transmitted or sent from the interface.	All levels
<b>Oerr</b>	Number of packets transmitted or sent from the interface with errors.	All levels
<b>Coll</b>	Number of packets that experienced collisions on the interface.	All levels

## Sample Output

## show route hidden

---

<b>Syntax</b>	<code>show route hidden</code> <code>&lt;brief   detail   extensive   terse&gt;</code> <code>&lt;logical-system (all   <i>logical-system-name</i>)&gt;</code>
<b>Release Information</b>	Command introduced before Junos OS Release 7.4.
<b>Description</b>	Display only hidden route information. A hidden route is unusable, even if it is the best path.
<b>Options</b>	<b>brief   detail   extensive   terse</b> —(Optional) Display the specified level of output. If you do not specify a level of output, the system defaults to <b>brief</b> .  <b>logical-system (all   <i>logical-system-name</i>)</b> —(Optional) Perform this operation on all logical systems or on a particular logical system.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Understanding Hidden Routes</a></li></ul>
<b>List of Sample Output</b>	<a href="#">show route hidden on page 2296</a> <a href="#">show route hidden detail on page 2297</a> <a href="#">show route hidden extensive on page 2297</a> <a href="#">show route hidden terse on page 2297</a>
<b>Output Fields</b>	For information about output fields, see the output field table for the <a href="#">show route</a> command, the <a href="#">show route detail</a> command, the <a href="#">show route extensive</a> command, or the <a href="#">show route terse</a> command.

## Sample Output

### show route hidden

```
user@host> show route hidden

**Output Fields** Table 206 on page 2306 lists the output fields for the **show route instance** command. Output fields are listed in the approximate order in which they appear.

*Table 206: show route instance Output Fields*

Field Name	Field Description	Level of Output
Instance or <i>instance-name</i>	Name of the routing instance.	All levels
Operational Routing Instances	( <b>operational</b> keyword only) Names of all operational routing instances.	—
Type	Type of routing instance: <b>forwarding</b> , <b>l2vpn</b> , <b>no-forwarding</b> , <b>vpls</b> , <b>virtual-router</b> , or <b>vrf</b> .	All levels
State	State of the routing instance: <b>active</b> or <b>inactive</b> .	<b>brief detail none</b>
Interfaces	Name of interfaces belonging to this routing instance.	<b>brief detail none</b>
Restart State	Status of graceful restart for this instance: <b>Pending</b> or <b>Complete</b> .	<b>detail</b>
Path selection timeout	Maximum amount of time, in seconds, remaining until graceful restart is declared complete. The default is <b>300</b> .	<b>detail</b>
Tables	Tables (and number of routes) associated with this routing instance.	<b>brief detail none</b>
Route-distinguisher	Unique route distinguisher associated with this routing instance.	<b>detail</b>
Vrf-import	VPN routing and forwarding instance import policy name.	<b>detail</b>
Vrf-export	VPN routing and forwarding instance export policy name.	<b>detail</b>
Vrf-import-target	VPN routing and forwarding instance import target community name.	<b>detail</b>
Vrf-export-target	VPN routing and forwarding instance export target community name.	<b>detail</b>
Vrf-edge-protection-id	Context identifier configured for edge-protection.	<b>detail</b>
Fast-reroute-priority	Fast reroute priority setting for a VPLS routing instance: <b>high</b> , <b>medium</b> , or <b>low</b> . The default is <b>low</b> .	<b>detail</b>
Restart State	Restart state: <ul style="list-style-type: none"> <li><b>Pending:protocol-name</b>—List of protocols that have not yet completed graceful restart for this routing table.</li> <li><b>Complete</b>—All protocols have restarted for this routing table.</li> </ul>	<b>detail</b>

Table 206: show route instance Output Fields (continued)

Field Name	Field Description	Level of Output
Primary rib	Primary table for this routing instance.	<b>brief</b> none <b>summary</b>
Active/holddown/hidden	Number of active, hold-down, and hidden routes.	All levels

## Sample Output

### show route label-switched-path

```
user@host> show route label-switched-path sf-to-ny
inet.0: 29 destinations, 29 routes (29 active, 0 holddown, 0 hidden)
+ = Active Route, - = Last Active, * = Both

1.1.1.1/32          [MPLS/7] 00:00:06, metric 0
> to 111.222.1.9 via s0-0/0/0, label-switched-path sf-to-ny
3.3.3.3/32          *[MPLS/7] 00:00:06, metric 0
> to 111.222.1.9 via s0-0/0/0, label-switched-path sf-to-ny

inet.3: 3 destinations, 3 routes (3 active, 0 holddown, 0 hidden)
+ = Active Route, - = Last Active, * = Both

2.2.2.2/32          *[MPLS/7] 00:00:06, metric 0
> to 111.222.1.9 via s0-0/0/0, label-switched-path sf-to-ny
```

```
4.4.4.4/32      *[MPLS/7] 00:00:06, metric 0
                 to 111.222.1.9 via s0-0/0/0, label-switched-path abc
                 > to 111.222.1.9 via s0-0/0/0, label-switched-path xyz
                 to 111.222.1.9 via s0-0/0/0, label-switched-path sf-to-ny
111.222.1.9/32  [MPLS/7] 00:00:06, metric 0
                 > to 111.222.1.9 via s0-0/0/0, label-switched-path sf-to-ny

iso.0: 1 destinations, 1 routes (1 active, 0 holddown, 0 hidden)
+ = Active Route, - = Last Active, * = Both

mpls.0: 2 destinations, 2 routes (2 active, 0 holddown, 0 hidden)
+ = Active Route, - = Last Active, * = Both
```

## show route localization

<b>Syntax</b>	<code>show route localization</code>
<b>Release Information</b>	Command introduced in Junos OS Release 11.4 for T-Series routers. Command introduced in Junos OS Release 12.3 for MX Series routers.
<b>Description</b>	(T320, T640, and T1600 routers only) Display route localization details.
<b>Options</b>	<b>detail</b> —Display detailed output.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li><i>Example: Configuring Packet Forwarding Engine FIB Localization</i></li> </ul>
<b>Output Fields</b>	Table 207 on page 2320 lists the output fields for the <b>show route localization</b> command. Output fields are listed in the approximate order in which they appear.

Table 207: show route localization Output Fields

Field Name	Field Description
<b>FIB-local</b>	FPCs configured as FIB-local.
<b>FIB-remote</b>	FPCs configured as FIB-remote.
<b>Normal</b>	FPCs neither configured as <b>FIB-local</b> or <b>FIB-remote</b> .
<b>Protocols</b>	IPv4 (inet) or IPv6 (inet6) traffic configured for route localization.

## Sample Output

```
user@R0> show route localization
FIB localization ready FPCs (and FIB-local Forwarding Engine addresses)
  FIB-local:  FPC2(4,5)
  FIB-remote: FPC0, FPC1
  Normal:     FPC3, FPC4, FPC5, FPC6, FPC7
```

```
user@R0> show route localization detail
FIB localization ready FPCs (and FIB-local Forwarding Engine addresses)
  FIB-local:  FPC2(4,5)
  FIB-remote: FPC0, FPC1
  Normal:     FPC3, FPC4, FPC5, FPC6, FPC7
FIB localization configuration
  Protocols:  inet, inet6
  FIB-local:  FPC2
  FIB-remote: FPC0, FPC1
```

**Forwarding Engine addresses**

FPC0: 1  
FPC1: 2  
FPC2: 4, 5  
FPC3: 6  
FPC4: 8  
FPC5: 11  
FPC6: 13  
FPC7: 15

## show route martians

---

**List of Syntax**   [Syntax on page 2322](#)  
[Syntax \(EX Series Switches\) on page 2322](#)

**Syntax**   `show route martians`  
          `<logical-system (all | logical-system-name)>`  
          `<table routing-table-name>`

**Syntax (EX Series Switches)**   `show route martians`  
                                  `<table routing-table-name>`

**Release Information**   Command introduced before Junos OS Release 7.4.  
                              Command introduced in Junos OS Release 9.0 for EX Series switches.

**Description**   Display the martian (invalid and ignored) entries associated with each routing table.

**Options**   **none**—Display standard information about route martians for all routing tables.

**logical-system (all | *logical-system-name*)**—(Optional) Perform this operation on all logical systems or on a particular logical system.

**table *routing-table-name***—(Optional) Display information about route martians for all routing tables whose name begins with this string (for example, **inet.0** and **inet6.0** are both displayed when you run the **show route martians table inet** command).

**Required Privilege Level**   view

**Related Documentation**

- *Example: Removing the Class E Prefix on Martian Addresses*
- *Understanding Martian Addresses*

**List of Sample Output**   [show route martians on page 2323](#)

**Output Fields**   [Table 208 on page 2322](#) lists the output fields for the **show route martians** command. Output fields are listed in the approximate order in which they appear

*Table 208: show route martians Output Fields*

Field Name	Field Description
<i>table-name</i>	Name of the route table in which the route martians reside.
<i>destination-prefix</i>	Route destination.
<i>match value</i>	Route match parameter.

Table 208: show route martians Output Fields (continued)

Field Name	Field Description
<b>status</b>	Status of the route: <b>allowed</b> or <b>disallowed</b> .

## Sample Output

### show route martians

```

user@host> show route martians

## show route protocol

---

**List of Syntax**    [Syntax on page 2340](#)  
                          [Syntax \(EX Series Switches\) on page 2340](#)

**Syntax**    `show route protocol protocol`  
                  `<brief | detail | extensive | terse>`  
                  `<logical-system (all | logical-system-name)>`

**Syntax (EX Series Switches)**    `show route protocol protocol`  
  `<brief | detail | extensive | terse>`

**Release Information**    Command introduced before Junos OS Release 7.4.  
                              Command introduced in Junos OS Release 9.0 for EX Series switches.  
                              **ospf2** and **ospf3** options introduced in Junos OS Release 9.2.  
                              **ospf2** and **ospf3** options introduced in Junos OS Release 9.2 for EX Series switches.  
                              **flow** option introduced in Junos OS Release 10.0.  
                              **flow** option introduced in Junos OS Release 10.0 for EX Series switches.

**Description**    Display the route entries in the routing table that were learned from a particular protocol.

**Options**    **brief | detail | extensive | terse**—(Optional) Display the specified level of output. If you do not specify a level of output, the system defaults to **brief**.

**logical-system (all | *logical-system-name*)**—(Optional) Perform this operation on all logical systems or on a particular logical system.

***protocol***—Protocol from which the route was learned:

- **access**—Access route for use by DHCP application
- **access-internal**—Access-internal route for use by DHCP application
- **aggregate**—Locally generated aggregate route
- **arp**—Route learned through the Address Resolution Protocol
- **atmvpn**—Asynchronous Transfer Mode virtual private network
- **bgp**—Border Gateway Protocol
- **ccc**—Circuit cross-connect
- **direct**—Directly connected route
- **dvmrp**—Distance Vector Multicast Routing Protocol
- **esis**—End System-to-Intermediate System
- **flow**—Locally defined flow-specification route
- **frr**—Precomputed protection route or backup route used when a link goes down
- **isis**—Intermediate System-to-Intermediate System

- **ldp**—Label Distribution Protocol
- **l2circuit**—Layer 2 circuit
- **l2vpn**—Layer 2 virtual private network
- **local**—Local address
- **mpls**—Multiprotocol Label Switching
- **msdp**—Multicast Source Discovery Protocol
- **ospf**—Open Shortest Path First versions 2 and 3
- **ospf2**—Open Shortest Path First versions 2 only
- **ospf3**—Open Shortest Path First version 3 only
- **pim**—Protocol Independent Multicast
- **rip**—Routing Information Protocol
- **ripng**—Routing Information Protocol next generation
- **rsvp**—Resource Reservation Protocol
- **rtarget**—Local route target virtual private network
- **static**—Statically defined route
- **tunnel**—Dynamic tunnel
- **vpn**—Virtual private network

**NOTE:** EX Series switches run a subset of these protocols. See the switch CLI for details.

## show route receive-protocol

---

<b>List of Syntax</b>	<a href="#">Syntax on page 2358</a> <a href="#">Syntax (EX Series Switches) on page 2358</a>
<b>Syntax</b>	<code>show route receive-protocol <i>protocol neighbor-address</i></code> <code>&lt;brief   detail   extensive   terse&gt;</code> <code>&lt;logical-system (all   <i>logical-system-name</i>)</code>
<b>Syntax (EX Series Switches)</b>	<code>show route receive-protocol <i>protocol neighbor-address</i></code> <code>&lt;brief   detail   extensive   terse&gt;</code>
<b>Release Information</b>	Command introduced before Junos OS Release 7.4. Command introduced in Junos OS Release 9.0 for EX Series switches.
<b>Description</b>	Display the routing information as it was received through a particular neighbor using a particular dynamic routing protocol.
<b>Options</b>	<b>brief   detail   extensive   terse</b> —(Optional) Display the specified level of output.  <b>logical-system (all   <i>logical-system-name</i>)</b> —(Optional) Perform this operation on all logical systems or on a particular logical system.  <b><i>protocol neighbor-address</i></b> —Protocol transmitting the route ( <b>bgp</b> , <b>dvmrp</b> , <b>msdp</b> , <b>pim</b> , <b>rip</b> , or <b>ripng</b> ) and address of the neighboring router from which the route entry was received.
<b>Additional Information</b>	The output displays the selected routes and the attributes with which they were received, but does not show the effects of import policy on the routing attributes.
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">show route receive-protocol bgp on page 2361</a> <a href="#">show route receive-protocol bgp extensive on page 2361</a> <a href="#">show route receive-protocol bgp table extensive on page 2362</a> <a href="#">show route receive-protocol bgp logical-system extensive on page 2362</a> <a href="#">show route receive-protocol bgp detail (Layer 2 VPN) on page 2363</a> <a href="#">show route receive-protocol bgp extensive (Layer 2 VPN) on page 2363</a> <a href="#">show route receive-protocol bgp (Layer 3 VPN) on page 2364</a> <a href="#">show route receive-protocol bgp detail (Layer 3 VPN) on page 2364</a> <a href="#">show route receive-protocol bgp detail (Long-Lived Graceful Restart) on page 2365</a> <a href="#">show route receive-protocol bgp detail (Labeled Unicast) on page 2365</a> <a href="#">show route receive-protocol bgp extensive (Layer 3 VPN) on page 2366</a> <a href="#">Show route receive protocol (Segment Routing Traffic Engineering) on page 2366</a>

**Output Fields** Table 209 on page 2359 describes the output fields for the **show route receive-protocol** command. Output fields are listed in the approximate order in which they appear.

*Table 209: show route receive-protocol Output Fields*

Field Name	Field Description	Level of Output
<i>routing-table-name</i>	Name of the routing table—for example, inet.0.	All levels
<i>number destinations</i>	Number of destinations for which there are routes in the routing table.	All levels
<i>number routes</i>	Number of routes in the routing table and total number of routes in the following states: <ul style="list-style-type: none"> <li>• <b>active</b></li> <li>• <b>holddown</b> (routes that are in pending state before being declared inactive)</li> <li>• <b>hidden</b> (routes that are not used because of a routing policy)</li> </ul>	All levels
Prefix	Destination prefix.	none <b>brief</b>
MED	Multiple exit discriminator value included in the route.	none <b>brief</b>
<i>destination-prefix</i> (entry, announced)	Destination prefix. The <b>entry</b> value is the number of routes for this destination, and the <b>announced</b> value is the number of routes being announced for this destination.	<b>detail extensive</b>
<b>Accepted LongLivedStale</b>	The LongLivedStale flag indicates that the route was marked LLGR-stale by this router, as part of the operation of LLGR receiver mode. Either this flag or the LongLivedStaleImport flag may be displayed for a route. Neither of these flags are displayed at the same time as the Stale (ordinary GR stale) flag.	<b>detail extensive</b>
<b>Accepted LongLivedStaleImport</b>	The LongLivedStaleImport flag indicates that the route was marked LLGR-stale when it was received from a peer, or by import policy. Either this flag or the LongLivedStale flag may be displayed for a route. Neither of these flags are displayed at the same time as the Stale (ordinary GR stale) flag.  Accept all received BGP long-lived graceful restart (LLGR) and LLGR stale routes learned from configured neighbors and import into the inet.0 routing table	<b>detail extensive</b>
<b>ImportAccepted LongLivedStaleImport</b>	Accept all received BGP long-lived graceful restart (LLGR) and LLGR stale routes learned from configured neighbors and imported into the inet.0 routing table  The LongLivedStaleImport flag indicates that the route was marked LLGR-stale when it was received from a peer, or by import policy.	<b>detail extensive</b>
<b>Route Distinguisher</b>	64-bit prefix added to IP subnets to make them unique.	<b>detail extensive</b>
<b>Label-Base, range</b>	First label in a block of labels and label block size. A remote PE routing device uses this first label when sending traffic toward the advertising PE routing device.	<b>detail extensive</b>

Table 209: show route receive-protocol Output Fields (continued)

Field Name	Field Description	Level of Output
<b>VPN Label</b>	Virtual private network (VPN) label. Packets are sent between CE and PE routing devices by advertising VPN labels. VPN labels transit over either an RSVP or an LDP label-switched path (LSP) tunnel.	<b>detail extensive</b>
<b>Next hop</b>	Next hop to the destination. An angle bracket (>) indicates that the route is the selected route.	All levels
<b>Localpref or Lclpref</b>	Local preference value included in the route.	All levels
<b>AS path</b>	<p>Autonomous system (AS) path through which the route was learned. The letters at the end of the AS path indicate the path origin, providing an indication of the state of the route at the point at which the AS path originated:</p> <ul style="list-style-type: none"> <li>• I—IGP.</li> <li>• E—EGP.</li> <li>• ?—Incomplete; typically, the AS path was aggregated.</li> </ul> <p>When AS path numbers are included in the route, the format is as follows:</p> <ul style="list-style-type: none"> <li>• [ ]—Brackets enclose the number that precedes the AS path. This number represents the number of ASs present in the AS path, when calculated as defined in RFC 4271. This value is used the AS-path merge process, as defined in RFC 4893.</li> <li>• [ ]—If more than one AS number is configured on the router, or if AS path prepending is configured, brackets enclose the local AS number associated with the AS path.</li> <li>• { }—Braces enclose AS sets, which are groups of AS numbers in which the order does not matter. A set commonly results from route aggregation. The numbers in each AS set are displayed in ascending order.</li> <li>• ( )—Parentheses enclose a confederation.</li> <li>• ( [ ] )—Parentheses and brackets enclose a confederation set.</li> </ul> <p><b>NOTE:</b> In Junos OS Release 10.3 and later, the AS path field displays an unrecognized attribute and associated hexadecimal value if BGP receives attribute 128 (attribute set) and you have not configured an independent domain in any routing instance.</p>	All levels
<b>Route Labels</b>	Stack of labels carried in the BGP route update.	<b>detail extensive</b>
<b>Cluster list</b>	(For route reflected output only) Cluster ID sent by the route reflector.	<b>detail extensive</b>
<b>Originator ID</b>	(For route reflected output only) Address of routing device that originally sent the route to the route reflector.	<b>detail extensive</b>
<b>Communities</b>	Community path attribute for the route. See the Output Field table in the <a href="#">show route detail</a> command for all possible values for this field.	<b>detail extensive</b>
<b>AIGP</b>	Accumulated interior gateway protocol (AIGP) BGP attribute.	<b>detail extensive</b>
<b>Attrset AS</b>	Number, local preference, and path of the AS that originated the route. These values are stored in the <b>Attrset</b> attribute at the originating routing device.	<b>detail extensive</b>

Table 209: show route receive-protocol Output Fields (continued)

Field Name	Field Description	Level of Output
Layer2-info: encaps	Layer 2 encapsulation (for example, VPLS).	detail extensive
control flags	Control flags: none or Site Down.	detail extensive
mtu	Maximum transmission unit (MTU) of the Layer 2 circuit.	detail extensive

## Sample Output

## show route resolution

---

**List of Syntax**    [Syntax on page 2368](#)  
                          [Syntax \(EX Series Switches\) on page 2368](#)

**Syntax**    show route resolution  
              <brief | detail | extensive | summary>  
              <index *index*>  
              <logical-system (all | *logical-system-name*)>  
              <*prefix*>  
              <table *routing-table-name*>  
              <unresolved>

**Syntax (EX Series Switches)**    show route resolution  
  <brief | detail | extensive | summary>  
  <index *index*>  
  <*prefix*>  
  <table *routing-table-name*>  
  <unresolved>

**Release Information**    Command introduced before Junos OS Release 7.4.  
                              Command introduced in Junos OS Release 9.0 for EX Series switches.

**Description**    Display the entries in the next-hop resolution database. This database provides for recursive resolution of next hops through other prefixes in the routing table.

**Options**    **none**—Display standard information about all entries in the next-hop resolution database.

**brief | detail | extensive | summary**—(Optional) Display the specified level of output.

**index *index***—(Optional) Show the index of the resolution tree.

**logical-system (all | *logical-system-name*)**—(Optional) Perform this operation on all logical systems or on a particular logical system.

***prefix network/destination-prefix***—(Optional) Display database entries for the specified address.

**table *routing-table-name***—(Optional) Display information about a particular routing table (for example, **inet.0**) where policy-based export is currently enabled.

**unresolved**—(Optional) Display routes that could not be resolved.

**Required Privilege Level**    view

**Related Documentation**    • [Example: Configuring Route Resolution on PE Routers](#)

- List of Sample Output**
- [show route resolution detail on page 2370](#)
  - [show route resolution \(Multipath Resolution\) on page 2371](#)
  - [show route resolution summary on page 2372](#)
  - [show route resolution unresolved on page 2372](#)

**Output Fields** Table 210 on page 2370 describes the output fields for the **show route resolution** command. Output fields are listed in the approximate order in which they appear.

*Table 210: show route resolution Output Fields*

Field Name	Field Description
<b>routing-table-name</b>	Name of the routing table whose prefixes are resolved using the entries in the route resolution database. For routing table groups, this is the name of the primary routing table whose prefixes are resolved using the entries in the route resolution database.
<b>Tree index</b>	Tree index identifier.
<b>Nodes</b>	Number of nodes in the tree.
<b>Reference count</b>	Number of references made to the next hop.
<b>Contributing routing tables</b>	Routing tables used for next-hop resolution.
<b>Originating RIB</b>	Name of the routing table whose active route was used to determine the forwarding next-hop entry in the resolution database. For example, in the case of <b>inet.0</b> resolving through <b>inet.0</b> and <b>inet.3</b> , this field indicates which routing table, <b>inet.0</b> or <b>inet.3</b> , provided the best path for a particular prefix.
<b>Metric</b>	Metric associated with the forwarding next hop.
<b>Node path count</b>	Number of nodes in the path.
<b>Forwarding next hops</b>	Number of forwarding next hops. The forwarding next hop is the network layer address of the directly reachable neighboring system (if applicable) and the interface used to reach it.
	Merged—Merged next hops when recursive resolution of multipath is configured.

