

ppp multilink multiclass reassembly

Syntax [no] ppp multilink multiclass reassembly [*trafficClassName*]*

Release Information Command introduced in JUNOS Release 11.1.0.

Description Enables reassembly on a specified multilink class. The maximum received reconstructed unit (MRRU) value of each class is the same as that of the MLPPP link. The **no** version disables reassembly on all multilink classes, or on the specified multilink classes if you include one or more traffic class names.

- Options**
- *trafficClassName*—Name of a QoS traffic class. You can enable reassembly for up to eight traffic classes. You must specify the best-effort traffic class in the command or the command fails.
 - *—Indicates that one or more parameters can be repeated multiple times in a list in the command line

Mode Interface Configuration, Profile Configuration, Subinterface Configuration
