**Output Fields** [Table 103 on page 1151](#) lists the output fields for the **show chassis environment fpm** command. Output fields are listed in the approximate order in which they appear.

*Table 103: show chassis environment fpm Output Fields*

Field Name	Field Description
<b>State</b>	FPM status: <ul style="list-style-type: none"> <li>• <b>Online</b>—FPM is online and running.</li> <li>• <b>Offline</b>—FPM is powered down.</li> </ul>
<b>FPM CMB Voltage</b>	(M40e and M160 routers only) Information about the voltage supplied to the FPM chassis management bus (CMB) device. The left column displays the required power, in volts. The right column displays the measured power, in millivolts.

Table 103: show chassis environment fpm Output Fields (continued)

Field Name	Field Description
<b>FPM GBUS Voltage</b>	(M320 and T Series routers only) Information about the voltage supplied to the FPM generic bus (GBUS) device. The left column displays the required power, in volts. The right column displays the measured power, in millivolts.
<b>FPM I2CS Voltage</b>	(PTX Series only) Information about the voltage supplied to the FPM generic bus (I2CS) device. The left column displays the required power, in volts. The right column displays the measured power, in millivolts.
<b>FPM Display Voltage</b>	Information about the voltage supplied to the FPM display. The left column displays the required power, in volts. The right column displays the measured power, in millivolts.
<b>FPM CMB Temperature</b>	(M40e and M160 routers only) Temperature of the air flowing past the FPM CMB device
<b>FPM GBUS Temperature</b>	(M320 and T Series routers only) Temperature of the air flowing past the FPM GBUS device.
<b>FPM I2CS Temperature</b>	(PTX Series only) Temperature of the air flowing past the FPM I2CS device.
<b>FPM Display Temperature</b>	Temperature of the air flowing past the FPM display.
<b>CMB Revision</b>	(M40e and M160 routers only) Revision level of the CMB device.
<b>GBUS Revision</b>	(M320 and T Series routers only) Revision level of the GBUS device.
<b>I2CS Revision</b>	(MX2010 routers, MX2020 routers, MX2008 routers, and PTX Series only) Revision level of the I2CS device.

## Sample Output

### show chassis environment fpm (M40e and M160 Routers)

```

user@host> show chassis environment fpm

FPM status:

## show chassis environment monitored

<b>List of Syntax</b>	<a href="#">Syntax on page 1157</a> <a href="#">Syntax (MX2020, MX2010, and MX2008 Routers) on page 1157</a>
<b>Syntax</b>	show chassis environment monitored
<b>Syntax (MX2020, MX2010, and MX2008 Routers)</b>	show chassis environment monitored <all-members> <local> <member <i>member-id</i> >
<b>Release Information</b>	<p>Command introduced in Junos OS Release 12.1 for PTX Series Packet Transport Routers. Command introduced in Junos OS Release 12.3 for MX2020 Universal Routing Platforms. Command introduced in Junos OS Release 12.3 for MX2010 Universal Routing Platforms. <b>all-members</b>, <b>local</b>, and <b>member <i>member-id</i></b> options introduced in Junos OS Release 15.1 for MX2020 and MX2010 routers.</p> <p>Command introduced in Junos OS Release 17.2 for MX2008 Universal Routing Platforms. Command introduced in Junos OS Release 18.2 for MX10008 Universal Routing Platforms.</p>
<b>Description</b>	<p>(PTX Series Packet Transport Routers, MX2010, MX2020, MX2008, and MX10008 routers) Display status information for monitored temperatures.</p> <p>On the PTX Series Packet Transport Routers, and on MX2010, MX2020, MX2008, and MX10008 routers, you can configure which temperatures are monitored for computing temperature alarms. Use this command to display only the temperatures that are monitored. Temperatures that are not included in the temperature alarm computations are not displayed.</p>
<b>Options</b>	<p><b>none</b>—Display status information for monitored temperatures.</p> <p><b>all-members</b>—(MX2010, MX2020, and MX2008 routers only) (Optional) Display chassis information for monitored temperatures in all members of the Virtual Chassis configuration.</p> <p><b>local</b>—(MX2010, MX2020, and MX2008 routers only) (Optional) Display chassis information for monitored temperatures in the local member of the Virtual Chassis.</p> <p><b>member <i>member-id</i></b>—(MX2010, MX2020, and MX2008 routers only) (Optional) Display chassis information for monitored temperatures in the specified member of the Virtual Chassis. Replace <b><i>member-id</i></b> with the value 0 or 1.</p>

**Output Fields** Table 104 on page 1158 lists the output fields for the **show chassis environment monitored** command. Output fields are listed in the approximate order in which they appear.

*Table 104: show chassis environment monitored Output Fields*

Field Name	Field Description
<b>Item</b>	Chassis component: <ul style="list-style-type: none"> <li>• (PTX Series Packet Transport Routers, and MX2010, MX2020, and Mx2008 routers)—Information about the chassis, Routing Engines, Control Boards (CBs), Switch Interface Boards (SIBs), PICs, and Flexible PIC Concentrators (FPCs).</li> </ul>
<b>Status</b>	Status of the specified item: <b>OK</b> , <b>Alarm</b> , or <b>Present</b> .
<b>Measurement</b>	Temperature of the air flowing past the specified chassis component. Temperature is displayed in degrees Celsius (C) and degrees Fahrenheit (F).

## Sample Output

## show chassis environment mcs

<b>Syntax</b>	<code>show chassis environment mcs</code> <code>&lt;slot&gt;</code>
<b>Release Information</b>	Command introduced before Junos OS Release 7.4.
<b>Description</b>	(M40e and M160 routers only) Display environmental information about the Miscellaneous Control Subsystems (MCSs).
<b>Options</b>	<p><b>none</b>—Display environmental information about both MCSs.</p> <p><b>slot</b> —(Optional) Display environmental information about an individual MCS. Replace <b>slot</b> with <b>0</b> or <b>1</b></p>
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li><a href="#">request chassis mcs on page 870</a></li> </ul>
<b>List of Sample Output</b>	<p><a href="#">show chassis environment mcs (M40e Router) on page 1181</a></p> <p><a href="#">show chassis environment mcs (M160 Router) on page 1181</a></p>
<b>Output Fields</b>	Table 105 on page 1179 lists the output fields for the <b>show chassis environment mcs</b> command. Output fields are listed in the approximate order in which they appear.

*Table 105: show chassis environment mcs Output Fields*

Field Name	Field Description
<b>State</b>	<p>Status of the MCS:</p> <ul style="list-style-type: none"> <li><b>Present</b>—MCS is detected by the chassis daemon but is either not supported by the current version of Junos or MCS is coming up but not yet online.</li> <li><b>Online</b>—MCS is online and running.</li> <li><b>Offline</b>—MCS is powered down.</li> <li><b>Empty</b>—No MCS is present.</li> <li><b>Master</b>—MCS is online, operating as master.</li> <li><b>Standby</b>—MCS is online, operating as standby.</li> </ul>
<b>Temperature</b>	Temperature of the air flowing past the MCS.
<b>Power</b>	Information about the voltage supplied to the MCS. The left column displays the required power, in volts. The right column displays the measured power, in millivolts.
<b>BUS Revision</b>	Revision level of the generic bus device.

*Table 105: show chassis environment mcs Output Fields (continued)*

Field Name	Field Description
<b>FPGA Revision</b>	Revision level of the field-programmable gate array (FPGA) revision.

---

## Sample Output

### show chassis environment mcs (M40e Router)

```
user@host> show chassis environment mcs
```

```
MCS 0 status:
State                Online Master
Temperature           45 degrees C / 113 degrees F
Power:
  3.3 V               3283 mV
  5.0 V               5013 mV
  12.0 V              11721 mV
  5.0 V bias          5025 mV
  8.0 V bias          8229 mV
BUS Revision         12
FPGA Revision        13
MCS 1 status:
State                Online Standby
Temperature           42 degrees C / 107 degrees F
Power:
  3.3 V               3296 mV
  5.0 V               4971 mV
  12.0 V              11814 mV
  5.0 V bias          4976 mV
  8.0 V bias          8241 mV
BUS Revision         12
FPGA Revision        13
```

### show chassis environment mcs (M160 Router)

```
user@host> show chassis environment mcs
```

```
MCS 0 status:
State                Online Master
Temperature           50 degrees C / 122 degrees F
Power:
  3.3 V               3306 mV
  5.0 V               4993 mV
  12.0 V              11799 mV
  5.0 V bias          4993 mV
  8.0 V bias          8288 mV
BUS Revision         12
FPGA Revision        13
```

## show chassis environment monitored

<b>List of Syntax</b>	<a href="#">Syntax on page 1182</a> <a href="#">Syntax (MX2020, MX2010, and MX2008 Routers) on page 1182</a>
<b>Syntax</b>	show chassis environment monitored
<b>Syntax (MX2020, MX2010, and MX2008 Routers)</b>	show chassis environment monitored <all-members> <local> <member <i>member-id</i> >
<b>Release Information</b>	<p>Command introduced in Junos OS Release 12.1 for PTX Series Packet Transport Routers. Command introduced in Junos OS Release 12.3 for MX2020 Universal Routing Platforms. Command introduced in Junos OS Release 12.3 for MX2010 Universal Routing Platforms. <b>all-members</b>, <b>local</b>, and <b>member <i>member-id</i></b> options introduced in Junos OS Release 15.1 for MX2020 and MX2010 routers.</p> <p>Command introduced in Junos OS Release 17.2 for MX2008 Universal Routing Platforms. Command introduced in Junos OS Release 18.2 for MX10008 Universal Routing Platforms.</p>
<b>Description</b>	<p>(PTX Series Packet Transport Routers, MX2010, MX2020, MX2008, and MX10008 routers) Display status information for monitored temperatures.</p> <p>On the PTX Series Packet Transport Routers, and on MX2010, MX2020, MX2008, and MX10008 routers, you can configure which temperatures are monitored for computing temperature alarms. Use this command to display only the temperatures that are monitored. Temperatures that are not included in the temperature alarm computations are not displayed.</p>
<b>Options</b>	<p><b>none</b>—Display status information for monitored temperatures.</p> <p><b>all-members</b>—(MX2010, MX2020, and MX2008 routers only) (Optional) Display chassis information for monitored temperatures in all members of the Virtual Chassis configuration.</p> <p><b>local</b>—(MX2010, MX2020, and MX2008 routers only) (Optional) Display chassis information for monitored temperatures in the local member of the Virtual Chassis.</p> <p><b>member <i>member-id</i></b>—(MX2010, MX2020, and MX2008 routers only) (Optional) Display chassis information for monitored temperatures in the specified member of the Virtual Chassis. Replace <b><i>member-id</i></b> with the value 0 or 1.</p>

**Output Fields** Table 104 on page 1158 lists the output fields for the **show chassis environment monitored** command. Output fields are listed in the approximate order in which they appear.

*Table 106: show chassis environment monitored Output Fields*

Field Name	Field Description
<b>Item</b>	Chassis component: <ul style="list-style-type: none"> <li>• (PTX Series Packet Transport Routers, and MX2010, MX2020, and Mx2008 routers)—Information about the chassis, Routing Engines, Control Boards (CBs), Switch Interface Boards (SIBs), PICs, and Flexible PIC Concentrators (FPCs).</li> </ul>
<b>Status</b>	Status of the specified item: <b>OK</b> , <b>Alarm</b> , or <b>Present</b> .
<b>Measurement</b>	Temperature of the air flowing past the specified chassis component. Temperature is displayed in degrees Celsius (C) and degrees Fahrenheit (F).

## Sample Output

### show chassis environment monitored (PTX3000 Packet Transport Router)

```
user@host> show chassis environment monitored
```

Class	Item	Status	Measurement
	Routing Engine 0 CPU	OK	54 degrees C / 129 degrees F
	Routing Engine 1 CPU	Present	
	CB 0 Exhaust A	OK	25 degrees C / 77 degrees F
	CB 1 Exhaust A	OK	22 degrees C / 71 degrees F

## show chassis environment pcg

<b>Syntax</b>	<code>show chassis environment pcg &lt;slot&gt;</code>
<b>Release Information</b>	Command introduced before Junos OS Release 7.4.
<b>Description</b>	(M40e and M160 routers only) Display environmental information about the Packet Forwarding Engine clock generators (PCGs).
<b>Options</b>	<p><b>none</b>—Display environmental information about both PCGs.</p> <p><b>slot</b>—(Optional) Display environmental information about an individual PCG. Replace <b>slot</b> with 0 or 1.</p>
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li><a href="#">request chassis pcg on page 875</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">show chassis environment pcg (M40e Router) on page 1206</a> <a href="#">show chassis environment pcg (M160 Router) on page 1206</a>
<b>Output Fields</b>	Table 107 on page 1204 lists the output fields for the <b>show chassis environment pcg</b> command. Output fields are listed in the approximate order in which they appear.

*Table 107: show chassis environment pcg Output Fields*

Field Name	Field Description
PCG slot status	Slot number: 0 or 1.
State	<p>Status of PCG:</p> <ul style="list-style-type: none"> <li><b>Present</b>—PCG is detected by the chassis process but is either not supported by the current version of Junos OS or PCG is coming up but is not yet online.</li> <li><b>Online</b>—PCG is powered down. If <b>Online</b>, it can be the <b>Master clock</b> or the <b>Standby clock</b>.</li> <li><b>Offline</b>—PCG is powered down.</li> <li><b>Empty</b>—No PCG is present.</li> </ul>
Temperature	Temperature of the air flowing past the PCG.
Frequency	Frequency setting and measurement for the PCG.

*Table 107: show chassis environment pcg Output Fields (continued)*

Field Name	Field Description
<b>Power</b>	Information about the voltage supplied to the PCG. The left column displays the required power, in volts. The right column displays the measured power, in millivolts.
<b>BUS Revision</b>	Revision level of the generic bus device.

## Sample Output

### show chassis environment pcg (M40e Router)

```
user@host> show chassis environment pcg

PCG 0 status:
  State                Online - Master clock
  Temperature           44 degrees C / 111 degrees F
  Frequency:
    Setting             125.00 MHz
    Measurement         124.95 MHz
  Power:
    3.3 V               3266 mV
    5.0 V bias          4964 mV
    8.0 V bias          8112 mV
  BUS Revision         12

PCG 1 status:
  State                Online - Standby
  Temperature           47 degrees C / 116 degrees F
  Frequency:
    Setting             125.00 MHz
    Measurement         124.96 MHz
  Power:
    3.3 V               3271 mV
    5.0 V bias          4979 mV
    8.0 V bias          8117 mV
  BUS Revision         12
```

### show chassis environment pcg (M160 Router)

```
user@host> show chassis environment pcg

PCG 0 status:
  State                Online - Master clock
  Temperature           41 degrees C / 105 degrees F
  Frequency:
    Setting             125.00 MHz
    Measurement         125.03 MHz
  Power:
    3.3 V               3286 mV
    5.0 V bias          5010 mV
    8.0 V bias          8183 mV
  BUS Revision         12

PCG 1 status:
  State                Online - Standby
  Temperature           43 degrees C / 109 degrees F
  Frequency:
    Setting             125.00 MHz
    Measurement         125.01 MHz
  Power:
    3.3 V               3288 mV
    5.0 V bias          4993 mV
    8.0 V bias          8197 mV
  BUS Revision         12
```

## show chassis environment pdu

<b>Syntax</b>	<pre>show chassis environment pdu &lt;none&gt; &lt;slot&gt;</pre>
<b>Release Information</b>	Command introduced in Junos OS Release 12.1X48 for PTX5000 Packet Transport Routers.
<b>Description</b>	<p>Display the environmental status information of a power distribution unit (PDU).</p> <p>Starting from Junos OS Release 14.1, the <b>show chassis environment pdu slot</b> operational mode command output displays environmental status information for the new DC power supply module (PSM) and PDU that are added to provide power to the high-density FPC—FPC2-PTX-P1A.</p> <p>Starting from Junos OS Release 14.2, the power management software in Junos OS tracks the PSM power capacity to identify the power available for the PTX5000 router. Each PSM is assigned a power capability value that is equal to its maximum power rating. Therefore, the total input power—power that the chassis draws from a PDU—is the sum of all the online PSMs' maximum rating. Note that to limit the PDU's output power, the power management software adjusts the maximum rating of the PSMs according to the feed—that is, 60 A, 100 A, or 150 A—selected.</p>
<b>Options</b>	<p><b>none</b>—Display environmental information about all PDUs.</p> <p><b>slot</b> —(Optional) Display environmental information about an individual PDU. For the PTX5000, replace <b>slot</b> with <b>0</b> or <b>1</b>.</p>
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>PTX5000 Packet Transport Router Hardware Guide</i></li> </ul>
<b>List of Sample Output</b>	<p><a href="#">show chassis environment pdu (PTX5000) on page 1208</a></p> <p><a href="#">show chassis environment pdu (PTX5000 Packet Transport Router with DC PSM and PDU) on page 1209</a></p> <p><a href="#">show chassis environment pdu (PTX5000 Packet Transport Router with AC PSM and PDU) on page 1210</a></p> <p><a href="#">show chassis environment pdu (PTX5000 Packet Transport Router after a health check failure on a PSM) on page 1210</a></p>
<b>Output Fields</b>	<a href="#">Table 108 on page 1208</a> lists the output fields for the <b>show chassis environment pdu</b> command. Output fields are listed in the approximate order in which they appear.

Table 108: show chassis environment pdu Output Fields

Field Name	Field Description
PDU slot status	Number of the PDU slot.
PDU - State	Status of the PDU. Status can be <b>Online</b> , <b>Present</b> , or <b>Absent</b> .
PDU - BoostConv	Status of the booster converter.
Feed Switch	Status of the connected input line cord in the AC PDU. Status can be , <b>60A</b> , <b>100A</b> , or <b>150A</b> .
PDU - Hours Used	Number of hours the PDU has been operational.
PDU - Firmware Version	Version level of the firmware running on the PDU.
PSM number status	PSM number. PSMs are numbered <b>0</b> through <b>3</b> .
PSM - State	Status of the PSM. Status can be <b>Online</b> , <b>Present</b> , or <b>Absent</b> .
PSM - Temperature	Temperature of the air flowing past the PSM.
PSM - Fans	Status of the cooling fans associated with the PSM.
PSM - AC Input	Status of the AC input for the specified component
PSM - AC Output	Status of the AC output for the specified component.
PSM - DC input	Status of the DC input for the specified component.
PSM - DC output	Status of the DC output for the specified component.
PSM-Health check status	Reason for the health check failure of the PSM.
PSM - Hours Used	Number of hours the PSM has been operational.
PSM - Firmware Version	Version level of the firmware running on the PSM.

## Sample Output

### show chassis environment pdu (PTX5000)

```
user@host> show chassis environment pdu 0
```

```
PDU 0 status:
  State                Online
  Hours Used           4281
  Firmware Version (MCU1) 00.02
  Firmware Version (MCU2) 00.02
  Firmware Version (MCU3) 00.02
  Firmware Version (MCU4) 00.02
```

```

PDU 0 PSM 0 status:
  State           Online
  Temperature     OK    32 degrees C / 89 degrees F
  Fans            OK
  DC Input        OK
  DC Output       OK
  Hours Used      2864
  Firmware Version 00.04
PDU 0 PSM 1 status:
  State           Online
  Temperature     OK    30 degrees C / 86 degrees F
  Fans            OK

**Release Information**

Command introduced before Junos OS Release 7.4.  
 Command introduced in Junos OS Release 11.3 for the QFX Series.  
 Command introduced in Junos OS Release 12.3R2 for EX Series.  
 Command introduced in Junos OS Release 13.2 for MX104 Universal Routing Platforms.  
 Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.  
**satellite** option introduced in Junos OS Release 14.2R3.  
 Command introduced in Junos OS Release 17.2 for PTX10008 Routers.  
 Command introduced in Junos OS Release 17.3 for MX10003 Universal Routing Platforms.  
 Command introduced in Junos OS Release 17.4 for MX204 Universal Routing Platforms.  
 Command introduced in Junos OS Release 17.3 for MX150 Router Appliance.  
 Command introduced in Junos OS Release 18.1R1 for EX9251 Switches.  
 Command introduced in Junos OS Release 18.2 for EX9253 Switches.  
 Command introduced in Junos OS Release 18.2R1 for MX10008 Routers

**Description**

Display Power Entry Module (PEM) environmental status information.

**NOTE:** The new high-capacity (4100W) enhanced DC PEM on MX960 routers includes a new design that can condition the input voltage. This results in the output voltage differing from the input voltage. The earlier generation of DC PEMs coupled the input power directly to the output, thereby making it safe to assume that the output voltage was equal to the input voltage.

**Options**

**none**—Display environmental information about both PEMs. For the TX Matrix router, display environmental information about the PEMs, the TX Matrix router, and its attached T640 routers. For the TX Matrix Plus router, display environmental information about the PEMs, the TX Matrix Plus router, and its attached routers.

**all-members**—(MX Series routers only) (Optional) Display environmental information about the PEMs in all the member routers of the Virtual Chassis configuration.

**interconnect-device *name***—(QFabric systems only) (Optional) Display chassis environmental information about the PEMs in the Interconnect device.

**lcc *number***—(TX Matrix router and TX Matrix Plus router only) (Optional) Line-card chassis number.

Replace *number* with the following values depending on the LCC configuration:

- 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.
- 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.
- 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.
- 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.

**local**—(MX Series routers only) (Optional) Display environmental information about the PEM in the local Virtual Chassis member.

**member *member-id***—(MX Series routers only) (Optional) Display environmental information about the PEM in the specified member of the Virtual Chassis configuration. Replace *member-id* with a value of 0 or 1.

**node-device *name***—(QFabric systems only) (Optional) Display chassis environmental information about the PEMs in the Node device.

**satellite [*fpc-slot slot-id* | device-alias *alias-name*]**—(Junos Fusion only)(Optional) Display environmental information about the PEM in the specified satellite device in a Junos Fusion, or for all satellite devices in the Junos Fusion if no satellite devices are specified.

**scc**—(TX Matrix routers only) (Optional) Display environmental information about the PEM in the TX Matrix router (or switch-card chassis).

**sfc**—(TX Matrix Plus routers only) (Optional) Display environmental information about the PEM in the TX Matrix Plus router (or switch-fabric chassis).

**slot** —(Optional) Display environmental information about an individual PEM. Replace *slot* with 0 or 1.

**Output Fields** [Table 109 on page 1216](#) lists the output fields for the **show chassis environment pem** command. Output fields are listed in the approximate order in which they appear.

*Table 109: show chassis environment pem Output Fields*

Field Name	Field Description
PEMslotstatus	Number of the PEM slot.
State	Status of the PEM.
Temperature	Temperature of the air flowing past the PEM.
AC Input	Status of the AC input for the specified component
AC Output	Status of the AC output for the specified component.
DC input	Status of the DC input for the specified component.
DC output	Status of the DC output for the specified component.
Load	(Not available on M40e or M160 routers) Information about the load on supply, in percentage of rated current being used.

Table 109: show chassis environment pem Output Fields (continued)

Field Name	Field Description
Voltage	(M120, M160, M320, T640, T1600, TX Matrix, and TX Matrix Plus routers only) Information about voltage supplied to the PEM.  (MX104 routers only) Information about voltage supplied by the PEM to the system.
Current	(T640, T1600, TX Matrix, and TX Matrix Plus routers only) Information about the PEM current.
Power	(T640, T1600, TX Matrix, and TX Matrix Plus routers only) Information about the PEM power.
SCG/CB/SIB	(T640, T1600, TX Matrix, and TX Matrix Plus routers only) SONET Clock Generator/Control Board/Switch Interface Board.
FAN	(T640, T1600, and T4000 routers with six-input DC power supply only) Information about the DC output to the fan.

## Sample Output

### show chassis environment pem (M40e Router)

```
user@host> show chassis environment pem
```

```

PEM 0 status:
  State           Online
  Temperature      OK
  AC input         OK
  DC output        OK

```

### show chassis environment pem (M120 Router)

```
user@host> show chassis environment pem
```

```

PEM 0 status:
  State           Online
  Temperature      OK
  DC Input:        OK
  DC Output:       OK
  Load            Less than 20 percent
  Voltage:
    48.0 V input   52864 mV
    48.0 V fan supply 41655 mV
    3.3 V          3399 mV
PEM 1 status:
  State           Online
  Temperature      OK
  DC Input:        OK
  DC Output:       OK
  Load            Less than 20 percent
  Voltage:
    48.0 V input   54537 mV
    48.0 V fan supply 42910 mV
    3.3 V          3506 mV

```

### show chassis environment pem (M160 Router)

```
user@host> show chassis environment pem
```

```
PEM 0 status:
  State           Online
  Temperature      OK
  DC input         OK
  DC output        OK
  Load            Less than 20 percent
  Voltage:
    48.0 V input   54833 mV
    48.0 V fan supply 50549 mV
    8.0 V bias     8239 mV
    5.0 V bias     5006 mV
```

### show chassis environment pem (M320 Router)

```
user@host> show chassis environment pem
```

```
PEM 2 status:
  State           Online
  Temperature      OK
  DC input         OK
  Load            Less than 40 percent
    48.0 V input   51853 mV
    48.0 V fan supply 48877 mV
    8.0 V bias     8449 mV
    5.0 V bias     4998 mV
PEM 3 status:
  State           Online
  Temperature      OK
  DC input         OK
  Load            Less than 40 percent
    48.0 V input   51717 mV
    48.0 V fan supply 49076 mV
    8.0 V bias     8442 mV
    5.0 V bias     4998 mV
```

### show chassis environment pem (MX150)

```
user@host> show chassis environment pem
```

```
FPC 0 PEM 0 status:
  State           Online
  Airflow          Front to Back
  Temperature      OK
```

### show chassis environment pem (MX104 Router)

```
user@host> show chassis environment pem
```

```
PEM 0 status:
  State           Online
  Temperature      OK
  DC Output:       OK
  Voltage:
    12.0 V output   12281 mV
    3.3 V output    3353 mV
```

```

PEM 1 status:
  State          Empty

```

#### show chassis environment pem (MX240 Router)

```
user@host> show chassis environment pem

## show chassis environment psu

<b>Syntax</b>	<b>show chassis environment psu</b> <b>&lt;slot-number&gt;</b>
<b>Release Information</b>	Command introduced in Junos OS Release 10.3 for EX Series switches.
<b>Description</b>	(On EX8200 switches only) Display the state of the power supply.
<b>Options</b>	<b>none</b> —Display the state of the power supply for all power supplies.  <b>slot-number</b> —(Optional) Display the state of the power supply for a specific power supply slot number (0–5).
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>Verifying Power Configuration and Use</i></li> <li>• <i>show chassis power-budget-statistics</i></li> </ul>
<b>List of Sample Output</b>	<a href="#">show chassis environment psu on page 1227</a> <a href="#">show chassis environment psu (for PSU 1) on page 1228</a>
<b>Output Fields</b>	Table 110 on page 1227 lists the output fields for the <b>show chassis environment psu</b> command. Output fields are listed in the approximate order in which they appear.

Table 110: show chassis environment psu Output Fields

Field Name	Field Description
<b>State</b>	State of the power supply: Online, Offline, or Empty.
<b>Temperature</b>	Temperature for the online power supply: OK or Out of Range.
<b>DC Output</b>	DC output for the online power supply: OK or Out of Range.

## Sample Output

### show chassis environment psu

```
user@switch> show chassis environment psu
```

```
PSU 0 status:
  State                Offline
PSU 1 status:
  State                Online
```

Temperature	OK
DC Output:	OK
PSU 2 status:	
State	Online
Temperature	OK
DC Output:	OK
PSU 3 status:	
State	Offline
PSU 4 status:	
State	Offline
PSU 5 status:	
State	Offline

#### show chassis environment psu (for PSU 1)

```
user@switch> show chassis environment psu 1
```

PSU 1 status:	
State	Online
Temperature	OK
DC Output:	OK

## show chassis environment psm

<b>Syntax</b>	<pre>show chassis environment psm &lt;all-members&gt; &lt;local&gt; &lt;member <i>member-id</i>&gt; &lt;psm-slot-number&gt;</pre>
<b>Release Information</b>	<p>Command introduced in Junos OS Release 12.3 for MX2020 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 12.3 for MX2010 Universal Routing Platforms.</p> <p><b>all-members</b>, <b>local</b>, and <b>member <i>member-id</i></b> options introduced in Junos OS Release 15.1 for MX2020 and MX2010 routers.</p> <p>Command introduced in Junos OS Release 17.2 for MX2008 Universal Routing Platforms.</p>
<b>Description</b>	Display chassis environmental information about the power supply module (PSM).
<b>Options</b>	<p><b>none</b>—Display environmental information about all power supply modules (PSMs).</p> <p><b>all-members</b>—(Optional) Display chassis environmental information about the PSM in all members of the Virtual Chassis configuration.</p> <p><b>local</b>—(Optional) Display chassis environmental information about the PSM in the local member of the Virtual Chassis.</p> <p><b>member <i>member-id</i></b>—(Optional) Display chassis environmental information about the PSM in the specified member of the Virtual Chassis. Replace <b><i>member-id</i></b> with the value 0 or 1.</p> <p><b><i>psm-slot-number</i></b>—(Optional) Display environmental information about the specified power supply module. For MX2020 routers, replace <b><i>psm-slot-number</i></b> with a value from 0 through 17. For MX2010 and MX2008 routers, replace <b><i>psm-slot-number</i></b> with a value from 0 through 8.</p>
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">show chassis environment on page 969</a></li> </ul>
<b>List of Sample Output</b>	<p><a href="#">show chassis environment psm (MX2020 Router) on page 1230</a></p> <p><a href="#">show chassis environment psm (MX2020 Router with 240-V high-voltage DC PSMs) on page 1232</a></p> <p><a href="#">show chassis environment psm (MX2010 Router) on page 1235</a></p> <p><a href="#">show chassis environment psm (MX2008 Router) on page 1236</a></p>
<b>Output Fields</b>	<p><a href="#">Table 111 on page 1230</a> lists the output fields for the <b>show chassis environment psm</b> command. Output fields are listed in the approximate order in which they appear.</p>

Table 111: show chassis environment psm Output Fields

Field Name	Field Description
<b>State</b>	Status of the PSM. <ul style="list-style-type: none"> <li>• <b>Online</b>—The PSM is online and running.</li> <li>• <b>Offline</b>—PSM is powered down.</li> </ul>
<b>Temperature</b>	The status of the temperature of the air flowing past the PSM. <ul style="list-style-type: none"> <li>• <b>Out of range</b>—Displayed if the PSM detects over-temperature.</li> <li>• <b>OK</b>—Displayed if the temperature is within the acceptable limit.</li> </ul>
<b>DC Input</b>	State of the DC input power feed for the specified zone at the specified amps and voltage, and load for the PSM.
<b>DC Output</b>	DC power output in watts (W) for the specified zone at the specified amps and voltage (A @ V), and load and percentage utilization of the maximum capacity for the PSM.
<b>Hours Used</b>	Number of hours the PSM has been operational.

## Sample Output

### show chassis environment psm (MX2020 Router)

```

user@host> show chassis environment psm

<b>Description</b>	Display Routing Engine environmental status information.
<b>Options</b>	<p><b>none</b>—Display environmental information about all Routing Engines. For a TX Matrix router, display environmental information about all Routing Engines on the TX Matrix router and its attached T640 routers. For a TX Matrix Plus router, display environmental information about all Routing Engines on the TX Matrix Plus router and its attached routers.</p> <p><b>all-members</b>—(MX Series routers only) (Optional) Display environmental information about the Routing Engines in all member routers in the Virtual Chassis configuration.</p>

**interconnect-device *name***—(QFabric systems only) (Optional) Display environmental information about the Routing Engines for the Interconnect device.

**lcc *number***—(TX Matrix router and TX Matrix Plus router only) (Optional) Line-card chassis number.

Replace *number* with the following values depending on the LCC configuration:

- 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.
- 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.
- 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.
- 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.

**local**—(MX Series routers only) (Optional) Display environmental information about the Routing Engines in the local Virtual Chassis member.

**member *member-id***—(MX Series routers only) (Optional) Display environmental information about the Routing Engines in the specified member in the Virtual Chassis configuration. Replace *member-id* with the value of 0 or 1.

**satellite [*fpc-slot slot-id* | *device-alias alias-name*]**—(Junos Fusion only)(Optional) Display environmental information for the specified satellite device in a Junos Fusion, or for all satellite devices in the Junos Fusion if no satellite devices are specified.

**scc**—(TX Matrix router only) (Optional) Display environmental information about the Routing Engine in the TX Matrix router (switch-card chassis).

**sfc**—(TX Matrix Plus router only) (Optional) Display environmental information about the Routing Engine in the TX Matrix Plus router (or switch-fabric chassis).

**slot**—(Optional) Display environmental information about an individual Routing Engine. On M10i, M20, M40e, M120, M160, M320, MX Series, MX104 routers, MX2010 routers, MX2020 routers, MX2008 routers, and T Series routers, replace *slot* with 0 or 1. On M5, M7i, M10, and M40 routers, replace *slot* with 0. On EX3200 and EX4200 standalone switches, replace *slot* with 0. On EX4200 switches in a Virtual Chassis configuration and on EX8208 and EX8216 switches, replace *slot* with 0 or 1. On the QFX3500 switch, there is only one Routing Engine, so you do not need to specify the slot number. On PTX Series Packet Transport Routers, replace *slot* with 0 or 1.

**Output Fields** [Table 112 on page 1242](#) lists the output fields for the **show chassis environment routing-engine** command. Output fields are listed in the approximate order in which they appear.

*Table 112: show chassis environment routing-engine Output Fields*

Field Name	Field Description
Routing engine <i>slot</i> status	Number of the Routing Engine slot: 0 or 1.
State	Status of the Routing Engine: <ul style="list-style-type: none"> <li>• Online Master—Routing Engine is online, operating as Master.</li> <li>• Online Standby—Routing Engine is online, operating as Standby.</li> <li>• Offline—Routing Engine is offline.</li> </ul>
Temperature	Temperature of the air flowing past the Routing Engine.
CPU Temperature	(PTX Series and T4000 Core Routers only) Temperature of the air flowing past the Routing Engine CPU.

## Sample Output

### show chassis environment routing-engine (Nonredundant)

```
user@host> show chassis environment routing-engine

Routing Engine 0 status:
  State                Online Master
  Temperature          27 degrees C / 80 degrees
```

### show chassis environment routing-engine (Redundant)

```
user@host> show chassis environment routing-engine

Route Engine 0 status:
  State                Online Master
  Temperature          26 degrees C / 78 degrees F
Route Engine 1 status:
  State                Online Standby
  Temperature          26 degrees C / 78 degrees F
```

### show chassis environment routing-engine (MX150)

```
user@ host >show chassis environment routing-engine

Routing Engine 0 status:
  State                Online Master
  CPU Temperature      42 degrees C / 107 degrees F
```

### show chassis environment routing-engine (MX104 Router)

```
user@ host >show chassis environment routing-engine

Routing Engine 0 status:
  State                Online Master
  Temperature          34 degrees C / 93 degrees F
  CPU Temperature      43 degrees C / 109 degrees F
Routing Engine 1 status:
  State                Online Standby
  Temperature          33 degrees C / 91 degrees F
  CPU Temperature      39 degrees C / 102 degrees F
```

### show chassis environment routing-engine (MX2010 Router)

```
user@host> show chassis environment routing-engine

Routing Engine 0 status:
  State                Online Master
  Temperature          37 degrees C / 98 degrees F
  CPU Temperature      37 degrees C / 98 degrees F
Routing Engine 1 status:
  State                Online Standby
  Temperature          35 degrees C / 95 degrees F
  CPU Temperature      34 degrees C / 93 degrees F
```

### show chassis environment routing-engine (MX2020 Router)

```
user@host> show chassis environment routing-engine
```

```
Routing Engine 0 status:
  State           Online Master
  Temperature      35 degrees C / 95 degrees F
  CPU Temperature  34 degrees C / 93 degrees F
Routing Engine 1 status:
  State           Online Standby
  Temperature      44 degrees C / 111 degrees F
  CPU Temperature  43 degrees C / 109 degrees F
```

#### show chassis environment routing-engine (MX2008 Router)

```
user@host> show chassis environment routing-engine

Routing Engine 0 status:
  State           Online Master
  CPU Temperature  75 degrees C / 167 degrees F
Routing Engine 1 status:
  State           Online Standby
  CPU Temperature  47 degrees C / 116 degrees F
```

#### show chassis environment routing-engine (TX Matrix Plus Router)

```
user@host> show chassis environment routing-engine

sfc0-re0:
-----
Routing Engine 0 status:
  State           Online Master

## show chassis environment scg

**List of Syntax**    [Syntax on page 1248](#)  
[Syntax \(TX Matrix and TX Matrix Plus Router\) on page 1248](#)

**Syntax**    `show chassis environment scg  
<slot>`

**Syntax (TX Matrix and TX Matrix Plus Router)**    `show chassis environment scg  
<lcc number>  
<slot>`

**Release Information**    Command introduced before Junos OS Release 7.4.  
 Command introduced in Junos OS Release 12.1 for the T4000 Core Routers.

**Description**    Display SONET Clock Generator (SCG) environmental information.

**Options**    **none**—(TX Matrix and TX Matrix Plus routers only) Display environmental information about all SCGs. On a TX Matrix router, display environmental information about all SCGs on the TX Matrix router and its attached T640 routers. On a TX Matrix Plus router, display environmental information about all SCGs on the TX Matrix Plus router and its attached routers.

**lcc number**—(TX Matrix router and TX Matrix Plus router only) (Optional) Line-card chassis number.

Replace *number* with the following values depending on the LCC configuration:

- 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.
- 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.
- 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.
- 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.

**slot**—(Optional) Display environmental information about the SCG. Replace **slot** with 0 or 1.

**Required Privilege Level**    view

**Output Fields** Table 113 on page 1249 lists the output fields for the **show chassis environment scg** command. Output fields are listed in the approximate order in which they appear.

*Table 113: show chassis environment scg Output Fields*

Field Name	Field Description
SCG slot status	Number of the SCG slot: 0 or 1.
State	Status of the SCG: <ul style="list-style-type: none"> <li>• <b>Online</b>—SCG is online and running.</li> <li>• <b>Offline</b>—SCG is powered down.</li> </ul> If two SCGs are installed and online, one is functioning as the master, and the other is the standby.
Temperature	Temperature of the air flowing past the SCG.
Power	Power on the SCG. The left column displays required power, in volts. The right column displays measured power, in millivolts.
BUS Revision	Revision level of the generic bus device.

## Sample Output

## show chassis environment sfm

<b>Syntax</b>	<code>show chassis environment sfm &lt;slot&gt;</code>
<b>Release Information</b>	Command introduced before Junos OS Release 7.4.
<b>Description</b>	(M40e and M160 routers only) Display Switching and Forwarding Module (SFM) environmental information.
<b>Options</b>	<p><b>none</b>—Display environmental information about all SFMs.</p> <p><b>slot</b>—(Optional) Display environmental information about an individual SFM. Replace <b>slot</b> with a value from <b>0</b> through <b>3</b>.</p>
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">request chassis sfm on page 897</a></li> <li>• <a href="#">request chassis sfm master switch on page 895</a></li> <li>• <i>Configuring SFM Redundancy on M40e and M160 Routers</i></li> <li>• <i>Switching the Global Master and Backup Roles in a Virtual Chassis Configuration</i></li> </ul>
<b>List of Sample Output</b>	<a href="#">show chassis environment sfm (M40e Router) on page 1268</a> <a href="#">show chassis environment sfm (M160 Router) on page 1268</a>
<b>Output Fields</b>	Table 115 on page 1266 lists the output fields for the <b>show chassis environment sfm</b> command. Output fields are listed in the approximate order in which they appear.

Table 115: show chassis environment sfm Output Fields

Field Name	Field Description
<b>SFM slot status</b>	SFM slot number: <b>0</b> or <b>1</b> on an M40e router, or <b>0</b> , <b>1</b> , <b>2</b> , or <b>3</b> on an M160 router.
<b>State</b>	<p>Status of the SFM:</p> <ul style="list-style-type: none"> <li>• <b>Online</b>—SFM is online and running.</li> <li>• <b>Offline</b>—SFM is powered down.</li> </ul> <p>If two SFMs are installed and online, one is functioning as the master, and the other is marked as the <b>Standby</b>.</p>
<b>SPP Temperature</b>	Temperature of the air flowing past the Switch Plane Processor card.
<b>SPR Temperature</b>	Temperature of the air flowing past the Switch Plane Router card.

*Table 115: show chassis environment sfm Output Fields (continued)*

Field Name	Field Description
<b>SPP Power</b>	Information about the voltage supplied to the Switch Plane Processor card. The left column displays the required power, in volts. The right column displays the measured power, in millivolts.
<b>SPR Power</b>	Information about the voltage supplied to the Switch Plane Router. The left column displays the required power, in volts. The right column displays the measured power, in millivolts.
<b>CMB Revision</b>	Revision level of the Chassis Management Bus (CMB) device.

## Sample Output

## show chassis environment sib

<b>List of Syntax</b>	<a href="#">Syntax on page 1271</a> <a href="#">Syntax (TX Matrix router) on page 1271</a> <a href="#">Syntax (TX Matrix Plus Router) on page 1271</a>
<b>Syntax</b>	show chassis environment sib <slot>
<b>Syntax (TX Matrix router)</b>	show chassis environment sib <lcc number   scc   slot>
<b>Syntax (TX Matrix Plus Router)</b>	show chassis environment sib <sib-slot   lcc number   sfc number   f13 sib-slot   f2s sib-slot/sib-f2s-slot-number>
<b>Release Information</b>	<p>Command introduced before Junos OS Release 7.4.</p> <p><b>sfc</b> option introduced in Junos OS Release 9.6. for the TX Matrix Plus router.</p> <p>Command introduced in Junos OS 12.1X48 for PTX Series Packet Transport Routers.</p> <p>Command introduced in Junos OS 12.1 for T4000 Core Routers.</p> <p>Command introduced in Junos OS Release 17.2 for PTX10008 Routers.</p>
<b>Description</b>	Display Switch Interface Board (SIB) environmental information.
<b>Options</b>	<p><b>none</b>—Display environmental information about all SIBs. On a TX Matrix router, display environmental information about all SIBs on the TX Matrix router and its attached T640 routers. On a TX Matrix Plus router, display environmental information about all SIBs on the TX Matrix Plus router and its attached routers .</p> <p><b>f13 sib-slot</b>—(TX Matrix Plus routers only) (Optional) Display SIB F13 environmental information only. Replace <b>sib-slot</b> with one of the following values: <b>0, 1, 3, 4, 6, 7, 8, 9, 11, or 12</b>. (Slots 2, 5, 10, 13, 14, and 15 are unused).</p> <p><b>f2s sib-slot/sib-f2s-slot-number</b>—(TX Matrix Plus routers only) (Optional) Display SIB F2s environmental information only. Replace <b>sib-slot</b> with a value from <b>0</b> through <b>4</b>, followed by a <b>sib-f2s-slot-number</b> value of <b>0, 2, 4 or 6</b>.</p> <p><b>lcc number</b>—(TX Matrix router, and TX Matrix Plus router only) (Optional) Line-card chassis number.</p> <p>Replace <i>number</i> with the following values depending on the LCC configuration:</p> <ul style="list-style-type: none"> <li>• 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.</li> <li>• 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.</li> </ul>

- 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.
- 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.

**scc**—(TX Matrix routers only) (Optional) Display environmental information about the SIB in the TX Matrix router (switch-card chassis).

**sfc**—(TX Matrix Plus routers only) (Optional) On a TX Matrix Plus router, display environmental information about the SIB in the TX Matrix Plus router (switch-fabric chassis).

**sib-slot**—(Optional) Display environmental information about the specified SIB. For the M320 router, replace **sib-slot** with a value from 0 through 3. For the T640, T1600, T4000, and TX Matrix routers, replace **sib-slot** with a value from 0 through 4. For the TX Matrix Plus router, see `f13 sib-slot` and `f2s sib-slot/sib-f2s-slot-number`. For the T320 router, replace **sib-slot** with a value from 0 through 2. For the PTX5000 Packet Transport Router, replace **sib-slot** with a value from 0 through 8.

**Output Fields** Table 116 on page 1273 lists the output fields for the **show chassis environment sib** command. Output fields are listed in the approximate order in which they appear.

Table 116: show chassis environment sib Output Fields

Field Name	Field Description
<b>SIB slot status</b>	<p>SIB slot number:</p> <ul style="list-style-type: none"> <li>• 0 through 3 on an M320 router.</li> <li>• 0 or 2 on a T320 router.</li> <li>• 0 through 4 on a T640, T1600, T4000, or TX Matrix router.</li> <li>• 0, 1, 3, 4, 6, 7, 8, 9, 11, or 12 for F13 SIBs on a TX Matrix Plus router. (Slots 2, 5, 10, 13, 14, and 15 are unused).</li> <li>• 0 through 4, followed by 0, 2, 4, or 6 for F2S SIBs on a TX Matrix Plus router. For example, <b>SIB F2S 0/4</b>.</li> <li>• 0 through 8 on a PTX5000 Packet Transport Router.</li> </ul>
<b>State</b>	<p>Status of the SIB:</p> <ul style="list-style-type: none"> <li>• <b>Online</b>—SIB is online and running.</li> <li>• <b>Offline</b>—SIB is powered down.</li> <li>• <b>Spare</b> (T640, T1600, T4000, and TX Matrix routers only)—SIB is redundant and will move to active state if one of the working SIBs fails.</li> </ul> <p>Only four of the SIBs are active at any time. The fifth one is marked <b>Spare</b>. It is activated if there is a fault on one of the active SIBs.</p> <p>Online standby (TX Matrix Plus router only).</p>
<b>Temperature</b>	<p>Temperature of the air flowing past the SIB.</p> <p>On PTX Series Packet Transport Routers, separate temperatures are displayed for <b>Intake</b>, <b>Exhaust</b>, and <b>Junction</b>.</p>
<b>Power</b>	<p>Information about the voltage supplied to the SIB. The left column displays the required power, in volts. The right column displays the measured power, in millivolts.</p>

## Sample Output

### show chassis environment sib (M320 Router)

```

user@host> show chassis environment sib

SIB 0 status:
State                Online
Temperature          34 degrees C / 93 degrees F
Power:
  GROUND              0 mV
  1.8 V               1805 mV
  2.5 V               2498 mV

Description	(M10i, M40e, M120, M160, M320, MX Series, and T Series routers and EX8200 and PTX Series routers only) Display information about the ports on the Control Board (CB) Ethernet switch.
Options	<p><b>none</b>—Display information about each connected port on the Ethernet switch. On a TX Matrix router, display information about each connected port on the Ethernet switch on the TX Matrix router and its attached T640 routers. On a TX Matrix Plus router, display information about each connected port on the Ethernet switch on the TX Matrix Plus router and its attached routers.</p> <p><b>all-members</b>—(MX Series routers only) (Optional) Display information about the ports on the CB Ethernet switch on all the members of the Virtual Chassis configuration.</p> <p><b>errors</b>—(Optional) Display the numbers and types of errors accumulated on all ports of the Ethernet switch.</p> <p><b>errors port</b>—(Optional) Display the numbers and types of errors accumulated on the specified port (0 through 15) of the Ethernet switch. On the TX Matrix router, replace <b>port</b> with a value from 0 through 15. On the TX Matrix Plus router and EX8200 switch, replace <b>port</b> with a value from 0 through 27. On the PTX Series Packet Transport Routers, replace <b>port</b> with a value from 0 through 25. On the T4000 routers, MX2020 routers, MX2010 routers, and MX2008 routers, replace <b>port</b> with a value from 0 through 27.</p> <p><b>errors switch number</b>—(TX Matrix Plus router only) (Optional) Display the numbers and types of errors accumulated on the specified switch. Replace <b>number</b> with a value from 0 through 2.</p>

**lcc number**—(TX Matrix router and TX Matrix Plus router only) (Optional) Line-card chassis number.

Replace *number* with the following values depending on the LCC configuration:

- 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.
- 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.
- 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.
- 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.