## Sample Output

### show route resolution detail

```

user@host> show route resolution detail

## show route summary

---

List of Syntax	<a href="#">Syntax on page 2382</a> <a href="#">Syntax (EX Series Switches) on page 2382</a>
Syntax	<code>show route summary</code> <code>&lt;logical-system (all   <i>logical-system-name</i>)&gt;</code> <code>&lt;table <i>routing-table-name</i>&gt;</code>
Syntax (EX Series Switches)	<code>show route summary</code>
Release Information	Command introduced before Junos OS Release 7.4. Command introduced in Junos OS Release 9.0 for EX Series switches.
Description	<p>Display summary statistics about the entries in the routing table.</p> <p>CPU utilization might increase while the device learns routes. We recommend that you use the <b>show route summary</b> command after the device learns and enters the routes into the routing table. Depending on the size of your network, this might take several minutes. If you receive a “timeout communicating with routing daemon” error when using the <b>show route summary</b> command, wait several minutes before attempting to use the command again. This is not a critical system error, but you might experience a delay in using the command-line interface (CLI).</p>
Options	<p><b>none</b>—Display summary statistics about the entries in the routing table.</p> <p><b>logical-system (all   <i>logical-system-name</i>)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p> <p><b>table <i>routing-table-name</i></b>—(Optional) Display summary statistics for all routing tables whose name begins with this string (for example, <b>inet.0</b> and <b>inet6.0</b> are both displayed when you run the <b>show route summary table inet</b> command). If you only want to display statistics for a specific routing table, make sure to enter the exact name of that routing table.</p>
Required Privilege Level	view
List of Sample Output	<a href="#">show route summary on page 2384</a> <a href="#">show route summary table on page 2384</a> <a href="#">show route summary table (with Route Limits Configured for the Routing Table) on page 2385</a>
Output Fields	<a href="#">Table 211 on page 2383</a> lists the output fields for the <b>show route summary</b> command. Output fields are listed in the approximate order in which they appear.

Table 211: show route summary Output Fields

Field Name	Field Description
<b>Router ID</b>	Address of the local routing device.
<b><i>routing-table-name</i></b>	Name of the routing table (for example, <b>inet.0</b> ).
<b>destinations</b>	Number of destinations for which there are routes in the routing table.
<b>routes</b>	<p>Number of routes in the routing table:</p> <ul style="list-style-type: none"> <li>• <b>active</b>—Number of routes that are active.</li> <li>• <b>holddown</b>—Number of routes that are in the hold-down state before being declared inactive.</li> <li>• <b>hidden</b>—Number of routes that are not used because of routing policy.</li> </ul>
<b>Restart complete</b>	<p>All protocols have restarted for this routing table.</p> <p>Restart state:</p> <ul style="list-style-type: none"> <li>• <b>Pending:protocol-name</b>—List of protocols that have not yet completed graceful restart for this routing table.</li> <li>• <b>Complete</b>—All protocols have restarted for this routing table.</li> </ul> <p>For example, if the output shows-</p> <ul style="list-style-type: none"> <li>• LDP.inet.0: 5 routes (4 active, 1 holddown, 0 hidden) Restart Pending: OSPF LDP VPN</li> </ul> <p>This indicates that <b>OSPF</b>, <b>LDP</b>, and <b>VPN</b> protocols did not restart for <b>LDP.inet.0</b> routing table.</p> <ul style="list-style-type: none"> <li>• vpls_1.l2vpn.0: 1 destinations, 1 routes (1 active, 0 holddown, 0 hidden) Restart Complete</li> </ul> <p>This indicates that all protocols have restarted for <b>vpls_1.l2vpn.0</b> routing table.</p>
<b>Limit/Threshold</b>	<p>Displays the configured route limits for the routing table set with the <b>maximum-prefixes</b> and the <b>maximum-paths</b> statements. If you do not configure route limits for the routing table, the show output does not display this information.</p> <ul style="list-style-type: none"> <li>• <b>destinations</b>—The first number represents the maximum number of route prefixes installed in the routing table. The second number represents the number of route prefixes that trigger a warning message.</li> <li>• <b>routes</b>—The first number represents the maximum number of routes. The second number represents the number of routes that trigger a warning message.</li> </ul>
<b>Direct</b>	Routes on the directly connected network.
<b>Local</b>	Local routes.
<b><i>protocol-name</i></b>	Name of the protocol from which the route was learned. For example, <b>OSPF</b> , <b>RSVP</b> , and <b>Static</b> .

## Sample Output

### show route summary

```
user@host> show route summary
Autonomous system number: 69
Router ID: 10.255.71.52
Maximum-ECMP: 32
inet.0: 24 destinations, 25 routes (23 active, 0 holddown, 1 hidden)
Restart Complete
    Direct:    6 routes,    5 active
    Local:    4 routes,    4 active
    OSPF:     5 routes,    4 active
    Static:   7 routes,    7 active
    IGMP:     1 routes,    1 active
    PIM:      2 routes,    2 active

Restart Complete
    RSVP:      2 routes,    2 active

iso.0: 1 destinations, 1 routes (1 active, 0 holddown, 0 hidden)
Restart Complete
    Direct:      1 routes,    1 active

mpls.0: 7 destinations, 7 routes (5 active, 0 holddown, 2 hidden)
Restart Complete
    MPLS:      3 routes,    3 active
    VPLS:      4 routes,    2 active

inet6.0: 5 destinations, 5 routes (5 active, 0 holddown, 0 hidden)
Restart Complete
    Direct:      2 routes,    2 active
    PIM:         2 routes,    2 active
    MLD:         1 routes,    1 active

green.l2vpn.0: 4 destinations, 4 routes (4 active, 0 holddown, 0 hidden)
Restart Complete
    BGP:        2 routes,    2 active
    L2VPN:      2 routes,    2 active

red.l2vpn.0: 3 destinations, 3 routes (3 active, 0 holddown, 0 hidden)
Restart Complete
    BGP:        2 routes,    2 active
    L2VPN:      1 routes,    1 active

bgp.l2vpn.0: 4 destinations, 4 routes (4 active, 0 holddown, 0 hidden)
Restart Complete
    BGP:        4 routes,    4 active
```

### show route summary table

```
user@host> show route summary table inet
Router ID: 192.168.0.1

inet.0: 32 destinations, 34 routes (31 active, 0 holddown, 1 hidden)
    Direct:    6 routes,    5 active
    Local:     9 routes,    9 active
    OSPF:      3 routes,    1 active
    Static:   13 routes,   13 active
```

```

IGMP:      1 routes,      1 active
PIM:       2 routes,      2 active

inet.1: 1 destinations, 1 routes (1 active, 0 holddown, 0 hidden)
Multicast: 1 routes,      1 active

inet6.0: 3 destinations, 3 routes (3 active, 0 holddown, 0 hidden)
Local:    1 routes,      1 active
PIM:      2 routes,      2 active

inet6.1: 1 destinations, 1 routes (1 active, 0 holddown, 0 hidden)
Multicast: 1 routes,      1 active

```

#### show route summary table (with Route Limits Configured for the Routing Table)

```

user@host> show route summary table VPN-A.inet.0
Autonomous system number: 100
Router ID: 10.255.182.142

VPN-A.inet.0: 13 destinations, 14 routes (13 active, 0 holddown, 0 hidden)
Limit/Threshold: 2000/200 destinations 20/12 routes
Direct:      2 routes,      2 active
Local:       1 routes,      1 active
OSPF:        4 routes,      3 active
BGP:         4 routes,      4 active
IGMP:        1 routes,      1 active
PIM:         2 routes,      2 active

```

## show route table

---

**Output Fields** [Table 193 on page 2178](#) describes the output fields for the **show route table** command. Output fields are listed in the approximate order in which they appear.

*Table 212: show route table Output Fields*

Field Name	Field Description
<i>routing-table-name</i>	Name of the routing table (for example, inet.0).
Restart complete	<p>All protocols have restarted for this routing table.</p> <p>Restart state:</p> <ul style="list-style-type: none"> <li>• <b>Pending:</b><i>protocol-name</i>—List of protocols that have not yet completed graceful restart for this routing table.</li> <li>• <b>Complete</b>—All protocols have restarted for this routing table.</li> </ul> <p>For example, if the output shows-</p> <ul style="list-style-type: none"> <li>• LDP.inet.0 : 5 routes (4 active, 1 holddown, 0 hidden) Restart Pending: OSPF LDP VPN</li> </ul> <p>This indicates that <b>OSPF</b>, <b>LDP</b>, and <b>VPN</b> protocols did not restart for the <b>LDP.inet.0</b> routing table.</p> <ul style="list-style-type: none"> <li>• vpls_1.l2vpn.0: 1 destinations, 1 routes (1 active, 0 holddown, 0 hidden) Restart Complete</li> </ul> <p>This indicates that all protocols have restarted for the <b>vpls_1.l2vpn.0</b> routing table.</p>
<i>number destinations</i>	Number of destinations for which there are routes in the routing table.

Table 212: show route table Output Fields (continued)

Field Name	Field Description
<i>number routes</i>	<p>Number of routes in the routing table and total number of routes in the following states:</p> <ul style="list-style-type: none"> <li>• <b>active</b> (routes that are active)</li> <li>• <b>holddown</b> (routes that are in the pending state before being declared inactive)</li> <li>• <b>hidden</b> (routes that are not used because of a routing policy)</li> </ul>
<i>route-destination</i> (entry, announced)	<p>Route destination (for example:10.0.0.1/24). The <b>entry</b> value is the number of routes for this destination, and the <b>announced</b> value is the number of routes being announced for this destination. Sometimes the route destination is presented in another format, such as:</p> <ul style="list-style-type: none"> <li>• <b>MPLS-label</b> (for example, 80001).</li> <li>• <b>interface-name</b> (for example, ge-1/0/2).</li> <li>• <b>neighbor-address:control-word-status:encapsulation type:vc-id:source</b> (Layer 2 circuit only; for example, 10.1.1.195:NoCtrlWord:1:1:Local/96). <ul style="list-style-type: none"> <li>• <b>neighbor-address</b>—Address of the neighbor.</li> <li>• <b>control-word-status</b>—Whether the use of the control word has been negotiated for this virtual circuit: <b>NoCtrlWord</b> or <b>CtrlWord</b>.</li> <li>• <b>encapsulation type</b>—Type of encapsulation, represented by a number: (1) Frame Relay DLCI, (2) ATM AAL5 VCC transport, (3) ATM transparent cell transport, (4) Ethernet, (5) VLAN Ethernet, (6) HDLC, (7) PPP, (8) ATM VCC cell transport, (10) ATM VPC cell transport.</li> <li>• <b>vc-id</b>—Virtual circuit identifier.</li> <li>• <b>source</b>—Source of the advertisement: <b>Local</b> or <b>Remote</b>.</li> </ul> </li> <li>• <b>inclusive multicast Ethernet tag route</b>—Type of route destination represented by (for example, 3:100.100.100.10:100::0::10::100.100.100.10/384): <ul style="list-style-type: none"> <li>• <b>route distinguisher</b>—(8 octets) Route distinguisher (RD) must be the RD of the EVPN instance (EVI) that is advertising the NLRI.</li> <li>• <b>Ethernet tag ID</b>—(4 octets) Identifier of the Ethernet tag. Can set to 0 or to a valid Ethernet tag value.</li> <li>• <b>IP address length</b>—(1 octet) Length of IP address in bits.</li> <li>• <b>originating router's IP address</b>—(4 or 16 octets) Must set to the provider edge (PE) device's IP address. This address should be common for all EVIs on the PE device, and may be the PE device's loopback address.</li> </ul> </li> </ul>
<i>label stacking</i>	<p>(Next-to-the-last-hop routing device for MPLS only) Depth of the MPLS label stack, where the label-popping operation is needed to remove one or more labels from the top of the stack. A pair of routes is displayed, because the pop operation is performed only when the stack depth is two or more labels.</p> <ul style="list-style-type: none"> <li>• <b>S=0 route</b> indicates that a packet with an incoming label stack depth of 2 or more exits this routing device with one fewer label (the label-popping operation is performed).</li> <li>• If there is no <b>S=</b> information, the route is a normal MPLS route, which has a stack depth of 1 (the label-popping operation is not performed).</li> </ul>

Table 212: show route table Output Fields (continued)

Field Name	Field Description
[ <i>protocol, preference</i> ]	<p>Protocol from which the route was learned and the preference value for the route.</p> <ul style="list-style-type: none"> <li>• <b>+</b>—A plus sign indicates the active route, which is the route installed from the routing table into the forwarding table.</li> <li>• <b>-</b>—A hyphen indicates the last active route.</li> <li>• <b>*</b>—An asterisk indicates that the route is both the active and the last active route. An asterisk before a <b>to</b> line indicates the best subpath to the route.</li> </ul> <p>In every routing metric except for the BGP <b>LocalPref</b> attribute, a lesser value is preferred. In order to use common comparison routines, Junos OS stores the 1's complement of the <b>LocalPref</b> value in the <b>Preference2</b> field. For example, if the <b>LocalPref</b> value for Route 1 is 100, the <b>Preference2</b> value is -101. If the <b>LocalPref</b> value for Route 2 is 155, the <b>Preference2</b> value is -156. Route 2 is preferred because it has a higher <b>LocalPref</b> value and a lower <b>Preference2</b> value.</p>
Level	(IS-IS only). In IS-IS, a single AS can be divided into smaller groups called areas. Routing between areas is organized hierarchically, allowing a domain to be administratively divided into smaller areas. This organization is accomplished by configuring Level 1 and Level 2 intermediate systems. Level 1 systems route within an area. When the destination is outside an area, they route toward a Level 2 system. Level 2 intermediate systems route between areas and toward other ASs.
Route Distinguisher	IP subnet augmented with a 64-bit prefix.
PMSI	Provider multicast service interface (MVPN routing table).
Next-hop type	Type of next hop. For a description of possible values for this field, see <a href="#">Table 197 on page 2234</a> .
Next-hop reference count	Number of references made to the next hop.
Flood nexthop branches exceed maximum message	Indicates that the number of flood next-hop branches exceeded the system limit of 32 branches, and only a subset of the flood next-hop branches were installed in the kernel.
Source	IP address of the route source.
Next hop	Network layer address of the directly reachable neighboring system.
via	<p>Interface used to reach the next hop. If there is more than one interface available to the next hop, the name of the interface that is actually used is followed by the word <b>Selected</b>. This field can also contain the following information:</p> <ul style="list-style-type: none"> <li>• <b>Weight</b>—Value used to distinguish primary, secondary, and fast reroute backup routes. Weight information is available when MPLS label-switched path (LSP) link protection, node-link protection, or fast reroute is enabled, or when the standby state is enabled for secondary paths. A lower weight value is preferred. Among routes with the same weight value, load balancing is possible.</li> <li>• <b>Balance</b>—Balance coefficient indicating how traffic of unequal cost is distributed among next hops when a routing device is performing unequal-cost load balancing. This information is available when you enable BGP multipath load balancing.</li> </ul>
Label-switched-path <i>lsp-path-name</i>	Name of the LSP used to reach the next hop.

Table 212: show route table Output Fields (continued)

Field Name	Field Description
Label operation	MPLS label and operation occurring at this routing device. The operation can be <b>pop</b> (where a label is removed from the top of the stack), <b>push</b> (where another label is added to the label stack), or <b>swap</b> (where a label is replaced by another label).
Interface	(Local only) Local interface name.
Protocol next hop	Network layer address of the remote routing device that advertised the prefix. This address is used to derive a forwarding next hop.
Indirect next hop	Index designation used to specify the mapping between protocol next hops, tags, kernel export policy, and the forwarding next hops.
State	State of the route (a route can be in more than one state). See <a href="#">Table 198 on page 2236</a> .
Local AS	AS number of the local routing devices.
Age	How long the route has been known.
AIGP	Accumulated interior gateway protocol (AIGP) BGP attribute.
Metric	Cost value of the indicated route. For routes within an AS, the cost is determined by IGP and the individual protocol metrics. For external routes, destinations, or routing domains, the cost is determined by a preference value.
MED-plus-IGP	Metric value for BGP path selection to which the IGP cost to the next-hop destination has been added.
TTL-Action	For MPLS LSPs, state of the TTL propagation attribute. Can be enabled or disabled for all RSVP-signaled and LDP-signaled LSPs or for specific VRF routing instances.
Task	Name of the protocol that has added the route.
Announcement bits	<p>The number of BGP peers or protocols to which Junos OS has announced this route, followed by the list of the recipients of the announcement. Junos OS can also announce the route to the kernel routing table (KRT) for installing the route into the Packet Forwarding Engine, to a resolve tree, a Layer 2 VC, or even a VPN. For example, <b>n-Resolve inet</b> indicates that the specified route is used for route resolution for next hops found in the routing table.</p> <ul style="list-style-type: none"> <li>• <b>n</b>—An index used by Juniper Networks customer support only.</li> </ul>

Table 212: show route table Output Fields (continued)

Field Name	Field Description
AS path	<p>AS path through which the route was learned. The letters at the end of the AS path indicate the path origin, providing an indication of the state of the route at the point at which the AS path originated:</p> <ul style="list-style-type: none"> <li>• <b>I</b>—IGP.</li> <li>• <b>E</b>—EGP.</li> <li>• <b>Recorded</b>—The AS path is recorded by the sample process (sampled).</li> <li>• <b>?</b>—Incomplete; typically, the AS path was aggregated.</li> </ul> <p>When AS path numbers are included in the route, the format is as follows:</p> <ul style="list-style-type: none"> <li>• <b>[ ]</b>—Brackets enclose the number that precedes the AS path. This number represents the number of ASs present in the AS path, when calculated as defined in RFC 4271. This value is used in the AS-path merge process, as defined in RFC 4893.</li> <li>• <b>[ ]</b>—If more than one AS number is configured on the routing device, or if AS path prepending is configured, brackets enclose the local AS number associated with the AS path.</li> <li>• <b>{ }</b>—Braces enclose AS sets, which are groups of AS numbers in which the order does not matter. A set commonly results from route aggregation. The numbers in each AS set are displayed in ascending order.</li> <li>• <b>( )</b>—Parentheses enclose a confederation.</li> <li>• <b>( [ ] )</b>—Parentheses and brackets enclose a confederation set.</li> </ul> <p><b>NOTE:</b> In Junos OS Release 10.3 and later, the AS path field displays an unrecognized attribute and associated hexadecimal value if BGP receives attribute 128 (attribute set) and you have not configured an independent domain in any routing instance.</p>
validation-state	<p>(BGP-learned routes) Validation status of the route:</p> <ul style="list-style-type: none"> <li>• <b>Invalid</b>—Indicates that the prefix is found, but either the corresponding AS received from the EBGp peer is not the AS that appears in the database, or the prefix length in the BGP update message is longer than the maximum length permitted in the database.</li> <li>• <b>Unknown</b>—Indicates that the prefix is not among the prefixes or prefix ranges in the database.</li> <li>• <b>Unverified</b>—Indicates that the origin of the prefix is not verified against the database. This is because the database got populated and the validation is not called for in the BGP import policy, although origin validation is enabled, or the origin validation is not enabled for the BGP peers.</li> <li>• <b>Valid</b>—Indicates that the prefix and autonomous system pair are found in the database.</li> </ul>
FECs bound to route	Indicates point-to-multipoint root address, multicast source address, and multicast group address when multipoint LDP (M-LDP) inband signaling is configured.
Primary Upstream	When multipoint LDP with multicast-only fast reroute (MoFRR) is configured, indicates the primary upstream path. MoFRR transmits a multicast join message from a receiver toward a source on a primary path, while also transmitting a secondary multicast join message from the receiver toward the source on a backup path.
RPF Nexthops	When multipoint LDP with MoFRR is configured, indicates the reverse-path forwarding (RPF) next-hop information. Data packets are received from both the primary path and the secondary paths. The redundant packets are discarded at topology merge points due to the RPF checks.
Label	Multiple MPLS labels are used to control MoFRR stream selection. Each label represents a separate route, but each references the same interface list check. Only the primary label is forwarded while all others are dropped. Multiple interfaces can receive packets using the same label.

Table 212: show route table Output Fields (continued)

Field Name	Field Description
weight	Value used to distinguish MoFRR primary and backup routes. A lower weight value is preferred. Among routes with the same weight value, load balancing is possible.
VC Label	MPLS label assigned to the Layer 2 circuit virtual connection.
MTU	Maximum transmission unit (MTU) of the Layer 2 circuit.
VLAN ID	VLAN identifier of the Layer 2 circuit.
Prefixes bound to route	Forwarding equivalent class (FEC) bound to this route. Applicable only to routes installed by LDP.
Communities	Community path attribute for the route. See <a href="#">Table 199 on page 2238</a> for all possible values for this field.
Layer2-info: encaps	Layer 2 encapsulation (for example, VPLS).
control flags	Control flags: <b>none</b> or <b>Site Down</b> .
mtu	Maximum transmission unit (MTU) information.
Label-Base, range	First label in a block of labels and label block size. A remote PE routing device uses this first label when sending traffic toward the advertising PE routing device.
status vector	Layer 2 VPN and VPLS network layer reachability information (NLRI).
Accepted Multipath	Current active path when BGP multipath is configured.
Accepted LongLivedStale	The LongLivedStale flag indicates that the route was marked LLGR-stale by this router, as part of the operation of LLGR receiver mode. Either this flag or the LongLivedStaleImport flag might be displayed for a route. Neither of these flags is displayed at the same time as the Stale (ordinary GR stale) flag.
Accepted LongLivedStaleImport	<p>The LongLivedStaleImport flag indicates that the route was marked LLGR-stale when it was received from a peer, or by import policy. Either this flag or the LongLivedStale flag might be displayed for a route. Neither of these flags is displayed at the same time as the Stale (ordinary GR stale) flag.</p> <p>Accept all received BGP long-lived graceful restart (LLGR) and LLGR stale routes learned from configured neighbors and import into the inet.0 routing table</p>
ImportAccepted LongLivedStaleImport	<p>Accept all received BGP long-lived graceful restart (LLGR) and LLGR stale routes learned from configured neighbors and imported into the inet.0 routing table</p> <p>The LongLivedStaleImport flag indicates that the route was marked LLGR-stale when it was received from a peer, or by import policy.</p>
Accepted MultipathContrib	Path currently contributing to BGP multipath.
Localpref	Local preference value included in the route.
Router ID	BGP router ID as advertised by the neighbor in the open message.

*Table 212: show route table Output Fields (continued)*

Field Name	Field Description
Primary Routing Table	In a routing table group, the name of the primary routing table in which the route resides.
Secondary Tables	In a routing table group, the name of one or more secondary tables in which the route resides.

[Table 197 on page 2234](#) describes all possible values for the Next-hop Types output field.

*Table 213: Next-hop Types Output Field Values*

Next-Hop Type	Description
Broadcast (bcast)	Broadcast next hop.
Deny	Deny next hop.
Discard	Discard next hop.
Flood	Flood next hop. Consists of components called branches, up to a maximum of 32 branches. Each flood next-hop branch sends a copy of the traffic to the forwarding interface. Used by point-to-multipoint RSVP, point-to-multipoint LDP, point-to-multipoint CCC, and multicast.
Hold	Next hop is waiting to be resolved into a unicast or multicast type.
Indexed (idxd)	Indexed next hop.
Indirect (indr)	Used with applications that have a protocol next hop address that is remote. You are likely to see this next-hop type for internal BGP (IBGP) routes when the BGP next hop is a BGP neighbor that is not directly connected.
Interface	Used for a network address assigned to an interface. Unlike the router next hop, the interface next hop does not reference any specific node on the network.
Local (locl)	Local address on an interface. This next-hop type causes packets with this destination address to be received locally.
Multicast (mcst)	Wire multicast next hop (limited to the LAN).
Multicast discard (mdsc)	Multicast discard.
Multicast group (mgrp)	Multicast group member.
Receive (rcv)	Receive.
Reject (rjct)	Discard. An ICMP unreachable message was sent.

*Table 213: Next-hop Types Output Field Values (continued)*

Next-Hop Type	Description
Resolve (rslv)	Resolving next hop.
Routed multicast (mcrtr)	Regular multicast next hop.
Router	<p>A specific node or set of nodes to which the routing device forwards packets that match the route prefix.</p> <p>To qualify as a next-hop type router, the route must meet the following criteria:</p> <ul style="list-style-type: none"> <li>• Must not be a direct or local subnet for the routing device.</li> <li>• Must have a next hop that is directly connected to the routing device.</li> </ul>
Table	Routing table next hop.
Unicast (ucst)	Unicast.
Unilist (ulst)	List of unicast next hops. A packet sent to this next hop goes to any next hop in the list.

[Table 198 on page 2236](#) describes all possible values for the State output field. A route can be in more than one state (for example, <Active NoReadvrt Int Ext>).

*Table 214: State Output Field Values*

Value	Description
Accounting	Route needs accounting.
Active	Route is active.
Always Compare MED	Path with a lower multiple exit discriminator (MED) is available.
AS path	Shorter AS path is available.
Cisco Non-deterministic MED selection	Cisco nondeterministic MED is enabled, and a path with a lower MED is available.
Clone	Route is a clone.
Cluster list length	Length of cluster list sent by the route reflector.
Delete	Route has been deleted.
Ex	Exterior route.

*Table 214: State Output Field Values (continued)*

Value	Description
Ext	BGP route received from an external BGP neighbor.
FlashAll	Forces all protocols to be notified of a change to any route, active or inactive, for a prefix. When not set, protocols are informed of a prefix only when the active route changes.
Hidden	Route not used because of routing policy.
IfCheck	Route needs forwarding RPF check.
IGP metric	Path through next hop with lower IGP metric is available.
Inactive reason	Flags for this route, which was not selected as best for a particular destination.
Initial	Route being added.
Int	Interior route.
Int Ext	BGP route received from an internal BGP peer or a BGP confederation peer.
Interior > Exterior > Exterior via Interior	Direct, static, IGP, or EBGp path is available.
Local Preference	Path with a higher local preference value is available.
Martian	Route is a martian (ignored because it is obviously invalid).
MartianOK	Route exempt from martian filtering.
Next hop address	Path with lower metric next hop is available.
No difference	Path from neighbor with lower IP address is available.
NoReadvrt	Route not to be advertised.
NotBest	Route not chosen because it does not have the lowest MED.
Not Best in its group	Incoming BGP AS is not the best of a group (only one AS can be the best).
NotInstall	Route not to be installed in the forwarding table.
Number of gateways	Path with a greater number of next hops is available.
Origin	Path with a lower origin code is available.

Table 214: State Output Field Values (continued)

Value	Description
Pending	Route pending because of a hold-down configured on another route.
Release	Route scheduled for release.
RIB preference	Route from a higher-numbered routing table is available.
Route Distinguisher	64-bit prefix added to IP subnets to make them unique.
Route Metric or MED comparison	Route with a lower metric or MED is available.
Route Preference	Route with lower preference value is available.
Router ID	Path through a neighbor with lower ID is available.
Secondary	Route not a primary route.
Unusable path	Path is not usable because of one of the following conditions: <ul style="list-style-type: none"> <li>The route is damped.</li> <li>The route is rejected by an import policy.</li> <li>The route is unresolved.</li> </ul>
Update source	Last tiebreaker is the lowest IP address value.

Table 199 on page 2238 describes the possible values for the Communities output field.

Table 215: Communities Output Field Values

Value	Description
<i>area-number</i>	4 bytes, encoding a 32-bit area number. For AS-external routes, the value is 0. A nonzero value identifies the route as internal to the OSPF domain, and as within the identified area. Area numbers are relative to a particular OSPF domain.
<b>bandwidth: local AS</b> <b>number:link-bandwidth-number</b>	Link-bandwidth community value used for unequal-cost load balancing. When BGP has several candidate paths available for multipath purposes, it does not perform unequal-cost load balancing according to the link-bandwidth community unless all candidate paths have this attribute.
<b>domain-id</b>	Unique configurable number that identifies the OSPF domain.
<b>domain-id-vendor</b>	Unique configurable number that further identifies the OSPF domain.
<i>link-bandwidth-number</i>	Link-bandwidth number: from 0 through 4,294,967,295 (bytes per second).
<i>local AS number</i>	Local AS number: from 1 through 65,535.

Table 215: Communities Output Field Values (continued)

Value	Description
<i>options</i>	1 byte. Currently this is only used if the route type is <b>5</b> or <b>7</b> . Setting the least significant bit in the field indicates that the route carries a type 2 metric.
<i>origin</i>	(Used with VPNs) Identifies where the route came from.
<i>ospf-route-type</i>	1 byte, encoded as <b>1</b> or <b>2</b> for intra-area routes (depending on whether the route came from a type 1 or a type 2 LSA); <b>3</b> for summary routes; <b>5</b> for external routes (area number must be <b>0</b> ); <b>7</b> for NSSA routes; or <b>129</b> for sham link endpoint addresses.
<i>route-type-vendor</i>	Displays the area number, OSPF route type, and option of the route. This is configured using the BGP extended community attribute <b>0x8000</b> . The format is <i>area-number:ospf-route-type:options</i> .
<i>rte-type</i>	Displays the area number, OSPF route type, and option of the route. This is configured using the BGP extended community attribute <b>0x0306</b> . The format is <i>area-number:ospf-route-type:options</i> .
<i>target</i>	Defines which VPN the route participates in; <b>target</b> has the format <i>32-bit IP address:16-bit number</i> . For example, 10.19.0.0:100.
<i>unknown IANA</i>	Incoming IANA codes with a value between <b>0x1</b> and <b>0x7fff</b> . This code of the BGP extended community attribute is accepted, but it is not recognized.
<i>unknown OSPF vendor community</i>	Incoming IANA codes with a value above <b>0x8000</b> . This code of the BGP extended community attribute is accepted, but it is not recognized.

## Sample Output

### show route table bgp.l2vpn

