

## next-hop

---

**Syntax** [ no ] [ suspend ] next-hop *address* [ classifier-group *claclName* ]  
[ precedence *precValue* ]

**Release Information** Command introduced before JUNOS Release 7.1.0.

**Description** Defines the IP address of the next hop for an IP policy list. The **no** version removes a next-hop rule from a policy list; the **suspend** keyword temporarily suspends the rule; the **no suspend** version resumes application of a suspended rule.

**NOTE:** The **next-hop** command has been replaced by the **forward next-hop** command and may be removed completely in a future release.

The SRP module Fast Ethernet port cannot be the destination of the **next-hop** command.

---

- Options**
- *address*—IP address for the next hop
  - *claclName*—In Policy List Configuration, specifies the classifier control list used to classify packets for this next-hop policy. If you do not specify a classifier group, the router selects all packets from the interface associated with this policy list for this rule.
  - *precValue*—In Policy List Configuration, specifies the precedence of this rule in relation to other rules within this set

**Mode** Classifier Group Configuration, Policy List Configuration
