## SRX 210 Services Gateway Hardware

SRX 210 services gateways are ideal for branch offices connected directly to a traditional private network, such as leased lines, Frame Relay, ATM, or MPLS, or for branch offices where the public Internet is used as an alternative to a traditional private WAN. The SRX 210 services gateway supports Mini-Physical Interface Modules (Mini-PIMs), which provide a wide variety of common WAN and LAN interfaces.

*Note: The Document Information Card is available on this website for Beta review. This document will be printed and shipped with the Mini-PIMs in the release timeframe.*