```

user@host> show route table bgp.l2vpn
bgp.l2vpn.0: 1 destinations, 1 routes (1 active, 0 holddown, 0 hidden)
+ = Active Route, - = Last Active, * = Both

192.168.24.1:1:4:1/96
    *[BGP/170] 01:08:58, localpref 100, from 192.168.24.1

## show route terse

**List of Syntax** [Syntax on page 2424](#)  
[Syntax \(EX Series Switches\) on page 2424](#)

**Syntax** show route terse  
<logical-system (all | *logical-system-name*)>

**Syntax (EX Series Switches)** show route terse

**Release Information** Command introduced before Junos OS Release 7.4.  
Command introduced in Junos OS Release 9.0 for EX Series switches.

**Description** Display a high-level summary of the routes in the routing table.

**NOTE:** For BGP routes, the `show route terse` command displays the local preference attribute and MED instead of the metric1 and metric2 values. This is mostly due to historical reasons.

To display the metric1 and metric2 value of a BGP route, use the [show route extensive](#) command.

**Options** **none**—Display a high-level summary of the routes in the routing table.

**logical-system (all | *logical-system-name*)**—(Optional) Perform this operation on all logical systems or on a particular logical system.

**Required Privilege Level** view

**List of Sample Output** [show route terse on page 2426](#)

**Output Fields** [Table 216 on page 2424](#) describes the output fields for the `show route terse` command. Output fields are listed in the approximate order in which they appear.

*Table 216: show route terse Output Fields*

Field Name	Field Description
<i>routing-table-name</i>	Name of the routing table (for example, inet.0).
<i>number destinations</i>	Number of destinations for which there are routes in the routing table.

Table 216: show route terse Output Fields (continued)

Field Name	Field Description
<i>number routes</i>	Number of routes in the routing table and total number of routes in the following states: <ul style="list-style-type: none"> <li>• <b>active</b> (routes that are active)</li> <li>• <b>holddown</b> (routes that are in the pending state before being declared inactive)</li> <li>• <b>hidden</b> (routes that are not used because of a routing policy)</li> </ul>
<i>route key</i>	Key for the state of the route: <ul style="list-style-type: none"> <li>• <b>+</b>—A plus sign indicates the active route, which is the route installed from the routing table into the forwarding table.</li> <li>• <b>-</b>—A hyphen indicates the last active route.</li> <li>• <b>*</b>—An asterisk indicates that the route is both the active and the last active route. An asterisk before a <b>to</b> line indicates the best subpath to the route.</li> </ul>
<b>A</b>	Active route. An asterisk (*) indicates this is the active route.
<b>V</b>	Validation status of the route: <ul style="list-style-type: none"> <li>• <b>?</b>—Not evaluated. Indicates that the route was not learned through BGP.</li> <li>• <b>I</b>—Invalid. Indicates that the prefix is found, but either the corresponding AS received from the EBGp peer is not the AS that appears in the database, or the prefix length in the BGP update message is longer than the maximum length permitted in the database.</li> <li>• <b>N</b>—Unknown. Indicates that the prefix is not among the prefixes or prefix ranges in the database.</li> <li>• <b>V</b>—Valid. Indicates that the prefix and autonomous system pair are found in the database.</li> </ul>
<i>Destination</i>	Destination of the route.
<b>P</b>	Protocol through which the route was learned: <ul style="list-style-type: none"> <li>• <b>A</b>—Aggregate</li> <li>• <b>B</b>—BGP</li> <li>• <b>C</b>—CCC</li> <li>• <b>D</b>—Direct</li> <li>• <b>G</b>—GMPLS</li> <li>• <b>I</b>—IS-IS</li> <li>• <b>L</b>—L2CKT, L2VPN, LDP, Local</li> <li>• <b>K</b>—Kernel</li> <li>• <b>M</b>—MPLS, MSDP</li> <li>• <b>O</b>—OSPF</li> <li>• <b>P</b>—PIM</li> <li>• <b>R</b>—RIP, RIPng</li> <li>• <b>S</b>—Static</li> <li>• <b>T</b>—Tunnel</li> </ul>
<b>Prf</b>	Preference value of the route. In every routing metric except for the BGP <b>LocalPref</b> attribute, a lesser value is preferred. In order to use common comparison routines, Junos OS stores the 1's complement of the <b>LocalPref</b> value in the <b>Preference2</b> field. For example, if the <b>LocalPref</b> value for Route 1 is 100, the <b>Preference2</b> value is -101. If the <b>LocalPref</b> value for Route 2 is 155, the <b>Preference2</b> value is -156. Route 2 is preferred because it has a higher <b>LocalPref</b> value and a lower <b>Preference2</b> value.

Table 216: show route terse Output Fields (continued)

Field Name	Field Description
Metric 1	First metric value in the route. For routes learned from BGP, this is the MED metric.
Metric 2	Second metric value in the route. For routes learned from BGP, this is the IGP metric.
Next hop	Next hop to the destination. An angle bracket (>) indicates that the route is the selected route.
AS path	<p>AS path through which the route was learned. The letters at the end of the AS path indicate the path origin, providing an indication of the state of the route at the point at which the AS path originated:</p> <ul style="list-style-type: none"> <li>I—IGP.</li> <li>E—EGP.</li> <li>?—Incomplete; typically, the AS path was aggregated.</li> </ul>

## Sample Output

# RIP Operational Commands

- `clear rip general-statistics`
- `clear rip statistics`
- `show rip general-statistics`
- `show rip neighbor`
- `show rip statistics`

## clear rip general-statistics

---

<b>List of Syntax</b>	<a href="#">Syntax on page 2428</a> <a href="#">Syntax (EX Series Switches and QFX Series) on page 2428</a>
<b>Syntax</b>	clear rip general-statistics <logical-system (all   <i>logical-system-name</i> )>
<b>Syntax (EX Series Switches and QFX Series)</b>	clear rip general-statistics
<b>Release Information</b>	Command introduced before Junos OS Release 7.4. Command introduced in Junos OS Release 9.0 for EX Series switches. Command introduced in Junos OS Release 12.1 for the QFX Series. Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.
<b>Description</b>	Clear RIP general statistics.
<b>Options</b>	<b>none</b> —Clear RIP general statistics.  <b>logical-system (all   <i>logical-system-name</i>)</b> —(Optional) Perform this operation on all logical systems or on a particular logical system.
<b>Required Privilege Level</b>	clear
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">show rip general-statistics on page 2431</a></li></ul>
<b>List of Sample Output</b>	<a href="#">clear rip general-statistics on page 2428</a>
<b>Output Fields</b>	When you enter this command, you are provided feedback on the status of your request.

## Sample Output

### clear rip general-statistics

```
user@host> clear rip general-statistics
```

## clear rip statistics

<b>List of Syntax</b>	<a href="#">Syntax on page 2429</a> <a href="#">Syntax (EX Series Switches and QFX Series) on page 2429</a>
<b>Syntax</b>	<pre>clear rip statistics &lt;instance (all   <i>instance-name</i>)&gt; &lt;logical-system (all   <i>logical-system-name</i>)&gt; &lt;neighbor&gt; &lt;peer (all   <i>address</i>)&gt;</pre>
<b>Syntax (EX Series Switches and QFX Series)</b>	<pre>clear rip statistics &lt;instance (all   <i>instance-name</i>)&gt; &lt;neighbor&gt;</pre>
<b>Release Information</b>	<p>Command introduced before Junos OS Release 7.4.</p> <p>Command introduced in Junos OS Release 9.0 for EX Series switches.</p> <p>Command introduced in Junos OS Release 12.1 for the QFX Series.</p> <p>Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.</p>
<b>Description</b>	Clear RIP statistics.
<b>Options</b>	<p><b>none</b>—Reset RIP counters for all neighbors for all routing instances.</p> <p><b>instance (all   <i>instance-name</i>)</b>—(Optional) Clear RIP statistics for all instances or for the specified routing instance only.</p> <p><b>logical-system (all   <i>logical-system-name</i>)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p> <p><b>neighbor</b>—(Optional) Clear RIP statistics for the specified neighbor only.</p> <p><b>peer (all   <i>address</i>)</b>—(Optional) Clear RIP statistics for a single peer or all peers.</p>
<b>Required Privilege Level</b>	clear
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">show rip statistics on page 2435</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">clear rip statistics on page 2429</a>
<b>Output Fields</b>	When you enter this command, you are provided feedback on the status of your request.

## Sample Output

### clear rip statistics

```
user@host> clear rip statistics
```

## show rip general-statistics

**List of Syntax**    [Syntax on page 2431](#)  
                          [Syntax \(EX Series Switches and QFX Series\) on page 2431](#)

**Syntax**    show rip general-statistics  
                  <logical-system (all | *logical-system-name*)>

**Syntax (EX Series Switches and QFX Series)**    show rip general-statistics

**Release Information**    Command introduced before Junos OS Release 7.4.  
                                  Command introduced in Junos OS Release 9.0 for EX Series switches.  
                                  Command introduced in Junos OS Release 12.1 for the QFX Series.  
                                  Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.

**Description**    Display brief RIP statistics.

**Options**    **none**—Display brief RIP statistics.  
                  **logical-system (all | *logical-system-name*)**—(Optional) Perform this operation on all logical systems or on a particular logical system.

**Required Privilege Level**    view

**Related Documentation**    • [clear rip general-statistics on page 2428](#)

**List of Sample Output**    [show rip general-statistics on page 2432](#)

**Output Fields**    [Table 217 on page 2431](#) lists the output fields for the **show rip general-statistics** command. Output fields are listed in the approximate order in which they appear.

*Table 217: show rip general-statistics Output Fields*

Field Name	Field Description
bad msgs	Number of invalid messages received.
no rcv intf	Number of packets received with no matching interface.
curr memory	Amount of memory currently used by RIP.
max memory	Most memory used by RIP.

## Sample Output

### show rip general-statistics

```
user@host> show rip general-statistics
RIPv2 I/O info:
  bad msgs      :      0
  no recv intf  :      0
  curr memory   :      0
  max memory    :      0
```

## show rip neighbor

---

<b>List of Syntax</b>	<a href="#">Syntax on page 2433</a> <a href="#">Syntax (EX Series Switches and QFX Series) on page 2433</a>
<b>Syntax</b>	<pre>show rip neighbor &lt;instance (all   <i>instance-name</i>)&gt; &lt;logical-system (all   <i>logical-system-name</i>)&gt; &lt;name&gt;</pre>
<b>Syntax (EX Series Switches and QFX Series)</b>	<pre>show rip neighbor &lt;instance (all   <i>instance-name</i>)&gt; &lt;name&gt;</pre>
<b>Release Information</b>	<p>Command introduced before Junos OS Release 7.4.</p> <p>Command introduced in Junos OS Release 9.0 for EX Series switches.</p> <p>Command introduced in Junos OS Release 12.1 for the QFX Series.</p> <p>Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.</p>
<b>Description</b>	Display information about RIP neighbors.
<b>Options</b>	<p><b>none</b>—Display information about all RIP neighbors for all instances.</p> <p><b>instance (all   <i>instance-name</i>)</b>—(Optional) Display RIP neighbor information for all instances or for only the specified routing instance.</p> <p><b>logical-system (all   <i>logical-system-name</i>)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p> <p><b>name</b>—(Optional) Display detailed information about only the specified RIP neighbor.</p>
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">show rip neighbor on page 2434</a> <a href="#">show rip neighbor (With Demand Circuits Configured) on page 2434</a>
<b>Output Fields</b>	<p><a href="#">Table 218 on page 2434</a> lists the output fields for the <b>show rip neighbor</b> command. Output fields are listed in the approximate order in which they appear.</p>

Table 218: show rip neighbor Output Fields

Field Name	Field Description
<b>Neighbor</b>	Name of the RIP neighbor.  <b>NOTE:</b> Beginning with Junos OS Release 11.1, when you configure demand circuits, the output displays a demand circuit (DC) flag next to neighbor interfaces configured for demand circuits.  If you configure demand circuits at the <b>[edit protocols rip group group-name neighbor neighbor-name]</b> hierarchy level, the output shows only the neighboring interface that you specifically configured as a demand circuit. If you configure demand circuits at the <b>[edit protocols rip group group-name]</b> hierarchy level, all of the interfaces in the group are configured as demand circuits. Therefore, the output shows all of the interfaces in that group as demand circuits.
<b>State</b>	State of the connection: <b>Up</b> or <b>Dn</b> (Down).
<b>Source Address</b>	Address of the port on the local router.
<b>Destination Address</b>	Address of the port on the remote router.
<b>Send Mode</b>	Send options: <b>broadcast</b> , <b>multicast</b> , <b>none</b> , or <b>version 1</b> .
<b>Receive Mode</b>	Type of packets to accept: <b>both</b> , <b>none</b> , <b>version 1</b> , or <b>version 2</b> .
<b>In Met</b>	Metric added to incoming routes when advertising into RIP routes that were learned from other protocols.

