

ospf bandwidth

Syntax [no] ospf bandwidth

Release Information Command introduced in JUNOS Release 10.3.0.

Description Directs the router to use the bandwidth configured on an OSPF interface for OSPF interface cost calculation. If you configure the bandwidth and then issue the **no ospf bandwidth** command, the router ignores the cost that is calculated using the configured bandwidth. The **no** version disables the use of the bandwidth for OSPF interface cost calculation.
