

Accessing the SRX 210 Services Gateway

You can use two user interfaces to monitor, configure, troubleshoot, and manage the SRX 210 services gateway:

- J-Web interface: Web-based graphical interface that allows you to operate a services gateway without commands. The J-Web interface provides access to all JUNOS functionality and features.
- JUNOS command-line interface (CLI): Juniper Networks command shell that runs on top of a UNIX-based operating system kernel. The CLI is a straightforward command interface. On a single line, you type commands that are executed when you press the Enter key. The CLI provides command Help and command completion.

The SRX 210 services gateway runs the JUNOS software.