## Sample Output

### show rip neighbor

```

user@host> show rip neighbor
Neighbor      Local  Source  Destination  Send  Receive  In
-----
ge-2/3/0.0    Up    192.168.9.105  192.168.9.107  bcast  both     1
at-5/1/1.42    Dn    (null)      (null)        mcast  v2 only  3
at-5/1/0.42    Dn    (null)      (null)        mcast  both     3
at-5/1/0.0     Up    198.51.100.0  224.0.0.9     mcast  both     3
so-0/0/0.0     Up    192.168.9.97  224.0.0.9     mcast  both     3

```

### show rip neighbor (With Demand Circuits Configured)

```

user@host> show rip neighbor
Neighbor      Local  Source  Destination  Send  Receive  In
-----
so-0/1/0.0(DC) Up    10.10.10.2  224.0.0.9     mcast  both     1
so-0/2/0.0(DC) Up    192.0.2.2   224.0.0.9     mcast  both     1

```

## show rip statistics

---

<b>List of Syntax</b>	<a href="#">Syntax on page 2435</a> <a href="#">Syntax (EX Series Switches and QFX Series) on page 2435</a>
<b>Syntax</b>	<pre>show rip statistics &lt;instance (all   <i>instance-name</i>)&gt; &lt;logical-system (all   <i>logical-system-name</i>)&gt; &lt;name&gt; &lt;peer (all   <i>address</i>)&gt;</pre>
<b>Syntax (EX Series Switches and QFX Series)</b>	<pre>show rip statistics &lt;instance (all   <i>instance-name</i>)&gt; &lt;name&gt;</pre>
<b>Release Information</b>	<p>Command introduced before Junos OS Release 7.4.</p> <p>Command introduced in Junos OS Release 9.0 for EX Series switches.</p> <p>Command introduced in Junos OS Release 12.1 for the QFX Series.</p> <p>Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.</p>
<b>Description</b>	Display RIP statistics about messages sent and received on an interface, as well as information received from advertisements from other routing devices.
<b>Options</b>	<p><b>none</b>—Display RIP statistics for all routing instances.</p> <p><b>instance (all   <i>instance-name</i>)</b>—(Optional) Display RIP statistics for all instances or for only the specified routing instance.</p> <p><b>logical-system (all   <i>logical-system-name</i>)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p> <p><b><i>name</i></b>—(Optional) Display detailed information about only the specified RIP neighbor.</p> <p><b>peer (all   <i>address</i>)</b>—(Optional) Display RIP statistics for a single peer or all peers.</p>
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">clear rip statistics on page 2429</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">show rip statistics on page 2437</a>
<b>Output Fields</b>	<p><a href="#">Table 219 on page 2436</a> lists the output fields for the <b>show rip statistics</b> command. Output fields are listed in the approximate order in which they appear.</p>

Table 219: show rip statistics Output Fields

Field Name	Field Description
<b>RIP info</b>	<p>Information about RIP on the specified interface:</p> <ul style="list-style-type: none"> <li>• <b>port</b>—UDP port number used for RIP.</li> <li>• <b>update interval</b>—Interval between routing table updates, in seconds.</li> <li>• <b>holddown</b>—Hold-down interval, in seconds.</li> <li>• <b>timeout</b>—Timeout interval, in seconds.</li> <li>• <b>restart in progress</b>—Graceful restart status. Displayed when RIP is or has been in the process of graceful restart.</li> <li>• <b>restart time</b>—Estimated time for the graceful restart to finish, in seconds.</li> <li>• <b>restart will complete in</b>—Remaining time for the graceful restart to finish, in seconds.</li> <li>• <b>rts learned</b>—Number of routes learned through RIP.</li> <li>• <b>rts held down</b>—Number of routes held down by RIP.</li> <li>• <b>rqsts dropped</b>—Number of received request packets that were dropped.</li> <li>• <b>resps dropped</b>—Number of received response packets that were dropped.</li> </ul>
<b>logical-interface</b>	<p>Name of the logical interface and its statistics:</p> <ul style="list-style-type: none"> <li>• <b>routes learned</b>—Number of routes learned on the logical interface.</li> <li>• <b>routes advertised</b>—Number of routes advertised by the logical interface.</li> </ul>
<b>Counter</b>	<p>List of counter types:</p> <ul style="list-style-type: none"> <li>• <b>Updates Sent</b>—Number of update messages sent.</li> <li>• <b>Triggered Updates Sent</b>—Number of triggered update messages sent.</li> <li>• <b>Responses Sent</b>—Number of response messages sent.</li> <li>• <b>Bad Messages</b>—Number of invalid messages received.</li> <li>• <b>RIPv1 Updates Received</b>—Number of RIPv1 update messages received.</li> <li>• <b>RIPv1 Bad Route Entries</b>—Number of RIPv1 invalid route entry messages received.</li> <li>• <b>RIPv1 Updates Ignored</b>—Number of RIPv1 update messages ignored.</li> <li>• <b>RIPv2 Updates Received</b>—Number of RIPv2 update messages received.</li> <li>• <b>RIPv2 Bad Route Entries</b>—Number of RIPv2 invalid route entry messages received.</li> <li>• <b>RIPv2 Updates Ignored</b>—Number of RIPv2 update messages that were ignored.</li> <li>• <b>Authentication Failures</b>—Number of received update messages that failed authentication.</li> <li>• <b>RIP Requests Received</b>—Number of RIP request messages received.</li> <li>• <b>RIP Requests Ignored</b>—Number of RIP request messages ignored.</li> </ul>
<b>Total</b>	Total number of packets for the selected counter.
<b>Last 5 min</b>	Number of packets for the selected counter in the most recent 5-minute period.
<b>Last minute</b>	Number of packets for the selected counter in the most recent 1-minute period.

## Sample Output

### show rip statistics

```

user@host> show rip statistics so-0/0/0.0
RIP info: port 520; update interval: 30s; holddown 180s; timeout 120s
restart in progress: restart time 60s; restart will complete in 55s
    rts learned   rts held down  rqsts dropped  resps dropped
              0             0             0             0
so-0/0/0.0: 0 routes learned; 501 routes advertised
Counter      Total      Last 5 min  Last minute
-----
Updates Sent          0          0          0
Triggered Updates Sent  0          0          0

## CHAPTER 27

# RIPng Operational Commands

- `clear ripng general-statistics`
- `clear ripng statistics`
- `show ripng general-statistics`
- `show ripng neighbor`
- `show ripng statistics`

## clear ripng general-statistics

---

<b>List of Syntax</b>	<a href="#">Syntax on page 2440</a> <a href="#">Syntax (EX Series Switches) on page 2440</a>
<b>Syntax</b>	clear ripng general-statistics <logical-system (all   <i>logical-system-name</i> )>
<b>Syntax (EX Series Switches)</b>	clear ripng general-statistics
<b>Release Information</b>	Command introduced before Junos OS Release 7.4. Command introduced in Junos OS Release 9.0 for EX Series switches.
<b>Description</b>	Clear RIP next generation (RIPng) general statistics.
<b>Options</b>	<b>none</b> —Clear RIPng general statistics.  <b>logical-system (all   <i>logical-system-name</i>)</b> —(Optional) Perform this operation on all logical systems or on a particular logical system.
<b>Required Privilege Level</b>	clear
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">show ripng general-statistics on page 2442</a></li></ul>
<b>List of Sample Output</b>	<a href="#">clear ripng general-statistics on page 2440</a>
<b>Output Fields</b>	When you enter this command, you are provided feedback on the status of your request.

## Sample Output

### clear ripng general-statistics

```
user@host> clear ripng general-statistics
```

## clear ripng statistics

---

<b>List of Syntax</b>	<a href="#">Syntax on page 2441</a> <a href="#">Syntax (EX Series Switch) on page 2441</a>
<b>Syntax</b>	clear ripng statistics < <i>instance</i>   <i>name</i> > <logical-system (all   <i>logical-system-name</i> )>
<b>Syntax (EX Series Switch)</b>	clear ripng statistics < <i>instance</i>   <i>name</i> >
<b>Release Information</b>	Command introduced before Junos OS Release 7.4. Command introduced in Junos OS Release 9.0 for EX Series switches.
<b>Description</b>	Clear RIP next-generation (RIPng) statistics.
<b>Options</b>	<p><b>none</b>—Reset RIPng counters for all neighbors for all routing instances.</p> <p><b>instance</b>—(Optional) Reset RIPng counters for the specified instance.</p> <p><b>logical-system (all   <i>logical-system-name</i>)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p> <p><b>name</b>—(Optional) Reset RIPng counters for the specified neighbor.</p>
<b>Required Privilege Level</b>	clear
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">show ripng statistics on page 2446</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">clear ripng statistics on page 2441</a>
<b>Output Fields</b>	When you enter this command, you are provided feedback on the status of your request.

## Sample Output

### clear ripng statistics

```
user@host> clear ripng statistics
```

## show ripng general-statistics

---

List of Syntax	<a href="#">Syntax on page 2442</a> <a href="#">Syntax (EX Series Switch) on page 2442</a>
Syntax	show ripng general-statistics <logical-system (all   <i>logical-system-name</i> )>
Syntax (EX Series Switch)	show ripng general-statistics
Release Information	Command introduced before Junos OS Release 7.4. Command introduced in Junos OS Release 9.0 for EX Series switches.
Description	Display general RIP next-generation (RIPng) statistics.
Options	<b>none</b> —Display general RIPng statistics.  <b>logical-system (all   <i>logical-system-name</i>)</b> —(Optional) Perform this operation on all logical systems or on a particular logical system.
Required Privilege Level	view
Related Documentation	<ul style="list-style-type: none"><li>• <a href="#">clear ripng general-statistics on page 2440</a></li></ul>
List of Sample Output	<a href="#">show ripng general-statistics on page 2443</a>
Output Fields	<a href="#">Table 220 on page 2442</a> lists the output fields for the <b>show ripng general-statistics</b> command. Output fields are listed in the approximate order in which they appear.

*Table 220: show ripng general-statistics Output Fields*

Field Name	Field Description
bad msgs	Number of invalid messages received.
no rcv intf	Number of packets received with no matching interface.
curr memory	Amount of memory currently used by RIPng.
max memory	Most memory used by RIPng.

## Sample Output

### show ripng general-statistics

```
user@host> show ripng general-statistics
RIPng I/O info:
  bad msgs      :      0
  no recv intf  :      0
  curr memory   :      0
  max memory    :      0
```

## show ripng neighbor

**List of Syntax** [Syntax on page 2444](#)  
[Syntax \(EX Series Switch\) on page 2444](#)

**Syntax** show ripng neighbor  
 <logical-system (all | *logical-system-name*)>  
 <*name*>

**Syntax (EX Series Switch)** show ripng neighbor  
 <*name*>

**Release Information** Command introduced before Junos OS Release 7.4.  
 Command introduced in Junos OS Release 9.0 for EX Series switches.

**Description** Display information about RIP next-generation (RIPng) neighbors.

**Options** **none**—Display information about all RIPng neighbors.

**logical-system (all | *logical-system-name*)**—(Optional) Perform this operation on all logical systems or on a particular logical system.

***name***—(Optional) Display detailed information about a specific RIPng neighbor.

**Required Privilege Level** view

**List of Sample Output** [show ripng neighbor on page 2445](#)

**Output Fields** [Table 221 on page 2444](#) lists the output fields for the **show ripng neighbor** command. Output fields are listed in the approximate order in which they appear.

*Table 221: show ripng neighbor Output Fields*

Field Name	Field Description
<b>Neighbor</b>	Name of RIPng neighbor.
<b>State</b>	State of the connection: <b>Up</b> or <b>Dn</b> (Down).
<b>Source Address</b>	Source address.
<b>Destination Address</b>	Destination address.
<b>Send</b>	Send options: <b>broadcast</b> , <b>multicast</b> , <b>none</b> , <b>version 1</b> , or <b>yes</b> .
<b>Recv</b>	Type of packets to accept: <b>both</b> , <b>none</b> , <b>version 1</b> , or <b>yes</b> .

Table 221: show ripng neighbor Output Fields (continued)

Field Name	Field Description
In Met	Metric added to incoming routes when advertising into RIPng routes that were learned from other protocols.

Sample Output

show ripng neighbor

```
user@host> show ripng neighbor
Neighbor      State  Source Address          Dest Address  Send Recv Met
-----
fe-0/0/2.0    Up    fe80::290:69ff:fe68:b002  ff02::9      yes  yes   1
```

## show ripng statistics

---

List of Syntax	<a href="#">Syntax on page 2446</a> <a href="#">Syntax (EX Series Switch) on page 2446</a>
Syntax	<code>show ripng statistics</code> <code>&lt;logical-system (all   <i>logical-system-name</i>)&gt;</code> <code>&lt;<i>name</i>&gt;</code>
Syntax (EX Series Switch)	<code>show ripng statistics</code> <code>&lt;<i>name</i>&gt;</code>
Release Information	Command introduced before Junos OS Release 7.4. Command introduced in Junos OS Release 9.0 for EX Series switches.
Description	Display RIP next generation (RIPng) statistics about messages sent and received on an interface, as well as information received from advertisements from other routing devices.
Options	<b>none</b> —Display RIPng statistics for all neighbors.  <b>logical-system (all   <i>logical-system-name</i>)</b> —(Optional) Perform this operation on all logical systems or on a particular logical system.  <b><i>name</i></b> —(Optional) Display detailed information about a specific RIPng neighbor.

## CHAPTER 28

# Firewall Filter Operational Commands

- `clear firewall`
- `show firewall`
- `show firewall filter version`
- `show firewall log`
- `show firewall prefix-action-stats`
- `show firewall templates-in-use`
- `show policer`

## clear firewall

---

**List of Syntax**   [Syntax on page 2450](#)  
[Syntax \(EX Series Switches\) on page 2450](#)

**Syntax**   `clear firewall (all | counter counter-name | filter filter-name | log (all | logical-system-name) | logical-system logical-system-name)`

**Syntax (EX Series Switches)**   `clear firewall (all | counter counter-name | filter filter-name | log (all | logical-system-name) | policer counter (all | counter-id counter-index))`

**Release Information**   Command introduced before Junos OS Release 7.4.  
Command introduced in Junos OS Release 9.0 for EX Series switches.  
**logical-system** option introduced in Junos OS Release 9.3.  
**log** option introduced before Junos OS Release 11.4.

**Description**   Clear statistics about configured firewall filters.

When you clear the counters of a filter, this impacts not only the counters shown by the CLI, but also the ones tracked by SNMP2.

Subscriber management uses firewall filters to capture and report the volume-based service accounting counters that are used for subscriber billing. The **clear firewall** command also clears the service accounting counters that are reported to the RADIUS accounting server. For this reason, you must be cautious in specifying which firewall statistics you want to clear.

**NOTE:** The **clear firewall** command cannot be used to clear the Routing Engine filter counters on a backup Routing Engine that is enabled for graceful Routing Engine switchover (GRES).

---

If you clear statistics for firewall filters that are applied to Trio-based DPCs and that also use the **prefix-action** action on matched packets, wait at least 5 seconds before you enter the **show firewall prefix-action-stats** command. A 5-second pause between issuing the **clear firewall** and **show firewall prefix-action-stats** commands avoids a possible timeout of the **show firewall prefix-action-stats** command.

**Options**   **all**—Clear the packet and byte counts for all filters. On EX Series switches, this option also clears the packet counts for all policer counters.

**counter *counter-name***—Clear the packet and byte counts for a filter counter that has been configured with the counter firewall filter action.

**filter *filter-name***—Clear the packet and byte counts for the specified firewall filter.

**log (all | *logical-system-name*)**—Clear log entries for IPv4 firewall filters that have **then log** as an action. Use **log all** to clear all log entries or **log *logical-system-name*** to clear log entries for the specified logical system.

**logical-system *logical-system-name***—Clear the packet and byte counts for the specified logical system.

**policer counter (all | counter-id *counter-index*)**—(EX8200 switches only) Clear all policer counters using the **policer counter all** command, or clear a specific policer counter using the **policer counter counter-id *counter-index*** command. The value of *counter-index* can be 0, 1, or 2.

**Required Privilege Level**

clear

**Related Documentation**

- [show firewall on page 2452](#)

**List of Sample Output**

[clear firewall all on page 2451](#)  
[clear firewall \(counter counter-name\) on page 2451](#)  
[clear firewall \(filter filter-name\) on page 2451](#)  
[clear firewall \(policer counter all\) \(EX8200 Switch\) on page 2451](#)  
[clear firewall \(policer counter counter-id counter-index\) \(EX8200 Switch\) on page 2451](#)

## Sample Output

clear firewall all

```
user@host> clear firewall all
```

clear firewall (counter counter-name)

```
user@host> clear firewall counter port-filter-counter
```

clear firewall (filter filter-name)

```
user@host> clear firewall filter ingress-port-filter
```

clear firewall (policer counter all) (EX8200 Switch)

```
user@switch> clear firewall policer counter all
```

clear firewall (policer counter counter-id counter-index) (EX8200 Switch)

```
user@switch> clear firewall policer counter counter-id 0
```

## show firewall

---

**List of Syntax**    [Syntax on page 2452](#)  
                          [Syntax \(EX Series Switches\) on page 2452](#)

**Syntax**    show firewall  
              <application (CFM | eswd | RMPS)>>  
              <counter *counter-name*>  
              <detail>  
              <filter *filter-name*>  
              <filter regex *regular-expression*>  
              <logical-system (all | *logical-system-name*)>  
              <terse>

**Syntax (EX Series Switches)**    show firewall  
  <application (CFM | eswd | RMPS)>>  
  <counter *counter-name*>  
  <detail>  
  <filter *filter-name*>  
  <filter regex *regular-expression*>  
  <log <(detail | interface *interface-name*)>>  
  <policer counters <(detail | counter-id *counter-index* <detail>)>>  
  <terse>

**Release Information**    Command introduced before Junos OS Release 7.4.  
                              Command introduced in Junos OS Release 9.0 for EX Series switches.  
                              Option **logical-system** introduced in Junos OS Release 9.3.  
                              Option **terse** introduced in Junos OS Release 9.4.  
                              Option **policer counters** introduced in Junos OS Release 12.2 for EX Series switches.  
                              Option **detail** introduced in Junos OS Release 12.3 for EX Series switches.  
                              Option **detail** introduced in Junos OS Release 14.1 for MX Series routers.  
                              Option **regex *regular-expression*** introduced in Junos OS Release 14.2.

**Description**    Display enhanced statistics and counters for all configured firewall filters.

**Options**    **none**—(Optional) Display statistics and counters for all configured firewall filters and counters. For EX Series switches, this command also displays statistics about all configured policers.

**application (CFM | eswd | RMPS)**—(Optional) Show firewall elements owned by the selected software component:

- Connectivity Fault Management (CFM)
- Ethernet switching daemon (eswd)—Shows only on devices that support it.
- Resource Management and Packet Steering (RMPS)

**counter *counter-name***—(Optional) Name of a filter counter.

**detail**—(EX Series switches and MX Series routers only) (Optional) Display firewall filter statistics and enhanced policer statistics and counters.

**filter *filter-name***—(Optional) Name of a configured filter.

**filter regex *regular-expression***—(Optional) Regular expression that matches the names of a subset of filters.

**logical-system (all | *logical-system-name*)**—(Optional) Perform this operation on all logical systems or on a particular logical system.

**log**—(Optional) Display log entries for firewall filters.

**log <(detail | interface *interface-name*)>**—(EX Series switches only) (Optional) Display detailed log entries of firewall activity or log information about a specific interface.

**policer counters <(detail | counter-id *counter-index* <detail>)>**—(EX8200 switches only) (Optional) Display enhanced policer counter statistics in brief or in detail.

**terse**—(Optional) Display firewall filter names only.

**Required Privilege Level**

view

**Output Fields**

[Table 223 on page 2454](#) lists the output fields for the **show firewall** command. Output fields are listed in the approximate order in which they appear.

Table 223: show firewall Output Fields

Field Name	Field Description
<b>Filter</b>	<p>Name of a filter that has been configured with the <b>filter</b> statement at the <b>[edit firewall]</b> hierarchy level.</p> <p>Except on EX Series switches:</p> <ul style="list-style-type: none"> <li>When an interface-specific filter is displayed, the name of the filter is followed by the full interface name and by either <b>-i</b> for an input filter or <b>-o</b> for an output filter.</li> <li>When dynamic filters are displayed, the name of the filter is followed by the full interface name and by either <b>-in</b> for an input filter or <b>-out</b> for an output filter. When a logical system-specific filter is displayed, the name of the filter is prefixed with two underscore (__) characters and the name of the logical system (for example, __ls1/filter1).</li> <li>When a service filter is displayed that uses a service set, the separator between the service-set name and the service-filter name is a semicolon (:).</li> </ul> <p><b>NOTE:</b> For <b>bridge family filter</b>, the <b>ip-protocol</b> match criteria is supported only for IPv4 and not for IPv6. This is applicable for line cards that support the Junos Trio chipset, such as the MX 3D MPC line cards.</p>
<b>Counters</b>	<p>Display filter counter information:</p> <ul style="list-style-type: none"> <li><b>Name</b>—Name of a filter counter that has been configured with the <b>counter</b> firewall filter action.</li> <li><b>Bytes</b>—Number of bytes that match the filter term under which the <b>counter</b> action is specified.</li> <li><b>Packets</b>—Number of packets that matched the filter term under which the <b>counter</b> action is specified.</li> </ul> <p><b>NOTE:</b> On M and T Series routers, firewall filters cannot count <b>ip-options</b> packets on a per option type and per interface basis. A limited work around is to use the <b>show pfe statistics ip options</b> command to see <b>ip-options</b> statistics on a per Packet Forwarding Engine (PFE) basis. See <i>show pfe statistics ip</i> for sample output.</p>
<b>Policers</b>	<p>Display policer information:</p> <ul style="list-style-type: none"> <li><b>Name</b>—Name of policer.</li> <li><b>Bytes</b>—(For two-color policers on MX Series routers and EX Series switches, and for hierarchical policers on interfaces hosted on MICs and MPCs in MX Series routers) Number of bytes that match the filter term under which the policer action is specified. This is only the number out-of-specification (out-of-spec) byte counts, not all the bytes in all packets policed by the policer. For other combinations of policer type, device, and line card type, this field is blank.</li> <li><b>Packets</b>—Number of packets that matched the filter term under which the policer action is specified. This is only the number of out-of-specification (out-of-spec) packet counts, not all packets policed by the policer.</li> </ul>
<b>Policer Counter Index</b>	(EX8200 switch only) Global management counter ID. The counter ID value ( <i>counter-index</i> ) can be 0, 1, or 2.
<b>Green</b>	(EX8200 switch only) Number of packets within the limits. The number of packets is smaller than the committed information rate (CIR).
<b>Yellow</b>	(EX8200 switch only) Number of packets partially within the limits. The number of packets is greater than the CIR, but the burst size is within the excess burst size (EBS) limit.

Table 223: *show firewall Output Fields (continued)*

Field Name	Field Description
<b>Discard</b>	(EX8200 switch only) Number of discarded packets.
<b>Bytes</b>	(EX8200 switch only) Number of green, yellow, red, or discarded packets in bytes.
<b>Packets</b>	(EX8200 switch only) Number of green, yellow, red, or discarded packets.
<b>Filter name</b>	(EX8200 switch only) Name of the filter with a term associated to a policer.
<b>Term name</b>	(EX8200 switch only) Name of the term associated with a policer.
<b>Policer name</b>	(EX8200 switch only) Name of the policer that is associated with a global management counter.
P1-t1	<ul style="list-style-type: none"> <li>• OOS packet statistics for packets that are marked out-of-specification (out-of-spec) by the policer. Changes to all packets that have out-of-spec actions, such as discard, color marking, or forwarding-class, are included in this counter.</li> <li>• Offered packet statistics for traffic subjected to policing.</li> <li>• Transmitted packet statistics for traffic that is not discarded by the policer. When the policer action is discard, the statistics are the same as the in-spec statistics; when the policer action is non-discard (loss-priority or forwarding-class), the statistics are included in this counter.</li> </ul>

## Sample Output

### show firewall filter (MX Series Router and EX Series Switch)

```
user@host> show firewall filter test
Filter: test
Counters:
Name          Bytes      Packets
Counter-1     0          0
Counter-2     0          0
Policers:
Name          Bytes      Packets
Policer-1    2770      70
```

### show firewall filter (non MX Series Router and EX Series Switch)

```
user@host> show firewall filter test
Filter: test
Counters:

## show firewall filter version

<b>Syntax</b>	show firewall filter version <filter-name>
<b>Release Information</b>	Command introduced in Junos OS Release 10.2R2.
<b>Description</b>	Display the version number of the installed firewall filter in the Routing Engine.
<b>Options</b>	none—(Optional) Display the version number of all installed firewall filters.  filter-name—(Optional) Name of a configured filter. If you specify the name of a filter, only the version number of that filter is displayed.
<b>Additional Information</b>	The initial version number is 1. This number increments by one when you modify the firewall filter settings or an associated prefix action. The maximum version number is 4,294,967,295. When the version number reaches 4,294,967,295, this number is reset to 1.
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">show firewall filter version on page 2460</a>
<b>Output Fields</b>	<a href="#">Table 224 on page 2460</a> lists the output fields for the <b>show firewall filter version</b> command. Output fields are listed in the approximate order in which they appear.