**local**—(MX Series routers only) (Optional) Display information about the ports on the CB Ethernet switch on the local Virtual Chassis member.

**member member-id**—(MX Series routers only) (Optional) Display information about the ports on the CB Ethernet switch on the specified member of the Virtual Chassis configuration. Replace *member-id* with a value of 0 or 1.

**old-rom-packet-count**—(MX 2020 Routers only) (Optional) Display information about installed linecards. A non-zero number indicates that the bootrom on that linecard needs to be updated.

**port-state**—(PTX Series only) (Optional) Display information about current port operation (**Blocking**, **Listening**, or **Disabled**).

**scc**—(TX Matrix router only) (Optional) Display information about the ports on the CB's Ethernet switch on the TX Matrix router (switch-card chassis).

**sfc number**—(TX Matrix Plus router only) (Optional) Display information about the ports on the CB's Ethernet switch on the TX Matrix Plus router (or switch-fabric chassis). Replace *number* with 0.

**statistics**—(Optional) Display traffic statistics for each connected port on the Ethernet switch.

**statistics port**—(Optional) Display traffic statistics for the specified port on the Ethernet switch. On the TX Matrix router, replace *port* with a value from 0 through 25. On the TX Matrix Plus router or EX8200 switch, replace *port* with a value from 0 through 27. On the PTX Series Packet Transport Routers, replace *port* with a value from 0 through 25. On the T4000 routers, MX2020 routers, MX2010 routers, and MX2008 routers, replace *port* with a value from 0 through 27.

**statistics switch number**—(TX Matrix Plus routers and EX8200 switch only) (Optional) Display traffic statistics for the specified Ethernet switch number. On the TX Matrix Plus router and EX8216 switch, replace *number* with a value from 0 through 2. On the EX8208 switch, replace *number* with a value from 0 through 1.

**Output Fields** [Table 117 on page 1307](#) lists the output fields for the **show chassis ethernet-switch** command. Output fields are listed in the approximate order in which they appear.

*Table 117: show chassis ethernet-switch Output Fields*

Field Name	Field Description
Link is good on port n connected to device	Information about the link between each port on the CB's Ethernet switch and one of the following devices:
or	<ul style="list-style-type: none"> <li>FPC0 (Flexible PIC Concentrator 0) through FPC7</li> </ul>
Link is good on Fast Ethernet port n connected to device	<ul style="list-style-type: none"> <li>Local controller</li> <li>Routing Engine</li> <li>Other Routing Engine (on a system with two Routing Engines)</li> <li>SPMB (Switch Processor Mezzanine Board)</li> </ul>
or	<ul style="list-style-type: none"> <li>(TX Matrix router only) LCC0 (line-card chassis 0) through LCC3</li> </ul>
Link is good on Gigabit Ethernet port n connected to device	
or	
Link is down on Gigabit Ethernet port connected to device	

Table 117: show chassis ethernet-switch Output Fields (continued)

Field Name	Field Description
<b>Speed is</b>	Speed at which the Ethernet link is running: <b>10 Mb</b> or <b>100 Mb</b> . When the device is <b>RE</b> or <b>Other RE</b> on the TX Matrix router, the speed is <b>1000 Mb</b> .  <b>NOTE:</b> Irrespective of the device, the speed is <b>1000 Mb</b> on the MX2010, MX2020, and MX2008 routers.
<b>Duplex is</b>	Duplex type of the Ethernet link: <b>full</b> or <b>half</b> .
<b>Autonegotiate is Enabled (or Disabled)</b>	By default, built-in Fast Ethernet ports on a PIC autonegotiate whether to operate at 10 Mbps or 100 Mbps. All other interfaces automatically choose the correct speed based on the PIC type and whether the PIC is configured to operate in multiplexed mode (using the <b>no-concatenate</b> statement at the <b>[edit chassis]</b> hierarchy level, as described in the <i>Junos OS System Basics Configuration Guide</i> ).
<b>Flow Control TX is Enabled (or Disabled)</b>	(MX2010 routers, MX2020 routers, MX2008 routers, and PTX Series) Flow control in the transmit direction is enabled (or disabled). Flow control regulates the flow of packets from the switch to the remote side of the connection.
<b>Flow Control RX is Enabled (or Disabled)</b>	(MX2010 routers, MX2020 routers, MX2008 routers, and PTX Series) Flow control in the receive direction is enabled (or disabled). Flow control regulates the flow of packets from the remote side of the connection to the switch.
<b>MLT3</b>	Number of multilevel threshold-3 (MLT-3) Fast Ethernet errors detected.
<b>Accumulated error counts for port <i>n</i> connected to device FPC<i>n</i>: (error output only)</b>	
<b>Lock</b>	Number of lock errors detected.
<b>Xmit</b>	Number of transmission errors detected.
<b>ESD</b>	Number of electrostatic discharge (ESD) errors detected.
<b>False Carrier</b>	Number of false carrier errors detected. This number is increased by one if a FRU is removed.
<b>Disconnects</b>	Number of disconnect errors detected.
<b>FX mode</b>	Number of errors detected on an Ethernet link over optical fiber.
<b>Statistics for port <i>n</i> connected to device FPC<i>n</i> (statistics output only)</b>	
<b>TX Packets 64 Octets</b>	(MX2010, MX2020, and MX2008 routers) Number of packets of size 64 octets transmitted.
<b>TX Packets 65 - 127 Octets</b>	(MX2010, MX2020, and MX2008 routers) Number of packets of size 65 through 127 octets transmitted.
<b>TX Packets 128 - 255 Octets</b>	(MX2010, MX2020, and MX2008 routers) Number of packets of size 128 through 255 octets transmitted.
<b>TX Packets 256 - 511 Octets</b>	(MX2010, MX2020, and MX2008 routers) Number of packets of size 256 through 511 octets transmitted.

Table 117: show chassis ethernet-switch Output Fields (continued)

Field Name	Field Description
<b>TX Packets 512 - 1023 Octets</b>	(MX2010, MX2020, and MX2008 routers) Number of packets of size 512 through 1023 octets transmitted.
<b>TX Packets 1024 - 1518 Octets</b>	(MX2010, MX2020, and MX2008 routers) Number of packets of size 1024 through 1518 octets transmitted.
<b>TX Packets 1519 - 2047 Octets</b>	(MX2010, MX2020, and MX2008 routers) Number of packets of size 1519 through 2047 octets transmitted.
<b>TX Packets 2048 - 4095 Octets</b>	(MX2010, MX2020, and MX2008 routers) Number of packets of size 2048 through 4095 octets transmitted.
<b>TX Packets 4096 - 9216 Octets</b>	(MX2010, MX2020, and MX2008 routers) Number of packets of size 4096 through 9216 octets transmitted.
<b>TX 1519 - 1522 Good Vlan frms</b>	(MX2010, MX2020, and MX2008 routers) Number of transmitted frames of size 1519 through 1522 octets that are good VLAN frames.
<b>TX Octets</b>	Number of octets sent.
<b>TX Unicast packets</b>	Number of unicast packets sent.
<b>TX Multicast packets</b>	Number of multicast packets sent.
<b>TX Broadcast packets</b>	Number of broadcast packets sent.
<b>TX Single Collision frames</b>	(MX2010, MX2020, and MX2008 routers) Number of packets sent after one collision.
<b>TX Mult. Collision frames</b>	(MX2010, MX2020, and MX2008 routers) Number of packets sent after multiple collisions.
<b>TX Late collisions</b>	Number of packets aborted during sending because of collisions after 64 bytes.
<b>TX Excessive collisions</b>	Number of packets not sent because of too many collisions.
<b>TX Dropped packets</b>	Number of transmitted packets that were dropped.
<b>TX PAUSEMAC Ctrl Frames</b>	Number of Media Access Control (MAC) frames containing PAUSE commands that were sent.
<b>TX Oversize Packets</b>	Number of oversize packets that were sent.
<b>TX FCS Error Counter</b>	Number of packets discarded because of frame check sequence errors.
<b>TX Fragment Counter</b>	Number of fragmented packets sent.
<b>TX Byte Counter</b>	Number of bytes sent.

*Table 117: show chassis ethernet-switch Output Fields (continued)*

Field Name	Field Description
<b>TX Packet OK Counter</b>	Number of viable packets sent.
<b>TX Pause Packet Counter</b>	Number of PAUSE packets sent.
<b>RX Packets 64 Octets</b>	(MX2010, MX2020, and MX2008 routers) Number of packets of size 64 octets received.
<b>RX Packets 65 - 127 Octets</b>	(MX2010, MX2020, and MX2008 routers) Number of packets of size 65 through 127 octets received.
<b>RX Packets 128 - 255 Octets</b>	(MX2010, MX2020, and MX2008 routers) Number of packets of size 128 through 255 octets received.
<b>RX Packets 256 - 511 Octets</b>	(MX2010, MX2020, and MX2008 routers) Number of packets of size 256 through 511 octets received.
<b>RX Packets 512 - 1023 Octets</b>	(MX2010, MX2020, and MX2008 routers) Number of packets of size 512 through 1023 octets received.
<b>RX Packets 1024 - 1518 Octets</b>	(MX2010, MX2020, and MX2008 routers) Number of packets of size 1024 through 1518 octets received.
<b>RX Packets 1519 - 2047 Octets</b>	(MX2010, MX2020, and MX2008 routers) Number of packets of size 1519 through 2047 octets received.
<b>RX Packets 2048 - 4095 Octets</b>	(MX2010, MX2020, and MX2008 routers) Number of packets of size 2048 through 4095 octets received.
<b>RX Packets 4096 - 9216 Octets</b>	(MX2010, MX2020, and MX2008 routers) Number of packets of size 4096 through 9216 octets received.
<b>RX Octets</b>	Number of octets received.
<b>RX Unicast packets</b>	Number of unicast packets received.
<b>RX Multicast packets</b>	Number of multicast packets received.
<b>RX Broadcast packets</b>	Number of broadcast packets received.
<b>RX FCS Errors</b>	Number of packets discarded because of frame check sequence errors.
<b>RX Alignment Errors</b>	Number of incomplete octets received.
<b>RX Dropped Packets</b>	Number of incoming packets that were dropped.
<b>RX Fragments</b>	Number of fragmented packets received.
<b>RX Symbol Errors</b>	Number of symbols received that the router did not correctly decode.

Table 117: *show chassis ethernet-switch Output Fields (continued)*

Field Name	Field Description
<b>RX MAC Control</b>	Number of Media Access Control (MAC) packets received.
<b>RX Oversize Packets</b>	Number of oversize packets received.
<b>RX Undersize Packets</b>	Number of undersize packets received.
<b>RX Jabbers</b>	Total number of frames received that exceed the maximum byte count and contain CRC errors .
<b>RX Control Frame Counter</b>	Number of control frames received.
<b>RX Pause Frame Counter</b>	Number of pause frames received.
<b>RX FCS Errors</b>	Number of packets discarded because of frame check sequence errors.
<b>RX Fragments</b>	Number of fragmented packets received.
<b>RX Byte Counter</b>	Number of bytes received.
<b>RX Packet OK Counter</b>	Number of viable packets received.

## Sample Output

### show chassis ethernet-switch

```

user@host> show chassis ethernet-switch

Link is good on port 0 connected to device: FPC0

Release Information	<p>Command introduced in Junos OS Release 10.0 on MX Series 5G Universal Routing Platforms, M120 routers, and M320 routers, T320 routers, T640 routers, T1600 routers, TX Matrix Routers, and TX Matrix Plus routers.</p> <p>Command introduced in Junos OS Release 11.1 for the QFX Series.</p> <p>Command introduced in Junos OS Release 11.4 for EX Series switches.</p> <p>Command introduced in Junos OS Release 12.1 for T4000 routers.</p> <p>Command introduced in Junos OS Release 12.3 for PTX5000 Packet Transport Routers.</p> <p>Command introduced in Junos OS Release 12.3 for MX2010 and MX2020 Universal Routing Platforms, and ACX Series Routers.</p> <p>Command introduced in Junos OS Release 13.2 for MX104 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.</p> <p><b>satellite</b> option introduced in Junos OS Release 14.2R3.</p> <p>Command introduced in Junos OS Release 17.2 for MX2008 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 17.3 for MX150 Router Appliance.</p> <p>Command introduced in Junos OS Release 17.2 for PTX10008 Routers.</p> <p>Command introduced in Junos OS Release 17.4 for MX204 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 18.1R1 for EX9251 Switches.</p> <p>Command introduced in Junos OS Release 18.2 for EX9253 Switches.</p> <p>Command introduced in Junos OS Release 18.2 for MX10008 Universal Routing Platforms.</p>
Description	<p>(T Series routers, TX Matrix routers, TX Matrix Plus routers, M120 routers, M320 routers, MX104 routers, MX2010 routers, MX2020 routers, MX2008 routers, MX Series 5G Universal Routing Platforms, QFX3008-I Interconnect devices, QFX Series, OCX Series, EX Series switches, and PTX Series Packet Transport Routers only) Show information about the fan tray and fans.</p>
Options	<p><b>all-members</b>—(MX Series routers only) (Optional) Display information about the fan tray and fans for all members of the Virtual Chassis configuration.</p> <p><b>local</b>—(MX Series routers only) (Optional) Display information about the fan tray and fans for the local Virtual Chassis member.</p>

**member *member-id***—(MX Series routers only) (Optional) Display information about the fan tray and fans for the specified member of the Virtual Chassis configuration. For an MX Series Virtual Chassis, replace *member-id* variable with a value 0 or 1.

**interconnect-device *name***—(QFX3000-G QFabric systems only) (Optional) Display information about the fan tray and fans for the specified QFX3008-I Interconnect device.

**lcc *number***—(TX Matrix and TX Matrix Plus routers only) (Optional) On a TX Matrix router, display information about the fan tray and fans for the specified T640 router (line-card chassis) that is connected to a TX Matrix router. On a TX Matrix Plus router, display information about the fan tray and fans for the specified router (line-card chassis) that is connected to a TX Matrix Plus router.

Replace *number* with the following values depending on the LCC configuration:

- 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.
- 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.
- 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.
- 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.

**satellite [*slot-id slot-id* | device-alias *alias-name*]**—(Junos Fusion only) (Optional) Display information about the fan tray and fans for the specified satellite device or devices in a Junos Fusion, or for all satellite devices if no satellite devices are specified.

**scc**—(TX Matrix routers only) (Optional) Display information about the fan tray and fans for the TX Matrix router (switch-card chassis).

**sfc *number***—(TX Matrix Plus routers only) (Optional) Display information about the fan tray and fans for the TX Matrix Plus router (switch-fabric chassis). Replace *number* variable with 0.

**Required Privilege Level**

**Output Fields** Table 118 on page 1355 lists the output fields for the **show chassis fan** command. Output fields are listed in the approximate order in which they appear.

*Table 118: show chassis fan Output Fields*

Field Name	Field Description
<b>Item</b>	Fan item identifier.
<b>Status</b>	Status of the fan: <ul style="list-style-type: none"> <li>• <b>OK</b>—Fan is running properly and within the normal range.</li> <li>• <b>Check</b>—Fan is in <b>Check</b> state because of some fault or alarm condition.</li> </ul>
<b>RPM</b>	(T Series routers, TX Matrix routers, TX Matrix Plus routers, MX Series 5G Universal Routing Platforms, QFX3108 Interconnect devices, and EX Series switches only) Fan speed in revolutions per minute (RPM).
<b>% RPM</b>	(MX2010 routers, MX2020 routers, MX2008 routers, and PTX Series Packet Transport Routers only) Percentage of the fan speed being used.
<b>Measurement</b>	(T Series routers, TX Matrix routers, TX Matrix Plus routers, MX Series 5G Universal Routing Platforms, QFX3108 Interconnect devices, and EX Series switches only) Fan speed status based on different chassis cooling requirements: <ul style="list-style-type: none"> <li>• Spinning at high speed</li> <li>• Spinning at intermediate speed</li> <li>• Spinning at normal speed</li> <li>• Spinning at low speed (except EX Series switches)</li> </ul> (MX2010 routers, MX2020 routers, MX2008 routers, and PTX Series Packet Transport Routers only) Fan speed in revolutions per minute (RPM) for each fan in the fan tray.

## show chassis fabric degraded-fabric-reachability

**Syntax** `show chassis fabric degraded-fabric-reachability`

**Release Information** Command introduced in Junos OS Release 12.1X48R4 for PTX Series Packet Transport Routers.  
Command introduced in Junos OS Release 17.2 for PTX10008 Routers.

**Description** Display the current state of reachability between the Packet Forwarding Engines in the system.

### Additional Information

**Required Privilege Level** view

**Related Documentation**

- [show chassis fabric reachability on page 1554](#)
- [degraded on page 629](#)

**List of Sample Output** [show chassis fabric degraded-fabric-reachability on page 1370](#)

**Output Fields** [Table 119 on page 1370](#) lists the output fields for the **show chassis fabric degraded-fabric-reachability** command. Output fields are listed in the approximate order in which they appear.

*Table 119: show chassis fabric degraded-fabric-reachability Output Fields*

Field Name	Field Description
FPC	Display fabric reachability for the displayed FPC slot.
PFE	Display fabric reachability for the displayed PFE slot on a per SIB and plane basis.
SIBx_Plane y	Display the SIB (x) and plane (y) where link errors occurred.
Link errors FPC/PFEs	Display the list of FPC and PFE slots that are unreachable for the displayed SIB and plane due to link errors.

## Sample Output

#### Output Fields

Table 120 on page 1373 lists the output fields for the **show chassis fabric destinations** command. Output fields are listed in the approximate order in which they appear.

*Table 120: show chassis fabric destinations Output Fields*

Field Name	Field Description
Fabric destinations state	Indicates the state of the fabric destinations: <ul style="list-style-type: none"> <li>• 0—Destination is non-existent.</li> <li>• 2—Destination is enabled.</li> <li>• 3—Destination is disabled.</li> <li>• 6—Destination is in erroneous state and is disabled.</li> </ul>
Flexible PIC Concentrator (FPC) number	Source FPC number.
Packet Forwarding Engine number	Source Packet Forwarding Engine number.
Plane number	Source plane number.

#### Sample Output

##### show chassis fabric destinations fpc 1 (MX240 Router)

In the output, the values followed by the plane number denote multiple quadruples. The first quadruple specifies FPC1, the second quadruple specifies FPC2 and so on. Each quadruple specifies the states of the fabric plane to the Packet Forwarding Engines.

## show chassis fabric faults recovery-actions

<b>Syntax</b>	show chassis fabric faults recovery-actions
<b>Release Information</b>	Command introduced in Junos OS Release 14.2 for TX Matrix Plus routers with 3D SIBs.
<b>Description</b>	Display the last 64 recovery actions related to a fabric black-hole condition.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">auto-recovery-disable on page 604</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">show chassis fabric faults recovery-actions on page 1403</a>
<b>Output Fields</b>	Table 119 on page 1370 lists the output fields for the <b>show chassis fabric faults recovery-actions</b> command. Output fields are listed in the approximate order in which they appear.

Table 121: show chassis fabric faults recovery-actions Output Fields

Field Name	Field Description
<b>Fault Name</b>	<p>The name of fault detected. The fault name appears in a message such as:</p> <p><b>CLOS LINK ERROR</b> detected on F2S or F13 slot <i>slot number</i> xf chip <i>chip number</i> and Link Number <i>link number</i></p>
<b>Recovery Start Time</b>	The time when recovery actions were initiated.
<b>Recovery Action</b>	<p>The recovery action that was used to recover from the mentioned fault. Recovery options depend on the type of faults and can include:</p> <ul style="list-style-type: none"> <li>• <b>SFC SIB Reboot:</b> The SFC SIB was rebooted.</li> <li>• <b>LCC SIB Reboot:</b> The LCC SIB was rebooted.</li> <li>• <b>FPC Reboot:</b> The FPC was rebooted.</li> <li>• <b>Destination Reprogramming:</b> Reenabling the data flow between Packet Forwarding Engines.</li> <li>• <b>Interchassis Link Retraining:</b> Retraining of optical links between an LCC SIB and an SFC SIB.</li> </ul>

## Sample Output

### show chassis fabric faults recovery-actions

```
user@host> show chassis fabric faults recovery-actions
```

```
Fault Name      :CLOS LINK ERROR on F2SSlot3Chip0LinkNum2
Recovery Start Time :2014-03-25 19:52:50 PDT
Recovery Action   :F2S slot 3 Reboot
```

## show chassis fabric feb

<b>Syntax</b>	show chassis fabric feb
<b>Release Information</b>	Command introduced in Junos OS Release 8.0.
<b>Description</b>	(M120 router only) Display the state of the electrical and optical switching fabric links between the Forwarding Engine Boards (FEBs) and the fabric planes, as interpreted by the FEB.
<b>Options</b>	This command has no options.
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">show chassis fabric feb on page 1405</a>
<b>Output Fields</b>	Table 122 on page 1405 lists the output fields for the <b>show chassis fabric feb</b> command.

*Table 122: show chassis fabric feb Output Fields*

Field Name	Field Description
<b>Fabric management FEB state</b>	State of the switching fabric link between each FEB and fabric plane: desalination error, disabled, enabled, link error, link ok, or unused.

## Sample Output

### show chassis fabric feb

```

user@host> show chassis fabric feb

Fabric management FEB state
FEB 0
    Plane 0: Plane enabled
    Plane 1: Plane enabled
    Plane 2: Plane enabled
    Plane 3: Plane enabled
FEB 4
    Plane 0: Plane enabled
    Plane 1: Plane enabled
    Plane 2: Plane enabled
    Plane 3: Plane enabled

```

## show chassis fabric errors

**List of Syntax**    [Syntax on page 1406](#)  
[Syntax \(PTX Series Packet Transport Routers\) on page 1406](#)

**Syntax**    show chassis fabric errors  
 <autoheal>  
 <fpc slot-number lcc number>  
 <sib (slot | f13 sib-slot | f2s sib-slot/sib-f2s-slot-number | lcc number)>

**Syntax (PTX Series Packet Transport Routers)**    show chassis fabric errors  
 (autoheal | fpc slot-number | sib sib-slot)

**Release Information**    Command introduced in Junos OS Release 10.0.  
 Command introduced in Junos OS Release 12.1X48 for the PTX Series Packet Transport Routers.  
 Command introduced in Junos OS Release 17.2 for PTX10008 Routers.

**Description**    Display the first ten and last ten fabric errors for the FPC or Switch Interface Boards (SIBs).

**NOTE:** This command can only be issued on a master Routing Engine.

**Options**    **autoheal**—(TX Matrix Plus routers and PTX Series Packet Transport Routers only) Show an error log of the first 100 autoheal actions taken on the system.

**fpc slot-number**—Show error log of the first ten and last ten errors for the specified FPC.

(PTX3000 routers only)—Replace **slot-number** with an FPC slot number: **0, 2, 4, 6, 8, 10, 12, or 14**.

(PTX5000 routers only)—Replace **slot-number** with a value from **0** through **7**.

(TX Matrix Plus routers only)—Replace **fpc slot-number** with the following values depending on the LCC configuration:

- On a TX Matrix Plus router with the TXP-T1600 configuration, if you specify the number of a T1600 LCC by using the **lcc number** option (the recommended method), replace **fpc slot-number** with a value from **0** through **7**. Otherwise, use a value from **0** through **31**.
- On a TX Matrix Plus router with the TXP-T1600-3D, TXP-T4000-3D, or TXP-Mixed-LCC-3D configuration, if you specify the number of a T1600 or T4000 LCC by using the **lcc number** option (the recommended method), replace **fpc**

**slot-number** with a value from 0 through 7. Otherwise, use a value from 0 through 63.

- **lcc number**—Show error log of the first ten and last ten errors for the specified FPC on a specific network device (line-card chassis) that is part of the routing matrix.

Replace **lcc number** with the following values depending on the LCC configuration:

- 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.
- 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.
- 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.
- 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.

If you specify the number of the network device by using only the **lcc number** option (the recommended method), replace **slot-number** with a value from 0 through 7. Otherwise, replace **slot-number** with a value from 0 through 31. For example, the following commands have the same result:

```
user@host> show chassis fabric errors fpc 1 lcc 1
user@host> show chassis fabric errors fpc 9
```

**sib**—Show error log of the first ten and last ten errors for the specified SIB. This option has the following suboptions:

- (TX Matrix Plus routers only) **sib-slot**—Specify a value ranging from 0 through 4.
- (PTX3000 and PTX5000 routers) **sib-slot**—Specify a value ranging from 0 through 8.
- (TX Matrix Plus routers only) **f13 sib-slot**—(Optional) Show SIB F13 errors. Specify a valid SIB value number: 0, 1, 3, 4, 6, 7, 8, 9, 11, or 12.
- (TX Matrix Plus routers only) **f2s sib-slot/sib-f2s-slot-number**—(Optional) Show SIB F2S errors. Replace **sib-slot** with a value from 0 through 4, followed by a **sib-f2s-slot-number** value 0, 2, 4 or 6.
- (TX Matrix Plus routers only) **lcc number**—(Optional) Show error log of the first ten and last ten SIB errors for the specified network device (line-card chassis).

Replace **number** with the following values depending on the LCC configuration:

- 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.
- 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.

- 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.
- 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.

**NOTE:** The `lcc number` suboption is mandatory when using the following format for the command: `show chassis fabric errors sib lcc number sib slot-number`. For instance, issuing `show chassis fabric errors sib lcc 2 3` displays errors detected on LCC 2, SIB 3.

This suboption is not required when the `f13` or `f2s` suboptions are used with the `sib slot-number` option.

**Required Privilege Level** view

**List of Sample Output** [show chassis fabric errors \(F13 SIB Errors on a TX Matrix Plus Router\) on page 1409](#)  
[show chassis fabric errors \(F2S SIB Errors on a TX Matrix Plus Router\) on page 1409](#)  
[show chassis fabric errors \(SIB Errors Specific to an LCC Connected to a TX Matrix Plus Router\) on page 1409](#)  
[show chassis fabric errors \(FPC Errors Specific to an LCC Connected to a TX Matrix Plus Router\) on page 1410](#)  
[show chassis fabric errors \(SIB Errors Specific to an LCC Connected to a TX Matrix Plus Router with 3D SIBs\) on page 1410](#)  
[show chassis fabric errors fpc or sib \(PTX Series Packet Transport Routers\) on page 1410](#)  
[show chassis fabric errors autoheal \(PTX Series Packet Transport Routers\) on page 1410](#)  
[show chassis fabric errors autoheal \(TX Matrix Plus Router with 3D SIBs\) on page 1410](#)

**Output Fields** [Table 123 on page 1408](#) lists the output fields for the `show chassis fabric errors` command. Output fields are listed in the approximate order in which they appear.

*Table 123: show chassis fabric errors Output Fields*

Field Name	Field Description
Time	Time the error was logged.  (TX Matrix Plus routers and PTX Series Packet Transport Routers only) For the <code>autoheal</code> option, shows the timestamp when autoheal was attempted on a SIB that was in fault state.
Error log of first 10 errors	List of the first ten errors.
Error log of last 10 errors	List of the last ten errors.

Table 123: show chassis fabric errors Output Fields (continued)

Field Name	Field Description
<b>Error log of first 100 errors</b>	<p>Indicates the autoheal action taken on the SIB. The following actions can occur:</p> <ul style="list-style-type: none"> <li>• Req—A SIB autoheal request was made on a faulty SIB.</li> <li>• Action—Autohealing (taking the SIB offline and then online) is initiated.</li> <li>• Denied—Autohealing (taking the SIB offline and then online) is denied because the SIB went to a fault state before the autoheal configuration period completed.</li> <li>• Set info—Setting information to force skipping autoheal on the SIB so that no further attempts to autoheal the faulty SIB are made.</li> <li>• Clear info— if a user takes a SIB offline and then online, then the autoheal information of the SIB is cleared. If the SIB goes to a fault state, autoheal is attempted on the SIB.</li> <li>• (PTX3000 and PTX5000 routers only) Completed—Autohealing is completed. This message is displayed whether autohealing is succesful or not.</li> </ul>
<b>fpc slot number</b>	(PTX5000 Packet Transport Router only)—Range is 0 through 7.
<b>sib slot number</b>	(PTX Series Packet Transport Routers only)—Range is 0 through 8.
<b>lcc number</b>	Not supported on PTX Series Packet Transport Routers.

## Sample Output

### show chassis fabric errors (F13 SIB Errors on a TX Matrix Plus Router)

```
user@host> show chassis fabric errors sib f13 11
```

```
Time                               Error log of first 10 errors
2009-10-06 02:21:17 PDT           LOS on Cable-D(1,0)
```

### show chassis fabric errors (F2S SIB Errors on a TX Matrix Plus Router)

```
user@host> show chassis fabric errors sib f2s 0/0
```

```
Time                               Error log of first 10 errors
2009-10-06 13:51:42 PDT           Cell drop errors on CLOS F2 SF 0 Port 0 link
```

### show chassis fabric errors (SIB Errors Specific to an LCC Connected to a TX Matrix Plus Router)

```
user@host> show chassis fabric errors sib 1 lcc 0
```

```
lcc0-re0:
```

Time	Error log of first 10 errors
2009-10-06 02:23:16 PDT	Cell drop errors on FPC7_T link
2009-10-06 02:23:16 PDT	Cell drop errors on FPC7_B link

### show chassis fabric errors (FPC Errors Specific to an LCC Connected to a TX Matrix Plus Router)

```
user@host> show chassis fabric errors fpc 5 lcc 0
```

lcc0-re0:

---

Time	Error log of first 10 errors
2009-10-06 13:56:59 PDT	PFE_T has link error on plane 1

### show chassis fabric errors (SIB Errors Specific to an LCC Connected to a TX Matrix Plus Router with 3D SIBs)

```
user@host> show chassis fabric errors sib 1 lcc 0
```

lcc0-re0:

---

Time	Error log of first 10 errors
2013-02-11 04:46:42 PST	CRC errors on XC link SIB01_XF3#11,0

### show chassis fabric errors fpc or sib (PTX Series Packet Transport Routers)

```
user@host> show chassis fabric errors fpc 1
```

Time	Error log of first 10 errors
2012-01-06 16:27:03 PST	Link errs on PFE 2, SIB 0, Plane 0

```
user@host> show chassis fabric errors sib 1
```

Time	Error log of first 10 errors
2015-01-16 15:34:33 PST	Link errs on PFE 0, FPC 0, Plane 2
2015-01-16 15:44:33 PST	CM set ASIC 1 to FAULT (Fault due to PIO errors)

### show chassis fabric errors autoheal (PTX Series Packet Transport Routers)

```
user@host> show chassis fabric errors autoheal
```

Mar 30 01:43:00

Time	Error log of first 100 errors
2016-03-29 23:46:23 PDT	Req: sib 0
2016-03-29 23:46:23 PDT	Action: SIB 0 (autohealing)
2016-03-29 23:54:52 PDT	Completed: SIB 0 (autoheal)

### show chassis fabric errors autoheal (TX Matrix Plus Router with 3D SIBs)

```
user@host> show chassis fabric errors autoheal
```

Time	Error log of first 100 errors
2013-03-25 00:16:10 PDT	Req: Plane 3 F13 8 Cb1 4 (tx) LCC0-SIB3 Cb1 4 (rx)
2013-03-25 00:16:12 PDT	Action: Plane 3 F13 8 Cb1 4 (autohealing)

```
2013-03-25 00:17:24 PDT Req: Plane 3 F13 8 Cbl 4 (tx) LCC0-SIB3 Cbl 4 (rx)

<b>Release Information</b>	<p>Command introduced before Junos OS Release 7.4.</p> <p>Command introduced in Junos OS Release 9.4 for EX Series switches.</p> <p>Command introduced in Junos OS Release 12.1x48 for PTX Series Packet Transport Routers.</p> <p>Command introduced in Junos OS Release 12.3 for MX2020 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 12.3 for MX2010 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 15.1X53-D30 for QFX Series switches.</p> <p><b>extended</b> option introduced in JunosOS Release 16.1 for MX2020 and MX2010 Routers.</p> <p>Command introduced in Junos OS Release 17.2 for MX2008 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 17.2 for PTX10008 Routers.</p> <p>Command introduced in Junos OS Release 17.3 for MX10003 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 18.2 for EX9253 Switches.</p>
<b>Description</b>	Display the state of the electrical switch fabric links between the Flexible PIC Concentrators (FPCs) and the Switch Interface Boards (SIBs).
<b>Options</b>	<p><b>none</b>—Display the switch fabric link state. On a TX Matrix router, display the switching fabric link states for the FPCs in all T640 routers connected to the TX Matrix router. On a TX Matrix Plus router, display the switching fabric link states for the FPCs in all routers connected to the TX Matrix Plus router.</p> <p><b>extended</b>—(MX2020 and MX2010 Routers with SFB2) (Optional) Display the fabric link state for all 24 fabric planes.</p> <p><b>all-members</b>—(MX Series routers only) (Optional) Display the switching fabric link states for the FPCs in all members of the Virtual Chassis configuration.</p> <p><b>lcc number</b>—(TX Matrix router and TX Matrix Plus router only) (Optional) On a TX Matrix router, display the switch fabric link state for the FPCs in the specified T640 router (line-card chassis) that is connected to the TX Matrix router. On a TX Matrix Plus router, display the switch fabric link state for the FPCs in the specified router (line-card chassis) that is connected to the TX Matrix Plus router. Replace <b>number</b> with a following value depending on the LCC configurations:</p> <ul style="list-style-type: none"> <li>• From <b>0</b> through <b>3</b> on a T640 router on the routing matrix with TX Matirx routers.</li> <li>• From <b>0</b> through <b>3</b> on a T1600 router on the routing matrix with TX Matirx Plus routers.</li> <li>• From <b>0</b> through <b>7</b> on a T1600 router in a routing matrix with TX Matrix Plus router with 3D SIBs.</li> <li>• <b>0, 2, 4, 6</b> on a T4000 router in a routing matrix with TX Matrix Plus router with 3D SIBs.</li> </ul> <p><b>local</b>—(MX Series routers only) (Optional) Display the switching fabric link states for the FPCs in the local Virtual Chassis member.</p>

**member *member-id***—(MX Series routers only) (Optional) Display the switching fabric link states for the FPCs in the specified member of the Virtual Chassis configuration. Replace *member-id* with a value of 0 or 1.

**slot *fpc-slot***—(PTX Series Packet Transport Routers and QFX Series switches only) (Optional) Display the fabric state of the specified FPC slot. If no value is provided, display the status of all FPCs.

**Output Fields** Table 124 on page 1415 lists the output fields for the **show chassis fabric fpcs** command. Output fields are listed in the approximate order in which they appear.

*Table 124: show chassis fabric fpcs Output Fields*

Field Name	Field Description
<b>Fabric management FPC state</b>	<p>Switching fabric link (link from SIB to FPC) state for each FPC:</p> <ul style="list-style-type: none"> <li>• <b>Unused</b>—FPC is not present. (On MX240 and MX480 routers with AS- MLC modular carrier card or MPC4E only) the fabric plane from the pair that share physical links (1 and 5, and 3 and 7) is inactive.</li> <li>• <b>Destination error on PFEs list of PFE numbers</b>—Destination errors to the listed Packet Forwarding Engines. Indicates that the link is not carrying traffic to the listed Packet Forwarding Engines.  <b>NOTE:</b> In Junos OS Release 9.6 and later, the list of Packet Forwarding Engines with destination errors is displayed in the output.  In Junos OS Releases before 9.6, the output only indicates that there are destination errors. However, the list of Packet Forwarding Engines with destination errors is not displayed.</li> <li>• <b>Links ok</b>—Link between the spare SIB and FPC is eligible to carry traffic.</li> <li>• <b>Link error</b>—Link between the SIB and FPC has CRC errors. However, the link is still eligible to carry traffic.</li> <li>• <b>Plane disabled</b>—Fabric plane has been disabled for the following reasons: <ul style="list-style-type: none"> <li>• Destination errors have exceeded the thresholds.</li> <li>• Run-time link errors have exceeded the thresholds.</li> <li>• Initialization time link errors detected, and link training was unsuccessful.</li> <li>• <b>Plane Disabled, Links Error</b> (PTX Series Packet Transport Routers and QFX Series switches only)—The plane is disabled because of link errors detected at the FPC RX.</li> </ul> </li> <li>• <b>Plane Disabled, Links Down</b> (PTX Series Packet Transport Routers and QFX Series switches only)—The plane is disabled because of link errors detected at the SIB RX.</li> <li>• <b>Plane enabled</b>—Link between the active SIB and FPC is eligible to carry traffic.  <b>NOTE:</b> On the Enhanced MX SCB with MPC, a maximum of 4 planes are operational and running. On all the other SCBs with MPC, all the planes are operational and running.</li> <li>• <b>Plane Enabled, Links OK</b> (PTX Series Packet Transport Routers and QFX Series switches only)—The FPC CCL RX link is eligible to carry traffic.</li> <li>• <b>Plane Enabled, Links OK</b> (TX Matrix and TX Matrix Plus routers only)—The FPC HSL RX link is eligible to carry traffic.</li> </ul>

## Sample Output

## show chassis fabric map

**List of Syntax**    [Syntax on page 1469](#)  
[Syntax \(MX Series Router\) on page 1469](#)

**Syntax**    show chassis fabric map  
 plane <plane-number>

**Syntax (MX Series Router)**    show chassis fabric map  
 <all-members>  
 <local>  
 <member *member-id*>  
 <plane *plane-number*>

**Release Information**    Command introduced in Junos OS Release 8.0.  
 Command introduced in Junos OS Release 9.4 for EX Series switches.

**Description**    (M120 and MX Series routers and EX8200 switches only) On the M120 router, display the state of the switching fabric map for connections from the Forwarding Engine Boards (FEBs) to the ports on the fabric planes, as interpreted by the fabric plane. On the MX Series router and the EX8200 switch, display the state of the switching fabric map for connections from each Packet Forwarding Engine on the Dense Port Concentrators (DPCs) to the ports on the fabric planes, as interpreted by the fabric plane. For information about the meaning of “fabric plane”, “DPCs”, and “SIBs” on the switches, see the hardware documentation for your switch.

**Options**    **none**—Display the switching fabric map state for the M120 or MX Series router or EX8200 switch.

**all-members**—(MX Series routers only) (Optional) Display the switching fabric map state for all the members of the Virtual Chassis configuration.

**local**—(MX Series routers only) (Optional) Display the switching fabric map state for the local Virtual Chassis member.

**member *member-id***—(MX Series routers only) (Optional) Display the switching fabric map state for the specified member of the Virtual Chassis configuration. Replace the *member-id* with a value of 0 or 1.

**plane *plane-number***—(Optional) Display the state of the fabric link for the specified plane number.

- For the M120 router, replace *plane-number* with a value from 0 through 3.
- For the MX480 and MX240 routers, replace *plane-number* with a value from 0 through 7.
- For the MX960 router, replace *plane-number* with a value from 0 through 5.

- For the EX8208 switch, replace *plane-number* with a value from 0 through 11.
- For the EX8216 switch, replace *plane-number* with a value from 0 through 7.

**Required Privilege Level** view

**List of Sample Output** [show chassis fabric map \(M120 Router\) on page 1470](#)  
[show chassis fabric map \(MX Series Routers\) on page 1471](#)  
[show chassis fabric map plane 1 \(EX8200 Switch\) on page 1474](#)

**Output Fields** [Table 125 on page 1470](#) lists the output fields for the **show chassis fabric map** command. Output fields are listed in the approximate order in which they appear.

