## show chassis lccs

<b>Syntax</b>	show chassis lccs
<b>Release Information</b>	Command introduced before Junos OS Release 7.4.
<b>Description</b>	(TX Matrix and TX Matrix Plus routers only ) On a TX Matrix router, display the status of all T640 LCC connected to the TX Matrix router. On a TX Matrix Plus router, display the status of all LCC connected to the TX Matrix Plus router.
<b>Options</b>	This command has no options.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">request chassis lcc on page 838</a></li> <li>• <i>Configuring Line-Card Upgrade Groups for Nonstop Software Upgrade (CLI Procedure)</i></li> <li>• <i>fpc</i></li> </ul>
<b>List of Sample Output</b>	<a href="#">show chassis lccs on page 1931</a> <a href="#">show chassis lccs (TX Matrix Plus router with 3D SIBs) on page 1932</a>
<b>Output Fields</b>	Table 145 on page 1931 lists the output fields for the <b>show chassis lccs</b> command. Output fields are listed in the approximate order in which they appear.

Table 145: show chassis lccs Output Fields

Field Name	Field Description
Slot	LCC slot number.
State	LCC status: <ul style="list-style-type: none"> <li>• <b>Online</b>—LCC is online and running.</li> <li>• <b>Offline</b>—LCC is powered down.</li> <li>• <b>Empty</b>—No LCC is present.</li> </ul>
Uptime	How long the LCC has been up and running.

## Sample Output

### show chassis lccs

```

user@host> show chassis lccs
Slot State Uptime
 0 Online 3 minutes, 17 seconds
 1 Empty

```

2	Online	3 minutes, 23 seconds
3	Empty	

#### show chassis lccs (TX Matrix Plus router with 3D SIBs)

```
user@host> show chassis lccs
```

Slot	State	Uptime
0	Offline	
1	Empty	
2	Online	1 day, 4 hours, 57 minutes, 7 seconds
3	Empty	
4	Online	1 day, 4 hours, 56 minutes, 58 seconds
5	Empty	
6	Empty	
7	Online	3 hours, 45 minutes, 41 seconds

## show chassis lcc-mode

**Syntax** show chassis lcc-mode

**Release Information** Command introduced in Junos OS Release 13.1.

**Description** (TX Matrix Plus routers only) Display the mode in which LCCs are connected to a TX Matrix Plus router.

**NOTE:** This command is supported only on TX Matrix Plus routers with 3D SIBs.

**Options** This command has no options.

**Required Privilege Level** view

7	EMPTY

## show chassis location

<b>List of Syntax</b>	<a href="#">Syntax on page 1935</a> <a href="#">Syntax (TX Matrix Router) on page 1935</a> <a href="#">Syntax (TX Matrix Plus Router) on page 1935</a> <a href="#">Syntax (MX Series Router) on page 1935</a> <a href="#">Syntax (QFX Series) on page 1935</a> <a href="#">Syntax (OCX Series) on page 1935</a>
<b>Syntax</b>	show chassis location
<b>Syntax (TX Matrix Router)</b>	show chassis location <fpc   interface (by-name <i>name</i>   by-slot fpc number lcc number)   lcc number   scc>
<b>Syntax (TX Matrix Plus Router)</b>	show chassis location <fpc   interface (by-name <i>name</i>   by-slot fpc number lcc number)   lcc number   sfc number>
<b>Syntax (MX Series Router)</b>	show chassis location <all-members> <local> <member <i>member-id</i> >
<b>Syntax (QFX Series)</b>	show chassis location <interconnect-device <i>name</i> > <node-device <i>name</i> >
<b>Syntax (OCX Series)</b>	show chassis location
<b>Release Information</b>	Command introduced before Junos OS Release 7.4. Command introduced in Junos OS Release 9.0 for EX Series switches. <b>sfc</b> option introduced for the TX Matrix Plus router in Junos OS Release 9.6. Command introduced in Junos OS Release 11.1 for the QFX Series. Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.
<b>Description</b>	Display the physical location of the chassis. This command can only be used on the master Routing Engine.
<b>Options</b>	<p><b>none</b>—Display all information about the physical location of the chassis. On a TX Matrix router, display all information about the physical location of the TX Matrix router and its attached T640 routers. On a TX Matrix Plus router, display all information about the physical location of the TX Matrix Plus router and its attached routers.</p> <p><b>all-members</b>—(MX Series routers only) (Optional) Display the physical location of the chassis for all the member routers in the Virtual Chassis configuration.</p> <p><b>fpc</b>—(TX Matrix router and TX Matrix Plus router only) (Optional) Display the physical location of all Flexible PIC Concentrators (FPCs).</p>

**interconnect-device *name***—(QFabric systems only) (Optional) Display the physical location of the Interconnect device.

**interface by-name *name***—(TX Matrix and TX Matrix Plus routers only) (Optional) Display the physical location of a specified interface name. On a TX Matrix router, this option displays the FPC number and T640 router (line-card chassis) number associated with the specified interface. On a TX Matrix Plus router, this option displays the FPC number and router (line-card chassis) number associated with the specified interface.

**interface by-slot fpc *number* lcc *number***—(TX Matrix and TX Matrix Plus router only) (Optional) On a TX Matrix router, display the global FPC number of an interface by specifying its local FPC number and T640 router (line-card chassis) number. On a TX Matrix Plus router, display the global FPC number of an interface by specifying its local FPC number and router (line-card chassis) number.

- The global FPC number is the FPC slot number when all the FPC slots in the routing matrix are considered: **0** through **31**. On TX Matrix Plus router with 3D SIBs, the value is **0** through **63**. The local FPC number is the FPC slot number on a particular T640 router.
- For **fpc**, replace *number* with a value from **0** through **7**.
- For **lcc**, replace *number* with a value from **0** through **7**.

**lcc *number***—(TX Matrix and TX Matrix Plus routers only) (Optional) On a TX Matrix router, display the physical location of a specified T640 router (line-card chassis) that is connected to a TX Matrix router. On a TX Matrix Plus router, display the physical location of a specified router (line-card chassis) that is connected to a TX Matrix Plus router.

Replace *number* with the following values depending on the LCC configuration:

- 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.
- 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.
- 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.
- 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.

**local**—(MX Series routers only) (Optional) Display the physical location of the chassis for the local Virtual Chassis member.

**member *member-id***—(MX Series routers only) (Optional) Display the physical location of the chassis for the specified member of the Virtual Chassis configuration. Replace *member-id* with a value of 0 or 1.

**node-device *name***—(QFabric systems only) (Optional) Display the physical location of the Node device.

**scc**—(TX Matrix routers only) (Optional) Display the physical location of the TX Matrix router (switch-card chassis).

**sfc**—(TX Matrix Plus routers only) (Optional) Display the physical location of the TX Matrix Plus router (or switch-fabric chassis).

**Required Privilege Level** view

**Related Documentation** • [Displaying Chassis Physical Locations for a Routing Matrix with a TX Matrix Plus Router](#)

**Output Fields** [Table 147 on page 1937](#) lists the output fields for the **show chassis location** command. Output fields are listed in the approximate order in which they appear.

*Table 147: show chassis location Output Fields*

Field Name	Field Description
country-code	Country code information.
postal-code	Postal code information.
Building	Building information.
Floor	Floor information.
Global FPC	Global FPC number. The FPC slot number, when all FPC slots in the routing matrix are considered. The range of values is 0 through 31. On TX Matrix Plus router with 3D SIBs the value is 0 through 63.
LATA	Local access transport area information.
LCC	Line-card chassis number. On a TX Matrix router, the number of a particular T640 router connected to the TX Matrix router. On a TX Matrix Plus router, the number of a particular router connected to the TX Matrix Plus router.

Table 147: show chassis location Output Fields (continued)

Field Name	Field Description
<b>Local FPC</b>	Local FPC number. On a TX Matrix router, the FPC slot number on a particular T640 router. On a TX Matrix Plus router, the FPC slot number on a particular router.

## Sample Output

### show chassis location

Command introduced in Junos OS Release 18.2 for EX9253 Switches.  
Command introduced in Junos OS Release 18.2 for MX10008 Universal Routing Platforms.

**Description**    Display the media access control (MAC) addresses for the router, switch chassis, or switch.

**Options**    **none**—(TX Matrix, TX Matrix Plus routers, QFX Series, and OCX Series Switches) Display the MAC addresses for the router chassis or switch. On a TX Matrix router, display MAC addresses on the TX Matrix router and its attached T640 routers. On a TX Matrix Plus router, display MAC addresses on the TX Matrix Plus router and its attached routers.

**all-members**—(MX Series routers only) (Optional) Display the MAC addresses for all the member routers of the Virtual Chassis configuration.

**interconnect-device *name***—(QFabric switches only) (Optional) Display the MAC addresses for the Interconnect device.

**lcc *number***—(TX Matrix and TX Matrix Plus routers only) (Optional) On a TX Matrix router, display MAC addresses for a specified T640 router (or line-card chassis) that is connected to the TX Matrix Plus router. On a TX Matrix Plus router, display MAC addresses for a specified router (line-card chassis) that is connected to the TX Matrix Plus router.

Replace *number* with the following values depending on the LCC configuration:

- 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.
- 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.
- 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.
- 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.

**local**—(MX Series routers only) (Optional) Display the MAC addresses for the local Virtual Chassis member.

**member *member-id***—(MX Series routers only) (Optional) Display the MAC addresses for the specified member of the Virtual Chassis configuration. Replace *member-id* with a value of 0 or 1.

**node-group *name***—(QFabric switches only) (Optional) Display the MAC addresses for the specified Node group.

**scc**—(TX Matrix routers only) (Optional) Display MAC addresses for the TX Matrix router (or switch-card chassis).

**sfc *number***—(TX Matrix Plus routers only) (Optional) Display MAC addresses for the TX Matrix Plus router (or switch-fabric chassis).

**Output Fields** [Table 148 on page 1942](#) lists the output fields for the **show chassis mac-addresses** command. Output fields are listed in the approximate order in which they appear.

*Table 148: show chassis mac-addresses Output Fields*

Field Name	Field Description
<b>MAC address information</b>	
Public base address	<p>Base address of the MAC addresses allocated to this router or switch, for example 00:24:dc:18:09:40. This address is also printed on the box of the device.</p> <p>Public MAC addresses are those addresses your switch/router assigns to Ethernet interfaces. The public base address is the first MAC address your device assigns to an interface. Consecutive public count MAC addresses are reserved for additional interfaces.</p>
	<p>Number of allocated public addresses, for example 64. Public addresses are calculated starting with the public base address. If the public base address is 00:24:dc:18:09:40, then The MAC address of ge-0/0/0 on this device is 00:24:dc:18:09:40, and ge-0/0/1 is 00:24:dc:18:09:41, and so on, up to 64 available addresses.</p>
Private base address	<p>Base address of the private MAC addresses allocated to this router or switch. The private base address is the first MAC address after the allocated consecutive public count addresses. For example, if 00:24:dc:18:09:40 is the public base and 0x40 is the public count in hex, then 00:24:dc:18:09:80 would be the private base.</p>
Private count	Number of allocated private addresses.

## Sample Output

### show chassis mac-addresses

```

user@host> show chassis mac-addresses
MAC address information
 Public base address 0:90:69:0:4:0
 Public count 1008
 Private base address 0:90:69:0:7:f0
 Private count 16

```

### show chassis mac-addresses (MX150)

```

user@host > show chassis mac-addresses
MAC address information:
 Public base address f4:cc:55:2b:4c:00
 Public count 1984

```

```

Private base address f4:cc:55:2b:53:c0
Private count 64

```

The MAC address displayed is the actual MAC address of the first physical port.

## show chassis network-services

<b>Syntax</b>	show chassis network-services
<b>Release Information</b>	<p>Command introduced in Junos OS Release 9.4.</p> <p>Command introduced in Junos OS Release 12.3 for MX2010 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 12.3 for MX2020 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 13.2 for MX104 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 15.F5 for PTX Series Routers with third-generation FPCs.</p> <p>Command introduced in Junos OS Release 17.2 for PTX10008 Routers.</p> <p>Command introduced in Junos OS Release 17.2 for MX2008 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 17.3 for MX10003 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 17.4 for MX204 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 18.2 for MX10008 Universal Routing Platforms.</p>
<b>Description</b>	Display the network services mode that the router is configured to run in—IP Network Services mode, Ethernet Network Services mode, Enhanced IP Network Services mode, Enhanced Ethernet Network Services mode, or Enhanced mode.
<b>Options</b>	This command has no options.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">enhanced-mode on page 622</a></li> </ul>
<b>List of Sample Output</b>	<p><a href="#">show chassis network services on page 1948</a></p> <p><a href="#">show chassis network services (MX104 Router) on page 1948</a></p> <p><a href="#">show chassis network services (MX2010 Router) on page 1948</a></p> <p><a href="#">show chassis network services (MX2020 Router) on page 1948</a></p> <p><a href="#">show chassis network services (MX2008 Router) on page 1948</a></p> <p><a href="#">show chassis network-services (MX10003 Router) on page 1948</a></p> <p><a href="#">show chassis network-services (MX204 Router) on page 1948</a></p> <p><a href="#">show chassis network-services (MX10008 Router) on page 1948</a></p> <p><a href="#">show chassis network services (PTX Router with third-generation FPCs) on page 1949</a></p>
<b>Output Fields</b>	Table 149 on page 1948 lists the output fields for the <b>show chassis network services</b> command. Output fields are listed in the approximate order in which they appear.

Table 149: show chassis network services Output Fields

Field Name	Field Description
<b>Network Services Mode</b>	<p>Network services mode configured for the router:</p> <ul style="list-style-type: none"> <li>• <b>IP</b>—IP Network Services mode.</li> <li>• <b>Ethernet</b>—Ethernet Network Services mode.</li> <li>• <b>enhanced-ip</b>—Enhanced IP Network Services mode</li> <li>• <b>enhanced-ethernet</b>—Enhanced Ethernet Network Services mode</li> <li>• <b>Enhanced-Mode</b>—Enhanced mode for PTX Series routers that have third-generation FPCs installed. See <a href="#">enhanced-mode</a>.</li> </ul>

## Sample Output

### show chassis network services

```
user@host> show chassis network services
Network Services Mode: IP
```

### show chassis network services (MX104 Router)

```
user@host> show chassis network services
Network Services Mode: IP
```

### show chassis network services (MX2010 Router)

```
user@host> show chassis network services
Network Services Mode: Enhanced-IP
```

### show chassis network services (MX2020 Router)

```
user@host> show chassis network services
Network Services Mode: Enhanced-IP
```

### show chassis network services (MX2008 Router)

```
user@host> show chassis network-services
Network Services Mode: Enhanced-IP
```

### show chassis network-services (MX10003 Router)

```
user@host> show chassis network-services

Network Services Mode: Enhanced-IP
```

### show chassis network-services (MX204 Router)

```
user@host> show chassis network-services

Network Services Mode: Enhanced-IP
```

### show chassis network-services (MX10008 Router)

```
user@host> show chassis network-services
```

Network Services Mode: Enhanced-IP

**show chassis network services (PTX Router with third-generation FPCs)**

```
user@host> show chassis network services
Network Services Mode: Enhanced-Mode
```

## show chassis oss-map

---

<b>Syntax</b>	show chassis oss-map
<b>Release Information</b>	Command introduced in Junos OS Release 12.3R3, 13.1R2, and 13.2R1 for T4000 routers.
<b>Description</b>	(T4000 routers only) Display the operations support systems (OSS) mapping details.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring OSS Mapping to Represent a T4000 Chassis as a T1600 or a T640 Chassis on page 435</a></li><li>• <a href="#">Example: Configuring a T4000 Chassis to Represent a T640 Chassis on page 437</a></li><li>• <a href="#">oss-map on page 702</a></li></ul>
<b>Output Fields</b>	<a href="#">Table 150 on page 1950</a> lists the output fields for the <b>show chassis oss-map</b> command. Output fields are listed in the approximate order in which they appear.

*Table 150: show chassis oss-map Output Fields*

Field Name	Field Description
Chassis type	Displays the original chassis type.
Oss-map	Displays the mapped chassis type.

### Sample Output

```
user@T4000# show chassis oss-map
Chassis type Oss-map
T4000 T640
```

## show chassis pic

Description	Display status information about the PIC installed in the specified Flexible PIC Concentrator (FPC) and PIC slot.
Options	<p><b>fpc-slot slot-number</b>—Display information about the PIC in this particular FPC slot:</p> <ul style="list-style-type: none"><li>On a TX Matrix router, if you specify the number of the T640 router by using the <b>lcc number</b> option (the recommended method), replace <b>slot-number</b> with a value from 0 through 7. Otherwise, replace <b>slot-number</b> with a value from 0 through 31.</li></ul> <p>Likewise, on a TX Matrix Plus router, if you specify the number of the T1600 router by using the <b>lcc number</b> option (the recommended method), replace <b>slot-number</b> with a value from 0 through 7. Otherwise, replace <b>slot-number</b> with a value from 0 through 31. For example, the following commands have the same result:</p> <pre>user@host&gt; show chassis pic fpc-slot 1 lcc 1 pic-slot 1 user@host&gt; show chassis pic fpc-slot 9 pic-slot 1</pre> <ul style="list-style-type: none"><li>M120 routers only—Replace <b>slot-number</b> with a value from 0 through 5.</li><li>MX80 routers only—Replace <b>slot-number</b> with a value from 0 through 1.</li><li>MX104 routers only—Replace <b>slot-number</b> with a value from 0 through 2.</li><li>MX240 routers only—Replace <b>slot-number</b> with a value from 0 through 2.</li><li>MX480 routers only—Replace <b>slot-number</b> with a value from 0 through 5.</li><li>MX960 routers only—Replace <b>slot-number</b> with a value from 0 through 11.</li></ul>

- MX2010 routers only—Replace **slot-number** with a value from 0 through 9.
- MX2020 routers only—Replace **slot-number** with a value from 0 through 19.
- MX2008 routers only—Replace **slot-number** with a value from 0 through 9.
- MX10003 routers only—Replace **slot-number** with a value from 0 through 1.
- Other routers—Replace **slot-number** with a value from 0 through 7.
- EX Series switches:
  - EX3200 switches and EX4200 standalone switches—Replace **slot-number** with 0.
  - EX4200 switches in a Virtual Chassis configuration—Replace **slot-number** with a value from 0 through 9 (switch's member ID).
  - EX8208 switches—Replace **slot-number** with a value from 0 through 7 (line card).
  - EX8216 switches—Replace **slot-number** with a value from 0 through 15 (line card).
- QFX Series:
  - QFX3500, QFX3600, QFX5100, and OCX Series standalone switches—Replace **slot-number** with 0. In the command output, FPC refers to a line card. The FPC number equals the slot number for the line card.
  - QFabric systems—Replace **slot-number** with any number between 0 and 15. In the command output, FPC refers to a line card. The FPC number equals the slot number for the line card.

**all-members**—(MX Series routers and EX Series switches only) (Optional) Display PIC information for all member routers in the Virtual Chassis configuration.

**interconnect-device name**—(QFabric systems only) (Optional) Display PIC information for a specified Interconnect device.

**lcc number**—(TX Matrix and TX Matrix Plus routers only) (Optional) On a TX Matrix router, display PIC information for a specified T640 router (or line-card chassis) that is connected to the TX Matrix router. On a TX Matrix Plus router, display PIC information for a specified router (line-card chassis) that is connected to the TX Matrix Plus router.

Replace *number* with the following values depending on the LCC configuration:

- 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.
- 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.

- 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.
- 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.

**local**—(MX Series routers and EX Series switches only) (Optional) Display PIC information for the local Virtual Chassis member.

**member *member-id***—(MX Series routers and EX Series switches only) (Optional) Display PIC information for the specified member of the Virtual Chassis configuration. Replace *member-id* with a value of 0 or 1.

**node-device *name***—(QFabric systems only) (Optional) Display PIC information for a specified Node device.

**pic-slot *slot-number***—Display information about the PIC in this particular PIC slot. For routers, replace *slot-number* with a value from 0 through 3. For EX3200 and EX4200 switches, replace *slot-number* with 0 for built-in network interfaces and 1 for interfaces on uplink modules. For EX8208 and EX8216 switches, replace *slot-number* with 0. For the QFX3500 standalone switch and the QFabric system, replace *slot-number* with 0 or 1.

**transport**—Display PIC information for optical transport network.

**Output Fields** Table 151 on page 1956 lists the output fields for the **show chassis pic** command. Output fields are listed in the approximate order in which they appear.

*Table 151: show chassis pic Output Fields*

Field Name	Field Description
Type	PIC type.  <b>NOTE:</b> On the 1-port OC192/STM64 MICs with the SDH framing mode, the type is displayed as <b>MIC-3D-1STM64-XFP</b> and with the SONET framing mode, the type is displayed as <b>MIC-3D-1OC192-XFP</b> . By default, the 1-port OC192/STM64 MICs displays the type as <b>MIC-3D-1OC192-XFP</b> .
Account Layer2 Overhead	(MX Series routers) Indicates whether functionality to count the Layer 2 overhead bytes in the interface statistics at the PIC level is enabled or disabled.
ASIC type	Type of ASIC on the PIC.
State	Status of the PIC. State is displayed only when a PIC is in the slot. <ul style="list-style-type: none"> <li>• <b>Online</b>— PIC is online and running.</li> <li>• <b>Offline</b>—PIC is powered down.</li> </ul>
PIC version	PIC hardware version.
Uptime	How long the PIC has been online.
Package	(Multiservices PICs only) Services package supported: <b>Layer-2</b> or <b>Layer-3</b> .
Port Number	Port number for the PIC.
Cable Type	Type of cable connected to the port: <b>LH</b> , <b>LX</b> , or <b>SX</b> .