Table 224: show firewall filter version Output Fields

Field Name	Field Description
Filter	Name of a filter that has been configured with the <b>filter</b> statement at the <b>[edit firewall]</b> hierarchy level.
Version	Display the version number of the firewall filter.

## Sample Output

### show firewall filter version

```
user@host> show firewall filter version
Filter version information :
Filter                                     Version
test                                     10
```

## show firewall log

## show firewall templates-in-use

---

<b>Syntax</b>	show firewall templates-in-use
<b>Release Information</b>	Command introduced in Junos OS Release 12.3.
<b>Description</b>	Display the names of configured filter templates that are currently in use by dynamic subscribers and the number of times each template is referenced.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">clear firewall on page 2450</a></li><li>• <a href="#">show firewall log on page 2461</a></li></ul>
<b>List of Sample Output</b>	<a href="#">show firewall templates-in-use on page 2467</a>
<b>Output Fields</b>	<a href="#">Table 227 on page 2466</a> lists the output fields for the <b>show firewall templates-in-use</b> command. Output fields are listed in the approximate order in which they appear.

*Table 227: show firewall templates-in-use Output Fields*

Field Name	Field Description
<b>Filter Template</b>	Name of a filter that has been configured using the <b>filter</b> statement at either the <b>[edit firewall]</b> or <b>[edit dynamic-profiles <i>profile-name</i> firewall]</b> hierarchy and is being used as a template for dynamic subscriber filtering.
<b>Reference Count</b>	Number of times the filter has been referenced by subscribers accessing the network.

## Sample Output

### show firewall templates-in-use

```
user@host> show firewall templates-in-use
```

Filter Template	Dynamic	Subscribers	Reference Counts
-----			-----
egressFilter			10
ingressFilter			10
dfilter			5
dfilter-pol			5

## show policer

<b>Syntax</b>	show policer <detail> <policer-name>
<b>Release Information</b>	Command introduced before Junos OS Release 7.4. Option <b>detail</b> introduced in Junos OS Release 12.3.
<b>Description</b>	Display the number of policed packets for a given policer or an aggregate policer. An aggregate policer is an aggregate of different policers on the same logical interface.
<b>Options</b>	<b>none</b> —Display the number of policed packets for all configured policers.  <b>detail</b> —(Optional) Display enhanced statistics and counters for policers.  <b>policer-name</b> —(Optional) Display the number of policed packets for the specified policer.
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">show policer (MX Series) on page 2469</a> <a href="#">show policer (non MX Series Router) on page 2469</a> <a href="#">show policer (Aggregate Policer, non MX Series Router) on page 2469</a> <a href="#">show policer detail on page 2470</a>
<b>Output Fields</b>	<a href="#">Table 228 on page 2468</a> lists the output fields for the <b>show policer</b> command. Output fields are listed in the approximate order in which they appear.

*Table 228: show policer Output Fields*

Field Name	Field Description
<b>Name</b>	Name of the policer.
<b>Bytes</b>	<ul style="list-style-type: none"> <li>(For two-color policers on MX Series routers, and for hierarchical policers on MS-DPC, MIC, and MPC interfaces on MX Series routers)—Total number of bytes policed by the specified policer. For other combinations of policer type, device, and line card type, this field is blank.</li> <li>(T Series and M10i)—Not applicable. The Bytes information is not displayed.</li> </ul>
<b>Packets</b>	Total number of packets policed by the specified policer.

Table 228: show policer Output Fields (continued)

Field Name	Field Description
Policer detail	<ul style="list-style-type: none"> <li>OOS packet statistics for packets that are marked out-of-specification by the policer. Changes to all packets that have out-of-specification actions, such as discard, color marking, or forwarding-class, are included in this counter.</li> <li>Offered packet statistics for traffic subjected to policing.</li> <li>Transmitted packet statistics for traffic that is not discarded by the policer. When the policer action is discard, the statistics are the same as the within-specification statistics; when the policer action is non-discard (loss-priority or forwarding-class), the statistics are included in this counter.</li> </ul>

## Sample Output

### show policer (MX Series)

```

user@host> show policer
Policers:
Name                                     Bytes      Packets

## CHAPTER 29

# Layer 2 Bridging and Switching Operational Commands

- clear bridge mac-table
- clear error bpdu interface
- clear error mac-rewrite
- show bridge domain
- show bridge flood
- show bridge mac-table
- show bridge statistics
- show l2-learning global-information
- show l2-learning global-mac-count
- show l2-learning instance
- show l2-learning interface
- show mac-rewrite interface

## clear bridge mac-table

---

<b>Syntax</b>	<code>clear bridge mac-table</code> <code>&lt;bridge-domain (all   <i>bridge-domain-name</i>)&gt;</code> <code>&lt;instance <i>instance-name</i>&gt;</code> <code>&lt;interface <i>interface-name</i>&gt;</code> <code>&lt;learning-vlan id (all-vlan   <i>learning-vlan-id</i>)&gt;</code> <code>&lt;mac-address&gt;</code>
<b>Release Information</b>	Command introduced in Junos OS Release 8.4.
<b>Description</b>	(MX Series routers only) Clear learned Layer 2 address information from the media access control (MAC) address table.
<b>Options</b>	<p><b>none</b>—Clear all learned Layer 2 address information from the MAC address table.</p> <p><b>bridge-domain (all   <i>bridge-domain-name</i>)</b>—(Optional) Clear learned Layer 2 MAC addresses for all bridging domains or for the specified bridging domain.</p> <p><b>instance <i>instance-name</i></b>—(Optional) Clear learned Layer 2 MAC addresses for the specified routing instance.</p> <p><b>interface <i>interface-name</i></b>—(Optional) Clear learned Layer 2 MAC addresses for the specified interface.</p> <p><b>learning-vlan-id (all-vlan   <i>learning-vlan-id</i>)</b>—(Optional) Clears learned Layer 2 MAC addresses for all VLANs or for the specified VLAN.</p> <p><b>mac-address</b>—(Optional) Clear the specified learned Layer 2 address from the MAC address table.</p>
<b>Required Privilege Level</b>	clear
<b>List of Sample Output</b>	<a href="#">clear bridge mac-table on page 2472</a>
<b>Output Fields</b>	When you enter this command, you are provided feedback on the status of your request.

## Sample Output

### clear bridge mac-table

```
user@host> clear bridge mac-table
```

## clear error bpdu interface

---

<b>List of Syntax</b>	<a href="#">MX Series on page 2473</a> <a href="#">QFX Series, EX Series, NFX Series on page 2473</a>
<b>MX Series</b>	<code>clear error bpdu interface <i>interface-name</i></code>
<b>QFX Series, EX Series, NFX Series</b>	<code>clear error bpdu interface (all   <i>interface-name</i>)</code>
<b>Release Information</b>	<p>Command introduced in Junos OS Release 9.4.</p> <p>Command introduced in Junos OS Release 13.2X50-D10 for EX Series switches.</p> <p>Command supports <b>all</b> option in Junos OS Release 15.1 for EX Series switches.</p>
<b>Description</b>	Clear a bridge protocol data unit (BPDU) error condition caused by the detection of a possible bridging loop from Spanning Tree Protocol (STP) operation.
<b>Required Privilege Level</b>	clear
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Configuring BPDU Protection on ACX Router, EX Switch and MX Router Edge Ports</i></li> <li>• <i>Unblocking a Switch Interface That Receives BPDUs in Error (CLI Procedure)</i></li> </ul>
<b>List of Sample Output</b>	<a href="#">clear error bpdu interface on page 2473</a>
<b>Output Fields</b>	When you enter this command, you are provided feedback on the status of your request.

## Sample Output

### clear error bpdu interface

```
user@host> clear error bpdu interface ge-1/1/1
```

## clear error mac-rewrite

---

<b>Syntax</b>	<b>clear error mac-rewrite</b> <b>&lt;interface <i>interface-name</i>&gt;</b>
<b>Release Information</b>	Command introduced in Junos OS Release 9.1.
<b>Description</b>	<p>Clear a MAC rewrite error condition caused by the reception of tunneled protocol packets on an interface with Layer 2 protocol tunneling enabled.</p> <p>On interfaces with L2PT configured, customer-facing ports should not receive packets with the L2PT MAC address as the destination address unless there is a network topology or configuration error. Any such interface receiving an L2PT packet becomes “Disabled”, and must subsequently be re-enabled by clearing the error with this command.</p>
<b>Options</b>	<b>interface <i>interface-name</i></b> —(Optional) Clear the MAC rewrite error condition for the specified interface.
<b>Required Privilege Level</b>	clear
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Layer 2 Protocol Tunneling Through a Network</i></li><li>• <i>Configuring Layer 2 Protocol Tunneling on EX Series Switches with ELS Support (CLI Procedure)</i></li><li>• <i>Clearing a MAC Rewrite Error on an Interface with Layer 2 Protocol Tunneling</i></li><li>• <a href="#">show mac-rewrite interface on page 2500</a></li></ul>
<b>List of Sample Output</b>	<a href="#">clear error mac-rewrite interface on page 2474</a>
<b>Output Fields</b>	When you enter this command, you are provided feedback on the status of your request.

## Sample Output

### clear error mac-rewrite interface

```
user@host> clear error mac-rewrite interface ge-1/0/1
```

## show bridge domain

**Syntax** show bridge domain  
 <brief | detail | extensive>  
 <bridge-domain (all | *domain-name*)>  
 <instance *instance-name*>  
 <operational>

**Release Information** Command introduced in Junos OS Release 8.4.

**Description** (MX Series routers only) Display bridge domain information.

**Options** **none**—Display information for all bridge domains.

**brief | detail | extensive**—(Optional) Display the specified level of output.

**bridge-domain (all | *domain-name*)**— (Optional) Display information about all bridge domains or the specified bridge domain.

**instance *instance-name***—(Optional) Display information for the specified routing instance.

**operational**—(Optional) Display information for the operational routing instances.

**Required Privilege Level** view

**List of Sample Output** [show bridge domain on page 2475](#)  
[show bridge domain brief on page 2475](#)  
[show bridge domain detail on page 2476](#)

## Sample Output

### show bridge domain

```
user@host> show bridge domain
Instance      Primary Table  Bridging Domain  Type      Active
vs1           bridge.0      vlan100          bridge    2
vs1           bridge.0      vlan200          bridge    0
```

### show bridge domain brief

```
user@host> show bridge domain brief
Instance      Primary Table  Bridging Domain  Type      Active
vs1           bridge.0      vlan100          bridge    2
vs1           bridge.0      vlan200          bridge    0
```

### show bridge domain detail

```
user@host> show bridge domain detail
Routing Instance:vs1
  Bridging Domain:vlan100
  Router ID: 0.0.0.0
  Type: bridge                      State: Active

## show bridge mac-table

---

<b>Syntax</b>	<pre>show bridge mac-table   &lt;age&gt;   &lt;brief   count   detail   extensive&gt;   &lt;bridge-domain (all   <i>bridge-domain-name</i>)&gt;   &lt;global-count&gt;   &lt;instance <i>instance-name</i>&gt;   &lt;interface <i>interface-name</i>&gt;   &lt;mac-address&gt;   &lt;instance <i>instance-name</i>&gt;   &lt;vlan-id (all-vlan   <i>vlan-id</i>)&gt;</pre>
<b>Release Information</b>	Command introduced in Junos OS Release 8.4. Command introduced in Junos OS Release 15.1 Support for PBB-EVPN instance added in Junos OS Release 16.1 MAC Flag P to indicate a MAC Pinned interface introduced in Junos OS 16.2
<b>Description</b>	(MX Series routers only) Display Layer 2 MAC address information.
<b>Options</b>	<p><b>none</b>—Display all learned Layer 2 MAC address information.</p> <p><b>age</b>— (Optional) Display age of a single mac-address.</p> <p><b>brief   count   detail   extensive</b>—(Optional) Display the specified level of output.</p> <p><b>bridge-domain (all   <i>bridge-domain-name</i>)</b>—(Optional) Display learned Layer 2 MAC addresses for all bridging domains or for the specified bridging domain.</p> <p><b>global-count</b>—(Optional) Display the total number of learned Layer 2 MAC addresses on the system.</p> <p><b>instance <i>instance-name</i></b>—(Optional) Display learned Layer 2 MAC addresses for the specified routing instance.</p> <p><b>interface <i>interface-name</i></b>—(Optional) Display learned Layer 2 MAC addresses for the specified interface.</p> <p><b>mac-address</b>—(Optional) Display the specified learned Layer 2 MAC address information.</p> <p><b>vlan-id (all-vlan   <i>vlan-id</i>)</b>—(Optional) Display learned Layer 2 MAC addresses for all VLANs or for the specified VLAN.</p>
<b>Additional Information</b>	When Layer 2 protocol tunneling is enabled, the tunneling MAC address 01:00:0c:cd:cd:d0 is installed in the MAC table. When the Cisco Discovery Protocol (CDP), Spanning Tree Protocol (STP), or VLAN Trunk Protocol (VTP) is configured for Layer 2 protocol tunneling on an interface, the corresponding protocol MAC address is installed in the MAC table.

**Output Fields** [Table 229 on page 2485](#) describes the output fields for the **show bridge mac-table** command. Output fields are listed in the approximate order in which they appear.

*Table 229: show bridge mac-table Output Fields*

Field Name	Field Description
Age	Age of a single mac-address.
<b>Routing instance</b>	Name of the routing instance.
Bridging domain	Name of the bridging domain.
MAC address	MAC address or addresses learned on a logical interface.
MAC flags	Status of MAC address learning properties for each interface: <ul style="list-style-type: none"> <li>• <b>S</b>—Static MAC address is configured.</li> <li>• <b>D</b>—Dynamic MAC address is configured.</li> <li>• <b>L</b>—Locally learned MAC address is configured.</li> <li>• <b>C</b>—Control MAC address is configured.</li> <li>• <b>SE</b>—MAC accounting is enabled.</li> <li>• <b>NM</b>—Non-configured MAC.</li> <li>• <b>R</b>—Remote PE MAC address is configured.</li> <li>• <b>P</b>—MAC Pinned interface is configured</li> </ul>
Logical interface	Name of the logical interface.
MAC count	Number of MAC addresses learned on the specific routing instance or interface.
Learning interface	Name of the logical interface on which the MAC address was learned.
Learning VLAN	VLAN ID of the routing instance or bridge domain in which the MAC address was learned.
VXLAN ID/VXLAN	VXLAN Network Identifier (VNI).

Table 229: show bridge mac-table Output Fields (continued)

Field Name	Field Description
Layer 2 flags	Debugging flags signifying that the MAC address is present in various lists.
Epoch	Spanning Tree Protocol epoch number identifying when the MAC address was learned. Used for debugging.
Sequence number	Sequence number assigned to this MAC address. Used for debugging.
Learning mask	Mask of the Packet Forwarding Engines where this MAC address was learned. Used for debugging.
IPC generation	Creation time of the logical interface when this MAC address was learned. Used for debugging.

## Sample Output

```

## show l2-learning global-information

<b>Syntax</b>	<code>show l2-learning global-information</code>
<b>Release Information</b>	Command introduced in Junos OS Release 8.4.
<b>Description</b>	(MX Series routers only) Display Layer 2 learning process-related information for the entire router.
<b>Options</b>	This command has no options.
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">show l2-learning global-information on page 2493</a>
<b>Output Fields</b>	<a href="#">Table 230 on page 2493</a> describes the output fields for the <b>show l2-learning global-information</b> command. Output fields are listed in the approximate order in which they appear.

*Table 230: show l2-learning global-information Output Fields*

Field Name	Field Description
MAC aging interval	Configured timeout interval, in seconds, for all MAC table entries.
MAC learning	Status of MAC learning: <b>Enabled</b> or <b>Disabled</b> .
MAC statistics	Status of MAC accounting: <b>Enabled</b> or <b>Disabled</b> .
MAC limit Count	Configured maximum limit on the number of MAC addresses that can be learned.
MAC limit hit flag	Status of the learned MAC limit hit flag: <b>Enabled</b> (the learned MAC exceeds the global MAC limit) or <b>Disabled</b> (the learned MAC does not exceed the global MAC limit).
MAC packet action drop	Status of action to drop packets after the configured MAC address limit is reached: <b>Enabled</b> (packets are dropped) or <b>Disabled</b> (packets are forwarded).

## Sample Output

### show l2-learning global-information

```

user@host> show l2-learning global-information
Global Configuration:

MAC aging interval      : 300
MAC learning            : Enabled

```

```
MAC statistics      : Disabled
MAC limit Count    : 393215
MAC limit hit flag  : Disabled
MAC packet action drop: Disabled
```

## show l2-learning global-mac-count

---

<b>Syntax</b>	<code>show l2-learning global-mac-count</code>
<b>Release Information</b>	Command introduced in Junos OS Release 9.3.
<b>Description</b>	(MX Series routers only) Display the total number of dynamic and static MAC addresses learned for the entire router.
<b>Options</b>	This command has no options.
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">show l2-learning global-mac-count on page 2495</a>
<b>Output Fields</b>	Displays the total number of dynamic and static MAC addresses learned for the entire router.

## Sample Output

### show l2-learning global-mac-count

```
user@host> show l2-learning global-mac-count
100 dynamic and static MAC addresses learned globally
```

## show l2-learning instance

**Syntax** `show l2-learning instance`

**Release Information** (MX Series routers only) Command introduced in Junos OS Release 8.4.

**Description** Display Layer 2 learning properties for all the configured routing instances.

**Options** This command has no options.

**Required Privilege Level** view

**List of Sample Output** [show l2-learning instance on page 2497](#)

**Output Fields** [Table 231 on page 2496](#) describes the output fields for the **show l2-learning instance** command. Output fields are listed in the approximate order in which they appear.

*Table 231: show l2-learning instance Output Fields*

Field Name	Field Description
Routing Instance	Name of routing instance.
Bridging Domain	Name of bridging domain.  On MX Series routers you can use the <b>show l2-learning instance &lt;extensive&gt;</b> command option to display the Bridge Service-id information which includes the Config Service ID and the Active Service ID.
Index	Number associated with the routing instance or bridging domain.
Logical System	Name of logical system or <b>Default</b> if no logical system is configured.
Routing instance flags	Status of Layer 2 learning properties for each routing instance: <ul style="list-style-type: none"> <li>• <b>DL</b>—MAC learning is disabled.</li> <li>• <b>SE</b>—MAC accounting is enabled.</li> <li>• <b>AD</b>—Packets are dropped after MAC address limit is reached.</li> <li>• <b>LH</b>—The maximum number of MAC addresses has been learned on the routing instance. The routing instance is not able to learn any additional MAC addresses.</li> </ul>
MAC limit	Maximum number of MAC addresses that can be learned from each interface in the routing instance or bridging domain.

## Sample Output

### show l2-learning instance

```
user@host> show l2-learning instance
Information for routing instance:
```

```
Routing Instance flags (DL -disable learning, SE -stats enabled,
                        AD -packet action drop, LH -mac limit hit)
```

Routing Instance	Bridging Domain	Index	Logical System	Routing flags	MAC limit
__juniper_private1__		1	Default		5000
vs1	vlan100	3	Default		5120
vs1	vlan200	4	Default		5120

## show l2-learning interface

---

<b>Syntax</b>	<b>show l2-learning interface</b>
<b>Release Information</b>	Command introduced in Junos OS Release 8.4. Added sample output to indicate an EVPN MAC Pinned interface, introduced in Junos OS 16.2R1.
<b>Description</b>	(MX Series routers only) Display Layer 2 learning information for all the interfaces.
<b>Options</b>	This command has no options.
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">show l2-learning interface on page 2498</a> <a href="#">show l2 learning-interface on page 2499</a>
<b>Output Fields</b>	<a href="#">Table 232 on page 2498</a> describes the output fields for the <b>show l2-learning interface</b> command. Output fields are listed in the approximate order in which they appear.

*Table 232: show l2-learning interface Output Fields*

Field Name	Field Description
Logical interface	Name of the logical interface.
Index	Index of the interface.
Routing Instance	Number of the routing instance to which the interface belongs.
Interface device	Value of the order in which the Junos OS finds and initializes the interface.
Logical interface flags	Status of Layer 2 learning properties for each interface: <ul style="list-style-type: none"><li>• <b>DL</b>—MAC learning is disabled.</li><li>• <b>SE</b>—MAC accounting is enabled.</li><li>• <b>AD</b>—Packets are dropped after the MAC interface limit is reached.</li><li>• <b>MAC limit</b>—Maximum number of MAC addresses that can be learned from the interface.</li><li>• <b>MP</b>—MAC Pinning enabled.</li></ul>

## Sample Output

### show l2-learning interface

```
user@host> show l2-learning interface
Information for interface family:
```

Logical Interface flags (DL -disable learning, SE -stats enabled,  
AD -packet action drop, LH -mac limit hit)

Logical interface	Index	Routing instance	Interface device	Logical Interface flags	MAC limit
ge-11/0/3.0	79	3	136		1024
ge-11/1/4.100	84	3	150		1024
ge-11/1/1.100	86	3	147		1024
ge-11/1/0.100	87	3	146		1024
xe-10/2/0.100	88	3	144		1024
xe-10/0/0.100	89	3	129		1024
ge-11/1/0.200	90	4	146		1024
ge-11/1/1.200	91	4	147		1024
ge-11/1/4.200	92	4	150		1024
xe-10/0/0.200	93	4	129		1024
xe-10/2/0.200	94	4	144		1024

### show l2 learning-interface

