

radius override nas-port-id remote-circuit-id

Syntax radius override nas-port-id remote-circuit-id
no radius override nas-port-id

Release Information Command introduced before JUNOS Release 7.1.0.

Description Configures RADIUS to override the standard use of the NAS-Port-Id [87] RADIUS attribute and instead use the PPPoE remote circuit ID transmitted from a DSLAM device. The **no** version restores the default NAS-Port-Id value, which is the physical interface of the network access server (NAS) that is authenticating the user.