*Table 125: show chassis fabric map Output Fields*

Field Name	Field Description
in-links	Fabric map for receive side links.
out-links	Fabric map for transmit side links.
state	<p>State of the fabric link:</p> <ul style="list-style-type: none"> <li>• <b>RESET</b>—Link between SIB and FPC/DPC is powered down on purpose. This is done in all non-dual PFE based boards.</li> <li>• <b>UP</b>—Link between SIB and FPC/DPC is up and running.</li> <li>• <b>DOWN</b>—Link between SIB and FPC/DPC is powered down.</li> <li>• <b>FAULT</b>—SIB is in alarmed state where the SIB's plane is not operational for the following reasons: <ul style="list-style-type: none"> <li>• On-board F-chip is not operational.</li> <li>• Fiber optic connector faults.</li> <li>• FPC connector faults.</li> <li>• SIB midplane connector faults.</li> </ul> </li> </ul>

## Sample Output

### show chassis fabric map (M120 Router)

```
user@host> show chassis fabric map

## show chassis fabric optics

<b>Syntax (TX Matrix Plus Router with 3D SIBs)</b>	<pre>show chassis fabric optics &lt;sib-slot&gt; &lt;lcc number   sfc number&gt; &lt;brief   detail&gt;</pre>
<b>Release Information</b>	Command introduced in Junos OS Release 13.1 for the TX Matrix Plus router with 3D SIBs.
<b>Description</b>	(TX Matrix Plus routers with 3D SIBs only) Display information about the optical ports on the TX Matrix Plus router (or the switch-fabric chassis (SFC)) and on the T1600 or T4000 line-card chassis (LCCs) connected to it in a routing matrix.
<b>Options</b>	<p><b>none</b>—Display brief information about the optical ports on the SFC and LCCs in the routing matrix.</p> <p><b>sib-number</b>—(Optional) Display information about the optical ports for the specified SIB number.</p> <p><b>lcc number</b>—(Optional) Display information about the optical ports for the specified T1600 or T4000 LCC that is connected to a TX Matrix Plus router with 3D SIBs. Replace <b>number</b> with the following values depending on the LCC configuration:</p> <ul style="list-style-type: none"> <li>From <b>0</b> through <b>7</b> on a T1600 router connected to a TX Matrix Plus router with 3D SIBs.</li> <li><b>0, 2, 4, or 6</b> on a T4000 router connected to a TX Matrix Plus router with 3D SIBs.</li> </ul> <p><b>sfc number</b>—(Optional) Display information about the optical ports for the specified SFC number. Replace <b>number</b> with <b>0</b>.</p> <p><b>brief</b>—(Optional) Display brief information about the optical ports.</p> <p><b>detail</b>—(Optional) Display detailed information about the optical ports.</p>
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li><i>Overview of a Routing Matrix with a TX Matrix Plus Router</i></li> </ul>
<b>List of Sample Output</b>	<a href="#">show chassis fabric optics (TX Matrix Plus Router with 3D SIBs) on page 1477</a> <a href="#">show chassis fabric optics (TX Matrix Plus Router with 3D SIBs) on page 1482</a> <a href="#">show chassis fabric optics sfc (TX Matrix Plus Router with 3D SIBs) on page 1483</a> <a href="#">show chassis fabric optics lcc (TX Matrix Plus Router with 3D SIBs) on page 1485</a>
<b>Output Fields</b>	Table 126 on page 1477 lists the output fields for the <b>show chassis fabric optics</b> command. Output fields are listed in the approximate order in which they appear.

Table 126: show chassis fabric optics Output Fields

Field Name	Field Description
<b>Port</b>	Indicates port number.
<b>Cable state</b>	<p>Indicates the cable state:</p> <ul style="list-style-type: none"> <li>• <b>CABLE_CONNECTED</b>—Cable is connected properly and is in an operable state.</li> <li>• <b>CABLE_LOOPBACK</b>—A loopback cable is connected to the port.</li> <li>• <b>CABLE_NOT_CONNECTED</b>—The optical port is not connected with any cable or all the channels are powered off on the remote side.</li> <li>• <b>CABLE_MIS_CONNECTED</b>—Cable is connected to an incorrect optical port.</li> <li>• <b>CABLE_CONNECTED_WITH_ERROR</b>—Cable is connected to the optical port, but indicates a cable issue. Refer to the optical cable fault alarms to identify the cable issue.</li> <li>• <b>CABLE_NOT_SUPPORTED</b>—The connected optics module is not supported. Only optics modules having Juniper Networks part numbers are supported.</li> <li>• <b>CABLE_MODULE_ABSENT</b>—No optics module is connected.</li> <li>• <b>CABLE_MODULE_FAULT</b>—The connected optics module has an irrecoverable fault. The optics module must be replaced for the device to recover from this error. This state can be caused by a device failure during initialization, a device crossing the high-temperature threshold, or a voltage failure on the optics module during normal operation.</li> <li>• <b>CABLE_ELEC_LOOPBACK</b>—An electrical loopback module is connected to the optics port.</li> </ul> <p><b>NOTE:</b> Only electrical loopback modules from ELPEUS are supported.</p> <ul style="list-style-type: none"> <li>• <b>CABLE_ERROR</b>—Cable cannot be detected, probably because the SIB is not online yet.</li> </ul>
<b>Module Type</b>	Indicates module type.

<b>Release Information</b>	<p>Command introduced in Junos OS Release 8.0.</p> <p>Command introduced in Junos OS Release 9.4 for EX Series switches.</p> <p>detail, extensive, lcc, sfc, and terse options introduced for the TX Matrix Plus router in Junos OS Release 9.6.</p> <p>Command introduced in Junos OS Release 12.3 for MX2020 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 12.3 for MX2010 Universal Routing Platforms.</p> <p><b>extended</b> option introduced in Junos OS Release 16.1 for MX2020 and MX2010 Routers.</p> <p>Command introduced in Junos OS Release 17.2 for MX2008 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 17.3 for MX10003 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 18.2 for MX10008 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 18.2 for EX9253 Switches.</p>
<b>Description</b>	<p>(TX Matrix Plus router, T4000, T1600, M120, and MX Series routers and EX8200 switches only) On the M120 router, display the state of all fabric plane connections to the Forwarding Engine Boards (FEBs). On MX Series routers, display the state of all fabric plane connections to the Dense Port Concentrators (DPCs) and Packet Forwarding</p>

Engines (PFEs) on the Flexible PIC Concentrators (FPCs). On the TX Matrix Plus router, and on T1600 or T4000 routers in a routing matrix, display the state of the fabric management plane and the logical planes on the switch-fabric chassis (SFC) and line-card chassis (LCC). On EX8200 switches, display the state of all fabric planes. This command can be used on the master Routing Engine only.

**Options**    **none**—(MX2010, MX2020, and MX2008 Routers only) (Optional) Display the state of the fabric management plane.

**extended**—(MX2020, MX2010, and MX2008 Routers only) (Optional) Display the state of the fabric management planes (all 24 fabric planes).

**detail**—(TX Matrix Plus routers, T1600 or T4000 routers in a routing matrix, and MX Series routers only) (Optional) Display detailed output for the fabric management plane. Show Switch Interface Board (SIB) states for the TXP-F13 SIB and the TXP-F2S SIB.

**extensive**—(TX Matrix Plus routers, T1600 or T4000 routers in a routing matrix, and MX Series routers only) (Optional) Display extensive output for the fabric management plane.

**terse**—(TX Matrix Plus routers and MX Series routers only) (Optional) Display terse output for the fabric management plane.

**all-members**—(MX Series routers only) (Optional) Display the state of all fabric plane connections on all members of the Virtual Chassis configuration.

**lcc *number***—(TX Matrix routers and TX Matrix Plus routers only) (Optional) Line-card chassis number.

Replace *number* with the following values depending on the LCC configuration:

- 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.
- 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.
- 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.
- 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.

**local**—(MX Series routers only) (Optional) Display the state of all fabric plane connections on the local Virtual Chassis member.

**member *member-id***—(MX Series routers only) (Optional) Display the state of all fabric plane connections on the specified member of the Virtual Chassis configuration. Replace *member-id* with a value of 0 or 1.

**sfc number**—(TX Matrix Plus router only) (Optional) Show information about the TX Matrix Plus router (SFC). Replace *number* with 0.

**Output Fields** [Table 127 on page 1490](#) lists the output fields for the **show chassis fabric plane** command. Output fields are listed in the approximate order in which they appear.

Table 127: show chassis fabric plane Output Fields

Field Name	Field Description	Level of output
Plane	(TX Matrix Plus, MX Series routers, M120 routers, and EX8200 switches only) Number of the plane.	none
Plane state	<p>(MX Series and M120 routers and EX8200 switches only) State of each plane:</p> <ul style="list-style-type: none"> <li>ACTIVE—SIB is operational and running.</li> </ul> <p><b>NOTE:</b> On the Enhanced MX SCB with MPCs, a maximum of 4 planes are operational and running. On all the other SCBs with MPCs, all the planes are operational and running.</p> <ul style="list-style-type: none"> <li>FAULTY— SIB is in alarmed state where the SIB's plane is not operational for the following reasons: <ul style="list-style-type: none"> <li>On-board fabric ASIC is not operational.</li> <li>Fiber optic connector faults.</li> <li>FPC connector faults.</li> <li>SIB midplane connector faults.</li> </ul> </li> </ul> <p>(MX2010, MX2020, MX10003, and MX2008 Routers only) State of each plane:</p> <ul style="list-style-type: none"> <li>ACTIVE—SFB is operational and running.</li> <li>OFFLINE— SFB is in offline.</li> </ul>	none
FEB	<p>(M120 routers only) FEB number and state of links to each FEB:</p> <ul style="list-style-type: none"> <li>Link error—Link between SIB and FPC is not operational.</li> <li>Links ok—Link between SIB and FPC is active.</li> <li>Unused—No FPC is present.</li> </ul>	none
FPC	(MX Series routers only) Slot number of each Dense Port Concentrator (DPC) or Flexible PIC Concentrator (FPC). An FPC occupies two DPC slots on an MX Series router. The interface corresponds to the lowest numbered DPC slot for which the FPC is installed.	none

Table 127: show chassis fabric plane Output Fields (continued)

Field Name	Field Description	Level of output
PFE	<p>(MX Series and M120 routers only) Slot number of each Packet Forwarding Engine and the state of the links to the DCP: <b>Links ok</b>, <b>Link error</b>, or <b>Unused</b>. Each DPC includes four Packet Forwarding Engines.</p> <ul style="list-style-type: none"> <li>• <b>Links ok</b>: Link between SIB and FPC is active.</li> <li>• <b>Link error</b>: Link between SIB and FPC is not operational.</li> <li>• <b>Unused</b>: No FPC is present.</li> </ul> <p>(On MX240 and MX480 routers with AS MLC modular carrier card and MPC4E only) Indicates that the link between the fabric plane and the hardware link on the modular carrier card or MPC4E is not operational.</p> <p>(MX2010, MX2020, and MX2008 routers only) Slot number of each Packet Forwarding Engine and the state of the links to the DPC: <b>Links ok</b>, <b>Link error</b>, or <b>Unused</b>. Each DPC includes four Packet Forwarding Engines.</p> <ul style="list-style-type: none"> <li>• <b>Links ok</b>: Link between SFB and FPC is active.</li> <li>• <b>Link error</b>: Link between SFB and FPC is not operational.</li> <li>• <b>Unused</b>: No FPC is present.</li> </ul>	none
State	<p>(TX Matrix Plus, and T1600 or T4000 routers in a routing matrix only)—State of the fabric plane:</p> <ul style="list-style-type: none"> <li>• <b>Online</b>: Fabric plane is operational and running and links on the SIB are operational.</li> <li>• <b>Offline</b>: Fabric plane state is <b>Offline</b> because the plane does not have four or more F2S and one F13 online.</li> <li>• <b>Empty</b>: Fabric plane state is <b>Empty</b> if all SIBs in the plane are absent.</li> <li>• <b>Spare</b>: Fabric plane is redundant and can be operational if the operational fabric plane encounters an error.</li> <li>• <b>Check</b>: Fabric plane is in alarmed state due to the following reason and the cause of the error must be resolved: <ul style="list-style-type: none"> <li>• One or more SIBs (belonging to the fabric plane) in the <b>Online</b> or <b>Spare</b> states has transitioned to the <b>Check</b> state. <b>Check</b> state of the SIB can be caused by link errors or destination errors.</li> </ul> </li> <li>• <b>Fault</b>: Fabric plane is in alarmed state if one or more SIBs belonging to the plane are in the <b>Fault</b> state. A SIB can be in the <b>Fault</b> state because of the following reasons: <ul style="list-style-type: none"> <li>• On-board fabric ASIC is not operational.</li> <li>• Fiber optic connector faults.</li> <li>• FPC connector faults.</li> <li>• SIB midplane connector faults.</li> <li>• Link errors have exceeded the threshold.</li> </ul> </li> </ul>	none
Link Errors	<p>(TX Matrix Plus routers with 3D SIBs only) indicate the number of links which are marked faulty because the errors on them have crossed threshold.</p>	none

Table 127: show chassis fabric plane Output Fields (continued)

Field Name	Field Description	Level of output
<b>Cable Errors</b>	(TX Matrix Plus routers with 3D SIBs only) Indicate the number of mandatory cables that are not connected, or in up state for that plane	none
<b>Destination Errors</b>	(TX Matrix Plus routers with 3D SIBs only) Indicates the number of destinations that are not reachable on this plane.	none
<b>Uptime</b>	(TX Matrix Plus, and T1600 or T4000 routers in a routing matrix only)—Time the fabric plane has been up and running.	none

#### Fabric Management Plane State Output Fields for the show chassis fabric plane extensive Command on a TX Matrix Plus Router

<b>PLANE <i>number</i></b>	<p>State of the fabric plane:</p> <ul style="list-style-type: none"> <li>• <b>Online:</b> Fabric plane is operational and running and links on the SIB are operational.</li> <li>• <b>Offline:</b> Fabric plane state is <b>Offline</b> because the plane does not have 4 or more F2S and 1 F13 online.</li> <li>• <b>Empty:</b> Fabric plane state is <b>Empty</b> if all SIBs in the plane are absent.</li> <li>• <b>Spare:</b> Fabric plane is redundant and can be operational if the operational fabric plane encounters an error.</li> <li>• <b>Check:</b> Fabric plane is in alarmed state due to the following reasons and the cause of the error must be resolved: <ul style="list-style-type: none"> <li>• One or more SIBs (belonging to the fabric plane) in the <b>Online</b> or <b>Spare</b> states has transitioned to the <b>Check</b> state. <b>Check</b> state of the SIB can be caused because of link errors or destination errors.</li> </ul> </li> <li>• <b>Fault:</b> Fabric plane is in alarmed state if one or more SIBs belonging to the plane are in the <b>Fault</b> state. A SIB can be in the <b>Fault</b> state because of the following reasons: <ul style="list-style-type: none"> <li>• On-board fabric ASIC is not operational.</li> <li>• Fiber optic connector faults.</li> <li>• FPC connector faults.</li> <li>• SIB midplane connector faults.</li> <li>• Link errors have exceeded the threshold.</li> </ul> </li> </ul>	<b>extensive</b>
----------------------------	---	------------------

Table 127: show chassis fabric plane Output Fields (continued)

Field Name	Field Description	Level of output
<b>SIB F13/F2S slot-number</b>	<p>State of the TXP-F13 SIB or TXP-F2S SIB:</p> <ul style="list-style-type: none"> <li>• <b>Activating</b>—Transitional state when the SIB is transitioning to the <b>Online</b> or <b>Spare</b> state.</li> <li>• <b>Deactivating</b>—Transitional state when the SIB is going offline.</li> <li>• <b>Online</b>—SIB is operational and running.</li> <li>• <b>Offline</b>—SIB is powered down.</li> <li>• <b>Spare</b>—SIB is redundant and will move to active state if one of the working SIBs fails to pass traffic.</li> <li>• <b>Empty</b>—No SIB is present.</li> <li>• <b>Fault</b>—SIB is in alarmed state because of the following reasons and the cause of the error must be resolved: <ul style="list-style-type: none"> <li>• On-board fabric ASIC is not operational.</li> <li>• Fiber optic connector faults.</li> <li>• FPC connector faults.</li> <li>• SIB midplane connector faults.</li> <li>• Link errors have exceeded the threshold</li> </ul> </li> <li>• <b>Check</b>—SIB is in alarmed state where the SIB is partially operational because of link or destination errors. Only a SIB that is <b>Online</b> or <b>Spare</b> can transition to the <b>Check</b> state.</li> </ul> <p><b>NOTE:</b> If a SIB is not inserted properly, the SIB cannot transition to the <b>Online</b> or <b>Spare</b> state, and therefore cannot transition to the <b>Check</b> state.</p>	<b>extensive</b>
<b>SIB F13 slot-number Odd/Even</b>	<p>State of the TXP-F13 SIB even and odd port connection optical links from the TX Matrix Plus router (SFC) to the router (LCC) in the routing matrix. The left four ports on the SFC are labeled <b>Even</b> and provide connections to one even-numbered LCC—LCC0 or LCC2. The right four ports on the SFC are labeled <b>Odd</b> and provide connections to one odd-numbered LCC—LCC1 or LCC3.</p>	<b>extensive</b>
<b>LCC number, SIB slot-number</b>	<p>State of the SIB on the LCC that is connected to the <b>Even</b> or <b>Odd</b> port on the TXP-F13 SIB faceplate:</p> <ul style="list-style-type: none"> <li>• <b>Links ok</b>—Links between the TXP-F13 SIB on the SFC and the LCC are active.</li> <li>• <b>Links error</b>—One or more links between the TXP-F13 SIB on the SFC and the LCC, have experienced an error, but the affected links remain operational.</li> <li>• <b>Unused</b>—No SIB is present.</li> </ul>	<b>extensive</b>

Table 127: show chassis fabric plane Output Fields (continued)

Field Name	Field Description	Level of output
<b>SG number Port number</b>	State of the SG chip ports on the LCC: <ul style="list-style-type: none"> <li>• <b>Links ok</b>—Link is active.</li> <li>• <b>Link error</b>—Link is operational with errors.</li> <li>• <b>Link error crc saturated</b>—CRC has exceeded the rate threshold and reached saturation without optical issues—that is, a cable has not been cut, removed, or otherwise experienced an error.</li> <li>• <b>Link error crc saturated with optical errors</b>—CRC has exceeded the rate threshold and reached saturation with optical issues—that is, a cable has been cut, removed, or otherwise experienced an error.</li> <li>• <b>Unused</b>—Port is not in use.</li> </ul>	<b>extensive</b>
<b>SIB F2S slot-number</b>	State of the intra-chassis links between the TXP-F2S and TXP-F13 SIBs.	<b>extensive</b>

Fabric Management SIB State Output Fields for the show chassis fabric plane extensive Command on a TX Matrix Plus Router

Table 127: show chassis fabric plane Output Fields (continued)

Field Name	Field Description	Level of output
<b>SIB slot-number</b>	<p>State of the SIBs on the T1600/T4000 router (LCC) in the routing matrix:</p> <ul style="list-style-type: none"> <li>• <b>Activating</b>—Transitional state when the SIB is coming online.</li> <li>• <b>Deactivating</b>—Transitional state when the SIB is going offline.</li> <li>• <b>Connected</b>—SIBs on an LCC are connected and trained, but are either not online or are spare, because the plane on the the TX Matrix Plus router (SFC) is still offline. The LCC SIB transitions to the <b>Connected</b> state when the F13 SIB to which it connects is online but the SFC plane (to which the LCC SIB connects) is offline for some reason; for instance, when there are insufficient number of F2 SIBs in the plane.</li> <li>• <b>Disconnected</b>—If an F13 SIB on the TX Matrix Plus router (SFC) goes offline, then the SIBs on the LCCs connected to the F13 SIB get disconnected. On the TX Matrix Plus router with 3D SIBs, the LCC SIB is also disconnected if the F13 SIB is online, but none of the cables are connected or trained. The <b>Disconnected</b> state is valid only for SIBs on an LCC. An LCC SIB transitions to the <b>Disconnected</b> state when the F13 SIB to which it connects goes <b>Offline</b>, irrespective of the state of the SFC plane. <b>SFC Error</b>—If an F13 SIB on the TX Matrix Plus router (SFC) transitions to the <b>Fault</b> state (because of link errors, for instance), and if an LCC SIB connected to the F13 SIB comes online, the LCC SIB transitions to the <b>SFC Error</b> state. This state indicates that the F13 SIB to which the LCC SIB is connected has errors. <b>NOTE:</b> The <b>Connected</b>, <b>Disconnected</b>, and <b>SFC Error</b> states are applicable only to the SIBs on an LCC.</li> <li>• <b>Online</b>—SIB is operational and running.</li> <li>• <b>Offline</b>—SIB is powered down.</li> <li>• <b>Spare</b>—SIB is redundant and will move to active state if one of the working SIBs fails to pass traffic.</li> <li>• <b>Empty</b>—No SIB is present.</li> <li>• <b>Fault</b>—SIB is in alarmed state where the SIB's plane is not operational for the following reasons: <ul style="list-style-type: none"> <li>• On-board fabric ASIC is not operational.</li> <li>• Fiber optic connector faults.</li> <li>• FPC connector faults.</li> <li>• SIB midplane connector faults.</li> <li>• Link errors have exceeded the threshold</li> </ul> </li> <li>• <b>Check</b>—SIB is in alarmed state where the SIB is partially operational because of link or destination errors. Only a SIB that is <b>Online</b> or <b>Spare</b> can transition to the <b>Check</b> state. <b>NOTE:</b> If a SIB is not inserted properly, the SIB cannot transition to the <b>Online</b> or <b>Spare</b> state, and therefore cannot transition to the <b>Check</b> state.</li> </ul>	<b>extensive</b>

Table 127: show chassis fabric plane Output Fields (continued)

Field Name	Field Description	Level of output
<b>LCC SIB Link State</b>	State of the LCC SIB link: <ul style="list-style-type: none"> <li>• <b>Links ok</b>—Link is active.</li> <li>• <b>Links error</b>—A link error has occurred, but the link remains operational.</li> <li>• <b>Unused</b>—SIB is not in use.</li> </ul>	<b>extensive</b>
<b>SG number Port number</b>	State of the SG chip ports on the LCC: <ul style="list-style-type: none"> <li>• <b>Links ok</b>—Link is active.</li> <li>• <b>Link error</b>—Link is operational with errors.</li> <li>• <b>Link error crc saturated</b>—CRC has exceeded the rate threshold and reached saturation without optical issues—that is, a cable has not been cut, removed, or otherwise experienced an error.</li> <li>• <b>Link error crc saturated with optical errors</b>—CRC has exceeded the rate threshold and reached saturation with optical issues—that is, a cable has been cut, removed, or otherwise experienced an error.</li> <li>• <b>Unused</b>—Port is not in use.</li> </ul>	<b>extensive</b>

<b>Release Information</b>	<p>Command introduced in Junos OS Release 8.0.</p> <p>Command introduced in Junos OS Release 9.4 for EX Series switches.</p> <p>Command introduced in Junos OS Release 12.1x48 for PTX Series Packet Transport Routers.</p> <p>Command introduced in Junos OS Release 12.3 for MX2020 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 12.3 for MX2010 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 15.1X53-D30 for QFX Series switches.</p> <p><b>extended</b> option introduced in Junos OS Release 16.1R1 for MX2020 and MX2010 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 17.2 for MX2008 Universal Routing Platforms.</p>
----------------------------	--

Command introduced in Junos OS Release 17.2 for PTX10008 Routers.

Command introduced in Junos OS Release 17.3 for MX10003 Universal Routing Platforms.

Command introduced in Junos OS Release 18.2 for MX10008 Universal Routing Platforms.

Command introduced in Junos OS Release 18.2 for EX9253 Switches.

**Description** (M120, MX Series routers, and EX8200 switches only) Display the Control Board (CB) location of each plane. This command can be used on the master Routing Engine or the backup Routing Engine. For information about the meaning of “CBs” and “fabric plane” on the switches, see the hardware documentation for your switch.

(TX Matrix Plus routers only) Display the SIB location of each fabric plane.

(PTX Series Packet Transport Routers and QFX Series switches only) Display the fabric plane location of each SIB.

(MX2010, MX2020, and MX2008 Routers only) Display the fabric plane location of each Switch Fabric Board (SFB).

**Options** **all-members**—(MX Series routers only) (Optional) Display the CB location of each fabric plane on the Routing Engines in all member routers in the Virtual Chassis configuration.

**local**—(MX Series routers only) (Optional) Display the CB location of each fabric plane on the Routing Engines in the local Virtual Chassis member.

**member *member-id***—(MX Series routers only) (Optional) Display the CB location of each fabric plane on the Routing Engines in the specified member in the Virtual Chassis configuration. Replace *member-id* with a value of 0 or 1.

**extended**—(MX2020, MX2010, and MX2008 routers only) (Optional) Display the fabric plane location of all 3 planes of each Switch Fabric Board (SFB) or enhanced Switch Fabric Board (SFB2).

**Required Privilege Level** view

**Output Fields** Table 128 on page 1544 lists the output fields for the **show chassis fabric plane-location** command. Output fields are listed in the approximate order in which they appear.

*Table 128: show chassis fabric plane-location Output Fields*

Field Name	Field Description
Plane <i>n</i>	Plane number.  (PTX Series Packet Transport Routers and QFX Series switches) Plane numbers associated with the SIB.  (MX2010, MX2020, and MX2008 Routers only) Plane numbers associated with the SFB.
Control Board <i>n</i>	Control board number.
SFC ABS-SIB-F13	(TX Matrix Plus routers only) Switch Interface Board (SIB) slot number on the F13 SIB.
SFC ABS-SIB-F2S	(TX Matrix Plus routers only) SIB slot number on the F2S SIB.
LCC ST-SIB-L	(TX Matrix Plus routers only) Line-card chassis (LCC) SIB slot number.
SFC SIB F13	(TX Matrix Plus routers with 3D SIBs only) Switch Interface Board (SIB) slot number on the F13 SIB.
SFC SIB F2S	(TX Matrix Plus routers with 3D SIBs only) SIB slot number on the F2S SIB.
LCC SIB	(TX Matrix Plus routers with 3D SIBs only) Line-card chassis (LCC) SIB slot number.
SIB	(PTX Series Packet Transport Routers and QFX Series switches) SIB number.
Switch Fabric Board <i>n</i>	(MX2010, MX2020, and MX2008 Routers only) SFB number.

## Sample Output

### [show chassis fabric plane-location \(M120 Router\)](#)

```

user@host> show chassis fabric plane-location
-----Fabric Plane Locations-----
Plane 0          Control Board 0
Plane 1          Control Board 0
Plane 2          Control Board 1
Plane 3          Control Board 1

```

**show chassis fabric plane-location (MX240 and MX480 Routers)**

```
user@host> show chassis fabric plane-location

## show chassis fabric redundancy-mode

<b>Syntax</b>	show chassis fabric redundancy-mode
<b>Release Information</b>	Command introduced in Junos OS Release 12.2.
<b>Description</b>	(MX240, MX480, and MX960 routers only) Display whether redundancy mode is configured for active control boards to enable increased fabric bandwidth usage.
<b>Options</b>	This command has no options.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Detection and Corrective Actions of Line Cards with Degraded Fabric on MX Series Routers on page 140</a></li> <li>• <a href="#">Detection and Recovery of Fabric-Related Failures Caused by Loss of Connectivity on MX Series Routers on page 135</a></li> <li>• <a href="#">MX Series Routers Fabric Resiliency on page 138</a></li> <li>• <a href="#">redundancy-mode on page 761</a></li> <li>• <a href="#">Configuring Redundancy Fabric Mode for Active Control Boards on MX Series Routers on page 145</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">show chassis fabric redundancy-mode on page 1553</a>
<b>Output Fields</b>	<a href="#">Table 129 on page 1553</a> lists the output fields for the <b>show chassis fabric redundancy-mode</b> command. Output fields are listed in the approximate order in which they appear.

*Table 129: show chassis fabric redundancy mode Output Fields*

Field name	Field Description
Fabric redundancy mode	Currently configured mode of the fabric

## Sample Output

### show chassis fabric redundancy-mode

```
user@host> show chassis fabric redundancy-mode
Fabric redundancy mode: Redundant Fabric
```

## show chassis fabric reachability

---

<b>Syntax</b>	<b>show chassis fabric reachability</b> <detail> <extended>
<b>Release Information</b>	<p>Command introduced before Junos OS Release 11.4.</p> <p>Command introduced in Junos OS Release 12.1 for MX240, MX480, and MX960 routers.</p> <p>Command introduced in Junos OS Release 18.2 for MX10008 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 12.1X48R4 for PTX Series Packet Transport Switches.</p> <p>Command introduced in Junos OS Release 13.1R3 for TX Matrix routers.</p> <p><b>extended</b> option introduced in Junos OS Release 16.1R1 for MX2010 and MX2020 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 17.2 for PTX10008 Routers.</p>
<b>Description</b>	(M320, MX240, MX480, MX960, and T Series routers only) Display the current state of fabric destination reachability. Additionally, display the details of the automated actions taken by the system to stop blackholing and attempt healing, and the final resolution of the actions.
<b>Options</b>	<p><b>none</b>—Display the state of fabric destination reachability for M320, MX240, MX480, MX960, T640, T1600, and TX Matrix routers, based on periodic reachability checks. Display the system's action phase sequences to stop the black hole and attempt healing, and the final resolution.</p> <p><b>detail</b>—(Optional) Display the details of the actions carried out by the system in the different action phases and the final resolution.</p> <p><b>extended</b>—(MX2020 and MX2010 Routers only) (Optional) Display the state of fabric destination reachability for MX2010 and MX2020 routers.</p>
<b>Required Privilege Level</b>	view

**Output Fields** The table lists the output fields for the **show chassis fabric reachability** command. Output fields are listed in the approximate order in which they appear.

*Table 130: show chassis fabric reachability Output Fields*

Field Name	Field Description	Level of Output
Fabric reachability status	Display the reachability status of the fabric. <ul style="list-style-type: none"> <li>• <b>Enabled destinations transitioned to unreachable, Fabric down action in progress</b>—Some enabled destinations that were originally reachable have become unreachable. The system is trying to stop the fabric down condition and attempt healing.</li> <li>• <b>Enabled destinations reachable</b>—The enabled destinations are reachable.</li> <li>• <b>Unreachable destinations healed</b>—The unreachable destinations are healed and are reachable.</li> <li>• <b>Unreachable destinations removed</b>—The unreachable destinations are removed.</li> <li>• <b>Unreachable destinations present</b>—Unreachable destinations are present in the system.</li> <li>• <b>Unreachable destinations present due to FPC restart disable configuration</b>—Unreachable destinations are present as a result of user configuration set to disable FPC restart.</li> </ul>	All levels
Unreachable destinations	Number of FPCs that have unreachable destinations.	All levels
Detected on	Date and time when unreachable destinations are detected.	All levels
Reason	Reason for the destination turning unreachable. <ul style="list-style-type: none"> <li>• <b>Single FPC error</b>—A single bad FPC is not reachable over the fabric.</li> <li>• <b>Fabric plane error</b>—Multiple FPCs are not able to forward traffic over the fabric planes.</li> </ul>	All levels
Fabric reachability action	Action taken to handle the unreachable destination. <ul style="list-style-type: none"> <li>• <b>Plane Action</b>—The healing is attempted only for the fabric planes.</li> <li>• <b>SIB Action</b>—(PTX Series system only) The healing is attempted only for the SIBs.</li> <li>• <b>Plane and FPC Action</b>—The healing is attempted both for the fabric planes and the FPCs.</li> <li>• <b>SIB and FPC Action</b>—(PTX Series system only) The healing is attempted both for the SIBs and the FPCs.</li> <li>• <b>FPC Action</b>—The healing is attempted only for the bad FPCs.</li> </ul>	All levels
Acting on	Current action is being performed on: <ul style="list-style-type: none"> <li>• <b>Single FPC error</b>—The current operation is for healing the single bad FPC.</li> <li>• <b>Fabric Plane error</b>—The current operation is for healing the fabric planes.</li> </ul>	All levels

Table 130: show chassis fabric reachability Output Fields (continued)

Field Name	Field Description	Level of Output
Initial phase	Starting phase for the healing action. <ul style="list-style-type: none"> <li>• <b>Plane restart</b>—The fabric planes are restarted.</li> <li>• <b>SIB restart</b>—(PTX Series system only) The SIBs are restarted.</li> <li>• <b>Plane and FPC restart</b>—Both the fabric planes and affected FPCs are restarted.</li> <li>• <b>SIB and FPC restart</b>—(PTX Series system only) SIBs and affected FPCs are restarted.</li> </ul>	All levels
Current phase	Current phase for the healing action. <ul style="list-style-type: none"> <li>• <b>Plane restart</b>—The fabric planes are restarted.</li> <li>• <b>SIB restart</b>—(PTX Series system only) The SIBs are restarted.</li> <li>• <b>Plane and FPC restart</b>—Both the fabric planes and affected FPCs are restarted.</li> <li>• <b>SIB and FPC restart</b>—(PTX Series system only) Both the SIBs and affected FPCs are restarted.</li> <li>• <b>FPC offline</b>—The FPCs are turned offline because the previously mentioned healing processes have failed.</li> </ul>	All levels
Action started	Date and time when the system fabric down healing attempt is started.	All levels
Plane restart phase	The status of the plane restart phase. <ul style="list-style-type: none"> <li>• <b>Completed</b>—The plane restart phase is completed.</li> <li>• <b>In progress</b>—The plane restart phase is in progress.</li> </ul>	detail
Phase started	Date and time when the plane restart phase is started.	detail
Planes restarted	List of plane numbers restarted by the system.	detail
Planes timed out	List of plane numbers that have timed out waiting to be restarted by the system.	detail
Planes being offlined / onlined	Planes that are turned offline or turned online by the system, with date and time.	detail
Phase completed	Date and time when the plane restart phase is completed.	detail
Plane and FPC Restart Phase	Status of the plane and FPC restart phase. <ul style="list-style-type: none"> <li>• <b>Completed</b>—The plane and FPC restart phase is completed.</li> <li>• <b>In progress</b>—The plane and FPC restart phase is in progress.</li> </ul>	detail
Phase started	Date and time when the plane and FPC restart phase is started.	detail
FPC Offline Started	Date and time when the FPC offline action is started.	detail
Offlined FPCs	List of FPCs that are turned offline by the system.	detail

Table 130: show chassis fabric reachability Output Fields (continued)

Field Name	Field Description	Level of Output
FPCs timed out	List of FPCs that have timed out waiting to be turned offline by the system.	<b>detail</b>
FPC being offlined	FPC that is being turned offline by the system, with date and time.	<b>detail</b>
FPC Offline completed	Date and time when the FPC offline action is completed.	<b>detail</b>
Plane restarting started	Date and time when the plane restart action is started.	<b>detail</b>
Planes restarted	List of planes restarted by the system.	<b>detail</b>
Planes being offlined / onlined	Planes that are currently being turned offline or turned online by the system, with date and time.	<b>detail</b>
Plane restarting completed	Date and time when the plane restarting action is completed.	<b>detail</b>
FPC online started	Date and time when FPC online action is started.	<b>detail</b>
Onlined FPCs	List of FPCs that are turned online by the system.	<b>detail</b>
FPCs timed out	FPCs that have timed out waiting to be turned online by the system.	<b>detail</b>
FPC being onlined	FPC that is being turned online by the system, with date and time.	<b>detail</b>
FPC Online completed	Date and time when the action of turning the FPCs online is completed.	<b>detail</b>
Phase Completed	Date and time when the plane and FPC restart phase is completed.	<b>detail</b>
Phase started	Date and time when the plane and FPC restart phase is started.	<b>detail</b>
FPC restart time	Date and time when the FPC restart action is started.	<b>detail</b>
FPC restarted	FPC that is restarted by the system, with date and time.	<b>detail</b>
Phase Completed	Date and time when the plane and FPC restart phase is completed.	<b>detail</b>
FPC Offline Phase	Status of the FPC offline phase. <ul style="list-style-type: none"> <li>• <b>Completed</b>— The FPC offline phase is completed.</li> <li>• <b>In progress</b>—The FPC offline phase is currently in progress.</li> </ul>	<b>detail</b>
Phase started	Date and time when the FPC offline phase is started.	<b>detail</b>
FPC Offline started	Date and time when the FPC offline action is started.	<b>detail</b>
Offlined FPCs	List of FPCs turned offline by the system.	<b>detail</b>
FPCs timed out	List of FPCs that have timed out waiting to be turned offline by the system.	<b>detail</b>

Table 130: show chassis fabric reachability Output Fields (continued)

Field Name	Field Description	Level of Output
FPC being offlined	FPC that is being turned offline by the system, with date and time.	<b>detail</b>
FPC Offline completed	Date and time when the FPC offline action is completed.	<b>detail</b>
Phase Completed	Date and time when the FPC offline phase is completed.	<b>detail</b>
Action Completed	Date and time when the system fabric down healing attempt is completed.	All levels
Fabric reachability resolution	Status after the healing actions are performed. <ul style="list-style-type: none"> <li>• <b>Unreachable destinations healed after <i>phase name</i></b>—The unreachable destinations are healed after the healing actions are performed. The phase name indicates the last healing phase.</li> <li>• <b>Unreachable destinations removed by FPCs <i>FPC number</i> offline</b>—The unreachable destinations are removed by turning the FPCs offline.</li> <li>• <b>Unreachable destinations present on FPC/PFE <i>FPC/PFE number</i></b>—The unreachable destinations are present on the FPCs or Packet Forwarding Engines and need to be acted upon.</li> </ul>	All levels

## Sample Output

### show chassis fabric reachability (T640 and T1600 routers)

```

user@host> show chassis fabric reachability

Fabric reachability status: Unreachable destinations removed

Fabric reachability detection:
  Unreachable destinations      : Present on 3 FPCs
  Detected on                  : 2010-11-22 15:19:45 PST
  Reason                       : Fabric plane error

Fabric reachability action:
  Fabric reachability action    : FPC action
  Acting on                    : Fabric plane error
  Initial phase                 : Plane restart
  Current phase                 : FPC offline is completed
  Action started                : 2010-11-22 15:08:05 PST
  Action completed              : 2010-11-22 15:19:45 PST

Fabric reachability resolution: Unreachable destinations removed by FPCs 2, 3, 5
offline

```

### show chassis fabric reachability detail (T640 and T1600 routers)

```

### show chassis fabric reachability (PTX5000 system)

```

user@host> show chassis fabric reachability

Fabric reachability status: Enabled destinations transitioned to unreachable,
Fabric down action in progress

Fabric reachability detection:
Unreachable destinations      : Present on 5 FPCs
  Detected on                 : 2012-11-14 15:53:00 PST
  Reason                      : Fabric plane error

Fabric reachability action:
Fabric reachability action    : SIB action
Acting on                    : Fabric plane error
Initial phase                 : SIB restart
Current phase                 : SIB restart is in progress
Action started                : 2012-11-14 15:53:00 PST

```

### show chassis fabric reachability (PTX10008 Router)

```

user@host> show chassis fabric reachability

```

```
Fabric reachability status: Enabled destinations reachable
```

```
Fabric reachability detection:
  Unreachable destinations      : Present on 0 FPCs
  Detected on                  : 2017-05-10 01:54:09 PDT
```

### show chassis fabric reachability (MX2020 Router with SFB2)

```
user@host > show chassis fabric reachability
```

```
Fabric reachability status: No Fabric degradation detected now
```

### show chassis fabric reachability detail (MX10003 Router)

```
user@host > show chassis fabric reachability detail
```

```
May 23 23:52:27
```

```
Fabric reachability status: Fabric degradation condition healed
  Detected on                  : 2017-05-23 23:49:54 PDT
  Reason                      : Fabric Degradation due to Plane
faults (fabric error)
```

```
Fabric reachability action:
  Fabric reachability action   : Plane action
  Current phase                : Plane Restart Phase is completed
  Action started               : 2017-05-23 23:50:04 PDT
  Action completed             : 2017-05-23 23:52:22 PDT
    Plane restart phase        : Completed
      Phase started            : 2017-05-23 23:50:04 PDT
        Planes restarted       : 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10,
11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21
      Phase completed          : 2017-05-23 23:52:22 PDT
```

### show chassis fabric reachability (TX Matrix router)

```
user@host> show chassis fabric reachability
```

```
Fabric reachability status: Enabled destinations transitioned to unreachable,
Fabric down action in progress
```

```
Fabric reachability detection:
  Unreachable destinations      : Present on 14 FPCs
  Detected on                  : 2013-08-29 02:09:16 PDT
  Reason                      : Fabric plane error
```

```
Fabric reachability action:
  Fabric reachability action   : Plane action
  Acting on                   : Fabric plane error
  Initial phase                : Plane restart
  Current phase                : Plane restart is in progress
  Action started               : 2013-08-29 02:09:16 PDT
```

### show chassis fabric reachability detail (TX Matrix router)

```
user@host> show chassis fabric reachability detail
```

```
Fabric reachability status: Enabled destinations transitioned to unreachable,
Fabric down action in progress
```

```
Fabric reachability detection:
```

```
    Unreachable destinations      : Present on 14 FPCs
      Detected on                 : 2013-08-29 02:09:16 PDT
      Reason                     : Fabric plane error
```

```
Fabric reachability action:
```

```
    Fabric reachability action    : Plane action
      Acting on                  : Fabric plane error
      Initial phase               : Plane restart
      Current phase               : Plane restart is in progress
      Action started              : 2013-08-29 02:09:16 PDT
        Plane restart phase       : In progress
          Phase started           : 2013-08-29 02:09:16 PDT
            Planes restarted      : 0, 2, 3
            Planes being offlined : 4 : 2013-08-29 02:10:11 PDT
```

### show chassis fabric reachability detail (MX960 router)

After triggering a phase action from an MPC, the **show chassis fabric reachability** command includes output from DPCs, MPCs, or FPCs.

```
user@host> show chassis fabric reachability detail
```

```
Fabric reachability status: Fabric degradation condition healed
```

```
    Detected on      : 2018-03-14 22:28:03 PDT
    Reason           : Fabric Degradation due to grant
timeouts seen by DPCs, MPCs, or FPCs
```

```
Fabric reachability action:
```

```
    Fabric reachability action    : Plane action
      Current phase               : Plane Restart Phase is completed
      Action started              : 2018-03-14 22:28:17 PDT
      Action completed            : 2018-03-14 22:29:28 PDT
        Plane restart phase       : Completed
          Phase started           : 2018-03-14 22:28:17 PDT
            Planes restarted      : 0, 1, 2, 3
            Phase completed       : 2018-03-14 22:29:28 PDT
```

```
Fabric reachability resolution: Fabric degradation healed after phase Plane restart
```

## show chassis fabric sibs

---

<b>Syntax</b>	<pre>show chassis fabric sibs &lt;fcc number   scc&gt; &lt;slot slot-number&gt;</pre>
<b>Release Information</b>	Command introduced before Junos OS Release 7.4. Command introduced on QFX Series switches in Junos OS Release 15.1X53-D30 Command introduced in Junos OS Release 17.2 for PTX10008 Routers.
<b>Description</b>	<p>(TX Matrix routers only) Display the state of the electrical and optical switch fabric link between the SIBs in the TX Matrix router (TX-SIBs) and the SIBs in the T640 routers (T640 LCC SIBs).</p> <p>(M320, T640, T1600, T4000 and PTX Series routers and QFX Series switches) Display the state of the electrical switch fabric link between the SIBs and the FPCs.</p>
<b>Options</b>	<p><b>none</b>—(TX Matrix routers only) Display the state of the electrical and optical switch fabric link between the SIBs in the TX Matrix router (TX-SIBs) and the SIBs in the T640 routers (T640 LCC SIBs).</p> <p>(M320, T640, T1600, T4000 and PTX Series routers and QFX Series switches) Display the state of the electrical switch fabric link between the SIBs and the FPCs.</p> <p><b>fcc number</b>—(Optional) Display the switching fabric link state for the T640 SIBs on a specified T640 router (line-card chassis) connected to a TX Matrix router.</p> <p><b>scc</b>—(Optional) Display the switching fabric link state for the TX-SIBs on the TX Matrix router (switch-card chassis).</p> <p><b>slot slot-number</b>—(Optional) Display the state of the electrical switch fabric link between the specified SIB slot and the FPCs.</p>
<b>Required Privilege Level</b>	view

**Output Fields** [Table 131 on page 1563](#) lists the output fields for the **show chassis fabric sibs** command. Output fields are listed in the approximate order in which they appear.

*Table 131: show chassis fabric sibs Output Fields*

Field Name	Field Description
<b>Fabric management SIB state</b>	Switching fabric link (link from FPC to SIB) state for each SIB: <ul style="list-style-type: none"><li>• <b>Unused</b>—SIB is not present.</li><li>• <b>Links ok</b>—Link between the SIB and the FPC is active.</li><li>• <b>Link error</b>—Link between the SIB and the FPC is not operational.</li></ul>

Table 131: show chassis fabric sibs Output Fields (continued)

Field Name	Field Description
Plane state	<p>Possible plane state of the M320 SIB, TX-SIB or T640 SIB:</p> <ul style="list-style-type: none"> <li>• <b>S_ACTIVE</b>—Links on the SIB are operational, and the fabric plane (SIB) is operational and running.</li> <li>• <b>S_SPARE</b>—Links on the SIB are operational and the fabric plane (SIB) is redundant and can be operational if any of the fabric planes in the <b>S_ACTIVE</b> state encounters an error.</li> </ul> <p><b>NOTE:</b> If the plane is unusable by any of the Packet Forwarding Engines, the command output displays an additional string, <b>plane has link errors on # pfes</b>, where, # indicates the total number of links (both from SIB to FPC, and from FPC to SIB) having link errors (detected either during initialization time or runtime) in this particular plane. This does not count links having destination errors.</p> <ul style="list-style-type: none"> <li>• <b>S_EMPTY</b>—No links are present on the SIB, and the fabric plane (SIB) is powered down.</li> <li>• <b>S_ACTIVATING</b>—Links on the SIB are coming online; this is a transitional state.</li> <li>• <b>S_DEACTIVATING</b>—Links on the SIB are going offline; this is a transitional state.</li> <li>• <b>S_FAULTING</b>—Links on the SIB are being marked faulty, and the fabric plane (SIB) is not operational.</li> <li>• <b>S_FAULT</b>—Links on the SIB are in an alarmed state, and the fabric plane (SIB) is not operational for the following reasons: <ul style="list-style-type: none"> <li>• On-board F-chip is not operational.</li> <li>• Fiber optic connector faults.</li> <li>• FPC connector faults.</li> </ul> </li> </ul> <p>Possible plane state of the QFX Series SIB:</p> <ul style="list-style-type: none"> <li>• <b>Active</b>—Links on the SIB are operational, and the fabric plane (SIB) is operational and running.</li> <li>• <b>Spare</b>—Links on the SIB are operational and the fabric plane (SIB) is redundant and can be operational if any of the fabric planes in the <b>S_ACTIVE</b> state encounters an error.</li> <li>• <b>Empty</b>—No links are present on the SIB, and the fabric plane (SIB) is powered down.</li> <li>• <b>Activating</b>—Links on the SIB are coming online; this is a transitional state.</li> <li>• <b>Deactivating</b>—Links on the SIB are going offline; this is a transitional state.</li> <li>• <b>Faulting</b>—Links on the SIB are being marked faulty, and the fabric plane (SIB) is not operational.</li> <li>• <b>Fault</b>—Links on the SIB are in an alarmed state, and the fabric plane (SIB) is not operational for the following reasons: <ul style="list-style-type: none"> <li>• On-board F-chip is not operational.</li> <li>• Fiber optic connector faults.</li> <li>• FPC connector faults.</li> </ul> </li> </ul>

## Sample Output

**Output Fields** [Table 132 on page 1577](#) lists the output fields for the **show chassis fabric summary** command. Output fields are listed in the approximate order in which they appear.

*Table 132: show chassis fabric summary Output Fields*

Field Name	Field Description
Plane	(MX Series, MX2020, MX2010, and MX2008 Routers only) Plane number.

Table 132: show chassis fabric summary Output Fields (continued)

Field Name	Field Description
<b>State</b>	<p>(MX Series and QFX Series) State of the SIB or FPC:</p> <ul style="list-style-type: none"> <li>• <b>Online</b>—Switch Interface Board (SIB) is operational and running.</li> </ul> <p><b>NOTE:</b> On the Enhanced MX SCB with Trio MPC, a maximum of 4 planes are operational and running. On all the other SCBs with Trio MPC, all the planes are operational and running.</p> <ul style="list-style-type: none"> <li>• <b>Empty</b>—SIB is powered down.</li> <li>• <b>Check</b>—SIB is in the <b>Check</b> state because of the following reasons: <ul style="list-style-type: none"> <li>• SIB is not inserted properly.</li> <li>• Some destination errors are detected on the SIB. In this case, the Packet Forwarding Engine stops using the SIB to send traffic to the affected destination Packet Forwarding Engine.</li> <li>• Some link errors are detected on the channel between the SIB and a Packet Forwarding Engine. Link errors can be detected at initialization time or runtime: <ul style="list-style-type: none"> <li>• Link errors caused by a link training failure at initialization time—The Packet Forwarding Engine does not use the SIB to send traffic. The <b>show chassis fabric fpcs</b> command shows <b>Plane disabled</b> as status for this link.</li> <li>• Link errors caused by CRC errors detected at runtime—The Packet Forwarding Engine continues to use the SIB to send traffic. The <b>show chassis fabric fpcs</b> command shows <b>Link error</b> as the status for this link.</li> </ul> </li> </ul> </li> </ul> <p><b>NOTE:</b> The <b>Check</b> state does not apply to PTX Series Packet Transport Routers because there are no SIBs in the Check state.</p> <p>For information about link and destination errors, issue the <b>show chassis fabric fpcs</b> commands.</p> <ul style="list-style-type: none"> <li>• <b>Spare</b>—SIB is redundant and will move to active state if one of the working SIBs fails.</li> </ul> <p><b>NOTE:</b> <b>Spare</b> does not apply to PTX Series Packet Transport Routers because there are no spare SIBs in the device.</p> <p>(MX2010, MX2020, and MX2008 Routers) State of the SFB.</p> <ul style="list-style-type: none"> <li>• <b>Online</b>—Switch Fabric Board (SFB) is operational and running.</li> <li>• <b>Offline</b>—Switch Fabric Board (SFB) is powered down.</li> <li>• <b>Check</b>—Switch Fabric Board (SFB) is in the check state.</li> </ul>
<b>Errors</b>	<p>(PTX Series and QFX Series) Indicates whether there is any error on the SIB.</p> <ul style="list-style-type: none"> <li>• <b>None</b>—No errors</li> <li>• <b>Link Errors</b>—Fabric link errors were found on the SIB RX link.</li> <li>• <b>Cell drops</b>—Fabric cell drops were found on the SIB ASIC.</li> <li>• <b>Link, Cell drops</b>—Both Link errors and cell drops were detected on at least one of the FPC's fabric links.</li> </ul>

Table 132: show chassis fabric summary Output Fields (continued)

Field Name	Field Description
	<ul style="list-style-type: none"> <li>• <b>Asic Errors</b>—A fault affecting one of the ASICs on the SIB is detected. It can be an IO error or an internal error signaled by the ASIC.</li> </ul> <p><b>NOTE:</b> The <b>Errors</b> column is empty only when the FPC or SIB is offline.</p>
<b>Uptime</b>	(MX Series, MX2010, MX2020, and MX2008 Routers) Elapsed time the plane has been online.
<b>Link Error</b>	Fabric link errors were found on the SIB RX link.
<b>Link TF</b>	Fabric link training failure has occurred.
<b>Destination errors</b>	<ul style="list-style-type: none"> <li>• <b>Local</b>—Destination error detected on the FPC or PFE's own self-stream.</li> <li>• <b>Remote</b>—Destination error detected on the FPC or PFE's non-self-streams.</li> </ul>

## Sample Output

### show chassis fabric summary (MX240 Router)

```
user@host> show chassis fabric summary
```

```
Plane  State  Uptime
0      Online 23 hours, 26 minutes, 54 seconds
1      Online 23 hours, 26 minutes, 54 seconds
2      Check 18 hours, 33 minutes, 42 seconds

<b>Syntax (PTX Series Packet Transport Routers)</b>	<pre>show chassis fabric topology</pre>
<b>Syntax (QTX Series Switches)</b>	<pre>show chassis fabric topology</pre>
<b>Release Information</b>	<p>Command introduced before Junos OS Release 7.4.</p> <p><b>sfc</b> option introduced for the TX Matrix Plus router in Junos OS Release 9.6.</p> <p>Command introduced in Junos OS Release 12.1 for PTX Series Packet Transport Routers.</p> <p>Command introduced in Junos OS Release 15.1X53-D30 for QFX Series switches.</p> <p>Command introduced in Junos OS Release 17.2 for PTX10008 Routers.</p>
<b>Description</b>	<p>(TX Matrix routers only) Display the state of the switching fabric topology for the Switch Interface Board (SIB) connection between the TX Matrix router and the T640 routers.</p> <p>(TX Matrix Plus routers only) Display the state of the switching fabric topology for the SIB connection between the TX Matrix Plus router and the connected routers.</p> <p>(T320, T640, T1600, and T4000 routers only) Display the state of the switching fabric topology for the connection between the Switch Interface Board (SIB) and the FPCs.</p>

(PTX Series Packet Transport Routers and QFX Series switches) Display the input-output link topology.