```
user@host> run show l2-learning interface
Routing Instance Name : default-switch
Logical Interface flags (DL -disable learning, AD -packet action drop,
                        LH - MAC limit hit, DN - Interface Down, MP - MAC Pinning
enabled)
Logical      BD      MAC      STP      Logical
Interface    Name     Limit    State    Interface flags
ae0.0                8192                MP
```

## show mac-rewrite interface

<b>Syntax</b>	<b>show mac-rewrite interface</b> <b>&lt;brief   detail&gt;</b> <b>&lt;interface-name&gt;</b>	
<b>Release Information</b>	<p>Command introduced in Junos OS Release 9.1.</p> <p>Command introduced in Junos OS Release 14.1X53-D10 for EX4300 switches.</p> <p>Command introduced in Junos OS Release 15.1X53-D55 for EX2300 and EX3400 switches.</p> <p>Command introduced in Junos OS Release 17.4R1 for EX4600 switches.</p>	
<b>Description</b>	Display Layer 2 protocol tunneling (L2PT) information.	
<b>Options</b>	<p><b>brief   detail</b>—(Optional) Display the specified level of output.</p> <p><b>interface interface-name</b>—(Optional) Display L2PT information for the specified interface.</p>	
<b>Required Privilege Level</b>	view	
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>layer2-control</i></li> <li>• <i>mac-rewrite</i></li> <li>• <i>protocol</i></li> <li>• <i>Layer 2 Protocol Tunneling Through a Network</i></li> <li>• <i>Layer 2 Protocol Tunnel Configuration Guidelines</i></li> <li>• <i>Configuring Layer 2 Protocol Tunneling</i></li> <li>• <i>Understanding Layer 2 Protocol Tunneling on EX Series Switches</i></li> <li>• <i>Configuring Layer 2 Protocol Tunneling on EX Series Switches with ELS Support (CLI Procedure)</i></li> </ul>	
<b>List of Sample Output</b>	<a href="#">show mac-rewrite interface on page 2501</a> <a href="#">show mac-rewrite interface (EX Series Switches) on page 2501</a>	
<b>Output Fields</b>	<p><a href="#">Table 233 on page 2500</a> lists the output fields for the <b>show mac-rewrite interface</b> command. Output fields are listed in the approximate order in which they appear.</p>	

**Table 233: show mac-rewrite interface Output Fields**

Field Name	Field Description	Level of Output
<b>Interface</b>	Name of the interface on which L2PT is configured.	<b>brief detail</b>

Table 233: *show mac-rewrite interface* Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Protocols</b>	<p>Layer 2 protocols being tunneled on this interface.</p> <p>All devices that support L2PT can tunnel the following protocols: Cisco Discovery Protocol (CDP), Spanning Tree Protocol (STP), or VLAN Trunk Protocol (VTP).</p> <p>The following Layer 2 protocols can also be tunneled on some devices that support L2PT: E-LMI, GVRP, IEEE 802.1X, IEEE 802.3AH, LACP, LLDP, MMRP, MVRP, PVSTP+, UDLD, or VSTP. See <i>protocol</i> for more information on the supported protocols for tunneling on different devices.</p>	<b>brief detail</b>

## Sample Output

### show mac-rewrite interface

```

user@host> show mac-rewrite interface
Interface      Protocols
ge-1/0/5       STP VTP CDP PVSTP+

```

### show mac-rewrite interface (EX Series Switches)

```

user@switch> show mac-rewrite interface
Interface      Protocols
ge-0/0/1       802.3AH LLDP STP

```

## CHAPTER 30

# VPN Operational Commands

- `clear vpls mac-address`
- `clear vpls mac-table`
- `request l2circuit-switchover`
- `show dynamic-tunnels database`
- `show hfrr profiles`
- `show ingress-replication mvpn`
- `show l2circuit connections`
- `show l2vpn connections`
- `show mvpn c-multicast`
- `show mvpn instance`
- `show mvpn neighbor`
- `show vpls connections`
- `show vpls flood event-queue`
- `show vpls flood instance`
- `show vpls flood route`
- `show vpls mac-table`
- `show vpls statistics`

## clear vpls mac-address

---

<b>Syntax</b>	<code>clear vpls mac-address</code> <code>&lt;instance <i>instance-name</i>&gt;</code> <code>&lt;logical-system (all   <i>logical-system-name</i>)&gt;</code> <code>&lt;mac-address&gt;</code>
<b>Release Information</b>	Command introduced before Junos OS Release 7.4.
<b>Description</b>	(T Series and M Series routers, except for the M160 router) Clear media access control (MAC) address entries from the virtual private LAN service (VPLS) table.
<b>Options</b>	<b>none</b> —Clear all MAC address entries from the VPLS table for all routing instances.  <b>instance <i>instance-name</i></b> —(Optional) Clear all MAC address entries for a VPLS instance from the VPLS table.  <b>logical-system (all   <i>logical-system-name</i>)</b> —(Optional) Perform this operation on all logical systems or on a particular logical system.  <b>mac-address</b> —(Optional) Clear a specific MAC address in a VPLS instance from the VPLS table.
<b>Required Privilege Level</b>	maintenance
<b>List of Sample Output</b>	<a href="#">clear vpls mac-address on page 2504</a>
<b>Output Fields</b>	When you enter this command, you are provided feedback on the status of your request.

## Sample Output

### clear vpls mac-address

```
user@host> clear vpls mac-address
```

## clear vpls mac-table

<b>Syntax</b>	clear vpls mac-table <instance <i>instance-name</i> > <interface <i>interface-name</i> > <logical-system (all   <i>logical-system-name</i> )> <mac-address> <vlan-id>
<b>Release Information</b>	Command introduced before Junos OS Release 9.5.
<b>Description</b>	(MX Series routers) Clear media access control (MAC) addresses from the virtual private LAN service (VPLS) MAC table.
<b>Options</b>	<p><b>none</b>—Clear all MAC addresses from the VPLS table for all routing instances.</p> <p><b>instance <i>instance-name</i></b>—(Optional) Clear all MAC addresses for a VPLS instance from the VPLS table.</p> <p><b>interface <i>interface-name</i></b>—(Optional) Clear all MAC addresses for a VPLS interface from the VPLS table.</p> <p><b>logical-system (all   <i>logical-system-name</i>)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p> <p><b>mac-address</b>—(Optional) Clear a specific MAC address in a VPLS instance from the VPLS table.</p> <p><b>vlan-id</b>—(Optional) Clear MAC addresses on a specified VLAN (0 through 4095).</p>
<b>Required Privilege Level</b>	maintenance
<b>List of Sample Output</b>	<a href="#">clear vpls mac-table on page 2505</a>
<b>Output Fields</b>	When you enter this command, you are provided feedback on the status of your request.

## Sample Output

### clear vpls mac-table

```
user@host> clear vpls mac-table
```

## request l2circuit-switchover

---

<b>Syntax</b>	<code>request l2circuit-switchover</code> <code>&lt;logical-system (all   logical-system-name)&gt;</code> <code>&lt;neighbor address&gt;</code> <code>&lt;virtual-circuit-id identifier&gt;</code>
<b>Release Information</b>	Command introduced in Junos OS Release 9.2. Statement introduced in Junos OS Release 14.1X53-D10 for the QFX Series and for EX4600 switches.
<b>Description</b>	Manually trigger a switch from the active pseudowire to the redundant pseudowire. This command can be useful when performing network maintenance.
<b>Options</b>	<b>logical-system (all   <i>logical-system-name</i>)</b> —(Optional) Perform this operation on all logical systems or on a particular logical system.  <b>neighbor <i>address</i></b> —(Optional) Trigger a switch of all of the active pseudowire connections with the specified neighbor to their respective redundant pseudowires.  <b>virtual-circuit-id <i>identifier</i></b> —(Optional) Trigger a switch from the active pseudowire connection of the specified Layer 2 circuit to its redundant pseudowire.
<b>Required Privilege Level</b>	maintenance
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>MPLS Feature Support on QFX Series and EX4600 Switches</i></li></ul>
<b>List of Sample Output</b>	<a href="#">request l2circuit-switchover virtual-circuit-id on page 2506</a>
<b>Output Fields</b>	When you enter this command, you are provided feedback on the status of your request.

## Sample Output

### request l2circuit-switchover virtual-circuit-id

```
user@host>request l2circuit-switchover virtual-circuit-id 12
```

## show dynamic-tunnels database

<b>Syntax</b>	show dynamic-tunnels database <destination> <logical-system (all   <i>logical-system-name</i> )> <table <i>routing-table-name</i> >
<b>Release Information</b>	Command introduced before Junos OS Release 7.4.
<b>Description</b>	Display dynamic tunnel database information.
<b>Options</b>	<p><b>none</b>—Display dynamic tunnel database information for all destinations and routing tables.</p> <p><b>destination</b>—(Optional) Display database entries for the specified IP address (with optional destination prefix length) only.</p> <p><b>logical-system (all   <i>logical-system-name</i>)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p> <p><b>table <i>routing-table-name</i></b>—(Optional) Display database entries for the specified table only.</p>
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">show dynamic-tunnels database (Tunnel Is Up) on page 2508</a> <a href="#">show dynamic-tunnels database (No Tunnel PIC) on page 2508</a> <a href="#">show dynamic-tunnels database (Tunnel Is Expiring) on page 2509</a> <a href="#">show dynamic-tunnels database (Destination Specified) on page 2509</a> <a href="#">show dynamic-tunnels database (Localization) on page 2509</a>
<b>Output Fields</b>	<p>Table 234 on page 2507 lists the output fields for the <b>show dynamic-tunnels database</b> command. Output fields are listed in the approximate order in which they appear.</p>

*Table 234: show dynamic-tunnels database Output Fields*

Field Name	Field Description
<b>Table</b>	Name of the routing table (for example, <b>inet.0</b> ).
<b>Destination-network</b>	Destination IP address and subnet.
<b>Tunnel to</b>	Destination IP address and prefix of the tunnel.
<b>State</b>	State of the tunnel: <b>Up</b> , <b>Up (expires in <i>nn:nn:nn</i>seconds)</b> , or <b>Dn</b> (down).
<b>Reference count</b>	Number of routes across the dynamic tunnel that are currently being resolved.

*Table 234: show dynamic-tunnels database Output Fields (continued)*

Field Name	Field Description
<b>Next-hop type</b>	Type of tunnel: GRE or UDP (BGP-Signal).
<b>Source address</b>	Source IP address of the tunnel.
<b>Next-hop</b>	IP address of the destination interface.
<b>VPN Label</b>	The label provided by the peer device to identify the VPN through which the packet needs to go. This label is used to identify the VRF for route lookup.
<b>Ingress Route</b>	The IGP route along with the corresponding metric that has been selected for forwarding the tunnel-encapsulated packet.
<b>Localized PFE</b>	Packet Forwarding Engine interface which is the anchor Packet Forwarding Engine for the localized next-hop-based dynamic tunnels.  When the anchor Packet Forwarding Engine of the tunnel goes down, it is represented by a # near the Packet Forwarding Engine name.
<b>State</b>	State of the destination interface: Up, Dn, or Dn (no tunnel pic).

## Sample Output

### show dynamic-tunnels database (Tunnel Is Up)

```

user@host> show dynamic-tunnels database
Table: inet.3

Destination-network: 10.255.120.94/32
Tunnel to: 10.255.120.94/32
Reference count: 4
Next-hop type: UDP
Source address: 10.255.120.92
Next hop: tunnel-composite, 0x31132f64, nhid 3406
VPN Label: Push 120 Reference count: 3
Ingress Route: 10.255.120.94/32, via metric 2
Traffic Statistics: Packets 241367951, Bytes 356741831578
State: Up

```

### show dynamic-tunnels database (No Tunnel PIC)

```

user@host> show dynamic-tunnels database
Table: inet.3

Destination-network: 10.255.120.94/32
Tunnel to: 10.255.120.94/32 State: Dn
Reference count: 2
Next-hop type: gre
Source address: 10.255.120.92
State: Dn (no tunnel pic)

```

### show dynamic-tunnels database (Tunnel Is Expiring)

```
user@host> show dynamic-tunnels database
Table: inet.3

Destination-network: 10.255.120.94/32
Tunnel to: 10.255.120.94/32 State: Up (expires in 00:14:56 seconds)
Reference count: 0
Next-hop type: gre
  Source address: 10.255.120.92
  Next hop: gr-4/3/0.32769
  State: Up
```

### show dynamic-tunnels database (Destination Specified)

```
user@host> show dynamic-tunnels database 10.255.120.94
Table: inet.3

Destination-network: 10.255.120.94/32
Tunnel to: 10.255.120.94/32 State: Up
Reference count: 2
Next-hop type: gre
  Source address: 10.255.120.92
  Next hop: gr-4/3/0.32769
  State: Up
```

### show dynamic-tunnels database (Localization)

```
user@host> show dynamic-tunnels database
Destination-network: 1.0.0.0/8
Tunnel to: 1.1.1.6/32
Reference count: 5
Next-hop type: UDP
Source address: 1.1.1.2
Next hop: tunnel-composite, 0xc807930, nhid 1016
Localized PFE: pfe-1/0/0
VPN Label: Push 299808 Reference count: 4
Ingress Route: 1.1.1.6/32, via metric 2
Traffic Statistics: Packets 0, Bytes 0
State: Up
```

## show hfrr profiles

<b>Syntax</b>	show hfrr profiles <brief   extensive>
<b>Release Information</b>	Command introduced in Junos OS Release 12.2.
<b>Description</b>	<p>Display host fast reroute (HFRR) profile information.</p> <p>HFRR adds a precomputed protection path into the Packet Forwarding Engine, such that if a link between a provider edge device and a server farm becomes unusable for forwarding, the Packet Forwarding Engine can use another path without having to wait for the router or the protocols to provide updated forwarding information.</p>
<b>Options</b>	<p><b>none</b>—Display information about HRFF profiles.</p> <p><b>brief   extensive</b>—(Optional) Display the specified level of output.</p>
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li><i>Example: Configuring Link Protection with Host Fast Reroute</i></li> </ul>
<b>List of Sample Output</b>	<a href="#">show hfrr profiles on page 2511</a>
<b>Output Fields</b>	<p><a href="#">Table 235 on page 2510</a> describes the output fields for the <b>show hfrr profiles</b> command. Output fields are listed in the approximate order in which they appear.</p>

*Table 235: show hfrr profiles Output Fields*

Field Name	Field Description
HFRR	
HFRR current state	Status of the HFRR profile: HFRR_ACTIVE, HFRR_INACTIVE, HFRR_IFLH-NOT-CONF, and so on.
HFRR Prefix limit blackout timer expiry (in secs)	Time interval between an HFRR profile becoming inactive on exceeding the ARP prefix limit, and the profile starting the SYNC process.
HFRR prefix limit hit count	Number of times that an HFRR profile becomes inactive on exceeding the ARP prefix limit.
HFRR protected IFL name	Interface configured for the HFRR feature.
HFRR protected IFL handle	
HFRR routing instance name	The routing instance in which the HFRR interface is configured.

Table 235: show hfrf profiles Output Fields (continued)

Field Name	Field Description
HFRR routing instance handle	
HFRR sync BG scheduled	
HFRR RTS filter on	
HFRR delete BG scheduled	
HFRR ARP prefix limit	Configured ARP prefix limit.
HFRR ARP supplementary blackout timeout (in mins)	Supplementary time-out value configured for profile to be inactive when it hits ARP prefix limit.
HFRR number of ARP routes learned	Number of ARP routes learned on the configured interface.
HFRR number of FRR routes created	Number of ARP routes created on the configured interface.

## Sample Output

### show hfrf profiles

```

user@host> show hfrf profiles
HFRR pointer: 0x9254000
HFRR current state: HFRR_ACTIVE
HFRR Prefix limit blackout timer expiry (in secs): 0
HFRR prefix limit hit count: 0

## show ingress-replication mvpn

**Syntax** show ingress-replication mvpn

**Release Information** Command introduced in Junos OS Release 10.4.

**Description** Display the state and configuration of the ingress replication tunnels created for the MVPN application when using the **mpls-internet-multicast** routing instance type.

**Required Privilege Level** View

**List of Sample Output** [show ingress-replication mvpn on page 2512](#)

**Output Fields** [Table 236 on page 2512](#) lists the output fields for the **show ingress-replication mvpn** command. Output fields are listed in the approximate order in which they appear.

*Table 236: show ingress-replication mvpn Output Fields*

Field Name	Field Description
Ingress tunnel	Identifies the MVPN ingress replication tunnel.
Application	Identifies the application (MVPN).
Unicast tunnels	List of unicast tunnels in use.
Leaf address	Address of the tunnel.
Tunnel type	Identifies the unicast tunnel type.
Mode	Indicates whether the tunnel was created as a new tunnel for the ingress replication, or if an existing tunnel was used.
State	Indicates whether the tunnel is Up or Down.

## Sample Output

show ingress-replication mvpn

```

user@host> show ingress-replication mvpn
Ingress Tunnel: mvpn:1
  Application: MVPN
  Unicast tunnels
    Leaf Address      Tunnel-type      Mode      State
    10.255.245.2      P2P LSP         New       Up
    10.255.245.4      P2P LSP         New       Up
Ingress Tunnel: mvpn:2
  Application: MVPN
  Unicast tunnels

```

Leaf Address	Tunnel-type	Mode	State
10.255.245.2	P2P LSP	Existing	Up

## show l2circuit connections

---

<b>Syntax</b>	<code>show l2circuit connections</code> <code>&lt;brief   extensive   summary&gt;</code> <code>&lt;down   up   up-down&gt;</code> <code>&lt;history&gt;</code> <code>&lt;interface <i>interface-name</i>&gt;</code> <code>&lt;logical-system (all   <i>logical-system-name</i>)&gt;</code> <code>&lt;neighbor <i>neighbor</i>&gt;</code> <code>&lt;status&gt;</code>
<b>Release Information</b>	Command introduced before Junos OS Release 7.4. Display enhancements in Junos OS Release 9.6. Display enhancements in Junos OS Release 10.2. Display enhancements in Junos OS Release 12.1. Display enhancements in Junos OS Release 13.2. Statement introduced in Junos OS Release 14.1X53-D10 for the QFX Series and for EX4600 switches.
<b>Description</b>	Display status information about Layer 2 virtual circuits from the local provider edge (PE) router to its neighbors.
<b>Options</b>	<p><b>none</b>—Display standard information about Layer 2 virtual circuits on all interfaces for all neighbors.</p> <p><b>brief   extensive   summary</b>—(Optional) Display the specified level of output. Use history to display information about connection history. Use status to display information about the connection and interface status.</p> <p><b>down   up   up-down</b>—(Optional) Display nonoperational, operational, or both kinds of connections.</p> <p><b>history</b>—(Optional) Display information about connection history.</p> <p><b>interface <i>interface-name</i></b>—(Optional) Show all Layer 2 virtual circuits on an interface.</p> <p><b>logical-system (all   <i>logical-system-name</i>)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p> <p><b>neighbor <i>neighbor</i></b>—(Optional) IP address of a specific neighbor.</p> <p><b>status</b>—(Optional) Display information about the connection and interface status.</p>
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">show l2circuit connections on page 2518</a> <a href="#">show l2circuit connections interface on page 2519</a> <a href="#">show l2circuit connections extensive on page 2519</a>

[show l2circuit connections extensive \(Pseudowire Redundancy with Hot Standby\)](#) on page 2520

**Output Fields** [Table 237 on page 2515](#) lists the output fields for the **show l2circuit connections** command. Output fields are listed in the approximate order in which they appear.

*Table 237: show l2circuit connections Output Fields*

Field Name	Field Description
<b>Layer-2 Circuit Connections</b>	Displays the legends for connection and interface status.
<b>Neighbor</b>	Remote PE neighbor.
<b>Interface</b>	Logical PE-to-CE interface on which the virtual circuit is configured.
<b>Type</b>	VC type: <b>rmt</b> (remote) or <b>loc</b> (local).

Table 237: *show l2circuit connections Output Fields (continued)*

Field Name	Field Description
<b>Legend for connection status (St)</b>	<p>Status of the virtual circuit connection:</p> <ul style="list-style-type: none"> <li><b>EI</b>—The local virtual circuit interface is configured with an encapsulation that is not supported.</li> <li><b>MM</b>—The two routers do not agree on an MTU value, which causes an MTU mismatch.</li> <li><b>EM</b>—The encapsulation type received on this virtual circuit from the neighbor does not match the local virtual circuit interface encapsulation type.</li> <li><b>CM</b>—The two routers do not agree on a control word, which causes a control word mismatch.</li> <li><b>VM</b>—The remote and local VLAN IDs do not match across the Layer 2 circuit.</li> <li><b>OL</b>—No advertisement has been received for this virtual circuit from the neighbor. There is no outgoing label available for use by this virtual circuit.</li> <li><b>NC</b>—The interface is not configured as a CCC or TCC interface.</li> <li><b>BK</b>—The virtual circuit has switched to a backup connection.</li> <li><b>CB</b>—The remote PE router is advertising a different cell bundle from that configured on the local PE router.</li> <li><b>LD</b>—The connection to the local site is signaled down, because the CE-facing interface to the local site is down.</li> <li><b>RD</b>—The remote neighbor is down. It has signaled a problem using the pseudowire status code.</li> <li><b>NP</b>—The router detects that interface hardware is not present. The hardware may be offline, a PIC may not be of the desired type, or the interface may be configured in a different routing instance.</li> <li><b>Dn</b>—The virtual circuit is down.</li> <li><b>VC-Dn</b>—The virtual circuit is down because there is no tunnel LSP from the local PE router to the neighbor.</li> <li><b>UP</b>—The virtual circuit is operational.</li> <li><b>CF</b>—The router cannot find enough bandwidth to the remote router to satisfy the Layer 2 circuit bandwidth requirement.</li> <li><b>IB</b>—The bit rate is incompatible for Time Division Multiplexing (TDM).</li> <li><b>TDM</b>—TDM is not configured correctly.</li> <li><b>ST</b>—The virtual circuit has been switched to a standby connection.</li> <li><b>SP</b>—The virtual circuit connection is using a static pseudowire.</li> <li><b>RS</b>—The remote site is in a standby state.</li> <li><b>XX</b>—The virtual circuit is down for an unknown reason. This is a programming error.</li> </ul>
<b>Time last up</b>	Date and time the virtual circuit was last operational.
<b># Up trans</b>	Number of times the virtual circuit came up.
<b>local-interface-name</b>	Name of the local PE-to-CE interface.
<b>Status</b>	Status of the local interface.
<b>Up</b>	Interface is operational.

