

## overload advertise-high-metric issu

---

**Syntax** [ no ] overload advertise-high-metric issu

**Release Information** Command introduced in JUNOS Release 9.0.0.

**Description** Configures IS-IS or OSPF to advertise the maximum link cost on each interface to its neighbors when a unified in-service software upgrade is started, causing neighbors to route around the upgrading router. The **no** version restores the default behavior, which is to advertise configured link costs.

**Mode** Router Configuration