Table 151: show chassis pic Output Fields (continued)

Field Name	Field Description
<b>PIC Port Information (MX480 Router 100-Gigabit Ethernet CFP)</b>	<p>Port-level information for the PIC.</p> <ul style="list-style-type: none"> <li>• Port—Port number</li> <li>• Cable type—Type of optical transceiver installed.</li> <li>• Fiber type—Type of fiber. SM is single-mode.</li> <li>• Xcvr vendor—Transceiver vendor name.</li> <li>• Xcvr vendor part number—Transceiver vendor part number.</li> <li>• Wavelength—Wavelength of the transmitted signal. Uplinks and downlinks are always 1550 nm. There is a separate fiber for each direction</li> <li>• Xcvr Firmware—Transceiver firmware version.</li> </ul>
<b>PIC Port Information (MX960 Router Bidirectional Optics )</b>	<p>Port-level information for the PIC.</p> <ul style="list-style-type: none"> <li>• Port—Port number</li> <li>• Cable type—Type of small form-factor pluggable (SFP) optical transceiver installed. Uplink interfaces display -U. Down link interfaces display -D.</li> <li>• Fiber type—Type of fiber. SM is single-mode.</li> <li>• Xcvr vendor—Transceiver vendor name.</li> <li>• Xcvr vendor part number—Transceiver vendor part number. <ul style="list-style-type: none"> <li>• BX10-10-km bidirectional optics.</li> <li>• BX40-40-km bidirectional optics.</li> <li>• SFP-LX-40-km SFP optics.</li> </ul> </li> <li>• Wavelength—Wavelength of the transmitted signal. Uplinks are always 1310 nm. Downlinks are either 1490 nm or 1550 nm.</li> </ul>
<b>PIC Port Information (Next-Generation SONET/SDH SFP)</b>	<p>Port-level information for the next-generation SONET/SDH SFP PIC.</p> <ul style="list-style-type: none"> <li>• Port—Port number.</li> <li>• Cable type—Type of small form-factor pluggable (SFP) optical transceiver installed.</li> <li>• Fiber type—Type of fiber: <b>SM</b> (single-mode) or <b>MM</b> (multimode).</li> <li>• Xcvr vendor—Transceiver vendor name.</li> <li>• Xcvr vendor part number—Transceiver vendor part number.</li> <li>• Wavelength—Wavelength of the transmitted signal. Next-generation SONET/SDH SFPs use 1310 nm.</li> </ul>
<b>PIC port information (MX104 router)</b>	<p>Port-level information for the PIC.</p> <ul style="list-style-type: none"> <li>• Port—Port number</li> <li>• Cable type—Type of optical transceiver installed.</li> <li>• Fiber type—Type of fiber. SM is single-mode.</li> <li>• Xcvr vendor—Transceiver vendor name.</li> <li>• Xcvr vendor part number—Transceiver vendor part number.</li> <li>• Wavelength—Wavelength of the transmitted signal.</li> <li>• Xcvr Firmware—Firmware version of the transceiver.</li> </ul>

Table 151: show chassis pic Output Fields (continued)

Field Name	Field Description
Port speed information	Information pertaining to port speed: <ul style="list-style-type: none"> <li>• Port—Port number.</li> <li>• PFE—Packet Forwarding Engine slot number.</li> <li>• Capable Port Speed—Speed supported by each port.</li> </ul>
Multirate Mode	Rate-selectability status for the MIC: <b>Enabled</b> or <b>Disabled</b> .
Channelization	Indicates whether channelization is enabled or disabled on the DS3/E3 MIC.
Administrative State	Indicates the administrative state of the PIC. Possible values are: In Service (Default) and Out of Service.
Operational State	Indicates the operational state of the PIC. Possible values are: Normal and Fault.

## Sample Output

### show chassis pic fpc-slot pic-slot

1	10GBASE SR	MM	SumitomoElectric	SPP5100SR-J3	850 nm	0.0
3	10GBASE SR	MM	SumitomoElectric	SPP5100SR-J3	850 nm	0.0

### show chassis pic fpc-slot pic-slot (MX2010 Router)

```
user@host> show chassis pic fpc-slot 9 pic-slot 3
```

FPC slot 9, PIC slot 3 information:

```
Type 1X100GE CFP
Account Layer2 Overhead Enabled
State Online
PIC version 0.0
Uptime 14 hours, 51 seconds
```

### show chassis pic fpc-slot pic-slot (T1600 Router with 100-Gigabit Ethernet PIC)

```
user@host> run show chassis pic fpc-slot 3 pic-slot 1
```

FPC slot 3, PIC slot 1 information:

```
Type 100GE SLOT1
ASIC type Brooklyn 100GE FPGA
State Online
PIC version 1.3
Uptime 10 minutes, 44 seconds
```

PIC port information:

Port	Cable type	Fiber type	Xcvr vendor	part number	Wavelength
0	100GBASE LR4	SM	Opnext Inc.	TRC5E20ENFSF000F	1310 nm

### show chassis pic fpc-slot pic-slot lcc (TX Matrix Router)

```
user@host> show chassis pic fpc-slot 1 pic-slot 1 lcc 0
```

lcc0-re0:

PIC fpc slot 1 pic slot 1 information:

```
Type 4x OC-3 SONET, SMIR
ASIC type D chip
State Online
PIC version 1.2
Uptime 5 days, 2 hours, 12 minutes, 8 seconds
```

### show chassis pic fpc-slot pic-slot lcc (TX Matrix Plus Router)

```
user@host> show chassis pic pic-slot 0 fpc-slot 8
```

lcc0-re0:

FPC slot 8, PIC slot 0 information:

```
Type 1x 10GE(LAN/WAN)
State Online
Uptime 2 hours, 46 minutes, 23 seconds
```

PIC port information:

Port	Cable type	Fiber type	Xcvr vendor	part number	Wavelength
0	10GBASE ZR	SM	Opnext Inc.	TRF7061BN-LF150	1550 nm
0	10GBASE ZR	SM	FINISAR CORP.	FTRX-1811-3-J2	1550 nm

### show chassis pic fpc-slot pic-slot (Next-Generation SONET/SDH SFP)

user@host> show chassis pic fpc-slot 4 pic-slot 0

FPC slot 4, PIC slot 0 information:

```
Type 4x OC-3 1x OC-12 SFP
ASIC type D FPGA
State Online
PIC version 1.3
Uptime 1 day, 50 minutes, 4 seconds
```

PIC port information:

Port	Cable type	Fiber type	Xcvr vendor	part number	Wavelength
0	OC48 short reach	SM	FINISAR CORP.	FTRJ1321P1BTL-J2	1310 nm

                                  Command introduced in Junos OS Release 12.3 for MX2010 Universal Routing Platforms.  
                                  Command introduced in Junos OS Release 12.3 for EX9200 switches, with **detail** option added in Junos OS Release 15.2.  
                                  Command introduced in Junos OS Release 17.2 for MX2008 Universal Routing Platforms.  
                                  Command introduced in Junos OS Release 17.2 for PTX10008 Routers.  
                                  Command introduced in Junos OS Release 17.3 for MX10003 Universal Routing Platforms.  
                                  Command introduced in Junos OS Release 18.2 for EX9253 Switches.  
                                  Command introduced in Junos OS Release 18.2 for MX10008 Universal Routing Platforms.

**Description** (EX9200 switches, MX Series 5G Universal Routing Platforms and PTX Series Packet Transport Routers only) Display power limits and usage information for the AC or DC power sources.

- On EX9200 switches and the MX Series 5G Universal Routing Platforms, power is supplied by Power Entry Modules (PEMs).

**NOTE:** The new high-capacity (4100 W) enhanced DC PEM on MX960 routers includes a new design that can condition the input voltage. This results in the output voltage differing from the input voltage. The earlier generation of DC PEMs coupled the input power directly to the output, thereby making it safe to assume that the output voltage was equal to the input voltage.

- On the MX2020 Universal Routing Platforms, the power system consists of three components: the power supply modules (PSMs), the power distribution module (PDM), and the power midplane. The power feed is connected to the PDM. The PDM delivers power to the power midplane. The power midplane supplies power to the PSMs. The MX2020 router chassis provides 3+3 (2500W/80A) or 4+4 (2100W/60A) PSM redundancy for the critical FRUs with two power zones.
- On the MX2010 and MX2008 Universal Routing Platforms, the power system consists of three components: the power supply modules (PSMs), the power distribution module (PDM), and the power midplane. The power feed is connected to the PDM. The PDM delivers power to the power midplane. The power midplane supplies power to the PSMs. Unlike the MX2020 router chassis, the MX2010 and MX2008 router chassis does not provide redundancy for the critical FRUs because there is only one power zone.

Starting from Junos OS Release 17.3, MX10003 routers support DC (1100W), AC High (1600W), and AC Low (800W) power supply units.

- On the PTX Series Packet Transport Routers, power is supplied by power supply modules (PSMs). On PTX5000 routers, the power feeds connect to the power distribution units (PDUs).
- Starting with Junos OS Release 14.1, the **show chassis power <detail>** operational mode command output displays power usage information for the new DC power supply module (PSM) and power distribution unit (PDU) that are added to provide power to the high-density FPC (FPC2-PTX-P1A) and other components in a PTX5000 Packet Transport Router. The output also displays power usage information for each PIC that is connected to the router. This command also displays power usage information for MX Series routers that have a MPC5EQ MPC installed.

**Options** **none**—Display basic power usage information for the AC and DC power sources.

**all-members**—(MX Series routers only) (Optional) Display power usage information for all members of the Virtual Chassis configuration.

**detail**—(Optional) Include power usage for specific FRUs.

**local**—(MX Series routers only) (Optional) Display power usage information for the local Virtual Chassis member.

**member *member-id***—(MX Series routers only) (Optional) Display power usage information for the specified member of the Virtual Chassis configuration. For an MX Series Virtual Chassis, replace *member-id* with a value of 0 or 1.

**Output Fields**

[Table 152 on page 1981](#) lists the output fields for the **show chassis power** command. Output fields are listed in the approximate order in which they appear.

Table 152: show chassis power Output Fields:

Field Name	Field Description	Level of Output
<b>PEM number</b>	<p>(EX9200 switches and MX Series routers only) AC or DC PEM number on the chassis. The following output fields are displayed for the PEM:</p> <ul style="list-style-type: none"> <li>• <b>State</b>—State of the PEM: <ul style="list-style-type: none"> <li>• <b>Online</b>—PEM is present in the slot and online.</li> <li>• <b>Empty</b>—PEM is not present in the slot.</li> <li>• <b>Present</b>—PEM is present in the slot, but not online.</li> </ul> </li> <li>• <b>AC/DC Input—OK or Check</b>—State of the AC or DC input power feed with the number of active and expected feeds (one or two). For a DC input power feed, this output field also displays the reference voltage input with maximum input voltage displayed in mV (in parentheses) for the AC or DC PEM.</li> <li>• <b>Capacity</b>—Actual power input capacity with maximum capacity displayed (in parentheses) in watts.</li> </ul> <p><b>NOTE:</b> The maximum actual power capacity for AC and DC PEMs is:</p> <ul style="list-style-type: none"> <li>• MX960 AC PEM—4100 W if two feeds are connected. 1700 W if one feed is connected.</li> <li>• MX960 DC PEM—4100 W if two feeds are connected. 1700 W if one feed is connected.</li> <li>• MX480 AC PEM—2520 W if it is high-line. 1450 W if it is low-line.</li> <li>• MX480 DC PEM—2240 W if the DIP switch is off. 2440 W if the DIP switch is on.</li> <li>• MX240 AC PEM—2240 W if it is high-line. 2440 W if it is low-line.</li> <li>• MX240 DC PEM—2240 W if the DIP switch is off. 2440 W if the DIP switch is on.</li> <li>• EX9204 AC PEM—2050 W if it is high-line. 1167 W if it is low-line.</li> <li>• EX9204 DC PEM—2400 W if the DIP switch is off. 2600 W if the DIP switch is on.</li> <li>• EX9208 AC PEM—2050 W if it is high-line. 1167 W if it is low-line.</li> <li>• EX9208 DC PEM—2400 W if the DIP switch is off. 2600 W if the DIP switch is on.</li> <li>• EX9214 AC PEM—4100 W if two feeds are connected. 1700 W if one feed is connected.</li> <li>• EX9214 DC PEM—4100 W if two feeds are connected. 1700 W if one feed is connected.</li> </ul> <ul style="list-style-type: none"> <li>• <b>DC Output</b>—DC power output in Watts for the specified zone, at the specified amps and voltage (A @ V), and load and percentage utilization of the maximum capacity) for the zone.</li> </ul>	All levels

Table 152: show chassis power Output Fields: (continued)

Field Name	Field Description	Level of Output
<b>System</b>	<p>(EX9200 switches, MX Series, MX2020 routers, MX2010 routers, and MX2008 routers only) Overall power statistics for the system zone.</p> <p>The following output fields are displayed for MX Series routers:</p> <ul style="list-style-type: none"> <li>• <i>Zone number</i>: <ul style="list-style-type: none"> <li>• <b>Capacity</b>—Maximum power capacity applicable for the zone, in watts.</li> <li>• <b>Allocated power</b>—Actual capacity allocated for the zone, in watts, with remaining power displayed in parentheses.</li> <li>• <b>Actual usage</b>—Actual power usage for the zone, in watts.</li> </ul> </li> <li>• <b>Total system capacity</b>—Cumulative power capacity of all the zones, in watts.</li> <li>• <b>Total remaining capacity</b>—Difference between the <b>Total system capacity</b> and cumulative <b>Allocated power</b> of all the zones, in watts.</li> </ul> <p>The following output fields are displayed for MX2010, MX2020, and MX2008 routers:</p> <ul style="list-style-type: none"> <li>• <b>Capacity</b>—Maximum power capacity applicable for the zone, in watts.</li> <li>• <b>Allocated power</b>—Actual capacity allocated for the zone, in watts, with remaining power displayed in parentheses.</li> <li>• <b>Actual usage</b>—Actual power usage for the zone, in watts.</li> </ul> <p><b>NOTE:</b> For MX2020 routers, there are two power subsystems (Lower Zone and Upper Zone) and the listed output fields are displayed for each zone.</p>	All levels
<b>Total Power</b>	(PTX Series only) Total power used by the switch (displayed in watts).	All levels
<b>PDU number</b>	(PTX5000 only) ID number of the power distribution unit (PDU) on the chassis.	All levels

Table 152: show chassis power Output Fields: (continued)

Field Name	Field Description	Level of Output
<b>PSM number</b>	<p>(PTX Series, MX2020 routers, MX2010 routers, and MX2008 routers only) ID number of the power supply module..</p> <p>(PTX Series) The following output fields are displayed for each PSM:</p> <ul style="list-style-type: none"> <li>• <b>Input (V)</b>—Voltage supplied to the PSM.</li> <li>• <b>Used (W)</b>—Actual power usage for the PSM (measured in watts).</li> </ul> <p><b>NOTE:</b> Starting with Junos OS Release 14.1, no output is displayed for <b>Input (v)</b> and <b>Used (W)</b> fields for missing PSMs; unlike in earlier releases where 0 was displayed for missing PSMs.</p> <p>(MX2010, MX2020, and MX2008 routers) The following output fields are displayed for each PSM:</p> <ul style="list-style-type: none"> <li>• <b>State</b>—State of the PSM: <ul style="list-style-type: none"> <li>• <b>Online</b>—PSM is present in the slot and online.</li> <li>• <b>Empty</b>—PSM is not present in the slot.</li> <li>• <b>Present</b>—PSM is present in the slot but not online.</li> </ul> </li> <li>• <b>DC Input</b>—State of the DC input power feed with the number of active or expected feeds (in parentheses).</li> <li>• <b>Capacity</b>—Actual power input capacity and maximum capacity (in parentheses) displayed in watts.</li> </ul> <p><b>NOTE:</b> The maximum capacity for AC and DC PSMs is:</p> <ul style="list-style-type: none"> <li>• MX2010/MX2020/MX2008 AC PSM—2500 W.</li> <li>• MX2010/MX2020/MX2008 DC PSM—2100 W if the DIP switch is at 60A settings. 2500 W if the DIP switch is at 80A settings.</li> </ul> <li>• <b>DC Output</b>—DC power output in watts for the specified zone at the specified amperes and voltage (A at V), and load and percentage utilization of the maximum capacity for the zone.</li>	All levels
<b>Item</b>	<p>Actual power usage (measured in watts) for the following FRUs:</p> <ul style="list-style-type: none"> <li>• <b>Fan Tray n</b>—Power usage for the specified fan tray.</li> <li>• <b>REn/CBn</b>—Power usage for the specified Routing Engines and Control Boards</li> <li>• <b>SIB/CCG/FPD</b>—Power usage for the Switch Interface Board, Centralized Clock Generator (PTX5000 only), and Front Panel Display (craft interface).</li> <li>• <b>FPC n</b>—Power usage for the FPC in the slot specified.</li> </ul> <p><b>NOTE:</b> MX Series routers must have a MPC5EQ MPC installed to view FRU power usage with the <b>detail</b> command.</p>	<b>detail</b>

## Sample Output

### show chassis power (MX960 Router with DC PEM)

```

user@host> show chassis power
PEM 0:
 State: Online
 DC input: OK (2 feed expected, 2 feed connected)

```

```
DC input: 48.0 V input (57000 mV)
Capacity: 4100 W (maximum 4100 W)
DC output: 513 W (zone 0, 9 A at 57 V, 12% of capacity)
```

**PEM 1:**

```
State: Online
DC input: OK (2 feed expected, 2 feed connected)
DC input: 48.0 V input (57000 mV)
Capacity: 4100 W (maximum 4100 W)
DC output: 228 W (zone 1, 4 A at 57 V, 5% of capacity)
```

**PEM 2:**

```
State: Online
DC input: OK (2 feed expected, 2 feed connected)
DC input: 48.0 V input (57000 mV)
Capacity: 4100 W (maximum 4100 W)
DC output: 513 W (zone 0, 9 A at 57 V, 12% of capacity)
```

**PEM 3:**

```
State: Online
DC input: OK (2 feed expected, 2 feed connected)
DC input: 48.0 V input (57000 mV)
Capacity: 4100 W (maximum 4100 W)
DC output: 342 W (zone 1, 6 A at 57 V, 8% of capacity)
```

**System:**

```
Zone 0:
 Capacity: 4100 W (maximum 4100 W)
 Allocated power: 1680 W (2420 W remaining)
 Actual usage: 1026 W
Zone 1:
 Capacity: 4100 W (maximum 4100 W)
 Allocated power: 1263 W (2837 W remaining)
 Actual usage: 570 W
Total system capacity: 8200 W (maximum 8200 W)
Total remaining power: 5257 W
```

**show chassis power (MX960 Router with AC PEM)**

```
user@host> show chassis power
PEM 0:
 State: Online
 AC input: OK (2 feed expected, 2 feed connected)
 Capacity: 4100 W (maximum 4100 W)
 DC output: 0 W (zone 0, 0 A at 56 V, 0% of capacity)

PEM 1:
 State: Present
 AC input: Check (2 feed expected, 1 feed connected)
 Capacity: 1700 W (maximum 4100 W)

PEM 2:
 State: Empty
 Input: Absent

PEM 3:
 State: Online
 AC input: OK (1 feed expected, 1 feed connected)
 Capacity: 1700 W (maximum 1700 W)

System:
```

```

Zone 0:
 Capacity: 4100 W (maximum 4100 W)
 Allocated power: 540 W (3560 W remaining)
 Actual usage: 0 W
Zone 1:
 Capacity: 0 W (maximum 0 W)
 Allocated power: 0 W (0 W remaining)
 Actual usage: 0 W
Total system capacity: 4100 W (maximum 4100 W)
Total remaining power: 3560 W

```

### show chassis power (MX960 Router with MPC5EQ)

```

user@host> show chassis power
PEM 0:
 State: Online
 AC input: OK (2 feed expected, 2 feed connected)
 Capacity: 4100 W (maximum 4100 W)
 DC output: 1197 W (zone 0, 21 A at 57 V, 29% of capacity)

PEM 1:
 State: Online
 AC input: OK (2 feed expected, 2 feed connected)
 Capacity: 4100 W (maximum 4100 W)
 DC output: 2451 W (zone 1, 43 A at 57 V, 59% of capacity)

PEM 2:
 State: Online
 AC input: OK (2 feed expected, 2 feed connected)
 Capacity: 4100 W (maximum 4100 W)
 DC output: 1083 W (zone 0, 19 A at 57 V, 26% of capacity)

PEM 3:
 State: Empty
 Input: Absent

System:
 Zone 0:
 Capacity: 4100 W (maximum 4100 W)
 Allocated power: 3508 W (592 W remaining)
 Actual usage: 2280 W
 Zone 1:
 Capacity: 4100 W (maximum 4100 W)
 Allocated power: 3341 W (759 W remaining)
 Actual usage: 2451 W
Total system capacity: 8200 W (maximum 8200 W)
Total remaining power: 1351 W

```

### show chassis power detail (MX960 Router with MPC5EQ)

```

user@host> show chassis power detail
PEM 0:
 State: Online
 DC input: OK (2 feed expected, 2 feed connected)
 DC input: 48.0 V input (57500 mV)
 Capacity: 4100 W (maximum 4100 W)
 DC output: 798 W (zone 0, 14 A at 57 V, 19% of capacity)

PEM 1:
 State: Online

