

sscc option

Syntax sssc option { user-ip-mask-override | send-calling-station-id }
no sssc option

Release Information Command introduced in JUNOS Release 10.2.0.
send-calling-station-id keyword added in JUNOS Release 11.1.0.

Description When used with the **user-ip-mask-override** option, enables the user IP address mask to be sent to the Policy Decision Point (PDP) in place of the interface IP address mask for a virtual router. If user IP address mask is not available, then the interface IP address mask is sent. The **no** version disables user IP address mask override.

When used with the **send-calling-station-id** option, enables the calling station ID to be sent to the PDP for a virtual router. The **no** version disables the option to send the calling station ID.

- Options** ■ user-ip-mask-override—Enables user IP address mask to be sent to PDP.
 ■ send-calling-station-id—Enables calling station ID to be sent to PDP.
