

show ipv6 local pool

Syntax show ipv6 local pool [*poolName* | statistics [delta]] [*filter*]

Release Information Command introduced in JUNOS Release 10.1.0.

Description Displays information for all IPv6 local address pools configured on a virtual router, a particular IPv6 local address pool, or the IPv6 local address pool statistics for DHCPv6 prefix delegation.

- Options**
- *poolName*—Name of the IPv6 local address pool configured on the virtual router for which you want to view statistics, such as the number of clients to which prefixes have been allocated from this pool, starting and ending prefixes of the address range, and other prefix configuration parameters .
 - statistics—Displays the IPv6 local address pool statistics details.
 - delta—Displays statistics that have changed since the last baseline was set.
 - *filter*—See Filtering show Commands.

Mode Privileged Exec, User Exec