**Options** **none**—(TX Matrix routers only) Display the state of the switching fabric topology for the Switch Interface Board (SIB) connection between the TX Matrix router and the T640 routers.

(TX Matrix Plus routers only) Display the state of the switching fabric topology for the SIB connection between the TX Matrix Plus router and the connected routers.

(T320, T640, T1600, and T4000 routers only) Display the state of the switching fabric topology for the connection between the Switch Interface Board (SIB) and the FPCs.

(QFX Series switches) Display the input-output link topology.

**lcc number**—(TX Matrix and TX Matrix Plus routers only) (Optional) On a TX Matrix router, display the fabric topology state for a specified T640 router (line-card chassis) that is connected to a TX Matrix router. On a TX Matrix Plus router, display the fabric topology state for a specified router (line-card chassis) that is connected to the TX Matrix Plus router.

Replace *number* with the following values depending on the LCC configuration:

- 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.
- 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.
- 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.
- 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.

**scc**—(TX Matrix routers only) (Optional) Display the fabric topology state for the TX Matrix router (or switch-card chassis).

**sfc number**—(TX Matrix Plus routers only) (Optional) Display the fabric topology for the switch-fabric chassis. Replace *number* with 0.

**sib-slot**—(Optional) Display the fabric topology state for a specified SIB slot. Replace *sib-slot* with a value from 0 through 4. On a TX Matrix Plus router, replace *sib-slot* with a value from 0 through 15.

**Output Fields** [Table 133 on page 1588](#) lists the output fields for the **show chassis fabric topology** command. Output fields are listed in the approximate order in which they appear.

*Table 133: show chassis fabric topology Output Fields*

Field Name	Field Description
<b>in-links</b>	Fabric topology for receive side links.
<b>out-links</b>	Fabric topology for transmit side links.
<b>state</b>	<p>State of the fabric link:</p> <ul style="list-style-type: none"> <li>• <b>RESET</b>—Link between the SIB and the FPC/DPC is powered down on purpose. This is done in all non-dual Packet Forwarding Engine–based boards.</li> <li>• <b>UP</b>—Link between the SIB and the FPC/DCP is up and running.</li> <li>• <b>DOWN</b>—Link between the SIB and the FPC/DCP is powered down.</li> <li>• <b>FAULT</b>—The SIB is in the alarmed state, in which the SIB’s plane is not operational for one or more of the following reasons: <ul style="list-style-type: none"> <li>• On-board F-chip is not operational.</li> <li>• Fiber-optic connector faults.</li> <li>• FPC connector faults.</li> <li>• SIB midplane connector faults.</li> </ul> </li> </ul> <p><b>NOTE:</b> The following state descriptions are applicable only to PTX Series Packet Transport Routers.</p> <ul style="list-style-type: none"> <li>• <b>OK</b>—The link between the SIB and the FPC is operational.</li> <li>• <b>Down</b>—The link between the SIB and the FPC is powered down.</li> <li>• <b>Error</b>—The CCL link between the SIB and FPC is not operational for one or more of the following reasons: <ul style="list-style-type: none"> <li>• FPC midplane connector failure.</li> <li>• SIB midplane connector failure.</li> <li>• CCL link CRC error.</li> </ul> </li> </ul>

**Table 133: show chassis fabric topology Output Fields (continued)**

<b>Out-Links:</b> and <b>In-Links</b> (TX Matrix Plus router only)	<p>State of the links from the F13 SIB to the LCC or vice-versa. Out-Links indicate Tx links. In-Links indicate an Rx link. The following additional fields are displayed for each SIB:</p> <ul style="list-style-type: none"> <li>• <b>VCSEL Status</b>—Optical (VCSEL channel) link status for the corresponding electrical (HSL2) link. The states include: <ul style="list-style-type: none"> <li>• <b>OK</b>—Optical signal power is good.</li> <li>• <b>Error</b>—Internal error.</li> <li>• <b>LOS</b>—Loss of Signal detected.</li> <li>• <b>High Cur</b>—The Tx Bias-current is higher than threshold on this channel. This is applicable only to Tx Channels.</li> <li>• <b>Low Cur</b>—The Tx Bias-current is lower than threshold on this channel. This is applicable only to Tx Channels.</li> </ul> </li> <li>• <b>HSL2 Channel</b>—HSL2 is the electrical link used to connect ASICs to the in-link and out-link. The channel number corresponds to the link and varies based on the ASIC or configuration.</li> </ul> <hr/> <ul style="list-style-type: none"> <li>• <b>HSL2 Status</b> —The status of the HSL2 Channel. Includes the following states: <ul style="list-style-type: none"> <li>• <b>Up</b>—Channel is up.</li> <li>• <b>Down</b>—Channel is down.</li> <li>• <b>Reset</b>—Channel has been reset.</li> <li>• <b>Fault</b>—Channel has faults.</li> </ul> </li> </ul>
---	--

The following is a representation of display output for links originating from the SIBs (LCC or SFC)

```
SF_[1|3]_port#_FB_[A-D] (VCSEL#, fiber)
```

- **SF\_[1|3]**—Name of the ASIC, with Fabric F1 or F3 mode.
- **port#**—HSL2 port number on the SF ASIC in the LCC.
- **FB\_[A-D]**—via fiber bundle A, B, C or D.
- **VCSEL#**—VCSEL module number on SIB.
- **fiber**—Fiber channel number.

The following is a representation of display output for links originating from the SIBs (LCC or SFC)

```
SF_[1|3]_port#_FB_[A-D] (VCSEL#, fiber)
```

- **SF\_[1|3]**—Name of the ASIC, with Fabric F1 or F3 mode.
- **port#**—HSL2 port number on the SF ASIC in the LCC.
- **FB\_[A-D]**—via fiber bundle A, B, C or D.
- **VCSEL#**—VCSEL module number on SIB.
- **fiber**—Fiber channel number.

The following is a sample output with description of the fields displayed in the output for Out-Links:

```
Out-Links:
```

```
=====
```

```
SF_30_13_FB_A(21,09) -> FPC7_B_SG(3,3,6)_FB_A(18,09)      OK      203      Up
```

**Table 133: show chassis fabric topology Output Fields (continued)**

- **SF\_30\_13**—Name of the ASIC, with Fabric F1 or F3 mode. In this case, 3 is the F3 direction and is used in the Tx path and 0 identifies the serial link on the SF chip (in this case, link goes to sf-3 chip number 0). You can also have F1 mode and Rx path instead.
- **FB\_A (21, 09)**—Fiber bundle A, with VCSEL unit number 21 within the SIB, and channel number 9 within the unit number.
- **FPC7\_B\_SG(3,3,6)**—FPC 7.with bottom Packet Forwarding Engine (T for top PFE and B for bottom PFE), SG ASIC, with number 3 and port number 3, with HSL2 link number with the SIB as 6.
- **FB\_A(18, 09)**—Fiber Bundle, with VCSEL unit number 18 within the SIB, and VCSEL channel number 9 within the unit number.

The following is a representation of display output for links originating from the FPCs (In-Links)

```
FPC#[T|B]_SG(ASIC#, port#, HSL2_bit)_FB_[A-D](VCSEL#, fiber)
```

- **FPC#**—FPC number with PFE (0 or 1).
- **T**—Top Packet Forwarding Engine.
- **B**—Bottom Packet Forwarding Engine.
- **SG(ASIC#, port#, HSL2\_bit)**—SG ASIC information (ASIC 0-3, port 0-3, HSL2\_bit 0-7).
- **FB\_[A-D]**—via fiber bundle A, B, C or D.
- **VCSEL#**—VCSEL module number on SIB.
- **fiber**—Fiber channel number.

The following is a representation of display output for links originating from the FPCs (In-Links)

```
FPC#[T|B]_SG(ASIC#, port#, HSL2_bit)_FB_[A-D](VCSEL#, fiber)
```

- **FPC#**—FPC number with PFE (0 or 1).
- **T**—Top Packet Forwarding Engine.
- **B**—Bottom Packet Forwarding Engine.
- **SG(ASIC#, port#, HSL2\_bit)**—SG ASIC information (ASIC 0-3, port 0-3, HSL2\_bit 0-7).
- **FB\_[A-D]**—via fiber bundle A, B, C or D.
- **VCSEL#**—VCSEL module number on SIB.
- **fiber**—Fiber channel number.

The following is a sample output with description of the fields displayed in the output for In-Links:

```
In-Links :
```

```
=====
```

```
FPC0_T_SG(0,0,0)_FB_D(04,11)  -> SF_10_00_FB_D(01,11)      OK      0      Up
```

- **FPC0**—FPC 0.
- **T**—Top Packet Forwarding Engine.
- **SG (0, 0, 0)**—SG ASIC with port number 0 and link 0.
- **FB\_D (04,11)**—Fiber Bundle D with VCSEL 4, channel 11.
- **SF\_10**—Indicates F1 mode chip number 0 and Rx path.
- **SF\_10\_00\_FB\_D(01,11)**—Indicates F1 mode chip number 0 and Rx path with port 0, fiber bundle D, with VCSEL 1, channel 11.

**Table 133: show chassis fabric topology Output Fields (continued)**

**Out-links and In-links**  
(TX Matrix Plus router with 3D SIBs only)

State of the links from the F13 SIB to the SFC/LCC or vice-versa. Out-Links indicate Tx links. In-Links indicate an Rx link. The following additional fields are displayed for each SIB:

- Description of the fields displayed in the output for **In-links** and **Out-links** for SFC:

In-links	State	Out-links	State
CXP0_Evn->F13_SIB0_XF2,04_0	Up	F13_SIB0_XF2,04_0->CXP0_Evn	Up

- **CXP0\_Evn**—CXP optics with type of port bits such as even or odd. In this case, it indicates CXP optics with even port bit number 0.
- **F13\_SIB0**—Name of the SFC data plane SIB with the SIB number. In this case, it indicates F13 SIB with number 0.
- **XF2,04\_0**—Name of the ASIC with port and subchannel number. In this case, it Indicates XF2 chip with port number 4 and subchannel number 0.
- Description of the fields displayed in the output for **In-links** and **Out-links** for LCC:

In-links	State	Out-links	State
CXP0_Evn->LCC_SIB0_XF3,10_0	Up	LCC_SIB0_XF3,10_0->CXP0_Evn	Up

- **CXP0\_Evn**—CXP optics with the type of port bits such as even or odd. In this case, it indicates CXP optics with even port bit number 0.
- **LCC\_SIB0**—LCC SIB number. In this case, it indicates LCC SIB with number 0.
- **XF3,10\_0**—Name of the ASIC with port and subchannel number. In this case, it Indicates XF3 with port number 10 and subchannel number 0.

## show chassis fabric unreachable-destinations

<b>Syntax</b>	<b>show chassis fabric unreachable-destinations</b>
<b>Release Information</b>	<p>Command introduced before Junos OS Release 11.4.</p> <p>Command introduced in Junos OS Release 12.1X48R4 for PTX Series Packet Transport Switches.</p> <p>Command introduced in Junos OS Release 13.1R3 for TX Matrix routers.</p>
<b>Description</b>	(M320 and T Series routers only) Display the list of destinations that have transitioned from a reachable state to an unreachable state.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li><a href="#">show chassis fabric reachability on page 1554</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">show chassis fabric unreachable-destinations(T640 and T1600 routers) on page 1622</a> <a href="#">show chassis fabric unreachable-destinations(TX Matrix routers) on page 1623</a>
<b>Output Fields</b>	The table lists the output fields for the <b>show chassis fabric unreachable-destinations</b> command. Output fields are listed in the approximate order in which they appear.

*Table 134: show chassis fabric unreachable-destinations Output Fields*

Field Name	Field Description
Flexible PIC Concentrator (FPC) number	Source FPC number where unreachable destinations are present.
Packet Forwarding Engine number	Source Packet Forwarding Engine number where unreachable destinations are present.
Destination error on Packet Forwarding Engine	List of destination FPCs <i>FPC number</i> /Packet Forwarding Engines <i>Packet Forwarding Engine number</i> that are not reachable from the source FPCs <i>FPC number</i> /Packet Forwarding Engines <i>Packet Forwarding Engine number</i> over the fabric.

## Sample Output

### show chassis fabric unreachable-destinations(T640 and T1600 routers)

```

user@host> show chassis fabric unreachable-destinations

Fabric management unreachable destinations:
FPC 2
  PFE 0
    Destination error on PFEs      2/0 3/0 3/1 7/0
FPC 3
  PFE 0

```

```

Description	<p>(T Series routers, TX Matrix routers, TX Matrix Plus routers, M120 routers, M320 routers, MX104 routers, MX2010 routers, MX2020 routers, MX2008 routers, MX Series 5G Universal Routing Platforms, QFX3008-I Interconnect devices, QFX Series, OCX Series, EX Series switches, and PTX Series Packet Transport Routers only) Show information about the fan tray and fans.</p>
Options	<p><b>all-members</b>—(MX Series routers only) (Optional) Display information about the fan tray and fans for all members of the Virtual Chassis configuration.</p> <p><b>local</b>—(MX Series routers only) (Optional) Display information about the fan tray and fans for the local Virtual Chassis member.</p>

**member *member-id***—(MX Series routers only) (Optional) Display information about the fan tray and fans for the specified member of the Virtual Chassis configuration. For an MX Series Virtual Chassis, replace *member-id* variable with a value 0 or 1.

**interconnect-device *name***—(QFX3000-G QFabric systems only) (Optional) Display information about the fan tray and fans for the specified QFX3008-I Interconnect device.

**lcc *number***—(TX Matrix and TX Matrix Plus routers only) (Optional) On a TX Matrix router, display information about the fan tray and fans for the specified T640 router (line-card chassis) that is connected to a TX Matrix router. On a TX Matrix Plus router, display information about the fan tray and fans for the specified router (line-card chassis) that is connected to a TX Matrix Plus router.

Replace *number* with the following values depending on the LCC configuration:

- 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.
- 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.
- 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.
- 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.

**satellite [*slot-id slot-id* | device-alias *alias-name*]**—(Junos Fusion only) (Optional) Display information about the fan tray and fans for the specified satellite device or devices in a Junos Fusion, or for all satellite devices if no satellite devices are specified.

**scc**—(TX Matrix routers only) (Optional) Display information about the fan tray and fans for the TX Matrix router (switch-card chassis).

**sfc *number***—(TX Matrix Plus routers only) (Optional) Display information about the fan tray and fans for the TX Matrix Plus router (switch-fabric chassis). Replace *number* variable with 0.

## show chassis feb

<b>Syntax</b>	show chassis feb
<b>Release Information</b>	Command introduced before Junos OS Release 7.4. Command introduced in Junos OS Release 12.2 for the ACX Series Universal Metro Routers.
<b>Description</b>	(ACX Series routers, and M5, M10, and M120 routers only) Display Forwarding Engine Board (FEB) status information.
<b>Options</b>	This command has no options.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">request chassis feb on page 856</a></li> <li>• <a href="#">show chassis fabric feb on page 1405</a></li> <li>• <a href="#">show chassis fpc-feb-connectivity on page 1723</a></li> <li>• <i>feb</i></li> <li>• <i>Understanding Switching Control Board Redundancy</i></li> </ul>
<b>List of Sample Output</b>	<a href="#">show chassis feb (M10 Router) on page 1644</a> <a href="#">show chassis feb (M120 Router) on page 1644</a> <a href="#">show chassis feb detail (M120 Router) on page 1645</a> <a href="#">show chassis feb detail (ACX2000 Universal Metro Router) on page 1646</a> <a href="#">show chassis feb detail (ACX1000 Universal Metro Router) on page 1646</a>
<b>Output Fields</b>	<a href="#">Table 136 on page 1643</a> lists the output fields for the <b>show chassis feb</b> command. Output fields are listed in the approximate order in which they appear.

Table 136: show chassis feb

Field Name	Field Description
State	State of the FEB: <ul style="list-style-type: none"> <li>• <b>Offline</b>—FEB is powered down.</li> <li>• <b>Online</b>—FEB is operational and running.</li> <li>• <b>Check</b>—FEB is in alarmed state where the Switch Interface Board (SIB) plane is partially operational for the following reasons:               <ul style="list-style-type: none"> <li>• FEB is not inserted properly.</li> <li>• Two or more links between the FEB and Packet Forwarding Engine fail.</li> </ul> </li> </ul>
Temp (C) or Intake temperature	Temperature of the air passing by the FEB, in degrees Celsius or in both degrees Celsius and degrees Fahrenheit.

Table 136: show chassis feb (continued)

Field Name	Field Description
CPU Utilization (%)	Percentage of CPU being used: <ul style="list-style-type: none"> <li><b>Total</b>—Total percentage of CPU being used by the FEB processor.</li> <li><b>Interrupt</b>—Of the total CPU being used by the FEB processor, the percentage being used for interrupts.</li> </ul>
Memory DRAM (MB)	Total DRAM, in megabytes, available to the FEB processor.
Utilization (%)	Percentage of memory utilization: <ul style="list-style-type: none"> <li><b>Heap</b>—Percentage of heap space (dynamic memory) being used by the FEB processor. If this number exceeds 80 percent, you might experience a software problem (memory leak).</li> <li><b>Buffer</b>—Percentage of buffer space being used by the FPC processor for buffering internal messages.</li> </ul>
Exhaust A temperature	Temperature of the air flowing past Exhaust A.
Exhaust B temperature	Temperature of the air flowing past Exhaust B.
Total DDR DRAM	Amount of double data rate dynamic random access memory (DDR DRAM) available to the FEB CPU.
Total RDRAM	Amount of reduced latency dynamic random access memory (RDRAM) available to the FEB CPU.
Start time (Detail output only)	Time when the Routing Engine detected that the FEB was running.
Uptime (Detail output only)	How long the Routing Engine has been connected to the FEB, and therefore, how long the Flexible PIC Concentrator (PIC) has been up and running.

## Sample Output

### show chassis feb (M10 Router)

```

user@host> show chassis feb

FEB status:
  Temperature           27 degrees C / 80 degrees F
  CPU utilization        3 percent
  Interrupt utilization  0 percent
  Heap utilization       26 percent
  Buffer utilization      50 percent
  Total CPU DRAM         64 MB
  Internet Processor II  Version 1, Foundry IBM, Part number 9
  Start time:            2010-05-23 13:59:51 PDT
  Uptime:                6 hours, 33 minutes, 11 seconds

```

### show chassis feb (M120 Router)

```

user@host> show chassis feb

Slot State      Temp  CPU Utilization (%)  Memory  Utilization (%)
              (C)   Total  Interrupt  DRAM (MB) Heap    Buffer
0 Online        47     4        0      512       7     60

```

1	Online	54	3	0	512	7	59
2	Online	50	4	0	512	7	59

Syntax (ACX500 Routers)	show chassis firmware
Syntax (EX Series Switches)	show chassis firmware <detail> <satellite [slot-id <i>slot-id</i>  device-alias <i>alias-name</i> ]>
Release Information	<p>Command introduced before Junos OS Release 7.4.</p> <p>Command introduced in Junos OS Release 9.4 for EX Series switches.</p> <p>sfc option introduced in Junos OS Release 9.6 for the TX Matrix Plus router.</p> <p>Command introduced for EX8200 switches in Junos OS Release 10.2 for EX Series switches.</p> <p>Command introduced in Junos OS Release 11.1 for QFX Series.</p> <p>Command introduced in Junos OS Release 12.2 for ACX Series Universal Metro Routers.</p> <p>Command introduced in Junos OS Release 12.3 for MX2010 and MX2020 Universal Routing Platforms, and ACX4000 Universal Metro Routers.</p> <p>Command introduced in Junos OS Release 13.2 for MX104 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.</p> <p>Command introduced in Junos OS Release 15.1X54-D20 for ACX5048 and ACX5096 Routers.</p> <p><b>satellite</b> option introduced in Junos OS Release 14.2R3.</p> <p>Command introduced in Junos OS Release 17.2 for MX2008 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 17.2 for PTX10008 Routers.</p> <p>Command introduced in Junos OS Release 17.3 for MX10003 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 17.4 for MX204 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 17.3 for MX150 Router Appliance.</p> <p>Command introduced in Junos OS Release 18.1R1 for EX9251 switches.</p> <p>Command introduced in Junos OS Release 18.2 for EX9253 Switches.</p> <p>Command introduced in Junos OS Release 18.2 for MX10008 Universal Routing Platforms.</p>

**Description** On routers and switches, display the version levels of the firmware running on the System Control Board (SCB), Switching and Forwarding Module (SFM), System and Switch Board (SSB), Forwarding Engine Board (FEB), Flexible PIC Concentrators (FPCs), and Routing Engines. On a TX Matrix Plus router, display the version levels of the firmware running on the FPCs and the Switch Processor Mezzanine Board (SPMBs).

On EX2200, EX3200, EX4200, QFX Series, and OCX Series switches, display the version levels of the firmware running on the switch. On an EX8208 switch, display the version levels of the firmware running on the Switch Fabric and Routing Engine (SRE) modules and on the line cards (shown as FPCs). On an EX8216 switch, display the version levels of the firmware running on the Routing Engine (RE) modules and on the line cards (shown as FPCs).

**Options** **none**—Display the version levels of the firmware running. For an EX4200 switch that is a member of a Virtual Chassis, display version levels for all members. For a TX Matrix router, display version levels for the firmware on the TX Matrix router and on all the T640 routers connected to the TX Matrix router. For a TX Matrix Plus router, display version levels for the firmware on the TX Matrix Plus router and on all the routers connected to the TX Matrix Plus router.

**all-members**—(MX Series routers only) (Optional) Display the version levels of the firmware running for all members of the Virtual Chassis configuration.

**interconnect-device *name***—(QFabric systems) (Optional) Display the version levels of the firmware running on the Interconnect device.

**lcc *number***—(TX Matrix and TX Matrix Plus routers only) (Optional) On a TX Matrix router, display version levels for the firmware on a specified T640 router (line-card chassis) that is connected to the TX Matrix router. On a TX Matrix Plus router, display the version levels for the firmware on a specified router (line-card chassis) that is connected to the TX Matrix Plus router.

Replace *number* with the following values depending on the LCC configuration:

- 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.
- 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.
- 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.
- 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.

**local**—(MX Series routers only) (Optional) Display the version levels of the firmware running for the local Virtual Chassis member.

**member *member-id***—(MX Series routers only) (Optional) Display the version levels of the firmware running for the specified member of the Virtual Chassis configuration. Replace *member-id* with a value of 0 or 1.

**node-device**—(QFabric systems only) (Optional) Display the version levels of the firmware running on the Node device.

**satellite [*slot-id slot-id* | *device-alias alias-name*]**—(Junos Fusion only) (Optional) Display version levels of the firmware running for the specified satellite device or devices in a Junos Fusion, or for all satellite devices if no satellite devices are specified.

**scc**—(TX Matrix router only) (Optional) Display version levels for the firmware on the TX Matrix router (switch-card chassis).

**sfc *number***—(TX Matrix Plus router only) (Optional) Display version levels for the firmware on the TX Matrix Plus router (or switch-fabric chassis). Replace *number* with 0.

**detail**—(EX3200, EX3300, EX4200, and EX4500 standalone and Virtual Chassis member switches only) (Optional) Display version levels of the firmware running on the switch for its programmable hardware components.

**Required Privilege Level** view

**Output Fields** [Table 137 on page 1651](#) lists the output fields for the show chassis firmware command. Output fields are listed in the approximate order in which they appear.

*Table 137: show chassis firmware Output Fields*

Field Name	Field Description
<b>Part</b>	(MX Series, MX2010, MX2020, and MX2008 routers) Chassis part name.
<b>Type</b>	(MX Series, MX2010, MX2020, and MX2008 routers) Type of firmware: On routers: ROM or O/S. On switches: uboot or loader.
<b>Version</b>	(MX Series, MX2010, MX2020, and MX2008 routers) Version of firmware running on the chassis part.
<b>FPC</b>	( <i>detail</i> option only) Number of FPC. For a standalone switch, the value is 0. For a Virtual Chassis configuration, value in the range of 0-9; refers to the member ID assigned to the switch.
<b>AFEB</b>	(MX104 routers) Version of the compact Forwarding Engine Board.
<b>Boot</b>	( <i>detail</i> option only) Version of the SYSPLD.
<b>PoE</b>	( <i>detail</i> option only) Version of the PoE firmware.
<b>PFE-&lt;number&gt;</b>	( <i>detail</i> option only) Version of the Packet Forwarding Engine used in the switch.
<b>PHY-</b>	( <i>detail</i> option only) Version of the physical layer device (PHY) used in the switch.
<b>microcode</b>	( <i>detail</i> option only) Microcode of the physical layer devices (PHY) used in the switch.
<b>uboot</b>	( <i>detail</i> option only) Version of the u-boot used in the switch.
<b>loader</b>	( <i>detail</i> option only) Version of the loader used in the switch.

## Sample Output

### show chassis firmware (M10 Router)

```
user@host> show chassis firmware
```

## show chassis forwarding

<b>Syntax</b>	show chassis forwarding
<b>Release Information</b>	Current—Command introduced before Junos OS Release 7.4. Now—Command introduced in Junos OS Release 7.4. Support for Branch SRX Series added in Junos OS Release 10.1
<b>Description</b>	Display status of the forwarding process (fwdd). This command is supported on Branch SRX Series Services Gateways.
<b>Options</b>	This command has no options.
<b>Required Privilege Level</b>	view
<b>List of Sample Output</b>	<a href="#">show chassis forwarding on page 1664</a>
<b>Output Fields</b>	<a href="#">Table 138 on page 1664</a> lists the output fields for the <b>show chassis forwarding</b> command. Output fields are listed in the approximate order in which they appear.

*Table 138: show chassis forwarding Output Fields*

Field Name	Field Description
<b>FWWD status</b>	<p>Forwarding status:</p> <ul style="list-style-type: none"> <li>• <b>State:</b> <ul style="list-style-type: none"> <li>• <b>Online</b>—FWDD is operational and running.</li> <li>• <b>Offline</b>—FWDD is not running.</li> </ul> </li> <li>• <b>Microkernel CPU utilization</b>—Percentage of microkernel CPU being used by the forwarding process.</li> <li>• <b>Real-time threads CPU utilization</b>—Percentage of CPU being used by the forwarding process.</li> <li>• <b>Heap utilization</b>—Percentage of heap space (dynamic memory) being used by the forwarding process. If this number exceeds 80 percent, there may be a software problem (memory leak).</li> <li>• <b>Buffer utilization</b>—Percentage of buffer space being used by the forwarding process for buffering internal messages.</li> <li>• <b>Uptime</b>—How long the forwarding process has been up and running.</li> </ul>

## Sample Output

### show chassis forwarding

```

user@host> show chassis forwarding

FWDD status:
  State                Online
  Microkernel CPU utilization  10 percent
  Real-time threads CPU utilization  4 percent

```

Heap utilization	26 percent
Buffer utilization	0 percent
Uptime:	1 day, 1 hour, 30 minutes, 11 seconds

Release Information	<p>Command introduced before Junos OS Release 7.4.</p> <p>Command introduced in Junos OS Release 9.0 for EX Series switches.</p> <p>Command introduced in Junos OS Release 11.1 for QFX Series.</p> <p>Command introduced in Junos OS Release 12.1x48 for PTX Series Packet Transport Routers.</p> <p>Command introduced in Junos OS Release 12.2 for ACX Series Universal Metro Routers.</p> <p>Command introduced in Junos OS Release 12.3 for MX2020 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 12.3 for MX2010 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 13.2 for MX104 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.</p> <p>Command introduced in Junos OS Release 17.2 for MX2008 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 17.2 for PTX10008 Routers.</p> <p>Command introduced in Junos OS Release 17.3 for MX10003 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 17.3 for MX150 Router Appliance.</p> <p>Command introduced in Junos OS Release 17.4 for MX204 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 18.1R1 for EX9251 switch.</p> <p>Command introduced in Junos OS Release 18.2 for EX9253 Switches.</p>

**Description** Display status information about the installed Flexible PIC Concentrators (FPCs) and PICs.

**Options** **none**—Display status information for all FPCs. On a TX Matrix router, display status information for all FPCs on the attached T640 routers in the routing matrix. On a TX Matrix Plus router, display status information for all FPCs on the attached routers in the routing matrix.

**NOTE:** In EX8200 switches, line cards initialize Packet Forwarding Engine during startup. If an error occurs during hardware initialization, the FPCs with bad hardware parts power down after transferring the debug information to the Routing Engine. The Routing Engine marks the FPC offline, logs the error in system log messages (/var/log/messages), and generates an alarm to inform the user.

See the following sample output:

```
user@host> show chassis fpc
```

Utilization (%)	Temp	CPU	Utilization (%)	Memory
Slot State	(C)	Total	Interrupt	DRAM (MB) Heap
Buffer

32				

---Hard FPC error---

The following sample output shows the alarm raised for the failed FPCs:

```
user@host> show chassis alarms
```

Alarm time	Class	Description
4 alarms currently active		
2011-03-24 00:52:51 UTC	Major	FPC 5 Hard errors
2011-03-24 00:52:31 UTC	Major	Fan Tray Failure
2011-03-24 00:52:31 UTC	Major	Fan Tray Failure
2011-03-24 00:51:26 UTC	Minor	Loss of communication with Backup RE

**NOTE:** On T4000 routers, when you include the enhanced-mode statement at the [edit chassis network-services] hierarchy level and reboot the system, only the T4000 Type 5 FPCs present on the router become online while the remaining FPCs are offline, and FPC misconfiguration alarms are generated. The show chassis alarm command output displays FPC misconfiguration (FPC *fpc-slot* misconfig) as the reason for the generation the alarms.

The following sample output shows the FPC status after the enhanced-mode statement is configured on the T4000 router. The T4000 Type 5 FPC present in slot 5 becomes online while the remaining FPCs are offline.

```
user@host> show chassis fpc
Utilization (%)      Temp  CPU Utilization (%)  Memory
Slot State          (C)  Total  Interrupt             DRAM (MB) Heap
Buffer
0  offline          ---FPC misconfiguration---
1  offline          ---FPC misconfiguration---
2  offline          ---FPC misconfiguration---
3  Empty
4  Empty
5  Online           66     50      0        2816      29
27
```

The following sample output shows FPC misconfiguration alarms:

```
user@host> show chassis alarms
3 alarms currently active
Alarm time          Class  Description
2011-03-24 00:52:51 PST  Major  FPC 1 misconfig
2011-03-24 00:52:31 PST  Major  FPC 2 misconfig
2011-03-24 00:52:31 PST  Major  FPC 3 misconfig
```

**detail**—(Optional) Display detailed status information for all FPCs or for the FPC in the specified slot (see *fpc-slot* or *slot*).

**all-members**—(MX Series routers and EX Series switches only) (Optional) Display status information for all FPCs on all members of the Virtual Chassis configuration.

**interconnect-device *name***—(QFabric systems only) (Optional) Display status information for all FPCs on the Interconnect device.

***fpc-slot***—(Optional) FPC slot number:

- (TX Matrix and TX Matrix Plus routers only)—On a TX Matrix router, if you specify the number of the T640 router (line-card chassis) by using the *lcc number* option

(the recommended method), replace **fpc-slot** with a value from 0 through 7. Otherwise, replace **fpc-slot** with a value from 0 through 31. Likewise, on a TX Matrix Plus router, if you specify the number of the specified router (line-card chassis) by using the **lcc number** option (the recommended method), replace **fpc-slot** with a value from 0 through 7. Otherwise, replace **fpc-slot** with a value from 0 through 31. For example, the following commands have the same result:

```
user@host> show chassis fpc detail 1 lcc 1
user@host> show chassis fpc detail 9
```

- M120 router—Replace **fpc-slot** with a value from 0 through 5.
- MX80 router—Replace **fpc-slot** with a value from 0 through 1.
- MX104 and MX104-40G routers—Replace **fpc-slot** with a value from 0 through 2.
- MX240 router—Replace **fpc-slot** with a value from 0 through 2.
- MX480 router—Replace **fpc-slot** with a value from 0 through 5.
- MX-960 router—Replace **fpc-slot** with a value from 0 through 11.
- MX2010 router—Replace **fpc-slot-number** with a value from 0 through 9.
- MX2008 router—Replace **fpc-slot-number** with a value from 0 through 9.
- MX2020 router—Replace **fpc-slot-number** with a value from 0 through 19.
- Other routers—Replace **fpc-slot** with a value from 0 through 7.
- EX Series switches:
  - EX3200 switches and EX4200 standalone switches—Replace **fpc-slot** with 0.
  - EX4200 switches in a Virtual Chassis configuration—Replace **fpc-slot** with a value from 0 through 9.
  - EX6210 switches—Replace **fpc-slot** with a value from 0 through 9.
  - EX8208 switches—Replace **fpc-slot** with a value from 0 through 7.
  - EX8216 switches—Replace **fpc-slot** with a value from 0 through 15.
  - EX9204 switches—Replace **fpc-slot** with a value from 0 through 2.
  - EX9208 switches—Replace **fpc-slot** with a value from 0 through 5.
  - EX9214 switches—Replace **fpc-slot** with a value from 0 through 11.
- QFX Series:
  - QFXSeries and OCX Series switches—Replace **fpc-slot** with 0.
  - QFabric systems—Replace **fpc-slot** with 0 through 31 on the Interconnect device.
- PTX Series Packet Transport Routers:

- PTX5000 Packet Transport Router—Replace **fpc-slot** with a value from 0 through 7.
- ACX Series Universal Metro Routers:
  - ACX1000 and ACX2000 Universal Metro Routers—Replace **fpc-slot** with 0.

**local**—(MX Series routers and EX Series switches only) (Optional) Display status information for all FPCs on the local Virtual Chassis member.

**member member-id**—(MX Series routers and EX Series switches only) (Optional) Display status information for all FPCs on the specified member of the Virtual Chassis configuration. Replace **member-id** with a value of 0 or 1.

**node-device name**—(QFabric systems only) (Optional) Display status information for each Node device. Each Node device is equivalent to an FPC.

**pic-status**—(Optional) Display status information for all PICs or for the PIC in the specified slot (see **fpc-slot**).

**NOTE:** On T1600 routers, Type 4 FPCs with ASICs based on the SL2.0 chipset do not support the 10-Gigabit Ethernet LAN/WAN PIC with SFP+ (10x10GE [LAN/WAN] SFPP). If you issue the `show chassis fpc` command with the `pic-status` option, the CLI displays the string “Not Supported” for 10x10GE (LAN/WAN) SFPP PICs installed on such FPCs. The following is a sample output:

```
user@host> show chassis fpc pic-status
Slot 0  Online      E2-FPC Type 1
  PIC 0  Online      1x G/E SFP, 1000 BASE
  PIC 1  Online      Adaptive Services-II
  PIC 2  Online      1x G/E IQ, 1000 BASE
  PIC 3  Online      1x G/E IQ, 1000 BASE
Slot 1  Online      FPC Type 3-ES
  PIC 0  Present     UNUSED- Not Supported
Slot 2  Online      FPC Type 4-ES
  PIC 0  Offline     4x OC-192 SONET XFP
  PIC 1  Present     10x10GE (LAN/WAN) SFPP- Not Supported
<<<<<<
Slot 4  Offline     FPC Type 1-ES
Slot 5  Offline     FPC Type 2-ES
Slot 6  Online      E2-FPC Type 3
  PIC 0  Online      1x OC-192 SONET XFP
  PIC 1  Online      4x OC-48 SONET
  PIC 2  Online      4x OC-48 SONET
  PIC 3  Online      MultiServices 500
Slot 7  Online      FPC Type 4-ES
  PIC 0  Online      4x 10GE (LAN/WAN) XFP
  PIC 1  Online      4x 10GE (LAN/WAN) XFP
```

In addition, an entry is logged in the system log messages (/var/log/messages) that the PIC is not supported. The following is a sample message logged in the system log:

```
Apr  5 08:47:36  router1 chassisd[2770]: CHASSISD_UNSUPPORTED_PIC:
PIC 1 in FPC 2 (type 763, version 257) is not supported
```

If you see this issue, contact Juniper Networks Technical Assistance Center (JTAC) for a possible fix. For more information about this issue and a possible solution, see [PSN-2010-03-696](#).

**NOTE:** When there is a double-bit ECC error in a network processor's memory, the Channelized OC3/STM1 (Multi-Rate) Circuit Emulation MIC with SFP or Channelized E1/T1 Circuit Emulation MIC is switched to the offline state.

```
user@host> show chassis fpc pic-status
```

```
Slot 1   Online      MPC Type 2 3D Q
PIC 0   Offline      1xC0C12/4xC0C3 CH-CE- ECC error detected
```

**lcc *number***—(TX Matrix router and TX Matrix Plus router only) (Optional) Line-card chassis number.

Replace *number* with the following values depending on the LCC configuration:

- 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.
- 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.
- 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.
- 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.

**Output Fields** Table 139 on page 1676 lists the output fields for the **show chassis fpc** command. Output fields are listed in the approximate order in which they appear.

*Table 139: show chassis fpc Output Fields*

Field Name	Field Description	Level of Output
<b>Slot</b> or <b>Slot State</b>	Slot number and state. The state can be one of the following conditions: <ul style="list-style-type: none"> <li>• <b>Dead</b>—Held in reset because of errors.</li> <li>• <b>Diag</b>—Slot is being ignored while the FPC is running diagnostics.</li> <li>• <b>Dormant</b>—Held in reset.</li> <li>• <b>Empty</b>—No FPC is present.</li> <li>• <b>Offline</b>—(PTX Series Packet Transport Routers only) One of the following two states is displayed: <ul style="list-style-type: none"> <li>• <b>FPC offlined due to unreachable destinations</b></li> <li>• <b>FPC Offlined due to degraded FPC action</b></li> </ul> </li> <li>• <b>Online</b>—FPC is online and running.</li> <li>• <b>Present</b>—FPC is detected by the chassis daemon but either is not supported by the current version of Junos OS or is inserted in the wrong slot. The output also states either <b>Hardware Not Supported</b> or <b>Hardware Not In Right Slot</b>. The FPC is coming up but not yet online.</li> <li>• <b>Probed</b>—Probe is complete; awaiting restart of the Packet Forwarding Engine.</li> <li>• <b>Probe-wait</b>—Waiting to be probed.</li> </ul>	all levels
<b>Logical slot</b>	Slot number.	all levels
<b>Temp (C) or Temperature</b>	Temperature of the air passing by the FPC, in degrees Celsius or in both Celsius and Fahrenheit.	all levels all levels
<b>Temperature (PTX Series)</b>	On PTX Series Packet Transport Routers, temperature details are provided in degrees Celsius and Fahrenheit. Output includes: <ul style="list-style-type: none"> <li>• Temperature (PMB)—Temperature of the air passing by the Processor Mezzanine Board (PMB) at the bottom of the FPC.</li> <li>• Temperature (Intake)—Temperature of the air flowing into the chassis.</li> <li>• Temperature (Exhaust)—Exhaust temperatures for multiple zones (Exhaust A and Exhaust B).</li> <li>• Temperature (TLn)—Temperature of the specified Lookup ASIC (TL) of the packet forwarding engine on the FPC.</li> <li>• Temperature (TQn)—Temperature of the specified Queuing and Memory Interface ASIC (TQ) of the packet forwarding engine on the FPC.</li> </ul>	detail
<b>Total CPU Utilization (%)</b>	Total percentage of CPU being used by the FPC's processor.	all levels
<b>Interrupt CPU Utilization (%)</b>	Of the total CPU being used by the FPC's processor, the percentage being used for interrupts.	none specified

Table 139: show chassis fpc Output Fields (continued)

Field Name	Field Description	Level of Output
<b>1 min CPU utilization (%)</b>  <i>NOTE:</i> Supported only on MX240, MX480, MX960, MX2010, MX2020, and MX2008.	Information about the Routing Engine's CPU utilization in the past 1 minute.	none specified
<b>5 min CPU utilization (%)</b>  <i>NOTE:</i> Supported only on MX240, MX480, MX960, MX2010, MX2020, and MX2008.	Information about the Routing Engine's CPU utilization in the past 5 minutes.	none specified
<b>15 min CPU utilization (%)</b>  <i>NOTE:</i> Supported only on MX240, MX480, MX960, MX2010, MX2020, and MX2008.	Information about the Routing Engine's CPU utilization in the past 15 minutes.	none specified
<b>Memory DRAM (MB)</b>	Total DRAM, in megabytes, available to the FPC's processor.	none specified
<b>Heap Utilization (%)</b>	Percentage of heap space (dynamic memory) being used by the FPC's processor. If this number exceeds 80 percent, there may be a software problem (memory leak).  <i>NOTE:</i> On MX Series routers and EX Series switches in a broadband edge environment, heap utilization levels higher than 70 percent can affect unified ISSU, router stability, or scaling capability.	none specified
<b>Buffer Utilization (%)</b>	Percentage of buffer space being used by the FPC's processor for buffering internal messages.	none specified
<b>Total CPU DRAM</b>	Amount of DRAM available to the FPC's CPU.	detail
<b>Total RLDRAM</b>	Amount of reduced latency dynamic random access memory (RLDRAM) available to the FPC CPU.	detail
<b>Total DDR DRAM</b>	Amount of double data rate dynamic random access memory (DDR DRAM) available to the FPC CPU.	detail
<b>Total SRAM</b>	Amount of static RAM (SRAM) used by the FPC's CPU.	detail
<b>Total SDRAM</b>	Total amount of memory used for storing packets and notifications.	detail

Table 139: show chassis fpc Output Fields (continued)

Field Name	Field Description	Level of Output
I/O Manager ASICs information	I/O Manager version number, manufacturer, and part number.	detail
Start time	Time when the Routing Engine detected that the FPC was running.	detail
Uptime	How long the Routing Engine has been connected to the FPC and, therefore, how long the FPC has been up and running.	detail
PIC type	(pic-status output only) Type of PIC.	none specified
GNF (Node slicing)	GNF identifier associated with each line card.  (pic-status output only) GNF identifier associated with each PIC.	all levels

## Sample Output

### show chassis fpc (EX6210 Switch)

```
user@switch> show chassis fpc
```

Slot	State	Temp (C)	CPU Utilization (%) Total	Interrupt	Memory DRAM (MB)	Utilization (%) Heap	Buffer
0	Empty						
1	Online	7	5	0	1024	0	32
2	Empty

2	Online	35	0	0	8	0	3
3	Empty	0	0	0	0	0	0

### show chassis fpc detail (M Series Routers)

```
user@host> show chassis fpc detail 1
```

```
Slot 1 information:
  State                Online
  Temperature          48 degrees C
  Total CPU DRAM       32 MB
  Total SRAM           4 MB
  Total SDRAM          256 MB
  I/O Manager ASICs information Version 2.0, Foundry IBM, Part number 0
  I/O Manager ASICs information Version 2.0, Foundry IBM, Part number 0
  Start time           2000-02-08 02:18:49 UTC
  Uptime               14 hours, 41 minutes, 41 seconds
```

### show chassis fpc detail (MX150)

```
user@host> show chassis fpc detail
```

```
Slot 0 information:
  State                Online
  Temperature          42 degrees C / 107 degrees F
  Total CPU DRAM       2048 MB
  Total RLDRAM         10 MB
  Total DDR DRAM       0 MB
  Start time           2017-04-04 04:44:04 PDT
  Uptime               7 days, 19 hours, 45 minutes, 50 seconds
```

### show chassis fpc detail (MX80 Router)

```
user@host> show chassis fpc detail
```

```
Slot 0 information:
  State                Online
  Temperature          47 degrees C / 116 degrees F
  Total CPU DRAM       1024 MB
  Total SRAM           331 MB
  Total SDRAM          1280 MB
  Start time           2010-02-08 12:25:33 PST
  Uptime               2 hours, 13 minutes, 19 seconds
Slot 1 information:
  State                Online
  Temperature          47 degrees C / 116 degrees F
  Total CPU DRAM       1024 MB

## show chassis fpc errors

**Syntax** `show chassis fpc errors;`  
`<fpc-slot scope error-scope category category>`

**Release Information** Command introduced in Junos OS Release 12.3 for the T Series routers.  
 Command introduced in Junos OS Release 13.3 for the PTX Series routers.  
 Command introduced in Junos OS Release 14.2 for the MX240, MX480, MX960, and MX2020 routers.  
 The `fpc-slot`, `scope`, and `category` options introduced in Junos OS Release 18.1R1.

**Description** Display chassis error information including FPC number, severity of error, error scope, category, number of error occurred, cleared, threshold, and corresponding action.

Error Severity Level	Default Threshold	Default Action
Fatal	1	Restart the FPC
Major	1	Get the current state of the FPC and raise an alarm.
Minor	10	Write a log for the event.

**Options** `fpc-slot`—Show the errors by FPC.

`scope error-scope`—Filter the errors by error scope. An error scope provides a deeper level of classification of the errors. The available scopes are `pfe` and `board`. Example: `show chassis fpc errors 2 scope pfe`

`category category`—Filter the errors by error category. An error category is used to categorize errors into various subgroups under the scope level. Therefore, the option `category` needs to be used under the `scope` filter. Example: `show chassis fpc errors 2 scope pfe category io`. Some of the categories are `functional`, `io`, `memory`, `processing`, `storage`, and `switch`.

**Required Privilege Level** view

**Related Documentation**

**List of Sample Output** [show chassis fpc errors on page 1719](#)  
[show chassis fpc errors \(output filtered by error scope\) on page 1721](#)  
[show chassis fpc errors \(output filtered by error category\) on page 1721](#)  
[show chassis fpc errors \(QFX10002, QFX10008, and QFX10016 Switches\) on page 1721](#)

**Output Fields** Table 140 on page 1719 lists the output fields for the **show chassis fpc errors** command. Output fields are listed in the approximate order in which they appear.