```

DC input: OK (2 feed expected, 2 feed connected)  
DC input: 48.0 V input (57500 mV)  
Capacity: 4100 W (maximum 4100 W)  
DC output: 1311 W (zone 1, 23 A at 57 V, 31% of capacity)

## PEM 2:

State: Online  
DC input: OK (2 feed expected, 2 feed connected)  
DC input: 48.0 V input (57500 mV)  
Capacity: 4100 W (maximum 4100 W)  
DC output: 855 W (zone 0, 15 A at 57 V, 20% of capacity)

## PEM 3:

State: Online  
DC input: OK (2 feed expected, 2 feed connected)  
DC input: 48.0 V input (57500 mV)  
Capacity: 4100 W (maximum 4100 W)  
DC output: 912 W (zone 1, 16 A at 57 V, 22% of capacity)

## System:

## Zone 0:

Capacity: 4100 W (maximum 4100 W)  
Allocated power: 2497 W (1603 W remaining)  
Actual usage: 1653 W

## Zone 1:

Capacity: 4100 W (maximum 4100 W)  
Allocated power: 3336 W (764 W remaining)  
Actual usage: 2223 W

Total system capacity: 8200 W (maximum 8200 W)  
Total remaining power: 2367 W

Item	Used(W)
FPC 0	255
FPC 10	341

### show chassis power (MX480 Router with AC PEM)

```
user@host> show chassis power
```

## PEM 0:

State: Online  
AC input: OK (1 feed expected, 1 feed connected)  
Capacity: 2520 W (maximum 2520 W)  
DC output: 472 W (zone 0, 8 A at 59 V, 18% of capacity)

## PEM 1:

State: Online  
AC input: OK (1 feed expected, 1 feed connected)  
Capacity: 2520 W (maximum 2520 W)  
DC output: 472 W (zone 0, 8 A at 59 V, 18% of capacity)

## PEM 2:

State: Online  
AC input: OK (1 feed expected, 1 feed connected)  
Capacity: 2520 W (maximum 2520 W)  
DC output: 118 W (zone 0, 2 A at 59 V, 4% of capacity)

## PEM 3:

State: Empty  
Input: Absent

## System:

```

Maximum capacity: 5040 W
Allocated capacity: 1675 W (33% of maximum)
Remaining capacity: 3365 W
Actual usage: 1062 W

```

### show chassis power (MX240 Router with DC PEM)

```

user@host> show chassis power
PEM 0:
 State: Online
 DC input: OK (1 feed expected, 1 feed connected)
 DC input: 48.0 V input (53500 mV)
 Capacity: 2400 W (maximum 2400 W)
 DC output: 318 W (zone 0, 6 A at 53 V, 13% of capacity)

PEM 1:
 State: Online
 DC input: OK (1 feed expected, 1 feed connected)
 DC input: 48.0 V input (54000 mV)
 Capacity: 2400 W (maximum 2400 W)
 DC output: 0 W (zone 0, 0 A at 54 V, 0% of capacity)

PEM 2:
 State: Online
 DC input: OK (1 feed expected, 1 feed connected)
 DC input: 48.0 V input (52500 mV)
 Capacity: 2400 W (maximum 2400 W)
 DC output: 312 W (zone 0, 6 A at 52 V, 13% of capacity)

PEM 3:
 State: Online
 DC input: OK (1 feed expected, 1 feed connected)
 DC input: 48.0 V input (55000 mV)
 Capacity: 2400 W (maximum 2400 W)
 DC output: 0 W (zone 0, 0 A at 55 V, 0% of capacity)

System:
 Maximum capacity: 2400 W
 Allocated capacity: 1270 W (52% of maximum)
 Remaining capacity: 1130 W
 Actual usage: 630 W

```

### show chassis power (MX2010 Router)

```

user@host > show chassis power
PSM 0:
 State: Online
 DC input: OK (INP0 feed expected, INP0 feed connected)
 Capacity: 2500 W (maximum 2500 W)
 DC output: 1022.06 W (19.75 A at 51.75 V, 40.88% of capacity)

PSM 1:
 State: Online
 DC input: OK (INP0 feed expected, INP0 feed connected)
 Capacity: 2500 W (maximum 2500 W)
 DC output: 996.19 W (19.25 A at 51.75 V, 39.85% of capacity)

PSM 2:
 State: Online
 DC input: OK (INP0 feed expected, INP0 feed connected)

```

```
Capacity: 2500 W (maximum 2500 W)
DC output: 1022.06 W (19.75 A at 51.75 V, 40.88% of capacity)

PSM 3:
State: Online
DC input: OK (INP0 feed expected, INP0 feed connected)
Capacity: 2500 W (maximum 2500 W)
DC output: 1004.25 W (19.50 A at 51.50 V, 40.17% of capacity)

PSM 4:
State: Online
DC input: OK (INP0 feed expected, INP0 feed connected)
Capacity: 2500 W (maximum 2500 W)
DC output: 996.19 W (19.25 A at 51.75 V, 39.85% of capacity)

PSM 5:
State: Online
DC input: OK (INP0 feed expected, INP0 feed connected)
Capacity: 2500 W (maximum 2500 W)
DC output: 1017.12 W (19.75 A at 51.50 V, 40.69% of capacity)

PSM 6:
State: Online
DC input: OK (INP0 feed expected, INP0 feed connected)
Capacity: 2500 W (maximum 2500 W)
DC output: 1009.12 W (19.50 A at 51.75 V, 40.37% of capacity)

PSM 7:
State: Online
DC input: OK (INP0 feed expected, INP0 feed connected)
Capacity: 2500 W (maximum 2500 W)
DC output: 996.19 W (19.25 A at 51.75 V, 39.85% of capacity)

PSM 8:
State: Online
DC input: OK (INP0 feed expected, INP0 feed connected)
Capacity: 2500 W (maximum 2500 W)
DC output: 1004.25 W (19.50 A at 51.50 V, 40.17% of capacity)

System:
Capacity: 22500 W (maximum 22500 W)
Allocated power: 12888 W (9612 W remaining)
Actual usage: 9067.44 W
```

### show chassis power (MX2020 Router)

```
user@host > show chassis power
PSM 0:
State: Online
DC input: OK (INP0 feed expected, INP0 feed connected)
Capacity: 2500 W (maximum 2500 W)

## show chassis power sequence

---

<b>Syntax</b>	show chassis power sequence
<b>Release Information</b>	Command introduced in Junos OS Release 10.0. Command introduced in Junos OS Release 12.1 for PTX Series Packet Transport Routers. Command introduced in Junos OS Release 12.3 for MX2020 Universal Routing Platforms. Command introduced in Junos OS Release 12.3 for MX2010 Universal Routing Platforms.
<b>Description</b>	(MX Series 5G Universal Routing Platforms only) Show power-on sequence for the chassis Dense Port Concentrators (DPCs).  (PTX Series Packet Transport Routers, MX2010 and MX2020 routers only) Show power-on sequence for FPCs installed in the chassis.
<b>Options</b>	This command has no options.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">show chassis power on page 1978</a></li></ul>
<b>List of Sample Output</b>	<a href="#">show chassis power sequence (MX Series) on page 2006</a> <a href="#">show chassis power sequence (MX2010 Routers) on page 2007</a> <a href="#">show chassis power sequence (MX2020 Routers) on page 2007</a> <a href="#">show chassis power sequence (PTX5000 Packet Transport Router) on page 2007</a>
<b>Output Fields</b>	<a href="#">Table 153 on page 2006</a> lists the output fields for the <b>show chassis power sequence</b> command. Output fields are listed in the approximate order in which they appear.

*Table 153: show chassis power sequence Output Fields*

Field Name	Field Description
Chassis FRU Power Sequence	(MX Series) Power-on sequence for the DPCs in the chassis. The numbers indicate the slot number of the DPCs.  (PTX Series, MX2010 and MX2020 routers only) Power-on sequence for the FPCs in the chassis. The numbers indicate the slot number of the FPC.

## Sample Output

### show chassis power sequence (MX Series)

```
user@host> show chassis power sequence
Chassis FRU Power Sequence: 3 4 5 6 7 8 9 10 11 0 1 2
```

**show chassis power sequence (MX2010 Routers)**

```
user@host > show chassis power sequence
Chassis FRU Power On Sequence: 0 1 2 3 4 5 6 7 8 9
```

**show chassis power sequence (MX2020 Routers)**

```
user@host > show chassis power sequence
Chassis FRU Power On Sequence: 0 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19
```

**show chassis power sequence (PTX5000 Packet Transport Router)**

```
user@host> show chassis power sequence
Chassis FRU Power On Sequence: 0 1 2 3 4 5 6 7
```

## show chassis psd

**Syntax** `show chassis psd`

**Release Information** Command introduced in Junos OS Release 9.1.

**Description** (Root System Domain [RSD] only) Display information about Protected System Domains (PSDs). A PSD is initially created by the RSD configuration. An RSD and PSDs are supported on a T320 or T640 router, or a T1600 routing node, or a TX Matrix Plus Platform that is interconnected with the JCS1200 platform.

**NOTE:** RSD configuration is not supported on a routing matrix based on TX Matrix Plus router with 3D SIBs.

**Options** This command has no options.

**Additional Information** For more information about PSDs, RSDs, and the JCS1200 platform, see the *Junos OS Protected System Domain Feature Guide for Routing Devices*.

**Required Privilege Level** view

**List of Sample Output** [show chassis psd on page 2008](#)

**Output Fields** [Table 154 on page 2008](#) lists the output fields for the `show chassis psd` command. Output fields are listed in the approximate order in which they appear.

*Table 154: show chassis psd Output Fields*

Field Name	Field Description
Slot Description	PSD identification.
State	PSD status: <ul style="list-style-type: none"> <li>• <b>Online</b>—PSD is online and running.</li> <li>• <b>Offline</b>—PSD is powered down.</li> </ul>
Uptime	Length of time that the PSD has been up and running.

## Sample Output

`show chassis psd`

```
{master}
```

```
user@host> show chassis psd
```

Slot	Description	State	Uptime
1		Online	12 hours, 19 minutes, 51 seconds
2		Online	2 hours, 18 minutes, 17 seconds
3		Online	12 hours, 19 minutes, 51 seconds

## show chassis redundancy feb

<b>Syntax</b>	show chassis redundancy feb <errors> <redundancy-group <i>group-name</i> >
<b>Release Information</b>	Command introduced in Junos OS Release 8.2.
<b>Description</b>	(M120 routers only) Display information about the status of configured Forwarding Engine Board (FEB) redundancy groups.
<b>Options</b>	<p><b>none</b>—Display information about the status of all configured FEB redundancy groups.</p> <p><b>redundancy-group <i>group-name</i></b>—(Optional) Display information about the specified configured redundancy group.</p> <p><b>errors</b>—(Optional) Display information about any errors encountered on the components in configured redundancy groups or on links between a FEB and a Flexible PIC Concentrator (FPC).</p>
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">request chassis redundancy feb slot on page 855</a></li> <li>• <i>Configuring FEB Redundancy on the M120 Router</i></li> <li>• <i>Understanding Switching Control Board Redundancy</i></li> </ul>
<b>List of Sample Output</b>	<a href="#">show chassis redundancy feb on page 2011</a> <a href="#">show chassis redundancy feb redundancy-group grp1 on page 2011</a> <a href="#">show chassis redundancy feb redundancy-group grp0 errors on page 2012</a>
<b>Output Fields</b>	<p><a href="#">Table 155 on page 2010</a> lists the output fields for the <b>show chassis redundancy feb</b> command. Output fields are listed in the approximate order in which they appear.</p>

*Table 155: show chassis redundancy feb Output Fields*

Field name	Field Description
<b>Group</b>	Name of configured redundancy group.
<b>FEB</b>	Slot number of each FEB included in redundancy groups.
<b>State</b>	State of each FEB: <ul style="list-style-type: none"> <li>• <b>Online</b>—FEB is online and running.</li> <li>• <b>Offline</b>—FEB is powered down.</li> </ul>

Table 155: show chassis redundancy feb Output Fields (continued)

Field name	Field Description
Priority	(Standard and <b>redundancy-group</b> option) Status of FEB in the redundancy group: <b>Backup</b> , <b>Primary</b> , <b>Other</b> , or null.
Connected FPCs	(Standard and <b>redundancy-group</b> option) Slot number of each FPC connected to the FEB. The status <b>Check</b> is displayed when an error might have occurred.
Redundancy State	(Standard and <b>redundancy-group</b> option) Status of the FEB: <ul style="list-style-type: none"> <li>• <b>Active</b>—FEB is currently active.</li> <li>• <b>Ready</b>—Backup FEB is ready for a switchover</li> <li>• <b>Not Ready</b>—Backup FEB is not ready for a switchover.</li> </ul>
Auto-failover	(Standard and <b>redundancy-group</b> option) Automatic failover status of redundancy group: <b>Enabled</b> or <b>Disabled</b> .
Switch-reason	(Standard and <b>redundancy-group</b> option) Reason a switchover occurred to the backup FEB in the redundancy group.
Hard error: Yes	( <b>errors</b> option only) Displayed when a hard error occurs on a FEB.
FPC	( <b>errors</b> option only) Slot number and status of FPC: <b>link ok</b> or <b>link error</b> .
Fabric plane	( <b>errors</b> option only) Slot number and status of fabric plane.

## Sample Output

### show chassis redundancy feb

```

user@host> show chassis redundancy feb
Group: cfpc
FEB State Priority Connected FPCs Redundancy state
0 Offline Backup 5 Not ready
1 Online 5 Active
Auto-failover: Enabled
Group: grp0
FEB State Priority Connected FPCs Redundancy state
3 Offline Backup 0 Not ready
5 Online Primary 0 Active
Auto-failover: Enabled

```

### show chassis redundancy feb redundancy-group grp1

```

user@host> show chassis redundancy feb redundancy-group grp1
Group: grp1
FEB State Priority Connected FPCs Redundancy state
0 Online Other 0 Active
1 Online Other 1 Active
4 Online Primary 4 Active
5 Online Backup 4 Ready
Autofailover: Enabled
Switch-reason: Switchover from CLI

```

**show chassis redundancy feb redundancy-group grp0 errors**

```
user@host> show chassis redundancy feb redundancy-group grp0 errors
Group: grp0
 FEB: 0 State: Online
 FPC 0 link OK
 Fabric plane 0 OK
 Fabric plane 1 OK
 Fabric plane 2 OK
 Fabric plane 3 OK
 FEB: 1 State: Online

Description	Display the status of the Routing Engine.
Options	<b>none</b> —Display information about one or more Routing Engines. On a TX Matrix router, display information about all Routing Engines on the TX Matrix router and its attached T640 routers. On a TX Matrix Plus router, display information about all Routing Engines on the TX Matrix Plus router and its attached routers.

**all-members**—(MX Series routers only) (Optional) Display Routing Engine information for all members of the Virtual Chassis configuration.

**bios**—(Optional) Display the (BIOS) firmware version.

**errors**—(Optional) Display routing engine errors.

**interconnect-device *number***—(QFabric systems only) (Optional) Display Routing Engine information for a specified Interconnect device.

**lcc *number***—(TX Matrix and TX Matrix Plus routers only) (Optional) On a TX Matrix router, display Routing Engine information for a specified T640 router (line-card chassis) that is connected to the TX Matrix router. On a TX Matrix Plus router, display Routing Engine information for a specified router (line-card chassis) that is connected to the TX Matrix Plus router.

Replace *number* with the following values depending on the LCC configuration:

- 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.
- 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.
- 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.
- 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.

**local**—(MX Series routers only) (Optional) Display Routing Engine information for the local Virtual Chassis member.

**member *member-id***—(MX Series routers only) (Optional) Display Routing Engine information for the specified member of the Virtual Chassis configuration. For an MX Series Virtual Chassis, replace *member-id* with a value of 0 or 1.

**node-device *number***—(QFabric systems only) (Optional) Display Routing Engine information for a specified Node device.

**satellite [*slot-id slot-id* | *device-alias alias-name*]**—(Junos Fusion only) (Optional) Display Routing Engine information for the specified satellite device in a Junos Fusion, or for all satellite devices in the Junos Fusion if no satellite devices are specified.

**scc**—(TX Matrix routers only) (Optional) Display Routing Engine information for the TX Matrix router (switch-card chassis).

**sfc *number***—(TX Matrix Plus routers only) (Optional) Display Routing Engine information for the TX Matrix Plus router (or switch-fabric chassis). Replace *number* with 0.

**slot**—(Systems with multiple Routing Engines) (Optional) Display information for an individual Routing Engine. Replace *slot* with 0 or 1. For QFX3500 switches, there is only one Routing Engine, so you do not need to specify the slot number.

**Output Fields** [Table 156 on page 2017](#) lists the output fields for the **show chassis routing-engine** command. Output fields are listed in the approximate order in which they appear.

Table 156: show chassis routing-engine Output Fields

Field Name	Field Description
Slot	(Systems with single and multiple Routing Engines) Slot number.
Current state	(Systems with multiple Routing Engines) Current state of the Routing Engine: <b>Master</b> , <b>Backup</b> , or <b>Disabled</b> .
Election priority	(Systems with multiple Routing Engines) Election priority for the Routing Engine: <b>Master</b> or <b>Backup</b> .
Temperature	Temperature of the air flowing past the Routing Engine.
CPU Temperature	Temperature of the CPU.
DRAM	Total DRAM available to the Routing Engine's processor.  Starting with Junos OS Release 12.3R1, the DRAM field displays both available memory and installed memory.
Memory utilization	Percentage of Routing Engine memory being used.  <b>NOTE:</b> For platforms running Junos OS with upgraded FreeBSD, the way memory utilization is calculated has changed. Starting in Junos OS Release 15.1R1, inactive memory is no longer included in the calculation for memory utilization. Inactive memory is now considered as free. That is, the value for used memory decreases and results in more memory to be available for other processes. For platforms that run Junos OS with upgraded FreeBSD, see <i>Release Information for Junos OS with Upgraded FreeBSD</i> .
CPU utilization	Information about the Routing Engine's CPU utilization: <ul style="list-style-type: none"> <li>• <b>User</b>—Percentage of CPU time being used by user processes.</li> <li>• <b>Background</b>—Percentage of CPU time being used by background processes.</li> <li>• <b>Kernel</b>—Percentage of CPU time being used by kernel processes.</li> <li>• <b>Interrupt</b>—Percentage of CPU time being used by interrupts.</li> <li>• <b>Idle</b>—Percentage of CPU time that is idle.</li> </ul>
5 sec CPU Utilization	Information about the Routing Engine's CPU utilization in the past 5 seconds: <ul style="list-style-type: none"> <li>• <b>User</b>—Percentage of CPU time being used by user processes.</li> <li>• <b>Background</b>—Percentage of CPU time being used by background processes.</li> <li>• <b>Kernel</b>—Percentage of CPU time being used by kernel processes.</li> <li>• <b>Interrupt</b>—Percentage of CPU time being used by interrupts.</li> <li>• <b>Idle</b>—Percentage of CPU time that is idle.</li> </ul>
1 min CPU Utilization	Information about the Routing Engine's CPU utilization in the past 1 minute: <ul style="list-style-type: none"> <li>• <b>User</b>—Percentage of CPU time being used by user processes.</li> <li>• <b>Background</b>—Percentage of CPU time being used by background processes.</li> <li>• <b>Kernel</b>—Percentage of CPU time being used by kernel processes.</li> <li>• <b>Interrupt</b>—Percentage of CPU time being used by interrupts.</li> <li>• <b>Idle</b>—Percentage of CPU time that is idle.</li> </ul>

Table 156: show chassis routing-engine Output Fields (continued)

Field Name	Field Description
<b>5 min CPU Utilization</b>	Information about the Routing Engine's CPU utilization in the past 5 minutes: <ul style="list-style-type: none"> <li>• <b>User</b>—Percentage of CPU time being used by user processes.</li> <li>• <b>Background</b>—Percentage of CPU time being used by background processes.</li> <li>• <b>Kernel</b>—Percentage of CPU time being used by kernel processes.</li> <li>• <b>Interrupt</b>—Percentage of CPU time being used by interrupts.</li> <li>• <b>Idle</b>—Percentage of CPU time that is idle.</li> </ul>
<b>15 min CPU Utilization</b>	Information about the Routing Engine's CPU utilization in the past 15 minutes: <ul style="list-style-type: none"> <li>• <b>User</b>—Percentage of CPU time being used by user processes.</li> <li>• <b>Background</b>—Percentage of CPU time being used by background processes.</li> <li>• <b>Kernel</b>—Percentage of CPU time being used by kernel processes.</li> <li>• <b>Interrupt</b>—Percentage of CPU time being used by interrupts.</li> <li>• <b>Idle</b>—Percentage of CPU time that is idle.</li> </ul>
<b>Model</b>	Routing Engine model number.
<b>Serial ID</b>	(Systems with multiple Routing Engines) Identification number of the Routing Engine in this slot.
<b>Start time</b>	Time at which the Routing Engine started running.
<b>Uptime</b>	How long the Routing Engine has been running.
Routing Engine BIOS Version	BIOS version being run by the Routing Engine.