Table 237: *show l2circuit connections Output Fields (continued)*

Field Name	Field Description
<b>Dn</b>	Interface is not operational.
<b>NP</b>	Not present. Interface does not exist.
<b>DS</b>	Disabled. Interface has been administratively disabled.
<b>WE</b>	Wrong encapsulation. The interface is not configured as CCC.
<b>UN</b>	Interface status is initialized.
<b>Encapsulation</b>	Encapsulation of the local interface.
<b>Flow Label Transmit</b>	Flow label transmit status.
<b>Flow Label Receive</b>	Flow label receive status.
<b>Remote PE</b>	Prefix of the remote PE router.
<b>Negotiated control-word</b>	Whether the use of the control word has been negotiated for this virtual circuit: <b>Yes (Null)</b> or <b>No</b> .
<b>Incoming label</b>	Label used by the remote side of the virtual circuit to send packets destined to the local side. This label is routed to the local virtual circuit interface.
<b>Outgoing label</b>	Label used by the local side of the virtual circuit to send packets to the remote side of the virtual circuit. Packets originated on the local virtual circuit interface are encapsulated with this label before being placed on the tunnel LSP to the neighbor for this virtual circuit. This label is allocated by the neighbor and is used in demultiplexing incoming packets destined for this virtual circuit.
<b>Negotiated PW status TLV</b>	Displays the pseudowire status type, length, and value (TLV). TLVs are a method of encoding variable-length or optional information. If the pseudowire status TLV is used, the corresponding local or neighbor PE router status code is also displayed.
<b>local PW status code</b>	If the pseudowire status TLV is used, displays the local PE router status code.
<b>Neighbor PW status code</b>	If the pseudowire status TLV is used, displays the neighbor PE router status code.
<b>Local interface</b>	Name of the local interface used for the Layer 2 circuit connection.
<b>Status</b>	Status of the local interface ( <b>Up</b> or <b>Down</b> ).
<b>Encapsulation</b>	Encapsulation configured for the local interface.
<b>APS-active</b>	Indicates that the interface belongs to the working circuit.

Table 237: show l2circuit connections Output Fields (continued)

Field Name	Field Description
APS-inactive	Indicates that the interface belongs to the protect circuit.
Connection protection	Whether or not connection protection is configured for the Layer 2 circuit to the neighbor: <b>Yes</b> or <b>No</b> .
VC bandwidth	Bandwidth requirement of the Layer 2 circuit.
Time	Time at which the event occurred.
Connection History	<p>Event types logged in history.</p> <ul style="list-style-type: none"> <li>• <b>loc intf up</b>—Local virtual circuit interface went up.</li> <li>• <b>loc intf down</b>—Local virtual circuit interface went down.</li> <li>• <b>In lbl Update</b>—Incoming label has been updated.</li> <li>• <b>Out lbl Update</b>—Outgoing label has been updated.</li> <li>• <b>PE route changed</b>—Route to PE router has been updated.</li> <li>• <b>PE route down</b>—Route to PE router is down.</li> <li>• <b>rmt side marked</b>—Remote side is marked.</li> <li>• <b>VC Dn</b>—Remote side indicated that its end of the virtual circuit is down (if the tunnel LSP from the remote side to the local side is down).</li> <li>• <b>status update timer</b>—Status update timer processing. It computes the state of the virtual circuit, and determines whether it should be advertised to or withdrawn from the remote side.</li> </ul>

## Sample Output

## show l2vpn connections

---

<b>Syntax</b>	<code>show l2vpn connections</code> <code>&lt;brief   extensive&gt;</code> <code>&lt;down   up   up-down&gt;</code> <code>&lt;history&gt;</code> <code>&lt;instance <i>instance</i>&gt;</code> <code>&lt;instance-history&gt;</code> <code>&lt;local-site <i>local-site</i>&gt;</code> <code>&lt;logical-system (all   <i>logical-system-name</i>)&gt;</code> <code>&lt;remote-site <i>remote-site</i>&gt;</code> <code>&lt;status&gt;</code> <code>&lt;summary&gt;</code>
<b>Release Information</b>	Command introduced before Junos OS Release 7.4. <b>instance-history</b> option introduced in Junos OS Release 12.3R2.
<b>Description</b>	Display Layer 2 virtual private network (VPN) connections.
<b>Options</b>	<b>none</b> —Display all Layer 2 VPN connections for all routing instances.  <b>brief   extensive</b> —(Optional) Display the specified level of output.  <b>down   up   up-down</b> —(Optional) Display nonoperational, operational, or both kinds of connections.  <b>history</b> —(Optional) Display information about connection history.  <b>instance <i>instance</i></b> —(Optional) Display connections for the specified routing instance only.  <b>instance-history</b> —(Optional) Display information about connection history for a particular instance.  <b>local-site <i>local-site</i></b> —(Optional) Display connections for the specified Layer 2 VPN local site name or ID only.  <b>logical-system (all   <i>logical-system-name</i>)</b> —(Optional) Perform this operation on all logical systems or on a particular logical system.  <b>remote-site <i>remote-site</i></b> —(Optional) Display connection for the specified Layer 2 VPN remote site ID only.  <b>status</b> —(Optional) Display information about the connection and interface status.  <b>summary</b> —(Optional) Display summary of all Layer 2 VPN connections information.
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">show l2vpn connections on page 2525</a>

[show l2vpn connections on page 2526](#)

[show l2vpn connections extensive on page 2527](#)

[show l2vpn connections extensive \(VPWS\) on page 2527](#)

**Output Fields** Table 238 on page 2523 lists the output fields for the **show l2vpn connections** command. Output fields are listed in the approximate order in which they appear.

*Table 238: show l2vpn connections Output Fields*

Field Name	Field Description
<b>Instance</b>	Name of Layer 2 VPN instance.
<b>L2vpn-id</b>	For BGP autodiscovery, a globally unique Layer 2 VPN community identifier for the instance.
<b>Local-ID</b>	BGP <b>local-address</b> assigned to the local routing device.
<b>Local site</b>	Name of local site.
<b>Local source-attachment-id</b>	For FEC 129, the VPWS source attachment identifier. The point-to-point nature of VPWS requires that you specify the source access individual identifier (SAII) and the target access individual identifier (TAII). This SAII-TAII pair defines a unique pseudowire between two PE devices.
<b>Target-attachment-id</b>	For FEC 129, the VPWS target attachment identifier. If the configured target identifier matches a source identifier advertised by a remote PE device by way of a BGP auto-discovery message, the pseudowire between that source-target pair is signaled. If there is no match between an advertised source identifier and the configured target identifier, the pseudowire is not established.
<b>Interface name</b>	Name of interface.
<b>Remote Site ID</b>	Remote site ID.
<b>Label Offset</b>	Numbers within the label block that are skipped to find the next label base.
<b>Label-base</b>	Advertises the first label in a block of labels. A remote PE router uses this first label when sending traffic toward the advertising PE router.
<b>Range</b>	Advertises the label block size.
<b>status-vector</b>	Bit vector advertising the state of local PE-CE circuits to remote PE routers. A bit value of 0 indicates that the local circuit and LSP tunnel to the remote PE router are up, whereas a value of 1 indicates either one or both are down.
<b>connection-site</b>	Name of the connection site.
<b>Type</b>	Type of connection: <b>loc</b> (local) or <b>rmt</b> (remote).
<b>St</b>	Status of the connection. (For a list of possible values, see the <b>Legend for connection status (St)</b> field.)

Table 238: *show l2vpn connections Output Fields (continued)*

Field Name	Field Description
<b>Time last up</b>	Time that the connection was last in the <b>Up</b> condition.
<b># Up trans</b>	Number of transitions from <b>Down</b> to <b>Up</b> condition.
<b>Local circuit</b>	Address and status of local circuit.
<b>Remote circuit</b>	Address and status of remote circuit.
<b>St</b>	<p>Status of the Layer 2 VPN connection (corresponds with Legend for Connection Status):</p> <ul style="list-style-type: none"> <li>• <b>EI</b>—The local Layer 2 VPN interface is configured with an encapsulation that is not supported.</li> <li>• <b>EM</b>—The encapsulation type received on this Layer 2 VPN connection from the neighbor does not match the local Layer 2 VPN connection interface encapsulation type.</li> <li>• <b>VC-Dn</b>—The virtual circuit is currently down.</li> <li>• <b>CM</b>—The two routers do not agree on a control word, which causes a control word mismatch.</li> <li>• <b>CN</b>—The virtual circuit is not provisioned properly.</li> <li>• <b>OR</b>—The label associated with the virtual circuit is out of range.</li> <li>• <b>OL</b>—No advertisement has been received for this virtual circuit from the neighbor. There is no outgoing label available for use by this virtual circuit.</li> <li>• <b>LD</b>—All of the CE-facing interfaces to the local site are down. Therefore, the connection to the local site is signaled as down to the other PE routers. No pseudowires can be established.</li> <li>• <b>RD</b>—All the interfaces to the remote neighbor are down. Therefore, the remote site has been signaled as down to the other PE routers. No pseudowires can be established.</li> <li>• <b>LN</b>—The local site has lost path selection to the remote site and therefore no pseudowires can be established from this local site.</li> <li>• <b>RN</b>—The remote site has lost path selection to a local site or other remote site and therefore no pseudowires are established to this remote site.</li> <li>• <b>XX</b>—The Layer 2 VPN connection is down for an unknown reason. This is a programming error.</li> <li>• <b>NC</b>—The interface encapsulation is not configured as an appropriate CCC, TCC, or Layer 2 VPN encapsulation.</li> <li>• <b>WE</b>—The encapsulation configured for the interface does not match the encapsulation configured for the associated connection within the Layer 2 VPN routing instance.</li> <li>• <b>NP</b>—The router detects that interface hardware is not present. The hardware might be offline, a PIC might not be of the desired type, or the interface might be configured in a different routing instance.</li> <li>• <b>-&gt;</b>—Only the outbound connection is up.</li> <li>• <b>&lt;-</b>—Only the inbound connection is up.</li> <li>• <b>Up</b>—The Layer 2 VPN connection is operational.</li> <li>• <b>Dn</b>—The Layer 2 VPN connection is down.</li> <li>• <b>CF</b>—The router cannot find enough bandwidth to the remote router to satisfy the Layer 2 VPN connection bandwidth requirement.</li> </ul>

Table 238: show l2vpn connections Output Fields (continued)

Field Name	Field Description
	<ul style="list-style-type: none"> <li>• <b>SC</b>—The local site identifier matches the remote site identifier. No pseudowire can be established between these two sites. You should configure different values for the local and remote site identifiers.</li> <li>• <b>LM</b>—The local site identifier is not the minimum designated, meaning it is not the lowest. There is another local site with a lower site identifier. Pseudowires are not being established to this local site, and the associated local site identifier is not being used to distribute Layer 2 VPN label blocks. However, this is not an error state. Traffic continues to be forwarded to the PE router interfaces connected to the local sites when the local sites are in this state.</li> <li>• <b>RM</b>—The remote site identifier is not the minimum designated, meaning it is not the lowest. There is another remote site connected to the same PE router which has lower site identifier. The PE router cannot establish a pseudowire to this remote site and the associated remote site identifier cannot be used to distribute VPLS label blocks. However, this is not an error state. Traffic can continue to be forwarded to the PE router interface connected to this remote site when the remote site is in this state.</li> <li>• <b>IL</b>—The incoming packets for the Layer 2 VPN connection have no MPLS label.</li> </ul>
Remote PE	Address of the remote provider edge router.
Incoming label	Name of the incoming label.
Outgoing label	Name of the outgoing label.
Egress Protection	Whether the given PVC is protected by connection protection logic using egress protection for BGP signaled layer 2 services.
Flow Label Receive	Capability to pop the flow label in the receive direction to the remote provider edge (PE) router
Flow Label Transmit	Capability to push the flow label in the transmit direction to the provider edge (PE) router
Time	Date and time of Layer 2 VPN connection event.
Event	Type of event.
Interface/Lbl/PE	Interface, label, or PE router.

## Sample Output

## show mvpn c-multicast

<b>Syntax</b>	show mvpn c-multicast <extensive   summary> <instance-name <i>instance-name</i> > <source-pe>
<b>Release Information</b>	Command introduced in Junos OS Release 8.4. Option to show <b>source-pe</b> introduced in Junos OS Release 15.1.
<b>Description</b>	Display the multicast VPN customer multicast route information.
<b>Options</b>	<b>extensive   summary</b> —(Optional) Display the specified level of output.  <b>instance-name <i>instance-name</i></b> —(Optional) Display output for the specified routing instance.  <b>source-pe</b> —(Optional) Display source-pe output for the specified c-multicast entries.
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">show mvpn c-multicast on page 2530</a> <a href="#">show mvpn c-multicast summary on page 2530</a> <a href="#">show mvpn c-multicast extensive on page 2530</a> <a href="#">show mvpn c-multicast source-pe on page 2531</a>
<b>Output Fields</b>	Table 239 on page 2529 lists the output fields for the <b>show mvpn c-multicast</b> command. Output fields are listed in the approximate order in which they appear.

Table 239: show mvpn c-multicast Output Fields

Field Name	Field Description	Level of Output
Instance	Name of the VPN routing instance.	summary extensive none
C-mcast IPv4 (S:G)	Customer router IPv4 multicast address.	extensive none
Ptnl	Provider tunnel attributes, <i>tunnel type:tunnel source, tunnel destination group</i> .	extensive none
St	State: <ul style="list-style-type: none"> <li>DS—Represents (S,G) and is created due to (*,G)</li> <li>RM—Remote VPN route learned from the remote PE router</li> <li>St display blank—SSM group join</li> </ul>	extensive none
MVPN instance	Name of the multicast VPN routing instance	extensive none

Table 239: show mvpn c-multicast Output Fields (continued)

Field Name	Field Description	Level of Output
C-multicast IPv4 route count	Number of customer multicast IPv4 routes associated with the multicast VPN routing instance.	summary
C-multicast IPv6 route count	Number of customer multicast IPv6 routes associated with the multicast VPN routing instance.	summary

## Sample Output

## show vpls connections

<b>Syntax</b>	<pre>show vpls connections &lt;brief   extensive&gt; &lt;down   up   up-down&gt; &lt;history&gt; &lt;instance <i>instance-name</i> local-site <i>local-site-name</i> remote-site <i>remote-site-name</i>&gt; &lt;instance-history&gt; &lt;logical-system (all   <i>logical-system-name</i>)&gt; &lt;status&gt; &lt;summary&gt;</pre>
<b>Release Information</b>	<p>Command introduced before Junos OS Release 7.4.</p> <p><b>instance-history</b> option introduced in Junos OS Release 12.3R2.</p>
<b>Description</b>	(T Series and M Series routers, except for the M160 router) Display virtual private LAN service (VPLS) connection information.
<b>Options</b>	<p><b>none</b>—Display information about all VPLS connections for all routing instances.</p> <p><b>brief   extensive</b>—(Optional) Display the specified level of output.</p> <p><b>down   up   up-down</b>—(Optional) Display nonoperational, operational, or both types of connections.</p> <p><b>history</b>—(Optional) Display information about connection history.</p> <p><b>instance <i>instance-name</i></b>—(Optional) Display the VPLS connections for the specified routing instance only.</p> <p><b>instance-history</b>—(Optional) Display information about connection history for a particular instance.</p> <p><b>local-site <i>local-site-name</i></b>—(Optional) Display the VPLS connections for the specified local site name or ID only.</p> <p><b>remote-site <i>remote-site-name</i></b>—(Optional) Display the VPLS connections for the specified remote site name or ID only. Label block size information is always shown as 0 when using this option.</p> <p><b>logical-system (all   <i>logical-system-name</i>)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p> <p><b>status</b>—(Optional) Display information about the connection and interface status.</p> <p><b>summary</b>—(Optional) Display summary of all VPLS connections information.</p>
<b>Required Privilege Level</b>	view

**List of Sample Output** [show vpls connections on page 2546](#)  
[show vpls connections \(with FEC128 and FEC129 in the same routing-instance\) on page 2548](#)  
[show vpls connections \(with multiple pseudowires\) on page 2549](#)  
[show vpls connections extensive \(Static VPLS Neighbors\) on page 2550](#)

**Output Fields** [Table 242 on page 2542](#) lists the output fields for the **show vpls connections** command. Output fields are listed in the approximate order in which they appear.

*Table 242: show vpls connections Output Fields*

Field Name	Field Description
<b>Instance</b>	Name of the VPLS instance.
<b>Local site</b>	Name of the local site.
<b>VPLS-id</b>	Identifier for the VPLS site.
<b>Number of local interfaces</b>	Number of interfaces configured for the local site.
<b>Number of local interfaces up</b>	Number of interfaces configured for the local site that are currently up.
<b>IRB interface present</b>	Indicates whether or not an integrated routing and bridging (IRB) interface is present ( <b>yes</b> or <b>no</b> ).
<b>Intf</b>	<p>List of all of the interfaces configured for the local site. The types of interfaces can include VPLS virtual loopback tunnel interfaces and label-switched interfaces. Any interface that supports VPLS could be listed here.</p> <p>Virtual loopback tunnel interfaces are displayed using the <b>vt-fpc/pic/port.nnnnn</b> format. Label-switched interfaces are displayed using the <b>lsi.nnnnn</b> format. In both cases, <b>nnnnn</b> is a dynamically generated virtual port used to transport and receive packets from other provider edge (PE) routers in the VPLS domain.</p> <p>Each interface might include the following information:</p> <ul style="list-style-type: none"> <li>• Identification as a VPLS interface</li> <li>• Name of the associated VPLS routing instance</li> <li>• Local site number</li> <li>• Remote site number</li> <li>• VPLS neighbor address</li> <li>• VPLS identifier</li> </ul>
<b>Interface flags</b>	<p>Flag associated with the interface. Can include the following:</p> <ul style="list-style-type: none"> <li>• <b>VC-Down</b>—The virtual circuit associated with this interface is down.</li> </ul>
<b>Label-base</b>	First label in a block of labels. A remote PE router uses this first label when sending traffic toward the advertising PE router.

Table 242: *show vpls connections* Output Fields (continued)

Field Name	Field Description
<b>Offset</b>	Displays the VPLS Edge (VE) block offset in the Layer 2 VPN NLRI. The VE block offset is used to identify a label block from which a particular label value is selected to setup a pseudowire for a remote site. The block offset value itself indicates the starting VE ID that maps to the label base contained in the VPLS NLRI advertisement.
<b>Size</b>	Label block size. A configurable value that represents the number of label blocks required to cover all the pseudowires for the remote peer. Acceptable configuration values are: <b>2</b> , <b>4</b> , <b>8</b> and <b>16</b> . The default value is <b>2</b> . A value of <b>0</b> will be displayed when using the <b>remote-site</b> option.
<b>Range</b>	Label block range. A value that keeps track of the numbers of remote sites discovered within each label block.
<b>Preference</b>	Preference value advertised for a VPLS site. When multiple PE routers are assigned the same VE ID for multihoming, you might need to specify that a particular PE router acts as the designated forwarder by configuring the site preference value. The site preference indicates the degree of preference for a particular customer site. The site preference is one of the tie-breaking criteria used in a designated forwarder election.
<b>status-vector</b>	Bit vector advertising the state of local PE-CE circuits to remote PE routers. A bit value of <b>0</b> indicates that the local circuit and LSP tunnel to the remote PE router are up, whereas a value of <b>1</b> indicates either one or both are down.
<b>connection-site</b>	Name of the connection site.
<b>Neighbor</b>	IP address and VPLS identifier for the VPLS neighbor. If multiple pseudowires have been configured, the IP address will also show the PW-specific <i>vpls-id-list</i> , for example, 203.0.113.144 (vpls-id 200).
<b>Type</b>	Type of connection: <b>loc</b> (local) or <b>rmt</b> (remote).