*Table 140: show chassis fpc errors Output Fields*

Field Name	Field Description
FPC	The FPC number.
Level	The severity of the error. It can be configured as follows: <ul style="list-style-type: none"> <li>• <b>fatal</b>—Fatal error on FPC</li> <li>• <b>major</b>—Major error on FPC</li> <li>• <b>minor</b>—Minor error on FPC</li> </ul>
Occurred	Number of error instances occurred.
Cleared	Number of error instances cleared.
Threshold	Configured threshold value. The associated detection and recovery actions are triggered when this threshold value is crossed.
Action	The detection and recovery actions that are triggered when the threshold value is crossed. <ul style="list-style-type: none"> <li>• Restart the FPC.</li> <li>• Get the current state of the FPC and raise an alarm.</li> <li>• Write a log for the event.</li> </ul>

## show chassis fpc-feb-connectivity

<b>Syntax</b>	show chassis fpc-feb-connectivity
<b>Release Information</b>	Command introduced in Junos OS Release 8.0.
<b>Description</b>	(M120 router only) Display the Flexible PIC Concentrator (FPC) and Forwarding Engine Board (FEB) mapping and their respective states.
<b>Options</b>	This command has no options.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">request chassis fpc on page 858</a></li> <li>• <a href="#">show chassis fpc on page 1666</a></li> <li>• <a href="#">show chassis fabric fpcs on page 1412</a></li> <li>• <a href="#">Configuring the Junos OS to Resynchronize FPC Sequence Numbers with Active FPCs when an FPC Comes Online on page 479</a></li> <li>• <a href="#">MX960 Flexible PIC Concentrator Description</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">show chassis fpc-feb-connectivity on page 1724</a>
<b>Output Fields</b>	<a href="#">Table 141 on page 1723</a> lists the output fields for the <b>show chassis fpc-feb-connectivity</b> command. Output fields are listed in the approximate order in which they appear.

*Table 141: show chassis fpc-feb-connectivity Output Fields*

Field Name	Field Description
FPC	Slot number of the Flexible PIC Concentrator (FPC).
FPC type	Type of FPC: <b>Type 1</b> , <b>Type 2</b> , <b>Type 3</b> , or <b>cFPC</b> .

Table 141: show chassis fpc-feb-connectivity Output Fields (continued)

Field Name	Field Description
<b>FPC state</b>	<p>State of the FPC. State can be any of the following:</p> <ul style="list-style-type: none"> <li>• <b>Announce offline</b>—Intermediate state where FPC is going down but is not offline and the Chassis manager acknowledges that the FPC is in the process of going offline.</li> <li>• <b>Announce online</b>—Intermediate state where FPC is coming up but is not online and the Chassis manager acknowledges that the FPC is in the process of coming online.</li> <li>• <b>Empty</b>—No FPC is present.</li> <li>• <b>Offline</b>—FPC is powered down.</li> <li>• <b>Online</b>—FPC is online and running.</li> <li>• <b>Present</b>—The chassis process has detected the FPC, but the FPC is either not supported by the current version of the Junos OS or FPC is coming up but is not online.</li> <li>• <b>Ready</b>—FPC is in transition state.</li> </ul>
<b>Connected FEB</b>	Slot number of the Forwarding Engine Board (FEB) connected to the FPC or <b>None</b> if the FPC is not connected to a FEB.
<b>FEB state</b>	<p>State of the FEB. State can be any of the following:</p> <ul style="list-style-type: none"> <li>• <b>Announce offline</b>—Intermediate state where FEB is going down but is not offline and the Chassis manager acknowledges that the FEB is in the process of going offline.</li> <li>• <b>Announce online</b>—Intermediate state where FEB is coming up but is not online and the Chassis manager acknowledges that the FEB is in the process of coming online.</li> <li>• <b>Empty</b>—No FEB is present.</li> <li>• <b>Offline</b>—FEB is powered down.</li> <li>• <b>Online</b>—FEB is online and running.</li> <li>• <b>Present</b>—The chassis process has detected the FEB, but the FEB is either not supported by the current version of the Junos OS or FEB is coming up but is not online.</li> <li>• <b>Ready</b>—FEB is in transition state.</li> </ul>
<b>Link status</b>	<p>Status of the link connecting the R-FEB and R-FPC:</p> <ul style="list-style-type: none"> <li>• <b>Error</b></li> <li>• <b>Misconfiguration</b>—Configuration between the R-FEB and the F-FPC is incorrect.</li> <li>• <b>OK</b></li> </ul>

## Sample Output

### show chassis fpc-feb-connectivity

```
user@host> show chassis fpc-feb-connectivity
```

<b>Description</b>	<p>Display a list of all Flexible PIC Concentrators (FPCs) and PICs installed in the router or switch chassis, including the hardware version level and serial number.</p> <p>In the EX Series switch command output, FPC refers to the following:</p> <ul style="list-style-type: none"> <li>On EX2200 switches, EX3200 switches, EX4200 standalone switches, and EX4500 switches—Refers to the switch; FPC <i>number</i> is always 0.</li> <li>On EX4200 switches in a Virtual Chassis configuration—Refers to the member of a Virtual Chassis; FPC <i>number</i> equals the member ID, from 0 through 9.</li> <li>On EX8208 and EX8216 switches—Refers to a line card; FPC <i>number</i> equals the slot number for the line card.</li> </ul> <p>On QFX3500, QFX5100, and OCX Series standalone switches, and PTX1000 routers both the FPC and FPC <i>number</i> are always 0.</p> <p>On T4000 Type 5 FPCs, there are no <b>top temperature sensor</b> or <b>bottom temperature sensor</b> parameters. Instead, <b>fan intake temperature sensor</b> and <b>fan exhaust temperature sensors</b> parameters are displayed.</p> <p>Starting from Junos OS Release 11.4, the output of the <b>show chassis hardware models</b> operational mode command displays the enhanced midplanes FRU model numbers (CHAS-BP3-MX240-S, CHAS-BP3-MX480-S or CHAS-BP3-MX960-S) based on the router. Prior to release 11.4, the FRU model numbers are left blank when the router has</p>

enhanced midplanes. Note that the enhanced midplanes are introduced through the Junos OS Release 13.3, but can be supported on all Junos OS releases.

Starting with Junos OS Release 14.1, the output of the **show chassis hardware detail | extensive | clei-models | models** operational mode command displays the new DC power supply module (PSM) and power distribution unit (PDU) that are added to provide power to the high-density FPC (FPC2-PTX-P1A) and other components in a PTX5000 Packet Transport Router.

**Options none**—Display information about hardware. For a TX Matrix router, display information about the TX Matrix router and its attached T640 routers. For a TX Matrix Plus router, display information about the TX Matrix Plus router and its attached routers.

**clei-models**—(Optional) Display Common Language Equipment Identifier (CLEI) barcode and model number for orderable field-replaceable units (FRUs).

**detail**—(Optional) Include RAM and disk information in output.

**extensive**—(Optional) Display ID EEPROM information.

**all-members**—(MX Series routers only) (Optional) Display hardware-specific information for all the members of the Virtual Chassis configuration.

**interconnect-device *name***—(QFabric systems only) (Optional) Display hardware-specific information for the Interconnect device.

**lcc *number***—(TX Matrix routers and TX Matrix Plus router only) (Optional) On a TX Matrix router, display hardware information for a specified T640 router (line-card chassis) that is connected to the TX Matrix router. On a TX Matrix Plus router, display hardware information for a specified router (line-card chassis) that is connected to the TX Matrix Plus router.

Replace *number* with the following values depending on the LCC configuration:

- 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.
- 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.
- 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.
- 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.

**local**—(MX Series routers only) (Optional) Display hardware-specific information for the local Virtual Chassis members.

**member *member-id***—(MX Series routers and EX Series switches) (Optional) Display hardware-specific information for the specified member of the Virtual Chassis configuration. Replace *member-id* variable with a value 0 or 1.

**models**—(Optional) Display model numbers and part numbers for orderable FRUs and, for components that use ID EEPROM format v2, the CLEI code.

**node-device *name***—(QFabric systems only) (Optional) Display hardware-specific information for the Node device.

**satellite [*slot-id slot-id* | device-alias *alias-name*]**—(Junos Fusion only) (Optional) Display hardware information for the specified satellite device in a Junos Fusion, or for all satellite devices in the Junos Fusion if no satellite devices are specified.

**scc**—(TX Matrix router only) (Optional) Display hardware information for the TX Matrix router (switch-card chassis).

**sfc *number***—(TX Matrix Plus router only) (Optional) Display hardware information for the TX Matrix Plus router (switch-fabric chassis). Replace *number* variable with 0.

**Additional Information** The **show chassis hardware detail** command now displays DIMM information for the following Routing Engines, as shown in [Table 142 on page 1730](#).

**Table 142: Routing Engines Displaying DIMM Information**

Routing Engines	Routers
RE-S-1800x2 and RE-S-1800x4	MX240, MX480, and MX960 routers
RE-A-1800x2	M120 and M320 routers

In Junos OS Release 11.4 and later, the output for the **show chassis hardware models** operational mode command for MX Series routers display the enhanced midplanes FRU model numbers—CHAS-BP3-MX240-S, CHAS-BP3-MX480-S, or CHAS-BP3-MX960-S—based on the router. In releases before Junos OS Release 11.4, the FRU model numbers are left blank when the router has enhanced midplanes. Note that the enhanced midplanes are introduced through Junos OS Release 13.3, but can be supported on all Junos OS releases.

Starting with Junos OS Release 17.3R1, the output of the **show chassis hardware** command displays the mode in which vMX is running (performance mode or lite mode) in the part number field for the FPC. **RIOT-PERF** indicates performance mode and **RIOT-LITE** indicates lite mode.

**Output Fields** [Table 143 on page 1736](#) lists the output fields for the **show chassis hardware** command. Output fields are listed in the approximate order in which they appear.

Table 143: show chassis hardware Output Fields

Field Name	Field Description	Level of Output
<b>Item</b>	<p>Chassis component:</p> <ul style="list-style-type: none"> <li>(EX Series switches)—Information about the chassis, Routing Engine (SRE and Routing Engine modules in EX8200 switches), power supplies, fan trays, and LCD panel. Also displays information about Flexible PIC Concentrators (FPCs) and associated Physical Interface Cards (PICs). Information about the backplane, midplane, and SIBs (SF modules) is displayed for EX8200 switches.</li> <li>(MX Series routers and EX Series switches)—Information about the backplane, Routing Engine, Power Entry Modules (PEMs), and fan trays. Also displays information about Flexible PIC Concentrators (FPCs) and associated Physical Interface Cards (PICs), Modular Port Concentrators (MPCs) and associated Modular Interface Cards (MICs), or Dense Port Concentrators (DPCs). MX80 routers have a single Routing Engine and a built-in Packet Forwarding Engine that attaches directly to MICs. The Packet Forwarding Engine has two “pseudo” FPCs (FPC 0 and FPC1). MX80 routers also have a Forwarding Engine Board (FEB). MX104 routers have a built-in Packet forwarding Engine and a Forwarding Engine Board (FEB). The Packet Forwarding Engine of the MX104 router has three “pseudo” FPCs (FPC0, FPC1, and FPC2).</li> <li>(M Series routers, except for the M320 router)—Information about the backplane; power supplies; fan trays; Routing Engine; maxicab (the connection between the Routing Engine and the backplane, for the M40 router only); SCB, SSB, SFM, or FEB; MCS and PCG (for the M160 router only); each FPC and PIC; and each fan, blower, and impeller.</li> <li>(M120, M320, and T Series routers)—Information about the backplane, power supplies, fan trays, midplane, FPM (craft interface), CIP, PEM, SCG, CB, FPC, PIC, SFP, SPMB, and SIB.</li> <li>(QFX Series)—Information about the chassis, Pseudo CB, Routing Engine, power supplies, fan trays, Interconnect devices, and Node devices. Also displays information about Flexible PIC Concentrators (FPCs) and associated Physical Interface Cards (PICs).</li> <li>(PTX Series)—Information about the chassis, midplane, craft interface (FPM), power distribution units (PDUs) and Power Supply Modules (PSMs), Centralized Clock Generators (CCGs), Routing Engines, Control Boards (CBs) and Switch Processor Mezzanine Boards (SPMBs), Flexible PIC Concentrators (FPCs), PICs, Switch Interface Boards (SIBs), and fan trays (vertical and horizontal).</li> <li>(MX2010, MX2020, and MX2008 routers)—Information about the chassis, midplane, craft interface (FPM), power midplane (PMP), Power Supply Modules (PSMs), Power Distribution Modules (PDMs), Routing Engines, Control Boards (CBs) and Switch Processor Mezzanine Boards (SPMBs), Switch Fabric Boards (SFBs), Flexible PIC Concentrators (FPCs), PICs, adapter cards (ADCs) and fan trays.</li> <li>(vMX routers)—Information about the chassis, midplane, Routing Engines, and Control Boards (CBs). Also displays information about Flexible PIC Concentrators (FPCs) and associated Modular Interface Cards (MICs) and Physical Interface Cards (PICs).</li> </ul>	All levels
<b>Version</b>	Revision level of the chassis component.	All levels
<b>Part number</b>	Part number of the chassis component.	All levels

Table 143: show chassis hardware Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Serial number</b>	Serial number of the chassis component. The serial number of the backplane is also the serial number of the router chassis. Use this serial number when you need to contact Juniper Networks Customer Support about the router or switch chassis.	All levels
<b>Assb ID or Assembly ID</b>	( <b>extensive</b> keyword only) Identification number that describes the FRU hardware.	<b>extensive</b>
<b>Assembly Version</b>	( <b>extensive</b> keyword only) Version number of the FRU hardware.	<b>extensive</b>
<b>Assembly Flags</b>	( <b>extensive</b> keyword only) Flags.	<b>extensive</b>
<b>FRU model number</b>	( <b>clei-models</b> , <b>extensive</b> , and <b>models</b> keyword only) Model number of the FRU hardware component.	none specified
<b>CLEI code</b>	( <b>clei-models</b> and <b>extensive</b> keyword only) Common Language Equipment Identifier code. This value is displayed only for hardware components that use ID EEPROM format v2. This value is not displayed for components that use ID EEPROM format v1.	none specified
<b>EEPROM Version</b>	ID EEPROM version used by the hardware component: <b>0x00</b> (version 0), <b>0x01</b> (version 1), or <b>0x02</b> (version 2).	<b>extensive</b>
<b>Description</b>	<p>Brief description of the hardware item:</p> <ul style="list-style-type: none"> <li>• Type of power supply.</li> <li>• Type of PIC. If the PIC type is not supported on the current software release, the output states <b>Hardware Not Supported</b>.</li> <li>• Type of FPC: <b>FPC Type 1</b>, <b>FPC Type 2</b>, <b>FPC Type 3</b>, <b>FPC Type 4</b>, or <b>FPC TypeOC192</b>.</li> </ul> <p>On EX Series switches, a brief description of the FPC.</p> <p>The following list shows the PIM abbreviation in the output and the corresponding PIM name.</p> <ul style="list-style-type: none"> <li>• <b>2x FE</b>—Either two built-in Fast Ethernet interfaces (fixed PIM) or dual-port Fast Ethernet PIM</li> <li>• <b>4x FE</b>—4-port Fast Ethernet ePIM</li> <li>• <b>1x GE Copper</b>—Copper Gigabit Ethernet ePIM (one 10-Mbps, 100-Mbps, or 1000-Mbps port)</li> <li>• <b>1x GE SFP</b>—SFP Gigabit Ethernet ePIM (one fiber port)</li> <li>• <b>2x Serial</b>—Dual-port serial PIM</li> <li>• <b>2x T1</b>—Dual-port T1 PIM</li> <li>• <b>2x E1</b>—Dual-port E1 PIM</li> <li>• <b>2x CT1E1</b>—Dual-port channelized T1/E1 PIM</li> <li>• <b>1x T3</b>—T3 PIM (one port)</li> <li>• <b>1x E3</b>—E3 PIM (one port)</li> <li>• <b>4x BRI S/T</b>—4-port ISDN BRI S/T PIM</li> <li>• <b>4x BRI U</b>—4-port ISDN BRI U PIM</li> <li>• <b>1x ADSL Annex A</b>—ADSL 2/2+ Annex A PIM (one port, for POTS)</li> </ul>	All levels

Table 143: show chassis hardware Output Fields (continued)

Field Name	Field Description	Level of Output
	<ul style="list-style-type: none"> <li>• <b>1x ADSL Annex B</b>—ADSL 2/2+ Annex B PIM (one port, for ISDN)</li> <li>• <b>2x SHDSL (ATM)</b>—G SHDSL PIM (2-port two-wire module or 1-port four-wire module)</li> <li>• <b>1x TGM550</b>—TGM550 Telephony Gateway Module (Avaya VoIP gateway module with one console port, two analog <b>LINE</b> ports, and two analog <b>TRUNK</b> ports)</li> <li>• <b>1x DS1 TIM510</b>—TIM510 E1/T1 Telephony Interface Module (Avaya VoIP media module with one E1 or T1 trunk termination port and ISDN PRI backup)</li> <li>• <b>4x FXS, 4x FXO, TIM514</b>—TIM514 Analog Telephony Interface Module (Avaya VoIP media module with four analog <b>LINE</b> ports and four analog <b>TRUNK</b> ports)</li> <li>• <b>4x BRI TIM521</b>—TIM521 BRI Telephony Interface Module (Avaya VoIP media module with four ISDN BRI ports)</li> <li>• <b>Crypto Accelerator Module</b>—For enhanced performance of cryptographic algorithms used in IP Security (IPsec) services</li> <li>• <b>MPC M16x10GE</b>—16-port 10-Gigabit Module Port Concentrator that supports SFP+ optical transceivers. (Not on EX Series switches.)</li> <li>• For hosts, the Routing Engine type.</li> <li>• For small form-factor pluggable transceiver (SFP) modules, the type of fiber: <b>LX, SX, LH, or T</b>.</li> <li>• LCD description for EX Series switches (except EX2200 switches).</li> <li>• <b>MPC2</b>—1-port MPC2 that supports two separate slots for MICs.</li> <li>• <b>MPC3E</b>—1-port MPC3E that supports two separate slots for MICs (MIC-3D-1X100GE-CFP and MIC-3D-20GE-SFP) on MX960, MX480, and MX240 routers. The MPC3E maps one MIC to one PIC (1 MIC, 1 PIC), which differs from the mapping of legacy MPCs.</li> <li>• 100GBASE-LR4, pluggable CFP optics</li> <li>• Supports the Enhanced MX Switch Control Board with fabric redundancy and existing SCBs without fabric redundancy.</li> <li>• Interoperates with existing MX Series line cards, including Flexible Port Concentrators (FPC), Dense Port Concentrators (DPCs), and Modular Port Concentrators (MPCs).</li> <li>• <b>MPC4E</b>—Fixed configuration MPC4E that is available in two flavors: MPC4E-3D-32XGE-SFPP and MPC4E-3D-2CGE-8XGE on MX2020, MX960, MX480, and MX240 routers.</li> <li>• LCD description for MX Series routers</li> </ul>	

## Sample Output

## show chassis in-service-upgrade

<b>Syntax</b>	<code>show chassis in-service-upgrade</code>
<b>Syntax (EX9253 Switches)</b>	<code>show chassis in-service-upgrade</code>
<b>Release Information</b>	<p>Command introduced in Junos OS Release 9.0.</p> <p>Command introduced in Junos OS Release 12.3R2, 13.1R2, and 13.2R1 for TX Matrix Plus routers.</p> <p>Command introduced in Junos OS Release 12.3 for MX2010 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 12.3 for MX2020 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 13.2 for PTX5000 routers.</p> <p>Command introduced in Junos OS Release 13.2X51-D15 for the QFX Series.</p> <p>Command introduced in Junos OS Release 17.2 for MX2008 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 18.2 for EX9253 Switches.</p>
<b>Description</b>	<p>Display the status of Flexible PIC Concentrators (FPCs) and their corresponding PICs after the most recent unified in-service software upgrade (ISSU). This command must be issued on the master Routing Engine.</p>
	<p> <b>NOTE:</b> Only Intelligent Queuing (IQ) PICs are displayed by this command output. Unified ISSU status for other PIC types is controlled internally by the FPC.</p>
<b>Options</b>	This command has no options.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <i>request system software abort</i></li> <li>• <i>request system software in-service-upgrade</i></li> <li>• <i>Getting Started with Unified In-Service Software Upgrade</i></li> <li>• <i>Example: Performing a Unified ISSU</i></li> </ul>

## show chassis lccs

<b>Syntax</b>	show chassis lccs
<b>Release Information</b>	Command introduced before Junos OS Release 7.4.
<b>Description</b>	(TX Matrix and TX Matrix Plus routers only ) On a TX Matrix router, display the status of all T640 LCC connected to the TX Matrix router. On a TX Matrix Plus router, display the status of all LCC connected to the TX Matrix Plus router.
<b>Options</b>	This command has no options.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">request chassis lcc on page 868</a></li> <li>• <i>Configuring Line-Card Upgrade Groups for Nonstop Software Upgrade</i></li> <li>• <i>fpc</i></li> </ul>
<b>List of Sample Output</b>	<a href="#">show chassis lccs on page 1997</a> <a href="#">show chassis lccs (TX Matrix Plus router with 3D SIBs) on page 1998</a>
<b>Output Fields</b>	Table 145 on page 1997 lists the output fields for the <b>show chassis lccs</b> command. Output fields are listed in the approximate order in which they appear.

*Table 145: show chassis lccs Output Fields*

Field Name	Field Description
<b>Slot</b>	LCC slot number.
<b>State</b>	LCC status: <ul style="list-style-type: none"> <li>• <b>Online</b>—LCC is online and running.</li> <li>• <b>Offline</b>—LCC is powered down.</li> <li>• <b>Empty</b>—No LCC is present.</li> </ul>
<b>Uptime</b>	How long the LCC has been up and running.

## Sample Output

### show chassis lccs

```
user@host> show chassis lccs
```

Slot	State	Uptime
0	Online	3 minutes, 17 seconds
1	Empty	
2	Online	3 minutes, 23 seconds
3	Empty	

#### show chassis lccs (TX Matrix Plus router with 3D SIBs)

```
user@host> show chassis lccs
```

Slot	State	Uptime
0	Offline	
1	Empty	
2	Online	1 day, 4 hours, 57 minutes, 7 seconds
3	Empty	
4	Online	1 day, 4 hours, 56 minutes, 58 seconds
5	Empty	
6	Empty	
7	Online	3 hours, 45 minutes, 41 seconds

## show chassis lcc-mode

**Syntax** `show chassis lcc-mode`

**Release Information** Command introduced in Junos OS Release 13.1.

**Description** (TX Matrix Plus routers only) Display the mode in which LCCs are connected to a TX Matrix Plus router.

**NOTE:** This command is supported only on TX Matrix Plus routers with 3D SIBs.

**Options** This command has no options.

**Required Privilege Level** view

**Related Documentation**

**Output Fields** [Table 146 on page 1999](#) lists the output fields for the **show chassis lcc-mode** command. Output fields are listed in the approximate order in which they appear.

*Table 146: show chassis lcc-mode Output Fields*

Field Name	Field Description
Slot	The LCC number.
LCC-mode	Displays the mode of the LCC: <ul style="list-style-type: none"> <li>• <b>T1600</b>—LCC functions as a T1600 router.</li> <li>• <b>T4000</b>—LCC functions as a T4000 router.</li> <li>• <b>EMPTY</b>—LCC is not configured as either a T1600 or a T4000 router.</li> </ul>

## Sample Output

[show chassis lcc-mode \(TX Matrix Plus Router with 3D SIBs\)](#)

```
user@host> show chassis lcc-mode
```

Slot	LCC-mode
0	T4000
1	EMPTY
2	T4000
3	EMPTY
4	T4000
5	EMPTY
6	T1600
7	EMPTY

## show chassis location

<b>List of Syntax</b>	<a href="#">Syntax on page 2001</a> <a href="#">Syntax (TX Matrix Router) on page 2001</a> <a href="#">Syntax (TX Matrix Plus Router) on page 2001</a> <a href="#">Syntax (MX Series Router) on page 2001</a> <a href="#">Syntax (QFX Series) on page 2001</a> <a href="#">Syntax (OCX Series) on page 2001</a>
<b>Syntax</b>	show chassis location
<b>Syntax (TX Matrix Router)</b>	show chassis location <fpc   interface (by-name <i>name</i>   by-slot fpc number lcc number)   lcc number   scc>
<b>Syntax (TX Matrix Plus Router)</b>	show chassis location <fpc   interface (by-name <i>name</i>   by-slot fpc number lcc number)   lcc number   sfc number>
<b>Syntax (MX Series Router)</b>	show chassis location <all-members> <local> <member <i>member-id</i> >
<b>Syntax (QFX Series)</b>	show chassis location <interconnect-device <i>name</i> > <node-device <i>name</i> >
<b>Syntax (OCX Series)</b>	show chassis location
<b>Release Information</b>	Command introduced before Junos OS Release 7.4. Command introduced in Junos OS Release 9.0 for EX Series switches. <b>sfc</b> option introduced for the TX Matrix Plus router in Junos OS Release 9.6. Command introduced in Junos OS Release 11.1 for the QFX Series. Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.
<b>Description</b>	Display the physical location of the chassis. This command can only be used on the master Routing Engine.
<b>Options</b>	<b>none</b> —Display all information about the physical location of the chassis. On a TX Matrix router, display all information about the physical location of the TX Matrix router and its attached T640 routers. On a TX Matrix Plus router, display all information about the physical location of the TX Matrix Plus router and its attached routers.

**all-members**—(MX Series routers only) (Optional) Display the physical location of the chassis for all the member routers in the Virtual Chassis configuration.

**fpc**—(TX Matrix router and TX Matrix Plus router only) (Optional) Display the physical location of all Flexible PIC Concentrators (FPCs).

**interconnect-device *name***—(QFabric systems only) (Optional) Display the physical location of the Interconnect device.

**interface by-name *name***—(TX Matrix and TX Matrix Plus routers only) (Optional) Display the physical location of a specified interface name. On a TX Matrix router, this option displays the FPC number and T640 router (line-card chassis) number associated with the specified interface. On a TX Matrix Plus router, this option displays the FPC number and router (line-card chassis) number associated with the specified interface.

**interface by-slot *fpc number lcc number***—(TX Matrix and TX Matrix Plus router only) (Optional) On a TX Matrix router, display the global FPC number of an interface by specifying its local FPC number and T640 router (line-card chassis) number. On a TX Matrix Plus router, display the global FPC number of an interface by specifying its local FPC number and router (line-card chassis) number.

- The global FPC number is the FPC slot number when all the FPC slots in the routing matrix are considered: **0** through **31**. On TX Matrix Plus router with 3D SIBs, the value is **0** through **63**. The local FPC number is the FPC slot number on a particular T640 router.
- For **fpc**, replace *number* with a value from **0** through **7**.
- For **lcc**, replace *number* with a value from **0** through **7**.

**lcc *number***—(TX Matrix and TX Matrix Plus routers only) (Optional) On a TX Matrix router, display the physical location of a specified T640 router (line-card chassis) that is connected to a TX Matrix router. On a TX Matrix Plus router, display the physical location of a specified router (line-card chassis) that is connected to a TX Matrix Plus router.

Replace *number* with the following values depending on the LCC configuration:

- 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.
- 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.
- 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.
- 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.

**local**—(MX Series routers only) (Optional) Display the physical location of the chassis for the local Virtual Chassis member.

**member *member-id***—(MX Series routers only) (Optional) Display the physical location of the chassis for the specified member of the Virtual Chassis configuration. Replace *member-id* with a value of 0 or 1.

**node-device *name***—(QFabric systems only) (Optional) Display the physical location of the Node device.

**scc**—(TX Matrix routers only) (Optional) Display the physical location of the TX Matrix router (switch-card chassis).

**sfc**—(TX Matrix Plus routers only) (Optional) Display the physical location of the TX Matrix Plus router (or switch-fabric chassis).

**Required Privilege Level** view

**Related Documentation**

- *Displaying Chassis Physical Locations for a Routing Matrix with a TX Matrix Plus Router*

**List of Sample Output**

[show chassis location on page 2004](#)  
[show chassis location fpc \(TX Matrix Router\) on page 2004](#)  
[show chassis location interface by-slot \(TX Matrix Router\) on page 2004](#)

[show chassis location \(QFX Series and OCX Series\) on page 2004](#)  
[show chassis location \(QFabric Systems\) on page 2005](#)

**Output Fields** [Table 147 on page 2003](#) lists the output fields for the **show chassis location** command. Output fields are listed in the approximate order in which they appear.

*Table 147: show chassis location Output Fields*

Field Name	Field Description
country-code	Country code information.
postal-code	Postal code information.
Building	Building information.
Floor	Floor information.
Global FPC	Global FPC number. The FPC slot number, when all FPC slots in the routing matrix are considered. The range of values is 0 through 31. On TX Matrix Plus router with 3D SIBs the value is 0 through 63.
LATA	Local access transport area information.

*Table 147: show chassis location Output Fields (continued)*

Field Name	Field Description
LCC	Line-card chassis number. On a TX Matrix router, the number of a particular T640 router connected to the TX Matrix router. On a TX Matrix Plus router, the number of a particular router connected to the TX Matrix Plus router.
Local FPC	Local FPC number. On a TX Matrix router, the FPC slot number on a particular T640 router. On a TX Matrix Plus router, the FPC slot number on a particular router.

## Sample Output

### show chassis location

```
user@host> show chassis location
country-code: US
postal-code: 94404
Building: Building 2, Floor: 2
```

### show chassis location fpc (TX Matrix Router)

```
user@host> show chassis location fpc
Global FPC    LCC    Local FPC
    17         2        1
    21         2        5
```

### show chassis location interface by-slot (TX Matrix Router)

```
user@host> show chassis location interface by-slot fpc 1 lcc 1
Global FPC: 9
```

### show chassis location fpc (TX Matrix Plus Router)

```
user@host> show chassis location fpc
Global FPC    LCC    Local FPC
    0         0        0
    1         0        1
```

### show chassis location interface by-slot (TX Matrix Plus Router)

```
user@host> show chassis location interface by-slot fpc 2 lcc 1
Global FPC: 10
```

### show chassis location (QFX Series and OCX Series)

```
user@switch> show chassis location
```

```
country-code: US  
postal-code: 94404  
Building: Building 2, Floor: 2
```

#### show chassis location (QFabric Systems)

```
user@switch> show chassis location interconnect-device interconnect1
```

```
country-code: US  
postal-code: 94404  
Building: Building 2, Floor: 2
```

Description	Display the media access control (MAC) addresses for the router, switch chassis, or switch.
Options	<p><b>none</b>—(TX Matrix, TX Matrix Plus routers, QFX Series, and OCX Series Switches) Display the MAC addresses for the router chassis or switch. On a TX Matrix router, display MAC addresses on the TX Matrix router and its attached T640 routers. On a TX Matrix Plus router, display MAC addresses on the TX Matrix Plus router and its attached routers.</p> <p><b>all-members</b>—(MX Series routers only) (Optional) Display the MAC addresses for all the member routers of the Virtual Chassis configuration.</p> <p><b>interconnect-device <i>name</i></b>—(QFabric switches only) (Optional) Display the MAC addresses for the Interconnect device.</p>

**lcc *number***—(TX Matrix and TX Matrix Plus routers only) (Optional) On a TX Matrix router, display MAC addresses for a specified T640 router (or line-card chassis) that is connected to the TX Matrix Plus router. On a TX Matrix Plus router, display MAC addresses for a specified router (line-card chassis) that is connected to the TX Matrix Plus router.

Replace *number* with the following values depending on the LCC configuration:

- 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.
- 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.
- 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.
- 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.

**local**—(MX Series routers only) (Optional) Display the MAC addresses for the local Virtual Chassis member.

**member *member-id***—(MX Series routers only) (Optional) Display the MAC addresses for the specified member of the Virtual Chassis configuration. Replace *member-id* with a value of 0 or 1.

**node-group *name***—(QFabric switches only) (Optional) Display the MAC addresses for the specified Node group.

**scc**—(TX Matrix routers only) (Optional) Display MAC addresses for the TX Matrix router (or switch-card chassis).

**sfc *number***—(TX Matrix Plus routers only) (Optional) Display MAC addresses for the TX Matrix Plus router (or switch-fabric chassis).

**Output Fields** [Table 148 on page 2009](#) lists the output fields for the **show chassis mac-addresses** command. Output fields are listed in the approximate order in which they appear.

*Table 148: show chassis mac-addresses Output Fields*

Field Name	Field Description
<b>MAC address information</b>	
Public base address	<p>Base address of the MAC addresses allocated to this router or switch, for example 00:24:dc:18:09:40. This address is also printed on the box of the device.</p> <p>Public MAC addresses are those addresses your switch/router assigns to Ethernet interfaces. The public base address is the first MAC address your device assigns to an interface. Consecutive public count MAC addresses are reserved for additional interfaces.</p>
	<p>Number of allocated public addresses, for example 64. Public addresses are calculated starting with the public base address. If the public base address is 00:24:dc:18:09:40, then The MAC address of ge-0/0/0 on this device is 00:24:dc:18:09:40, and ge-0/0/1 is 00:24:dc:18:09:41, and so on, up to 64 available addresses.</p>
Private base address	<p>Base address of the private MAC addresses allocated to this router or switch. The private base address is the first MAC address after the allocated consecutive public count addresses. For example, if 00:24:dc:18:09:40 is the public base and 0x40 is the public count in hex, then 00:24:dc:18:09:80 would be the private base.</p>
Private count	Number of allocated private addresses.

## Sample Output

**show chassis mac-addresses**

```

user@host> show chassis mac-addresses
MAC address information
Public base address  0:90:69:0:4:0
Public count        1008
Private base address 0:90:69:0:7:f0
Private count        16

```

### show chassis mac-addresses (MX150)

```
user@host > show chassis mac-addresses

MAC address information:
  Public base address    f4:cc:55:2b:4c:00
  Public count           1984
  Private base address   f4:cc:55:2b:53:c0
  Private count          64
```

The MAC address displayed is the actual MAC address of the first physical port.

### show chassis mac-addresses (MX104 Router)

```
user@host > show chassis mac-addresses

MAC address information:

## show chassis network-services

<b>Syntax</b>	<code>show chassis network-services</code>
<b>Release Information</b>	<p>Command introduced in Junos OS Release 9.4.</p> <p>Command introduced in Junos OS Release 12.3 for MX2010 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 12.3 for MX2020 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 13.2 for MX104 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 15.F5 for PTX Series Routers with third-generation FPCs.</p> <p>Command introduced in Junos OS Release 17.2 for PTX10008 Routers.</p> <p>Command introduced in Junos OS Release 17.2 for MX2008 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 17.3 for MX10003 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 17.4 for MX204 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 18.2 for MX10008 Universal Routing Platforms.</p>
<b>Description</b>	Display the network services mode that the router is configured to run in—IP Network Services mode, Ethernet Network Services mode, Enhanced IP Network Services mode, Enhanced Ethernet Network Services mode, or Enhanced mode.
<b>Options</b>	This command has no options.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">enhanced-mode on page 639</a></li> </ul>
<b>List of Sample Output</b>	<p><a href="#">show chassis network services on page 2016</a></p> <p><a href="#">show chassis network services (MX104 Router) on page 2016</a></p> <p><a href="#">show chassis network services (MX2010 Router) on page 2016</a></p> <p><a href="#">show chassis network services (MX2020 Router) on page 2016</a></p> <p><a href="#">show chassis network services (MX2008 Router) on page 2016</a></p> <p><a href="#">show chassis network-services (MX10003 Router) on page 2016</a></p> <p><a href="#">show chassis network-services (MX204 Router) on page 2016</a></p> <p><a href="#">show chassis network-services (MX10008 Router) on page 2017</a></p> <p><a href="#">show chassis network services (PTX Router with third-generation FPCs) on page 2017</a></p>
<b>Output Fields</b>	Table 149 on page 2016 lists the output fields for the <b>show chassis network services</b> command. Output fields are listed in the approximate order in which they appear.

Table 149: show chassis network services Output Fields

Field Name	Field Description
<b>Network Services Mode</b>	<p>Network services mode configured for the router:</p> <ul style="list-style-type: none"> <li><b>IP</b>—IP Network Services mode.</li> <li><b>Ethernet</b>—Ethernet Network Services mode.</li> <li><b>enhanced-ip</b>—Enhanced IP Network Services mode</li> <li><b>enhanced-ethernet</b>—Enhanced Ethernet Network Services mode</li> <li><b>Enhanced-Mode</b>—Enhanced mode for PTX Series routers that have third-generation FPCs installed. See <a href="#">enhanced-mode</a>.</li> </ul>

## Sample Output

### show chassis network services

```
user@host> show chassis network services
Network Services Mode: IP
```

### show chassis network services (MX104 Router)

```
user@host> show chassis network services
Network Services Mode: IP
```

### show chassis network services (MX2010 Router)

```
user@host> show chassis network services
Network Services Mode: Enhanced-IP
```

### show chassis network services (MX2020 Router)

```
user@host> show chassis network services
Network Services Mode: Enhanced-IP
```

### show chassis network services (MX2008 Router)

```
user@host> show chassis network-services
Network Services Mode: Enhanced-IP
```

### show chassis network-services (MX10003 Router)

```
user@host> show chassis network-services
Network Services Mode: Enhanced-IP
```

### show chassis network-services (MX204 Router)

```
user@host> show chassis network-services
```

```
Network Services Mode: Enhanced-IP
```

#### show chassis network-services (MX10008 Router)

```
user@host> show chassis network-services
```

```
Network Services Mode: Enhanced-IP
```

#### show chassis network services (PTX Router with third-generation FPCs)

```
user@host> show chassis network services
```

```
Network Services Mode: Enhanced-Mode
```

## show chassis oss-map

<b>Syntax</b>	show chassis oss-map
<b>Release Information</b>	Command introduced in Junos OS Release 12.3R3, 13.1R2, and 13.2R1 for T4000 routers.
<b>Description</b>	(T4000 routers only) Display the operations support systems (OSS) mapping details.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"><li>• <a href="#">Configuring OSS Mapping to Represent a T4000 Chassis as a T1600 or a T640 Chassis on page 447</a></li><li>• <a href="#">Example: Configuring a T4000 Chassis to Represent a T640 Chassis on page 449</a></li><li>• <a href="#">oss-map on page 726</a></li></ul>
<b>Output Fields</b>	<a href="#">Table 150 on page 2018</a> lists the output fields for the <b>show chassis oss-map</b> command. Output fields are listed in the approximate order in which they appear.

*Table 150: show chassis oss-map Output Fields*

Field Name	Field Description
Chassis type	Displays the original chassis type.
Oss-map	Displays the mapped chassis type.

## Sample Output