Table 156: show chassis routing-engine Output Fields (continued)

Field Name	Field Description
Last reboot reason	<p>Reason for last reboot, including:</p> <ul style="list-style-type: none"> <li><b>power cycle/failure</b>—Halt of the Routing Engine using the <b>halt</b> command, powering down using the power button on the chassis or any other method (such as removal of the control board or Routing Engine), and then powering back the Routing Engine. A halt of the operating system also occurs if you enter the <b>request system halt</b> command. You can enter this command to halt the system operations on the chassis or specific Routing Engines. To restart the software, press any key on the keyboard.</li> <li><b>watchdog</b>—Reboot due to a hardware watchdog. A watchdog is a hardware monitoring process that examines the health and performance of the router to enable the device to recover from failures. A watchdog checks for problems at certain intervals, and reboots the routing engine if a problem is encountered.</li> <li><b>reset-button reset</b>—(Not available on the EX Series switch) Reboot due to pressing of the reset button on the Routing Engine.</li> <li><b>power-button hard power off</b>—Reboot due to pressing of the power button on the chassis. A powering down of the software also occurs if you enter the <b>request system power-off</b> command. You can enter this command to power down the chassis or specific Routing Engines; you can then restart the software.</li> <li><b>misc hardware reason</b>—Reboot due to miscellaneous hardware reasons.</li> <li><b>thermal shutdown</b>—Reboot due to the router or switch reaching a critical temperature at which point it is unsafe to continue operations.</li> <li><b>hard disk failure</b>—Reboot due to a hard disk or solid-state drive (SSD) failure.</li> <li><b>reset from debugger</b>—Reboot due to reset from the debugger.</li> <li><b>chassis control reset</b>—Restart the chassis process that manages PICs, FPCs, and other hardware components. The chassis control module that runs the Routing Engine performs management and monitoring functions, and it provides a single access point for operational and maintenance functions. A reset of the chassis management process occurs when you enter the <b>restart chassis-control</b> command.</li> <li><b>bios auto recovery reset</b>—Reboot due to a BIOS auto-recovery reset.</li> <li><b>could not be determined</b>—Reboot due to an undetermined reason.</li> <li><b>Router rebooted after a normal shutdown</b>—Reboot due to a normal shutdown. This reason is displayed if the Routing Engine is powered down by pushing and holding the online/offline button on the Routing Engine faceplate for 30 seconds, and then powered back. A reboot of the software also occurs if you enter the <b>request system reboot</b> command. You can enter this command to reboot the chassis or specific Routing Engines.</li> <li><b>Hypervisor reboot</b>—When both Linux host and Junos OS is rebooted using the <b>request vmhost reboot</b> command.</li> <li><b>VJUNOS Reboot</b>—When Junos OS is rebooted using the <b>request system reboot</b> command.</li> </ul>
Load averages	Routing Engine load averages for the last 1, 5, and 15 minutes.

## Sample Output

### show chassis routing-engine (M5 Router)

```

user@host> show chassis routing-engine
Routing Engine status:
 Temperature 25 degrees C / 77 degrees F
 DRAM 768 MB
 Memory utilization 21 percent
 CPU utilization:

```

```
User 0 percent
Background 0 percent
Kernel 0 percent
Interrupt 0 percent
Idle 100 percent
Model RE-2.0
Serial ID 31000007349bf701
Start time 2003-12-04 09:42:17 PST
Uptime 26 days, 1 hour, 12 minutes, 27 seconds
Last reboot reason Router rebooted after a normal shutdown
Load averages: 1 minute 5 minute 15 minute
 0.00 0.01 0.00
```

### show chassis routing-engine (M10 Router)

```
user@host> show chassis routing-engine
Routing Engine status:
 Temperature 25 degrees C / 77 degrees F
 DRAM 768 MB
 Memory utilization 21 percent
 CPU utilization:
 User 0 percent
 Background 0 percent
 Kernel 0 percent
 Interrupt 0 percent
 Idle 100 percent
 Model RE-2.0
 Serial ID 31000007349bf701
 Start time 2003-12-04 09:42:17 PST
 Uptime 26 days, 1 hour, 12 minutes, 27 seconds
 Last reboot reason Router rebooted after a normal shutdown
 Load averages: 1 minute 5 minute 15 minute
 0.00 0.01 0.00
```

### show chassis routing-engine (M20 Router)

```
user@host> show chassis routing-engine
Routing Engine status:
 Slot 0:
 Current state Master
 Election priority Master (default)
 Temperature 29 degrees C / 84 degrees F
 DRAM 768 MB
 Memory utilization 20 percent
 CPU utilization:
 User 1 percent
 Background 0 percent
 Kernel 2 percent
 Interrupt 0 percent
 Idle 97 percent
 Model RE-2.0
 Serial ID 58000007348d9a01
 Start time 2003-12-30 07:05:47 PST
 Uptime 3 hours, 41 minutes, 14 seconds
 Last reboot reason Router rebooted after a normal shutdown
 Load averages: 1 minute 5 minute 15 minute
 0.00 0.02 0.00
 Routing Engine status:
 Slot 1:
 Current state Backup
```

```

Election priority Backup (default)
Temperature 29 degrees C / 84 degrees F
DRAM 768 MB
Memory utilization 0 percent
CPU utilization:
 User 0 percent
 Background 0 percent
 Kernel 1 percent
 Interrupt 0 percent
 Idle 99 percent
Model RE-2.0
Serial ID d800000734745701
Start time 2003-06-17 16:37:33 PDT
Uptime 195 days, 18 hours, 47 minutes, 9 seconds
Last reboot reason Router rebooted after a normal shutdown

```

#### show chassis routing-engine (M40 Router)

```

user@host> show chassis routing-engine
Routing Engine status:
 Temperature 25 degrees C / 77 degrees F
 DRAM 768 MB
 Memory utilization 21 percent
 CPU utilization:
 User 0 percent
 Background 0 percent
 Kernel 0 percent
 Interrupt 0 percent
 Idle 100 percent
 Model RE-2.0
 Serial ID 31000007349bf701
 Start time 2003-12-04 09:42:17 PST
 Uptime 26 days, 1 hour, 12 minutes, 27 seconds
 Last reboot reason Router rebooted after a normal shutdown
 Load averages: 1 minute 5 minute 15 minute
 0.00 0.01 0.00

```

#### show chassis routing-engine (M120 Router)

```

user@host> show chassis routing-engine
Routing Engine status:
Slot 0:
 Current state Master
 Election priority Master (default)
 Temperature 46 degrees C / 114 degrees F
 CPU temperature 44 degrees C / 111 degrees F
 DRAM 2048 MB
 Memory utilization 18 percent
 CPU utilization:
 User 0 percent
 Background 0 percent
 Kernel 5 percent
 Interrupt 0 percent
 Idle 95 percent
 Model RE-A-1000
 Serial ID 1000621154
 Start time 2006-10-31 17:10:05 PST
 Uptime 14 minutes, 31 seconds
 Last reboot reason Router rebooted after a normal shutdown
 Load averages: 1 minute 5 minute 15 minute

```

```

 0.02 0.07 0.07
Routing Engine status:
Slot 1:
 Current state Backup
 Election priority Backup (default)
 Temperature 45 degrees C / 113 degrees F
 CPU temperature 42 degrees C / 107 degrees F
 DRAM 2048 MB
 Memory utilization 15 percent
 CPU utilization:
 User 0 percent
 Background 0 percent
 Kernel 0 percent
 Interrupt 0 percent
 Idle 100 percent
 Model RE-A-1000
 Serial ID 1000621151
 Start time 2006-10-31 17:10:04 PST
 Uptime 14 minutes, 30 seconds
 Last reboot reason Router rebooted after a normal shutdown

```

### show chassis routing-engine (M160 Router)

```

user@host> show chassis routing-engine
Routing Engine status:
Slot 0:
 Current state Master
 Election priority Master (default)
 Temperature 43 degrees C / 109 degrees F
 DRAM 2048 MB
 Memory utilization 11 percent
 CPU utilization:
 User 1 percent
 Background 0 percent
 Kernel 2 percent
 Interrupt 0 percent
 Idle 97 percent
 Model RE-3.0
 Serial ID 210865700403
 Start time 2003-12-23 12:25:55 PST
 Uptime 6 days, 22 hours, 33 minutes, 24 seconds
 Last reboot reason Router rebooted after a normal shutdown
 Load averages: 1 minute 5 minute 15 minute
 0.24 0.13 0.04

Routing Engine status:
Slot 1:
 Current state Backup
 Election priority Backup (default)
 Temperature 40 degrees C / 104 degrees F
 DRAM 2048 MB
 Memory utilization 9 percent
 CPU utilization:
 User 0 percent
 Background 0 percent
 Kernel 0 percent
 Interrupt 0 percent
 Idle 100 percent
 Model RE-3.0
 Serial ID 210865700332
 Start time 2003-12-23 12:25:55 PST

```

Uptime	6 days, 22 hours, 33 minutes, 21 seconds
Last reboot reason	Router rebooted after a normal shutdown

### show chassis routing-engine (MX104 Router)

```

user@host> show chassis routing-engine
Routing Engine status:
Slot 0:
 Current state Master
 Election priority Master (default)
 Temperature 32 degrees C / 89 degrees F
 CPU temperature 42 degrees C / 107 degrees F
 DRAM 3840 MB (3840 MB installed)

## show chassis scb

<b>Syntax</b>	show chassis scb
<b>Release Information</b>	Command introduced before Junos OS Release 7.4.
<b>Description</b>	(M40 router only) Display System Control Board (SCB) status information.
<b>Options</b>	This command has no options.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <i>Checklist for Monitoring the SCB</i></li></ul>
<b>List of Sample Output</b>	<a href="#">show chassis scb on page 2044</a>
<b>Output Fields</b>	<a href="#">Table 157 on page 2042</a> lists the output fields for the <b>show chassis scb</b> command. Output fields are listed in the approximate order in which they appear.

Table 157: show chassis scb Output Fields

Field Name	Field Description
Temperature	Temperature of the air passing by the SCB, in degrees Celsius.
CPU utilization	Total percentage of CPU being used by the SCB's processor.
Interrupt utilization	Of the total CPU being used by the SCB's processor, the percentage being used for interrupts.
Heap utilization	Percentage of heap space being used by the SCB's processor.
Buffer utilization	Percentage of buffer space being used by the SCB's processor.
DRAM	Total DRAM available to the SCB's processor.
Start time	Time when the SCB started running.
Uptime	How long the SCB has been running.

*Table 157: show chassis scb Output Fields (continued)*

Field Name	Field Description
<b>Internet Processor memory</b>	<p>Information about the memory of the Internet Processor ASIC on the SCB:</p> <ul style="list-style-type: none"><li>• <b>IP routes</b>—Number of IP routes known to the Internet Processor.</li><li>• <b>MPLS routes</b>—Number of MPLS routes known to the Internet Processor.</li><li>• <b>SRAM banks enabled</b>—Which SRAM banks are enabled.</li><li>• <b>SRAM size</b>—Size of SCB SRAM, in bytes.</li><li>• <b>SRAM used</b>—Amount of SRAM used, in bytes.</li><li>• <b>SRAM utilization</b>—Percentage of SRAM used.</li></ul>

## Sample Output

### show chassis scb

```
user@host> show chassis scb
SCB status:
 Temperature: 30 Centigrade
 CPU utilization: 5 percent
 Interrupt utilization: 0 percent
 Heap utilization: 0 percent
 Buffer utilization: 2 percent
 DRAM: 64 Mbytes
 Start time: 1998-10-28 18:35:46 UTC
 Uptime: 6 minutes, 16 seconds
Internet Processor memory:
 IP routes: 16
 MPLS routes: 1
 SRAM banks enabled: [1 1 1 1]
 SRAM size: 4 Mbytes
 SRAM used: 256 bytes
 SRAM utilization: 0 percent
```

## show chassis sfb

<b>List of Syntax</b>	<a href="#">Syntax on page 2045</a> <a href="#">Syntax (MX10008 Universal Edge Routers) on page 2045</a>

## show chassis sfm

<b>Syntax</b>	show chassis sfm <detail < <i>sfm-slot</i> >>
<b>Release Information</b>	Command introduced before Junos OS Release 7.4.
<b>Description</b>	(M40e and M160 routers only) Display Switching and Forwarding Module (SFM) status information.
<b>Options</b>	<p><b>none</b>—Display standard status information about all SFMs.</p> <p><b>detail</b>—(Optional) Display detailed SFM status information.</p> <p><b>sfm-slot</b>—(Optional) Display status information about the SFM in the specified slot only. For the M40e router, replace <b>sfm-slot</b> with 0 or 1. For the M160 router, replace <b>sfm-slot</b> with a value from 0 through 3.</p>
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">request chassis sfm on page 867</a></li> <li>• <a href="#">request chassis sfm master switch on page 865</a></li> <li>• <i>Switching the Global Master and Backup Roles in a Virtual Chassis Configuration</i></li> </ul>
<b>List of Sample Output</b>	<a href="#">show chassis sfm (M160 Router) on page 2051</a> <a href="#">show chassis sfm detail (M40e Router) on page 2052</a> <a href="#">show chassis sfm detail (M160 Router) on page 2052</a>
<b>Output Fields</b>	<a href="#">Table 160 on page 2050</a> lists the output fields for the <b>show chassis sfm</b> command. Output fields are listed in the approximate order in which they appear.

*Table 160: show chassis sfm Output Fields*

Field Name	Field Description	Level of Output
Slot	Slot number.	All levels
State	Status of the SFM. State can be any of the following: <ul style="list-style-type: none"> <li>• <b>Online</b>—SFM is online and running.</li> <li>• <b>Online-Standby</b> (M40e router only)—SFM is online, operating as Standby.</li> <li>• <b>Offline</b>—SFM is powered down.</li> <li>• <b>Empty</b>—No SFM is present.</li> </ul>	All levels
Reason	If the status is <b>Offline</b> , reason for this state.	All levels

Table 160: show chassis sfm Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Temp</b>	Temperature of air passing by the SFM, in degrees Celsius.	none specified
<b>CPU Utilization (%)</b>	Information about CPU usage.	none specified
<b>Total</b>	Total percentage of the CPU being used by the SFM's processor.	All levels
<b>Interrupt</b>	Of the total CPU being used by the SFM's processor, the percentage being used for interrupts.	All levels
<b>Memory Utilization</b>	Information about memory usage.	none specified
<b>DRAM</b>	Total DRAM available to the SFM's processor, in megabytes (MB).	All levels
<b>Heap</b>	Percentage of heap space (dynamic memory) being used by the SFM's processor. If this number exceeds 80 percent, it might indicate a software problem (memory leak).	All levels
<b>Buffer</b>	Percentage of buffer space being used by the SFM's processor for buffering internal messages.	All levels
<b>SPP Temperature</b>	Temperature of air passing by the Switch Plane Processor card, in degrees Celsius and Fahrenheit	<b>detail</b>
<b>SPR Temperature</b>	Temperature of air passing by the Switch Plane Router card, in degrees Celsius and Fahrenheit.	<b>detail</b>
<b>Total CPU DRAM</b>	Total amount of CPU DRAM being used by the SFM's processor.	<b>detail</b>
<b>Total SSRAM</b>	Total amount of SSRAM being used by the SFM's processor.	<b>detail</b>
<b>Internet processor II</b>	(M160 router only) Processor type.	<b>detail</b>
<b>Start time</b>	Time this SFM became active.	<b>detail</b>
<b>Uptime</b>	How long the SFM has been up and running.	<b>detail</b>
<b>Packet scheduling mode</b>	(M160 router only) Enabled or disabled.	<b>detail</b>

## Sample Output

### show chassis sfm (M160 Router)

```

user@host> show chassis sfm
SFM status:

```

Slot	State	Temp (C)	CPU Total	Utilization (%) Interrupt	Memory DRAM (MB)	Utilization (%) Heap	Buffer
0	Online	39	0	0	64	0	6

1	Online	43	0	0	64	0	6
2	Empty	0	0	0	0	0	0
3	Empty	0	0	0	0	0	0

#### show chassis sfm detail (M40e Router)

```
user@host> show chassis sfm detail
Slot 0 information:
 State Offline
 Reason: - power configured off
Slot 1 information:
 State Present
 SPP temperature 0 degrees C / 32 degrees F
 SPR temperature 0 degrees C / 32 degrees F
 Total CPU DRAM 0 MB
 Total SSRAM 0 MB
```

#### show chassis sfm detail (M160 Router)

```
user@host> show chassis sfm detail
Slot 0 information:
 State Online
 SPP temperature 37 degrees C / 98 degrees F
 SPR temperature 39 degrees C / 102 degrees F
 Total CPU DRAM 64 MB
 Total SSRAM 8 MB
 Internet Processor II Version 1, Foundry IBM, Part number 9
 Start time: 2004-08-17 09:23:08 PDT
 Uptime: 72 days, 1 hour, 15 minutes, 57 seconds
Slot 1 information:
 State Online
 SPP temperature 36 degrees C / 96 degrees F
 SPR temperature 37 degrees C / 98 degrees F
 Total CPU DRAM 64 MB
 Total SSRAM 8 MB
 Internet Processor II Version 1, Foundry IBM, Part number 9
 Start time: 2004-08-17 09:23:08 PDT
 Uptime: 72 days, 1 hour, 15 minutes, 57 seconds
Slot 2 information:

