

## service check-config

---

**Syntax** [ no ] service check-config [ auto | fileName *fileName* | running-configuration | running-configuration recover | auto-recover ]

**Release Information** Command introduced in JUNOS Release 9.3.0.  
**auto-recover** keyword added in JUNOS Release 10.3.0.

**Description** Detects corruption of running configuration and CNF files on both the primary and the standby SRP when it is due to a fatal duplicate key error. The **no** version restores the default action, manual detection.

- Options**
- **auto**—Checks the running configuration at regular intervals; cannot be used for CNF files
  - **fileName**—Name of an existing configuration file (.cnf) that needs to be validated for corruption
  - **running-configuration**—Specifies that the running configuration needs to be validated for corruption
  - **running-configuration recover**—Recovers the corrupted configuration files in the running configuration
  - **auto-recover**—Specifies that the running configuration needs to be validated for corruption and the corrupted files need to be recovered

**Mode** Global Configuration
