

next-hop

Syntax [no] [suspend] next-hop *address* [classifier-group *claclName*]
[precedence *precValue*]

Release Information Command introduced before JUNOS Release 7.1.0.

Description Defines the IP address of the next hop for an IP policy list. The **no** version removes a next-hop rule from a policy list; the **suspend** keyword temporarily suspends the rule; the **no suspend** version resumes application of a suspended rule.

NOTE: The **next-hop** command has been replaced by the **forward next-hop** command and may be removed completely in a future release.

The SRP module Fast Ethernet port cannot be the destination of the **next-hop** command.

- Options**
- *address*—IP address for the next hop
 - *claclName*—In Policy List Configuration, specifies the classifier control list used to classify packets for this next-hop policy. If you do not specify a classifier group, the router selects all packets from the interface associated with this policy list for this rule.
 - *precValue*—In Policy List Configuration, specifies the precedence of this rule in relation to other rules within this set

Mode Classifier Group Configuration, Policy List Configuration