Table 242: *show vpls connections* Output Fields (continued)

Field Name	Field Description
<b>St</b>	<p>Status of the VPLS connection (corresponds with Legend for Connection Status):</p> <ul style="list-style-type: none"> <li>• <b>EI</b>—The local VPLS interface is configured with an encapsulation that is not supported.</li> <li>• <b>EM</b>—The encapsulation type received on this VPLS connection from the neighbor does not match the local VPLS connection interface encapsulation type.</li> <li>• <b>VC-Dn</b>—The virtual circuit is currently down.</li> <li>• <b>CM</b>—The two routers do not agree on a control word, which causes a control word mismatch.</li> <li>• <b>CN</b>—The virtual circuit is not provisioned properly.</li> <li>• <b>OR</b>—The label associated with the virtual circuit is out of range.</li> <li>• <b>OL</b>—No advertisement has been received for this virtual circuit from the neighbor. There is no outgoing label available for use by this virtual circuit.</li> <li>• <b>LD</b>—All of the CE-facing interfaces to the local site are down. Therefore, the connection to the local site is signaled as down to the other PE routers. No pseudowires can be established.</li> <li>• <b>RD</b>—All the interfaces to the remote neighbor are down. Therefore, the remote site has been signaled as down to the other PE routers. No pseudowires can be established.</li> <li>• <b>LN</b>—The local site has lost path selection to the remote site and therefore no pseudowires can be established from this local site.</li> <li>• <b>RN</b>—The remote site has lost path selection to a local site or other remote site and therefore no pseudowires are established to this remote site.</li> </ul> <p>In a multihoming configuration, one multihomed PE site displays the state <b>LN</b>, and the other multihomed PE site displays the state <b>RN</b> in the following circumstances:</p> <ul style="list-style-type: none"> <li>• The multihomed links are both configured to be the backup site.</li> <li>• The two multihomed PE routers have the same site ID, but have a peering relationship with a route reflector (RR) that has a different site ID.</li> </ul> <ul style="list-style-type: none"> <li>• <b>XX</b>—The VPLS connection is down for an unknown reason. This is a programming error.</li> <li>• <b>MM</b>—The MTU for the local site and the remote site do not match.</li> <li>• <b>BK</b>—The router is using a backup connection.</li> <li>• <b>PF</b>—Profile parse failure.</li> <li>• <b>RS</b>—The remote site is in a standby state.</li> <li>• <b>NC</b>—The interface encapsulation is not configured as an appropriate CCC, TCC, or VPLS encapsulation.</li> <li>• <b>WE</b>—The encapsulation configured for the interface does not match the encapsulation configured for the associated connection within the VPLS routing instance.</li> </ul>

Table 242: *show vpls connections* Output Fields (continued)

Field Name	Field Description
	<ul style="list-style-type: none"> <li>• <b>NP</b>—The router detects that interface hardware is not present. The hardware might be offline, a PIC might not be of the desired type, or the interface might be configured in a different routing instance.</li> <li>• <b>--&gt;</b>—Only the outbound connection is up.</li> <li>• <b>&lt;--</b>—Only the inbound connection is up.</li> <li>• <b>Up</b>—The VPLS connection is operational.</li> <li>• <b>Dn</b>—The VPLS connection is down.</li> <li>• <b>CF</b>—The router cannot find enough bandwidth to the remote router to satisfy the VPLS connection bandwidth requirement.</li> <li>• <b>SC</b>—The local site identifier matches the remote site identifier. No pseudowire can be established between these two sites. You should configure different values for the local and remote site identifiers.</li> <li>• <b>LM</b>—The local site identifier is not the minimum designated, meaning it is not the lowest. There is another local site with a lower site identifier. Pseudowires are not being established to this local site, and the associated local site identifier is not being used to distribute VPLS label blocks. However, this is not an error state. Traffic continues to be forwarded to the PE router interfaces connected to the local sites when the local sites are in this state.</li> <li>• <b>RM</b>—The remote site identifier is not the minimum designated, meaning it is not the lowest. There is another remote site connected to the same PE router which has lower site identifier. The PE router cannot establish a pseudowire to this remote site and the associated remote site identifier cannot be used to distribute VPLS label blocks. However, this is not an error state. Traffic can continue to be forwarded to the PE router interface connected to this remote site when the remote site is in this state.</li> <li>• <b>IL</b>—The incoming packets for the VPLS connection have no MPLS label.</li> <li>• <b>MI</b>—The configured mesh group identifier is in use by another system in the network.</li> <li>• <b>ST</b>—The router has switched to a standby connection.</li> <li>• <b>PB</b>—Profile busy.</li> <li>• <b>SN</b>—The VPLS neighbor is static.</li> </ul>
<b>Time last up</b>	Time connection was last in the <b>Up</b> condition.
<b># Up trans</b>	Number of transitions from <b>Down</b> to <b>Up</b> condition.
<b>Status</b>	Status of the (local or remote circuit) local interface: <ul style="list-style-type: none"> <li>• <b>Up</b>—Operational</li> <li>• <b>Dn</b>—Down</li> <li>• <b>NP</b>—Not present</li> <li>• <b>DS</b>—Disabled</li> <li>• <b>WE</b>—Wrong encapsulation</li> <li>• <b>UN</b>—Uninitialized</li> </ul>
<b>Encapsulation</b>	Type of encapsulation: <b>VPLS</b> .
<b>Remote PE</b>	Address of the remote provider edge router.

Table 242: show vpls connections Output Fields (continued)

Field Name	Field Description
<b>Negotiated control-word</b>	Whether a control word has been negotiated: <b>Yes</b> or <b>No</b> .
<b>Incoming label</b>	Name of the incoming label.
<b>Outgoing label</b>	Name of the outgoing label.
<b>Negotiated PW status TLV</b>	Indicates whether or not the pseudowire status TLV has been negotiated for the VPLS connection.
<b>Local interface</b>	Provides the following information about the local interface configured for the VPLS neighbor: <ul style="list-style-type: none"> <li>• Name of the local interface</li> <li>• <b>Status</b>—Interface status (<b>Up</b> or <b>Down</b>)</li> <li>• <b>Encapsulation</b>—Interface encapsulation (for example, <b>ETHERNET</b>)</li> <li>• <b>Description</b>—Includes the VPLS instance name, the VPLS neighbor address, and the VPLS identifier</li> </ul>
<b>Time</b>	Date and time of VPLS connection event.
<b>Event</b>	Type of event.
<b>Interface/Lbl/PE</b>	Interface, label, or PE router.
<b>Connection History</b>	Each entry can include the date, time, year, and the connection event. Connection events include any of a variety of events related to VPLS connections, such as route changes, label updates, and interfaces going down or coming up.

## Sample Output

## show vpls flood event-queue

---

**Syntax**    show vpls flood event-queue

**Release Information**    Command introduced in Junos OS Release 8.0.

**Description**    Display the pending events in the VPLS flood queue.

**Options**    This command has no options.

**Required Privilege Level**    view

**List of Sample Output**    [show vpls flood event-queue on page 2552](#)

**Output Fields**    [Table 243 on page 2552](#) lists the output fields for the **show vpls flood event-queue** command. Output fields are listed in the approximate order in which they appear.

*Table 243: show vpls flood event-queue Output Fields*

Field Name	Field Description
<b>Current Pending Event</b>	Provides information on the current event in the VPLS flood event queue.
<b>Name</b>	Name of the event.
<b>Owner Name</b>	Name of the interface associated with the flood event.
<b>Pending Op</b>	Pending operation for the event.
<b>Last Error</b>	Name of the last error encountered.
<b>Number of Retries</b>	Number of attempts made to update the event queue.
<b>Pending Event List</b>	List of the events awaiting processing.
<b>Event Name</b>	Name of the event.
<b>Pending Op</b>	Pending operation for the event.
<b>Event Identifier</b>	Name of the interface associated with the flood event.

## Sample Output

### show vpls flood event-queue

```
user@host> show vpls flood event-queue
```

## Current Pending Event

Name: Flood Nexthop

Owner Name:ge-4/3/0.0

Pending Op: ADD

Last Error:ENOMEM

Number of Retries:3

Pending Event List:

Event Name	Pending Op	Event Identifier
Flood Nexthop	ADD	ge-4/3/0.0
Flood Route	ADD	ge-4/3/0.0

## show vpls flood instance

**Syntax** show vpls flood instance  
 <brief | detail | extensive>  
 <instance-name>  
 <logical-system *logical-system-name*>

**Release Information** Command introduced in Junos OS Release 8.0.

**Description** Display VPLS information related to the flood process.

**Options** **none**—Display VPLS information related to the flood process for all routing instances.

**brief | detail | extensive**—(Optional) Display the specified level of output.

**instance-name**—(Optional) Display VPLS information related to the flood process for the specified routing instance.

**logical-system *logical-system-name***—(Optional) Display VPLS information related to the flood process for the specified logical system.

**Required Privilege Level** view

**List of Sample Output** [show vpls flood instance on page 2555](#)  
[show vpls flood instance logical-system-name on page 2555](#)  
[show vpls flood instance detail on page 2555](#)

**Output Fields** [Table 244 on page 2554](#) lists the output fields for the **show vpls flood instance** command. Output fields are listed in the approximate order in which they appear.

*Table 244: show vpls flood instance Output Fields*

Field Name	Field Description
Logical system	Name of the logical system.
Name	Name of the VPLS routing instance.
CEs	Number of CE routers connected to the VPLS instance.
VEs	Number of VE routers connected to the VPLS instance.
Flood routes	List of all flood routes associated with the VPLS instance.
Prefix	Prefix for the route.
Type	Type of route.

Table 244: *show vpls flood instance* Output Fields (continued)

Field Name	Field Description
Owner	VPLS routing instance or interface associated with the route.
NhType	Next-hop type. For example, <b>flood</b> for a flood route.
Nhindex	Next-hop index number for the route.

## Sample Output

### show vpls flood instance

```

user@host> show vpls flood instance

Logical system: __example_ls1__
Name: green
CEs: 1
VEs: 1
Flood Routes:
  Prefix  Type      Owner      NhType      NhIndex
  default ALL_CE_FLOOD green       flood       383
  0x47/16 CE_FLOOD fe-1/2/1.0 flood       388

```

### show vpls flood instance logical-system-name

```

user@host: __example_ls1__> show vpls flood instance example_ls1

Logical system: __example_ls1__
Name: green
CEs: 1
VEs: 1
Flood Routes:
  Prefix  Type      Owner      NhType      NhIndex
  default ALL_CE_FLOOD green       flood       383
  0x47/16 CE_FLOOD fe-1/2/1.0 flood       388

```

### show vpls flood instance detail

```

user@host: __example_ls1__> show vpls flood instance detail

Logical system: __example_ls1__
Name: green
CEs: 1
VEs: 1
Flood Routes:
  Prefix  Type      Owner      NhType      NhIndex
  default ALL_CE_FLOOD green       flood       383
  0x47/16 CE_FLOOD fe-1/2/1.0 flood       388

```

## show vpls flood route

**Syntax** `show vpls flood route`  
 (all-ce-flood instance-name *instance-name* <logical-system-name *logical-system-name*>  
 |  
 ce-flood interface *interface-name*)

**Release Information** Command introduced in Junos OS Release 8.0.

**Description** Display VPLS route information related to the flood process for either the specified routing instance or the specified interface.

**Options** **all-ce-flood**—Display the flood next-hop route for all customer edge routers for traffic coming from the core of the network.

**ce-flood interface *interface-name***—Display the flood next-hop route for traffic coming from the specified customer edge interface.

**instance-name *instance-name***—Display the flood routes for the specified instance.

**logical-system-name *logical-system-name***—(Optional) Specify the logical system whose flood routes you want to display. You can only specify the default logical system name for VPLS. The default logical system name is `__example_ls1__` (the name must be entered in the command with the underscore characters).

**Required Privilege Level** view

**List of Sample Output** [show vpls flood route all-ce-flood on page 2557](#)  
[show vpls flood route ce-flood on page 2557](#)

**Output Fields** [Table 245 on page 2556](#) lists the output for the **show vpls flood route** command. Output fields are listed in the approximate order in which they appear.

*Table 245: show vpls flood route Output Fields*

Field Name	Field Description
Flood route prefix	Prefix for the flood route.
Flood route type	Type of flood route (either <b>CE_FLOOD</b> or <b>ALL_CE_FLOOD</b> ).
Flood route owner	VPLS routing instance or interface associated with the flood route.
Nexthop type	Next-hop type. For example, <b>flood</b> for a flood route.
Nexthop index	Next-hop index number for the route.
Interfaces flooding to	Interfaces to which VPLS routes are being flooded.

Table 245: show vpls flood route Output Fields (continued)

Field Name	Field Description
Name	Name of the interface.
Type	Type of VPLS router (CE or VE).
Nh type	Next-hop type.
Index	Index number for the flood route.

## Sample Output

### show vpls flood route all-ce-flood

```
user@host: __example_lsl__> show vpls flood route all-ce-flood logical-system-name
__example_lsl__instance-name green
```

```
Flood route prefix: default
Flood route type: ALL_CE_FLOOD
Flood route owner: green

## show vpls mac-table

---

Syntax	<pre>show vpls mac-table &lt;age&gt; &lt;brief   detail   extensive   summary&gt; &lt;bridge-domain <i>bridge-domain-name</i>&gt; &lt;instance <i>instance-name</i>&gt; &lt;interface <i>interface-name</i>&gt; &lt;logical-system (all   <i>logical-system-name</i>)&gt; &lt;mac-address&gt; &lt;vlan-id <i>vlan-id-number</i>&gt;</pre>
Release Information	Command introduced in Junos OS Release 8.5. Command introduced in Junos OS Release 15.1.
Description	Display learned virtual private LAN service (VPLS) media access control (MAC) address information.
Options	<p><b>none</b>—Display all learned VPLS MAC address information.</p> <p><b>age</b>— (Optional) Display age of a single mac-address.</p> <p><b>brief   detail   extensive   summary</b>—(Optional) Display the specified level of output.</p> <p><b>bridge-domain <i>bridge-domain-name</i></b>—(Optional) Display learned VPLS MAC addresses for the specified bridge domain.</p> <p><b>instance <i>instance-name</i></b>—(Optional) Display learned VPLS MAC addresses for the specified instance.</p> <p><b>interface <i>interface-name</i></b>—(Optional) Display learned VPLS MAC addresses for the specified instance.</p> <p><b>logical-system (all   <i>logical-system-name</i>)</b>—(Optional) Display learned VPLS MAC addresses for all logical systems or for the specified logical system.</p> <p><b>mac-address</b>—(Optional) Display the specified learned VPLS MAC address information..</p> <p><b>vlan-id <i>vlan-id-number</i></b>—(Optional) Display learned VPLS MAC addresses for the specified VLAN.</p>
Required Privilege Level	view
List of Sample Output	<p><a href="#">show vpls mac-table on page 2560</a></p> <p><a href="#">show vpls mac-table (with Layer 2 Services over GRE Interfaces) on page 2560</a></p> <p><a href="#">show vpls mac-table (with VXLAN enabled) on page 2560</a></p> <p><a href="#">show vpls mac-table age (for GE interface) on page 2561</a></p> <p><a href="#">show vpls mac-table age (for AE interface) on page 2561</a></p> <p><a href="#">show vpls mac-table count on page 2561</a></p>

[show vpls mac-table detail on page 2562](#)  
[show vpls mac-table extensive on page 2562](#)

**Output Fields** [Table 246 on page 2559](#) describes the output fields for the **show vpls mac-table** command. Output fields are listed in the approximate order in which they appear.

*Table 246: show vpls mac-table Output fields*

Field Name	Field Description
Age	Age of a single mac-address.
Routing instance	Name of the routing instance.
Bridging domain	Name of the bridging domain.
MAC address	MAC address or addresses learned on a logical interface.
MAC flags	Status of MAC address learning properties for each interface: <ul style="list-style-type: none"> <li>• <b>S</b>—Static MAC address configured.</li> <li>• <b>D</b>—Dynamic MAC address learned.</li> <li>• <b>SE</b>—MAC accounting is enabled.</li> <li>• <b>NM</b>—Nonconfigured MAC.</li> </ul>
Logical interface	Name of the logical interface.
MAC count	Number of MAC addresses learned on a specific routing instance or interface.
Learning interface	Logical interface or logical Label Switched Interface (LSI) the address is learned on.
Base learning interface	Base learning interface of the MAC address. This field is introduced in Junos OS Release 14.2.
Learn VLAN ID/VLAN	VLAN ID of the routing instance or bridge domain in which the MAC address was learned.
VXLAN ID/VXLAN	VXLAN Network Identifier (VNI)
Layer 2 flags	Debugging flags signifying that the MAC address is present in various lists.
Epoch	Spanning Tree Protocol epoch number identifying when the MAC address was learned. Used for debugging.
Sequence number	Sequence number assigned to this MAC address. Used for debugging.
Learning mask	Mask of Packet Forwarding Engines where this MAC address was learned. Used for debugging.
IPC generation	Creation time of the logical interface when this MAC address was learned. Used for debugging.

## Sample Output

### show vpls mac-table

```

```

### show vpls mac-table age (for GE interface)

```
user@host> show vpls mac-table age 00:00:5e:00:53:1a instance vpls_instance_1
MAC Entry Age information
Current Age: 4 seconds
```

### show vpls mac-table age (for AE interface)

```
user@host> show vpls mac-table age 000:00:5e:00:53:1a instance vpls_instance_1
MAC Entry Age information
Current Age on FPC1: 102 seconds
Current Age on FPC2: 94 seconds
```

### show vpls mac-table count

```
user@host> show vpls mac-table count
0 MAC address learned in routing instance __example_private1__
```

MAC address count per interface within routing instance:

Logical interface	MAC count
lc-0/0/0.32769	0
lc-0/1/0.32769	0
lc-0/2/0.32769	0
lc-2/0/0.32769	0
lc-0/3/0.32769	0
lc-2/1/0.32769	0
lc-9/0/0.32769	0
lc-11/0/0.32769	0
lc-2/2/0.32769	0
lc-9/1/0.32769	0
lc-11/1/0.32769	0
lc-2/3/0.32769	0
lc-9/2/0.32769	0
lc-11/2/0.32769	0
lc-11/3/0.32769	0
lc-9/3/0.32769	0

MAC address count per learn VLAN within routing instance:

Learn VLAN ID	MAC count
0	0

1 MAC address learned in routing instance vpls\_ldp1

MAC address count per interface within routing instance:

Logical interface	MAC count
lsi.1051137	0
ge-0/2/5.400	1

MAC address count per learn VLAN within routing instance:

Learn VLAN ID	MAC count
0	1

1 MAC address learned in routing instance vpls\_red

MAC address count per interface within routing instance:

Logical interface	MAC count
ge-0/2/5.300	1

MAC address count per learn VLAN within routing instance:

Learn VLAN ID	MAC count
0	1

### show vpls mac-table detail

```

user@host> show vpls mac-table detail
MAC address: 00:00:5e:00:53:5d
Routing instance: vpls_ldp1
Learning interface: ge-0/2/5.400
Layer 2 flags: in_ifd, in_ifl, in_vlan, kernel
Epoch: 0                               Sequence number: 1
Learning mask: 0x1                       IPC generation: 0

MAC address: 00:00:5e:00:53:5d
Routing instance: vpls_red
Learning interface: ge-0/2/5.300
Layer 2 flags: in_ifd, in_ifl, in_vlan, kernel
Epoch: 0                               Sequence number: 1
Learning mask: 0x1                       IPC generation: 0

```

### show vpls mac-table extensive

```

user@host> show vpls mac-table extensive

MAC address: 00:00:5e:00:53:00
Routing instance: vpls_1
Bridging domain: __vpls_1__, VLAN : NA
Learning interface: lsi.1049165
Base learning interface: lsi.1049165
Layer 2 flags: in_hash,in_ifd,in_ifl,in_vlan,in_rtt,kernel,in_ifbd
Epoch: 0                               Sequence number: 1
Learning mask: 0x00000001

MAC address: 00:00:5e:00:53:01
Routing instance: vpls_1
Bridging domain: __vpls_1__, VLAN : NA
Learning interface: lsi.1049165
Base learning interface: lsi.1049165
Layer 2 flags: in_hash,in_ifd,in_ifl,in_vlan,in_rtt,kernel,in_ifbd
Epoch: 0                               Sequence number: 1
Learning mask: 0x00000001

MAC address: 00:00:5e:00:53:02
Routing instance: vpls_1
Bridging domain: __vpls_1__, VLAN : NA
Learning interface: lsi.1049165
Base learning interface: lsi.1049165
Layer 2 flags: in_hash,in_ifd,in_ifl,in_vlan,in_rtt,kernel,in_ifbd
Epoch: 0                               Sequence number: 1
Learning mask: 0x00000001

MAC address: 00:00:5e:00:53:03
Routing instance: vpls_1
Bridging domain: __vpls_1__, VLAN : NA
Learning interface: lsi.1049165
Base learning interface: lsi.1049165
Layer 2 flags: in_hash,in_ifd,in_ifl,in_vlan,in_rtt,kernel,in_ifbd
Epoch: 0                               Sequence number: 1
Learning mask: 0x00000001

```

## show vpls statistics

<b>Syntax</b>	show vpls statistics <instance <i>instance-name</i> > <logical-system (all   <i>logical-system-name</i> )>
<b>Release Information</b>	Command introduced before Junos OS Release 7.4.
<b>Description</b>	(T Series and M Series routers, except for the M160 router) Display virtual private LAN service (VPLS) statistics.
<b>Options</b>	<p><b>none</b>—Display VPLS statistics for all routing instances.</p> <p><b>instance <i>instance-name</i></b>—(Optional) Display VPLS statistics for a specific VPLS routing instance only.</p> <p><b>logical-system (all   <i>logical-system-name</i>)</b>—(Optional) Perform this operation on all logical systems or on a particular logical system.</p>
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">show vpls statistics on page 2564</a> <a href="#">show vpls statistics instance on page 2565</a>
<b>Output Fields</b>	Table 247 on page 2563 lists the output fields for the <b>show vpls statistics</b> command. Output fields are listed in the approximate order in which they appear.

*Table 247: show vpls statistics Output Fields*

Field Name	Field Description
Instance	Name of the VPLS instance.
Local interface	Name of the local VPLS virtual loopback tunnel interface, <b>vt-fpc/pic/port.nnnnn</b> , where <b>nnnnn</b> is a dynamically generated virtual port used to transport and receive packets from other provider edge (PE) routers in the VPLS domain.
Index	Number associated with the next hop.
Remote provider edge router	Address of the remote provider edge router.
Multicast packets	Number of multicast packets received.
Multicast bytes	Number of multicast bytes received.
Flood packets	Number of VPLS flood packets received.

Table 247: show vpls statistics Output Fields (continued)

Field Name	Field Description
Flood bytes	Number of VPLS flood bytes received.
Current MAC count	Number of MAC addresses learned by the interface and the configured maximum limit on the number of MAC addresses that can be learned.

## Sample Output

### show vpls statistics

```
user@host> show vpls statistics
```

```
VPLS statistics:
```

```
Instance: green
```

```
Local interface: fe-2/2/1.0, Index: 69
Multicast packets:      1
Multicast bytes   :      60
Flooded packets   :      18
Flooded bytes    :    2556
Current MAC count:      1
```

```
Local interface: lt-0/3/0.2, Index: 72
Multicast packets:      3
Multicast bytes   :    153
Flooded packets   :      1
Flooded bytes    :      51
Current MAC count:      1
```

```
Local interface: lsi.32769, Index: 75
Current MAC count:      0
```

```
Local interface: lsi.32771, Index: 77
Remote PE: 10.255.14.222
Current MAC count:      2
```

```
Instance: red
```

```
Local interface: vt-0/3/0.32768, Index: 74
Multicast packets:      0
Multicast bytes   :      0
Flooded packets   :      0
Flooded bytes    :      0
Current MAC count:      0
```

```
Local interface: vt-0/3/0.32770, Index: 76
Multicast packets:      0
Multicast bytes   :      0
Flooded packets   :      0
Flooded bytes    :      0
Current MAC count:      0
```

**show vpls statistics instance**

```
user@host> show vpls statistics instance red
```

Layer-2 VPN Statistics:

Instance: red

Local interface: vt-3/2/0.32768, Index: 73

Remote provider edge router: 10.255.17.35

Multicast packets: 0

Multicast bytes : 0

Flood packets : 0

Flood bytes : 0

Current MAC count: 1 (Limit 20)
