

sscc restart

Syntax ssc restart [clean-state]

Release Information Command introduced in JUNOS Release 11.0.0.

Description Forces the router to restart a COPS connection to, and resynchronize with, the SRC software, without removing the SRC client. The **no ssc enable cops** command removes the SRC client. There is no **no** version.

Options ■ clean-state—Enables a complex restart where the SRC client closes the connection and clears the Policy Information Base (PIB) structures and tables. Then the SRC client connects to the SRC software, which requests full synchronization, which restores correct policy and QoS provisioning.

Mode Privileged Exec
