

vlan classifier-list

Syntax vlan classifier-list *classifierName*
 [traffic-class *className*] [color { green | yellow | red }]
 [user-packet-class *userPacketClassValue*] [user-priority *userPriorityValue*]

 no vlan classifier-list *classifierName* [*classifierNumber*]

Release Information Command introduced before JUNOS Release 7.1.0.

Description Creates or modifies a VLAN classifier control list. The **no** version deletes the classifier control list.

- Options**
- *classifierName*—Name of a classifier list entry
 - *className*—Name of a traffic class; the router supports up to eight traffic classes
 - green—Matches packet color to green, indicating a low drop preference
 - yellow—Matches packet color to yellow, indicating a medium drop preference
 - red—Matches packet color to red, indicating a high drop preference
 - *userPacketClassValue*—Value of the user packet class in the range 0–15
 - *userPriorityValue*—Value of the user priority bits in the range 0–7
 - *classifierNumber*—Index of the classifier control list entry to be deleted; an integer in the range 1–10000

Mode Global Configuration