Packet scheduling mode : Disabled
```

## show chassis sibs

<b>List of Syntax</b>	<a href="#">Syntax on page 2053</a> <a href="#">Syntax (TX Matrix Router) on page 2053</a> <a href="#">Syntax (TX Matrix Plus Router) on page 2053</a> <a href="#">Syntax (PTX Series Packet Transport Routers) on page 2053</a>
<b>Syntax</b>	show chassis sibs
<b>Syntax (TX Matrix Router)</b>	show chassis sibs <lcc <i>number</i>   scc>
<b>Syntax (TX Matrix Plus Router)</b>	show chassis sibs <lcc <i>number</i>   sfc <i>number</i> >
<b>Syntax (PTX Series Packet Transport Routers)</b>	show chassis sibs <detail> <slot>
<b>Release Information</b>	<p>Command introduced before Junos OS Release 7.4.</p> <p>Command introduced in Junos OS Release 12.1 for the PTX Series Packet Transport Routers.</p> <p><b>sfc</b> option introduced for the TX Matrix Plus router in Junos OS Release 9.6.</p> <p><b>detail</b> and <b>sib-slot</b> options introduced for the PTX Packet Transport Router in Junos OS Release 12.1</p> <p>Command introduced in Junos OS Release 17.2 for PTX10008 Routers.</p>
<b>Description</b>	(M320,T Series routers, TX Matrix routers, TX Matrix Plus routers, and PTX Series routers only) Display Switch Interface Boards (SIBs) status information.
<b>Options</b>	<p><b>none</b>—(TX Matrix routers and TX Matrix Plus routers only) On a TX Matrix router, display the SIB status for the TX Matrix router and its attached T640 routers. On a TX Matrix Plus router, display the SIB status for the TX Matrix Plus router and its attached routers.</p> <p><b>detail</b>—(PTX Series) (Optional) Display detailed SIB status information.</p> <p><b>lcc <i>number</i></b>—(TX Matrix routers and TX Matrix Plus routers only) (Optional) On a TX Matrix router, display SIB status information for a specified T640 router (line-card chassis or LCC) that is connected to the TX Matrix router. On a TX Matrix Plus router, display SIB status information for a specified T1600 or T4000 router (LCC) that is connected to the TX Matrix Plus router.</p>

Replace *number* with the following values depending on the LCC configuration:

- 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.
- 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.
- 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.
- 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.

**scc**—(TX Matrix routers only) (Optional) Display SIB status information for the TX Matrix router (switch-card chassis).

**sfc number**—(TX Matrix Plus routers only) (Optional) Display SIB status information for the TX Matrix Plus router (switch-fabric chassis or SFC). Replace *number* with 0.

**slot**—(PTX Series) (Optional) Display status information about the SIB in the specified slot only. The range of values is 0 through 8.

**Output Fields** Table 161 on page 2055 lists the output fields for the **show chassis sibs** command. Output fields are listed in the approximate order in which they appear.

*Table 161: show chassis sibs Output Fields*

Field Name	Field Description
Slot	SIB slot number.
Type	(TX Matrix Plus router only) SIB type.
Uptime	How long the SIB has been up and running.
State	<p>SIB status:</p> <ul style="list-style-type: none"> <li>• <b>Activating</b>—SIB is coming online; this is a transitional state.</li> <li>• <b>Deactivating</b>—SIB is going offline; this is a transitional state.</li> <li>• <b>Connected</b>—SIBs on a T1600 router are connected and trained but are either not online or are spare, because the plane on the TX Matrix Plus router (or switch-fabric chassis) is still offline.</li> <li>• <b>Disconnected</b>—SIBs on all T640 routers on the TX Matrix router (switch-card chassis) are in the <b>Disconnected</b> state, because a SIB on the SCC has gone offline. Likewise, SIBs on all T1600 routers on the TX Matrix Plus router (or switch-fabric chassis) are in the <b>Disconnected</b> state, because a SIB on the SFC has gone offline.</li> </ul> <p>On the TX Matrix Plus router with 3D SIBs, the LCC SIB is also disconnected if the F13 SIB is online, but none of the cables are connected or trained.</p> <ul style="list-style-type: none"> <li>• <b>Online</b>—SIB is operational and running.</li> <li>• <b>Offline</b>—SIB is powered down.</li> </ul> <p><b>NOTE:</b> If a SIB transitions to the <b>Offline</b> state, the command displays an appropriate reason in the output. For instance, if the SIB is taken offline using the <b>request chassis sib</b> command, the <b>show chassis sibs</b> command displays <b>--- Offlined by cli command ---</b> in the output.</p> <ul style="list-style-type: none"> <li>• <b>Spare</b>—SIB is redundant and will move to active state if one of the working SIBs fails to pass traffic.</li> </ul> <p><b>NOTE:</b> <b>Spare</b> does not apply to PTX Series Packet Transport Routers, as there are no spare SIBs.</p> <ul style="list-style-type: none"> <li>• <b>Empty</b>—No SIB is present.</li> <li>• <b>Fault</b>—SIB is in an alarmed state in which none of the SIB's planes are operational for one of the following reasons: <ul style="list-style-type: none"> <li>• All onboard fabric ASICs are not operational.</li> <li>• Fiber-optic connector faults.</li> <li>• FPC connector faults.</li> <li>• SIB midplane connector faults.</li> </ul> </li> <li>• <b>Check</b>—SIB is in an alarmed state due to link errors or destination errors. A SIB can transition to the <b>Check</b> state from the online or spare state.</li> </ul>

Table 161: show chassis sibs Output Fields (continued)

Field Name	Field Description
	<p>The <b>Check</b> state can be caused by the following reasons:</p> <ul style="list-style-type: none"> <li>• Unsupported FPC installed on a router.</li> <li>• SIB not inserted properly (such as bent pins).</li> <li>• Destination errors are detected on the SIB. In this case, the Packet Forwarding Engine stops using the SIB to send traffic to the affected destination Packet Forwarding Engine. When a Packet Forwarding Engine cannot be reached on that plane or SIB, a destination error is reported against that SIB.</li> </ul> <p><b>NOTE:</b> For SIBs in the <b>Check</b> state, the output displays some additional information:</p> <ul style="list-style-type: none"> <li>• In Junos OS Release 9.6 and later, the <b>Check</b> state message shows the number of Packet Forwarding Engines in the plane having destination errors. For example, <b>Check (10 destination errors)</b> indicates 10 Packet Forwarding Engines cannot be reached on that particular SIB. If there are no destination errors, and if the SIB transitions to the <b>Check</b> state because of link errors only, the <b>Check</b> state message shows <b>Check (0 destination errors)</b>.</li> <li>• In Junos OS Release 9.5 and earlier, the <b>Check</b> state message shows <b>Check (destination errors)</b> if there are Packet Forwarding Engines with destination errors in this plane. However, it does not show the number of Packet Forwarding Engines having destination errors. If there are no destination errors and if the SIB transitions to the <b>Check</b> state because of link errors only, the <b>Check</b> state message shows <b>Check (no destination errors)</b>.</li> </ul> <p>If the SIB is in a <b>Check</b> state, because of destination errors, the CLI displays an additional line in the output, use "<b>show chassis fabric fpcs</b>" and "<b>show chassis fabric sibs</b>" for more details.</p> <ul style="list-style-type: none"> <li>• Link errors are detected on the channel between the SIB and a Packet Forwarding Engine. Link errors can be detected at initialization time or runtime: <ul style="list-style-type: none"> <li>• Link errors caused by a link training failure at initialization time—The Packet Forwarding Engine does not use the SIB to send traffic. The <b>show chassis fabric fpcs</b> command shows <b>Plane disabled</b> as status for this link.</li> <li>• Link errors caused by CRC errors detected at runtime—The Packet Forwarding Engine continues to use the SIB to send traffic. The <b>show chassis fabric fpcs</b> command shows <b>Link error</b> as the status for this link.</li> </ul> </li> </ul> <p><b>NOTE:</b> The <b>Check</b> state does not apply to PTX Series Packet Transport Routers.</p> <ul style="list-style-type: none"> <li>• <b>SFC Error</b>—If an F13 SIB on the TX Matrix Plus router (SFC) transitions to the <b>Fault</b> state (for instance, because of link errors), and then if an LCC SIB (connected to the F13 SIB) comes online, the LCC SIB transitions to the <b>SFC Error</b> state. This state indicates that the F13 SIB to which the LCC SIB is connected has errors.</li> </ul> <p><b>NOTE:</b> The <b>Connected</b>, <b>Disconnected</b>, and <b>SFC Error</b> states are only applicable to the SIBs on an LCC.</p>

Table 161: show chassis sibs Output Fields (continued)

Field Name	Field Description
	<ul style="list-style-type: none"> <li><b>Invalid</b>—The specific SIB slot is not valid for 4-LCC chassis configuration. See the <i>TX Matrix Plus Hardware Guide</i> for more information about the supported SIB slots.</li> </ul> <p><b>NOTE:</b> The <b>Invalid</b> state is applicable to TX Matrix Plus routers only.</p>
<b>Fabric links</b>	<p>Indicates status of fabric links on the SIB.</p> <ul style="list-style-type: none"> <li><b>Active</b>—All fabric links on SIB are active. Errors detected on the SIB's fabric links, if any, are reported in the Errors column.</li> <li><b>Unused</b>—All fabric links on the SIB are not used for fabric traffic.</li> </ul>
<b>Errors</b>	<p>Indicates if there is any error on the SIB.</p> <ul style="list-style-type: none"> <li><b>None</b>—No errors</li> <li><b>Link Errors</b>—Fabric link errors were found on SIB RX link.</li> <li><b>Cell drops</b>—Fabric cell drops were found on the SIB ASIC.</li> <li><b>Link Errors, Cell drops</b>—Both link errors and cell drops were detected on at least one of the SIB's fabric links.</li> <li><b>Asic Errors</b>—A fault affecting one of the ASICs on the SIB is detected. It can be an IO error or an internal error signaled by the ASIC.</li> </ul>
<b>Link Errors</b>	<p>indicate the number of links which are marked faulty because the errors on them have crossed threshold.</p>
<b>Cable Errors</b>	<p>Indicate the number of mandatory cables that are not connected, or in up state for that plane</p>
<b>Destination Errors</b>	<p>Indicate the number of destinations that are not reachable on this plane.</p>

## Sample Output

### show chassis sibs (T640 Router)

```

user@host> show chassis sibs
Slot State Uptime
0 Empty
1 Offline --- Offlined by cli command ---
2 Check (21 destination errors) 1 day, 1 hour, 32 minutes, 55 seconds
3 Check (0 destination errors) 1 day, 1 hour, 32 minutes, 45 seconds
4 Empty

```

use "show chassis fabric fpcs" and "show chassis fabric sibs" for more details

### show chassis sibs (T4000 Router)

```

user@host> show chassis sibs

```

Slot	State	Uptime
0	Spare	
1	Online	3 hours, 48 minutes, 38 seconds
2	Online	3 hours, 48 minutes, 22 seconds

## show chassis spmb

<b>List of Syntax</b>	<a href="#">Syntax on page 2065</a> <a href="#">Syntax (MX Series Routers) on page 2065</a> <a href="#">Syntax (T4000 Routers) on page 2065</a> <a href="#">Syntax (TX Matrix Routers) on page 2065</a> <a href="#">Syntax (TX Matrix Plus Routers) on page 2065</a>
<b>Syntax</b>	show chassis spmb
<b>Syntax (MX Series Routers)</b>	show chassis spmb <all-members> <local> <member <i>member-id</i> >
<b>Syntax (T4000 Routers)</b>	show chassis spmb <sibs>
<b>Syntax (TX Matrix Routers)</b>	show chassis spmb <sibs> <lcc <i>number</i>   scc>
<b>Syntax (TX Matrix Plus Routers)</b>	show chassis spmb <sibs> <lcc <i>number</i>   sfc <i>number</i> >
<b>Release Information</b>	Command introduced before Junos OS Release 7.4. <b>sibs</b> option introduced for the T1600 and TX Matrix Plus routers in Junos OS Release 9.6. Command introduced in Junos OS Release 12.3 for MX2020 Universal Routing Platforms. Command introduced in Junos OS Release 12.3 for MX2010 Universal Routing Platforms. <b>all-members</b> , <b>local</b> , and <b>member <i>member-id</i></b> options introduced in Junos OS Release 15.1 for MX2020 and MX2010 routers. Command introduced in Junos OS Release 17.2 for MX2008 Universal Routing Platforms.
<b>Description</b>	(T Series routers, MX2010, MX2020, and MX2008 routers only) Display Switch Processor Mezzanine Board (SPMB) status information.
<b>Options</b>	<p><b>none</b>—(TX Matrix, TX Matrix Plus router, MX2010, MX2020, and MX2008 routers only)            On a TX Matrix router, display SPMB status for the TX Matrix router and its attached T640 routers. On a TX Matrix Plus router, display SPMB status for the TX Matrix Plus router and its attached routers. On MX2010, MX2020, and MX2008 routers, display the SPMB status for the routers.</p> <p><b>all-members</b>—(MX2010, MX2020, and MX2008 routers only) (Optional) Display status information for the SPMB in all members of the Virtual Chassis configuration.</p> <p><b>lcc <i>number</i></b>—(TX Matrix and TX Matrix Plus router only) (Optional) On a TX Matrix router, display information about the SPMB on a specified T640 router (line-card chassis)</p>

that is connected to the TX Matrix router. On a TX Matrix Plus router, display information about the SPMB on a specified router (line-card chassis) that is connected to the TX Matrix Plus router.

Replace *number* with the following values depending on the LCC configuration:

- 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.
- 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.
- 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.
- 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.

**local**—(MX2010, MX2020, and MX2008 routers only) (Optional) Display status information for the SPMB in the local member of the Virtual Chassis.

**member *member-id***—(MX2010, MX2020, and MX2008 routers only) (Optional) Display status information for the SPMB in the specified member of the Virtual Chassis. Replace *member-id* with the value 0 or 1.

**scc**—(TX Matrix routers only) (Optional) Display information about the SPMB on the TX Matrix router (switch-card chassis).

**sfc *number***—(TX Matrix Plus router only) (Optional) Display information about the SPMB on the TX Matrix Plus router (switch-fabric chassis). Replace *number* with 0.

**sibs**—(TX Matrix and TX Matrix Plus router only) (Optional) On a TX Matrix Plus router, display information about the SIBs on the TX Matrix router (switch-card chassis). On a TX Matrix Plus router, display information about the SIBs on The TX Matrix Plus router (switch-fabric chassis). The **sibs** option has the following sub-options:

**lcc *number*** (TX Matrix, TX Matrix Plus router only) (Optional) On a TX Matrix router, display information about the SIBs on a specified T640 router (line-card chassis) that is connected to the TX Matrix router. On a TX Matrix Plus router, display information about the SIBs on a specified router (line-card chassis) that is connected to the TX Matrix Plus router.

Replace *number* with the following values depending on the LCC configuration:

- 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.
- 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.

- 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.
- 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.

**scc *number***—(TX Matrix routers only) (Optional) Display information about the SIBs on the TX Matrix router (switch-card chassis). Replace ***number*** variable with 0.

**sfc *number***—(TX Matrix Plus router only) (Optional) Display information about the SIBs on the TX Matrix Plus router (switch-fabric chassis). Replace ***number*** variable with 0.

**Output Fields** [Table 162 on page 2067](#) lists the output fields for the **show chassis spmb** command. Output fields are listed in the approximate order in which they appear.

*Table 162: show chassis spmb Output Fields*

Field Name	Field Description
Slot	SPMB slot number: 0 or 1.

Table 162: show chassis spmb Output Fields (continued)

Field Name	Field Description
<b>State</b>	SPMB status: <ul style="list-style-type: none"> <li>• <b>Online</b>—SPMB is operational and running.</li> <li>• <b>Offline</b>—SPMB is powered down.</li> </ul>
<b>Total CPU Utilization (%)</b>	Total percentage of CPU being used by the SPMB processor.
<b>Interrupt CPU Utilization (%)</b>	Of the total CPU being used by the SPMB processor, the percentage being used for interrupts.
<b>Memory Heap Utilization (%)</b>	Percentage of heap space (dynamic memory) being used by the FPC processor. If this number exceeds 80 percent, there may be a software problem (memory leak).
<b>Buffer Utilization (%)</b>	Percentage of buffer space being used by the SPMB processor for buffering internal messages.
<b>Start time</b>	Time at which the SPMB last came online.
<b>Uptime</b>	How long the SPMB has been up and running.

<b>List of Syntax</b>	<a href="#">Syntax on page 2076</a> <a href="#">Syntax (TX Matrix Router) on page 2076</a> <a href="#">Syntax (TX Matrix Plus Router) on page 2076</a>
<b>Syntax</b>	show chassis spmb sibs
<b>Syntax (TX Matrix Router)</b>	show chassis spmb sibs <lcc <i>number</i>   scc>
<b>Syntax (TX Matrix Plus Router)</b>	show chassis spmb sibs <lcc <i>number</i>   sfc <i>number</i> >
<b>Release Information</b>	Command introduced before Junos OS Release 7.4. sfc option introduced for the TX Matrix Plus router in Junos OS Release 9.6.
<b>Description</b>	(T Series routers only) Display Switch Processor Mezzanine Board (SPMB) Switch Interface Board (SIB) status information.
<b>Options</b>	<p><b>none</b>—(TX Matrix and TX Matrix Plus routers only) On a TX Matrix router, display the SIB status for the TX Matrix router and its attached T640 routers. On a TX Matrix Plus router, display the SIB status for the TX Matrix Plus router and its attached routers.</p> <p><b>lcc <i>number</i></b>—(TX Matrix and TX Matrix Plus routers only) (Optional) On a TX Matrix router, display SIB status information for a specified T640 router (line-card chassis) that is connected to a TX Matrix router. On a TX Matrix Plus router, display SIB status information for a specified router (line-card chassis) that is connected to a TX Matrix Plus router.</p> <p>Replace <i>number</i> with the following values depending on the LCC configuration:</p> <ul style="list-style-type: none"><li>• 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.</li><li>• 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.</li><li>• 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.</li><li>• 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.</li></ul> <p><b>scc</b>—(TX Matrix router only) (Optional) Display SIB status information for the TX Matrix router (switch-card chassis).</p> <p><b>sfc</b>—(TX Matrix Plus router only) (Optional) Display SIB status information for the TX Matrix Plus router (or switch-fabric chassis).</p>

**Additional Information** On a T Series router, you can use either this command or the **show chassis sibs** command to produce the same output. The **show chassis sibs** command is supported on the M320 router and on the T Series routers.

                              Command introduced in Junos OS Release 17.2 for PTX10008 Routers.  
                              Command introduced in Junos OS Release 18.1R1 for EX9251 Switches.

**Description**    (ACX Series, M320, M40e, M120, T320, T640, and T1600 routers and PTX Series Packet Transport Routers only) Display information about the external clock source currently used for chassis synchronization.

**Options**    **clock-module**—Display clock module information. You can optionally specify one of these Routing Engine qualifiers:

**re0**—Routing Engine 0

**re1**—Routing Engine 1

**routing-engine (backup | both | local | master | other)**—Routing Engine type

**extensive**—(Optional) Display clock synchronization information in detail.

**interface *interface-name***—(Optional) Display clock synchronization information for the specified interface.

**backup**—(Optional) Display clock synchronization information about the backup clock.

**master**— (Optional) Display clock synchronization information about the master clock.

**Required Privilege Level** maintenance

[show chassis synchronization](#)

*Table 164: show chassis synchronization Output Fields*

Field Name	Field Description
Current state	<p>Indicates current status of external clock sources:</p> <ul style="list-style-type: none"> <li>• backup—Source is currently the backup clock source.</li> <li>• master—Source is currently the master clock source.</li> <li>• Online-Master—(PTX Series Packet Transport Routers) Source is the master clock. Source is online.</li> <li>• Online-Standby—(PTX Series Packet Transport Routers) Source is the standby (backup) clock. Source is online.</li> </ul>

Table 164: show chassis synchronization Output Fields (continued)

Field Name	Field Description
Current clock state	Indicates current source of external synchronization: <ul style="list-style-type: none"> <li>internal—Source is providing its own clocking.</li> <li>locked to master CB—(M320, M40e, and M120 routers) Source is locked to master clock source.</li> <li>locked to master SCG—(T320, T640, and T1600 routers) Source is locked to master clock source.</li> <li>locked to master CCG—(PTX Series Packet Transport Routers) Source is locked to master clock source.</li> </ul>
SNMP trap status	Denotes the SNMP trap generation status (Enabled or Disabled) on ACX Series routers.
Selected for	Number of seconds this clock has been the master or backup clock source.
Selected since	Timestamp for establishment as master or backup clock source.
Deviation (in ppm)	Difference in clock timing, in parts per million (ppm). <p><b>NOTE:</b> Starting in Junos OS Release 16.1R2, if the clock source is locked and the deviation exceeds 10 ppm, the status of the configured source is displayed in the command output as <b>in-use</b>. This status indicates that the clock source is locked even though the clock has significant deviation.</p>
Last deviation (in ppm)	Previous difference in clock timing, if any, in ppm.
Configured sources	Information about clock sources eligible for selection as master clock.
Source	Information about external clock sources.
Priority	Indicates priority of external clock sources: <ul style="list-style-type: none"> <li>primary—Source is a primary reference.</li> <li>secondary—Source is a secondary reference.</li> </ul>
Deviation (in ppm)	Current difference in clock timing, in ppm: <ul style="list-style-type: none"> <li>measuring—Establishing source deviation.</li> <li>number—Deviation in ppm.</li> </ul>
Last deviation (in ppm)	Previous difference in clock timing, in ppm: <ul style="list-style-type: none"> <li>number—Deviation in ppm.</li> </ul>
Status	Indicates status of external sources: <ul style="list-style-type: none"> <li>present—Source is configured and present.</li> <li>qualified—Source is eligible for synchronization source.</li> </ul>

## Sample Output

### show chassis synchronization

```
user@host> show chassis synchronization

 external-b secondary -0.25 -0.25 qualified

```

### show chassis synchronization (PTX Series Packet Transport Routers)

```

user@host> show chassis synchronization
Clock Synchronization Status :
Clock module on CCG 0
 Current state : Online - Master
 Current clock state : internal
 Selected for : 1 hour, 24 minutes, 21 seconds
 Selected since : 2011-03-21 15:59:37 PDT
 Deviation (in ppm) : +0.51
 Last deviation (in ppm): +0.51
Clock Synchronization Status :
Clock module on CCG 1
 Current state : Online - Standby
 Current clock state : locked to master CCG
 Selected for : 1 hour, 39 minutes, 12 seconds
 Selected since : 2011-03-21 15:44:46 PDT

```

### show chassis synchronization clock-module (PTX Series Packet Transport Routers)

```

user@host> show chassis synchronization clock-module
re0:

Clock Synchronization Status :
Clock module on CCG 0
 Current state : Online - Master
 Current clock state : locked to bits-a
 Selected for : 1 minute, 24 seconds
 Selected since : 2015-06-22 15:01:33 PDT
 Deviation (in ppm) : unknown
 Last deviation (in ppm): unknown
Configured sources
 Source Priority Deviation Last deviation Status
 (in ppm) (in ppm)
ro bits-a primary unknown unknown unknown
 fpc-2 secondary unknown unknown unknown
Clock Synchronization Status :
Clock module on CCG 1
 Current state : Online - Standby

```

```

Current clock state : locked to master CCG
Selected for : 1 hour, 39 minutes, 52 seconds
Selected since : 2015-06-22 13:23:05 PDT
Deviation (in ppm) : unknown
Last deviation (in ppm): unknown
Configured sources
Source Priority Deviation Last deviation Status
 (in ppm) (in ppm)
bits-a primary unknown unknown unknown
fpc-2 secondary unknown unknown unknown

```

This following sample output displays the status of configured sources as **in-use#**. This status indicates that the clock source is locked even though the clock has significant deviation in timing.

```

user@host> show chassis synchronization clock-module
re0:

```

```

Clock Synchronization Status :
Clock module on CB 0
Current state : Online - Master
Current clock state : locked to fpc-12
Selected for : 7 seconds
Selected since : 2016-08-16 09:39:07 PDT
Deviation (in ppm) : 10.00
Last deviation (in ppm): 8.75
Configured sources
Source Priority Deviation Last deviation Status
 (in ppm) (in ppm)
fpc-12 primary 10.00 8.75 in-use#

```

#### show chassis synchronization extensive (ACX Series Routers)

```

user@host> show chassis synchronization extensive

## show chassis synchronization (MX Series Routers)

---

**Syntax**    show chassis synchronization  
              <clock-module <(re0 | re1 | routing-engine (backup | both | local | master | other))>>  
              <extensive>  
              <interface *interface-name*>

**Release Information**    Command introduced in Junos OS Release 10.4.  
                              Command introduced in Junos OS Release 13.3 for MX2020 routers.  
                              **clock-module** option introduced in Junos OS Release 12.2.  
                              Command introduced in Junos OS Release 17.3R1 for MX10003 Universal Routing Platforms.  
                              Command introduced in Junos OS Release 17.4 for MX204 Universal Routing Platforms.

**Description**    Display information about clocks used for chassis synchronization.

**NOTE:** In hybrid mode, the EEC in the MPC derives frequency synchronization from Synchronous Ethernet and the phase and time of day from PTP; however, the `show chassis synchronization extensive` operational mode command output displays the lock status that is derived from the EEC located on the SCB.

---

**NOTE:**

The Switch Control Board (SCB) framer in MX Series routers supports only the first-generation Synchronization Status Message (SSM) format. Therefore, whenever the router needs to transmit an SSM value of `st3e` or `tnc` via an external interface, an SSM value of `st3` is transmitted. However, on a Synchronous Ethernet interface, an ESMC packet with the unadjusted SSM is transmitted. The term *unadjusted* here means:

- If the `receive-quality` statement at the `[edit chassis synchronization selection-mode]` hierarchy level is configured, the originally received SSM value `st3e` or `tnc` (corresponding to the currently active Synchronous Ethernet clock interface) is transmitted.
- If the configured `quality` statement at the `[edit chassis synchronization selection-mode]` hierarchy level is configured, the originally configured SSM value of `st3e` or `tnc` (corresponding to the currently active Synchronous Ethernet clock interface) is transmitted.