```
user@T4000# show chassis oss-map
Chassis type      Oss-map
T4000             T640
```

Release Information	<p>Command introduced before Junos OS Release 7.4.</p> <p>Command introduced in Junos OS Release 9.0 for EX Series switches.</p> <p>Command introduced in Junos OS Release 11.1 for QFX Series.</p> <p>Command introduced in Junos OS Release 12.2 for ACX Series Universal Metro Routers.</p> <p>Command introduced in Junos OS Release 12.3 for MX2020 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 12.3 for MX2010 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 13.2 for PTX Series Packet Transport Routers.</p> <p>Command introduced in Junos OS Release 13.2 for MX104 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.</p> <p><b>transport</b> option introduced in Junos OS Release 16.1R1 for MX Series Routers.</p> <p>Command introduced in Junos OS Release 17.2 for MX2008 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 17.2 for PTX10008 Routers.</p> <p>Command introduced in Junos OS Release 17.3 for MX10003 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 17.3 for MX150 Router Appliance.</p> <p>Command introduced in Junos OS Release 17.4 for MX204 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 18.1R1 for EX9251 switches.</p> <p>Command introduced in Junos OS Release 18.2 for EX9253 Switches.</p>
Description	Display status information about the PIC installed in the specified Flexible PIC Concentrator (FPC) and PIC slot.
Options	<p><b>fpc-slot <i>slot-number</i></b>—Display information about the PIC in this particular FPC slot:</p> <ul style="list-style-type: none"> <li>On a TX Matrix router, if you specify the number of the T640 router by using the <b>lcc <i>number</i></b> option (the recommended method), replace <b><i>slot-number</i></b> with a value from 0 through 7. Otherwise, replace <b><i>slot-number</i></b> with a value from 0 through 31.</li> </ul> <p>Likewise, on a TX Matrix Plus router, if you specify the number of the T1600 router by using the <b>lcc <i>number</i></b> option (the recommended method), replace <b><i>slot-number</i></b> with a value from 0 through 7. Otherwise, replace <b><i>slot-number</i></b> with a value from 0 through 31. For example, the following commands have the same result:</p> <pre> user@host&gt; show chassis pic fpc-slot 1 lcc 1 pic-slot 1 user@host&gt; show chassis pic fpc-slot 9 pic-slot 1 </pre> <ul style="list-style-type: none"> <li>M120 routers only—Replace <b><i>slot-number</i></b> with a value from 0 through 5.</li> </ul>

- MX80 routers only—Replace **slot-number** with a value from 0 through 1.
- MX104 routers only—Replace **slot-number** with a value from 0 through 2.
- MX240 routers only—Replace **slot-number** with a value from 0 through 2.
- MX480 routers only—Replace **slot-number** with a value from 0 through 5.
- MX960 routers only—Replace **slot-number** with a value from 0 through 11.
- MX2010 routers only—Replace **slot-number** with a value from 0 through 9.
- MX2020 routers only—Replace **slot-number** with a value from 0 through 19.
- MX2008 routers only—Replace **slot-number** with a value from 0 through 9.
- MX10003 routers only—Replace **slot-number** with a value from 0 through 1.
- Other routers—Replace **slot-number** with a value from 0 through 7.
- EX Series switches:
  - EX3200 switches and EX4200 standalone switches—Replace **slot-number** with 0.
  - EX4200 switches in a Virtual Chassis configuration—Replace **slot-number** with a value from 0 through 9 (switch's member ID).
  - EX8208 switches—Replace **slot-number** with a value from 0 through 7 (line card).
  - EX8216 switches—Replace **slot-number** with a value from 0 through 15 (line card).
- QFX Series:
  - QFX3500, QFX3600, QFX5100, and OCX Series standalone switches—Replace **slot-number** with 0. In the command output, FPC refers to a line card. The FPC number equals the slot number for the line card.
  - QFabric systems—Replace **slot-number** with any number between 0 and 15. In the command output, FPC refers to a line card. The FPC number equals the slot number for the line card.

**all-members**—(MX Series routers and EX Series switches only) (Optional) Display PIC information for all member routers in the Virtual Chassis configuration.

**interconnect-device name**—(QFabric systems only) (Optional) Display PIC information for a specified Interconnect device.

**lcc number**—(TX Matrix and TX Matrix Plus routers only) (Optional) On a TX Matrix router, display PIC information for a specified T640 router (or line-card chassis) that is connected to the TX Matrix router. On a TX Matrix Plus router, display PIC information for a specified router (line-card chassis) that is connected to the TX Matrix Plus router.

Replace *number* with the following values depending on the LCC configuration:

- 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.
- 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.
- 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.
- 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.

**local**—(MX Series routers and EX Series switches only) (Optional) Display PIC information for the local Virtual Chassis member.

**member *member-id***—(MX Series routers and EX Series switches only) (Optional) Display PIC information for the specified member of the Virtual Chassis configuration. Replace *member-id* with a value of 0 or 1.

**node-device *name***—(QFabric systems only) (Optional) Display PIC information for a specified Node device.

**pic-slot *slot-number***—Display information about the PIC in this particular PIC slot. For routers, replace *slot-number* with a value from 0 through 3. For EX3200 and EX4200 switches, replace *slot-number* with 0 for built-in network interfaces and 1 for interfaces on uplink modules. For EX8208 and EX8216 switches, replace *slot-number* with 0. For the QFX3500 standalone switch and the QFabric system, replace *slot-number* with 0 or 1.

**transport**—Display PIC information for optical transport network.

**Output Fields** [Table 151 on page 2024](#) lists the output fields for the **show chassis pic** command. Output fields are listed in the approximate order in which they appear.

*Table 151: show chassis pic Output Fields*

Field Name	Field Description
Type	<p>PIC type.</p> <p><b>NOTE:</b> On the 1-port OC192/STM64 MICs with the SDH framing mode, the type is displayed as <b>MIC-3D-1STM64-XFP</b> and with the SONET framing mode, the type is displayed as <b>MIC-3D-1OC192-XFP</b>. By default, the 1-port OC192/STM64 MICs displays the type as <b>MIC-3D-1OC192-XFP</b>.</p>
Account Layer2 Overhead	(MX Series routers) Indicates whether functionality to count the Layer 2 overhead bytes in the interface statistics at the PIC level is enabled or disabled.
ASIC type	Type of ASIC on the PIC.
State	<p>Status of the PIC. State is displayed only when a PIC is in the slot.</p> <ul style="list-style-type: none"> <li>• <b>Online</b>— PIC is online and running.</li> <li>• <b>Offline</b>—PIC is powered down.</li> </ul>
PIC version	PIC hardware version.
Uptime	How long the PIC has been online.
Package	(Multiservices PICs only) Services package supported: <b>Layer-2</b> or <b>Layer-3</b> .
Port Number	Port number for the PIC.
Cable Type	Type of cable connected to the port: <b>LH</b> , <b>LX</b> , or <b>SX</b> .

Table 151: show chassis pic Output Fields (continued)

Field Name	Field Description
<b>PIC Port Information (MX480 Router 100-Gigabit Ethernet CFP)</b>	<p>Port-level information for the PIC.</p> <ul style="list-style-type: none"> <li>• Port—Port number</li> <li>• Cable type—Type of optical transceiver installed.</li> <li>• Fiber type—Type of fiber. SM is single-mode.</li> <li>• Xcvr vendor—Transceiver vendor name.</li> <li>• Xcvr vendor part number—Transceiver vendor part number.</li> <li>• Wavelength—Wavelength of the transmitted signal. Uplinks and downlinks are always 1550 nm. There is a separate fiber for each direction</li> <li>• Xcvr Firmware—Transceiver firmware version.</li> </ul>
<b>PIC Port Information (MX960 Router Bidirectional Optics )</b>	<p>Port-level information for the PIC.</p> <ul style="list-style-type: none"> <li>• Port—Port number</li> <li>• Cable type—Type of small form-factor pluggable (SFP) optical transceiver installed. Uplink interfaces display -U. Down link interfaces display -D.</li> <li>• Fiber type—Type of fiber. SM is single-mode.</li> <li>• Xcvr vendor—Transceiver vendor name.</li> <li>• Xcvr vendor part number—Transceiver vendor part number. <ul style="list-style-type: none"> <li>• BX10-10-km bidirectional optics.</li> <li>• BX40-40-km bidirectional optics.</li> <li>• SFP-LX-40-km SFP optics.</li> </ul> </li> <li>• Wavelength—Wavelength of the transmitted signal. Uplinks are always 1310 nm. Downlinks are either 1490 nm or 1550 nm.</li> </ul>
<b>PIC Port Information (Next-Generation SONET/SDH SFP)</b>	<p>Port-level information for the next-generation SONET/SDH SFP PIC.</p> <ul style="list-style-type: none"> <li>• Port—Port number.</li> <li>• Cable type—Type of small form-factor pluggable (SFP) optical transceiver installed.</li> <li>• Fiber type—Type of fiber: <b>SM</b> (single-mode) or <b>MM</b> (multimode).</li> <li>• Xcvr vendor—Transceiver vendor name.</li> <li>• Xcvr vendor part number—Transceiver vendor part number.</li> <li>• Wavelength—Wavelength of the transmitted signal. Next-generation SONET/SDH SFPs use 1310 nm.</li> </ul>
<b>PIC port information (MX104 router)</b>	<p>Port-level information for the PIC.</p> <ul style="list-style-type: none"> <li>• Port—Port number</li> <li>• Cable type—Type of optical transceiver installed.</li> <li>• Fiber type—Type of fiber. SM is single-mode.</li> <li>• Xcvr vendor—Transceiver vendor name.</li> <li>• Xcvr vendor part number—Transceiver vendor part number.</li> <li>• Wavelength—Wavelength of the transmitted signal.</li> <li>• Xcvr Firmware—Firmware version of the transceiver.</li> </ul>

Table 151: show chassis pic Output Fields (continued)

Field Name	Field Description
Port speed information	Information pertaining to port speed: <ul style="list-style-type: none"> <li>• Port—Port number.</li> <li>• PFE—Packet Forwarding Engine slot number.</li> <li>• Capable Port Speed—Speed supported by each port.</li> </ul>
Multirate Mode	Rate-selectability status for the MIC: <b>Enabled</b> or <b>Disabled</b> .
Channelization	Indicates whether channelization is enabled or disabled on the DS3/E3 MIC.
Administrative State	Indicates the administrative state of the PIC. Possible values are: In Service (Default) and Out of Service.
Operational State	Indicates the operational state of the PIC. Possible values are: Normal and Fault.

## Sample Output

### show chassis pic fpc-slot pic-slot

**Release Information**    Command introduced in Junos OS Release 10.0.  
                                   Command introduced in Junos OS Release 12.1 for PTX Series Packet Transport Routers.  
                                   Command introduced in Junos OS Release 12.3 for MX2020 Universal Routing Platforms.  
                                   Command introduced in Junos OS Release 12.3 for MX2010 Universal Routing Platforms.  
                                   Command introduced in Junos OS Release 12.3 for EX9200 switches, with **detail** option added in Junos OS Release 15.2.

Command introduced in Junos OS Release 17.2 for MX2008 Universal Routing Platforms.  
Command introduced in Junos OS Release 17.2 for PTX10008 Routers.  
Command introduced in Junos OS Release 17.3 for MX10003 Universal Routing Platforms.  
Command introduced in Junos OS Release 18.2 for EX9253 Switches.  
Command introduced in Junos OS Release 18.2 for MX10008 Universal Routing Platforms.

**Description** (EX9200 switches, MX Series 5G Universal Routing Platforms and PTX Series Packet Transport Routers only) Display power limits and usage information for the AC or DC power sources.

- On EX9200 switches and the MX Series 5G Universal Routing Platforms, power is supplied by Power Entry Modules (PEMs).

**NOTE:** The new high-capacity (4100 W) enhanced DC PEM on MX960 routers includes a new design that can condition the input voltage. This results in the output voltage differing from the input voltage. The earlier generation of DC PEMs coupled the input power directly to the output, thereby making it safe to assume that the output voltage was equal to the input voltage.

---

- On the MX2020 Universal Routing Platforms, the power system consists of three components: the power supply modules (PSMs), the power distribution module (PDM), and the power midplane. The power feed is connected to the PDM. The PDM delivers power to the power midplane. The power midplane supplies power to the PSMs. The MX2020 router chassis provides 3+3 (2500W/80A) or 4+4 (2100W/60A) PSM redundancy for the critical FRUs with two power zones.
- On the MX2010 and MX2008 Universal Routing Platforms, the power system consists of three components: the power supply modules (PSMs), the power distribution module (PDM), and the power midplane. The power feed is connected to the PDM. The PDM delivers power to the power midplane. The power midplane supplies power to the PSMs. Unlike the MX2020 router chassis, the MX2010 and MX2008 router chassis does not provide redundancy for the critical FRUs because there is only one power zone.

Starting from Junos OS Release 17.3, MX10003 routers support DC (1100W), AC High (1600W), and AC Low (800W) power supply units.

- On the PTX Series Packet Transport Routers, power is supplied by power supply modules (PSMs). On PTX5000 routers, the power feeds connect to the power distribution units (PDUs).
- Starting with Junos OS Release 14.1, the **show chassis power <detail>** operational mode command output displays power usage information for the new DC power supply module (PSM) and power distribution unit (PDU) that are added to provide power to the high-density FPC (FPC2-PTX-P1A) and other components in a PTX5000 Packet Transport Router. The output also displays power usage information for each PIC that is connected to the router. This command also displays power usage information for MX Series routers that have a MPC5EQ MPC installed.

<b>Options</b>	<p><b>none</b>—Display basic power usage information for the AC and DC power sources.</p> <p><b>all-members</b>—(MX Series routers only) (Optional) Display power usage information for all members of the Virtual Chassis configuration.</p> <p><b>detail</b>—(Optional) Include power usage for specific FRUs.</p> <p><b>local</b>—(MX Series routers only) (Optional) Display power usage information for the local Virtual Chassis member.</p> <p><b>member <i>member-id</i></b>—(MX Series routers only) (Optional) Display power usage information for the specified member of the Virtual Chassis configuration. For an MX Series Virtual Chassis, replace <i>member-id</i> with a value of 0 or 1.</p>

<b>Output Fields</b>	<p><a href="#">Table 152 on page 2050</a> lists the output fields for the <b>show chassis power</b> command. Output fields are listed in the approximate order in which they appear.</p>

Table 152: show chassis power Output Fields:

Field Name	Field Description	Level of Output
<b>PEM number</b>	<p>(EX9200 switches and MX Series routers only) AC or DC PEM number on the chassis. The following output fields are displayed for the PEM:</p> <ul style="list-style-type: none"> <li>• <b>State</b>—State of the PEM: <ul style="list-style-type: none"> <li>• <b>Online</b>—PEM is present in the slot and online.</li> <li>• <b>Empty</b>—PEM is not present in the slot.</li> <li>• <b>Present</b>—PEM is present in the slot, but not online.</li> </ul> </li> <li>• <b>AC/DC Input—OK or Check</b>—State of the AC or DC input power feed with the number of active and expected feeds (one or two). For a DC input power feed, this output field also displays the reference voltage input with maximum input voltage displayed in mV (in parentheses) for the AC or DC PEM.</li> <li>• <b>Capacity</b>—Actual power input capacity with maximum capacity displayed (in parentheses) in watts.</li> </ul> <p><b>NOTE:</b> The maximum actual power capacity for AC and DC PEMs is:</p> <ul style="list-style-type: none"> <li>• MX960 AC PEM—4100 W if two feeds are connected. 1700 W if one feed is connected.</li> <li>• MX960 DC PEM—4100 W if two feeds are connected. 1700 W if one feed is connected.</li> <li>• MX480 AC PEM—2520 W if it is high-line. 1450 W if it is low-line.</li> <li>• MX480 DC PEM—2240 W if the DIP switch is off. 2440 W if the DIP switch is on.</li> <li>• MX240 AC PEM—2240 W if it is high-line. 2440 W if it is low-line.</li> <li>• MX240 DC PEM—2240 W if the DIP switch is off. 2440 W if the DIP switch is on.</li> <li>• EX9204 AC PEM—2050 W if it is high-line. 1167 W if it is low-line.</li> <li>• EX9204 DC PEM—2400 W if the DIP switch is off. 2600 W if the DIP switch is on.</li> <li>• EX9208 AC PEM—2050 W if it is high-line. 1167 W if it is low-line.</li> <li>• EX9208 DC PEM—2400 W if the DIP switch is off. 2600 W if the DIP switch is on.</li> <li>• EX9214 AC PEM—4100 W if two feeds are connected. 1700 W if one feed is connected.</li> <li>• EX9214 DC PEM—4100 W if two feeds are connected. 1700 W if one feed is connected.</li> <li>• <b>DC Output</b>—DC power output in Watts for the specified zone, at the specified amps and voltage (A @ V), and load and percentage utilization of the maximum capacity) for the zone.</li> </ul>	All levels

Table 152: show chassis power Output Fields: (continued)

Field Name	Field Description	Level of Output
<b>System</b>	<p>(EX9200 switches, MX Series, MX2020 routers, MX2010 routers, and MX2008 routers only) Overall power statistics for the system zone.</p> <p>The following output fields are displayed for MX Series routers:</p> <ul style="list-style-type: none"> <li>• <b>Zone number:</b> <ul style="list-style-type: none"> <li>• <b>Capacity</b>—Maximum power capacity applicable for the zone, in watts.</li> <li>• <b>Allocated power</b>—Actual capacity allocated for the zone, in watts, with remaining power displayed in parentheses.</li> <li>• <b>Actual usage</b>—Actual power usage for the zone, in watts.</li> </ul> </li> <li>• <b>Total system capacity</b>—Cumulative power capacity of all the zones, in watts.</li> <li>• <b>Total remaining capacity</b>—Difference between the <b>Total system capacity</b> and cumulative <b>Allocated power</b> of all the zones, in watts.</li> </ul> <p>The following output fields are displayed for MX2010, MX2020, and MX2008 routers:</p> <ul style="list-style-type: none"> <li>• <b>Capacity</b>—Maximum power capacity applicable for the zone, in watts.</li> <li>• <b>Allocated power</b>—Actual capacity allocated for the zone, in watts, with remaining power displayed in parentheses.</li> <li>• <b>Actual usage</b>—Actual power usage for the zone, in watts.</li> </ul> <p><b>NOTE:</b> For MX2020 routers, there are two power subsystems (Lower Zone and Upper Zone) and the listed output fields are displayed for each zone.</p>	All levels
<b>Total Power</b>	(PTX Series only) Total power used by the switch (displayed in watts).	All levels
<b>PDU number</b>	(PTX5000 only) ID number of the power distribution unit (PDU) on the chassis.	All levels

Table 152: show chassis power Output Fields: (continued)

Field Name	Field Description	Level of Output
<b>PSM number</b>	<p>(PTX Series, MX2020 routers, MX2010 routers, and MX2008 routers only) ID number of the power supply module..</p> <p>(PTX Series) The following output fields are displayed for each PSM:</p> <ul style="list-style-type: none"> <li>• <b>Input (V)</b>—Voltage supplied to the PSM.</li> <li>• <b>Used (W)</b>—Actual power usage for the PSM (measured in watts).</li> </ul> <p><b>NOTE:</b> Starting with Junos OS Release 14.1, no output is displayed for <b>Input (v)</b> and <b>Used (W)</b> fields for missing PSMs; unlike in earlier releases where 0 was displayed for missing PSMs.</p> <p>(MX2010, MX2020, and MX2008 routers) The following output fields are displayed for each PSM:</p> <ul style="list-style-type: none"> <li>• <b>State</b>—State of the PSM: <ul style="list-style-type: none"> <li>• <b>Online</b>—PSM is present in the slot and online.</li> <li>• <b>Empty</b>—PSM is not present in the slot.</li> <li>• <b>Present</b>—PSM is present in the slot but not online.</li> </ul> </li> <li>• <b>DC Input</b>—State of the DC input power feed with the number of active or expected feeds (in parentheses).</li> <li>• <b>Capacity</b>—Actual power input capacity and maximum capacity (in parentheses) displayed in watts.</li> </ul> <p><b>NOTE:</b> The maximum capacity for AC and DC PSMs is:</p> <ul style="list-style-type: none"> <li>• MX2010/MX2020/MX2008 AC PSM—2500 W.</li> <li>• MX2010/MX2020/MX2008 DC PSM—2100 W if the DIP switch is at 60A settings. 2500 W if the DIP switch is at 80A settings.</li> </ul> <li>• <b>DC Output</b>—DC power output in watts for the specified zone at the specified amperes and voltage (A at V), and load and percentage utilization of the maximum capacity for the zone.</li>	All levels
<b>Item</b>	<p>Actual power usage (measured in watts) for the following FRUs:</p> <ul style="list-style-type: none"> <li>• <b>Fan Tray n</b>—Power usage for the specified fan tray.</li> <li>• <b>REn/CBn</b>—Power usage for the specified Routing Engines and Control Boards</li> <li>• <b>SIB/CCG/FPD</b>—Power usage for the Switch Interface Board, Centralized Clock Generator (PTX5000 only), and Front Panel Display (craft interface).</li> <li>• <b>FPC n</b>—Power usage for the FPC in the slot specified.</li> </ul> <p><b>NOTE:</b> MX Series routers must have a MPC5EQ MPC installed to view FRU power usage with the <b>detail</b> command.</p>	<b>detail</b>

## Sample Output

### show chassis power (MX960 Router with DC PEM)

```

user@host> show chassis power

PEM 0:
  State:    Online

```

```

DC input: OK (2 feed expected, 2 feed connected)
DC input: 48.0 V input (57000 mV)
Capacity: 4100 W (maximum 4100 W)
DC output: 513 W (zone 0, 9 A at 57 V, 12% of capacity)

PEM 1:
State: Online
DC input: OK (2 feed expected, 2 feed connected)
DC input: 48.0 V input (57000 mV)
Capacity: 4100 W (maximum 4100 W)
DC output: 228 W (zone 1, 4 A at 57 V, 5% of capacity)

PEM 2:
State: Online
DC input: OK (2 feed expected, 2 feed connected)
DC input: 48.0 V input (57000 mV)
Capacity: 4100 W (maximum 4100 W)
DC output: 513 W (zone 0, 9 A at 57 V, 12% of capacity)

PEM 3:
State: Online
DC input: OK (2 feed expected, 2 feed connected)
DC input: 48.0 V input (57000 mV)
Capacity: 4100 W (maximum 4100 W)
DC output: 342 W (zone 1, 6 A at 57 V, 8% of capacity)

System:
Zone 0:
Capacity: 4100 W (maximum 4100 W)
Allocated power: 1680 W (2420 W remaining)
Actual usage: 1026 W
Zone 1:
Capacity: 4100 W (maximum 4100 W)
Allocated power: 1263 W (2837 W remaining)
Actual usage: 570 W
Total system capacity: 8200 W (maximum 8200 W)
Total remaining power: 5257 W

```

### show chassis power (MX960 Router with AC PEM)

```

user@host> show chassis power

PEM 0:
State: Online
AC input: OK (2 feed expected, 2 feed connected)
Capacity: 4100 W (maximum 4100 W)
DC output: 0 W (zone 0, 0 A at 56 V, 0% of capacity)

PEM 1:
State: Present
AC input: Check (2 feed expected, 1 feed connected)
Capacity: 1700 W (maximum 4100 W)

PEM 2:
State: Empty
Input: Absent

PEM 3:
State: Online
AC input: OK (1 feed expected, 1 feed connected)

```

```

Capacity: 1700 W (maximum 1700 W)

System:
Zone 0:
  Capacity: 4100 W (maximum 4100 W)
  Allocated power: 540 W (3560 W remaining)
  Actual usage: 0 W
Zone 1:
  Capacity: 0 W (maximum 0 W)
  Allocated power: 0 W (0 W remaining)
  Actual usage: 0 W
Total system capacity: 4100 W (maximum 4100 W)
Total remaining power: 3560 W

```

### show chassis power (MX960 Router with MPC5EQ)

```

user@host> show chassis power

PEM 0:
  State: Online
  AC input: OK (2 feed expected, 2 feed connected)
  Capacity: 4100 W (maximum 4100 W)
  DC output: 1197 W (zone 0, 21 A at 57 V, 29% of capacity)

PEM 1:
  State: Online
  AC input: OK (2 feed expected, 2 feed connected)
  Capacity: 4100 W (maximum 4100 W)
  DC output: 2451 W (zone 1, 43 A at 57 V, 59% of capacity)

PEM 2:
  State: Online
  AC input: OK (2 feed expected, 2 feed connected)
  Capacity: 4100 W (maximum 4100 W)
  DC output: 1083 W (zone 0, 19 A at 57 V, 26% of capacity)

PEM 3:
  State: Empty
  Input: Absent

System:
Zone 0:
  Capacity: 4100 W (maximum 4100 W)
  Allocated power: 3508 W (592 W remaining)
  Actual usage: 2280 W
Zone 1:
  Capacity: 4100 W (maximum 4100 W)
  Allocated power: 3341 W (759 W remaining)
  Actual usage: 2451 W
Total system capacity: 8200 W (maximum 8200 W)
Total remaining power: 1351 W

```

### show chassis power detail (MX960 Router with MPC5EQ)

```

user@host> show chassis power detail

PEM 0:
  State: Online
  DC input: OK (2 feed expected, 2 feed connected)

```

```

DC input: 48.0 V input (57500 mV)
Capacity: 4100 W (maximum 4100 W)
DC output: 798 W (zone 0, 14 A at 57 V, 19% of capacity)

PEM 1:
State: Online
DC input: OK (2 feed expected, 2 feed connected)
DC input: 48.0 V input (57500 mV)
Capacity: 4100 W (maximum 4100 W)
DC output: 1311 W (zone 1, 23 A at 57 V, 31% of capacity)

PEM 2:
State: Online
DC input: OK (2 feed expected, 2 feed connected)
DC input: 48.0 V input (57500 mV)
Capacity: 4100 W (maximum 4100 W)
DC output: 855 W (zone 0, 15 A at 57 V, 20% of capacity)

PEM 3:
State: Online
DC input: OK (2 feed expected, 2 feed connected)
DC input: 48.0 V input (57500 mV)
Capacity: 4100 W (maximum 4100 W)
DC output: 912 W (zone 1, 16 A at 57 V, 22% of capacity)

System:
Zone 0:
Capacity: 4100 W (maximum 4100 W)
Allocated power: 2497 W (1603 W remaining)
Actual usage: 1653 W
Zone 1:
Capacity: 4100 W (maximum 4100 W)
Allocated power: 3336 W (764 W remaining)
Actual usage: 2223 W
Total system capacity: 8200 W (maximum 8200 W)
Total remaining power: 2367 W

Item          Used(W)
FPC 0         255
FPC 10        341

```

### show chassis power (MX480 Router with AC PEM)

```

user@host> show chassis power

PEM 0:
State: Online
AC input: OK (1 feed expected, 1 feed connected)
Capacity: 2520 W (maximum 2520 W)
DC output: 472 W (zone 0, 8 A at 59 V, 18% of capacity)

PEM 1:
State: Online
AC input: OK (1 feed expected, 1 feed connected)
Capacity: 2520 W (maximum 2520 W)
DC output: 472 W (zone 0, 8 A at 59 V, 18% of capacity)

PEM 2:
State: Online
AC input: OK (1 feed expected, 1 feed connected)

```

```
Capacity: 2520 W (maximum 2520 W)
DC output: 118 W (zone 0, 2 A at 59 V, 4% of capacity)
```

**PEM 3:**

```
State:      Empty
Input:      Absent
```

**System:**

```
Maximum capacity: 5040 W
Allocated capacity: 1675 W (33% of maximum)
Remaining capacity: 3365 W
Actual usage:      1062 W
```

### show chassis power (MX240 Router with DC PEM)

```
user@host> show chassis power
```

**PEM 0:**

```
State:      Online
DC input:    OK (1 feed expected, 1 feed connected)
DC input:    48.0 V input (53500 mV)
Capacity:    2400 W (maximum 2400 W)
DC output:   318 W (zone 0, 6 A at 53 V, 13% of capacity)
```

**PEM 1:**

```
State:      Online
DC input:    OK (1 feed expected, 1 feed connected)
DC input:    48.0 V input (54000 mV)
Capacity:    2400 W (maximum 2400 W)
DC output:   0 W (zone 0, 0 A at 54 V, 0% of capacity)
```

**PEM 2:**

```
State:      Online
DC input:    OK (1 feed expected, 1 feed connected)
DC input:    48.0 V input (52500 mV)
Capacity:    2400 W (maximum 2400 W)
DC output:   312 W (zone 0, 6 A at 52 V, 13% of capacity)
```

**PEM 3:**

```
State:      Online
DC input:    OK (1 feed expected, 1 feed connected)
DC input:    48.0 V input (55000 mV)
Capacity:    2400 W (maximum 2400 W)
DC output:   0 W (zone 0, 0 A at 55 V, 0% of capacity)
```

**System:**

```
Maximum capacity: 2400 W
Allocated capacity: 1270 W (52% of maximum)
Remaining capacity: 1130 W
Actual usage:      630 W
```

### show chassis power (MX2010 Router)

```
user@host > show chassis power
```

**PSM 0:**

```
State:      Online
DC input:    OK (INP0 feed expected, INP0 feed connected)
Capacity:    2500 W (maximum 2500 W)
```

```

DC output: 1022.06 W (19.75 A at 51.75 V, 40.88% of capacity)

PSM 1:
  State:      Online
  DC input:   OK (INP0 feed expected, INP0 feed connected)
  Capacity:   2500 W (maximum 2500 W)
  DC output:  996.19 W (19.25 A at 51.75 V, 39.85% of capacity)

PSM 2:
  State:      Online
  DC input:   OK (INP0 feed expected, INP0 feed connected)
  Capacity:   2500 W (maximum 2500 W)
  DC output:  1022.06 W (19.75 A at 51.75 V, 40.88% of capacity)

PSM 3:
  State:      Online
  DC input:   OK (INP0 feed expected, INP0 feed connected)
  Capacity:   2500 W (maximum 2500 W)
  DC output:  1004.25 W (19.50 A at 51.50 V, 40.17% of capacity)

PSM 4:
  State:      Online
  DC input:   OK (INP0 feed expected, INP0 feed connected)
  Capacity:   2500 W (maximum 2500 W)
  DC output:  996.19 W (19.25 A at 51.75 V, 39.85% of capacity)

PSM 5:
  State:      Online
  DC input:   OK (INP0 feed expected, INP0 feed connected)
  Capacity:   2500 W (maximum 2500 W)
  DC output:  1017.12 W (19.75 A at 51.50 V, 40.69% of capacity)

PSM 6:
  State:      Online
  DC input:   OK (INP0 feed expected, INP0 feed connected)
  Capacity:   2500 W (maximum 2500 W)
  DC output:  1009.12 W (19.50 A at 51.75 V, 40.37% of capacity)

PSM 7:
  State:      Online
  DC input:   OK (INP0 feed expected, INP0 feed connected)
  Capacity:   2500 W (maximum 2500 W)
  DC output:  996.19 W (19.25 A at 51.75 V, 39.85% of capacity)

PSM 8:
  State:      Online
  DC input:   OK (INP0 feed expected, INP0 feed connected)
  Capacity:   2500 W (maximum 2500 W)
  DC output:  1004.25 W (19.50 A at 51.50 V, 40.17% of capacity)

System:
  Capacity:           22500 W (maximum 22500 W)
  Allocated power:    12888 W (9612 W remaining)
  Actual usage:       9067.44 W

```

### show chassis power (MX2020 Router)

```
user@host > show chassis power
```

## show chassis power sequence

<b>Syntax</b>	show chassis power sequence
<b>Release Information</b>	<p>Command introduced in Junos OS Release 10.0.</p> <p>Command introduced in Junos OS Release 12.1 for PTX Series Packet Transport Routers.</p> <p>Command introduced in Junos OS Release 12.3 for MX2020 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 12.3 for MX2010 Universal Routing Platforms.</p>
<b>Description</b>	<p>(MX Series 5G Universal Routing Platforms only) Show power-on sequence for the chassis Dense Port Concentrators (DPCs).</p> <p>(PTX Series Packet Transport Routers, MX2010 and MX2020 routers only) Show power-on sequence for FPCs installed in the chassis.</p>
<b>Options</b>	This command has no options.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">show chassis power on page 2047</a></li> </ul>
<b>List of Sample Output</b>	<p><a href="#">show chassis power sequence (MX Series) on page 2076</a></p> <p><a href="#">show chassis power sequence (MX2010 Routers) on page 2077</a></p> <p><a href="#">show chassis power sequence (MX2020 Routers) on page 2077</a></p> <p><a href="#">show chassis power sequence (PTX5000 Packet Transport Router) on page 2077</a></p>
<b>Output Fields</b>	<p><a href="#">Table 153 on page 2076</a> lists the output fields for the <b>show chassis power sequence</b> command. Output fields are listed in the approximate order in which they appear.</p>

*Table 153: show chassis power sequence Output Fields*

Field Name	Field Description
<b>Chassis FRU Power Sequence</b>	<p>(MX Series) Power-on sequence for the DPCs in the chassis. The numbers indicate the slot number of the DPCs.</p> <p>(PTX Series, MX2010 and MX2020 routers only) Power-on sequence for the FPCs in the chassis. The numbers indicate the slot number of the FPC.</p>

## Sample Output

### show chassis power sequence (MX Series)

```
user@host> show chassis power sequence
Chassis FRU Power Sequence: 3 4 5 6 7 8 9 10 11 0 1 2
```

**show chassis power sequence (MX2010 Routers)**

```
user@host > show chassis power sequence
Chassis FRU Power On Sequence: 0 1 2 3 4 5 6 7 8 9
```

**show chassis power sequence (MX2020 Routers)**

```
user@host > show chassis power sequence
Chassis FRU Power On Sequence: 0 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19
```

**show chassis power sequence (PTX5000 Packet Transport Router)**

```
user@host> show chassis power sequence
Chassis FRU Power On Sequence: 0 1 2 3 4 5 6 7
```

## show chassis psd

**Syntax** `show chassis psd`

**Release Information** Command introduced in Junos OS Release 9.1.

**Description** (Root System Domain [RSD] only) Display information about Protected System Domains (PSDs). A PSD is initially created by the RSD configuration. An RSD and PSDs are supported on a T320 or T640 router, or a T1600 routing node, or a TX Matrix Plus Platform that is interconnected with the JCS1200 platform.

**NOTE:** RSD configuration is not supported on a routing matrix based on TX Matrix Plus router with 3D SIBs.

**Options** This command has no options.

**Additional Information** For more information about PSDs, RSDs, and the JCS1200 platform, see the *Junos OS Protected System Domain Feature Guide for Routing Devices*.

**Required Privilege Level** view

**List of Sample Output** [show chassis psd on page 2079](#)

**Output Fields** [Table 154 on page 2078](#) lists the output fields for the `show chassis psd` command. Output fields are listed in the approximate order in which they appear.

*Table 154: show chassis psd Output Fields*

Field Name	Field Description
Slot Description	PSD identification.
State	PSD status: <ul style="list-style-type: none"> <li>• <b>Online</b>—PSD is online and running.</li> <li>• <b>Offline</b>—PSD is powered down.</li> </ul>
Uptime	Length of time that the PSD has been up and running.

## Sample Output

show chassis psd

```
{master}
```

```
user@host> show chassis psd
```

Slot	Description	State	Uptime
1		Online	12 hours, 19 minutes, 51 seconds
2		Online	2 hours, 18 minutes, 17 seconds
3		Online	12 hours, 19 minutes, 51 seconds

## show chassis redundancy feb

**Syntax** `show chassis redundancy feb  
<errors>  
<redundancy-group group-name>`

**Release Information** Command introduced in Junos OS Release 8.2.

**Description** (M120 routers only) Display information about the status of configured Forwarding Engine Board (FEB) redundancy groups.

**Options** **none**—Display information about the status of all configured FEB redundancy groups.

**redundancy-group group-name**—(Optional) Display information about the specified configured redundancy group.

**errors**—(Optional) Display information about any errors encountered on the components in configured redundancy groups or on links between a FEB and a Flexible PIC Concentrator (FPC).

**Required Privilege Level** view

**Related Documentation**

- [request chassis redundancy feb slot on page 885](#)
- *Configuring FEB Redundancy on the M120 Router*
- *Understanding Switching Control Board Redundancy*

**List of Sample Output** [show chassis redundancy feb on page 2081](#)  
[show chassis redundancy feb redundancy-group grp1 on page 2081](#)  
[show chassis redundancy feb redundancy-group grp0 errors on page 2082](#)

**Output Fields** [Table 155 on page 2080](#) lists the output fields for the **show chassis redundancy feb** command. Output fields are listed in the approximate order in which they appear.

*Table 155: show chassis redundancy feb Output Fields*

Field name	Field Description
Group	Name of configured redundancy group.
FEB	Slot number of each FEB included in redundancy groups.
State	State of each FEB: <ul style="list-style-type: none"> <li>• <b>Online</b>—FEB is online and running.</li> <li>• <b>Offline</b>—FEB is powered down.</li> </ul>

Table 155: show chassis redundancy feb Output Fields (continued)

Field name	Field Description
Priority	(Standard and <b>redundancy-group</b> option) Status of FEB in the redundancy group: <b>Backup</b> , <b>Primary</b> , <b>Other</b> , or null.
Connected FPCs	(Standard and <b>redundancy-group</b> option) Slot number of each FPC connected to the FEB. The status <b>Check</b> is displayed when an error might have occurred.
Redundancy State	(Standard and <b>redundancy-group</b> option) Status of the FEB: <ul style="list-style-type: none"> <li>• <b>Active</b>—FEB is currently active.</li> <li>• <b>Ready</b>—Backup FEB is ready for a switchover</li> <li>• <b>Not Ready</b>—Backup FEB is not ready for a switchover.</li> </ul>
Auto-failover	(Standard and <b>redundancy-group</b> option) Automatic failover status of redundancy group: <b>Enabled</b> or <b>Disabled</b> .
Switch-reason	(Standard and <b>redundancy-group</b> option) Reason a switchover occurred to the backup FEB in the redundancy group.
Hard error: Yes	( <b>errors</b> option only) Displayed when a hard error occurs on a FEB.
FPC	( <b>errors</b> option only) Slot number and status of FPC: <b>link ok</b> or <b>link error</b> .
Fabric plane	( <b>errors</b> option only) Slot number and status of fabric plane.

## Sample Output

Syntax (MX2020 Universal Routing Platforms)	show chassis routing-engine <bios   <i>slot</i> >
Syntax (MX104 Universal Routing Platforms)	show chassis routing-engine
Syntax (MX204 and MX10003 Universal Routing Platforms)	show chassis routing-engine < <i>slot</i> > <bios> <errors>
Syntax (PTX Series Packet Transport Routers)	show chassis routing-engine
Syntax (T Series Routers)	show chassis routing-engine <bios   <i>slot</i> >
Syntax (TX Matrix Routers)	show chassis routing-engine <bios   <i>slot</i> > <lcc <i>number</i>   scc>
Syntax (TX Matrix Plus Routers)	show chassis routing-engine <bios   <i>slot</i> > <lcc <i>number</i>   sfc <i>number</i> >
Release Information	<p>Command introduced before Junos OS Release 7.4.</p> <p>Command introduced in Junos OS Release 9.0 for EX Series switches.</p> <p><b>sfc</b> option introduced in Junos OS Release in 9.6 for the TX Matrix Plus router.</p> <p>Command introduced in Junos OS Release 11.1 for QFX Series.</p> <p><b>5 sec CPU Utilization, 1 min CPU Utilization, 5 min CPU Utilization, and 15 min CPU Utilization</b> output fields introduced in Junos OS Release 11.3R1.</p> <p>Command introduced in Junos OS Release 12.2 for ACX Series Universal Metro Routers.</p> <p>Command introduced in Junos OS Release 12.3 for MX2010 and MX2020 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 13.2 for MX104 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 14.1X53-D20 for the OCX Series.</p> <p><b>satellite</b> option introduced in Junos OS Release 14.2R3.</p> <p>Command introduced in Junos OS Release 17.2 for PTX10008 Routers.</p> <p>Command introduced in Junos OS Release 17.3 for MX10003 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 17.4 for MX204 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 18.1R1 for EX9251 switches.</p>

**Description** Display the status of the Routing Engine.

**Options** **none**—Display information about one or more Routing Engines. On a TX Matrix router, display information about all Routing Engines on the TX Matrix router and its attached T640 routers. On a TX Matrix Plus router, display information about all Routing Engines on the TX Matrix Plus router and its attached routers.

**all-members**—(MX Series routers only) (Optional) Display Routing Engine information for all members of the Virtual Chassis configuration.

**bios**—(Optional) Display the (BIOS) firmware version.

**errors**—(Optional) Display routing engine errors.

**interconnect-device *number***—(QFabric systems only) (Optional) Display Routing Engine information for a specified Interconnect device.

**lcc *number***—(TX Matrix and TX Matrix Plus routers only) (Optional) On a TX Matrix router, display Routing Engine information for a specified T640 router (line-card chassis) that is connected to the TX Matrix router. On a TX Matrix Plus router, display Routing Engine information for a specified router (line-card chassis) that is connected to the TX Matrix Plus router.

Replace *number* with the following values depending on the LCC configuration:

- 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.
- 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.
- 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.
- 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.

**local**—(MX Series routers only) (Optional) Display Routing Engine information for the local Virtual Chassis member.

**member *member-id***—(MX Series routers only) (Optional) Display Routing Engine information for the specified member of the Virtual Chassis configuration. For an MX Series Virtual Chassis, replace *member-id* with a value of 0 or 1.

**node-device *number***—(QFabric systems only) (Optional) Display Routing Engine information for a specified Node device.

**satellite [*slot-id slot-id* [*device-alias alias-name*]]**—(Junos Fusion only) (Optional) Display Routing Engine information for the specified satellite device in a Junos Fusion, or for all satellite devices in the Junos Fusion if no satellite devices are specified.

**scc**—(TX Matrix routers only) (Optional) Display Routing Engine information for the TX Matrix router (switch-card chassis).

**sfc number**—(TX Matrix Plus routers only) (Optional) Display Routing Engine information for the TX Matrix Plus router (or switch-fabric chassis). Replace **number** with 0.

**slot**—(Systems with multiple Routing Engines) (Optional) Display information for an individual Routing Engine. Replace **slot** with 0 or 1. For QFX3500 switches, there is only one Routing Engine, so you do not need to specify the slot number.

**Output Fields** [Table 156 on page 2087](#) lists the output fields for the **show chassis routing-engine** command. Output fields are listed in the approximate order in which they appear.

*Table 156: show chassis routing-engine Output Fields*

Field Name	Field Description
<b>Slot</b>	(Systems with single and multiple Routing Engines) Slot number.
<b>Current state</b>	(Systems with multiple Routing Engines) Current state of the Routing Engine: <b>Master</b> , <b>Backup</b> , or <b>Disabled</b> .
<b>Election priority</b>	(Systems with multiple Routing Engines) Election priority for the Routing Engine: <b>Master</b> or <b>Backup</b> .
<b>Temperature</b>	Temperature of the air flowing past the Routing Engine.
<b>CPU Temperature</b>	Temperature of the CPU.
<b>DRAM</b>	Total DRAM available to the Routing Engine's processor.  Starting with Junos OS Release 12.3R1, the DRAM field displays both available memory and installed memory.
<b>Memory utilization</b>	Percentage of Routing Engine memory being used.  <b>NOTE:</b> For platforms running Junos OS with upgraded FreeBSD, the way memory utilization is calculated has changed. Starting in Junos OS Release 15.1R1, inactive memory is no longer included in the calculation for memory utilization. Inactive memory is now considered as free. That is, the value for used memory decreases and results in more memory to be available for other processes. For platforms that run Junos OS with upgraded FreeBSD, see <i>Release Information for Junos OS with Upgraded FreeBSD</i> .
<b>CPU utilization</b>	Information about the Routing Engine's CPU utilization: <ul style="list-style-type: none"> <li>• <b>User</b>—Percentage of CPU time being used by user processes.</li> <li>• <b>Background</b>—Percentage of CPU time being used by background processes.</li> <li>• <b>Kernel</b>—Percentage of CPU time being used by kernel processes.</li> <li>• <b>Interrupt</b>—Percentage of CPU time being used by interrupts.</li> <li>• <b>Idle</b>—Percentage of CPU time that is idle.</li> </ul>
<b>5 sec CPU Utilization</b>	Information about the Routing Engine's CPU utilization in the past 5 seconds: <ul style="list-style-type: none"> <li>• <b>User</b>—Percentage of CPU time being used by user processes.</li> <li>• <b>Background</b>—Percentage of CPU time being used by background processes.</li> <li>• <b>Kernel</b>—Percentage of CPU time being used by kernel processes.</li> <li>• <b>Interrupt</b>—Percentage of CPU time being used by interrupts.</li> <li>• <b>Idle</b>—Percentage of CPU time that is idle.</li> </ul>

Table 156: show chassis routing-engine Output Fields (continued)

Field Name	Field Description
<b>1 min CPU Utilization</b>	Information about the Routing Engine's CPU utilization in the past 1 minute: <ul style="list-style-type: none"> <li>• <b>User</b>—Percentage of CPU time being used by user processes.</li> <li>• <b>Background</b>—Percentage of CPU time being used by background processes.</li> <li>• <b>Kernel</b>—Percentage of CPU time being used by kernel processes.</li> <li>• <b>Interrupt</b>—Percentage of CPU time being used by interrupts.</li> <li>• <b>Idle</b>—Percentage of CPU time that is idle.</li> </ul>
<b>5 min CPU Utilization</b>	Information about the Routing Engine's CPU utilization in the past 5 minutes: <ul style="list-style-type: none"> <li>• <b>User</b>—Percentage of CPU time being used by user processes.</li> <li>• <b>Background</b>—Percentage of CPU time being used by background processes.</li> <li>• <b>Kernel</b>—Percentage of CPU time being used by kernel processes.</li> <li>• <b>Interrupt</b>—Percentage of CPU time being used by interrupts.</li> <li>• <b>Idle</b>—Percentage of CPU time that is idle.</li> </ul>
<b>15 min CPU Utilization</b>	Information about the Routing Engine's CPU utilization in the past 15 minutes: <ul style="list-style-type: none"> <li>• <b>User</b>—Percentage of CPU time being used by user processes.</li> <li>• <b>Background</b>—Percentage of CPU time being used by background processes.</li> <li>• <b>Kernel</b>—Percentage of CPU time being used by kernel processes.</li> <li>• <b>Interrupt</b>—Percentage of CPU time being used by interrupts.</li> <li>• <b>Idle</b>—Percentage of CPU time that is idle.</li> </ul>
<b>Model</b>	Routing Engine model number.
<b>Serial ID</b>	(Systems with multiple Routing Engines) Identification number of the Routing Engine in this slot.
<b>Start time</b>	Time at which the Routing Engine started running.
<b>Uptime</b>	How long the Routing Engine has been running.
Routing Engine BIOS Version	BIOS version being run by the Routing Engine.

Table 156: show chassis routing-engine Output Fields (continued)

Field Name	Field Description
Last reboot reason	<p>Reason for last reboot, including:</p> <ul style="list-style-type: none"> <li><b>power cycle/failure</b>—Halt of the Routing Engine using the <b>halt</b> command, powering down using the power button on the chassis or any other method (such as removal of the control board or Routing Engine), and then powering back the Routing Engine. A halt of the operating system also occurs if you enter the <b>request system halt</b> command. You can enter this command to halt the system operations on the chassis or specific Routing Engines. To restart the software, press any key on the keyboard.</li> <li><b>watchdog</b>—Reboot due to a hardware watchdog. A watchdog is a hardware monitoring process that examines the health and performance of the router to enable the device to recover from failures. A watchdog checks for problems at certain intervals, and reboots the routing engine if a problem is encountered.</li> <li><b>reset-button reset</b>—(Not available on the EX Series switch) Reboot due to pressing of the reset button on the Routing Engine.</li> <li><b>power-button hard power off</b>—Reboot due to pressing of the power button on the chassis. A powering down of the software also occurs if you enter the <b>request system power-off</b> command. You can enter this command to power down the chassis or specific Routing Engines; you can then restart the software.</li> <li><b>misc hardware reason</b>—Reboot due to miscellaneous hardware reasons.</li> <li><b>thermal shutdown</b>—Reboot due to the router or switch reaching a critical temperature at which point it is unsafe to continue operations.</li> <li><b>hard disk failure</b>—Reboot due to a hard disk or solid-state drive (SSD) failure.</li> <li><b>reset from debugger</b>—Reboot due to reset from the debugger.</li> <li><b>chassis control reset</b>—Restart the chassis process that manages PICs, FPCs, and other hardware components. The chassis control module that runs the Routing Engine performs management and monitoring functions, and it provides a single access point for operational and maintenance functions. A reset of the chassis management process occurs when you enter the <b>restart chassis-control</b> command.</li> <li><b>bios auto recovery reset</b>—Reboot due to a BIOS auto-recovery reset.</li> <li><b>could not be determined</b>—Reboot due to an undetermined reason.</li> <li><b>Router rebooted after a normal shutdown</b>—Reboot due to a normal shutdown. This reason is displayed if the Routing Engine is powered down by pushing and holding the online/offline button on the Routing Engine faceplate for 30 seconds, and then powered back. A reboot of the software also occurs if you enter the <b>request system reboot</b> command. You can enter this command to reboot the chassis or specific Routing Engines.</li> <li><b>Hypervisor reboot</b>—When both Linux host and Junos OS is rebooted using the <b>request vmhost reboot</b> command.</li> <li><b>VJUNOS Reboot</b>—When Junos OS is rebooted using the <b>request system reboot</b> command.</li> </ul>
Load averages	Routing Engine load averages for the last 1, 5, and 15 minutes.

## Sample Output

### show chassis routing-engine (M5 Router)

```

user@host> show chassis routing-engine

Routing Engine status:
  Temperature           25 degrees C / 77 degrees F
  DRAM                   768 MB
  Memory utilization     21 percent

```

```

CPU utilization:
  User          0 percent
  Background    0 percent
  Kernel        0 percent
  Interrupt     0 percent
  Idle          100 percent
Model          RE-2.0
Serial ID      31000007349bf701
Start time     2003-12-04 09:42:17 PST
Uptime         26 days, 1 hour, 12 minutes, 27 seconds
Last reboot reason Router rebooted after a normal shutdown
Load averages: 1 minute  5 minute 15 minute
                  0.00    0.01    0.00

```

### show chassis routing-engine (M10 Router)

```
user@host> show chassis routing-engine
```

```

Routing Engine status:
  Temperature    25 degrees C / 77 degrees F
  DRAM           768 MB
  Memory utilization 21 percent
  CPU utilization:
    User          0 percent
    Background    0 percent
    Kernel        0 percent
    Interrupt     0 percent
    Idle          100 percent
  Model          RE-2.0
  Serial ID      31000007349bf701
  Start time     2003-12-04 09:42:17 PST
  Uptime         26 days, 1 hour, 12 minutes, 27 seconds
  Last reboot reason Router rebooted after a normal shutdown
  Load averages: 1 minute  5 minute 15 minute
                    0.00    0.01    0.00

```

### show chassis routing-engine (M20 Router)

```
user@host> show chassis routing-engine
```

```

Routing Engine status:
  Slot 0:
    Current state      Master
    Election priority  Master (default)
    Temperature        29 degrees C / 84 degrees F
    DRAM               768 MB
    Memory utilization 20 percent
    CPU utilization:
      User              1 percent
      Background        0 percent
      Kernel            2 percent
      Interrupt         0 percent
      Idle              97 percent
    Model              RE-2.0
    Serial ID          58000007348d9a01
    Start time         2003-12-30 07:05:47 PST
    Uptime              3 hours, 41 minutes, 14 seconds
    Last reboot reason Router rebooted after a normal shutdown
    Load averages:    1 minute  5 minute 15 minute

```

```

## show chassis scb

<b>Syntax</b>	show chassis scb
<b>Release Information</b>	Command introduced before Junos OS Release 7.4.
<b>Description</b>	(M40 router only) Display System Control Board (SCB) status information.
<b>Options</b>	This command has no options.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li><i>Checklist for Monitoring the SCB</i></li> </ul>
<b>List of Sample Output</b>	<a href="#">show chassis scb on page 2115</a>
<b>Output Fields</b>	<a href="#">Table 157 on page 2113</a> lists the output fields for the <b>show chassis scb</b> command. Output fields are listed in the approximate order in which they appear.

*Table 157: show chassis scb Output Fields*

Field Name	Field Description
Temperature	Temperature of the air passing by the SCB, in degrees Celsius.
CPU utilization	Total percentage of CPU being used by the SCB's processor.
Interrupt utilization	Of the total CPU being used by the SCB's processor, the percentage being used for interrupts.
Heap utilization	Percentage of heap space being used by the SCB's processor.
Buffer utilization	Percentage of buffer space being used by the SCB's processor.
DRAM	Total DRAM available to the SCB's processor.
Start time	Time when the SCB started running.
Uptime	How long the SCB has been running.

