

## strip-domain

---

**Syntax** strip-domain { enable | disable }  
no strip-domain

**Release Information** Command introduced before JUNOS Release 7.1.0.

**Description** Strips the domain name from the username before sending an access-request message to the RADIUS server. The domain name is the text after the last @ character. For example, xyz.com is the domain name of the following: fred@abc.com@xyz.com. To stop stripping the domain name, use the **disable** keyword. The **no** version resets the default, **disable**.

- Options**
- enable—Specifies the feature
  - disable—Disables the feature; this is the default setting

**Mode** Domain Map Configuration