Note that when the external interface receives an SSM value of either `st3e` or `tnc`, the SCB framer does not recognize either of these SSM codes, and therefore, it reports that the Do Not Use (DNU) quality value has been received.

SCBE2 does not support SSM when you configure the following framing format values on the external interface at the `[edit chassis synchronization interfaces external]` hierarchy level:

- `sf` for the `t1-options` statement
- `g704-no-crc` for the `e1-options` statement

**Options** `clock-module`—(MX240, MX480, MX960, MX10003, MX204, MX2010, MX2020, and MX2008 routers with Enhanced MX Switch Control Board; ) (Optional) Display clock module information. You can optionally specify one of these Routing Engine qualifiers:

`re0`—Routing Engine 0

`re1`—Routing Engine 1

`routing-engine (backup | both | local | master | other)`—Routing Engine type

`extensive`—(Optional) Display clock synchronization information in detail.

`interface interface-name`—(Optional) Display clock synchronization information for the specified interface.

**Required Privilege Level** maintenance

- Output Fields** [Table 165 on page 2092](#) lists the output fields for the **show chassis synchronization** command. Output fields are listed in the approximate order in which they appear.

*Table 165: show chassis synchronization Output Fields*

Field Name	Field Description	Level of Output
<b>Current clock status</b>	Indicates the current status of chassis synchronization: <ul style="list-style-type: none"> <li>• <b>Locked</b>—Clock is operational.</li> <li>• <b>Holdover</b>—Clock is not operational.</li> <li>• <b>Freerun</b>—Clock is locked to the free-run local oscillator.</li> </ul>	none

Table 165: show chassis synchronization Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Clock locked to</b>	Indicates whether the clock is locked to either the <b>primary</b> source or the <b>secondary</b> source.	none
<b>Configured sources</b>	Heading for the list of interfaces configured for chassis synchronization and their subsequent status indicators.	none
<b>Source name</b>	Indicates the configured interface that is the source. The <b>external</b> source name indicates the external clock interface.	none
<b>Configured Priority</b>	Indicates the priority configured for the interface.	none
<b>Interface Status</b>	Indicates the status of the interface as <b>primary</b> , <b>secondary</b> , or <b>n/a</b> (external).	none
<b>Configured quality</b>	Indicates the configured quality of the interface. <ul style="list-style-type: none"> <li>• <b>prs</b>—Primary reference source—Stratum 1</li> <li>• <b>st2</b>—Stratum 2</li> <li>• <b>tnc</b>—Transit node clock</li> <li>• <b>st3e</b>—Stratum 3E</li> <li>• <b>st3</b>—Stratum 3</li> <li>• <b>smc</b>—SONET minimum clock</li> <li>• <b>st4</b>—Stratum 4</li> <li>• <b>prc</b>—Primary reference clock</li> <li>• <b>ssu-a</b>—Synchronization supply unit A</li> <li>• <b>ssu-b</b>—Synchronization supply unit B</li> <li>• <b>sec</b>—SDH equipment clock</li> </ul>	none
<b>Interface</b>	Indicates the configured interface: <ul style="list-style-type: none"> <li>• <b>ge-fpc/pic/port</b>—Indicates the interface type and which FPC, PIC, and port are configured.</li> </ul>	<b>extensive</b>
<b>Status</b>	Indicates the synchronization status of the indicated interface, as follows: <ul style="list-style-type: none"> <li>• <b>Primary</b>—This interface is the selected primary chassis clock source.</li> <li>• <b>Secondary</b>—This interface is the selected secondary chassis clock source.</li> <li>• <b>n/a</b>—This interface is not a selected clock source.</li> </ul>	<b>extensive</b>
<b>Index</b>	Unique numeric identifier for the established Synchronous Ethernet configuration.	<b>extensive</b>
<b>Clock source state</b>	Indicates the status of the Synchronous Ethernet clock source: <ul style="list-style-type: none"> <li>• <b>Clk qualified</b>—The Synchronous Ethernet clock source is qualified.</li> <li>• <b>n/a</b>—The Synchronous Ethernet clock source is not qualified.</li> </ul>	<b>extensive</b>

Table 165: show chassis synchronization Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Priority</b>	Indicates the configured priority. The range is from 1 through 5. The following values indicate whether the parameter is not specified or undefined: <ul style="list-style-type: none"> <li>• <b>Default(8)</b>—The parameter is not specified.</li> <li>• <b>-</b>—The parameter is undefined or out of range.</li> </ul>	<b>extensive</b>
<b>Configured QL</b>	Indicates the configured source interface quality level (QL), which is dependent on the source interface and option. The following quality levels are supported and the configured QL is indicated: <ul style="list-style-type: none"> <li>• <b>prs   st2   tnc   st3e   st3   smc   st4</b>—Network option I QLs</li> <li>• <b>prc   ssu-a   ssu-b   sec</b>—Network option II QLs</li> </ul>	<b>extensive</b>
<b>ESMC QL</b>	Indicates the configured Ethernet Synchronization Message Channel (ESMC) quality level: <ul style="list-style-type: none"> <li>• <b>DNU</b>—Network option I source</li> <li>• <b>DSU</b>—Network option II source</li> </ul>	<b>extensive</b>
<b>Clock source type</b>	Indicates that the configured chassis synchronization clock source is one of the following types: <ul style="list-style-type: none"> <li>• <b>ifd</b>—Uses the free-run local oscillator.</li> <li>• <b>extern</b>—Uses a configured qualified clock source.</li> </ul>	<b>extensive</b>
<b>Clock Event</b>	Indicates the event clock status: <ul style="list-style-type: none"> <li>• <b>Clock locked</b>—Clock is established.</li> <li>• <b>n/a</b>—Clock is not established.</li> </ul>	<b>extensive</b>
<b>Configuration flags</b>	Indicates <b>Ext</b> for external interface configuration	
<b>Wait-to-restore time</b>	Indicates the amount of time in minutes for the port signal to be up before the port is opened to receive and transmit Ethernet Synchronization messages.	<b>extensive</b>
<b>Hold-off time</b>	Indicates the amount of time in milliseconds for hold off time for Synchronous Ethernet interfaces and external clock source interfaces to prevent rapid successive switching. If an interface goes down, hold-off time delays short signal failures from being sent to the clock selection process.	<b>extensive</b>
<b>Kernel flags</b>	Indicates the Synchronous Ethernet software operational status: <ul style="list-style-type: none"> <li>• <b>Up</b>—The Synchronous Ethernet software is operational for the configured interface.</li> <li>• <b>pri</b>—The source is the selected primary clock source.</li> <li>• <b>Dn</b>—The Synchronous Ethernet software is not operational for the configured interface.</li> </ul>	<b>extensive</b>

Table 165: show chassis synchronization Output Fields (continued)

Field Name	Field Description	Level of Output
Ineligibility reason	<p>Indicates the reason the interface is ineligible for the Synchronous Ethernet operation, including the following:</p> <ul style="list-style-type: none"> <li>• <b>Link Down</b>—The link between the Synchronous Ethernet interfaces is not operational.</li> <li>• <b>Not restored</b>—The Synchronous Ethernet link has not yet been restored because it is waiting for the specified <b>wait-to-restore</b> time to elapse.</li> <li>• <b>Forbidden slot</b>—Slot 10 is not supported.</li> <li>• <b>Interface unit missing</b>—The unit parameter is not set or is invalid.</li> <li>• <b>Locked</b>—The paired interface is not available.</li> <li>• <b>No cfg</b>—Synchronous Ethernet is not configured.</li> <li>• <b>RX Disabled</b>—The receiving interface is disabled.</li> <li>• <b>Undefined/invalid QL</b>—The QL mode is not specified in the configuration or, if specified, is not supported.</li> <li>• <b>System initialization in progress</b>—The remote system is performing initialization and not currently available for synchronization.</li> <li>• <b>Unsupported interface</b>—The configured interface does not support Synchronous Ethernet.</li> </ul>	extensive
Clock module on	Indicates whether the clock module is on the Switch Control Board <b>SCB0</b> or <b>SCB1</b> .	clock-module
Current role	<p>Indicates the role of the clock module:</p> <ul style="list-style-type: none"> <li>• <b>master</b>—The clock module is on the primary SCB, which is the active chassis clock source.</li> <li>• <b>backup</b>—The clock module is on the backup SCB, which mirrors the state of the active clock.</li> </ul>	clock-module
Current state	<p>Indicates the state of the clock module:</p> <ul style="list-style-type: none"> <li>• <b>freerun</b>—The clock module is in free-run mode. When the system starts up, the default clock module state is free-run.</li> <li>• <b>acquiring-lock on</b>—The clock module is attempting to acquire a lock on the specified clock source.</li> <li>• <b>locked to</b>—The clock module is locked to the specified clock source.</li> <li>• <b>holdover on</b>—The clock module is in holdover mode on the specified clock source. Prior to the specified clock source becoming invalid, the clock module was locked on the source and holdover data was collected.</li> <li>• <b>holdover</b>—The clock module has transitioned into holdover prior to locking on a valid clock source and collecting holdover data.</li> </ul>	clock-module
Monitored clock sources	Displays information about monitored clock sources.	clock-module
Interface	<p>Indicates the interface type and which FPC, PIC, and port are configured:</p> <ul style="list-style-type: none"> <li>• <b>external</b>—External clock source</li> <li>• <b>ge-fpc/pic/port</b>—Line Synchronous Ethernet or PTP slave</li> <li>• <b>xe-fpc/pic/port</b>—Line Synchronous Ethernet or PTP slave</li> </ul>	clock-module

Table 165: show chassis synchronization Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Type</b>	Indicates the type of clock source: <ul style="list-style-type: none"> <li><b>t1</b>—BITS T1 framed</li> <li><b>e1</b>—BITS E1 framed</li> <li><b>2048khz</b>—BITS unframed 2048 KHz frequency source</li> <li><b>syncE</b>—Synchronous Ethernet frequency source</li> <li><b>ptp</b>—PTP slave source</li> <li><b>ptp-hybrid</b>—PTP slave source using Synchronous Ethernet for frequency</li> </ul>	clock-module
<b>Status</b>	Indicates the status of the clock source: <ul style="list-style-type: none"> <li><b>failed</b>—The clock source is in the failed state.</li> <li><b>qualifying</b>—The clock source is being qualified.</li> <li><b>qualified</b>—The clock source is qualified and can be selected as the chassis clock source.</li> <li><b>qualified-selected</b>—The clock source is qualified and selected as the chassis clock source.</li> </ul>	clock-module

## Sample Output

### show chassis synchronization

**Description** Display chassis temperature threshold settings, in degrees Celsius.

**Options** **none**—Display the temperature threshold details.

**all-members**—(MX Series routers only) (Optional) Display the chassis temperature threshold settings of all member routers in the Virtual Chassis configuration.

**interconnect-device *name***—(QFabric systems only) (Optional) Display the chassis temperature threshold settings of the Interconnect device.

**lcc *number***—(TX Matrix and TX Matrix Plus routers only) (Optional) On a TX Matrix router, display the temperature threshold details of a specified T640 router (line-card chassis) that is connected to a TX Matrix router. On a TX Matrix Plus router, display the temperature threshold details of a specified router (line-card chassis) that is connected to a TX Matrix Plus router.

Replace *number* with the following values depending on the LCC configuration:

- 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.
- 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.
- 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.
- 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.

**local**—(MX Series routers only) (Optional) Display the chassis temperature threshold settings of the local Virtual Chassis member.

**member *member-id***—(MX Series routers only) (Optional) Display the chassis temperature threshold settings of the specified member of the Virtual Chassis configuration. Replace *member-id* with a value of 0 or 1.

**node-device *name***—(QFabric systems only) (Optional) Display the chassis temperature threshold settings of the Node device.

**satellite [*slot-id slot-ID* | *device-alias alias-name*]**—(Junos Fusion only) (Optional)  
Display the chassis temperature threshold settings for the specified satellite device or devices in a Junos Fusion, or for all satellite devices if no satellite devices are specified.

**scc**—(TX Matrix routers only) (Optional) Display the temperature threshold details of the TX Matrix router (switch-card chassis).

**sfc *number***—(TX Matrix Plus routers only) (Optional) On TX Matrix Plus routers, display the temperature threshold details of the TX Matrix Plus router, which is the switch-fabric chassis. Replace *number* with 0.

**Required Privilege Level** view

**Output Fields** [Table 166 on page 2105](#) lists the output fields for the **show chassis temperature-thresholds** command. Output fields are listed in the approximate order in which they appear.

Table 166: show chassis temperature-thresholds Output Fields

Field name	Field Description
Item	Chassis component. If per FRU per slot thresholds are configured, the components about which information is displayed include the chassis, the Routing Engines, FPCs, and FEBs. If per FRU per slot thresholds are not configured, the components about which information is displayed include the chassis and the Routing Engines.
Fan speed	<p><b>NOTE:</b> On the QFX3500 switch and QFX3600 switch, there are four fan speeds: <b>low</b>, <b>medium-low</b>, <b>medium-high</b>, and <b>high</b>. The fan speed changes at the threshold when going from a low speed to a higher speed. When the fan speed changes from a higher speed to a lower speed, the temperature changes two degrees below the threshold.</p> <p>Temperature threshold settings, in degrees Celsius, for the fans to operate at normal and high speeds.</p> <ul style="list-style-type: none"> <li>Normal—The fans operate at normal speed if the component is at or below this temperature and all the fans are present and functioning normally.</li> </ul> <p><b>NOTE:</b> On a TX Matrix Plus router with 3D SIBs, the threshold temperature at the XF junction is set to 70°C for <b>Normal</b> fan speed, which is less than or equal to 4800 RPM.</p> <ul style="list-style-type: none"> <li>High—The fans operate at high speed if the component has exceeded this temperature or a fan has failed or is missing.</li> </ul> <p><b>NOTE:</b> On a TX Matrix Plus router with 3D SIBs, the threshold temperature at the XF junction is set to 75°C for <b>High</b> fan speed, which is greater than or equal to 5000 RPM.</p> <p><b>NOTE:</b> For MX480 Routers, there are three fan speeds: Low, Medium, and High.</p> <p>An alarm is not triggered until the temperature exceeds the threshold settings for a yellow alarm or a red alarm.</p>
Yellow alarm	<p>Temperature threshold settings, in degrees Celsius, that trigger a yellow alarm.</p> <ul style="list-style-type: none"> <li>Normal—The temperature that must be exceeded on the component to trigger a yellow alarm when the fans are running at full speed.</li> <li>Bad fan—The temperature that must be exceeded on the component to trigger a yellow alarm when one or more fans have failed or are missing.</li> </ul>
Red alarm	<p>Temperature threshold settings, in degrees Celsius, that trigger a red alarm.</p> <ul style="list-style-type: none"> <li>Normal—The temperature that must be exceeded on the component to trigger a red alarm when the fans are running at full speed.</li> <li>Bad fan—The temperature that must be exceeded on the component to trigger a red alarm when one or more fans have failed or are missing.</li> </ul>
Fire Shutdown	(T4000 routers, TX Matrix Plus router with 3D SIBs, and PTX Series Packet Transport Routers only)—Temperature threshold settings, in degrees Celsius, for the network device to shut down.

## Sample Output

### show chassis temperature-thresholds

```
user@host> show chassis temperature-thresholds
```

Fan speed (degrees C)	Yellow alarm (degrees C)	Red alarm (degrees C)
--------------------------	-----------------------------	--------------------------

Item	Normal	High	Normal	Bad fan	Normal	Bad fan
Chassis default	48	54	65	55	75	65
Routing Engine 0	70	80	95	95	110	110
Routing Engine 1	70	80	95	95	110	110

## show chassis zones (PTX Series Packet Transport Routers)

<b>Syntax</b>	<code>show chassis zones</code> <code>&lt;detail&gt;</code>
<b>Release Information</b>	Command introduced in Junos OS Release 12.1 for PTX Series Packet Transport Routers.
<b>Description</b>	(PTX5000 Packet Transport Router only) Display the status of the two cooling system zones of the chassis. Zone 0 consists of the Routing Engine, Control Board, SIB, PMB, and the CCG, and is cooled by the vertical fan tray. Zone 1 consists of the eight (0–7) FPCs, and their respective PICs, and is cooled by the horizontal fan trays. The vertical fan tray is located at the front of the chassis. One horizontal fan tray is located at the front top of the chassis, and another is located at the front bottom of the chassis.
<b>Options</b>	<b>detail</b> —(Optional) Display status of each FRU and fan belonging to the cooling system zones.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">show chassis fan on page 1307</a></li> <li>• <a href="#">show chassis temperature-thresholds on page 2102</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">show chassis zones (PTX5000 Packet Transport Router) on page 2142</a> <a href="#">show chassis zones detail (PTX5000 Packet Transport Router) on page 2143</a>
<b>Output Fields</b>	<a href="#">Table 167 on page 2142</a> lists the output fields for the <b>show chassis zones detail</b> command.

*Table 167: show chassis zones detail Output Fields*

Field Name	Field Description
<b>Item</b>	Chassis component: <ul style="list-style-type: none"> <li>• (PTX Series Packet Transport Routers)—Information about the chassis, Routing Engines, Control Boards (CBs), Switch Interface Boards (SIBs), PICs, and Flexible PIC Concentrators (FPCs).</li> </ul>
<b>Status</b>	Status of the specified item. Status can be <b>OK</b> , <b>Absent</b> , or <b>Offline</b> .
<b>Measurement</b>	Fan tray speed utilization in percentage.

<b>List of Syntax</b>	<a href="#">Syntax on page 2144</a> <a href="#">Syntax (MX Series Routers) on page 2144</a> <a href="#">Syntax (QFX Series) on page 2144</a>
<b>Syntax</b>	show chassis zones <detail>
<b>Syntax (MX Series Routers)</b>	show chassis zones <detail> <all-members> <local> <member <i>member-id</i> >
<b>Syntax (QFX Series)</b>	show chassis zones <detail> <interconnect-device <i>name</i> >
<b>Release Information</b>	Command introduced in Junos OS Release 11.3 for the QFX Series. Command introduced in Junos OS Release 12.3 for MX2020 Universal Routing Platforms. Command introduced in Junos OS Release 12.3 for MX2010 Universal Routing Platforms. <b>all-members</b> , <b>local</b> , and <b>member <i>member-id</i></b> options introduced in Junos OS Release 15.1 for MX2020 and MX2010 routers. Command introduced in Junos OS Release 17.2 for MX2008 Universal Routing Platforms.
<b>Description</b>	<p>(QFabric systems only) Display the status of the two cooling system zones on the Interconnect device. Zone 1 consists of eight (0 – 7) front cards, which are cooled by two fan trays. Zone 2 consists of two control boards and eight rear cards, which are cooled by eight (0 – 7) fan trays.</p> <p>(MX2010, MX2020, and MX2008 routers only) Display the status of the cooling system zones of the chassis. Zone 0 consists of the Control Board, ten (0–9) FPCs, and their respective PICs, Switch Fabric Boards, and Adapter Cards. Zone 1 consists of the Routing Engine, Control Board, and Switch Processor Mezzanine Boards.</p>
<b>Options</b>	<p><b>all-members</b>—(MX2010, MX2020, and MX2008 routers only) (Optional) Display the status of the cooling system zones in all members of the Virtual Chassis configuration.</p> <p><b>detail</b>—(MX2010, MX2020, and MX2008 routers only) (Optional) Display detailed status of the cooling system zones.</p> <p><b>detail <i>device-name</i></b>— (QFabric systems only) (Optional) Display detailed status of the two cooling systems on the Interconnect device.</p> <p><b>interconnect-device <i>name</i></b>— (QFabric systems only) (Optional) Display the status of the cooling zones on the Interconnect device.</p>

**local**—(MX2010, MX2020, and MX2008 routers only) (Optional) Display the status of the cooling system zones in the local member of the Virtual Chassis.

**member *member-id***—(MX2010, MX2020, and MX2008 routers only) (Optional) Display the status of the cooling system zones in the specified member of the Virtual Chassis. Replace *member-id* with the value 0 or 1.

**Output Fields**

[Table 168 on page 2145](#) lists the output fields for the **show chassis zones** command. Output fields are listed in the approximate order in which they appear.

*Table 168: show chassis zones Output Fields*

Field Name	Field Description
Slot	FPC slot number of the device whose content is being displayed. On QFX3500 standalone switches, the number is always 0.
Beacon State	Status of the beacon state: <ul style="list-style-type: none"> <li>• Off—The beacon is <b>OFF</b>.</li> <li>• On—The beacon is <b>ON</b>.</li> </ul>
show chassis zones command output fields for MX2020, MX2010, and MX2008 routers:	
Driving FRU	Field replaceable unit (FRU).
Temperature	Temperature of the specified FRU in degrees Celsius and degrees Fahrenheit.
Condition	Condition of the specified FRU. Condition can be <b>HIGH TEMP</b> , <b>WARM TEMP</b> , <b>OK</b> , and <b>Offline</b> .