*Table 157: show chassis scb Output Fields (continued)*

Field Name	Field Description
<b>Internet Processor memory</b>	<p>Information about the memory of the Internet Processor ASIC on the SCB:</p> <ul style="list-style-type: none"><li>• <b>IP routes</b>—Number of IP routes known to the Internet Processor.</li><li>• <b>MPLS routes</b>—Number of MPLS routes known to the Internet Processor.</li><li>• <b>SRAM banks enabled</b>—Which SRAM banks are enabled.</li><li>• <b>SRAM size</b>—Size of SCB SRAM, in bytes.</li><li>• <b>SRAM used</b>—Amount of SRAM used, in bytes.</li><li>• <b>SRAM utilization</b>—Percentage of SRAM used.</li></ul>

---

## Sample Output

show chassis scb

```
user@host> show chassis scb
```

```
SCB status:
  Temperature:          30 Centigrade
  CPU utilization:      5 percent
  Interrupt utilization: 0 percent
  Heap utilization:     0 percent
  Buffer utilization:    2 percent
  DRAM:                 64 Mbytes
  Start time:           1998-10-28 18:35:46 UTC
  Uptime:               6 minutes, 16 seconds
  Internet Processor memory:
    IP routes:          16
    MPLS routes:        1
    SRAM banks enabled: [ 1 1 1 1 ]
    SRAM size:          4 Mbytes
    SRAM used:          256 bytes
    SRAM utilization:   0 percent
```

## show chassis sfb

---

List of Syntax	<a href="#">Syntax on page 2116</a> <a href="#">Syntax (MX10008 Universal Edge Routers) on page 2116</a>

5	Online	6 hours, 11 minutes, 2 seconds
6	Online	6 hours, 10 minutes, 57 seconds
7	Online	6 hours, 10 minutes, 51 seconds

### show chassis sfb (MX2010 Router)

```
user@host> show chassis sfb
```

Slot	State	Uptime
0	Online	6 hours, 48 minutes, 28 seconds
1	Online	6 hours, 48 minutes, 23 seconds
2	Online	6 hours, 48 minutes, 17 seconds
3	Offline	--- Restarting unresponsive board ---
4	Online	6 hours, 48 minutes, 12 seconds
5	Online	6 hours, 48 minutes, 6 seconds
6	Online	6 hours, 48 minutes
7	Online	6 hours, 47 minutes, 55 seconds

### show chassis sfb (MX2008 Router)

```
user@host> show chassis sfb
```

Slot	State	Uptime
0	Online	10 days, 6 hours, 52 minutes, 38 seconds

1	Online	10 days, 6 hours, 52 minutes, 32 seconds
2	Online	10 days, 6 hours, 52 minutes, 26 seconds
3	Online	10 days, 6 hours, 52 minutes, 20 seconds
4	Online	10 days, 6 hours, 52 minutes, 15 seconds
5	Online	10 days, 6 hours, 52 minutes, 9 seconds
6	Online	10 days, 6 hours, 52 minutes, 3 seconds
7	Online	10 days, 6 hours, 51 minutes, 58 seconds

#### show chassis sfb (MX10008 Router)

```
user@host> show chassis sfb
```

Slot	State	Uptime
0	Online	21 hours, 25 minutes, 50 seconds
1	Online	21 hours, 25 minutes, 22 seconds
2	Online	21 hours, 24 minutes, 55 seconds
3	Online	21 hours, 24 minutes, 27 seconds
4	Online	21 hours, 23 minutes, 56 seconds
5	Online	21 hours, 23 minutes, 23 seconds

## show chassis sfb errors

<b>Syntax</b>	<code>show chassis sfb errors</code> <code>&lt; slot <i>sfb-slot-number</i>&gt;</code>
<b>Release Information</b>	Command introduced in Junos OS Release 18.2 for MX10008 Universal Routing Platform.
<b>Description</b>	Display information about errors pertaining to Switch Fabric Boards (SFBs).
<b>Options</b>	<p><b>none</b>—Display information about the errors pertaining to all the SFBs in the router.</p> <p><b><i>sfb-slot-number</i></b>—(Optional) Display information about error for the specified Switch Fabric Board.</p> <p><b>Range:</b> 0–5</p>
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li><a href="#">request chassis sfb on page 893</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">show chassis sfb errors slot 1(MX10008 Router) on page 2120</a>
<b>Output Fields</b>	Table 158 on page 2117 lists the output fields for the <b>show chassis sfb errors</b> command. Output fields are listed in the approximate order in which they appear.

Table 159: show chassis sfb errors Output Fields

Field Name	Field Description
Slot	Displays the SFB slot number.
Name	Displays the name of the SFB. In MX10008 routers, SFB is identified as SIB.
DeviceID	Displays device ID.
Threshold	Displays the error threshold.
Active	Displays the number of active error instances.
Occurred	Displays the number of error instances occurred.
Cleared	Displays the number of error instances cleared.
Description	Displays error description.

## Sample Output

### show chassis sfb errors slot 1(MX10008 Router)

```
user@host> show chassis sfb errors slot 1
```

Slot Name	DeviceId	Threshold	Active	Occured	Cleared	Description

## show chassis sfm

<b>Syntax</b>	<code>show chassis sfm</code> <code>&lt;detail &lt;sfm-slot&gt;&gt;</code>
<b>Release Information</b>	Command introduced before Junos OS Release 7.4.
<b>Description</b>	(M40e and M160 routers only) Display Switching and Forwarding Module (SFM) status information.
<b>Options</b>	<p><b>none</b>—Display standard status information about all SFMs.</p> <p><b>detail</b>—(Optional) Display detailed SFM status information.</p> <p><b>sfm-slot</b>—(Optional) Display status information about the SFM in the specified slot only. For the M40e router, replace <b>sfm-slot</b> with 0 or 1. For the M160 router, replace <b>sfm-slot</b> with a value from 0 through 3.</p>
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">request chassis sfm on page 897</a></li> <li>• <a href="#">request chassis sfm master switch on page 895</a></li> <li>• <i>Switching the Global Master and Backup Roles in a Virtual Chassis Configuration</i></li> </ul>
<b>List of Sample Output</b>	<a href="#">show chassis sfm (M160 Router) on page 2122</a> <a href="#">show chassis sfm detail (M40e Router) on page 2123</a> <a href="#">show chassis sfm detail (M160 Router) on page 2123</a>
<b>Output Fields</b>	<a href="#">Table 160 on page 2121</a> lists the output fields for the <b>show chassis sfm</b> command. Output fields are listed in the approximate order in which they appear.

*Table 160: show chassis sfm Output Fields*

Field Name	Field Description	Level of Output
<b>Slot</b>	Slot number.	All levels
<b>State</b>	Status of the SFM. State can be any of the following: <ul style="list-style-type: none"> <li>• <b>Online</b>—SFM is online and running.</li> <li>• <b>Online-Standby</b> (M40e router only)—SFM is online, operating as Standby.</li> <li>• <b>Offline</b>—SFM is powered down.</li> <li>• <b>Empty</b>—No SFM is present.</li> </ul>	All levels
<b>Reason</b>	If the status is <b>Offline</b> , reason for this state.	All levels

Table 160: show chassis sfm Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Temp</b>	Temperature of air passing by the SFM, in degrees Celsius.	none specified
<b>CPU Utilization (%)</b>	Information about CPU usage.	none specified
<b>Total</b>	Total percentage of the CPU being used by the SFM's processor.	All levels
<b>Interrupt</b>	Of the total CPU being used by the SFM's processor, the percentage being used for interrupts.	All levels
<b>Memory Utilization</b>	Information about memory usage.	none specified
<b>DRAM</b>	Total DRAM available to the SFM's processor, in megabytes (MB).	All levels
<b>Heap</b>	Percentage of heap space (dynamic memory) being used by the SFM's processor. If this number exceeds 80 percent, it might indicate a software problem (memory leak).	All levels
<b>Buffer</b>	Percentage of buffer space being used by the SFM's processor for buffering internal messages.	All levels
<b>SPP Temperature</b>	Temperature of air passing by the Switch Plane Processor card, in degrees Celsius and Fahrenheit	detail
<b>SPR Temperature</b>	Temperature of air passing by the Switch Plane Router card, in degrees Celsius and Fahrenheit.	detail
<b>Total CPU DRAM</b>	Total amount of CPU DRAM being used by the SFM's processor.	detail
<b>Total SSRAM</b>	Total amount of SSRAM being used by the SFM's processor.	detail
<b>Internet processor II</b>	(M160 router only) Processor type.	detail
<b>Start time</b>	Time this SFM became active.	detail
<b>Uptime</b>	How long the SFM has been up and running.	detail
<b>Packet scheduling mode</b>	(M160 router only) Enabled or disabled.	detail

## Sample Output

### show chassis sfm (M160 Router)

```
user@host> show chassis sfm
```

```
SFM status:
```

Slot	State	Temp (C)	CPU Utilization (%) Total	Interrupt	Memory Utilization (%) DRAM (MB)	Heap	Buffer
------	-------	----------	---------------------------	-----------	----------------------------------	------	--------

0	Online	39	0	0	64	0	6
1	Online	43	0	0	64	0	6
2	Empty	0	0	0	0	0	0
3	Empty	0	0	0	0	0	0

### show chassis sfm detail (M40e Router)

```
user@host> show chassis sfm detail
```

```
Slot 0 information:
  State                Offline
  Reason:              - power configured off
Slot 1 information:
  State                Present
  SPP temperature      0 degrees C / 32 degrees F
  SPR temperature      0 degrees C / 32 degrees F
  Total CPU DRAM       0 MB
  Total SSRAM          0 MB
```

### show chassis sfm detail (M160 Router)

```
user@host> show chassis sfm detail
```

```
Slot 0 information:
  State                Online
  SPP temperature      37 degrees C / 98 degrees F

<b>Syntax</b>	show chassis sibs
<b>Syntax (TX Matrix Router)</b>	show chassis sibs <lcc number   scc>
<b>Syntax (TX Matrix Plus Router)</b>	show chassis sibs <lcc number   sfc number>
<b>Syntax (PTX Series Packet Transport Routers)</b>	show chassis sibs <detail> <slot>
<b>Release Information</b>	<p>Command introduced before Junos OS Release 7.4.</p> <p>Command introduced in Junos OS Release 12.1 for the PTX Series Packet Transport Routers.</p> <p><b>sfc</b> option introduced for the TX Matrix Plus router in Junos OS Release 9.6.</p> <p><b>detail</b> and <b>sib-slot</b> options introduced for the PTX Packet Transport Router in Junos OS Release 12.1</p> <p>Command introduced in Junos OS Release 17.2 for PTX10008 Routers.</p>
<b>Description</b>	(M320,T Series routers, TX Matrix routers, TX Matrix Plus routers, and PTX Series routers only) Display Switch Interface Boards (SIBs) status information.
<b>Options</b>	<p><b>none</b>—(TX Matrix routers and TX Matrix Plus routers only) On a TX Matrix router, display the SIB status for the TX Matrix router and its attached T640 routers. On a TX Matrix Plus router, display the SIB status for the TX Matrix Plus router and its attached routers.</p> <p><b>detail</b>—(PTX Series) (Optional) Display detailed SIB status information.</p> <p><b>lcc number</b>—(TX Matrix routers and TX Matrix Plus routers only) (Optional) On a TX Matrix router, display SIB status information for a specified T640 router (line-card chassis or LCC) that is connected to the TX Matrix router. On a TX Matrix Plus router, display SIB status information for a specified T1600 or T4000 router (LCC) that is connected to the TX Matrix Plus router.</p>

Replace *number* with the following values depending on the LCC configuration:

- 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.
- 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.
- 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.
- 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.

**scc**—(TX Matrix routers only) (Optional) Display SIB status information for the TX Matrix router (switch-card chassis).

**sfc number**—(TX Matrix Plus routers only) (Optional) Display SIB status information for the TX Matrix Plus router (switch-fabric chassis or SFC). Replace *number* with 0.

**slot**—(PTX Series) (Optional) Display status information about the SIB in the specified slot only. The range of values is 0 through 8.

**Output Fields** Table 161 on page 2126 lists the output fields for the **show chassis sibs** command. Output fields are listed in the approximate order in which they appear.

*Table 161: show chassis sibs Output Fields*

Field Name	Field Description
Slot	SIB slot number.
Type	(TX Matrix Plus router only) SIB type.
Uptime	How long the SIB has been up and running.
State	<p>SIB status:</p> <ul style="list-style-type: none"> <li>• <b>Activating</b>—SIB is coming online; this is a transitional state.</li> <li>• <b>Deactivating</b>—SIB is going offline; this is a transitional state.</li> <li>• <b>Connected</b>—SIBs on a T1600 router are connected and trained but are either not online or are spare, because the plane on the TX Matrix Plus router (or switch-fabric chassis) is still offline.</li> <li>• <b>Disconnected</b>—SIBs on all T640 routers on the TX Matrix router (switch-card chassis) are in the <b>Disconnected</b> state, because a SIB on the SCC has gone offline. Likewise, SIBs on all T1600 routers on the TX Matrix Plus router (or switch-fabric chassis) are in the <b>Disconnected</b> state, because a SIB on the SFC has gone offline.</li> </ul> <p>On the TX Matrix Plus router with 3D SIBs, the LCC SIB is also disconnected if the F13 SIB is online, but none of the cables are connected or trained.</p> <ul style="list-style-type: none"> <li>• <b>Online</b>—SIB is operational and running.</li> <li>• <b>Offline</b>—SIB is powered down.</li> </ul> <p><b>NOTE:</b> If a SIB transitions to the <b>Offline</b> state, the command displays an appropriate reason in the output. For instance, if the SIB is taken offline using the <b>request chassis sib</b> command, the <b>show chassis sibs</b> command displays <b>--- Offlined by cli command ---</b> in the output.</p> <ul style="list-style-type: none"> <li>• <b>Spare</b>—SIB is redundant and will move to active state if one of the working SIBs fails to pass traffic.</li> </ul> <p><b>NOTE:</b> <b>Spare</b> does not apply to PTX Series Packet Transport Routers, as there are no spare SIBs.</p> <ul style="list-style-type: none"> <li>• <b>Empty</b>—No SIB is present.</li> <li>• <b>Fault</b>—SIB is in an alarmed state in which none of the SIB's planes are operational for one of the following reasons: <ul style="list-style-type: none"> <li>• All onboard fabric ASICs are not operational.</li> <li>• Fiber-optic connector faults.</li> <li>• FPC connector faults.</li> <li>• SIB midplane connector faults.</li> </ul> </li> <li>• <b>Check</b>—SIB is in an alarmed state due to link errors or destination errors. A SIB can transition to the <b>Check</b> state from the online or spare state.</li> </ul>

Table 161: show chassis sibs Output Fields (continued)

Field Name	Field Description
	<p>The <b>Check</b> state can be caused by the following reasons:</p> <ul style="list-style-type: none"> <li>• Unsupported FPC installed on a router.</li> <li>• SIB not inserted properly (such as bent pins).</li> <li>• Destination errors are detected on the SIB. In this case, the Packet Forwarding Engine stops using the SIB to send traffic to the affected destination Packet Forwarding Engine. When a Packet Forwarding Engine cannot be reached on that plane or SIB, a destination error is reported against that SIB.</li> </ul> <p><b>NOTE:</b> For SIBs in the <b>Check</b> state, the output displays some additional information:</p> <ul style="list-style-type: none"> <li>• In Junos OS Release 9.6 and later, the <b>Check</b> state message shows the number of Packet Forwarding Engines in the plane having destination errors. For example, <b>Check (10 destination errors)</b> indicates 10 Packet Forwarding Engines cannot be reached on that particular SIB. If there are no destination errors, and if the SIB transitions to the <b>Check</b> state because of link errors only, the <b>Check</b> state message shows <b>Check (0 destination errors)</b>.</li> <li>• In Junos OS Release 9.5 and earlier, the <b>Check</b> state message shows <b>Check (destination errors)</b> if there are Packet Forwarding Engines with destination errors in this plane. However, it does not show the number of Packet Forwarding Engines having destination errors. If there are no destination errors and if the SIB transitions to the <b>Check</b> state because of link errors only, the <b>Check</b> state message shows <b>Check (no destination errors)</b>.</li> </ul> <p>If the SIB is in a <b>Check</b> state, because of destination errors, the CLI displays an additional line in the output, use "<b>show chassis fabric fpcs</b>" and "<b>show chassis fabric sibs</b>" for more details.</p> <ul style="list-style-type: none"> <li>• Link errors are detected on the channel between the SIB and a Packet Forwarding Engine. Link errors can be detected at initialization time or runtime: <ul style="list-style-type: none"> <li>• Link errors caused by a link training failure at initialization time—The Packet Forwarding Engine does not use the SIB to send traffic. The <b>show chassis fabric fpcs</b> command shows <b>Plane disabled</b> as status for this link.</li> <li>• Link errors caused by CRC errors detected at runtime—The Packet Forwarding Engine continues to use the SIB to send traffic. The <b>show chassis fabric fpcs</b> command shows <b>Link error</b> as the status for this link.</li> </ul> </li> </ul> <p><b>NOTE:</b> The <b>Check</b> state does not apply to PTX Series Packet Transport Routers.</p> <ul style="list-style-type: none"> <li>• <b>SFC Error</b>—If an F13 SIB on the TX Matrix Plus router (SFC) transitions to the <b>Fault</b> state (for instance, because of link errors), and then if an LCC SIB (connected to the F13 SIB) comes online, the LCC SIB transitions to the <b>SFC Error</b> state. This state indicates that the F13 SIB to which the LCC SIB is connected has errors.</li> </ul> <p><b>NOTE:</b> The <b>Connected</b>, <b>Disconnected</b>, and <b>SFC Error</b> states are only applicable to the SIBs on an LCC.</p>

Table 161: show chassis sibs Output Fields (continued)

Field Name	Field Description
	<ul style="list-style-type: none"> <li><b>Invalid</b>—The specific SIB slot is not valid for 4-LCC chassis configuration. See the <i>TX Matrix Plus Hardware Guide</i> for more information about the supported SIB slots.</li> </ul> <p><b>NOTE:</b> The <b>Invalid</b> state is applicable to TX Matrix Plus routers only.</p>
<b>Fabric links</b>	<p>Indicates status of fabric links on the SIB.</p> <ul style="list-style-type: none"> <li><b>Active</b>—All fabric links on SIB are active. Errors detected on the SIB's fabric links, if any, are reported in the Errors column.</li> <li><b>Unused</b>—All fabric links on the SIB are not used for fabric traffic.</li> </ul>
<b>Errors</b>	<p>Indicates if there is any error on the SIB.</p> <ul style="list-style-type: none"> <li><b>None</b>—No errors</li> <li><b>Link Errors</b>—Fabric link errors were found on SIB RX link.</li> <li><b>Cell drops</b>—Fabric cell drops were found on the SIB ASIC.</li> <li><b>Link Errors, Cell drops</b>—Both link errors and cell drops were detected on at least one of the SIB's fabric links.</li> <li><b>Asic Errors</b>—A fault affecting one of the ASICs on the SIB is detected. It can be an IO error or an internal error signaled by the ASIC.</li> </ul>
<b>Link Errors</b>	<p>indicate the number of links which are marked faulty because the errors on them have crossed threshold.</p>
<b>Cable Errors</b>	<p>Indicate the number of mandatory cables that are not connected, or in up state for that plane</p>
<b>Destination Errors</b>	<p>Indicate the number of destinations that are not reachable on this plane.</p>

## Sample Output

### show chassis sibs (T640 Router)

```
user@host> show chassis sibs
```

```
Slot  State                      Uptime
0      Empty
1      Offline                      --- Offlined by cli command ---
2      Check (21 destination errors) 1 day, 1 hour, 32 minutes, 55 seconds
3      Check (0 destination errors)  1 day, 1 hour, 32 minutes, 45 seconds
4      Empty
```

use "show chassis fabric fpcs" and "show chassis fabric sibs" for more details

### show chassis sibs (T4000 Router)

```
user@host> show chassis sibs
```

Slot	State	Uptime
0	Spare	
1	Online	3 hours, 48 minutes, 38 seconds
2	Online	3 hours, 48 minutes, 22 seconds
3	Online	3 hours, 48 minutes, 5 seconds
4	Online	3 hours, 47 minutes, 49 seconds

### show chassis sibs (TX Matrix Router)

```
user@host> show chassis sibs
```

```
scc-re0:
```

Slot	State	Uptime
0	Empty	
1	Empty	
2	Offline	--- Offlined by cli command ---
3	Offline	
4	Online	7 days, 21 hours, 50 minutes, 4 seconds

```
lcc0-re0:
```

Slot	State	Uptime
0	Offline	--- Offlined by cli command ---
1	Empty	
2	Check (21 destination errors)	1 day, 1 hour, 32 minutes, 55 seconds
3	Check (0 destination errors)	1 day, 1 hour, 32 minutes, 45 seconds
4	Empty	

use "show chassis fabric fpcs" and "show chassis fabric sibs" for more details

### show chassis sibs (T1600 Router)

```
user@host> show chassis sibs
```

Slot	State	Uptime
0	Check (destination errors)	2 hours, 23 minutes, 2 seconds
1	Offline	--- Offlined by cli command ---
2	Check (destination errors)	2 hours, 23 minutes, 3 seconds
3	Check (destination errors)	2 hours, 23 minutes, 3 seconds
4	Check (destination errors)	2 hours, 23 minutes, 3 seconds

use "show chassis fabric fpcs" and "show chassis fabric sibs" for more details

### show chassis sibs (TX Matrix Plus Router)

<b>Syntax</b>	show chassis spmb
<b>Syntax (MX Series Routers)</b>	show chassis spmb <all-members> <local> <member <i>member-id</i> >
<b>Syntax (T4000 Routers)</b>	show chassis spmb <sibs>
<b>Syntax (TX Matrix Routers)</b>	show chassis spmb <sibs> <lcc <i>number</i>   scc>
<b>Syntax (TX Matrix Plus Routers)</b>	show chassis spmb <sibs> <lcc <i>number</i>   sfc <i>number</i> >
<b>Release Information</b>	<p>Command introduced before Junos OS Release 7.4.</p> <p><b>sibs</b> option introduced for the T1600 and TX Matrix Plus routers in Junos OS Release 9.6.</p> <p>Command introduced in Junos OS Release 12.3 for MX2020 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 12.3 for MX2010 Universal Routing Platforms.</p> <p><b>all-members</b>, <b>local</b>, and <b>member <i>member-id</i></b> options introduced in Junos OS Release 15.1 for MX2020 and MX2010 routers.</p> <p>Command introduced in Junos OS Release 17.2 for MX2008 Universal Routing Platforms.</p>
<b>Description</b>	(T Series routers, MX2010, MX2020, and MX2008 routers only) Display Switch Processor Mezzanine Board (SPMB) status information.
<b>Options</b>	<p><b>none</b>—(TX Matrix, TX Matrix Plus router, MX2010, MX2020, and MX2008 routers only)</p> <p>On a TX Matrix router, display SPMB status for the TX Matrix router and its attached T640 routers. On a TX Matrix Plus router, display SPMB status for the TX Matrix Plus router and its attached routers. On MX2010, MX2020, and MX2008 routers, display the SPMB status for the routers.</p>

**all-members**—(MX2010, MX2020, and MX2008 routers only) (Optional) Display status information for the SPMB in all members of the Virtual Chassis configuration.

**lcc number**—(TX Matrix and TX Matrix Plus router only) (Optional) On a TX Matrix router, display information about the SPMB on a specified T640 router (line-card chassis) that is connected to the TX Matrix router. On a TX Matrix Plus router, display information about the SPMB on a specified router (line-card chassis) that is connected to the TX Matrix Plus router.

Replace *number* with the following values depending on the LCC configuration:

- 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.
- 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.
- 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.
- 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.

**local**—(MX2010, MX2020, and MX2008 routers only) (Optional) Display status information for the SPMB in the local member of the Virtual Chassis.

**member member-id**—(MX2010, MX2020, and MX2008 routers only) (Optional) Display status information for the SPMB in the specified member of the Virtual Chassis. Replace *member-id* with the value 0 or 1.

**scc**—(TX Matrix routers only) (Optional) Display information about the SPMB on the TX Matrix router (switch-card chassis).

**sfc number**—(TX Matrix Plus router only) (Optional) Display information about the SPMB on the TX Matrix Plus router (switch-fabric chassis). Replace *number* with 0.

**sibs**—(TX Matrix and TX Matrix Plus router only) (Optional) On a TX Matrix Plus router, display information about the SIBs on the TX Matrix router (switch-card chassis). On a TX Matrix Plus router, display information about the SIBs on The TX Matrix Plus router (switch-fabric chassis). The **sibs** option has the following sub-options:

**lcc number** (TX Matrix, TX Matrix Plus router only) (Optional) On a TX Matrix router, display information about the SIBs on a specified T640 router (line-card chassis) that is connected to the TX Matrix router. On a TX Matrix Plus router, display information about the SIBs on a specified router (line-card chassis) that is connected to the TX Matrix Plus router.

Replace *number* with the following values depending on the LCC configuration:

- 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.
- 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.
- 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.
- 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.

**scc number**—(TX Matrix routers only) (Optional) Display information about the SIBs on the TX Matrix router (switch-card chassis). Replace *number* variable with 0.

**sfc number**—(TX Matrix Plus router only) (Optional) Display information about the SIBs on the TX Matrix Plus router (switch-fabric chassis). Replace *number* variable with 0.

**Output Fields**

[Table 162 on page 2139](#) lists the output fields for the **show chassis spmb** command. Output fields are listed in the approximate order in which they appear.

Table 162: show chassis spmb Output Fields

Field Name	Field Description
Slot	SPMB slot number: 0 or 1.
State	SPMB status: <ul style="list-style-type: none"> <li>• <b>Online</b>—SPMB is operational and running.</li> <li>• <b>Offline</b>—SPMB is powered down.</li> </ul>
Total CPU Utilization (%)	Total percentage of CPU being used by the SPMB processor.
Interrupt CPU Utilization (%)	Of the total CPU being used by the SPMB processor, the percentage being used for interrupts.
Memory Heap Utilization (%)	Percentage of heap space (dynamic memory) being used by the FPC processor. If this number exceeds 80 percent, there may be a software problem (memory leak).
Buffer Utilization (%)	Percentage of buffer space being used by the SPMB processor for buffering internal messages.
Start time	Time at which the SPMB last came online.
Uptime	How long the SPMB has been up and running.

## Sample Output

### show chassis spmb

## show chassis spmb sibs

<b>List of Syntax</b>	<a href="#">Syntax on page 2147</a> <a href="#">Syntax (TX Matrix Router) on page 2147</a> <a href="#">Syntax (TX Matrix Plus Router) on page 2147</a>
<b>Syntax</b>	show chassis spmb sibs
<b>Syntax (TX Matrix Router)</b>	show chassis spmb sibs <lcc <i>number</i>   scc>
<b>Syntax (TX Matrix Plus Router)</b>	show chassis spmb sibs <lcc <i>number</i>   sfc <i>number</i> >
<b>Release Information</b>	Command introduced before Junos OS Release 7.4. sfc option introduced for the TX Matrix Plus router in Junos OS Release 9.6.
<b>Description</b>	(T Series routers only) Display Switch Processor Mezzanine Board (SPMB) Switch Interface Board (SIB) status information.
<b>Options</b>	<p><b>none</b>—(TX Matrix and TX Matrix Plus routers only) On a TX Matrix router, display the SIB status for the TX Matrix router and its attached T640 routers. On a TX Matrix Plus router, display the SIB status for the TX Matrix Plus router and its attached routers.</p> <p><b>lcc <i>number</i></b>—(TX Matrix and TX Matrix Plus routers only) (Optional) On a TX Matrix router, display SIB status information for a specified T640 router (line-card chassis) that is connected to a TX Matrix router. On a TX Matrix Plus router, display SIB status information for a specified router (line-card chassis) that is connected to a TX Matrix Plus router.</p> <p>Replace <i>number</i> with the following values depending on the LCC configuration:</p> <ul style="list-style-type: none"> <li>• 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.</li> <li>• 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.</li> <li>• 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.</li> <li>• 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.</li> </ul> <p><b>scc</b>—(TX Matrix router only) (Optional) Display SIB status information for the TX Matrix router (switch-card chassis).</p>

**sfc**—(TX Matrix Plus router only) (Optional) Display SIB status information for the TX Matrix Plus router (or switch-fabric chassis).

**Additional Information** On a T Series router, you can use either this command or the **show chassis sibs** command to produce the same output. The **show chassis sibs** command is supported on the M320 router and on the T Series routers.

   <interface *interface-name*>

**Release Information**    Command introduced in Junos OS Release 7.6 for M320 routers.  
                                   Command introduced in Junos OS Release 8.3 for M40e routers.  
                                   Command introduced in Junos OS Release 9.3 for M120 routers.  
                                   Command introduced in Junos OS Release 10.2 for T320, T640, and T1600 routers.  
                                   Command introduced in Junos OS Release 12.1 for PTX Series Packet Transport Routers.  
                                   Command introduced in Junos OS Release 12.2 for ACX Series routers.  
                                   Command introduced in Junos OS Release 12.3X54–D20 for ACX500 Series routers.  
                                   Command introduced in Junos OS Release 17.2 for PTX10008 Routers.  
                                   Command introduced in Junos OS Release 18.1R1 for EX9251 Switches.

**Description**    (ACX Series, M320, M40e, M120, T320, T640, and T1600 routers and PTX Series Packet Transport Routers only) Display information about the external clock source currently used for chassis synchronization.

**Options**    **clock-module**—Display clock module information. You can optionally specify one of these Routing Engine qualifiers:

**re0**—Routing Engine 0

**re1**—Routing Engine 1

**routing-engine (backup | both | local | master | other)**—Routing Engine type

**extensive**—(Optional) Display clock synchronization information in detail.

**interface *interface-name***—(Optional) Display clock synchronization information for the specified interface.

**backup**—(Optional) Display clock synchronization information about the backup clock.

**master**— (Optional) Display clock synchronization information about the master clock.

**Required Privilege Level** maintenance

**Table 164: show chassis synchronization Output Fields**

Field Name	Field Description
Current state	<p>Indicates current status of external clock sources:</p> <ul style="list-style-type: none"> <li>• backup—Source is currently the backup clock source.</li> <li>• master—Source is currently the master clock source.</li> <li>• Online-Master—(PTX Series Packet Transport Routers) Source is the master clock. Source is online.</li> <li>• Online-Standby—(PTX Series Packet Transport Routers) Source is the standby (backup) clock. Source is online.</li> </ul>

Table 164: *show chassis synchronization Output Fields (continued)*

Field Name	Field Description
Current clock state	Indicates current source of external synchronization: <ul style="list-style-type: none"> <li>internal—Source is providing its own clocking.</li> <li>locked to master CB—(M320, M40e, and M120 routers) Source is locked to master clock source.</li> <li>locked to master SCG—(T320, T640, and T1600 routers) Source is locked to master clock source.</li> <li>locked to master CCG—(PTX Series Packet Transport Routers) Source is locked to master clock source.</li> </ul>
SNMP trap status	Denotes the SNMP trap generation status (Enabled or Disabled) on ACX Series routers.
Selected for	Number of seconds this clock has been the master or backup clock source.
Selected since	Timestamp for establishment as master or backup clock source.
Deviation (in ppm)	Difference in clock timing, in parts per million (ppm). <p><b>NOTE:</b> Starting in Junos OS Release 16.1R2, if the clock source is locked and the deviation exceeds 10 ppm, the status of the configured source is displayed in the command output as <b>in-use</b>. This status indicates that the clock source is locked even though the clock has significant deviation.</p>
Last deviation (in ppm)	Previous difference in clock timing, if any, in ppm.
Configured sources	Information about clock sources eligible for selection as master clock.
Source	Information about external clock sources.
Priority	Indicates priority of external clock sources: <ul style="list-style-type: none"> <li>primary—Source is a primary reference.</li> <li>secondary—Source is a secondary reference.</li> </ul>
Deviation (in ppm)	Current difference in clock timing, in ppm: <ul style="list-style-type: none"> <li>measuring—Establishing source deviation.</li> <li>number—Deviation in ppm.</li> </ul>
Last deviation (in ppm)	Previous difference in clock timing, in ppm: <ul style="list-style-type: none"> <li>number—Deviation in ppm.</li> </ul>
Status	Indicates status of external sources: <ul style="list-style-type: none"> <li>present—Source is configured and present.</li> <li>qualified—Source is eligible for synchronization source.</li> </ul>

Clock module on SCB0  
Current role      : master
```

## show chassis synchronization (MX Series Routers)

**Syntax**    show chassis synchronization  
              <clock-module <(re0 | re1 | routing-engine (backup | both | local | master | other))>>  
              <extensive>  
              <interface *interface-name*>

**Release Information**    Command introduced in Junos OS Release 10.4.  
                              Command introduced in Junos OS Release 13.3 for MX2020 routers.  
                              **clock-module** option introduced in Junos OS Release 12.2.  
                              Command introduced in Junos OS Release 17.3R1 for MX10003 Universal Routing Platforms.  
                              Command introduced in Junos OS Release 17.4 for MX204 Universal Routing Platforms.

**Description**    Display information about clocks used for chassis synchronization.

**NOTE:** In hybrid mode, the EEC in the MPC derives frequency synchronization from Synchronous Ethernet and the phase and time of day from PTP; however, the **show chassis synchronization extensive** operational mode command output displays the lock status that is derived from the EEC located on the SCB.

**NOTE:**

The Switch Control Board (SCB) framer in MX Series routers supports only the first-generation Synchronization Status Message (SSM) format. Therefore, whenever the router needs to transmit an SSM value of `st3e` or `tnc` via an external interface, an SSM value of `st3` is transmitted. However, on a Synchronous Ethernet interface, an ESMC packet with the unadjusted SSM is transmitted. The term *unadjusted* here means:

- If the `receive-quality` statement at the `[edit chassis synchronization selection-mode]` hierarchy level is configured, the originally received SSM value `st3e` or `tnc` (corresponding to the currently active Synchronous Ethernet clock interface) is transmitted.
- If the configured `quality` statement at the `[edit chassis synchronization selection-mode]` hierarchy level is configured, the originally configured SSM value of `st3e` or `tnc` (corresponding to the currently active Synchronous Ethernet clock interface) is transmitted.

Note that when the external interface receives an SSM value of either `st3e` or `tnc`, the SCB framer does not recognize either of these SSM codes, and therefore, it reports that the Do Not Use (DNU) quality value has been received.

SCBE2 does not support SSM when you configure the following framing format values on the external interface at the `[edit chassis synchronization interfaces external]` hierarchy level:

- `sf` for the `t1-options` statement
- `g704-no-crc` for the `e1-options` statement

**Options** **clock-module**—(MX240, MX480, MX960, MX10003, MX204, MX2010, MX2020, and MX2008 routers with Enhanced MX Switch Control Board; ) (Optional) Display clock module information. You can optionally specify one of these Routing Engine qualifiers:

**re0**—Routing Engine 0

**re1**—Routing Engine 1

**routing-engine (backup | both | local | master | other)**—Routing Engine type

**extensive**—(Optional) Display clock synchronization information in detail.

**interface *interface-name***—(Optional) Display clock synchronization information for the specified interface.

**Required Privilege Level** maintenance

- Output Fields** [Table 165 on page 2163](#) lists the output fields for the **show chassis synchronization** command. Output fields are listed in the approximate order in which they appear.

*Table 165: show chassis synchronization Output Fields*

Field Name	Field Description	Level of Output
<b>Current clock status</b>	Indicates the current status of chassis synchronization: <ul style="list-style-type: none"> <li>• <b>Locked</b>—Clock is operational.</li> <li>• <b>Holdover</b>—Clock is not operational.</li> <li>• <b>Freerun</b>—Clock is locked to the free-run local oscillator.</li> </ul>	none

Table 165: show chassis synchronization Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Clock locked to</b>	Indicates whether the clock is locked to either the <b>primary</b> source or the <b>secondary</b> source.	none
<b>Configured sources</b>	Heading for the list of interfaces configured for chassis synchronization and their subsequent status indicators.	none
<b>Source name</b>	Indicates the configured interface that is the source. The <b>external</b> source name indicates the external clock interface.	none
<b>Configured Priority</b>	Indicates the priority configured for the interface.	none
<b>Interface Status</b>	Indicates the status of the interface as <b>primary</b> , <b>secondary</b> , or <b>n/a</b> (external).	none
<b>Configured quality</b>	Indicates the configured quality of the interface. <ul style="list-style-type: none"> <li>• <b>prs</b>—Primary reference source—Stratum 1</li> <li>• <b>st2</b>—Stratum 2</li> <li>• <b>tnc</b>—Transit node clock</li> <li>• <b>st3e</b>—Stratum 3E</li> <li>• <b>st3</b>—Stratum 3</li> <li>• <b>smc</b>—SONET minimum clock</li> <li>• <b>st4</b>—Stratum 4</li> <li>• <b>prc</b>—Primary reference clock</li> <li>• <b>ssu-a</b>—Synchronization supply unit A</li> <li>• <b>ssu-b</b>—Synchronization supply unit B</li> <li>• <b>sec</b>—SDH equipment clock</li> </ul>	none
<b>Interface</b>	Indicates the configured interface: <ul style="list-style-type: none"> <li>• <b>ge-fpc/pic/port</b>—Indicates the interface type and which FPC, PIC, and port are configured.</li> </ul>	<b>extensive</b>
<b>Status</b>	Indicates the synchronization status of the indicated interface, as follows: <ul style="list-style-type: none"> <li>• <b>Primary</b>—This interface is the selected primary chassis clock source.</li> <li>• <b>Secondary</b>—This interface is the selected secondary chassis clock source.</li> <li>• <b>n/a</b>—This interface is not a selected clock source.</li> </ul>	<b>extensive</b>
<b>Index</b>	Unique numeric identifier for the established Synchronous Ethernet configuration.	<b>extensive</b>
<b>Clock source state</b>	Indicates the status of the Synchronous Ethernet clock source: <ul style="list-style-type: none"> <li>• <b>Clk qualified</b>—The Synchronous Ethernet clock source is qualified.</li> <li>• <b>n/a</b>—The Synchronous Ethernet clock source is not qualified.</li> </ul>	<b>extensive</b>

Table 165: show chassis synchronization Output Fields (continued)

Field Name	Field Description	Level of Output
<b>Priority</b>	Indicates the configured priority. The range is from 1 through 5. The following values indicate whether the parameter is not specified or undefined: <ul style="list-style-type: none"> <li>• <b>Default(8)</b>—The parameter is not specified.</li> <li>• <b>-</b>—The parameter is undefined or out of range.</li> </ul>	<b>extensive</b>
<b>Configured QL</b>	Indicates the configured source interface quality level (QL), which is dependent on the source interface and option. The following quality levels are supported and the configured QL is indicated: <ul style="list-style-type: none"> <li>• <b>prs   st2   tnc   st3e   st3   smc   st4</b>—Network option I QLs</li> <li>• <b>prc   ssu-a   ssu-b   sec</b>—Network option II QLs</li> </ul>	<b>extensive</b>
<b>ESMC QL</b>	Indicates the configured Ethernet Synchronization Message Channel (ESMC) quality level: <ul style="list-style-type: none"> <li>• <b>DNU</b>—Network option I source</li> <li>• <b>DSU</b>—Network option II source</li> </ul>	<b>extensive</b>
<b>Clock source type</b>	Indicates that the configured chassis synchronization clock source is one of the following types: <ul style="list-style-type: none"> <li>• <b>ifd</b>—Uses the free-run local oscillator.</li> <li>• <b>extern</b>—Uses a configured qualified clock source.</li> </ul>	<b>extensive</b>
<b>Clock Event</b>	Indicates the event clock status: <ul style="list-style-type: none"> <li>• <b>Clock locked</b>—Clock is established.</li> <li>• <b>n/a</b>—Clock is not established.</li> </ul>	<b>extensive</b>
<b>Configuration flags</b>	Indicates <b>Ext</b> for external interface configuration	
<b>Wait-to-restore time</b>	Indicates the amount of time in minutes for the port signal to be up before the port is opened to receive and transmit Ethernet Synchronization messages.	<b>extensive</b>
<b>Hold-off time</b>	Indicates the amount of time in milliseconds for hold off time for Synchronous Ethernet interfaces and external clock source interfaces to prevent rapid successive switching. If an interface goes down, hold-off time delays short signal failures from being sent to the clock selection process.	<b>extensive</b>
<b>Kernel flags</b>	Indicates the Synchronous Ethernet software operational status: <ul style="list-style-type: none"> <li>• <b>Up</b>—The Synchronous Ethernet software is operational for the configured interface.</li> <li>• <b>pri</b>—The source is the selected primary clock source.</li> <li>• <b>Dn</b>—The Synchronous Ethernet software is not operational for the configured interface.</li> </ul>	<b>extensive</b>

Table 165: show chassis synchronization Output Fields (continued)

Field Name	Field Description	Level of Output
Ineligibility reason	<p>Indicates the reason the interface is ineligible for the Synchronous Ethernet operation, including the following:</p> <ul style="list-style-type: none"> <li>• <b>Link Down</b>—The link between the Synchronous Ethernet interfaces is not operational.</li> <li>• <b>Not restored</b>—The Synchronous Ethernet link has not yet been restored because it is waiting for the specified <b>wait-to-restore</b> time to elapse.</li> <li>• <b>Forbidden slot</b>—Slot 10 is not supported.</li> <li>• <b>Interface unit missing</b>—The unit parameter is not set or is invalid.</li> <li>• <b>Locked</b>—The paired interface is not available.</li> <li>• <b>No cfg</b>—Synchronous Ethernet is not configured.</li> <li>• <b>RX Disabled</b>—The receiving interface is disabled.</li> <li>• <b>Undefined/invalid QL</b>—The QL mode is not specified in the configuration or, if specified, is not supported.</li> </ul> <p><b>NOTE:</b> When GPS is configured as the clock source and the <b>quality-mode-enable</b> statement is configured, the <b>Current Lock Status</b> is displayed as <b>Locked</b> but <b>Undefined/invalid QL</b> is displayed as the Ineligibility reason. As a workaround, configure the <b>no-ssm-support</b> statement at the <b>[edit chassis synchronization source interfaces interface-name]</b> hierarchy level.</p> <ul style="list-style-type: none"> <li>• <b>System initialization in progress</b>—The remote system is performing initialization and not currently available for synchronization.</li> <li>• <b>Unsupported interface</b>—The configured interface does not support Synchronous Ethernet.</li> </ul>	extensive
Clock module on	Indicates whether the clock module is on the Switch Control Board <b>SCB0</b> or <b>SCB1</b> .	clock-module
Current role	<p>Indicates the role of the clock module:</p> <ul style="list-style-type: none"> <li>• <b>master</b>—The clock module is on the primary SCB, which is the active chassis clock source.</li> <li>• <b>backup</b>—The clock module is on the backup SCB, which mirrors the state of the active clock.</li> </ul>	clock-module
Current state	<p>Indicates the state of the clock module:</p> <ul style="list-style-type: none"> <li>• <b>freerun</b>—The clock module is in free-run mode. When the system starts up, the default clock module state is free-run.</li> <li>• <b>acquiring-lock on</b>—The clock module is attempting to acquire a lock on the specified clock source.</li> <li>• <b>locked to</b>—The clock module is locked to the specified clock source.</li> <li>• <b>holdover on</b>—The clock module is in holdover mode on the specified clock source. Prior to the specified clock source becoming invalid, the clock module was locked on the source and holdover data was collected.</li> <li>• <b>holdover</b>—The clock module has transitioned into holdover prior to locking on a valid clock source and collecting holdover data.</li> </ul>	clock-module
Monitored clock sources	Displays information about monitored clock sources.	clock-module

Table 165: show chassis synchronization Output Fields (continued)

Field Name	Field Description	Level of Output
Interface	Indicates the interface type and which FPC, PIC, and port are configured: <ul style="list-style-type: none"> <li><b>external</b>—External clock source</li> <li><b>ge-fpc/pic/port</b>—Line Synchronous Ethernet or PTP slave</li> <li><b>xe-fpc/pic/port</b>—Line Synchronous Ethernet or PTP slave</li> </ul>	clock-module
Type	Indicates the type of clock source: <ul style="list-style-type: none"> <li><b>t1</b>—BITS T1 framed</li> <li><b>e1</b>—BITS E1 framed</li> <li><b>2048khz</b>—BITS unframed 2048 KHz frequency source</li> <li><b>syncE</b>—Synchronous Ethernet frequency source</li> <li><b>ptp</b>—PTP slave source</li> <li><b>ptp-hybrid</b>—PTP slave source using Synchronous Ethernet for frequency</li> </ul>	clock-module
Status	Indicates the status of the clock source: <ul style="list-style-type: none"> <li><b>failed</b>—The clock source is in the failed state.</li> <li><b>qualifying</b>—The clock source is being qualified.</li> <li><b>qualified</b>—The clock source is qualified and can be selected as the chassis clock source.</li> <li><b>qualified-selected</b>—The clock source is qualified and selected as the chassis clock source.</li> </ul>	clock-module

Command introduced in Junos OS Release 17.3 for MX10003 Universal Routing Platforms.  
Command introduced in Junos OS Release 17.3 for MX150 Router Appliance.  
Command introduced in Junos OS Release 17.4 for MX204 Universal Routing Platforms.  
Command introduced in Junos OS Release 18.1R1 for EX9251 switches.  
Command introduced in Junos OS Release 18.2 for EX9253 Switches.  
Command introduced in Junos OS Release 18.2R1 for MX10008 Routers.

**Description** Display chassis temperature threshold settings, in degrees Celsius.

**Options** **none**—Display the temperature threshold details.

**all-members**—(MX Series routers only) (Optional) Display the chassis temperature threshold settings of all member routers in the Virtual Chassis configuration.

**interconnect-device *name***—(QFabric systems only) (Optional) Display the chassis temperature threshold settings of the Interconnect device.

**lcc *number***—(TX Matrix and TX Matrix Plus routers only) (Optional) On a TX Matrix router, display the temperature threshold details of a specified T640 router (line-card chassis) that is connected to a TX Matrix router. On a TX Matrix Plus router, display the temperature threshold details of a specified router (line-card chassis) that is connected to a TX Matrix Plus router.

Replace *number* with the following values depending on the LCC configuration:

- 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.
- 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.
- 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.
- 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.

**local**—(MX Series routers only) (Optional) Display the chassis temperature threshold settings of the local Virtual Chassis member.

**member *member-id***—(MX Series routers only) (Optional) Display the chassis temperature threshold settings of the specified member of the Virtual Chassis configuration. Replace *member-id* with a value of 0 or 1.

**node-device *name***—(QFabric systems only) (Optional) Display the chassis temperature threshold settings of the Node device.

**satellite [*slot-id slot-ID* | *device-alias alias-name*]**—(Junos Fusion only) (Optional) Display the chassis temperature threshold settings for the specified satellite device or devices in a Junos Fusion, or for all satellite devices if no satellite devices are specified.

**scc**—(TX Matrix routers only) (Optional) Display the temperature threshold details of the TX Matrix router (switch-card chassis).

**sfc *number***—(TX Matrix Plus routers only) (Optional) On TX Matrix Plus routers, display the temperature threshold details of the TX Matrix Plus router, which is the switch-fabric chassis. Replace *number* with 0.

**Required Privilege Level** view

**Output Fields** [Table 166 on page 2176](#) lists the output fields for the **show chassis temperature-thresholds** command. Output fields are listed in the approximate order in which they appear.

