

l2tp policy

Syntax l2tp policy { input | output } *policyName* [statistics
 { enabled | disabled } [merge]

 no l2tp policy { input | output }

Release Information Command introduced before JUNOS Release 7.1.0.
 merge keyword added in JUNOS Release 7.2.0.

Description Assigns an L2TP policy list to a profile, which then assigns the policy to an interface. If you enter the **l2tp policy** command and the policy list does not exist, the router creates a policy list with no rules, the default. Attaching this policy list to an interface filters all packets on that interface. You must specify the **input** or **output** keyword to assign the policy list to the ingress or egress of the interface. The **no** version removes the association between a policy list and a profile.

- Options**
- input—Applies policy to data arriving at the interface
 - output—Applies policy to data leaving the interface
 - *policyName*—Name of the policy; maximum of 40 characters
 - statistics—Enables or disables collection of policy routing statistics
 - enabled—Enables collection of policy routing statistics
 - disabled—Disables collection of policy routing statistics
 - merge—Enables merging of multiple policies to form a single policy