Table 168: show chassis zones Output Fields (continued)

Field Name	Field Description
Num Fans Missing	Number of fans or fan trays missing.
Num Fans Failed	Number of fans or fan trays that have failed.
Fan Duty Cycle	Fan duty cycle value.
show chassis zones detail command output fields for MX2020, MX2010, and MX2008 routers:	
Item	Chassis component: <ul style="list-style-type: none"> <li>Information about the chassis, Routing Engines, Control Boards (CBs), Switch Fabric Boards (SFBs), PICs, Flexible PIC Concentrators (FPCs), and Adapter Cards (ADCs).</li> </ul>
Measurement	Fan tray speed utilization in percentage.
Status	Status of the specified item. Status can be OK, Absent, or Offline.

## show pfe cfep

**Syntax**    show pfe cfep

**Release Information**    Command introduced before Junos OS Release 7.4.

**Description**    (M7i routers only) Display Packet Forwarding Engine Compact Forwarding Engine Board (CFEB) status and statistics information.

**Options**    This command has no options.

**Required Privilege Level**    admin

**List of Sample Output**    [show pfe cfep on page 2152](#)

**Output Fields**    [Table 169 on page 2151](#) lists the output fields for the **show pfe cfep** command. Output fields are listed in the approximate order in which they appear.

*Table 169: show pfe cfep Output Fields*

Field Name	Field Description
CFEB status	<p>Status of CFEB:</p> <ul style="list-style-type: none"> <li>Slot—CFEB slot number.</li> <li>State—Status of the CFEB: <ul style="list-style-type: none"> <li>Online—CFEB is online and running.</li> <li>Offline—CFEB is powered down.</li> </ul> </li> <li>Last State Change—Date and time the CFEB state last changed.</li> <li>Uptime (total)—How long the Routing Engine has been connected to the CFEB and, therefore, how long the Flexible PIC Concentrator (FPC) has been up and running.</li> <li>Failures—Number of PFE Peer detach failures.</li> <li>Pending—Number of messages waiting to be sent.</li> <li>Policer Drop Probability—Current policer drop probability. The default is high, and can be configured using the <a href="#">policer-drop-probability-low</a> statement.</li> </ul>
Peer message type receive qualifiers	<ul style="list-style-type: none"> <li>Message Type—IPC Message Type. For example, interface and nexthop.</li> <li>Receive Qualifier – Message receive qualifier for a peer (non-None only): <ul style="list-style-type: none"> <li>All</li> <li>Only this slot</li> <li>Selective slot</li> </ul> </li> </ul>

## show pfe fpc

<b>List of Syntax</b>	<a href="#">Syntax on page 2161</a> <a href="#">Syntax (TX Matrix and TX Matrix Plus Router) on page 2161</a> <a href="#">Syntax (MX Series Router) on page 2161</a>
<b>Syntax</b>	<pre>show pfe fpc slot &lt;detail   extensive&gt;</pre>
<b>Syntax (TX Matrix and TX Matrix Plus Router)</b>	<pre>show pfe fpc &lt;lcc number&gt;</pre>
<b>Syntax (MX Series Router)</b>	<pre>show pfe fpc slot &lt;detail   extensive&gt; &lt;all-members&gt; &lt;local&gt; &lt;member member-id&gt;</pre>
<b>Release Information</b>	Command introduced before Junos OS Release 7.4.
<b>Description</b>	Display Packet Forwarding Engine statistics for the specified Flexible PIC Concentrator (FPC).
<b>Options</b>	<p><b>slot</b>—FPC slot number. Replace <b>slot</b> with a value from 0 through 2.</p> <p><b>detail   extensive</b>—(Optional) Display the specified level of detail.</p> <p><b>all-members</b>—(MX Series routers only) (Optional) Display Packet Forwarding Engine statistics for the specified FPC in all members of the Virtual Chassis configuration.</p> <p><b>lcc number</b>—(TX Matrix and TX Matrix Plus routers only) (Optional) On a TX Matrix router, the slot number of the T640 router (or line-card chassis) that houses the FPC. On a TX Matrix Plus router, <b>lcc number</b> represents the slot number of the router (or line-card chassis) that houses the FPC.</p> <p>Replace <i>number</i> with the following values depending on the LCC configuration:</p> <ul style="list-style-type: none"> <li>• 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.</li> <li>• 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.</li> <li>• 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.</li> <li>• 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.</li> </ul>

**local**—(MX Series routers only) (Optional) Display Packet Forwarding Engine statistics for the specified FPC in the local Virtual Chassis member.

**member *member-id***—(MX Series routers only) (Optional) Display Packet Forwarding Engine statistics for the specified FPC in the specified member of the Virtual Chassis configuration. Replace *member-id* with a value of 0 or 1.

**Required Privilege Level** admin

**List of Sample Output** [show pfe fpc on page 2164](#)  
[show pfe fpc lcc on page 2165](#)  
[show pfe fpc 0 detail on page 2167](#)  
[show pfe fpc 0 \(MX 960 with DPC\) on page 2169](#)

**Output Fields** [Table 171 on page 2162](#) lists the output fields for the **show pfe fpc** command. Output fields are listed in the approximate order in which they appear.

*Table 171: show pfe fpc Output Fields*

Field Name	Field Description
FPC 1 status	<p>Status of FPC 1:</p> <ul style="list-style-type: none"> <li>Slot—FPC slot number – 1.</li> <li>State—State of FPC1: <ul style="list-style-type: none"> <li>Dead—Held in reset because of errors.</li> <li>Diag—Slot is being ignored while the FPC is running diagnostics.</li> <li>Dormant—Held in reset.</li> <li>Empty—No FPC is present.</li> <li>Online—FPC is online and running.</li> <li>Present—FPC is detected by the chassis daemon but either is not supported by the current version of Junos OS or is inserted in the wrong slot. The output also states either Hardware Not Supported or Hardware Not in Right Slot. The FPC is coming up but not yet online.</li> <li>Probed—Probe is complete; awaiting restart of the Packet Forwarding Engine (PFE).</li> <li>Probe-wait—Waiting to be probed.</li> </ul> </li> <li>Last State Change—Date and time the FPC state last changed.</li> <li>Uptime—How long the Routing Engine has been connected to the FEB and, therefore, how long the Flexible PIC Concentrator (FPC) has been up and running.</li> <li>Failures—Number of PFE Peer detach failures.</li> <li>Pending—Number of messages waiting to be sent.</li> <li>Route Memory Enhanced—Reallocation of the jtree memory on the Packet Forwarding Engine to allocate more memory for routing tables. Can be configured with the <a href="#">memory-enhanced</a> statement.</li> </ul>

Table 171: show pfe fpc Output Fields (continued)

Field Name	Field Description

## show fib-local-accounting ip

**Syntax** show fib-local-accounting ip

**Release Information** Command introduced in Junos OS Release 12.3 for MX Series routers.

**Description** Display the number of packets that were sent to an anchor MPC due to FIB localization.

**Required Privilege Level** view

**Related Documentation**

- [fib-remote on page 379](#)
- [fib-local on page 378](#)
- [Example: Configuring Packet Forwarding Engine FIB Localization on page 373](#)

## Sample Output

### show fib-local-accounting ip

```
user@host> show fib-local-accounting ip
PFE 0
 fe_addr packets bytes
 28 0 0
 29 0 0
 30 0 0
 31 0 0
PFE 1
 fe_addr packets bytes
 28 0 0
 29 0 0
 30 0 0
 31 0 0
```

## show ptp aggregated-ethernet interfaces

**Syntax** `show ptp aggregated-ethernet interfaces`

**Release Information** Command introduced in Junos OS Release 17.2R1.

**Description** Display the information related to aggregated Ethernet bundles.

**Options** This command has no options.

**Required Privilege Level** View

**Related Documentation**

**Output Fields** [Table 172 on page 2180](#) lists the output fields for the `show ptp aggregated-ethernet interfaces` command. Output fields are listed in the approximate order in which they appear.

*Table 172: show ptp aggregated-ethernet interfaces*

Field Name	Field Description
<b>Bundle</b>	Name of the aggregated Ethernet bundle.
<b>Primary</b>	Primary interface in an aggregated Ethernet bundle. <ul style="list-style-type: none"> <li><b>active</b>—Indicates that the link is actively receiving ptp packets.</li> <li><b>down</b>—Indicates that the link is down.</li> </ul>
<b>Secondary</b>	Secondary interface in an aggregated Ethernet bundle. <ul style="list-style-type: none"> <li><b>active</b>—Indicates that the link is actively receiving ptp packets.</li> <li><b>ready</b>—Indicates that the link is ready to take over if the primary link fails.</li> </ul>
<b>Role</b>	Role of the aggregated Ethernet bundle: <ul style="list-style-type: none"> <li><b>Master or Slave</b></li> </ul>

## Sample Output

### show ptp aggregated-ethernet interfaces

```

user@host> show ptp aggregated-ethernet interfaces
show ptp aggregated-ethernet interfaces
bundle primary secondary role
ae0.0 ge-1/0/1 (active) ge-5/0/5 (ready) slave
ae2.0 ge-5/0/1 (down) ge-6/1/1 (active) master

```

## show ptp clock

**Syntax** show ptp clock

**Release Information** Command introduced in Junos OS Release 12.2.  
Command introduced in Junos OS Release 12.3 for ACX Series Routers.  
Command introduced in Junos OS Release 17.3 for QFX Series switches.

**Description** (ACX Series, MX80, MX240, MX480, MX960 routers, and QFX Series switches) Display the details of the clock configured on the node.

**Options** This command has no options.

**Required Privilege Level** view

**Related Documentation**

- [IEEE 1588v2 Precision Timing Protocol \(PTP\)](#)
- [Precision Time Protocol Overview on page 250](#)

**List of Sample Output** [show ptp clock on page 2182](#)  
[show ptp clock \(ACX Series Routers\) on page 2183](#)

**Output Fields** [Table 173 on page 2181](#) lists the output fields for the **show ptp clock** command. Output fields are listed in the approximate order in which they appear.

*Table 173: show ptp clock Output Fields*

Field Name	Field Description
Slot Number	Number of the FPC or MIC slot.
Two-step Clock	Whether the clock provides time information which is a combination of an event message and a subsequent general message: <b>True</b> or <b>False</b> .
Clock Identity	Clock identity of the slave or client as defined in IEEE 1588.
Total Ports on Device	Total number of PTP ports on the router.
Clock Class	Attribute of an ordinary or boundary clock that denotes the traceability of the time or frequency distributed by the grandmaster clock.
Clock Accuracy	Indicates the expected accuracy of a clock when it is the grandmaster, or in the event it becomes the grandmaster.
Log Variance	Represents an estimate of the variations of the local clock when it is not synchronized via PTP to another clock.

Table 173: show ptp clock Output Fields (continued)

Field Name	Field Description
<b>Clock Priority1</b>	Priority value of the clock. Lower value takes precedence.
<b>Clock Priority2</b>	Prioritize the masters to avoid confusion when the <b>Clock Priority1</b> value is the same for different masters in a network.
<b>UTC Offset</b>	Offset between International Atomic Time (TAI) and Coordinated Universal Time (UTC) times. The value is 34 seconds as of January 2012.
<b>Leap59</b>	When <b>TRUE</b> , the last minute of the current UTC day has only 59 seconds (instead of the 60 SI seconds).
<b>Leap61</b>	When <b>TRUE</b> , the last minute of the current UTC day has 61 seconds (instead of the 60 SI seconds).
<b>Time Traceable</b>	When <b>TRUE</b> , the timescale and the UTC offset are traceable to a primary reference.
<b>Frequency Traceable</b>	When <b>TRUE</b> , frequency determining the timescale is traceable to a primary reference.
<b>Time Source</b>	Time source external to the Precision Time Protocol (PTP), which provides time and/or frequency as appropriate. The time source is traceable to the international standards laboratories maintaining clocks that form the basis for the International Atomic Time (TAI) and Universal Coordinated Time (UTC) timescales. Examples of these are Global Positioning System (GPS), NTP, and National Institute of Standards and Technology (NIST) timeservers.
<b>Delay Req Sending Time</b>	Interval in seconds between the delay-request messages sent by the slave to the master.
<b>Steps Removed</b>	Number of boundary clocks between the local clock and the foreign master clock.
<b>Slave-only</b>	Set to <b>TRUE</b> , when the system is used in ordinary slave clock mode; otherwise, <b>FALSE</b> .
<b>Parent Id</b>	EUI-64 clock identifier of the immediate upstream master clock.
<b>GMC Id</b>	EUI-64 clock identifier of the grandmaster clock.
<b>GMC Class</b>	Denotes the grandmaster clock's traceability of the distributed time or frequency.
<b>GMC Accuracy</b>	Indicates the expected accuracy of the grandmaster clock.
<b>GMC Variance</b>	Represents an estimate of the variations of the grandmaster clock.
<b>GMC Priority1</b>	<b>Priority1-value</b> of the grandmaster clock.
<b>GMC Priority2</b>	<b>Priority2-value</b> of the grandmaster clock.

## Sample Output

### show ptp clock

```
user@host> run show ptp clock
```

## Clock Details:

Slot Number	: 7

## show ptp hybrid

<b>Syntax</b>	<b>show ptp hybrid</b> <config   status>
<b>Release Information</b>	Command introduced in Junos OS Release 12.2R2.
<b>Description</b>	Display the current configuration and current operation mode of the slave.
<b>Options</b>	<b>config</b> —Display the PTP source to Synchronous Ethernet interface mappings. <b>status</b> —Display the current hybrid mode operational status.
<b>Required Privilege Level</b>	View
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Understanding Hybrid Mode on page 282</a></li> </ul>
<b>Output Fields</b>	<a href="#">Table 172 on page 2180</a> lists the output fields for the <b>show ptp hybrid</b> command. Output fields are listed in the approximate order in which they appear.

*Table 174: show ptp hybrid Output Fields*

Field Name	Field Description
<b>ptp source</b>	Displays the IP address of the PTP source.
<b>sync source</b>	Displays the interface name of the Synchronous Ethernet source through which the PTP source is traceable.
<b>Configured Mode</b>	Displays the current configured mode of the router as <b>Hybrid</b> .
<b>Operating Mode</b>	Displays the current operation mode: <b>Hybrid</b> or <b>None</b> .
<b>PTP Reference</b>	Displays the IP address and the interface name of the PTP reference clock.
<b>Synchronous Ethernet Reference</b>	Displays the interface name of the Synchronous Ethernet reference clock.
<b>Lock state</b>	Displays the current lock state of the router: <b>Locked</b> , <b>Initializing</b> , or <b>Acquiring</b> .

Table 174: show ptp hybrid Output Fields (continued)

Field Name	Field Description
<b>Lock state description</b>	<p>Displays the description for the current lock state of the router:</p> <ul style="list-style-type: none"> <li>• <b>Initializing</b>—Hybrid mode is being initialized.</li> <li>• <b>Acquiring Frequency</b>—Synchronous Ethernet source identified for frequency synchronization, acquiring frequency-related data from master clock.</li> <li>• <b>Frequency Locked, Acquiring Phase</b>—Frequency locked from the Synchronous Ethernet source, acquiring phase-related data from master clock.</li> <li>• <b>Frequency and Phase Locked</b>—Slave clock is frequency and phase synchronized with master clock.</li> </ul>

## Sample Output

### show ptp hybrid config

```
user@host> show ptp hybrid config
ptp source sync source
100.1.1.2 ge-1/1/2
```

### show ptp hybrid status

```
user@host> show ptp hybrid status
Hybrid Mode Status:
Configured Mode : Hybrid
Operating Mode : Hybrid
PTP Reference : 100.1.1.2, ge-1/0/0.0
Synchronous Ethernet Reference : ge-1/1/2
Lock state : Locked
Lock state description : Frequency and Phase Locked
```

## show ptp lock-status

<b>Syntax</b>	show ptp lock-status
<b>Release Information</b>	Command introduced in Junos OS Release 12.2. Command introduced in Junos OS Release 17.3 for the QFX Series.
<b>Description</b>	(ACX Series, MX80, MX240, MX480, MX960 routers, and QFX Series switches) Display information about the lock status of the slave. The output verifies whether the slave is aligned to the grandmaster (master clock) or not.
<b>Options</b>	<b>detail</b> —Display detailed information about the lock status of the slave.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">IEEE 1588v2 PTP Boundary Clock Overview</a></li> <li>• <a href="#">IEEE 1588v2 Precision Timing Protocol (PTP)</a></li> <li>• <a href="#">Precision Time Protocol Overview on page 250</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">show ptp lock-status on page 2187</a> <a href="#">show ptp lock-status (ACX Series) on page 2187</a> <a href="#">show ptp lock-status detail (ACX Series) on page 2187</a> <a href="#">show ptp lock-status detail (with IPv6 addresses for PTP master/slave) on page 2187</a>
<b>Output Fields</b>	<a href="#">Table 175 on page 2186</a> lists the output fields for the <b>show ptp lock-status</b> command. Output fields are listed in the approximate order in which they appear.

Table 175: show ptp lock-status Output Fields

Field Name	Field Description
<b>Lock State</b>	State of the slave clock with respect to its master clock: <ul style="list-style-type: none"> <li>• Freerun</li> <li>• Holdover</li> <li>• Phase Aligned</li> <li>• Acquiring</li> <li>• Initializing</li> <li>• Freq locked</li> </ul>
<b>Phase offset</b>	Time offset information of a slave clock with respect to its master clock. Precision of this time offset is 1 nanosecond.

Table 175: show ptp lock-status Output Fields (continued)

Field Name	Field Description
<b>State since</b>	Date, time, and how long ago the lock status of the PTP client or slave clock changed. The format is <b>State since: year-month-day hour:minute:second:timezone (hour:minute:second ago)</b> . For example, <b>State since: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> . On ACX Series routers, this field is displayed in Junos OS Release 15.1 and later.
<b>Selected Master Details</b>	<p>Details include the following:</p> <ul style="list-style-type: none"> <li>• <b>Upstream Master address</b>—The address of the remote master from which the slave acquires the clock.</li> <li>• <b>Slave interface</b>—The slave interface on this router corresponding to the Master above.</li> </ul> <p><b>NOTE:</b> On ACX Series router, if the PTP lock state is <b>FREERUN</b>, then the <b>Selected Master Details</b> field is not shown.</p>

## Sample Output

### show ptp lock-status

```
user@host> run show ptp lock-status
Lock Status:

Lock State : 5 (PHASE ALIGNED)
Phase offset : 0.000000001 sec
```

### show ptp lock-status (ACX Series)

```
user@host> show ptp lock-status
Lock Status:

Lock State : 1 (FREERUN)
Phase offset : 0.000000869 sec
```

### show ptp lock-status detail (ACX Series)

```
user@host> show ptp lock-status detail
Lock Status:

Lock State : 5 (PHASE ALIGNED)
State since : 2014-09-10 11:24:11 PDT (00:02:51 ago)

Phase offset : 0.000000030 sec

Selected Master Details:
Upstream Master address : 13.13.13.1
Slave interface : ge-0/1/5.0
```

### show ptp lock-status detail (with IPv6 addresses for PTP master/slave)

```
user@host> show ptp lock-status detail
Lock Status:

Lock State : 5 (PHASE ALIGNED)
Phase offset : -0.000000010 sec
```

Selected Master Details:

Upstream Master address	: 2001:cdba:0000:0000:0000:0000:3257:9652
Slave interface	: ge-0/2/0.0
Parent Id	: 84:18:88:ff:fe:c0:34:00
GMC Id	: 00:18:0b:ff:fe:20:03:14

## show ptp master

<b>Syntax</b>	show ptp master <brief   detail   interface>
<b>Release Information</b>	Command introduced in Junos OS Release 12.2. Command introduced in Junos OS Release 17.3 for the QFX Series.
<b>Description</b>	(MX80, MX240, MX480, MX960 routers, and the QFX Series) Display information about the configured master and the status of the master.
<b>Options</b>	<b>brief</b> —Display information about the master in brief. <b>detail</b> —Display information about the master in detail. <b>interface</b> —Display information about the configured interface of the master.
<b>Required Privilege Level</b>	View
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Precision Time Protocol Overview on page 250</a></li> <li>• <i>Configuring the Precision Time Protocol G.8275.2 Enhanced Profile (Telecom Profile)</i></li> </ul>
<b>Output Fields</b>	<a href="#">Table 176 on page 2189</a> lists the output fields for the <b>show ptp master</b> command. Output fields are listed in the approximate order in which they appear.