*Table 166: show chassis temperature-thresholds Output Fields*

Field name	Field Description
Item	Chassis component. If per FRU per slot thresholds are configured, the components about which information is displayed include the chassis, the Routing Engines, FPCs, and FEBs. If per FRU per slot thresholds are not configured, the components about which information is displayed include the chassis and the Routing Engines.
Fan speed	<p><b>NOTE:</b> On the QFX3500 switch and QFX3600 switch, there are four fan speeds: <b>low</b>, <b>medium-low</b>, <b>medium-high</b>, and <b>high</b>. The fan speed changes at the threshold when going from a low speed to a higher speed. When the fan speed changes from a higher speed to a lower speed, the temperature changes two degrees below the threshold.</p> <p>Temperature threshold settings, in degrees Celsius, for the fans to operate at normal and high speeds.</p> <ul style="list-style-type: none"> <li>Normal—The fans operate at normal speed if the component is at or below this temperature and all the fans are present and functioning normally.</li> </ul> <p><b>NOTE:</b> On a TX Matrix Plus router with 3D SIBs, the threshold temperature at the XF junction is set to 70°C for <b>Normal</b> fan speed, which is less than or equal to 4800 RPM.</p> <ul style="list-style-type: none"> <li>High—The fans operate at high speed if the component has exceeded this temperature or a fan has failed or is missing.</li> </ul> <p><b>NOTE:</b> On a TX Matrix Plus router with 3D SIBs, the threshold temperature at the XF junction is set to 75°C for <b>High</b> fan speed, which is greater than or equal to 5000 RPM.</p> <p><b>NOTE:</b> For MX480 Routers, there are three fan speeds: Low, Medium, and High.</p> <p>An alarm is not triggered until the temperature exceeds the threshold settings for a yellow alarm or a red alarm.</p>
Yellow alarm	<p>Temperature threshold settings, in degrees Celsius, that trigger a yellow alarm.</p> <ul style="list-style-type: none"> <li>Normal—The temperature that must be exceeded on the component to trigger a yellow alarm when the fans are running at full speed.</li> <li>Bad fan—The temperature that must be exceeded on the component to trigger a yellow alarm when one or more fans have failed or are missing.</li> </ul>
Red alarm	<p>Temperature threshold settings, in degrees Celsius, that trigger a red alarm.</p> <ul style="list-style-type: none"> <li>Normal—The temperature that must be exceeded on the component to trigger a red alarm when the fans are running at full speed.</li> <li>Bad fan—The temperature that must be exceeded on the component to trigger a red alarm when one or more fans have failed or are missing.</li> </ul>
Fire Shutdown	(T4000 routers, TX Matrix Plus router with 3D SIBs, and PTX Series Packet Transport Routers only)—Temperature threshold settings, in degrees Celsius, for the network device to shut down.

## Sample Output

### show chassis temperature-thresholds

```
user@host> show chassis temperature-thresholds
```

Item	Fan speed (degrees C)		Yellow alarm (degrees C)		Red alarm (degrees C)	
	Normal	High	Normal	Bad fan	Normal	Bad fan

## show chassis zones (PTX Series Packet Transport Routers)

**Syntax** `show chassis zones  
<detail>`

**Release Information** Command introduced in Junos OS Release 12.1 for PTX Series Packet Transport Routers.

**Description** (PTX5000 Packet Transport Router only) Display the status of the two cooling system zones of the chassis. Zone 0 consists of the Routing Engine, Control Board, SIB, PMB, and the CCG, and is cooled by the vertical fan tray. Zone 1 consists of the eight (0–7) FPCs, and their respective PICs, and is cooled by the horizontal fan trays. The vertical fan tray is located at the front of the chassis. One horizontal fan tray is located at the front top of the chassis, and another is located at the front bottom of the chassis.

**Options** **detail**—(Optional) Display status of each FRU and fan belonging to the cooling system zones.

**Required Privilege Level** view

**Syntax (QFX Series)**    show chassis zones  
                                   <detail>  
                                   <interconnect-device *name*>

**Release Information**    Command introduced in Junos OS Release 11.3 for the QFX Series.  
                                   Command introduced in Junos OS Release 12.3 for MX2020 Universal Routing Platforms.  
                                   Command introduced in Junos OS Release 12.3 for MX2010 Universal Routing Platforms.  
                                   **all-members**, **local**, and **member *member-id*** options introduced in Junos OS Release 15.1 for MX2020 and MX2010 routers.  
                                   Command introduced in Junos OS Release 17.2 for MX2008 Universal Routing Platforms.

**Description**    (QFabric systems only) Display the status of the two cooling system zones on the Interconnect device. Zone 1 consists of eight (0 – 7) front cards, which are cooled by two fan trays. Zone 2 consists of two control boards and eight rear cards, which are cooled by eight (0 – 7) fan trays.

(MX2010, MX2020, and MX2008 routers only) Display the status of the cooling system zones of the chassis. Zone 0 consists of the Control Board, ten (0–9) FPCs, and their respective PICs, Switch Fabric Boards, and Adapter Cards. Zone 1 consists of the Routing Engine, Control Board, and Switch Processor Mezzanine Boards.

**Options**    **all-members**—(MX2010, MX2020, and MX2008 routers only) (Optional) Display the status of the cooling system zones in all members of the Virtual Chassis configuration.

**detail**—(MX2010, MX2020, and MX2008 routers only) (Optional) Display detailed status of the cooling system zones.

**detail *device-name***— (QFabric systems only) (Optional) Display detailed status of the two cooling systems on the Interconnect device.

**interconnect-device *name***— (QFabric systems only) (Optional) Display the status of the cooling zones on the Interconnect device.

**local**—(MX2010, MX2020, and MX2008 routers only) (Optional) Display the status of the cooling system zones in the local member of the Virtual Chassis.

**member *member-id***—(MX2010, MX2020, and MX2008 routers only) (Optional) Display the status of the cooling system zones in the specified member of the Virtual Chassis. Replace *member-id* with the value 0 or 1.

**Output Fields** [Table 168 on page 2217](#) lists the output fields for the **show chassis zones** command. Output fields are listed in the approximate order in which they appear.

*Table 168: show chassis zones Output Fields*

Field Name	Field Description
Slot	FPC slot number of the device whose content is being displayed. On QFX3500 standalone switches, the number is always 0.
Beacon State	Status of the beacon state: <ul style="list-style-type: none"> <li>• Off—The beacon is <b>OFF</b>.</li> <li>• On—The beacon is <b>ON</b>.</li> </ul>
show chassis zones command output fields for MX2020, MX2010, and MX2008 routers:	
Driving FRU	Field replaceable unit (FRU).
Temperature	Temperature of the specified FRU in degrees Celsius and degrees Fahrenheit.

Table 168: show chassis zones Output Fields (continued)

Field Name	Field Description
Condition	Condition of the specified FRU. Condition can be <b>HIGH TEMP</b> , <b>WARM TEMP</b> , <b>OK</b> , and <b>Offline</b> .
Num Fans Missing	Number of fans or fan trays missing.
Num Fans Failed	Number of fans or fan trays that have failed.
Fan Duty Cycle	Fan duty cycle value.
show chassis zones detail command output fields for MX2020, MX2010, and MX2008 routers:	
Item	Chassis component: <ul style="list-style-type: none"> <li>Information about the chassis, Routing Engines, Control Boards (CBs), Switch Fabric Boards (SFBs), PICs, Flexible PIC Concentrators (FPCs), and Adapter Cards (ADCs).</li> </ul>
Measurement	Fan tray speed utilization in percentage.
Status	Status of the specified item. Status can be <b>OK</b> , <b>Absent</b> , or <b>Offline</b> .

## Sample Output

### show chassis zones interconnect-device (QFabric System)

## show pfe fpc

---

**List of Syntax**    [Syntax on page 2234](#)  
                          [Syntax \(TX Matrix and TX Matrix Plus Router\) on page 2234](#)  
                          [Syntax \(MX Series Router\) on page 2234](#)

**Syntax**    `show pfe fpc slot`  
                  `<detail | extensive>`

**Syntax (TX Matrix and TX Matrix Plus Router)**    `show pfe fpc`  
  `<lcc number>`

**Syntax (MX Series Router)**    `show pfe fpc slot`  
  `<detail | extensive>`  
  `<all-members>`  
  `<local>`  
  `<member member-id>`

**Release Information**    Command introduced before Junos OS Release 7.4.

**Description**    Display Packet Forwarding Engine statistics for the specified Flexible PIC Concentrator (FPC).

**Options**    **slot**—FPC slot number. Replace **slot** with a value from 0 through 2.

**detail | extensive**—(Optional) Display the specified level of detail.

**all-members**—(MX Series routers only) (Optional) Display Packet Forwarding Engine statistics for the specified FPC in all members of the Virtual Chassis configuration.

**lcc number**—(TX Matrix and TX Matrix Plus routers only) (Optional) On a TX Matrix router, the slot number of the T640 router (or line-card chassis) that houses the FPC. On a TX Matrix Plus router, **lcc number** represents the slot number of the router (or line-card chassis) that houses the FPC.

                  Replace *number* with the following values depending on the LCC configuration:

- 0 through 3, when T640 routers are connected to a TX Matrix router in a routing matrix.
- 0 through 3, when T1600 routers are connected to a TX Matrix Plus router in a routing matrix.
- 0 through 7, when T1600 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.
- 0, 2, 4, or 6, when T4000 routers are connected to a TX Matrix Plus router with 3D SIBs in a routing matrix.

**local**—(MX Series routers only) (Optional) Display Packet Forwarding Engine statistics for the specified FPC in the local Virtual Chassis member.

**member *member-id***—(MX Series routers only) (Optional) Display Packet Forwarding Engine statistics for the specified FPC in the specified member of the Virtual Chassis configuration. Replace *member-id* with a value of 0 or 1.

**Required Privilege Level** admin

**List of Sample Output** [show pfe fpc on page 2237](#)

## show fib-local-accounting ip

---

**Syntax**      `show fib-local-accounting ip`

**Release Information**    Command introduced in Junos OS Release 12.3 for MX Series routers.

**Description**          Display the number of packets that were sent to an anchor MPC due to FIB localization.

**Required Privilege Level**    view

**Related Documentation**

- [fib-remote on page 389](#)
- [fib-local on page 388](#)
- [Example: Configuring Packet Forwarding Engine FIB Localization on page 383](#)

## Sample Output

### show fib-local-accounting ip

```
user@host> show fib-local-accounting ip
```

```
PFE 0
  fe_addr      packets      bytes
  28           0           0
  29           0           0
  30           0           0
  31           0           0
PFE 1
  fe_addr      packets      bytes
  28           0           0
  29           0           0
  30           0           0
  31           0           0
```

## show ptp aggregated-ethernet interfaces

<b>Syntax</b>	<code>show ptp aggregated-ethernet interfaces</code>
<b>Release Information</b>	Command introduced in Junos OS Release 17.2R1.
<b>Description</b>	Display the information related to aggregated Ethernet bundles.
<b>Options</b>	This command has no options.
<b>Required Privilege Level</b>	View
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Precision Time Protocol Overview on page 256</a></li> </ul>
<b>Output Fields</b>	<a href="#">Table 172 on page 2253</a> lists the output fields for the <code>show ptp aggregated-ethernet interfaces</code> command. Output fields are listed in the approximate order in which they appear.

*Table 172: show ptp aggregated-ethernet interfaces*

Field Name	Field Description
<b>Bundle</b>	Name of the aggregated Ethernet bundle.
<b>Primary</b>	Primary interface in an aggregated Ethernet bundle. <ul style="list-style-type: none"> <li>• <b>active</b>—Indicates that the link is actively receiving ptp packets.</li> <li>• <b>down</b>—Indicates that the link is down.</li> </ul>
<b>Secondary</b>	Secondary interface in an aggregated Ethernet bundle. <ul style="list-style-type: none"> <li>• <b>active</b>—Indicates that the link is actively receiving ptp packets.</li> <li>• <b>ready</b>—Indicates that the link is ready to take over if the primary link fails.</li> </ul>
<b>Role</b>	Role of the aggregated Ethernet bundle: <ul style="list-style-type: none"> <li>• <b>Master, Slave, or Stateful</b></li> </ul>

## Sample Output

### show ptp aggregated-ethernet interfaces

```
user@host> show ptp aggregated-ethernet interfaces
```

bundle	primary	secondary	role
ae0.0	ge-1/0/1 (active)	ge-5/0/5 (ready)	slave
ae2.0	ge-5/0/1 (down)	ge-6/1/1 (active)	master

**show ptp aggregated-ethernet interfaces ( stateful ports)**

```
user@host> show ptp aggregated-ethernet interfaces
```

AE Bundle	Ifstate	Primary	Secondary	Role
ae0.0	Up	et-11/0/5(active)	et-11/1/2(secondary)	Stateful

## show ptp clock

<b>Syntax</b>	show ptp clock
<b>Release Information</b>	Command introduced in Junos OS Release 12.2. Command introduced in Junos OS Release 12.3 for ACX Series Routers. Command introduced in Junos OS Release 17.3 for QFX Series switches.
<b>Description</b>	(ACX Series, MX80, MX240, MX480, MX960 routers, and QFX Series switches) Display the details of the clock configured on the node.
<b>Options</b>	This command has no options.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">IEEE 1588v2 PTP Boundary Clock Overview</a></li> <li>• <a href="#">IEEE 1588v2 Precision Timing Protocol (PTP)</a></li> <li>• <a href="#">Precision Time Protocol Overview on page 256</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">show ptp clock on page 2257</a> <a href="#">show ptp clock (ACX Series Routers) on page 2257</a>
<b>Output Fields</b>	<a href="#">Table 173 on page 2255</a> lists the output fields for the <b>show ptp clock</b> command. Output fields are listed in the approximate order in which they appear.

*Table 173: show ptp clock Output Fields*

Field Name	Field Description
Slot Number	Number of the FPC or MIC slot.
Two-step Clock	Whether the clock provides time information which is a combination of an event message and a subsequent general message: <b>True</b> or <b>False</b> .
Clock Identity	Clock identity of the slave or client as defined in IEEE 1588.
Total Ports on Device	Total number of PTP ports on the router.
Clock Class	Attribute of an ordinary or boundary clock that denotes the traceability of the time or frequency distributed by the grandmaster clock.
Clock Accuracy	Indicates the expected accuracy of a clock when it is the grandmaster, or in the event it becomes the grandmaster.

Table 173: show ptp clock Output Fields (continued)

Field Name	Field Description
<b>Log Variance</b>	Represents an estimate of the variations of the local clock when it is not synchronized via PTP to another clock.
<b>Clock Priority1</b>	Priority value of the clock. Lower value takes precedence.
<b>Clock Priority2</b>	Prioritize the masters to avoid confusion when the <b>Clock Priority1</b> value is the same for different masters in a network.
<b>UTC Offset</b>	Offset between International Atomic Time (TAI) and Coordinated Universal Time (UTC) times. The value is 34 seconds as of January 2012.
<b>Leap59</b>	When <b>TRUE</b> , the last minute of the current UTC day has only 59 seconds (instead of the 60 SI seconds).
<b>Leap61</b>	When <b>TRUE</b> , the last minute of the current UTC day has 61 seconds (instead of the 60 SI seconds).
<b>Time Traceable</b>	When <b>TRUE</b> , the timescale and the UTC offset are traceable to a primary reference.
<b>Frequency Traceable</b>	When <b>TRUE</b> , frequency determining the timescale is traceable to a primary reference.
<b>Time Source</b>	Time source external to the Precision Time Protocol (PTP), which provides time and/or frequency as appropriate. The time source is traceable to the international standards laboratories maintaining clocks that form the basis for the International Atomic Time (TAI) and Universal Coordinated Time (UTC) timescales. Examples of these are Global Positioning System (GPS), NTP, and National Institute of Standards and Technology (NIST) timeservers.
<b>Delay Req Sending Time</b>	Interval in seconds between the delay-request messages sent by the slave to the master.
<b>Steps Removed</b>	Number of boundary clocks between the local clock and the foreign master clock.
<b>Slave-only</b>	Set to <b>TRUE</b> , when the system is used in ordinary slave clock mode; otherwise, <b>FALSE</b> .
<b>Parent Id</b>	EUI-64 clock identifier of the immediate upstream master clock.
<b>GMC Id</b>	EUI-64 clock identifier of the grandmaster clock.
<b>GMC Class</b>	Denotes the grandmaster clock's traceability of the distributed time or frequency.
<b>GMC Accuracy</b>	Indicates the expected accuracy of the grandmaster clock.
<b>GMC Variance</b>	Represents an estimate of the variations of the grandmaster clock.
<b>GMC Priority1</b>	<b>Priority1</b> -value of the grandmaster clock.
<b>GMC Priority2</b>	<b>Priority2</b> -value of the grandmaster clock.

## Sample Output

### show ptp clock

```
user@host> run show ptp clock
```

#### Clock Details:

Slot Number	: 7		
Default Data:			
Two-step Clock	: FALSE	Clock Identity :	
00:05:85:ff:fe:73:ef:d0			
Total Ports on Device	: 0	Clock Class	: 255
Clock Accuracy	: 49	Log Variance	: -12944
Clock Priority1	: 128	Clock Priority2	: 128

Time source	: 16		

## show ptp hybrid

**Syntax** `show ptp hybrid  
<config | status>`

**Release Information** Command introduced in Junos OS Release 12.2R2.

**Description** Display the current configuration and current operation mode of the slave.

**Options** **config**—Display the PTP source to Synchronous Ethernet interface mappings.  
**status**—Display the current hybrid mode operational status.

**Required Privilege Level** View

**Related Documentation**

- [Understanding Hybrid Mode on page 288](#)

**Output Fields** [Table 172 on page 2253](#) lists the output fields for the **show ptp hybrid** command. Output fields are listed in the approximate order in which they appear.

*Table 174: show ptp hybrid Output Fields*

Field Name	Field Description
<b>ptp source</b>	Displays the IP address of the PTP source.
<b>sync source</b>	Displays the interface name of the Synchronous Ethernet source through which the PTP source is traceable.
<b>Configured Mode</b>	Displays the current configured mode of the router as <b>Hybrid</b> .
<b>Operating Mode</b>	Displays the current operation mode: <b>Hybrid</b> or <b>None</b> .
<b>PTP Reference</b>	Displays the IP address and the interface name of the PTP reference clock.
<b>Synchronous Ethernet Reference</b>	Displays the interface name of the Synchronous Ethernet reference clock.
<b>Lock state</b>	Displays the current lock state of the router: <b>Locked</b> , <b>Initializing</b> , or <b>Acquiring</b> .

Table 174: show ptp hybrid Output Fields (continued)

Field Name	Field Description
<b>Lock state description</b>	<p>Displays the description for the current lock state of the router:</p> <ul style="list-style-type: none"> <li>• <b>Initializing</b>—Hybrid mode is being initialized.</li> <li>• <b>Acquiring Frequency</b>—Synchronous Ethernet source identified for frequency synchronization, acquiring frequency-related data from master clock.</li> <li>• <b>Frequency Locked, Acquiring Phase</b>—Frequency locked from the Synchronous Ethernet source, acquiring phase-related data from master clock.</li> <li>• <b>Frequency and Phase Locked</b>—Slave clock is frequency and phase synchronized with master clock.</li> </ul>

## Sample Output

### show ptp hybrid config

```
user@host> show ptp hybrid config

ptp source          sync source
100.1.1.2           ge-1/1/2
```

### show ptp hybrid status

```
user@host> show ptp hybrid status

Hybrid Mode Status:
Configured Mode       : Hybrid
Operating Mode        : Hybrid
PTP Reference         : 100.1.1.2, ge-1/0/0.0
Synchronous Ethernet Reference : ge-1/1/2
Lock state            : Locked
Lock state description : Frequency and Phase Locked
```

## show ptp lock-status

<b>Syntax</b>	<code>show ptp lock-status</code>
<b>Release Information</b>	Command introduced in Junos OS Release 12.2. Command introduced in Junos OS Release 17.3 for the QFX Series.
<b>Description</b>	(ACX Series, MX80, MX240, MX480, MX960 routers, and QFX Series switches) Display information about the lock status of the slave. The output verifies whether the slave is aligned to the grandmaster (master clock) or not.
<b>Options</b>	<b>detail</b> —Display detailed information about the lock status of the slave.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">IEEE 1588v2 PTP Boundary Clock Overview</a></li> <li>• <a href="#">IEEE 1588v2 Precision Timing Protocol (PTP)</a></li> <li>• <a href="#">Precision Time Protocol Overview on page 256</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">show ptp lock-status on page 2261</a> <a href="#">show ptp lock-status (ACX Series) on page 2261</a> <a href="#">show ptp lock-status detail (ACX Series) on page 2261</a> <a href="#">show ptp lock-status detail (with IPv6 addresses for PTP master/slave) on page 2261</a>
<b>Output Fields</b>	<a href="#">Table 175 on page 2260</a> lists the output fields for the <b>show ptp lock-status</b> command. Output fields are listed in the approximate order in which they appear.

Table 175: show ptp lock-status Output Fields

Field Name	Field Description
<b>Lock State</b>	State of the slave clock with respect to its master clock: <ul style="list-style-type: none"> <li>• Freerun</li> <li>• Holdover</li> <li>• Phase Aligned</li> <li>• Acquiring</li> <li>• Initializing</li> <li>• Freq locked</li> </ul>
<b>Phase offset</b>	Time offset information of a slave clock with respect to its master clock. Precision of this time offset is 1 nanosecond.

Table 175: show ptp lock-status Output Fields (continued)

Field Name	Field Description
<b>State since</b>	Date, time, and how long ago the lock status of the PTP client or slave clock changed. The format is <b>State since: year-month-day hour:minute:second:timezone (hour:minute:second ago)</b> . For example, <b>State since: 2002-04-26 10:52:40 PDT (04:33:20 ago)</b> . On ACX Series routers, this field is displayed in Junos OS Release 15.1 and later.
<b>Selected Master Details</b>	<p>Details include the following:</p> <ul style="list-style-type: none"> <li>• <b>Upstream Master address</b>—The address of the remote master from which the slave acquires the clock.</li> <li>• <b>Slave interface</b>—The slave interface on this router corresponding to the Master above.</li> </ul> <p><b>NOTE:</b> On ACX Series router, if the PTP lock state is <b>FREERUN</b>, then the <b>Selected Master Details</b> field is not shown.</p>

## Sample Output

### show ptp lock-status

```
user@host> run show ptp lock-status
Lock Status:

Lock State      : 5 (PHASE ALIGNED)
Phase offset    : 0.000000001 sec
```

### show ptp lock-status (ACX Series)

```
user@host> show ptp lock-status
Lock Status:

Lock State      : 1 (FREERUN)
Phase offset    : 0.000000869 sec
```

### show ptp lock-status detail (ACX Series)

```
user@host> show ptp lock-status detail
Lock Status:

Lock State      : 5 (PHASE ALIGNED)
State since     : 2014-09-10 11:24:11 PDT (00:02:51 ago)

Phase offset    : 0.000000030 sec

Selected Master Details:
Upstream Master address : 13.13.13.1
Slave interface         : ge-0/1/5.0
```

### show ptp lock-status detail (with IPv6 addresses for PTP master/slave)

```
user@host> show ptp lock-status detail
```

**Lock Status:**

Lock State : 5 (PHASE ALIGNED)

Phase offset : -0.000000010 sec

**Selected Master Details:**

Upstream Master address : 2001:cdba:0000:0000:0000:0000:3257:9652

Slave interface : ge-0/2/0.0

Parent Id : 84:18:88:ff:fe:c0:34:00

GMC Id : 00:18:0b:ff:fe:20:03:14

## show ptp master

<b>Syntax</b>	<code>show ptp master</code> <code>&lt;brief   detail   interface&gt;</code>
<b>Release Information</b>	Command introduced in Junos OS Release 12.2. Command introduced in Junos OS Release 17.3 for the QFX Series.
<b>Description</b>	(MX80, MX240, MX480, MX960 routers, and the QFX Series) Display information about the configured master and the status of the master.
<b>Options</b>	<b>brief</b> —Display information about the master in brief. <b>detail</b> —Display information about the master in detail. <b>interface</b> —Display information about the configured interface of the master.
<b>Required Privilege Level</b>	View
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Precision Time Protocol Overview on page 256</a></li> <li>• <i>Configuring the Precision Time Protocol G.8275.2 Enhanced Profile (Telecom Profile)</i></li> </ul>
<b>Output Fields</b>	<a href="#">Table 176 on page 2263</a> lists the output fields for the <b>show ptp master</b> command. Output fields are listed in the approximate order in which they appear.

*Table 176: show ptp master Output Fields*

Field Name	Field Description
<b>Interface</b>	Name of the interface configured for Precision Time Protocol (PTP) on the master.
<b>Status</b>	Status of the Precision Time Protocol master: <ul style="list-style-type: none"> <li>• <b>Master</b> or <b>Slave</b></li> <li>• <b>Active</b> or <b>Inactive</b></li> <li>• <b>Initializing</b> or <b>Down</b></li> </ul>
<b>Local Address</b>	IP or MAC address of the configured master clock.
<b>Status</b> (Local address Status)	Status of the local address of the interface: <ul style="list-style-type: none"> <li>• <b>Configured</b> or <b>Not configured</b></li> <li>• <b>Master</b> or <b>Slave</b></li> <li>• <b>Active</b> or <b>Inactive</b></li> </ul>

Table 176: show ptp master Output Fields (continued)

Field Name	Field Description
<b>Status</b>  (Remote address Status)	Status of the remote address of the interface on the QFX Series: <ul style="list-style-type: none"> <li>• <b>Configured</b> or <b>Not configured</b></li> <li>• <b>Master</b> or <b>Slave</b></li> <li>• <b>Active</b> or <b>Inactive</b></li> </ul>
<b>Total Remote Slaves</b>	Number of remote slaves.
<b>Slave Address</b>	IP or MAC address of the slave.
<b>Status</b>  (Slave Address Status)	Status of the address of the slave: <ul style="list-style-type: none"> <li>• <b>Configured</b> or <b>Not configured</b></li> <li>• <b>Master</b> or <b>Slave</b></li> <li>• <b>Active</b> or <b>Inactive</b> or <b>Ready</b></li> </ul>

## Sample Output

### show ptp master

```

user@host> run show ptp master brief

PTP Master Interface Configured:

Master Interface      Status
ge-7/0/2.0           Master, Active

```

### show ptp master detail (Enterprise Profile on the QFX Series)

```

user@host> run show ptp master detail

PTP Master Interface Details:
Interface   : xe-0/0/6:1.0
Status      : Master, Active
Clock Info  :
  Local Address: 50.50.50.1      Status: Configured, Master, Active
  Remote Address: 224.0.1.129
  Total Remote Slaves: 1

```

### show ptp master detail (Enterprise Profile with dynamically learned master and slave interfaces for each physical interface on the QFX Series)

```

user@host> run show ptp slave detail

PTP Master Interface Details:

Interface   : xe-0/0/31:3.0
Status      : Master, Active
Clock Info  :
  Local Address: 10.10.10.2      Status: Configured, Master, Active
  Remote Address: 10.10.10.1      Status: Learned, Slave, Active
  Remote Address: 224.0.1.129    Status: Configured, Slave, Active

```

```

Total Remote Slaves: 2

Interface : xe-0/0/35:3.0
Status    : Master, Active
Clock Info :
  Local Address: 10.2.2.1      Status: Configured, Master, Active
  Remote Address: 10.2.2.24    Status: Learned, Slave, Active
  Remote Address: 10.2.2.29    Status: Learned, Slave, Active
  Remote Address: 10.2.2.30    Status: Learned, Slave, Active
  Remote Address: 10.2.2.32    Status: Learned, Slave, Active
  Remote Address: 10.2.2.35    Status: Learned, Slave, Active
  Remote Address: 10.2.2.52    Status: Learned, Slave, Active
  Remote Address: 10.2.2.61    Status: Learned, Slave, Active
  Remote Address: 224.0.1.129  Status: Configured, Slave, Active
Total Remote Slaves: 8

```

### show ptp master detail

```

user@host> run show ptp master detail

PTP Master Interface Details:
Interface : ge-7/0/2.0
Status    : Master, Active
Clock Info :
  Local Address: 10.0.0.1      Status: Configured, Master, Active
  Total Remote Slaves: 0
  Slave IP: 10.0.0.2          Status: Configured, Slave, Active

```

### show ptp master detail (with IPv6 addresses for PTP master/slave)

```

user@host> run show ptp master detail

PTP Master Interface Details:
Interface : ge-0/1/5.0
Status    : Master, Active
Clock Info :
  Local Address: 84:18:88:c0:60:a1 Status: Configured, Master, Active
  Remote Address: [Slave Mac]      Status: Configured, Slave, Active
Total Remote Slaves: 1

```

### show ptp interface ge-7/0/2.0

```

user@host> run show ptp master interface ge-7/0/2.0

PTP Master Interface Configured:

Master Interface      Status
ge-7/0/2.0           Master, Active

```

## show ptp path-trace detail

<b>Syntax</b>	show ptp path-trace detail
<b>Release Information</b>	Command introduced in Junos OS Release 13.3R4.
<b>Description</b>	(MX80, MX240, MX480, and MX960 routers) Display the details of the path an announce message takes in a PTP ring topology.
<b>Options</b>	This command has no options.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">IEEE 1588v2 PTP Boundary Clock Overview</a></li> <li>• <a href="#">Precision Time Protocol Overview on page 256</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">show ptp path-trace detail on page 2266</a>
<b>Output Fields</b>	<a href="#">Table 177 on page 2266</a> lists the output fields for the <b>show ptp path-trace detail</b> command. Output fields are listed in the approximate order in which they appear.

*Table 177: show ptp path-trace detail Output Fields*

Field Name	Field Description
Hop Count	The count of the next router in a network trail where the announce message is received.
Member Clock Identity	Clock identity of the slave or client as defined in IEEE 1588.

## Sample Output

### show ptp path-trace detail

```

user@host> show ptp path-trace detail
Hop count      Member Clock Identity
-----
1              00:05:85:ff:fe:74:1f:d0
2              00:05:85:ff:fe:73:ef:d0

```

## show ptp phy-timestamping-interfaces

<b>Syntax</b>	show ptp phy-timestamping-interfaces
<b>Release Information</b>	Command introduced in Junos OS Release 17.1R1.
<b>Description</b>	Display information about the interfaces that have PHY timestamping enabled. PHY timestamping is the timestamping of the IEEE 1588 event packets at the physical layer. Timestamping the packet at the physical layer eliminates the noise or the packet delay variation (PDV) that is introduced by the Packet Forwarding Engine.
<b>Options</b>	This command has no options.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Precision Time Protocol Overview on page 256</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">show ptp phy-timestamping-interfaces on page 2267</a>
<b>Output Fields</b>	<a href="#">Table 92 on page 923</a> lists the output fields for the <b>show ptp phy-timestamping-interfaces</b> command. Output fields are listed in the approximate order in which they appear.

*Table 178: show-ptp-phy-timestamping-interfaces*

Field Name	Field Description
PHY time-stamp interfaces	Name of the interface configured for phy-timestamping.

## Sample Output

### show ptp phy-timestamping-interfaces

```
user@host> show ptp phy-timestamping-interfaces
PHY time-stamp interfaces:
  xe-0/2/1
  xe-4/1/3
```

## show ptp port

<b>Syntax</b>	show ptp port <brief   detail> ifl <i>logical-interface-name</i>
<b>Release Information</b>	Command introduced in Junos OS Release 12.2. <i>ifl logical-interface-name</i> added in Junos OS Release 16.1.
<b>Description</b>	(MX80, MX240, MX480, and MX960 routers) Display information about the number of ports created according to the configuration. For each unique local IP address, one Precision Time Protocol port is created.
<b>Options</b>	<b>brief</b> —Display information about the PTP port in brief.  <b>detail</b> —Display information about the PTP port in detail.  <b>logical-interface-name</b> —Display PTP port information for a specific logical interface.
<b>Required Privilege Level</b>	View
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li><a href="#">Precision Time Protocol Overview on page 256</a></li> </ul>
<b>Output Fields</b>	<a href="#">Table 179 on page 2268</a> lists the output fields for the <b>show ptp port</b> command. Output fields are listed in the approximate order in which they appear.

Table 179: show ptp port Output Fields

Field Name	Field Description
Local Interface	Local logical interface.
Local IP	IP address of the interface acting as the slave.
Remote IP	IP address of the remote node.
Clock Stream	Unique index for each session created.
Clock Identity	IP address of the slave.
Port State	Status of the port: <b>PTP listening</b> or <b>PTP initializing</b> .
Delay Req Interval	Interval in seconds between the delay request messages sent by the slave to the master.
Announce Interval	Logarithmic mean interval for the announce messages to be sent by the master.

Table 179: show ptp port Output Fields (continued)

Field Name	Field Description
<b>Announce Timeout</b>	Number of times the announce interval message has to pass between the slave and the master without receipt of an announce message.
<b>Sync Interval</b>	Logarithmic mean interval for sync interval messages to be sent by the master.
<b>Delay Mechanism</b>	Type of delay mechanism used.
<b>Port Number</b>	PTP port number.
<b>Operating Mode</b>	Clock mode of the node.
<b>Master Clock ID</b>	Unique clock-identity of the master.
<b>Previous Announce Messages</b>	Previous announce messages.
<b>Current Announce Message</b>	Current announce messages.

## Sample Output

### show ptp port brief

```
user@host> run show ptp port brief
```

```
PTP port-data:
Local IP      : 10.0.0.1      Remote IP      : 10.0.0.2
Clock Stream  : 1            Clock Identity : 00:05:85:ff:fe:73:ef:d0
Port State    : Listening     Delay Req Interval: -4

## show ptp slave

<b>Syntax</b>	show ptp slave <brief   detail   interface>
<b>Release Information</b>	Command introduced in Junos OS Release 12.2. Command introduced in Junos OS Release 17.3 for the QFX Series.
<b>Description</b>	(MX80, MX240, MX480, MX960 routers, and the QFX Series) Display information about the configured slave and the status of the slave.
<b>Options</b>	<b>brief</b> —Display information about the slave in detail. <b>detail</b> —Display information about the slave in detail. <b>interface</b> —Display information about the configured interface of the slave.
<b>Required Privilege Level</b>	View
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Precision Time Protocol Overview on page 256</a></li> <li>• <i>Configuring the Precision Time Protocol G.8275.2 Enhanced Profile (Telecom Profile)</i></li> </ul>
<b>Output Fields</b>	<a href="#">Table 180 on page 2271</a> lists the output fields for the <b>show ptp slave</b> command. Output fields are listed in the approximate order in which they appear.

*Table 180: show ptp slave Output Fields*

Field Name	Field Description
<b>Interface</b>	Name of the interface configured for Precision Time Protocol.
<b>Status</b>	Status of the Precision Time Protocol slave: <ul style="list-style-type: none"> <li>• <b>Master</b> or <b>Slave</b></li> <li>• <b>Active</b> or <b>Inactive</b></li> <li>• <b>Initializing</b> or <b>Down</b></li> </ul>
<b>Interface</b>	Interface configured on the slave.
<b>Local Address</b>	IP or MAC address of the local interface.
<b>Status</b> (Local address Status)	Status of the local address of the interface acting as the slave: <ul style="list-style-type: none"> <li>• <b>Configured</b> or <b>Unconfigured</b></li> <li>• <b>Master</b> or <b>Slave</b></li> <li>• <b>Active</b> or <b>Inactive</b> or <b>Ready</b></li> </ul>

Table 180: show ptp slave Output Fields (continued)

Field Name	Field Description
<b>Status</b>  (Remote address Status)	Status of the remote address of the interface on the QFX Series: <ul style="list-style-type: none"> <li>• <b>Configured</b> or <b>Not configured</b></li> <li>• <b>Master</b> or <b>Slave</b></li> <li>• <b>Active</b> or <b>Inactive</b></li> </ul>
<b>Total Remote Masters</b>	Number of remote masters.
<b>Remote Master</b>	IP or MAC address of the remote node.
<b>Status (Slave IP Address Status)</b>	Status of the address of the master: <ul style="list-style-type: none"> <li>• <b>Configured</b> or <b>Unconfigured</b></li> <li>• <b>Master</b> or <b>Slave</b></li> <li>• <b>Active</b> or <b>Inactive</b></li> </ul>

## Sample Output

### show ptp slave

```
user@host> run show ptp slave
PTP Slave Interfaces Configured:

Slave Interface      Status
ge-7/0/0.0           Slave, Active
```

### show ptp slave detail

```
user@host> run show ptp slave detail
PTP Slave Interface Details:

Interface      : ge-7/0/0.0
Status         : Slave, Active
Clock Info
  Local address : 10.10.1.10           Status: Configured, Slave, Active
  Total Remote Masters: 0
  Remote Master: 10.10.1.2           Status: Configured, Master, Active
```

### show ptp slave detail (with IPv6 addresses for PTP master/slave)

```
user@host> run show ptp slave detail
PTP Slave Interface Details:

Interface      : ge-0/1/5.0
Status         : Slave, Active
Clock Info
  Local Address 2001:cdba:0000:0000:0000:0000:3257:9653 Status:
Configured, Slave, Active
  Remote Master:: 2001:cdba:0000:0000:0000:0000:3257:9652 Status: Configured,
```

```
Master, Active  
Total Remote Masters: 1
```

## show ptp stateful detail

<b>Syntax</b>	show ptp stateful detail
<b>Release Information</b>	Command introduced in Junos OS Release 17.1R1.
<b>Description</b>	Display information about the stateful interfaces.
<b>Options</b>	This command has no options.
<b>Required Privilege Level</b>	view
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Precision Time Protocol Overview on page 256</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">show ptp stateful detail on page 2274</a>
<b>Output Fields</b>	Table 92 on page 923 lists the output fields for the <b>show ptp stateful detail</b> command. Output fields are listed in the approximate order in which they appear.

Table 181: show ptp stateful detail

Field Name	Field Description
Interface	Name of the configured stateful interface.
Status	Status of the stateful interface: stateful and active or inactive.
Local Address	MAC address of the configured stateful interfaces.
Status (of local address)	Status of the local address of the interface: <ul style="list-style-type: none"> <li>• Configured or not configured</li> <li>• Active or inactive</li> </ul>
Port Status	Status of the port configured: <ul style="list-style-type: none"> <li>• Master or slave</li> </ul>
Remote Address	MAC address of the remote stateful interface.

## Sample Output

### show ptp stateful detail

```
user@host> show ptp stateful detail
```

```
Interface : ge-7/0/1.0
Status    : Stateful, Active
Clock Info :
  Local Address: 01:00:5E:90:10:00  Status: Configured, Active
  Port Status: Slave
  Remote Address: 01:00:5E:90:10:FF
```

## show synchronous-ethernet esmc statistics

<b>Syntax</b>	<pre>show synchronous-ethernet esmc statistics &lt;brief interface <i>interface-name</i>&gt; &lt;detail interface <i>interface-name</i>&gt; &lt; interface <i>interface-name</i>&gt; &lt; interface <i>interface-name</i> (brief   detail)&gt;</pre>
<b>Release Information</b>	<p>Command introduced in Junos OS Release 11.2R4 for MX Series 5G Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 14.2R1 for PTX Series Packet Transport Routers.</p>
<b>Description</b>	(MX5, MX10, MX40, MX80, MX80-T, MX240, MX480, MX960, MX2010, MX2020 , and PTX Series routers only) Display the Synchronous Ethernet ESMC statistics.
<b>Required Privilege Level</b>	maintenance
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Synchronous Ethernet Overview on page 242</a></li> <li>• <a href="#">Configuring an External Clock Synchronization Interface for MX Series Routers on page 293</a></li> <li>• <a href="#">request chassis synchronization mode on page 910</a></li> <li>• <a href="#">request chassis synchronization switch on page 912</a></li> <li>• <a href="#">show synchronous-ethernet global-information on page 2280</a></li> <li>• <a href="#">show synchronous-ethernet esmc transmit on page 2278</a></li> <li>• <a href="#">clear synchronous-ethernet esmc statistics on page 837</a></li> </ul>
<b>List of Sample Output</b>	<p><a href="#">show synchronous-ethernet esmc statistics on page 2277</a></p> <p><a href="#">show synchronous-ethernet esmc statistics detail on page 2277</a></p> <p><a href="#">show synchronous-ethernet esmc statistics interface (PTX) on page 2277</a></p>
<b>Output Fields</b>	Table 182 on page 2276 lists the output fields for the <b>show synchronous-ethernet esmc statistics</b> command. Output fields are listed in the approximate order in which they appear.

Table 182: show synchronous-ethernet esmc statistics Output Fields

Field Name	Field Description
Interface Name	<b>interface-slot/pic/port</b> —Displays the name of the interface for which the ESMC statistics are displayed.
Transmit Count	<b>number</b> —Displays the number of ESMC packets transmitted.
Receive Count	<b>number</b> —Displays the number of ESMC packets received.

## Sample Output

### show synchronous-ethernet esmc statistics

```
user@host> show synchronous-ethernet esmc statistics
```

ESMC statistics:		
Interface Name	Transmit Count	Receive Count
ge-1/0/4	3540	0
ge-1/0/2	3539	0
ge-1/2/4	3540	0

### show synchronous-ethernet esmc statistics detail

```
user@host> show synchronous-ethernet esmc statistics detail
```

ESMC Statistics:	
Interface Name	: xe-2/0/10
Transmit Count	: 40908
Receive Count	: 40534
Total Drop Count	: 336
Ineligible Drop Count	: 0
Adjacency Count	: 4

### show synchronous-ethernet esmc statistics interface (PTX)

```
user@host> show synchronous-ethernet esmc statistics interface et-1/1/0:0
```

ESMC statistics:		
Interface Name	Transmit Count	Receive Count
et-1/1/0:0	358	338

## show synchronous-ethernet esmc transmit

<b>Syntax</b>	<pre>show synchronous-ethernet esmc transmit &lt;brief interface <i>interface-name</i>&gt; &lt;detail interface <i>interface-name</i>&gt; &lt; interface <i>interface-name</i>&gt; &lt; interface <i>interface-name</i> (brief   detail)&gt;</pre>
<b>Release Information</b>	<p>Command introduced in Junos OS Release 11.2R4 for MX80 Universal Routing Platforms.</p> <p>Command introduced in Junos OS Release 14.2R1 for PTX Series Routers.</p>
<b>Description</b>	(MX5, MX10, MX40, MX80, MX80-T, MX240, MX480, MX960, MX2010, MX2020, and PTX Series routers only) Display the Synchronous Ethernet ESMC transmit interface details.
<b>Required Privilege Level</b>	maintenance
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Synchronous Ethernet Overview on page 242</a></li> <li>• <a href="#">Configuring an External Clock Synchronization Interface for MX Series Routers on page 293</a></li> <li>• <a href="#">request chassis synchronization mode on page 910</a></li> <li>• <a href="#">request chassis synchronization switch on page 912</a></li> <li>• <a href="#">show synchronous-ethernet global-information on page 2280</a></li> <li>• <a href="#">show synchronous-ethernet esmc statistics on page 2276</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">show synchronous-ethernet esmc transmit on page 2279</a>
<b>Output Fields</b>	<p><a href="#">Table 183 on page 2278</a> lists the output fields for the <b>show synchronous-ethernet esmc transmit detail</b> command. Output fields are listed in the approximate order in which they appear.</p>

*Table 183: show synchronous-ethernet esmc transmit detail Output Fields*

Field Name	Field Description
Interface name	<b>interface-slot/pic/port</b> —Displays the name of the interface for which the ESMC transmit details are displayed.
Status	<b>string</b> —Displays the ESMC transmit interface status details.

## Sample Output

```
user@host# show synchronous-ethernet esmc transmit detail
```

```
ESMC Transmit interface details:
  Interface name: ge-1/0/4      Status: ESMC Tx (QL SSU-A/SSM 0x4)
  Interface name: ge-1/0/2      Status: ESMC Tx (QL DNU/SSM 0xf)
  Interface name: ge-1/2/4      Status: ESMC Tx (QL SSU-A/SSM 0x4)
```

### show synchronous-ethernet esmc transmit

```
user@host> show synchronous-ethernet esmc transmit

ESMC Transmit interfaces:
  xe-2/0/10
```

### show synchronous-ethernet esmc transmit (PTX)

```
user@host> show synchronous-ethernet esmc transmit

ESMC Transmit interfaces:
  et-1/1/0:0
  et-2/0/22:3
```

## show synchronous-ethernet global-information

<b>Syntax</b>	<code>show synchronous-ethernet global-information</code> <code>&lt;brief&gt;</code>
<b>Release Information</b>	Command introduced in Junos OS Release 11.2R4 for MX80-T, MX5, MX10, MX40, MX240, MX480, and MX960 routers. Command introduced in Junos OS Release 14.2R1 for PTX Series Routers.
<b>Description</b>	(MX5, MX10, MX40, MX80, MX80-T, MX240, MX480, MX960, and PTX routers only) Display information about the global configuration for Synchronous Ethernet chassis synchronization.
<b>Required Privilege Level</b>	maintenance
<b>Related Documentation</b>	<ul style="list-style-type: none"> <li>• <a href="#">Synchronous Ethernet Overview on page 242</a></li> <li>• <a href="#">Configuring an External Clock Synchronization Interface for MX Series Routers on page 293</a></li> <li>• <a href="#">request chassis synchronization mode on page 910</a></li> <li>• <a href="#">show synchronous-ethernet esmc statistics on page 2276</a></li> <li>• <a href="#">show synchronous-ethernet esmc transmit on page 2278</a></li> </ul>
<b>List of Sample Output</b>	<a href="#">show synchronous-ethernet global-information (MX) on page 2281</a> <a href="#">show synchronous-ethernet global-information (PTX) on page 2281</a>
<b>Output Fields</b>	<a href="#">Table 184 on page 2280</a> lists the output fields for the <b>show synchronous-ethernet global-information</b> command. Output fields are listed in the approximate order in which they appear.

*Table 184: show synchronous-ethernet global-information Output Fields*

Field Name	Field Description
<b>Network option</b>	<b>(option-1(EEC1)   option-2(EEC2))</b> —Displays the network option configuration, either option-1(EEC1) or option-2(EEC2).
<b>Clock mode</b>	<b>(free-run   auto-select)</b> —Displays the configured mode of operation. The clock source can be either from the free-run local oscillator or from an external qualified clock. The default is auto-select mode.
<b>QL mode</b>	<b>(enable   disable)</b> —Displays the configured quality level mode configuration. The default is disable.
<b>Switchover mode</b>	<b>(revertive   non-revertive)</b> —Displays the configured synchronization clock switching mode. The default mode is revertive.

Table 184: *show synchronous-ethernet global-information Output Fields (continued)*

Field Name	Field Description
<b>Config change holdover</b>	<b>seconds</b> —Displays the time interval to wait before selecting the new clock source during a configuration change. The default value is 30 seconds.
<b>Switchover holdover</b>	<b>seconds</b> —Displays the time interval to wait before selecting the new clock source during switchover. The default value is 30 seconds.
<b>Reboot holdover</b>	<b>seconds</b> —Displays the time interval to wait before selecting the new clock source during reboot. The default value is 120 seconds.

## Sample Output

### show synchronous-ethernet global-information (MX)

```

user@host# show synchronous-ethernet global-information
Global Configuration:

Network option       : option-1(EEC1)
Clock mode           : Auto-select
QL mode              : Disabled
Switchover mode      : Revertive
Config change holdover : 15 seconds
Switchover holdover  : 30 seconds
Reboot holdover      : 120 seconds

```

### show synchronous-ethernet global-information (PTX)

```

user@host# show synchronous-ethernet global-information
Global Configuration:

Network option       : option-1(EEC1)
Clock mode           : Auto-select
Max transmit quality : PRC
QL mode              : Disabled
Clock selection mode  : Config-QL based
Switchover mode      : Revertive
Config change holdover : 15 seconds
Switchover holdover  : 30 seconds
Reboot holdover      : 120 seconds
RE Status             : Master
Global Wait to Restore : 0 min

```