Table 176: show ptp master Output Fields

Field Name	Field Description
<b>Interface</b>	Name of the interface configured for Precision Time Protocol (PTP) on the master.
<b>Status</b>	Status of the Precision Time Protocol master: <ul style="list-style-type: none"> <li>• <b>Master</b> or <b>Slave</b></li> <li>• <b>Active</b> or <b>Inactive</b></li> <li>• <b>Initializing</b> or <b>Down</b></li> </ul>
<b>Local Address</b>	IP or MAC address of the configured master clock.
<b>Status</b> (Local address Status)	Status of the local address of the interface: <ul style="list-style-type: none"> <li>• <b>Configured</b> or <b>Not configured</b></li> <li>• <b>Master</b> or <b>Slave</b></li> <li>• <b>Active</b> or <b>Inactive</b></li> </ul>

Table 176: show ptp master Output Fields (continued)

Field Name	Field Description
<b>Status</b>  (Remote address Status)	Status of the remote address of the interface on the QFX Series: <ul style="list-style-type: none"> <li>• <b>Configured</b> or <b>Not configured</b></li> <li>• <b>Master</b> or <b>Slave</b></li> <li>• <b>Active</b> or <b>Inactive</b></li> </ul>
<b>Total Remote Slaves</b>	Number of remote slaves.
<b>Slave Address</b>	IP or MAC address of the slave.
<b>Status</b>  (Slave Address Status)	Status of the address of the slave: <ul style="list-style-type: none"> <li>• <b>Configured</b> or <b>Not configured</b></li> <li>• <b>Master</b> or <b>Slave</b></li> <li>• <b>Active</b> or <b>Inactive</b> or <b>Ready</b></li> </ul>

## Sample Output

### show ptp master

```
user@host> run show ptp master brief
PTP Master Interface Configured:

Master Interface Status
ge-7/0/2.0 Master, Active
```

### show ptp master detail (Enterprise Profile on the QFX Series)

```
user@host> run show ptp master detail
PTP Master Interface Details:
Interface : xe-0/0/6:1.0
Status : Master, Active
Clock Info :
 Local Address: 50.50.50.1 Status: Configured, Master, Active
 Remote Address: 224.0.1.129
 Total Remote Slaves: 1
```

### show ptp master detail (Enterprise Profile with dynamically learned master and slave interfaces for each physical interface on the QFX Series)

```
user@host> run show ptp slave detail
PTP Master Interface Details:

Interface : xe-0/0/31:3.0
Status : Master, Active
Clock Info :
 Local Address: 10.10.10.2 Status: Configured, Master, Active
 Remote Address: 10.10.10.1 Status: Learned, Slave, Active
 Remote Address: 224.0.1.129 Status: Configured, Slave, Active
 Total Remote Slaves: 2

Interface : xe-0/0/35:3.0
```

```

Status : Master, Active
Clock Info :
 Local Address: 10.2.2.1 Status: Configured, Master, Active
 Remote Address: 10.2.2.24 Status: Learned, Slave, Active
 Remote Address: 10.2.2.29 Status: Learned, Slave, Active
 Remote Address: 10.2.2.30 Status: Learned, Slave, Active
 Remote Address: 10.2.2.32 Status: Learned, Slave, Active
 Remote Address: 10.2.2.35 Status: Learned, Slave, Active
 Remote Address: 10.2.2.52 Status: Learned, Slave, Active
 Remote Address: 10.2.2.61 Status: Learned, Slave, Active
 Remote Address: 224.0.1.129 Status: Configured, Slave, Active
Total Remote Slaves: 8

```

### show ptp master detail

```

user@host> run show ptp master detail
PTP Master Interface Details:
Interface : ge-7/0/2.0
Status : Master, Active
Clock Info :
 Local Address: 10.0.0.1 Status: Configured, Master, Active
 Total Remote Slaves: 0
 Slave IP: 10.0.0.2 Status: Configured, Slave, Active

```

### show ptp master detail (with IPv6 addresses for PTP master/slave)

```

user@host> run show ptp master detail
PTP Master Interface Details:
Interface : ge-0/1/5.0
Status : Master, Active
Clock Info :
 Local Address: 84:18:88:c0:60:a1 Status: Configured, Master, Active
 Remote Address: [Slave Mac] Status: Configured, Slave, Active
Total Remote Slaves: 1

```

### show ptp interface ge-7/0/2.0

```

user@host> run show ptp master interface ge-7/0/2.0
PTP Master Interface Configured:

Master Interface Status
ge-7/0/2.0 Master, Active

```

## show ptp path-trace detail

**Syntax**    show ptp path-trace detail

**Release Information**    Command introduced in Junos OS Release 13.3R4.

**Description**    (MX80, MX240, MX480, and MX960 routers) Display the details of the path an announce message takes in a PTP ring topology.

**Options**    This command has no options.

**Required Privilege Level**    view

**Related Documentation**

- *IEEE 1588v2 PTP Boundary Clock Overview*
- [Precision Time Protocol Overview on page 250](#)

**List of Sample Output**    [show ptp path-trace detail on page 2192](#)

**Output Fields**    [Table 177 on page 2192](#) lists the output fields for the **show ptp path-trace detail** command. Output fields are listed in the approximate order in which they appear.

*Table 177: show ptp path-trace detail Output Fields*

Field Name	Field Description
Hop Count	The count of the next router in a network trail where the announce message is received.
Member Clock Identity	Clock identity of the slave or client as defined in IEEE 1588.

## Sample Output

### show ptp path-trace detail

```

user@host> show ptp path-trace detail
Hop count Member Clock Identity

1 00:05:85:ff:fe:74:1f:d0
2 00:05:85:ff:fe:73:ef:d0

```

## show ptp phy-timestamping-interfaces

<b>Syntax</b>	show ptp phy-timestamping-interfaces
<b>Release Information</b>	Command introduced in Junos OS Release 17.1R1.
<b>Description</b>	Display information about the interfaces that have PHY timestamping enabled. PHY timestamping is the timestamping of the IEEE 1588 event packets at the physical layer. Timestamping the packet at the physical layer eliminates the noise or the packet delay variation (PDV) that is introduced by the Packet Forwarding Engine.
<b>Options</b>	This command has no options.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Precision Time Protocol Overview on page 250</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">show ptp phy-timestamping-interfaces on page 2193</a>
<b>Output Fields</b>	<a href="#">Table 92 on page 893</a> lists the output fields for the <b>show ptp phy-timestamping-interfaces</b> command. Output fields are listed in the approximate order in which they appear.

*Table 178: show-ptp-phy-timestamping-interfaces*

Field Name	Field Description
PHY time-stamp interfaces	Name of the interface configured for phy-timestamping.

## Sample Output

### show ptp phy-timestamping-interfaces

```

user@host> show ptp phy-timestamping-interfaces
PHY time-stamp interfaces:
 xe-0/2/1
 xe-4/1/3

```

## show ptp port

<b>Syntax</b>	show ptp port <brief   detail> ifl <i>logical-interface-name</i>
<b>Release Information</b>	Command introduced in Junos OS Release 12.2. <i>ifl logical-interface-name</i> added in Junos OS Release 16.1.
<b>Description</b>	(MX80, MX240, MX480, and MX960 routers) Display information about the number of ports created according to the configuration. For each unique local IP address, one Precision Time Protocol port is created.
<b>Options</b>	<b>brief</b> —Display information about the PTP port in brief.  <b>detail</b> —Display information about the PTP port in detail.  <b>logical-interface-name</b> —Display PTP port information for a specific logical interface.
<b>Required Privilege Level</b>	View
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Precision Time Protocol Overview on page 250</a></li> </ul>
<b>Output Fields</b>	<a href="#">Table 179 on page 2194</a> lists the output fields for the <b>show ptp port</b> command. Output fields are listed in the approximate order in which they appear.

Table 179: show ptp port Output Fields

Field Name	Field Description
Local Interface	Local logical interface.
Local IP	IP address of the interface acting as the slave.
Remote IP	IP address of the remote node.
Clock Stream	Unique index for each session created.
Clock Identity	IP address of the slave.
Port State	Status of the port: <b>PTP listening</b> or <b>PTP initializing</b> .
Delay Req Interval	Interval in seconds between the delay request messages sent by the slave to the master.
Announce Interval	Logarithmic mean interval for the announce messages to be sent by the master.

Table 179: show ptp port Output Fields (continued)

Field Name	Field Description
Announce Timeout	Number of times the announce interval message has to pass between the slave and the master without receipt of an announce message.
Sync Interval	Logarithmic mean interval for sync interval messages to be sent by the master.
Delay Mechanism	Type of delay mechanism used.
Port Number	PTP port number.
Operating Mode	Clock mode of the node.
Master Clock ID	Unique clock-identity of the master.
Previous Announce Messages	Previous announce messages.
Current Announce Message	Current announce messages.

## Sample Output

### show ptp port brief

```

user@host> run show ptp port brief
PTP port-data:
Local IP : 10.0.0.1 Remote IP : 10.0.0.2
Clock Stream : 1 Clock Identity : 00:05:85:ff:fe:73:ef:d0

Port Number : 1 Operating Mode : Master only
```

## show ptp slave

<b>Syntax</b>	show ptp slave <brief   detail   interface>
<b>Release Information</b>	Command introduced in Junos OS Release 12.2. Command introduced in Junos OS Release 17.3 for the QFX Series.
<b>Description</b>	(MX80, MX240, MX480, MX960 routers, and the QFX Series) Display information about the configured slave and the status of the slave.
<b>Options</b>	<b>brief</b> —Display information about the slave in detail. <b>detail</b> —Display information about the slave in detail. <b>interface</b> —Display information about the configured interface of the slave.
<b>Required Privilege Level</b>	View
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Precision Time Protocol Overview on page 250</a></li> <li>• <i>Configuring the Precision Time Protocol G.8275.2 Enhanced Profile (Telecom Profile)</i></li> </ul>
<b>Output Fields</b>	<a href="#">Table 180 on page 2197</a> lists the output fields for the <b>show ptp slave</b> command. Output fields are listed in the approximate order in which they appear.

Table 180: show ptp slave Output Fields

Field Name	Field Description
<b>Interface</b>	Name of the interface configured for Precision Time Protocol.
<b>Status</b>	Status of the Precision Time Protocol slave: <ul style="list-style-type: none"> <li>• <b>Master or Slave</b></li> <li>• <b>Active or Inactive</b></li> <li>• <b>Initializing or Down</b></li> </ul>
<b>Interface</b>	Interface configured on the slave.
<b>Local Address</b>	IP or MAC address of the local interface.
<b>Status (Local address Status)</b>	Status of the local address of the interface acting as the slave: <ul style="list-style-type: none"> <li>• <b>Configured or Unconfigured</b></li> <li>• <b>Master or Slave</b></li> <li>• <b>Active or Inactive or Ready</b></li> </ul>

Table 180: show ptp slave Output Fields (continued)

Field Name	Field Description
<b>Status</b>  (Remote address Status)	Status of the remote address of the interface on the QFX Series: <ul style="list-style-type: none"> <li>• <b>Configured</b> or <b>Not configured</b></li> <li>• <b>Master</b> or <b>Slave</b></li> <li>• <b>Active</b> or <b>Inactive</b></li> </ul>
<b>Total Remote Masters</b>	Number of remote masters.
<b>Remote Master</b>	IP or MAC address of the remote node.
<b>Status (Slave IP Address Status)</b>	Status of the address of the master: <ul style="list-style-type: none"> <li>• <b>Configured</b> or <b>Unconfigured</b></li> <li>• <b>Master</b> or <b>Slave</b></li> <li>• <b>Active</b> or <b>Inactive</b></li> </ul>

## Sample Output

### show ptp slave

```
user@host> run show ptp slave
PTP Slave Interfaces Configured:

Slave Interface Status
ge-7/0/0.0 Slave, Active
```

### show ptp slave detail

```
user@host> run show ptp slave detail
PTP Slave Interface Details:

Interface : ge-7/0/0.0
Status : Slave, Active
Clock Info
 Local address : 10.10.1.10 Status: Configured, Slave, Active
 Total Remote Masters: 0
 Remote Master: 10.10.1.2 Status: Configured, Master, Active
```

### show ptp slave detail (with IPv6 addresses for PTP master/slave)

```
user@host> run show ptp slave detail
PTP Slave Interface Details:

Interface : ge-0/1/5.0
Status : Slave, Active
Clock Info
 Local Address 2001:cdba:0000:0000:0000:0000:3257:9653 Status:
Configured, Slave, Active
 Remote Master:: 2001:cdba:0000:0000:0000:0000:3257:9652 Status: Configured,
Master, Active
 Total Remote Masters: 1
```

## show ptp stateful detail

<b>Syntax</b>	show ptp stateful detail
<b>Release Information</b>	Command introduced in Junos OS Release 17.1R1.
<b>Description</b>	Display information about the stateful interfaces.
<b>Options</b>	This command has no options.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Precision Time Protocol Overview on page 250</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">show ptp stateful detail on page 2200</a>
<b>Output Fields</b>	Table 92 on page 893 lists the output fields for the <b>show ptp stateful detail</b> command. Output fields are listed in the approximate order in which they appear.

Table 181: show ptp stateful detail

Field Name	Field Description
Interface	Name of the configured stateful interface.
Status	Status of the stateful interface: stateful and active or inactive.
Local Address	MAC address of the configured stateful interfaces.
Status (of local address)	Status of the local address of the interface: <ul style="list-style-type: none"> <li>• Configured or not configured</li> <li>• Active or inactive</li> </ul>
Port Status	Status of the port configured: <ul style="list-style-type: none"> <li>• Master or slave</li> </ul>
Remote Address	MAC address of the remote stateful interface.

## Sample Output

### show ptp stateful detail

```

user@host> show ptp stateful detail
Interface : ge-7/0/1.0
Status : Stateful, Active

```

## Clock Info :

Local Address: 01:00:5E:90:10:00 Status: Configured, Active

Port Status: Slave

Remote Address: 01:00:5E:90:10:FF

## show synchronous-ethernet esmc statistics

<b>Syntax</b>	<pre>show synchronous-ethernet esmc statistics &lt;brief interface <i>interface-name</i>&gt; &lt;detail interface <i>interface-name</i>&gt; &lt; interface <i>interface-name</i>&gt; &lt; interface <i>interface-name</i> (brief   detail)&gt;</pre>
<b>Release Information</b>	<p>Command introduced in Junos OS Release 11.2R4 for MX Series 5G Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 14.2R1 for PTX Series Packet Transport Routers.</p>
<b>Description</b>	(MX5, MX10, MX40, MX80, MX80-T, MX240, MX480, MX960, MX2010, MX2020 , and PTX Series routers only) Display the Synchronous Ethernet ESMC statistics.
<b>Required Privilege Level</b>	maintenance
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Synchronous Ethernet Overview on page 236</a></li> <li>• <a href="#">Configuring an External Clock Synchronization Interface for MX Series Routers on page 287</a></li> <li>• <a href="#">request chassis synchronization mode on page 880</a></li> <li>• <a href="#">request chassis synchronization switch on page 882</a></li> <li>• <a href="#">show synchronous-ethernet global-information on page 2206</a></li> <li>• <a href="#">show synchronous-ethernet esmc transmit on page 2204</a></li> <li>• <a href="#">clear synchronous-ethernet esmc statistics on page 808</a></li> </ul>
<b>List of Sample Output</b>	<p><a href="#">show synchronous-ethernet esmc statistics on page 2203</a></p> <p><a href="#">show synchronous-ethernet esmc statistics detail on page 2203</a></p> <p><a href="#">show synchronous-ethernet esmc statistics interface (PTX) on page 2203</a></p>
<b>Output Fields</b>	Table 182 on page 2202 lists the output fields for the <b>show synchronous-ethernet esmc statistics</b> command. Output fields are listed in the approximate order in which they appear.

Table 182: show synchronous-ethernet esmc statistics Output Fields

Field Name	Field Description
Interface Name	<b>interface-slot/pic/port</b> —Displays the name of the interface for which the ESMC statistics are displayed.
Transmit Count	<b>number</b> —Displays the number of ESMC packets transmitted.
Receive Count	<b>number</b> —Displays the number of ESMC packets received.

## Sample Output

### show synchronous-ethernet esmc statistics

```
user@host> show synchronous-ethernet esmc statistics
ESMC statistics:
Interface Name Transmit Count Receive Count
ge-1/0/4 3540 0
ge-1/0/2 3539 0
ge-1/2/4 3540 0
```

### show synchronous-ethernet esmc statistics detail

```
user@host> show synchronous-ethernet esmc statistics detail
ESMC Statistics:

Interface Name : xe-2/0/10
Transmit Count : 40908 Receive Count : 40534
Total Drop Count: 336 Ineligible Drop Count: 0
Adjacency Count : 4
```

### show synchronous-ethernet esmc statistics interface (PTX)

```
user@host> show synchronous-ethernet esmc statistics interface et-1/1/0:0
ESMC statistics:
Interface Name Transmit Count Receive Count
et-1/1/0:0 358 338
```

## show synchronous-ethernet esmc transmit

<b>Syntax</b>	<pre>show synchronous-ethernet esmc transmit &lt;brief interface <i>interface-name</i>&gt; &lt;detail interface <i>interface-name</i>&gt; &lt; interface <i>interface-name</i>&gt; &lt; interface <i>interface-name</i> (brief   detail)&gt;</pre>
<b>Release Information</b>	<p>Command introduced in Junos OS Release 11.2R4 for MX80 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 14.2R1 for PTX Series Routers.</p>
<b>Description</b>	(MX5, MX10, MX40, MX80, MX80-T, MX240, MX480, MX960, MX2010, MX2020, and PTX Series routers only) Display the Synchronous Ethernet ESMC transmit interface details.
<b>Required Privilege Level</b>	maintenance
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Synchronous Ethernet Overview on page 236</a></li> <li>• <a href="#">Configuring an External Clock Synchronization Interface for MX Series Routers on page 287</a></li> <li>• <a href="#">request chassis synchronization mode on page 880</a></li> <li>• <a href="#">request chassis synchronization switch on page 882</a></li> <li>• <a href="#">show synchronous-ethernet global-information on page 2206</a></li> <li>• <a href="#">show synchronous-ethernet esmc statistics on page 2202</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">show synchronous-ethernet esmc transmit on page 2205</a>
<b>Output Fields</b>	<p><a href="#">Table 183 on page 2204</a> lists the output fields for the <b>show synchronous-ethernet esmc transmit detail</b> command. Output fields are listed in the approximate order in which they appear.</p>

*Table 183: show synchronous-ethernet esmc transmit detail Output Fields*

Field Name	Field Description
<b>Interface name</b>	<b>interface-slot/pic/port</b> —Displays the name of the interface for which the ESMC transmit details are displayed.
<b>Status</b>	<b>string</b> —Displays the ESMC transmit interface status details.

## Sample Output

```
user@host# show synchronous-ethernet esmc transmit detail
```

**ESMC Transmit interface details:**

Interface name: ge-1/0/4	Status: ESMC Tx (QL SSU-A/SSM 0x4)
Interface name: ge-1/0/2	Status: ESMC Tx (QL DNU/SSM 0xf)
Interface name: ge-1/2/4	Status: ESMC Tx (QL SSU-A/SSM 0x4)

**show synchronous-ethernet esmc transmit**

```
user@host> show synchronous-ethernet esmc transmit
ESMC Transmit interfaces:
 xe-2/0/10
```

**show synchronous-ethernet esmc transmit (PTX)**

```
user@host> show synchronous-ethernet esmc transmit
ESMC Transmit interfaces:
 et-1/1/0:0
 et-2/0/22:3
```

## show synchronous-ethernet global-information

<b>Syntax</b>	show synchronous-ethernet global-information <brief>
<b>Release Information</b>	Command introduced in Junos OS Release 11.2R4 for MX80-T, MX5, MX10, MX40, MX240, MX480, and MX960 routers. Command introduced in Junos OS Release 14.2R1 for PTX Series Routers.
<b>Description</b>	(MX5, MX10, MX40, MX80, MX80-T, MX240, MX480, MX960, and PTX routers only) Display information about the global configuration for Synchronous Ethernet chassis synchronization.
<b>Required Privilege Level</b>	maintenance
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Synchronous Ethernet Overview on page 236</a></li> <li>• <a href="#">Configuring an External Clock Synchronization Interface for MX Series Routers on page 287</a></li> <li>• <a href="#">request chassis synchronization mode on page 880</a></li> <li>• <a href="#">show synchronous-ethernet esmc statistics on page 2202</a></li> <li>• <a href="#">show synchronous-ethernet esmc transmit on page 2204</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">show synchronous-ethernet global-information (MX) on page 2207</a> <a href="#">show synchronous-ethernet global-information (PTX) on page 2207</a>
<b>Output Fields</b>	<a href="#">Table 184 on page 2206</a> lists the output fields for the <b>show synchronous-ethernet global-information</b> command. Output fields are listed in the approximate order in which they appear.

*Table 184: show synchronous-ethernet global-information Output Fields*

Field Name	Field Description
Network option	(option-1(EEC1)   option-2(EEC2))—Displays the network option configuration, either option-1(EEC1) or option-2(EEC2).
Clock mode	(free-run   auto-select)—Displays the configured mode of operation. The clock source can be either from the free-run local oscillator or from an external qualified clock. The default is auto-select mode.
QL mode	(enable   disable)—Displays the configured quality level mode configuration. The default is disable.
Switchover mode	(revertive   non-revertive)—Displays the configured synchronization clock switching mode. The default mode is revertive.

Table 184: show synchronous-ethernet global-information Output Fields (continued)

Field Name	Field Description
<b>Config change holdover</b>	<b>seconds</b> —Displays the time interval to wait before selecting the new clock source during a configuration change. The default value is 30 seconds.
<b>Switchover holdover</b>	<b>seconds</b> —Displays the time interval to wait before selecting the new clock source during switchover. The default value is 30 seconds.
<b>Reboot holdover</b>	<b>seconds</b> —Displays the time interval to wait before selecting the new clock source during reboot. The default value is 120 seconds.

## Sample Output

### show synchronous-ethernet global-information (MX)

```

user@host# show synchronous-ethernet global-information
Global Configuration:

Network option : option-1(EEC1)
Clock mode : Auto-select
QL mode : Disabled
Switchover mode : Revertive
Config change holdover : 15 seconds
Switchover holdover : 30 seconds
Reboot holdover : 120 seconds

```

### show synchronous-ethernet global-information (PTX)

```

user@host# show synchronous-ethernet global-information
Global Configuration:

Network option : option-1(EEC1)
Clock mode : Auto-select
Max transmit quality : PRC
QL mode : Disabled
Clock selection mode : Config-QL based
Switchover mode : Revertive
Config change holdover : 15 seconds
Switchover holdover : 30 seconds
Reboot holdover : 120 seconds
RE Status : Master
Global Wait to Restore : 0 min

```
